Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements are the essential outcomes of the unit of competency.

Together, performance criteria specify the requirements for competent performance. Text in ***bold italics*** is explained in the Range Statement following.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Disseminate security policy	1.1 Profile of security management is raised to highest level to indicate its key focus in the organisation. 1.2 Security standards for the organisation are articulated in a manner suited to the level and experience of staff. 1.3 Ways in which the security policy and plan contribute to the achievement of organisational corporate goals are articulated. 1.4 Roles and responsibilities of key people in the organisation regarding implementation of security measures are articulated. 1.5 Dissemination methods take account of various audiences and ***information*** is presented in a way that meets particular audience needs.
2. Champion security awareness	2.1 Leadership and motivation are provided in highlighting the role of security processes as integral to effective management practices. 2.2 Methods underpinning the championing of security awareness are based on an in-depth understanding of the organisation's culture and structure, and the nature of both internal and external clients. 2.3 A positive tone is set in the organisation regarding security through engendering trust and confidence in security measures. 2.4 Guidelines for the establishment of formal and informal networks are established to nurture cooperative and ethical client relationships.
3. Market security management inside and outside the organisation	3.1 Potential activities to promote security and its importance to the overall objectives of the organisation are identified and assessed in relation to the security policy and plan in place. 3.2 Implementation is coordinated with management and key ***stakeholders*** who play a role in implementation.

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	3.3 Shared ownership of security processes is encouraged through ongoing consultation and information sharing.
	3.4 Promotion activities are organised to raise stakeholder awareness of both the ethical and financial aspects of security and to facilitate endorsement of the concept and practice of security management.
	3.5 ***Trends*** are monitored in order to ensure currency in the organisation's security measures.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Skill requirements

Look for evidence that confirms skills in:

- applying leadership
- synthesising and articulating broader policy issues
- using a range of communication, negotiation and presentation styles to suit different audiences and purposes
- responding to diversity, including gender and disability
- applying occupational health and safety and environmental procedures in the context of managing security awareness

Knowledge requirements

Look for evidence that confirms knowledge and understanding of:

- corporate plan and strategic directions of the organisation
- structure and core business activities of the organisation
- organisation's security policy and plans
- external expectations placed on the organisation by external stakeholders such as government
- the incorporation of constraints imposed by the culture of the organisation and operational factors into security management issues and practices
- organisational change practices
- public sector legislation, policies and procedures including anti-discrimination and diversity legislation, occupational health and safety, and environment in the context of security management

© Commonwealth of Australia, 2025 Industry Skills Australia

Evidence Guide

The Evidence Guide specifies the evidence required to demonstrate achievement in the unit of competency as a whole. It must be read in conjunction with the Unit descriptor, Performance Criteria, the Range Statement and the Assessment Guidelines for the Public Sector Training Package.

Units to be assessed together

- *Pre-requisite* units that must be achieved prior to this unit:*Nil*
- *Co-requisite* units that must be assessed with this unit:*Nil*
- *Co-assessed units* that may be assessed with this unit to increase the efficiency and realism of the assessment process include, but are not limited to:
  - PSPETHC601B Maintain and enhance confidence in public service
  - PSPGOV601B Apply government systems
  - PSPGOV602B Establish and maintain strategic networks
  - PSPLEGN601B Manage compliance with legislation in the public sector
  - PSPMNGT604B Manage change
  - PSPMNGT608B Manage risk
  - PSPPOL603A Manage policy implementation
  - PSPSEC601A Define information systems framework

Overview of evidence requirements

In addition to integrated demonstration of the elements and their related performance criteria, look for evidence that confirms:

- the knowledge requirements of this unit
- the skill requirements of this unit
- application of the Employability Skills as they relate to this unit (see Employability Summaries in Qualifications Framework)
- management of security awareness in a range of (3 or more) contexts (or occasions, over time)

Resources required to carry out assessment

These resources include:

- legislation, policy and procedures relating to government security management
- security guidelines and standards
- public sector values and codes of conduct
- case studies and workplace scenarios to capture the range of security awareness situations likely to be encountered

Where and how to assess evidence

Valid assessment of this unit requires:

- a workplace environment or one that closely resembles normal work practice and replicates the range of conditions

© Commonwealth of Australia, 2025 Industry Skills Australia

likely to be encountered when managing security awareness, including coping with difficulties, irregularities and breakdowns in routine
- management of security awareness in a range of (3 or more) contexts (or occasions, over time)

Assessment methods should reflect workplace demands, such as literacy, and the needs of particular groups, such as:

- people with disabilities
- people from culturally and linguistically diverse backgrounds
- Aboriginal and Torres Strait Islander people
- women
- young people
- older people
- people in rural and remote locations

Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of 2 or more of:

- case studies
- portfolios
- questioning
- scenarios
- authenticated evidence from the workplace and/or training courses

For consistency of assessment

Evidence must be gathered over time in a range of contexts to ensure the person can achieve the unit outcome and apply the competency in different situations or environments

Range Statement

The Range Statement provides information about the context in which the unit of competency is carried out. The variables cater for differences between States and Territories and the Commonwealth, and between organisations and workplaces. They allow for different work requirements, work practices and knowledge. The Range Statement also provides a focus for assessment. It relates to the unit as a whole. Text in ***bold italics*** in the Performance Criteria is explained here.

Information may include:

- instructions
- guidelines
- case briefings

© Commonwealth of Australia, 2025 Industry Skills Australia

	• research outcomes • outcomes of analyses
Stakeholders may include:	• relevant government Ministers • agency staff and senior management • agency clients • contractors and consultants • suppliers and customers • industry associations • other agencies with a mandate for security management • law enforcement agencies • prosecution agencies • internal/external audit
Trends are monitored through:	• research of national and international material • surveys • data matching • internal and external networks • information on security breaches • aggregated national data relating to government security

PUACOM007B Liaise with other organisations

Modification History

Release	TP Version	Comments
3	PUA12 V2.1	Editorial changes.
2	PUA12 V2	Layout adjusted. Application added.
1	PUA00 V8.1	Primary release.

Unit Descriptor

This unit covers the competency to develop networks and relationships and liaise effectively with other organisations.

Application of the Unit

This unit applies to workers who have a role that includes formally liaising with other organisations in order to increase response effectiveness and community safety. While all workers should engage in networking opportunities with like-minded organisations in order to increase the effective of response in incidents, this unit is focussed at a more strategic liaisons, from local public safety group level to organisation wide.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

PUACOM005B Foster a positive organisational image in the community (Fire sector specific)

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the Performance Criteria describe the required performance

essential outcomes of a Unit of Competency.	needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Establish networks and relationships	1.1 Formal and informal networks are established to support ongoing and future liaisons and collaboration. 1.2 Relationships are developed and used in a way which provides identifiable benefits to the organisation from shared expertise, information and/or resources. 1.3 Participation in regular meetings and forums supports mutual cooperation. 1.4 Consultation with ***affected and interested parties*** is undertaken to support the ***organisational goals and objectives***.
2. Communicate and interact with other organisations	2.1 Information is provided to other ***organisations*** in a clear, concise and comprehensive manner. 2.2 Communication with other organisations is conducted in accordance with organisational policy and procedures. 2.3 Information from other organisations is gathered to inform the improvement of services and to avoid duplication of effort.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- chairing meetings
- networking and developing relationships
- public speaking
- using networks effectively

© Commonwealth of Australia, 2025 Industry Skills Australia

Required Knowledge

- awareness of role and responsibilities of other organisations
- chairing meetings
- knowledge of current practices and procedures for communicating in the workplace
- meeting protocols and procedures
- organisation's confidentiality requirements
- organisational policy and procedures relating to liaison with other organisations
- role

Evidence Guide

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential for this unit that competence be demonstrated as follows:

- Networks and relationships developed and used effectively
- All information provided is accurate and clear

Consistency in performance

Evidence should be gathered over a period of time in a range of actual or simulated workplace environments.

Context of and specific resources for assessment

Context of assessment

On the job or in a simulated work environment.

Specific resources for assessment

No special requirements.

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Affected and interested parties may include:

- local community
- business community
- commonwealth
- state and territory and local governments

Organisational goals and objectives may vary between

- organisational performance standards
- organisational personnel practices and guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

sectors and organisations and may include:	• organisational quality standards • customer focussed service delivery • community awareness of public safety issues • effective response to incidents/operations/emergencies • community participation in public safety activities • inter-organisation cooperation and collaboration • organisational goals and objectives may vary between sectors and organisations
Organisations may include:	• public safety organisations • government organisations • emergency response organisations • local • state/territory and commonwealth • government • suppliers • non-government organisations e.g. Red Cross • Salvation Army • volunteers • rescue etc

PUADEFVH001A Conduct recovery vehicle operations in a field environment

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the competency required to undertake recovery of broken down vehicles and equipment, requiring the operation of specialist recovery vehicles and equipment.

Recovery involves dispatching the recovery vehicle to an incident site, retrieving disabled equipment and moving to a place of repair.

This unit does not cover the extraction of the disabled equipment by winching techniques, which is covered by PUADEFVH002A Extract disabled equipment using winching techniques in a field environment.

Application of the Unit

Application of the Unit

This unit includes the skills and knowledge to lead a small team to recover vehicles and equipment. Specialist recovery vehicles and equipment includes the operation of towing, lifting and winching equipment.

Personnel must be capable of assessing recovery situations in remote environments and tasking personnel to complete operations in isolation from supervision or support.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Prepare for recovery tasks**	1.1 Orders and instructions are received and confirmed 1.2 ***Recovery vehicle and equipment*** are checked and prepared for deployment in accordance with ***workplace procedures*** 1.3 Resources required for operational tasks are confirmed and organised 1.4 Recovery crew is briefed on task in accordance with workplace procedures 1.5 Identified problems/shortfalls are reported to appropriate personnel in accordance with workplace procedures so corrective action can occur prior to deployment 1.6 Occupational health and safety (OH&S) requirements and recognised safety precautions are applied throughout operation in accordance with standard procedures 1.7 Environmentally sustainable work practices are

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	identified, assessed and implemented where feasible
2. **Deploy on recovery tasks**	2.1 Recovery vehicle is deployed to recovery site in accordance with workplace procedures 2.2 Liaison with disabled equipment stakeholders is conducted to ensure everyone is aware of recovery procedures
3. **Recover disabled equipment**	3.1 ***Equipment casualty faults*** are diagnosed, where possible, to ensure recovery actions are the most efficient and cost effective 3.2 Recovery situation is ***assessed*** in accordance with workplace procedures to determine recovery method 3.3 ***Safety risks associated with recovery task*** are assessed and measures to ensure a safe working environment are implemented in accordance with workplace procedures 3.4 ***Briefing of on site personnel*** is conducted and tasks are allocated and supervised 3.5 ***Recovery tasks*** are completed in accordance with workplace procedures 3.6 ***Minor problems*** are dealt with in accordance with workplace procedures 3.7 ***Major incidents*** outside scope of own capabilities are reported to appropriate personnel
4. **Transport disabled equipment**	4.1 Disabled equipment is secured to recovery vehicle in accordance with manufacturer's instructions and workplace procedures 4.2 Stability and braking capability of recovery vehicle is tested to ensure it is safe to transport disabled equipment 4.3 Recovery vehicle is driven to maintenance facility 4.4 ***Unforseen incidents*** are managed as they occur
5. **Finalise recovery tasks**	5.1 Equipment casualty is handed over to owner or

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	recovered further in accordance with workplace procedures
	5.2 Documentation, including reports and returns, are completed in accordance with workplace procedures
	5.3 Maintenance is supervised and conducted in accordance with workplace procedures
	5.4 Faulty equipment is reported and actions are taken in accordance with workplace procedures
	5.5 Recovery crew is debriefed as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- allocate appropriate materials and personnel to tasks
- communicate effectively in the workplace
- direct, brief, coordinate and monitor personnel
- interpret instructions and directions
- operate specialist recovery vehicles and equipment
- perform basic mathematical calculations
- solve task specific problems

Required Knowledge

- basic vehicle mechanical principles
- basic engineering principles including:
- material capabilities
- theory of levers and pulleys
- characteristics and capabilities of recovery vehicles and equipment
- functions and responsibilities of team members
- maintenance requirements and procedures
- organisational OH&S procedures relevant to field recovery operations
- recovery methods and procedures
- reporting requirements and procedures
- safety precautions associated with tasks

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- allocate appropriate materials and personnel to task
- assess risks
- brief and direct personnel
- communicate effectively in the workplace
- perform basic mathematical calculations
- provide reports and appropriate documentation
- solve problems relevant to task

Required Knowledge

- basic vehicle mechanical principles
- basic engineering principles including:
- theory of levers and pulleys
- material capabilities
- characteristics and capabilities of recovery vehicles and equipment
- maintenance requirements and procedures
- organisational OH&S procedures relevant to winching operations
- recovery methods and procedures
- reporting requirements and procedures

Evidence Guide

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessment must confirm the ability to: • conduct winching operations on ground which is soft enough to simulate the conditions encountered when winching bogged vehicles • conduct a winching operation to extricate a light and a medium/heavy rigid vehicle • utilise motorised winches, winch ropes and associated fittings.

© Commonwealth of Australia, 2025 Industry Skills Australia

EVIDENCE GUIDE

	Consistency in performance Competency should be demonstrated over time using a variety of equipment casualties and situations which the candidate is likely to encounter within the workplace.
Context of and specific resources for assessment	**Context of assessment** Competency should be assessed in areas of difficult terrain incorporating undulating ground. **Specific resources for assessment** Access is required to: • recovery vehicles and winching equipment • actual or simulated equipment casualties • specific workplace operating procedures and publications.

Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

PUAOPE001B Supervise response

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor

This unit covers the competency to supervise a response by a small team to incidents and may include the use of aircraft, which are time critical and/or potentially threatening to life, property or the environment.

The unit includes the competency to proceed to the incident, assess the incident, and plan and implement an operational response and post-response activities.

Application of the Unit

Application of the Unit

The application of this unit in the workplace - the environments, complexities and situations involved - will be written during Phase II of the Review of the PUA00 Public Safety Training Package.

This text will be useful for the purposes of job descriptions, recruitment advice or job analysis; where possible, it will not be too job specific to allow other industries to import it into other Training Packages, where feasible.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. **Receive incident response request**	1.1 Requests for response are received and dealt with in accordance with ***organisational policy*** and guidelines 1.2 Relevant incident information is obtained and assessed to enable personnel to make appropriate preparations 1.3 An appropriate response is determined according to the type of incident and information available in accordance with organisational policies and procedures 1.4 The location of the incident and the most appropriate route to the incident are ascertained
2. **Proceed to incident**	2.1 Personnel, equipment and ***transport*** resources are dispatched promptly, consistent with the nature of the incident and the information available 2.2 Communication is established and maintained 2.3 An appropriate route to the incident is followed

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	to minimise response time
	2.4 ***En-route hazards*** are recognised and negotiated to minimise risk
	2.5 Multi-vehicle response is conducted in accordance with the organisation's procedures
3. **Assess the incident**	3.1 Observations are made en route to assist with ***incident*** assessments
	3.2 Assigned personnel's arrival at the incident is confirmed according to organisational policies and procedures
	3.3 ***Communication*** with on-site personnel is established
	3.4 An initial assessment of the incident is carried out promptly
	3.5 ***Hazards*** or potential hazards are assessed and minimised or controlled
	3.6 Assigned ***resources*** to deal with the incident are established at the earliest opportunity
	3.7 The need for additional resources is identified and resources requested in accordance with organisational policy and procedures
	3.8 Hazards are monitored during the incidents and changes in the situation acted upon
4. **Plan and implement an operational response to the incident**	4.1 A safe and effective operational environment is established and maintained in accordance with occupational health and safety guidelines and organisation's policies and procedures
	4.2 Incident information is communicated to assigned personnel clearly, accurately and in a timely manner
	4.3 ***Incident plan*** is developed based on available information and organisational procedures
	4.4 Strategies and tactics are determined and tasks allocated to appropriate personnel
	4.5 An incident plan is implemented, continually monitored, reported and reviewed in the light of additional information and communicated in accordance with the organisation's policies and procedures
	4.6 Leadership and supervision are provided to ensure that performance and practice are to operational standards

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	4.7 Appropriate equipment and materials are deployed to deal with the incident
	4.8 Changes in the incident plan are communicated to relevant personnel and organisations
5. **Conclude operation**	5.1 Incident is terminated in accordance with the organisation's procedures
	5.2 Incident records of incident actions and decisions are maintained in accordance with the organisation's requirements
	5.3 Incident assessment is conducted in accordance with the organisation's requirements
6. **Supervise post-response activities**	6.1 Equipment cleaning, repair, storage and replenishment is supervised
	6.2 Debriefing requirements are met
	6.3 Post operation reports are prepared to organisation's requirements
	6.4 ***Welfare of team members*** is monitored and appropriate action taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- analyse an incident
- assess risks and apply safe work practices
- communicate effectively
- conduct an incident assessment
- conduct briefings and debriefings for aircraft based work
- deploy personnel and equipment to deal with the incident
- for aircraft based work the ability to work in an aircraft for an extended period
- make decisions
- respond promptly to an incident
- use communication equipment

Required Knowledge

© Commonwealth of Australia, 2025 Industry Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

- hazards/potential hazards and their effects
- knowledge of current navigational practices to perform navigation
- knowledge of current practices to perform conduct briefings and debriefings
- organisational policies and procedures relating to operations

Evidence Guide

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential for this unit that competence be demonstrated in implementation of an appropriate strategy to deal effectively with the incident **Consistency in performance** Evidence should be gathered over a period of time in a range of actual or simulated workplace environments
Context of and specific resources for assessment	**Context of assessment** Evidence of competent performance should be obtained by observing an individual in responding to and dealing with an actual or simulated incident operation and supplemented by appropriate questions **Specific resources for assessment** Assessment of this competency will require access to relevant transport, communication and emergency equipment
Guidance information for assessment	Information that will assist or guide assessment will be written during Phase II of the Review of the PUA00 Public Safety Training Package.

PUAWER005B Operate as part of an emergency control organisation

Modification History

Release	TP version	Comments
2	PUA12 V1	Layout adjusted. Application revised.
1	PUA00 V8.1	First release in TGA.

Unit Descriptor

This unit covers the competency required to implement the emergency response specified in the workplace emergency procedures or specified by a person at a higher level in the emergency control organisation.

People who undertake this work will be working within the command, control and coordinate structure of the emergency control organisation.

This unit has been developed to cover the broad range of emergencies and workplaces as considered in Australian Standard 3745-2010.

Application of the Unit

This unit applies to employees in the workplace within all industries and in all contexts.

This unit places responsibility on individual employees who are delegated responsibility as part of an emergency control organisation to participate in the preparation of workplace emergency procedures; alert and report potential workplace emergencies; evaluate the need to evacuate a work area; prepare for an evacuation; and assist people who may require assistance in accordance with workplace emergency procedures.

The knowledge and skills gained through the completion of this unit may be applied by employees across all industries.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Respond to emergency reports, signals and warnings	1.1 ***Emergency reports***, ***signals and warnings*** are identified and appropriate action is taken. 1.2 Emergency situations and possible further development are assessed and relevant action is taken according to workplace emergency procedures. 1.3 Arrangements are made for people who may require assistance. 1.4 ***Emergency stations*** are attended and operated according to workplace emergency procedures. 1.5 Suitable ***identification*** is worn according to workplace emergency procedures and relevant standards.
2. Initiate and control initial emergency response	2.1 ***Initial emergency response*** is initiated and carried out according to the workplace emergency procedures or authorised instruction. 2.2 Evacuated areas are checked according to workplace emergency procedures. 2.3 Results of the evacuation of an area are reported to the ***relevant person*** according to the workplace emergency procedures. 2.4 People are accounted for appropriately after the

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	evacuation and the results are reported to the relevant person according to the workplace emergency procedures.
	2.5 Persons not accounted for are reported in accordance with workplace emergency procedures.
3. Anticipate the further development of emergencies	3.1 Emergency responses are based on the emergency management plan, taking into account the current situation and possible further development.
	3.2 Possible further development of emergency situations is continually assessed, reported to the relevant person and acted on according to workplace emergency procedures.
4. Assist with post initial response	4.1 Emergency evacuation or alternative action is completed before any ***post initial response activities*** are undertaken.
	4.2 Post initial response activities are conducted under the control of the relevant person and are consistent with the workplace emergency plan.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- ability to relate to a range of people from a range of cultural, linguistic, social and ethnic backgrounds, and a range of physical and intellectual abilities
- apply methods of accounting for people
- assist people who need assistance
- carry out a search pattern within an area
- communicate clearly by the means specified in the workplace emergency procedures
- contribute to emergency management planning
- exercise leadership within a workplace emergency context
- use equipment assigned to assist with implementing the workplace emergency procedures

Required Knowledge

- arrangements for evacuating people who need support
- assessing and anticipating the progress of emergencies that might reasonably be expected in the workplace
- command, control and coordinate function of the emergency control organisation

© Commonwealth of Australia, 2025 Industry Skills Australia

- context of own role within the workplace emergency procedures
- emergency assessment and reporting procedures
- emergency reporting signals, alarms, warnings and procedures
- emergency response and operating procedures
- members of the emergency control organisation and their roles and responsibilities
- evacuation priorities
- hazard identification
- precautions to be taken during emergencies and during an evacuation
- methods of accounting for people during and after emergencies
- methods of summoning first aid to occupants or visitor injured during an emergency evacuation
- need to keep the relevant person informed of the developing situation
- post initial response emergency activities
- responses to meet the various situations
- workplace procedures

Evidence Guide

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessment must confirm the ability to respond to emergency reports, signals and warnings appropriately; to supply clear directions under emergency conditions; to make decisions appropriate to the situation; to keep others appropriately informed; to respond according to the workplace emergency procedures; and to take on a leadership role consistent with the emergency control organisation. **Consistency in performance** Competency should be demonstrated over time with a range of emergencies that could be expected in the workplace.
Context of and specific resources for assessment	**Context of assessment** Competency should be assessed in the workplace or in a simulated workplace. **Specific resources for assessment** Access to scenarios that reflect a range of emergency situations that may be expected in the workplace.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Emergency reports, signals and warnings may include:	• audible/visual alarms • audible or vibrating pagers • coded or uncoded public address announcements • e-mail • screen alerts • stench alarms • verbal alert
People who may require assistance may include:	• babies and children • people with a mobility, intellectual, visual, auditory or sensory impairment, either temporary or permanent, who require assistance during an emergency response • people from diverse cultural and linguistic backgrounds • people who are injured • people who are not able to comprehend the instructions given • pregnant women • the elderly
Emergency stations may include:	• assembly or marshalling points • designated telephone or intercom • designated muster points • emergency control point • master emergency control point • warden’s inter-communication point (WIP) phones
Identification may include:	• armbands • helmets, caps, hats • uniforms • tabards, vests or other distinguishing/distinctive clothing
Initial emergency response may include:	• to evacuate • not to evacuate • to partially evacuate • advice or requests for emergency services • alternative evacuation • lateral evacuation • any guidance from emergency response team

© Commonwealth of Australia, 2025 Industry Skills Australia

- designated assembly area
- evacuation routes and destination
- not to re-enter the evacuated area until directed by emergency personnel
- shelter in place/lockdown
- relocating or providing welfare services for evacuated persons
- restricting entry to danger areas
- searching floors or areas
- supplying emergency equipment
- use of response equipment

Relevant person may include:

- emergency control organisation members
- emergency services personnel
- people with overall evacuation control responsibility or a person delegated with this responsibility
- police, fire and emergency services

Post initial response activities may include:

- assisting with recovery activities
- assisting with authorised restoration of normal activity
- participating in debriefing
- providing advice
- requests for emergency services or specialist response team
- relocating or providing welfare services for evacuated persons
- restricting entry to danger areas
- security
- supplying emergency equipment
- checking the welfare of evacuees

RIIBEF402D Supervise on-site operations

Modification History

Release	Comment
1	This unit replaces RIIBEF402A Supervise on-site operations
2	Corrected numbering in Performance Criteria.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to supervise on-site operations in the Resources and Infrastructure Industries.

This unit is appropriate for those working in supervisory roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Elements and Performance Criteria

1 Manage on-site safety	1.1 Access, interpret and apply site documentation and ensure the work activity is compliant 1.2 Relay safety rules and regulations, legislation and specific site instructions to personnel 1.3 Conduct equipment safety audits as required 1.4 Identify and document in writing hazards 1.5 Determine a range of preventative measures for potential hazards 1.6 Communicate procedures for the use and wear of personal protective equipment and installed safety equipment to personnel 1.7 Provide clear and concise instructions to others in emergency

© Commonwealth of Australia, 2025 Industry Skills Australia

	drills and their application 1.8 Establish methods for contacting all necessary medical services 1.9 Provide safety and/or equipment safety induction to new personnel and visitors 1.10 Complete work health and safety records
2 Communicate regularly with client, personnel, and other relevant parties	2.1 Brief personnel and other relevant parties regularly on up to date scope of activities 2.2 Maintain a good working relationship with landholder/client 2.3 Honour confidentiality clauses in contract 2.4 Communicate verbally and in writing progress, problems encountered/anticipated and results regularly to landholder/client/supervisor 2.5 Maintain regular communication by radio/telephone or other means to report progress and/or request information or assistance
3 Diagnose and solve routine and non-routine problems	3.1 Confirm, by investigation, the existence and immediate effects/potential effects of the problem 3.2 Identify a clear and accurate definition of the problem 3.3 Identify, through analysis of information, the preferred options and formulate action plans 3.4 Obtain additional equipment, contractors and/or advice as needed 3.5 Outline contingency plans 3.6 Organise alternative duties for personnel if problems cause hold-ups in production 3.7 Implement the preferred option
4 Control work program to ensure objectives are met	4.1 Monitor work progress regularly and take corrective action 4.2 Ensure availability of materials for schedules and tasks 4.3 Allocate specific tasks to make effective use of personnel 4.4 Prepare alternative plans if required 4.5 Implement alternative plans to meet work program objectives
5 Coordinate work of personnel	5.1 Make all personnel aware of their roles and responsibilities in the work plan 5.2 Set operational targets in consultation with personnel, and check at regular intervals 5.3 Provide assistance when requested, to meet operational targets

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.4 Acquire resources required to support changing work requirements 5.5 Allocate workloads and required resources in accordance with modified work plans 5.6 Communicate agreed time lines for tasks to personnel
6 Maintain operating records	6.1 Determine range of records, reports and their required frequency 6.2 Keep daily written running records to facilitate reporting 6.3 Complete written logs/records and/or shift reports 6.4 Note variations to contract requirements on log and discuss with originator and management 6.5 Complete required written reports and submit/distribute 6.6 Take and record in writing accurate measurements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIBEF402D Supervise on-site operations

Modification History

Release	Comment
1	This unit replaces RIIBEF402A Supervise on-site operations
2	Corrected numbering in Performance Criteria.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- works effectively with others to supervise on-site operations that meet all of the required outcomes including:
  - applying a range of communication techniques to clearly and concisely train and instruct others
  - applying a range of communication techniques to communicate/consult clearly and concisely all technical information, rules, procedures and regulations to others
- demonstrates completion of supervising on-site operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - identifying hazards on site and determining a range of preventative measures
  - inducting new personnel and visitors about on-site and equipment safety procedures
  - identifying and defining potential problems and impact through investigating and analysis of available information
  - outlining contingency plans and implementing appropriate action to resolve the problem
  - reviewing the outcome of work and refining decisions for future activity
  - allocating tasks to others and ensuring compliance to policies and meeting targets

© Commonwealth of Australia, 2025 Industry Skills Australia

- managing people and process effectively including conflict resolution and negotiation with others
- maintaining written records and logs

Knowledge Evidence

The candidate must demonstrate knowledge when supervising on-site operations through:

- operational and maintenance procedures
- fault finding and troubleshooting techniques
- working in teams
- communication systems, processes and procedures (e.g. two way radio)
- graphical representation (e.g. maps, diagrams, and their uses for interpretation and prediction)
- maintaining required documentation (e.g. requisition forms, daily log reports)

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Industry Skills Australia

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIICBS312D Conduct bitumen tanker operations

Modification History

Release	Comment
1	This unit replaces RIICBS312A Conduct bitumen tanker operations
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct bitumen tanker operations in Civil Construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for bitumen tanker operations	1.1 Access, interpret and apply bitumen tanker operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Select and check for faults plant, tools and equipment to carry out tasks 1.6 Confirm and apply environmental protection and safety

© Commonwealth of Australia, 2025 Industry Skills Australia

	requirements 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Set up tanker for operation	2.1 Carry out pre-operational checks on bitumen tanker 2.2 Fill ancillary tanks and ensure adequate materials are available to perform tanker operations 2.3 Check tanks to prevent contamination 2.4 Obtain load details, including correct amount of any additives
3. Load tanker	3.1 Carry out pre-start and start-up procedures 3.2 Drive and operate tanker 3.3 Check previous load details for compatibility 3.4 Load tank with the prescribed amount of material 3.5 Add and mix additives to specifications 3.6 Check temperature of the material and ensure compliance with manufacturer's specifications 3.7 Measure, calculate and record material quantities and additives 3.8 Heat materials in accordance with manufacturer's/suppliers' instructions
4. Transfer materials	4.1 Set up transfer site 4.2 Confirm transfer procedures with depot supervisor/sprayer driver 4.3 Transfer materials 4.4 Record details of transferred materials
5. Empty tanker	5.1 Empty tank into storage or waste 5.2 Clean tank interior
6. Carry out operator maintenance	6.1 Prepare machine for maintenance 6.2 Conduct inspection and fault finding 6.3 Carry out scheduled maintenance tasks 6.4 Process written maintenance records
7. Clean up	7.1 Clear work area and dispose of or recycle materials 7.2 Clean, check, maintain and store plant, tools and equipment 7.3 Carry out housekeeping requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICBS312D Conduct bitumen tanker operations

Modification History

Release	Comment
1	This unit replaces RIICBS312A Conduct bitumen tanker operations
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable legislation, documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the conduct of bitumen tanker operations including:
  - select and use relevant tools and equipment safely
  - identify and report on hazards related to the worksite and work activity
- works effectively with others to undertake and complete the conduct of bitumen tanker operations that meets all of the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to resolve coordination requirements prior to commencing and during work activities
- demonstrates completion of conducting bitumen tanker operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - transfer a minimum of three (3) different materials, one of which must be a PMB;
    - loaded from a refinery or depot
    - mixed and heated
    - transferred to at least one roadside and one storage depot
  - calculation and recording of all details for the activities

© Commonwealth of Australia, 2025 Industry Skills Australia

- compliance with the instructions for transferring listed in Austroads Bitumen Sealing Safety guide

Knowledge Evidence

The candidate must demonstrate knowledge in conducting bitumen tanker operations through:

- accessing, interpreting and applying legislative, organisation and site requirements and procedures for:
  - site and equipment safety requirements
  - heating bitumen
  - housekeeping
- equipment types, characteristics, technical capabilities and limitations
- understanding bituminous materials and their characteristics
- complying with the operational, maintenance and basic diagnostic procedures
- safety data sheets and materials handling methods
- understanding the treatment for bitumen burns
- complying with the quality requirements and environmental systems and standards
- understanding the handling and safe use of bitumen hoses
- preparing and/or implementing JSAs/JSEA/safe work method statements

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector’s work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,

Assessment Requirements for RIICCM201D Carry out measurements and calculations

Modification History

Release	Comment
1	This unit replaces RIICCM201A Carry out measurements and calculations.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient carrying out of measurements and calculations including:
  - calculating each of the following using a realistic civil construction project:
    - quantity
    - length
    - perimeter
    - circumference
    - area
    - volume
    - number
    - ratio
    - percentage
- works effectively with others to undertake and complete measurements and calculations that meet all of the required outcomes, including:
  - using a range of communications techniques and equipment
  - complying with written and verbal reporting requirements and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- demonstrates completion of measurements and calculations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completing measurements, calculations and estimations of quantities for projects of varying complexity
  - measuring using a rule or tape measure for a variety of tasks within 98% accuracy

Knowledge Evidence

The candidate must demonstrate knowledge of the following when carrying out measurements and calculations:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using operational tools and equipment safely and effectively
  - achieving project quality and accuracy
  - using JSA's/JSEA/Safe work methods
- conversion of different metric values e.g. metres to millimetres
- understanding tolerances
- completing measuring, calculating, geometry and determination of quantities
- caring for measuring equipment
- working with civil construction terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

© Commonwealth of Australia, 2025 Industry Skills Australia

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

RIICCM203D Read and interpret plans and job specifications

Modification History

Release	Comment
1	This unit replaces RIICCM203A Read and interpret plans and specifications.
2	Editorial corrections.
3	Amended Performance Evidence.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to read and interpret plans and specifications in Civil Construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for read and interpret plans and job specifications	1.1 Access, interpret and apply plans and job specification documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify the main types of plans and drawings used in the Industry 1.4 Identify the key functions of each type of drawing 1.5 Recognise and adhere to quality requirements of company

© Commonwealth of Australia, 2025 Industry Skills Australia

	operations 1.6 Identify environmental controls from the job plans, specifications and environmental plan
2. Recognise amendments	2.1 Check title panel to verify latest amendments to drawing 2.2 Check amendments to specifications and ensure currency of information
3. Recognise commonly used symbols and abbreviations	3.1 Identify and confirm civil construction symbols and abbreviations 3.2 Locate and interpret legend on project drawings
4. Locate and identify key features on site plan	4.1 Achieve orientation of the plan with the site 4.2 Identify and locate key features of the site 4.3 Gain access to site and identify services, main features, contours and datum
5. Read and interpret job specifications	5.1 Identify and confirm job specifications from drawings, notes and descriptions 5.2 Identify and confirm standards of work, finishes and tolerances from job specifications 5.3 Identify and confirm material attributes from job specifications

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICCM203D Read and interpret plans and job specifications

Modification History

Release	Comment
1	This unit replaces RIICCM203A Read and interpret plans and specifications.
2	Editorial corrections.
3	Amended Performance Evidence.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the reading and interpreting of plans and specifications including:
  - communicating effectively to clarify instructions/information
  - orienting/confirming the orientation of a plan
- works effectively with others to undertake and complete the reading and interpreting of plans and specifications that meet all of the required outcomes including:
  - using a range of communications techniques and equipment
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of reading and interpreting plans and specifications that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - identifying key features on site plans
  - recognising clear discrepancies and verifications between the documents (map, plan, specifications) and the actual site and taking action to correct
  - gaining access to sites and identifying symbols, abbreviations, services, main features, contours and datum

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

The candidate must demonstrate knowledge of the following when reading and interpreting plans and specifications:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - identifying and reporting on hazards
  - achieving project quality and accuracy
  - using JSA's/JSEA/Safe work methods
- planning and organising work activities
- working with civil construction terminology
- identifying types of services/utilities and providers
- using construction principles
- carrying out basic calculations of heights, areas, volumes and grades
- interpreting features of plans and elevations including direction, scale, key, contours, symbols and abbreviations
- interpreting commonly used civil construction symbols and abbreviations
- application of scales in plan preparation and interpretation
- identifying key features of formal job specifications
- complying with drawing conventions

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

© Commonwealth of Australia, 2025 Industry Skills Australia

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIICCM205D Carry out manual excavation

Modification History

Release	Comment
1	This unit replaces RIICCM205A Carry out manual excavation.
2	Editorial corrections.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to carry out manual excavation in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for manual excavation	1.1 Access, interpret and apply manual excavation documentation, and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Identify, obtain and implement traffic signage requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Dig small excavations by hand	2.1 Confirm the location and specifications of the intended excavation 2.2 Identify service markers/taped areas 2.3 Determine and confirm location of underground services and avoid damage/interference 2.4 Use hand tools, and dig post holes, small pits and trenches to the required dimensions 2.5 Undertake trench collapse prevention procedures, where excavation is in unstable ground 2.6 Place barricades around the excavation
3. Complete and isolate the excavation	3.1 Clean loose material out of excavation using hand tools 3.2 Check excavation complies with the specification/work instruction 3.3 Clear loose material away from the edge of excavation
4. Conduct housekeeping activities	4.1 Clear work area and dispose of or recycle materials 4.2 Clean and maintain condition of equipment, ensure suitability for use, and address/report issues 4.3 Manage/report hazards, and maintain a safe working environment 4.4 Process written records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICCM205D Carry out manual excavation

Modification History

Release	Comment
1	This unit replaces RIICCM205A Carry out manual excavation.
2	Editorial corrections.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of manual excavation including:
  - using manual excavation tools
  - using concreting tools, plant and equipment
  - communicating effectively to receive and clarify work instructions
- works effectively with others to undertake and complete the manual excavation in a way that meets all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of manual excavation that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - identifying the location of underground services
  - digging post holes, small pits and trenches to the required dimensions
  - applying trench collapse prevention procedures in unstable ground

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

The candidate must demonstrate knowledge of the following when carrying out manual excavation:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using JSAs/safe work methods
  - achieving project quality outcomes
  - identifying and reporting on hazards related to the worksite and work activity
- organising work activities
- using relevant tools and equipment safely
- identifying types, uses, limitations and maintenance requirements of manual excavation tools
- applying basic principles of soil technology for civil works
- using basic trench collapse prevention techniques including benching and battering
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,

RIICCM207D Spread and compact materials manually

Modification History

Release	Comment
1	This unit replaces RIICCM207A Spread and compact materials manually.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to spread and compact materials manually in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for manually spreading and compacting materials	1.1 Access, interpret and apply spreading and compacting materials documentation, and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Identify, obtain and implement traffic signage requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Conduct compaction machine operational checks	2.1 Carry out pre-start, start-up and shutdown procedures 2.2 Check machine controls and functions for serviceability, and rectify or report any faults
3. Spread and compact materials	3.1 Conduct basic field identification test and identify material type 3.2 Direct trucks to required location for loading/dumping 3.3 Direct delivered/relocated materials to correct location 3.4 Check manufactured material for segregation 3.5 Conduct field test to ensure material moisture is suitable 3.6 Direct machine operator to spread materials to specified levels 3.7 Finish materials by hand to specified levels 3.8 Operate mechanical compaction equipment and consolidate materials into layers 3.9 Conduct field test to ensure compaction has been achieved in restricted locations
4. Conduct housekeeping activities	4.1 Clear work area and dispose of or recycle materials 4.2 Clean and maintain condition of equipment, ensure suitability for use, and address/report issues 4.3 Manage/report hazards, and maintain a safe working environment 4.4 Process written records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICCM207D Spread and compact materials manually

Modification History

Release	Comment
1	This unit replaces RIICCM207A Spread and compact materials manually.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the manual spreading and compacting of materials including:
  - selecting and using relevant tools/equipment
  - carrying out equipment pre-start, start-up and shutdown
  - conducting practical field tests for moisture content, shrinkage and compaction
  - communicating effectively to direct operators
- works effectively with others to undertake and complete the manual spreading and compacting of materials that meets all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of manually spreading and compacting materials that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completing the hand spreading and the mechanical (hand operated) compaction of two (2) different material types to site specification

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

The candidate must demonstrate knowledge of the following when spreading and compacting materials manually:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using JSAs/JSEA/safe work methods
  - achieving project quality outcomes
  - identifying and reporting on hazards related to the worksite and work activity
  - applying materials handling methods and using safety data sheets
- organising work activities
- using relevant tools and equipment safely
- identifying hand operated mechanical compaction machine types, characteristics, technical capabilities and limitations
- applying basic principles of soil technology for civil works
- identifying basic soil compaction theory including the effects of moisture and mechanical interlock
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

© Commonwealth of Australia, 2025 Industry Skills Australia

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

RIICCM208D Carry out basic levelling

Modification History

Release	Comment
1	This unit replaces RIICCM208A Carry out basic levelling.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to carry out basic levelling in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for basic levelling	1.1 Access, interpret and apply basic levelling documentation, and ensure the work activity is complaint 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.5 Identify, obtain and implement traffic signage requirements 1.6 Select equipment and/or attachments for work activities, and check for faults and serviceability within specified tolerances 1.7 Identify environmental protection requirements 1.8 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Establish offsets to plans and drawings	2.1 Establish offset and recovery pegs from survey controls to specified plans and drawings 2.2 Re-establish earthwork and pavement control lines from offsets and/or recovery pegs 2.3 Establish drainage offsets from survey control
3. Set up and use levelling device	3.1 Identify heights to be transferred/established from project plans or instructions 3.2 Set up and use levelling instruments, and complete levelling 3.3 Transfer heights from the known to the required 3.4 Document results of levelling procedure
4. Conduct housekeeping activities	4.1 Clear work area and dispose of or recycle materials 4.2 Clean and maintain condition of equipment, ensure suitability for use, and address/report issues 4.3 Manage/report hazards, and maintain a safe working environment 4.4 Process written records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICCM208D Carry out basic levelling

Modification History

Release	Comment
1	This unit replaces RIICCM208A Carry out basic levelling.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of basic levelling including:
  - selecting and using relevant tools/equipment
  - carrying out basic leveling mathematics
  - following basic civil construction processes
  - communicating effectively to confirm work requirements/plans/drawings
- works effectively with others to undertake and complete the basic levelling in a way that meets all of the required outcomes, including:
  - using a range of communications techniques and equipment to convey information to others
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of carrying out basic levelling that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - conducting different levelling tasks, at least one (1) utilising an automatic level. One (1) of the tasks must include closed traverse utilising ***either*** the height of instrument ***or*** rise and fall method of reduction

© Commonwealth of Australia, 2025 Industry Skills Australia

- conducting a peg test with an automatic level, to confirm instrument meets manufacturer's tolerances
- accurately recording of the results of each levelling procedure to organisational requirements

Knowledge Evidence

The candidate must demonstrate knowledge of the following when carrying out basic levelling:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using JSAs/JSEA/safe work methods
  - achieving project quality outcomes
  - identifying and reporting on hazards related to the worksite and work activity
  - applying materials handling methods and using safety data sheets
- organising work activities
- using relevant tools and equipment safely
- identifying leveling devices, characteristics, technical capabilities and limitations
- read, interpret and applying civil construction plan, symbols and construction terminology
- identifying site isolation and traffic control responsibilities and authorities
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,

RIICCM209D Carry out concrete work

Modification History

Release	Comment
1	This unit replaces RIICCM209A Carry out concrete work.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to carry out concrete work in Civil Construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for concrete work	1.1 Access, interpret and apply concrete work documentation, and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.5 Identify, obtain and implement traffic signage requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Identify environmental protection requirements 1.8 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Select materials	2.1 Determine location requirements of steel reinforcement and formwork 2.2 Confirm reinforcement requirements 2.3 Select formwork components/materials 2.4 Select and use fixing/fasteners
3. Set out for concrete work	3.1 Set string lines accurately from existing pegs 3.2 Check grades and ensure correct fall 3.3 Identify services, protect and prevent damage
4. Construct and fit reinforcement	4.1 Cut and bend reinforcing fabric and bars 4.2 Tie/fix fabric and bars to configuration 4.3 Attach stiffening rods to panels as required to facilitate handling 4.4 Locate reinforcement material in formwork, and place it on bar chairs/spacers, and confirm clearance from formwork 4.5 Locate and secure cast-ins
5. Erect formwork	5.1 Clear work area and prepare surface for erection of formwork 5.2 Set out formwork 5.3 Assemble/erect and brace formwork 5.4 Position expansion joints to specification and to relevant Australian standard 5.5 Position dowel joints 5.6 Remove debris, sawdust and other waste material from formwork 5.7 Apply release agent to manufacturer’s specifications
6. Carry out concrete work	6.1 Place concrete to specified levels and grades and avoid segregation 6.2 Compact concrete using immersion vibrator or other specified method

© Commonwealth of Australia, 2025 Industry Skills Australia

	6.3 Screed, finish and apply curing process to concrete 6.4 Cover and protect concrete surface
7. Strip formwork	7.1 Remove edge boxing and braces sequentially 7.2 Denail, clean, store/stack timber components 7.3 Clean, oil, store/stack steel components 7.4 Discard damaged formwork components after stripping 7.5 Clean screens before movement
8. Conduct housekeeping activities	8.1 Clear work area and dispose of or recycle materials 8.2 Clean and maintain condition of equipment, ensure suitability for use, and address/report issues 8.3 Manage/report hazards, and maintain a safe working environment 8.4 Process written records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICCM209D Carry out concrete work

Modification History

Release	Comment
1	This unit replaces RIICCM209A Carry out concrete work.
2	Editorial corrections Amended Performance Evidence.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of concrete work including:
    - selecting and using relevant tools/equipment
    - carrying out steel reinforcement
    - completing formwork
    - communicating effectively to confirm work requirements/drawings/specifications
- works effectively with others to undertake and complete concrete work that meets all of the required outcomes including:
    - using a range of communications techniques and equipment to convey information to others
    - complying with written and verbal reporting requirements and procedures
- demonstrates completion of carrying out concrete work that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
    - set up string lines, framework and reinforcements
    - position expansion and dowel joints
    - place concrete according to job specifications

© Commonwealth of Australia, 2025 Industry Skills Australia

- compact concrete
- screed/finish concrete surface

Knowledge Evidence

The candidate must demonstrate knowledge of the following when carrying out concrete work:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using JSAs/JSEA/safe work methods
  - achieving project quality outcomes
  - identifying and reporting on hazards related to the worksite and work activity
  - applying materials handling methods and using safety data sheets
- organising work activities
- using relevant tools and equipment safely
- identifying equipment types, characteristics, technical capabilities and limitations
- identifying site isolation and traffic control responsibilities and authorities
- identifying concrete characteristics and properties
- using concreting principles
- using structural technology
- using civil construction terminology
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

© Commonwealth of Australia, 2025 Industry Skills Australia

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.
**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIHAN301D Operate elevating work platform

Modification History

Release	Comment
1	This unit replaces RIIHAN301B Operate elevating work platform
2	Editorial corrections; Amend reference to Licensing requirements in Unit Application
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to operate an elevating work platform in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and Industry sectors. Relevant information must be sourced prior to application of the unit.

Elements and Performance Criteria

1. Plan and prepare for operating an elevating work platform	1.1 Access, interpret and apply elevating work platforms documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Select and wear personal protective equipment appropriate for work activities 1.4 Identify and select any required tools and equipment, check for serviceability and rectify or report, verbally or in writing, any faults prior to commencement 1.5 Perform pre-start and post-start inspections/checks 1.6 Coordinate activities with others prior to commencement of, and during, the work activity

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.7 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.8 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Conduct work activities from elevating work platform	2.1 Stabilise elevating work platform 2.2 Place tools and equipment into bucket/platform 2.3 Use approved safety devices, ensure safety of personnel and surrounding site 2.4 Act on or report, verbally or in writing, monitoring systems and alarms 2.5 Recognise and respond to hazardous and emergency situations 2.6 Complete work and shut-down in accordance with agreed work plan
3. Carry out operator maintenance	3.1 Carry out work platform inspections and fault finding 3.2 Carry out routine operational servicing, lubrication and housekeeping tasks in accordance with manufacturer's instructions and site authorised procedures and practices 3.3 Carry out minor operator maintenance to manufacturer's instructions and site requirements 3.4 Process written records
4. Clean up	4.1 Clear work area and reuse, recycle or dispose of materials 4.2 Check, clean, maintain and store plant, tools and equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIHAN301D Operate elevating work platform

Modification History

Release	Comment
1	This unit replaces RIIHAN301B Operate elevating work platform
2	Editorial corrections; Amend reference to Licensing requirements in Unit Application
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of operating elevating work platforms including:
  - selecting and using the required plant, tools and equipment
  - planning and preparing for operating elevating work platforms
  - identifying, addressing and/or reporting, verbally or in writing monitoring systems and alarms
  - identifying and following procedures in emergency or hazardous situations
  - applying hand-eye coordination
- works effectively with others to undertake and complete the operation of elevating work platforms that meet all of the required outcomes including:
  - using a range of communication techniques and equipment to coordinate activities with others
  - maintaining written and verbal reporting requirements and procedures
- demonstrates completion of operating elevating work platforms that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:

© Commonwealth of Australia, 2025 Industry Skills Australia

- stabilising elevating work platform
- selecting safety devices and correctly ensuring safety of personnel and surrounding site
- completing work platform inspections and fault finding
- completing operational servicing, lubrication and housekeeping tasks
- disposing of environmentally sensitive oils, fluids and materials

Knowledge Evidence

The candidate must demonstrate knowledge of the following when operating an elevating work platform:

- the appropriate National Certification Standards
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- elevating work platform operational procedures
- basic geological and survey data related to elevating work platforms
- site environmental requirements and constraints related to elevating work platforms

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,

RIIMPO317D Conduct roller operations

Modification History

Release	Comment
1	This unit replaces RIIMPO317A Conduct roller operations. Performance Criteria amended to include Manoeuvring, Driving and Parking Up; made requirements more explicit; introduced Housekeeping element.
2	Editorial corrections; Modification History added.
3	Removed repetition from Performance Criteria; amended Performance Evidence wording; editorial corrections.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct roller operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare roller operations	1.1 Access, interpret and apply roller operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address risks, hazards and environmental issues

© Commonwealth of Australia, 2025 Industry Skills Australia

	and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Identify, obtain and implement traffic management signage requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate roller	2.1 Carry out Pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks , and ensure safety of self, other personnel, plant and equipment 2.4 Drive and operate roller, and modify the operating technique to meet changing work conditions 2.5 Complete work plan within the operating capacity of the equipment 2.6 Engage and disengage the compacting device 2.7 Identify, remove or manage contaminants 2.8 Act on or report monitoring systems and alarms
3. Select, remove and fit attachments	3.1 Select attachment for the task 3.2 Remove and fit attachment 3.3 Test attachment to ensure correct fitting and operation 3.4 Use attachment in accordance with recommendations and design limits 3.5 Clean and store removed attachments in designated location
4. Relocate the roller	4.1 Prepare the roller for relocation 4.2 Move the machine between worksites, observing relevant codes and traffic management requirements 4.3 Load and unload machine from float/trailer
5. Carry out machine operator maintenance	5.1 Prepare machine for maintenance 5.2 Conduct inspection and fault finding 5.3 Carry out scheduled maintenance tasks

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.4	Return machine to service
	5.5	Process written maintenance records
6. Conduct housekeeping activities	6.1	Clear work area and dispose of or recycle materials
	6.2	Process records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Unit Mapping Information

No equivalent unit

Assessment Requirements for RIIMPO317D Conduct roller operations

Modification History

Release	Comment
1	This unit replaces RIIMPO317A Conduct roller operations. Performance Criteria amended to include Manoeuvring, Driving and Parking Up; made requirements more explicit; introduced Housekeeping element.
2	Editorial corrections; Modification History added.
3	Removed repetition from Performance Criteria; amended Performance Evidence wording; editorial corrections.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of roller operations in the civil construction Industry including:
  - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
  - carrying out vehicle refuelling requirements and procedures
  - driving and operating the equipment to site conditions
  - applying safe work practices and identifying and reporting all potential hazards, risks and environmental issues
  - applying problem solving and troubleshooting techniques
  - applying operating techniques for leveling and compacting
  - selecting and using the required tools and equipment
  - working safely around other machines and personnel
  - safe parking and securing of equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

- works effectively with others to undertake and complete roller operations in the civil construction industry that meet all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others
  - maintaining written and verbal reporting requirements and procedures
  - organising work activities to meet all task requirements
  - communicating clearly and concisely with others to receive and clarify work instructions
- demonstrates completion of conducting roller operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completion of operations using a variety of different material types and include the mandatory tasks of:
    - compacting materials to pattern and density
    - sealing and finishing
    - the removal and fitting of at least one attachment

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting roller operations:

- identifying, interpreting ground conditions
- communicating and performing isolation procedures
- identifying equipment processes, technical capability and limitations
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- complying with project quality requirements
- applying basic principles of soil technology and soil compaction for civil works
- using basic earthworks calculations
- using civil construction activity sequences of road construction, earthworks and drainage
- applying operational, maintenance and basic diagnostics
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector’s work environment; and,

© Commonwealth of Australia, 2025 Industry Skills Australia

- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

RIIMPO318D Conduct civil construction skid steer loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO318B Conduct civil construction skid steer loader operations.
2	Amend terminology used in Performance Evidence; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct civil construction skid steer loader operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for skid steer loader operations	1.1 Access, interpret and apply skid steer loader operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.5 Obtain, identify and implement traffic signage requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate skid steer loader	2.1 Carry out pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks , and ensure safety of self, other personnel, plant and equipment 2.4 Drive and operate loader, and modify the operating technique to meet changing work conditions 2.5 Complete work plan within the operating capacity of the equipment 2.6 Act on or report monitoring systems and alarms
3. Load, carry and place materials	3.1 Conduct communication practices associated with transportation and lifting of materials 3.2 Establish weight of load and ensure it is within safe operational limits of the machine 3.3 Select, attach and apply slings and/or lifting gear in accordance with safe working load requirements 3.4 Position machinery to ensure stability and locate to effectively shift materials according to job specifications 3.5 Shift load safely and effectively 3.6 Move load using hand/audible/communication signals
4. Select, remove and fit attachments	4.1 Select attachment for the task 4.2 Remove and fit attachment 4.3 Test attachment and ensure correct fitting and operation 4.4 Use attachment in accordance with recommendations and design limits 4.5 Clean and store removed attachments in designated location
5. Relocate the skid steer loader	5.1 Prepare for relocation of skid steer loader 5.2 Move skid steer loader safely between worksites, observing relevant codes and traffic management requirements 5.3 Load and unload machine from float/trailer

© Commonwealth of Australia, 2025 Industry Skills Australia

6. Carry out machine operator maintenance	6.1	Prepare machine for maintenance
	6.2	Conduct inspection and fault finding
	6.3	Carry out scheduled maintenance tasks
	6.4	Process written maintenance records
7. Conduct housekeeping activities	7.1	Clear work area and dispose of or recycle materials
	7.2	Process records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIMPO318D Conduct civil construction skid steer loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO318B Conduct civil construction skid steer loader operations.
2	Amend terminology used in Performance Evidence; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of civil construction skid steer loader operations including:
  - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
  - carrying out vehicle refuelling requirements and procedures
  - driving and operating the equipment to site conditions
  - applying safe work practices and identifying and reporting all potential hazards, risks and environmental issues
  - applying problem solving and troubleshooting techniques
  - applying leveling techniques
  - selecting and using the required tools and equipment
  - working safely around other machines and personnel
  - safely parking and securing equipment
  - applying methods of changing machine attachments
- works effectively with others to undertake and complete civil construction skid steer loader operations that meet all of the required outcomes including:

© Commonwealth of Australia, 2025 Industry Skills Australia

  - using a range of communications techniques and equipment to convey information to others
  - maintaining written and verbal reporting requirements and procedures
  - organising work activities to meet all task requirements
  - communicating clearly and concisely with others to receive and clarify work instructions
- demonstrates completion of conducting civil construction skid steer loader operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completion of operations to specification using a variety of material types during the three occasions, including:
    - stripping/spreading topsoil and materials
    - backfilling
    - lifting, loading vehicles
    - excavations
    - mixing materials
    - site clean-up

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting civil construction skid steer loader operations:

- identifying and interpreting ground conditions
- communicating and performing isolation procedures
- identifying equipment processes, technical capability and limitations
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- complying with project quality requirements
- applying basic principles of soil technology and soil compaction for civil works
- using basic earthworks calculations
- using civil construction activity sequences of road construction, earthworks and drainage
- using methods for calculating safe working loads
- applying operational, maintenance and basic diagnostics
- completing housekeeping activities

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

© Commonwealth of Australia, 2025 Industry Skills Australia

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIMPO319D Conduct backhoe/loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO319A Conduct backhoe loader operations.
2	Amended Performance Evidence and Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct backhoe/loader operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for backhoe/loader operations	1.1 Access, interpret and apply backhoe/loader operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work instructions 1.3 Identify and address risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Identify, obtain and implement signage traffic management

© Commonwealth of Australia, 2025 Industry Skills Australia

	requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate backhoe/ loader	2.1 Carry out pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks , and ensure safety of self, other personnel, plant and equipment 2.4 Drive and operate machine, and modify the operating technique to meet changing work conditions 2.5 Complete work plan within the operating capacity of the equipment 2.6 Act on or report monitoring systems and alarms
3. Load, carry and place materials	3.1 Conduct communication practices associated with transportation and lifting of materials 3.2 Establish weight of load and ensure it is within safe operational limits of the machine 3.3 Select, attach and apply slings and lifting gear in accordance with safe working load requirements 3.4 Position and locate machinery to ensure stability to effectively shift materials according to job specifications 3.5 Shift load safely and effectively 3.6 Move load using hand/audible/communication signals
4. Select, remove and fit attachments	4.1 Select attachment for the task 4.2 Remove and fit attachment 4.3 Test attachment and ensure correct fitting and operation 4.4 Use attachment in accordance with recommendations and design limits 4.5 Clean and store removed attachments in designated location
5. Relocate the backhoe/ loader	5.1 Prepare backhoe/loader for relocation 5.2 Move backhoe/loader safely between worksites, observing relevant codes and traffic management requirements
6. Carry out machine	6.1 Prepare machine for maintenance

© Commonwealth of Australia, 2025 Industry Skills Australia

operator maintenance	6.2	Conduct inspection and fault finding
	6.3	Carry out scheduled maintenance tasks
	6.4	Process written maintenance records
7. Clean up	7.1	Clear work area and dispose of or recycle materials
	7.2	Process records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIMPO319D Conduct backhoe/loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO319A Conduct backhoe loader operations.
2	Amended Performance Evidence and Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of backhoe/ loader operations including:
  - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
  - carrying out vehicle refuelling requirements and procedures
  - driving and operating the equipment to site conditions
  - applying safe work practices and identifying and reporting all potential hazards, risks and environmental issues
  - applying problem solving and troubleshooting techniques
  - applying leveling techniques
  - selecting and using the required tools and equipment
  - working safely around other machines and personnel
  - safely parking and securing of equipment
  - applying methods of changing machine attachments
- works effectively with others to undertake and complete backhoe/ loader operations that meet all of the required outcomes including:

© Commonwealth of Australia, 2025 Industry Skills Australia

  - using a range of communications techniques and equipment to convey information to others
  - maintaining written and verbal reporting requirements and procedures
  - organising work activities to meet all task requirements
  - communicating clearly and concisely with others to receive and clarify work instructions
- demonstrates completion of conducting backhoe/loader operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completion of operations to specification using a variety of material types including:
    - mixing materials
    - stripping/spreading topsoils and materials
    - trench excavation
    - backfilling
    - lifting and carrying materials
    - loading dump trucks, wagons, hoppers, chutes, and cutting/boxing
  - fitting and removal a variety of attachments selected from the following:
    - extending devices
    - tilt bucket
    - buckets
    - compaction wheel
    - ripper
    - plate compactor
    - rock breaker
    - auger
    - broom
    - mower/slasher
    - forklift
    - 4 in 1 bucket and free/rock grab

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting backhoe/loader operations:

- identifying, interpreting ground conditions
- communicating and performing isolation procedures
- identifying equipment processes, technical capability and limitations
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities

© Commonwealth of Australia, 2025 Industry Skills Australia

- using civil construction terminology
- complying with project quality requirements
- applying basic principles of soil technology and soil compaction for civil works
- using basic earthworks calculations
- using civil construction activity sequences of road construction, earthworks and drainage
- applying leveling techniques
- using methods for calculating safe working loads
- applying operational, maintenance and basic diagnostics
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years

© Commonwealth of Australia, 2025 Industry Skills Australia

Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIMPO320D Conduct civil construction excavator operations

Modification History

Release	Comment
1	This unit replaces RIIMPO320B Conduct civil construction excavator operations.
2	Performance Evidence wording amended; removed repetition from Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct civil construction excavator operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for excavator operations	1.1 Access, interpret and apply excavator operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Obtain, identify and implement traffic management signage

© Commonwealth of Australia, 2025 Industry Skills Australia

	requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate excavator	2.1 Carry out pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks, and ensure safety of self, other personnel, plant and equipment 2.4 Drive and operate excavator, and modify the operating technique to meet changing work conditions
3. Lift, carry and place materials	3.1 Conduct communication practices associated with transportation and lifting of materials 3.2 Establish weight of load and ensure it is within safe operational limits of the machine 3.3 Select, attach and use slings and lifting gear in accordance with safe working load requirements 3.4 Position machinery and ensure stability and locate to effectively shift materials according to job specifications 3.5 Shift load safely and effectively 3.6 Move load using hand/audible/communication signals
4. Select, remove and fit attachments	4.1 Select attachment for the task 4.2 Remove and fit attachment according to manufacturer's manual and site requirements 4.3 Test attachment and ensure correct fitting and operation 4.4 Use attachment in accordance with recommendations and design limits 4.5 Remove, clean and store attachments in designated location
5. Relocate the excavator	5.1 Prepare excavator for relocation 5.2 Move excavator safely between worksites, observing relevant codes and traffic management requirements 5.3 Load and unload machine from float/trailer
6. Carry out machine operator maintenance	6.1 Prepare machine for maintenance 6.2 Conduct inspection and fault finding

© Commonwealth of Australia, 2025 Industry Skills Australia

	6.3	Carry out scheduled maintenance tasks
	6.4	Process written maintenance records
7. Conduct housekeeping activities	7.1	Clear work area and dispose of or recycle materials
	7.2	Process records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

  - using a range of communications techniques and equipment to convey information to others
  - maintaining written and verbal reporting requirements and procedures
  - organising work activities to meet all task requirements
  - communicating clearly and concisely with others to receive and clarify work instructions
- demonstrates completion of conducting civil construction excavator operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completion of operations to specification using a variety of material types including:
    - loading
    - lifting and carrying materials
    - bulk excavation
    - backfilling
    - trench excavation
    - stockpiling
    - battering
    - benching
    - site clean up
  - fitting and removal of a variety of attachments selected from the following:
    - tilt bucket
    - buckets
    - lifting device
    - vibrating compaction wheel
    - ripper/tyne
    - compaction plate
    - compaction wheel
    - rock breaker
    - auger

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting civil construction excavator operations:

- identifying, interpreting ground conditions
- communicating and performing isolation procedures
- identifying equipment processes, technical capability and limitations
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities

RIIMPO321D Conduct civil construction wheeled front end loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO321B Conduct civil construction wheeled front end loader operations.
2	Performance Evidence wording amended; removed repetition from Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct civil construction wheeled front end loader operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for wheeled front end loader operations	1.1 Access, interpret and apply wheeled front end loader operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work instructions 1.3 Identify and address risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for

© Commonwealth of Australia, 2025 Industry Skills Australia

	work activities 1.5 Obtain, identify and implement traffic management signage requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate front end loader	2.1 Carry out pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks, and ensure safety of self, other personnel, plant and equipment 2.4 Drive and operate front end loader, and modify the operating technique to meet changing work conditions 2.5 Complete work plan within the operating capacity of the equipment 2.6 Act on or report monitoring systems and alarms
3. Attach, secure, lift, carry and place materials	3.1 Conduct communication practices associated with transportation and lifting of materials 3.2 Establish weight of load and ensure it is within safe operational limits of the machine 3.3 Select, attach and use slings and lifting gear in accordance with safe working load requirements 3.4 Position machinery to ensure stability and locate to effectively shift materials according to job specifications 3.5 Shift load safely and effectively 3.6 Move load using hand/audible/communication signals
4. Select, remove and fit attachments	4.1 Select attachment for the task 4.2 Remove and fit attachment 4.3 Test attachment and ensure correct fitting and operation 4.4 Use attachment in accordance with recommendations and design limits 4.5 Clean and store removed attachments in designated location
5. Relocate the front end loader	5.1 Prepare front end loader for relocation 5.2 Move front end loader safely between worksites, observing

© Commonwealth of Australia, 2025 Industry Skills Australia

	relevant codes and traffic management requirements 5.3 Load and unload machine from float/trailer
6. Carry out machine operator maintenance	6.1 Prepare machine for maintenance 6.2 Conduct inspection and fault finding 6.3 Carry out scheduled maintenance tasks 6.4 Process written maintenance records
7. Conduct housekeeping activities	7.1 Clear work area and dispose of or recycle materials 7.2 Process records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIMPO321D Conduct civil construction wheeled front end loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO321B Conduct civil construction wheeled front end loader operations.
2	Performance Evidence wording amended; removed repetition from Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of civil construction wheeled front end loader operations including:
  - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
  - carrying out vehicle refuelling requirements and procedures
  - driving and operating the equipment to site conditions
  - applying safe work practices and identifying and reporting all potential hazards, risks and environmental issues
  - applying problem solving and troubleshooting techniques
  - applying leveling techniques
  - selecting and using the required tools and equipment
  - working safely around other machines and personnel
  - safely parking and securing of equipment
  - applying methods of changing machine attachments
- works effectively with others to undertake and complete civil construction wheeled front end loader operations that meet all of the required outcomes including:

© Commonwealth of Australia, 2025 Industry Skills Australia

- using a range of communications techniques and equipment to convey information to others
- maintaining written and verbal reporting requirements and procedures
- organising work activities to meet all task requirements
- communicating clearly and concisely with others to receive and clarify work instructions

- demonstrates completion of civil construction wheeled front end loader operations that safely, effectively and efficiently meets all of the required outcomes including:
  - completion of operations to specification in a minimum of two different material types including:
    - mixing materials
    - stripping/spreading topsoil and materials
    - loading, cutting/boxing
    - backfilling
    - lifting and carrying materials
    - site clean-up on
    - select, fit and remove an attachment

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting civil construction wheeled front end loader operations:

- identifying, interpreting ground conditions
- communicating and performing isolation procedures
- identifying equipment processes, technical capability and limitations
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- complying with project quality requirements
- applying basic principles of soil technology and soil compaction for civil works
- using basic earthworks calculations
- using civil construction activity sequences of road construction, earthworks and drainage
- using methods for calculating safe working loads
- applying operational, maintenance and basic diagnostics
- completing housekeeping activities

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

© Commonwealth of Australia, 2025 Industry Skills Australia

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIMPO322D Conduct civil construction tracked front end loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO322A Conduct civil construction tracked front end loader operations. Performance Criteria amended to include Manoeuvring, Driving and Parking Up; made requirements more explicit; introduced Housekeeping element.
2	Editorial corrections; Modification History added.
3	Removed repetition from Performance Criteria; amended Performance Evidence wording; amend reference to Licensing requirements in Unit Application; editorial corrections.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct civil construction tracked front end loader operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for tracked front end loader	1.1 Access, interpret and apply tracked front end loader operations documentation and ensure the work activity is compliant

© Commonwealth of Australia, 2025 Industry Skills Australia

operations	1.2 Obtain, read, interpret, clarify and confirm work instructions 1.3 Identify and address risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Identify, obtain and implement traffic management signage requirements 1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate front end loader	2.1 Carry out pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks , and ensure safety of self, other personnel, plant and equipment 2.4 Drive and operate front end loader, and modify the operating technique to meet changing work conditions 2.5 Complete work plan within the operating capacity of the equipment 2.6 Act on or report monitoring systems and alarms
3. Attach, secure, lift, carry and place	3.1 Conduct communication practices associated with transportation and lifting of materials 3.2 Establish weight of load and ensure it is within safe operational limits of the machine 3.3 Select , attach and use slings and lifting gear in accordance with safe working load requirements 3.4 Position machinery to ensure stability and locate to effectively shift materials according to job specifications 3.5 Shift load safely and effectively 3.6 Move load using hand/audible/communication signals
4. Relocate the front end loader	4.1 Prepare front end loader for relocation 4.2 Move front end loader safely between work sites, observing relevant codes and traffic management requirements 4.3 Load and unload machine from float/trailer
5. Carry out machine	5.1 Prepare machine for maintenance

© Commonwealth of Australia, 2025 Industry Skills Australia

operator maintenance	5.2 Conduct inspection and fault finding 5.3 Carry out scheduled maintenance tasks 5.4 Return machine to service 5.5 Process written maintenance records
6. Conduct housekeeping activities	6.1 Clear work area and dispose of or recycle materials in accordance with project environmental management plan 6.2 Process records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIMPO322D Conduct civil construction tracked front end loader operations

Modification History

Release	Comment
1	This unit replaces RIIMPO322A Conduct civil construction tracked front end loader operations. Performance Criteria amended to include Manoeuvring, Driving and Parking Up; made requirements more explicit; introduced Housekeeping element.
2	Editorial corrections; Modification History added.
3	Removed repetition from Performance Criteria; amended Performance Evidence wording; amend reference to Licensing requirements in Unit Application; editorial corrections.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of tracked front end loader operations including:
  - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
  - carrying out vehicle refuelling requirements and procedures
  - driving and operating the equipment to site conditions
  - applying safe work practices and identifying and reporting all potential hazards, risks and environmental issues
  - applying problem solving and troubleshooting techniques
  - applying leveling techniques
  - selecting and using the required tools and equipment
  - working safely around other machines and personnel

© Commonwealth of Australia, 2025 Industry Skills Australia

  - safely parking and securing of equipment
  - applying methods of changing machine attachments
- works effectively with others to undertake and complete tracked front end loader operations that meet all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others
  - maintaining written and verbal reporting requirements and procedures
  - organising work activities to meet all task requirements
  - communicating clearly and concisely with others to receive and clarify work instructions
- demonstrates completion of civil construction tracked front end loader operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completion of operations to specification using a variety of material types including:
    - mixing materials
    - stripping/spreading topsoil and materials
    - loading
    - cutting/boxing
    - backfilling
    - lifting and carrying materials
    - site clean-up

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting civil construction tracked front end loader operations:

- identifying, interpreting ground conditions
- communicating and performing isolation procedures
- identifying equipment processes, technical capability and limitations
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- complying with project quality requirements
- applying basic principles of soil technology and soil compaction for civil works
- using basic earthworks calculations
- using civil construction activity sequences of road construction, earthworks and drainage
- using methods for calculating safe working loads
- applying operational, maintenance and basic diagnostics

© Commonwealth of Australia, 2025 Industry Skills Australia

- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is	

© Commonwealth of Australia, 2025 Industry Skills Australia

	specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIMPO326D Conduct civil construction water cart operations

Modification History

Release	Comment
1	This unit replaces RIIMPO326A Conduct civil construction water cart operations.
2	Performance Evidence wording amended; removed repetition from Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to conduct civil construction water cart operations in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

1. Plan and prepare for water cart operations	1.1 Access, interpret and apply water cart operations documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work instructions 1.3 Identify and address risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Obtain, identify and implement traffic management signage requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.6 Select, and check for faults, equipment and/or attachments for work activities 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Operate water cart	2.1 Carry out pre-start, start-up, park, shutdown and secure equipment procedures 2.2 Coordinate activities with others at the site prior to commencement of, and during, the work activity 2.3 Continually monitor hazards and risks , and ensure safety of self, other personnel, plant and equipment 2.4 Manage engine power to ensure efficiency of water cart platform movements and to minimise damage to the engine and gears 2.5 Coordinate engine power with gear selection to ensure smooth transition and operation within torque range 2.6 Drive and operate water cart, and modify the operating technique to meet changing work conditions 2.7 Bring vehicle to a halt smoothly, minimising the wear and tear on vehicle using the engine retarder, gears and brakes
3. Load, transport and distribute water	3.1 Position water cart at load and discharge/distribution points 3.2 Load water cart to within the authorised carrying capacity and to suit the site and task conditions 3.3 Carry out water haulage operations efficiently, safely and smoothly avoiding surge and sway 3.4 Discharge/distribute water efficiently in accordance with requirements and procedures 3.5 Monitor and maintain discharge and distribution systems throughout the operations 3.6 Complete work the workplan within the operating capacity of the equipment
4. Carry out machine operator maintenance	4.1 Prepare machine for maintenance 4.2 Conduct inspection and fault finding 4.3 Carry out scheduled maintenance tasks 4.4 Process written maintenance records
5. Conduct housekeeping activities	5.1 Clear work area and dispose of or recycle materials 5.2 Process records

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIMPO326D Conduct civil construction water cart operations

Modification History

Release	Comment
1	This unit replaces RIIMPO326A Conduct civil construction water cart operations.
2	Performance Evidence wording amended; removed repetition from Performance Criteria; amend reference to Licensing requirements in Unit Application.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of water cart operations including:
  - conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
  - carrying out vehicle refuelling requirements and procedures
  - driving and operating the equipment to site conditions
  - applying safe work practices and identifying and reporting all potential hazards, risks and environmental issues
  - applying problem solving and troubleshooting techniques
  - applying water distribution techniques
  - selecting and using the required tools and equipment
  - working safely around other machines and personnel
  - safely parking and securing of equipment
- works effectively with others to undertake and complete water cart operations that meet all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others

© Commonwealth of Australia, 2025 Industry Skills Australia

- maintaining written and verbal reporting requirements and procedures
- organising work activities to meet all task requirements
- communicating clearly and concisely with others to receive and clarify work instructions

- demonstrates completion of civil construction water cart operations that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - completion of the loading, transporting, discharging and distribution of water including:
    - completion of pressure and gravity discharging of water evenly in civil construction compaction operations in a minimum of two different soil types to meet moisture content requirements
    - completion of pressure and gravity distribution of water into two separate water storage facilities/receptacles
    - completion of dust suppression operations

Knowledge Evidence

The candidate must demonstrate knowledge of the following when conducting civil construction water cart operations:

- identifying, interpreting ground conditions
- communicating and performing isolation procedures
- being prepared for fire/accident/emergency
- identifying signs of operator fatigue and how it should be managed
- interpreting drawings and sketches
- identifying site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- complying with project quality requirements
- applying basic principles of soil technology and soil compaction for civil works
- identifying basic soil types and characteristics
- communicating basic soil compaction theory including the effects of moisture content and mechanical interlock
- applying practical field tests for moisture content
- using pumps and pumping system operations
- identifying water distribution systems types, characteristics, technical capabilities and limitations
- describing basic dust suppression theory
- identifying the causes and effects of surge and sway in bulk fluid loads
- using basic earthworks calculations
- using civil construction activity sequences of road construction, earthworks and drainage
- using methods for calculating safe working loads

© Commonwealth of Australia, 2025 Industry Skills Australia

- applying operational, maintenance and basic diagnostics
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being	

© Commonwealth of Australia, 2025 Industry Skills Australia

	assessed and where no Industry standard is specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIRIS401D Apply site risk management system

Modification History

Release	Comment
1	This unit replaces RIIRIS401A Apply site risk management system
2	Editorial corrections
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to apply the site risk management system in the Resources and Infrastructure Industries.

This unit is appropriate for those working in supervisory roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

1. Plan and prepare to provide information to the work group	1.1 Access, interpret and apply risk management documentation and ensure the work activity is compliant 1.2 Clearly and concisely explain risk management compliance documentation 1.3 Provide documents and reference information for risk management policies, procedures and programs in an accessible manner 1.4 Maintain risk management communication through regularly providing clear information about identified hazards and the outcomes of risk assessment and control
2. Apply and monitor participative arrangements	2.1 Explain the importance of effective consultative mechanisms in managing risk 2.2 Conduct and monitor consultative procedures for

© Commonwealth of Australia, 2025 Industry Skills Australia

	management of hazards 2.3 Promptly deal with issues raised through consultation 2.4 Record and promptly communicate the outcomes of consultation of risk management issues
3. Apply and monitor the procedures for providing training	3.1 Systematically identify risk management training needs 3.2 Make arrangements, in consultation with relevant individuals, to meet risk management training needs 3.3 Provide learning opportunities, and coaching and mentoring assistance to achieve training needs
4. Apply and monitor procedures for identifying hazards and assessing risks	4.1 Identify and report hazards and risks 4.2 Coordinate others to routinely carry out hazard identification and risk assessments 4.3 Select and implement actions from hazard reports promptly
5. Apply and monitor the procedures for controlling risks	5.1 Maintain standard for risk management and apply procedures for controlling risks using the hierarchy of controls 5.2 Consider potential risks and plan for their management 5.3 Identify and report inadequacies in existing risk control measures 5.4 Monitor outcomes of reported inadequacies to ensure a prompt response
6. Apply and monitor the procedures for maintaining records	6.1 Ensure accurate written completion and maintenance of risk management records 6.2 Use collated information and data records to forecast and identify hazards and monitor effectiveness of risk control procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIRIS401D Apply site risk management system

Modification History

Release	Comment
1	This unit replaces RIIRIS401A Apply site risk management system
2	Editorial corrections
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- obtain and applies relevant legislation, documentation, policies and procedures
- demonstrates completion of the application of the site risk management system that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - working with others to plan, prepare and apply the site risk management system
  - identifying risk management training needs of others and prepare training plans
  - providing clear and timely instruction and supervision to those involved in applying the site risk management system
  - analysing and prioritising hazards and risks
  - considering and selecting most appropriate options for managing site risk using the hierarchy of controls
  - implementing selected options for managing risk
  - monitoring outcomes of risk management implementations
  - maintaining written records and reports for risk management systems activity and outcomes
  - using aggregate risk and hazard data to forecast and identify hazards and monitor effectiveness of risk control procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

The candidate must demonstrate knowledge of the following in applying the risk management process through:

- key component of the sites risk management system
- responsibilities for applying site risk management system
- work instructions and processes
- using communication skills, including questioning and active listening skills with supervisors and other employees
- writing reports to communicate procedural activity, breach or inadequacies to procedure and review process

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Industry Skills Australia

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

RIIWHS202D Enter and work in confined spaces

Modification History

Release	Comment
1	The unit replaces RIIOHS202A Enter and work in confined spaces.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to enter and work in confined spaces in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles undertaking work in confined spaces.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1 Plan and prepare for working in confined space	1.1 Access, interpret and apply procedures for confined space entry and the environmental management plan and ensure the work activity is compliant 1.2 Obtain, confirm, clarify and apply work instructions and agreed procedure 1.3 Obtain, confirm, clarify and apply safety requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.4 Obtain and confirm authorisation (entry permit) meets regulatory requirements 1.5 Confirm the emergency response procedure is with the stand-by person and understood 1.6 Identify, obtain and implement signage and barrier requirements 1.7 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults 1.8 Identify, confirm and apply the environmental protection requirements 1.9 Position rescue equipment by the entry permit
2 Work in confined space	2.1 Gain access to confined space 2.2 Ensure that the atmosphere is tested and monitored for harmful elements 2.3 Correctly apply tagging and lock-out procedures 2.4 Enter the confined space correctly 2.5 Maintain ongoing communication with the stand-by person 2.6 Comply with entry permit requirements 2.7 Monitor and adhere to allocated entry time
3 Exit confined space	3.1 Exit confined space correctly 3.2 Recover tools, equipment and materials 3.3 Conduct inspection of the confined space 3.4 Secure access to the confined space 3.5 Remove tagging and lock-out 3.6 Accurately complete confined space entry permit
4 Clean up	4.1 Clear work area and dispose of or recycle materials 4.2 Clean, check, maintain and store tools and equipment 4.3 Remove, clean and store barriers and signs

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS202D Enter and work in confined spaces

Modification History

Release	Comment
1	The unit replaces RIIOHS202A Enter and work in confined spaces.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of entering and working in confined spaces that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - obtain appropriate entry permit and instructions for performing work in confined space
  - interpreting and applying safe work method statements
  - apply tagging and lock out
  - selecting, wearing and caring for personal protective equipment applicable to all tasks and environment identified
  - entering the confined space
  - using atmospheric monitoring devices prior to entering the confined space
  - working in the confined space
  - using atmospheric monitoring devices during confined space activity
  - applying safe materials handling methods
  - exiting the confined space
  - remove tagging and lock out

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

The candidate must demonstrate knowledge of enter and work in confined spaces through:

- identifying areas that constitute confined spaces
- complying with site and equipment safety requirements
- complying with the entry and exit procedures, risks and regulations
- types of air contaminants and toxic gases
- identifying the limitations of breathing apparatus
- identifying equipment types, characteristics, technical capabilities and limitations
- complying with site isolation and site control responsibilities and authorities
- locations of safety data sheets (SDS) information and application
- using confined space and Industry terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Industry Skills Australia

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIWHS204D Work safely at heights

Modification History

Release	Comments
1	This unit replaces RIIOHS204A Work safely at heights.
2	Formatting corrections.
3	Inserted Application information.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to work safety at heights in the Resources and Infrastructure Industries.

This unit it appropriate for those working in operational roles where they are required to perform work at heights.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1. Identify work requirements	1.1 Access, interpret and apply height safety procedures and ensure the work activity is compliant 1.2 Inspect site to determine layout and physical condition, condition of structures, prevailing weather conditions, equipment requirements and potential hazards

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.3 Adhere to WHS requirements 1.4 Identify, select and check safety equipment for serviceability 1.5 Identify, manage and report potential risks and hazards
2. Identify work procedures and instructions	2.1 Consult with authorised personnel to select materials, tools and equipment and check for serviceability 2.2 Select, wear and care for personal protective equipment 2.3 Inspect/install fall protection and perimeter protection equipment 2.4 Identify approved methods of moving tools and equipment to work area and minimise potential hazards associated with tools at heights 2.5 Ensure safety system has been installed correctly 2.6 Select and install appropriate signs and barricades
3. Access and install equipment	3.1 Consult with authorised personnel to ensure anchor fall protection and associated equipment is correctly fitted and adjusted 3.2 Ensure all required equipment is installed 3.3 Use recommended methods to access work area for people, tools and equipment 3.4 Locate tools and materials to eliminate or minimise the risk of items being knocked down
4. Perform work at heights	4.1 Check access from ground to work area and ensure it is safe 4.2 Keep fall equipment in place and adjusted appropriately for movement during work 4.3 Undertake manual handling of materials and equipment 4.4 Locate materials and equipment ensuring that they are safely secured and distributed 4.5 Check safety system periodically for compliance 4.6 Monitor risk control measures to ensure that they are effective and appropriate 4.7 Reassess risk control measures, as required, in accordance with changed work practices and/or site conditions and undertake alterations
5. Clean up work area	5.1 Consult with authorised personnel to ensure safety system is dismantled and removed 5.2 Clear work area and dispose of or recycle materials 5.3 Clean, check, maintain and store tools and equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS204D Work safely at heights

Modification History

Release	Comments
1	This unit replaces RIIOHS204A Work safely at heights.
2	Formatting corrections.
3	Inserted Application information.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of working safely at heights that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - accessing, interpreting and applying technical and safety information for working at heights
  - assessing hazards and risk associated with working at heights and implement control methods
  - selecting wearing and caring for personal protective equipment
  - identifying required safety systems including fall protection and associated equipment
  - checking that fitting, adjusting and anchoring of fall protection and associated equipment is correct
  - performing work safely at heights

Knowledge Evidence

The candidate must demonstrate knowledge of the following when working safely at heights:

- names and functions of equipment, components and materials

© Commonwealth of Australia, 2025 Industry Skills Australia

- complying with equipment manufacturer's instructions and specifications
- safe shifting and handling of tools and materials
- adhering to statutory and regulatory authority requirements
- the nature of work undertaken at heights
- complying with heights safety systems
- the processes of providing for safe working practices
- using safety equipment/systems and considerations to facilitate working safely at heights
- complying with safe work methods

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years

© Commonwealth of Australia, 2025 Industry Skills Australia

Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIWHS205D Control traffic with stop-slow bat

Modification History

Release	Comment
1	The unit replaces RIIOHS205A Control traffic with stop-slow bat.
2	Editorial corrections; Performance Criteria numbering for element 1 corrected.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to control traffic with stop-slow bat in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1. Plan and prepare	1.1 Access, interpret and apply site traffic plan procedures and ensure the work activity is compliant 1.2 Obtain, confirm, clarify and apply work instructions 1.3 Obtain, confirm, clarify and apply safety requirements 1.4 Identify, obtain and implement signage and devices 1.5 Select tools and equipment, check for serviceability and rectify or report any faults

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.6 Identify, confirm, clarify and apply environmental protection requirements
2. Control traffic	2.1 Position or confirm temporary traffic signs and barriers 2.2 Direct traffic correctly 2.3 Control vehicles and pedestrian traffic and ensure safety 2.4 Monitor traffic, make adjustments for changing conditions and position waiting vehicles for smooth traffic flow 2.5 Use hand held stop/slow bats 2.6 Use visibly clear and unobstructed hand signals 2.7 Report traffic offenders
3. Operate communication devices	3.1 Adjust communication device controls for optimum reception/transmission results 3.2 Transmit messages clearly and concisely 3.3 Maintain communication device power supply 3.4 Check communications contact after nominated period of non-contact
4. Clean up	4.1 Remove or cover signs and devices sequentially to provide warning to motorists during shutdown 4.2 Clean, check, maintain and store tools and equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS205D Control traffic with stop-slow bat

Modification History

Release	Comment
1	The unit replaces RIIOHS205A Control traffic with stop-slow bat.
2	Editorial corrections; Performance Criteria numbering for element 1 corrected.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of controlling traffic with a stop-slow bat that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - reading and interpreting the work instruction and planning work activity accordingly
  - positioning signage and barriers
  - directing and controlling vehicle traffic
  - directing and controlling pedestrian traffic
  - communicating to drivers and pedestrians clearly using hand signals
  - using approved communication devices such as hand held radios or phones to transmit message and report of offenders
  - removing or covering signs after work completion

Knowledge Evidence

The candidate must demonstrate knowledge of controlling traffic with stop-slow bat through:

- site and equipment safety requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

- traffic controlling requirements and procedures
- complying with traffic management plans
- erecting traffic control signage and barricades
- communication device operations
- determine equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- detailing site isolation and traffic control responsibilities and authorities
- describing the effects of travel speed and vehicle mass on stopping distances
- interpreting and implementing safe work method statement

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal	1	1 Year

© Commonwealth of Australia, 2025 Industry Skills Australia

Mining, Extractive (Quarrying) and Civil Construction	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

RIIWHS302D Implement traffic management plan

Modification History

Release	Comment
1	The unit replaces RIIOHS302A Implement traffic management plan.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit develops a participant's skills and knowledge required to implement a traffic management plan in Civil construction.

This unit is appropriate for those working in supervisory roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1 Plan and prepare to implement traffic management plan	1.1 Access, interpret and apply traffic management documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify, address and report potential risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for the work activity

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.5 Identify, obtain and implement traffic control signage and devices 1.6 Select, and check for faults, tools and equipment to carry out tasks 1.7 Identify, confirm and apply environmental protection requirements 1.8 Check the designated traffic controllers' training and qualifications for currency 1.9 Advise traffic controllers of the traffic flow requirements
2 Set out the traffic guidance scheme	2.1 Select traffic guidance scheme to suit site conditions, traffic volumes and work activities 2.2 Determine and ensure adherence to work schedule, maximum traffic delays, signals and site communications 2.3 Ensure signs and devices are correctly positioned on the approaches to the work area 2.4 Ensure that signs and devices are positioned and displayed on each approach 2.5 Ensure signs and devices are positioned and displayed laterally 2.6 Ensure traffic is controlled effectively to protect the work crew
3 Monitor traffic guidance scheme	3.1 Ensure traffic flow is monitored and effectiveness of guidance scheme determined 3.2 Monitor work activities and provide guidance to adjust scheme 3.3 Apply process for dealing with traffic controllers who fail to adhere to approved procedures 3.4 Apply procedures to deal with offending motorists
4 Close down traffic guidance scheme	4.1 Ensure traffic is controlled to protect work crew removing traffic control devices 4.2 Ensure signs are removed in sequence to provide maximum warning during removal 4.3 Ensure guidance scheme details are recorded and reported as required 4.4 Ensure incidents are recorded and reported as required
5 Clean up	5.1 Ensure work area is appropriately cleared 5.2 Ensure tools and equipment are cleaned, checked, maintained

© Commonwealth of Australia, 2025 Industry Skills Australia

	and stored

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS302D Implement traffic management plan

Modification History

Release	Comment
1	The unit replaces RIIOHS302A Implement traffic management plan.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- works effectively with others to undertake and complete the traffic management plans that meet all of the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to resolve coordination requirements prior to commencing and during work activities
- demonstrates completion of implementing traffic management plans that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - complying with State/Territory regulations on three separate live traffic projects, and
  - completing one (1) project controlling site construction vehicles
  - identify and select traffic guidance scheme according to conditions
  - identify and select traffic guidance scheme according to conditions select and implement signage and device requirements, position and display according to site plan

© Commonwealth of Australia, 2025 Industry Skills Australia

- monitor and adjust scheme according to variances in requirements
- apply procedures to deal with non-compliant crew and motorists

Knowledge Evidence

The candidate must demonstrate knowledge of implementing a traffic management plan through:

- accessing, interpreting and applying legislative, organization and site requirements and procedures for:
  - JSAs/JSEA/Safe work method statement
  - potential hazards and risks
  - controlling traffic
  - basic signalling
  - signs and devices
  - radio operations
- identifying equipment types, characteristics, technical capabilities and limitations
- identifying site isolation and traffic control responsibilities and authorities
- identifying quality requirements
- applying civil construction terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

© Commonwealth of Australia, 2025 Industry Skills Australia

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

SIRCDIS302 Deliver medicines to customers outside the pharmacy

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is an updated unit, based on and equivalent to SIRPDIS002A Deliver prescription medicines to customers outside the pharmacy.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and carry out home delivery of dispensed medications and other pharmacy products to community pharmacy customers.

Application of the Unit

This unit applies to pharmacy assistants and dispensary assistants who work in community pharmacies.

A person undertaking this role is required to work under the supervision and direction of a pharmacist.

Licensing/Regulatory Information

All relevant federal, state or territory legislation, Pharmacy Board of Australia Guidelines, and established practice and quality assurance standards are to be met.

Pre-Requisites

SIRCHCS201 Support the supply of Pharmacy Medicines and Pharmacist Only Medicines

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Confirm customer delivery requirements.	1.1. Identify ***pharmacy products*** to be delivered to customer. 1.2. Identify prescription items required. 1.3. Confirm ***customer details***. 1.4. Confirm ***delivery information*** with the customer.
2. Prepare and plan prescription deliveries.	2.1. Confirm that items are ***ready for delivery***. 2.2. Liaise with a pharmacist to confirm method of providing customer advice. 2.3. Prepare items for delivery to meet ***handling and storage*** requirements. 2.4. Confirm that ***delivery documentation*** is accurate and complete. 2.5. Use available aids to plan the most efficient delivery route. 2.6. Schedule deliveries to suit requirements of the pharmacy and customers.
3. Distribute medicine to customers outside the community pharmacy.	3.1. Verify customer or agent identity and any special delivery instructions. 3.2. Explain ***information provided on medicines*** and, where instructed by the pharmacist, question to confirm customer or agent's understanding. 3.3. Request a dated signature as evidence of receipt of goods. 3.4. Arrange for pharmacist follow-up in situations requiring additional assistance or therapeutic advice. 3.5. Finalise the sales transaction if appropriate.
4. Reconcile delivered items and records.	4.1. Reconcile medicines and other items collected for delivery with items distributed. 4.2. Reconcile cash payment with the value of items sold. 4.3. Complete delivery documentation and records. 4.4. Follow pharmacy procedures to make alternative arrangements where unplanned factors have prevented delivery of medications.

© Commonwealth of Australia, 2025 Industry Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - confirm that the person receiving medicines and delivery information is authorised to do so
  - confirm that the person receiving medicines is not a child
  - explain information contained on cautionary and advisory labels in a level of English suited to customer communication requirements
  - question to confirm that the customer correctly understands the information provided
  - invite further questions from the customer
  - seek direction from the dispensing pharmacist
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- literacy skills to:
  - follow pharmacy procedures
  - check prescription information
  - read directions and maps to locate addresses and plan efficient delivery routes
- planning and organising skills to:
  - plan delivery routes to achieve efficient delivery outcomes
  - arrange for a customer to make contact with a pharmacist where more detailed support or advice is required
- problem-solving skills to respond to situations where no authorised person is available to receive items

Required knowledge

- pharmacy procedures relating to:
  - delivery of prescription items to customers outside the pharmacy
  - response to unavailability of the customer or an authorised agent to accept delivery
  - responding to customer questions
  - arranging for a pharmacist to provide follow-up therapeutic advice and information to the customer
  - protecting security of self, product and cash
  - response in the event of theft, loss or accident
- product and delivery:
  - charges
  - payment options and procedures
- privacy principles as they relate to home delivery of medicines
- label information, such as:

© Commonwealth of Australia, 2025 Industry Skills Australia

  - dosage regimen, e.g. dose time in relation to food
  - frequency
  - duration of treatment
  - special storage requirements, e.g. cold chain
- role boundaries and responsibilities and circumstances under which referral to a pharmacist or other pharmacy staff is required

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • apply pharmacy procedures when delivering dispensed medicines and other products outside the pharmacy • provide information in ways appropriate to customer needs and demonstrate relevant techniques to confirm understanding • apply correct storage and transport conditions and any special delivery requirements for dispensed items • recognise and arrange follow-up contact, in situations requiring referral to a pharmacist.
Context of and specific resources for assessment	Assessment must ensure that competency is: • demonstrated over a period of time and observed by the assessor or the technical expert working in partnership with the assessor as described in the assessment • demonstrated in a real workplace environment that meets relevant industry standards and which may include client interruptions and involvement in other related activities normally expected in the pharmacy. Assessment must ensure access to: • a range of customers or their agents with different locations and delivery requirements who are typical of the customer base • dispensed items and other products for delivery to the customer or their agent • dispensed items requiring special handling • delivery documentation and record-keeping systems

© Commonwealth of Australia, 2025 Industry Skills Australia

- payment systems
- relevant documentation, such as:
  - customer details
  - delivery checklists
  - maps or location information
  - pharmacy procedures
  - real or simulated prescriptions
  - CMI.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate:
  - preparing for deliveries
  - delivering items to customers outside the pharmacy
  - completing documentation and records relevant to delivering prescription and other pharmacy items
  - seeking direction from the dispensing pharmacist
- review of portfolios of evidence and third-party workplace reports of on-the-job performance
- role plays to:
  - confirm communication skills that meet diverse customer requirements
  - demonstrate understanding of contingency management procedures
- written or oral questions appropriate to the language and literacy level of the learner to test relevant underpinning knowledge.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Pharmacy products may include:

- prescription medicines
- Pharmacy Medicines (S2)

© Commonwealth of Australia, 2025 Industry Skills Australia

	• non-scheduled pharmacy products.

Customer may include people:	• from a range of social, cultural and ethnic backgrounds and with varying mental and physical abilities
	• in their own home or contacting the pharmacy by phone
	• in residential care settings
	• with special needs, such as:
	  • the elderly
	  • infants
	• who are:
	  • drug or alcohol affected
	  • emotionally unstable
	  • mentally unstable
	  • physically unwell.

Customer details may include:	• patient name • delivery address • telephone number • suitable delivery times • specific location advice.
Delivery information may include:	• items on the prescriptions to be dispensed • other products required • estimated delivery time • persons authorised to accept delivery • payment method.
Ready for delivery may include:	• assembled items are complete, clearly and correctly labelled, and match customer requirements • a pharmacist has verified dispensed items • required information and advice accompanies the items • items are packaged appropriately to protect customer privacy and product integrity.
Handling and storage requirements may include:	• temperature control and cold chain items • light-sensitive items • heat-sensitive items.
Delivery documentation may include:	• prescription documentation to be signed by customer or agent • self-care and health information • other information supplied by a pharmacist • delivery check sheets • customer location details.
Information provided on medicines may include:	• pharmacy labels • cautionary and advisory labels • additional information or advice prepared by a

SIRCHCS201 Support the supply of Pharmacy Medicines and Pharmacist Only Medicines

Modification History

The version details of this endorsed unit are in the table below. The latest information is at the top.

Release	Comments
First Release	This is a revised unit, based on and equivalent to SIRPPKS001A Support the sale of pharmacy and pharmacist-only medicines. New functional area. Unit descriptor expanded to define regulatory environment. Application statement expanded to define scope and boundaries of the pharmacy assistant role. No change to the overall scope or outcomes of the unit.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to support the supply of Pharmacy Medicines (S2) and Pharmacist Only Medicines (S3).

Application of the Unit

This unit applies to community pharmacy employees working as pharmacy assistants or dispensary assistants. Pharmacy assistants work directly with customers, suggesting Pharmacy Medicines and unscheduled medicines. In situations where customers require referral to a pharmacist for therapeutic advice, or where the supply of Pharmacist Only Medicines or products is required, the pharmacy assistant gathers information, refers the customer on, and then supports the pharmacist by finalising the supply of medicines and products.

A person undertaking this role is required to work under the supervision of a pharmacist.

Licensing/Regulatory Information

All relevant federal, state or territory legislation, Pharmacy Board of Australia Guidelines, and established practice and quality assurance standards are to be met relating to the promotion and supply of Pharmacy Medicines and Pharmacist Only Medicines.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Identify and locate scheduled medicines in the pharmacy.	1.1. Follow pharmacy procedures that address ***legal requirements and industry standards*** for the supply of medicines and products to ***customers*** in community pharmacies. 1.2. Identify medicines, storage locations and requirements according to the ***Standard for the Uniform Scheduling of Medicines and Poisons*** (SUSMP). 1.3. Identify common medicine categories for which Pharmacy Medicines or Pharmacist Only Medicines are available.
2. Assess customer needs.	2.1. Follow pharmacy ***protocols and procedures*** to determine customer needs, applying tact and discretion when collecting information. 2.2. Assess response from customer. 2.3. Identify and act on ***triggers for referral to a pharmacist***.
3. Supply scheduled medicines.	3.1. Apply pharmacy procedures for complying with the conditions relating to the supply of scheduled medicines. 3.2. Supply medicines and products to meet customer needs where relevant. 3.3. Finalise supply of Pharmacy Medicines and Pharmacist Only Medicines and products to customers following pharmacist provision of therapeutic advice. 3.4. Access relevant ***information sources*** to provide product, lifestyle and self-care advice to customers and check customer understanding.

© Commonwealth of Australia, 2025 Industry Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - interact with the customer to:
    - obtain and provide information
    - confirm understanding
    - suggest and supply medicines and products
    - ask questions to identify and confirm requirements
- learning skills to maintain currency of the schedule of the SUSMP
- literacy skills to:
  - follow pharmacy protocols and procedures
  - interpret information on product labels
  - record customer information
- teamwork skills to operate as part of a pharmacy team, providing relevant information and seeking advice from a pharmacist and other pharmacy staff as required
- technology skills to access and use information systems required by the role

Required knowledge

- broad factors taken into account when determining scheduling, e.g. quantities and concentration of active ingredients in packaged medicine
- common problems or health conditions for which Pharmacy Medicines or Pharmacist Only Medicines are used
- health privacy principles
- legal requirements and pharmacy procedures for positioning and advertising scheduled items in a pharmacy
- personal role boundaries and responsibilities, and circumstances under which referral to a pharmacist or other pharmacy staff is required
- pharmacy protocols and procedures relating to Pharmacy Medicines and Pharmacist Only Medicines, including:
  - maintaining privacy and confidentiality of customer information
  - referring to a pharmacist
  - supplying Pharmacy Medicines and Pharmacist Only Medicines
- roles of the:
  - Advisory Committee in Chemicals Scheduling
  - Advisory Committee on Medicines Scheduling
  - Therapeutic Goods Administration (TGA) in approving registration of new medicines
- sources of information on scheduled medicines
- system for scheduling medicines
- schedule of medicines, including:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Pharmacy Medicine (S2)
- Pharmacist Only Medicine (S3)
- Prescription Only Medicine (S4)
- Caution (S5)
- Poison (S6)
- Dangerous Poison (S7)
- Controlled Drug (S8)
- Prohibited Substance (S9)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • apply knowledge of commonly requested medicines scheduled as Pharmacy Medicines and Pharmacist Only Medicines • follow pharmacy protocols and procedures to identify customer supply needs • operate within the role boundaries that apply to a pharmacy assistant and follow pharmacy protocols and procedures when supplying Pharmacy Medicines and Pharmacist Only Medicines • refer all requests for Pharmacist Only Medicines to a pharmacist, and recognise and act on other triggers for referral.
Context of and specific resources for assessment	Assessment must ensure that competency is: • observed by the assessor or the technical expert working in partnership with the assessor as described in the assessment guidelines • demonstrated across a range of customers over sufficient time to include handling of a range of contingencies • demonstrated in a real or simulated pharmacy environment, which may include customer interruptions and involvement in other related activities normally expected in the pharmacy.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment must ensure access to:

- a range of real or simulated customers with different requirements
- a range of Pharmacy Medicines and Pharmacist Only Medicines
- typical pharmacy storage locations, shelf facings and signage for a community pharmacy, including unscheduled medicines, Pharmacy Medicines and Pharmacist Only Medicines
- pharmacy protocols and procedures
- relevant regulations and guidelines
- relevant documentation, such as:
  - consumer product information
  - self-care advice.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- observation of the candidate in the workplace:
  - applying tact and discretion when collecting information from and providing information to customers
  - following pharmacy procedures when supplying Pharmacy Medicines and Pharmacist Only Medicines
  - responding to product and symptom-based requests
- written or oral questions appropriate to the language and literacy level of the learner to test relevant underpinning knowledge
- role plays to confirm communication skills required to meet diverse customer requirements
- review of portfolios of evidence and third-party workplace reports of on-the-job performance.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,

© Commonwealth of Australia, 2025 Industry Skills Australia

accessibility of the item, and local industry and regional contexts) may also be included.

Legal requirements and industry standards may vary between States and Territories and may include:	• consumer law, environmental law, work health and safety (WHS); and welfare law drugs, poisons and controlled substances legislation • Health Act and related regulations • Pharmacy Board of Australia guidelines and directives • pharmacy and pharmacist Acts and related regulations • Pharmaceutical Society of Australia's Professional Practice Standards • privacy legislation • Therapeutic Goods Administration guidelines and requirements • SUSMP.

Customers may include people:	• from a range of social, cultural and ethnic backgrounds and with varying mental and physical abilities
	• visiting the pharmacy, contacting the pharmacy by phone, or in their own home
	• with special needs, such as:
	  • the elderly
	  • infants
	• who are:
	  • drug or alcohol affected
	  • emotionally unstable
	  • mentally unstable
	  • physically unwell.

Standards for the Uniform Scheduling of Medicines and Poisons may include:	• general sales medicines (unscheduled) • Pharmacy Medicine (S2) • Pharmacist Only Medicine (S3) • Prescription Only Medicine (S4) • Controlled Drug (S8).

Protocols and procedures may include:	• questioning the customer to establish:
	  • who the product is for
	  • symptoms
	  • duration of symptoms
	  • other existing health conditions
	  • other medications being used by the customer
	  • if the customer has seen a doctor in the past 12 months
	• assessing:

© Commonwealth of Australia, 2025 Industry Skills Australia

- customer responses to questions
- own confidence that the product or service requested by the customer or recommended by the pharmacy assistant is right for the customer's symptoms.

Triggers for referral to a pharmacist may include:

- customer who is:
  - a child under 2
  - an aged person
  - pregnant or breastfeeding
  - taking other medicines
- customer who has:
  - had the complaint for some time
  - other health conditions, such as asthma, diabetes and high blood pressure
  - used the product before but is not satisfied with its efficacy
- pharmacy assistant is unsure and needs confirmation of the medicine selected, even if the product has been requested by name
- customer who appears to be:
  - sick
  - confused
  - uncertain
  - dissatisfied
  - angry
  - under the influence of drugs or alcohol
- personal concern regarding the accuracy of the information given by the customer
- request for Pharmacist Only Medicine.

Information sources may include:

- self-care and health-care information
- product brochures and leaflets supplied by a pharmacist
- manufacturer information
- Consumer Medicine Information (CMI) website and phone line
- industry and professional publications.

SITHFAB201 Provide responsible service of alcohol

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
2.0 updated on 2 March 2023	Minor changes to Range Statement
2.0	Amendments to the Evidence Guide which better define the assessment environment and assessment requirements of the unit.
1.0	E Replaces and is equivalent to SITHFAB009A Provide responsible service of alcohol.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to responsibly sell or serve alcohol.

Application of the Unit

Responsible practices must be undertaken wherever alcohol is served or sold, including where alcohol samples are served during on-site product tastings. This unit, therefore, applies to any workplace where alcohol is served or sold, including all types of hospitality venues, retail liquor outlets and wineries, breweries and distilleries.

This unit applies to all levels of sales personnel involved in the sale, service and promotional service of alcohol in licensed premises. Those selling or serving alcohol may include food and beverage attendants; retail liquor sales persons; winery, brewery and distillery cellar door staff and supplier sales representatives. It also applies to security staff who monitor customer behaviour and to the licensee who is ultimately responsible for RSA management.

Licensing/Regulatory Information

The unit incorporates the knowledge requirements, under state and territory liquor licensing law, for employees engaged in the sale or service of alcohol.

© Commonwealth of Australia, 2025 Industry Skills Australia

Certification requirements differ across states and territories. In most cases all people involved in the sale, service and promotional service of alcohol in licensed premises must be certified in this unit. This can include the licensee and security staff.

This unit covers the Responsible Service of Alcohol (RSA) skill and knowledge requirements common to all States and Territories. Some legislative requirements and knowledge will differ across borders. In some cases after completion of this unit, state and territory liquor authorities require candidates to complete a bridging course to address these specific differences.

Those developing training to support this unit must consult the relevant state or territory liquor licensing authority to determine any accreditation arrangements for courses, trainers and assessors.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Sell or serve alcohol responsibly.	1.1 Sell or serve alcohol according to provisions of relevant state or territory legislation, licensing requirements and responsible service of alcohol principles. 1.2 Provide ***accurate information*** to customers on alcoholic beverages according to organisation or house policy and government legislation, including types, strengths, standard drinks and the alcoholic percentages of a range of frequently sold alcoholic beverages. 1.3 Assist customers with information on the range of non alcoholic beverages available for purchase. 1.4 Identify ***issues*** related to the sale and service of alcohol to different types of customers, especially ***those at risk***, and incorporate them into sales or service.

© Commonwealth of Australia, 2025 Industry Skills Australia

2. Assist customers to drink within appropriate limits.	2.1 Prepare and serve ***standard drinks*** or ***samples*** according to industry requirements. 2.2 Encourage customers courteously and diplomatically to drink within appropriate limits. 2.3 Recognise ***erratic drinking patterns*** as an early sign of possible intoxication and take appropriate action. 2.4 Monitor emotional and physical state of customers for signs of intoxication and ill effects of illicit or other drug usage. 2.5 Where appropriate, offer food and non alcoholic beverages. 2.6 Politely decline requests for alcohol to be dispensed in a manner that is ***irresponsible***, ***or which encourages the rapid or excessive consumption of alcohol***, and advise customers of the reasons for the refusal.
3. Assess alcohol affected customers and identify customers to whom sale or service must be refused.	3.1 Assess intoxication levels of customers using a number of methods, including observing ***changes in behaviour***, observing emotional and physical state, and monitoring noise levels and drink purchases. 3.2 When assessing intoxication, take into account ***factors*** that may affect individual responses to alcohol. 3.3 Identify customers to whom sale or service must be refused according to state and territory legislation, including minors, those purchasing on behalf of minors, intoxicated persons, and persons affected by the consumption of illicit and other drugs. 3.4 Where appropriate, request and obtain acceptable ***proof of age*** prior to sale or service.
4. Refuse to provide alcohol.	4.1 Refuse service in a polite manner and state reasons for the refusal. 4.2 Speak to ***intoxicated*** customers in a suitable and consistent manner, minimising confrontation and arguments and point out ***signage***. 4.3 Provide ***appropriate assistance*** to customers when refusing service. 4.4 Where appropriate, give customers a verbal warning and ask them to leave the premises according to organisation or house requirements, the specific situation and provisions of state or territory legislation and regulations. 4.5 Use appropriate ***communication and conflict resolution skills*** to handle difficult situations. 4.6 Refer difficult situations beyond the scope of individual responsibility to the appropriate person. 4.7 Promptly identify situations that pose a threat to the safety

© Commonwealth of Australia, 2025 Industry Skills Australia

or security of colleagues, customers or property, and seek assistance from appropriate colleagues according to organisational policy.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication to:
  - provide complex information on responsible service of alcohol laws in a way that is readily understood by customers
  - speak firmly and clearly with intoxicated customers
  - deal with customers sensitively, courteously and discreetly using non-confrontational language
- critical thinking skills to assess intoxication levels of customers
- initiative and enterprise skills to offer food and non-alcoholic beverages to assist customers
- learning skills to continuously update knowledge of changing responsible service of alcohol laws and regulations
- literacy skills to:
  - read and interpret documents such as identification (ID) cards, proof of age cards, driver's licences, statutory signage, warning signs and wording within advertising or promotional material, in-house policies and procedures and any general plain English regulatory and advisory information issued by local, or state and territory liquor licensing authorities
- numeracy skills to measure and calculate standard drinks or samples and calculate blood alcohol levels to determine alcohol consumption
- problem-solving skills to:
  - identify customers to whom sale or service must be refused
  - identify intoxicated persons and refuse service
  - identify situations that pose a safety threat and seek assistance from appropriate colleagues
- teamwork skills to share customer information with team members to ensure proper responsible service of alcohol practices within the organisation.

Required knowledge

- public interest reasons for implementation of responsible service of alcohol practices, including:
  - government and community concern with alcohol misuse and abuse
  - crime, violence and anti-social behaviour associated with alcohol abuse
- impact of excessive drinking on:

© Commonwealth of Australia, 2025 Industry Skills Australia

    - local neighbourhood and community
    - premises and staff
    - customers
    - particular types of customers who may be at heightened risk such as young people, pregnant women and minors
    - government agencies such as the local police, health facilities and road authority
- key agencies and how to source relevant information on laws, regulations and codes of practice or conduct
- current promotional and strategic community education campaigns developed and conducted by agencies and industry groups
- effects of alcohol on:
    - emotional state
    - health
    - physical alertness
- factors that affect individual responses to alcohol, including:
    - gender
    - weight
    - general health
    - rate of consumption
    - food intake
    - other substances taken
- time for effects of alcohol to be registered
- standard drinks and acceptable measures of alcohol
- indicators of intoxication, including ways of assessing intoxication of customers
- ways of assessing customers affected by the consumption of illicit and other drugs
- principles of harm minimisation and strategies to minimise the harm associated with liquor abuse:
    - strategies laid down in legislation and codes of conduct developed by government agencies or industry groups
    - organisational policies that are designed to reduce the harm associated with liquor abuse
- the key provisions of liquor laws and regulations at a depth relevant to the scope of job responsibility within licensed premises, including the following list that expresses general statements about requirements of liquor legislation and information that must be customised for each State or Territory:
    - legislative definition of intoxication; intoxicated person and unduly intoxicated
    - role of individual staff members and supervisors or managers in providing responsible service of alcohol, including seller or server duty of care and liability
    - requirement to adopt and use statutory signage on the premises for the entire range of circumstances applicable to the organisation
    - requirements for mandatory content of any warning signs and wording within advertising or promotional material of any form, such as print advertising or internet

© Commonwealth of Australia, 2025 Industry Skills Australia

sales
- requirements for the remote sale and delivery of alcohol sales generated via the telephone, fax, email or mail
- requirements for proof of age and obligations to minors under local legislation
- provisions for retaining and reporting falsified proof of age documents
- provisions for requiring someone to leave the premises
- transportation options
- barring procedures
- opening and closing hour provisions
- requirements for monitoring noise and disturbances in and around licensed premises
- requirements laid down in codes of practice or conduct developed by government agencies or industry groups
- requirements described by an in-house policy, standard or code of practice or conduct
- training and record keeping requirements
- banned or undesirable products
- personal and business implications of breaching any laws, regulations, government or industry-driven codes of practice or conduct
- offences and penalties relating to offences
- legal restrictions on alcohol use customised to state or territory legislation, including intoxication provisions of liquor licensing laws
- legal drink and drive limits.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• responsibly sell or serve alcohol on multiple occasions to customers
	• satisfy the legal requirements for responsible sale or service of alcohol for the local state or territory law
	• follow organisational policies and procedures for the responsible service of alcohol
	• demonstrate knowledge of:
	  • reasons for and benefits of responsible service of alcohol
	  • principles of responsible service of alcohol and

© Commonwealth of Australia, 2025 Industry Skills Australia

harm minimisation
- the key provisions of liquor laws and regulations at a depth relevant to the scope of job responsibility within licensed premises
- the ramifications of non-compliance with the law and industry codes for the organisation, licensee and individual staff members.

Context of and specific resources for assessment

Assessment must ensure use of:

- a real or simulated workplace
- a range of industry equipment to demonstrate standard drink measures or samples
- relevant and current publications, signage, information and plain English fact sheets distributed by government regulators and industry bodies.

Method of assessment

A range of assessment methods should be used to assess the practical skills and knowledge required to sell or serve alcohol responsibly.

The following examples are appropriate for this unit:

- role-plays or case studies simulating customers, intoxicated patrons and alcohol that allow assessment of the individual's ability to:
  - interact with customers and explain organisational legal requirements to sell or serve alcohol responsibly
  - explain in-house policies for the service of alcohol
  - refuse service to people to whom alcohol cannot be served
  - speak to intoxicated customers to minimise confrontation
- case studies and problem-solving activities to assess the individual's ability to respond to:
  - situations where customers are engaging in erratic drinking patterns
  - signage deficiencies
  - situations that pose a safety threat
- written or oral questioning to assess knowledge of legislation and all other knowledge components of this unit
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for

The assessor should design integrated assessment

© Commonwealth of Australia, 2025 Industry Skills Australia

assessment	activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • SITHFAB202 Operate a bar • SITHFAB302 Conduct a product tasting for alcoholic beverages • SITHFAB303 Prepare and serve cocktails • SITHFAB304 Provide advice on beers, spirits and liqueurs • SITHFAB305 Provide advice on Australian wines • SITHFAB306 Provide advice on imported wines • SITHFAB307 Provide table service of food and beverage.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Accurate information may be provided to customers:	• by use of fact sheets and advertising material that comply with legislative requirements • by use of mandatory signage • verbally.
Issues may include:	• demeanour and mood • familiarity with specific customers • perceived effects of illicit and other drug usage • perceived health status • physical stature • social context.
Those at risk may include:	• minors • people affected by the consumption of illicit and other drugs • people from non-English speaking backgrounds • women • young customers.
Standard drinks should be measured using:	• appropriate nip measures

© Commonwealth of Australia, 2025 Industry Skills Australia

	• appropriately sized sample glasses • electronic dispensing and measuring devices.
Samples may include tastings of any item for sale in a:	• brewery • distillery • hospitality venue • retail liquor outlet • winery.
Erratic drinking patterns may include:	• mixing a wide range of drink types • drinking quickly and asking for more immediately • ordering more than one drink for self-consumption • mixing alcohol consumption with consumption of prescription or illicit drugs • consistently returning to the tasting site to request more samples • ordering multiple samples • ordering large samples • ordering 'triple shots' or extra large drinks.
Requests for drinks to be dispensed in a manner that is ***irresponsible***, ***or which encourages the rapid or excessive consumption of liquor*** include:	• jugs of spirits and mixers • large samples • laybacks • multiple samples for self-consumption • rocket fuel • shooters • test tubes • yard glasses.
Changes in behaviour may involve the customer becoming:	• aggressive • disorderly • quarrelsome • violent.
Factors include:	• food intake • gender • general health • other substances taken, especially illicit and other drugs • rate of consumption • weight.
Proof of age includes:	• current drivers licence

© Commonwealth of Australia, 2025 Industry Skills Australia

	• passport • photo card • proof of age card.
Intoxicated denotes:	• drunk • those to whom service may be refused due to excessive consumption of alcohol • 'unduly intoxicated' may also be used in some state or territory legislation.
Signage may include:	• signs produced in-house that comply with wording required by legislation • standard promotional signs issued by the relevant state or territory licensing authority • warning notices within any form of advertising.
Appropriate assistance may include:	• assisting the customer to connect with their designated driver • offering alternatives to alcohol, including food • offering to sell or serve non-alcoholic drinks • organising transport for customers wishing to leave • providing information on taxis.
Communication and conflict resolution skills may include:	• using open and non-aggressive body language • using a number of strategies to diffuse a situation, such as taking the person away from an audience or blaming the refusal on the 'law' • monitoring the reactions of other customers • picking early warning signs and intervening before the person is intoxicated • not using physical touch or body language • remaining calm and using tactful language.

SITXCOM401 Manage conflict

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXCOM003A Deal with conflict situations. Title changed to better reflect the complexity of the unit. Re-worked Elements, Performance Criteria, Required Skills and Knowledge to more fully articulate content.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to resolve complex or escalated complaints and disputes with internal and external customers and colleagues. It requires the ability to use effective conflict resolution techniques and communication skills to manage conflict and develop solutions. It does not cover formal negotiation, counselling or mediation.

Application of the Unit

This unit applies to all tourism, travel, hospitality and event sectors.

The unit applies mainly to senior operational personnel, supervisors and managers who operate with some level of independence and use discretion and judgement to resolve conflicts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Identify conflict situations.	1.1 Identify potential for ***conflict*** and take swift and tactful action to prevent escalation.
	1.2 Identify ***situations*** where personal safety of ***customers or colleagues*** may be threatened and organise appropriate assistance.
	1.3 Identify and use ***resources*** to assist in managing conflict.
2. Resolve conflict.	2.1 Take responsibility for finding a solution to conflict.
	2.2 Establish and agree on the nature and details of conflict with all parties and assess impact.
	2.3 Deal with conflict sensitively, courteously and discreetly.
	2.4 Minimise impact on other colleagues and customers.
	2.5 Use effective ***conflict resolution techniques*** and ***communication skills*** to manage the conflict and develop solutions.
	2.6 Encourage all points of view, acknowledge them and treat them with respect.
	2.7 Identify and evaluate the impact of conflict on business reputation and legal liability.
	2.8 Evaluate options to resolve the dispute taking into account any organisational ***policies and constraints***.
	2.9 Implement the best solution and complete required documentation.
3. Evaluate conflicts and resolutions.	3.1 Communicate with the parties involved to seek and provide feedback on conflict and its resolution.
	3.2 Evaluate and reflect on the situation and effectiveness of the solution.
	3.3 Determine possible ***causes of workplace conflict*** and provide input for workplace enhancement and improvements.

© Commonwealth of Australia, 2025 Industry Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to deal with conflict sensitively, courteously and discreetly through use of conflict resolution techniques
- critical thinking skills to analyse and decide on the best resolution for conflict
- initiative and enterprise skills to consider and suggest changes to workplace practices to avoid future conflict
- literacy skills to:
  - research sources of internal and external assistance to resolve the conflict
  - write reports, including comprehensive details of the conflict, the parties involved, discussions with all parties and the resolution
- problem-solving skills to identify and resolve conflicts and minimise impact on other colleagues and customers
- self-management skills to take responsibility for conflict outcomes
- teamwork skills to discuss and resolve conflicts between team members.

Required knowledge

- types of conflict in the tourism, travel, hospitality and event industries, typical causes and resolutions
- conflict theory, including signs, stages, levels, factors involved and results
- conflict resolution and communication techniques, including:
  - assertiveness
  - active listening
  - non-verbal communication
  - language style
  - negotiation
  - use of appropriate communication
- organisational policies and procedures for complaint, conflict and dispute resolution.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to	Evidence of the ability to: • resolve different workplace conflicts using a range of

© Commonwealth of Australia, 2025 Industry Skills Australia

demonstrate competency in this unit	conflict resolution and communication techniques • demonstrate knowledge of commonly occurring conflict situations in the workplace and the stages of conflict.
Context of and specific resources for assessment	Assessment must ensure use of: • a real or simulated tourism, hospitality or event industry environment where conflicts occur • current commercial policies and procedures for complaint, conflict and dispute resolution • others with whom the individual can interact to resolve conflicts.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
	• direct observation, using role plays, of the individual resolving conflicts using a range of communication techniques
	• use of simulated activities to assess participation in conflicts involving:
	  • customers refusing to leave or be pacified
	  • drug or alcohol-affected persons
	  • people who appear to be violent or are threatening
	• use of problem-solving activities so the individual can analyse and find solutions for various conflicts arising in the workplace
	• written or oral questioning to assess knowledge of:
	  • types of conflict
	  • conflict theory
	  • conflict resolution and communication techniques
	  • content of policy and procedures for refunds or exchange
	• review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment	The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • BSBDIV501A Manage diversity in the workplace • SITHACS201 Provide porter services • SITHACS303 Provide accommodation reception services

© Commonwealth of Australia, 2025 Industry Skills Australia

- SITTGDE303 Lead tour groups
- SITTGDE401 Coordinate and operate tours
- SITXCCS302 Provide club reception services
- SITXCCS303 Provide service to customers
- SITXCCS401 Enhance the customer service experience
- SITXHRM503 Monitor staff performance.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Conflict may relate to:

- customers whose special needs or expectations have not been met
- delays or poor timing of product or service supply
- difficult or complex customer complaints
- difficult or demanding customers
- disputes or arguments among work colleagues
- drug or alcohol-affected persons
- ejection from premises
- escalated customer or staff complaints leading to disputes
- human resource issues:
  - counselling
  - incorrect pay
  - job duties
  - lack of competence
  - worker mistakes
  - rosters
  - dismissals
- misunderstandings or communication barriers
- problems or faults with a service or product
- refused entry.

Situations may involve:

- customers refusing to leave or be pacified
- drug or alcohol-affected persons
- people who appear to be violent or are threatening
- people involved in physical violence
- people with guns or arms

© Commonwealth of Australia, 2025 Industry Skills Australia

	• situations where someone has been or may be hurt.
Customers or colleagues may include:	• internal or external customers • those from a range of social and cultural backgrounds • outside contractors • suppliers • workmates.
Resources may include:	• counsellors • internal security staff • mediators • other staff members • police • senior staff.
Conflict resolution techniques may include:	• negotiation • use of appropriate communication skills.
Communication skills may include:	• ability to speak clearly, be understood and use appropriate language, style and tone • active listening • asking questions to gain information, clarify ambiguities and adequately understand requirements • assertiveness • empathising with the person's situation while upholding organisational policy • non-verbal communication and recognition of non-verbal signs • questioning techniques, such as asking the right question to elicit the other parties' needs • rephrasing and repeating questions, requests and statements to confirm that they have been correctly understood • those appropriate to different social and cultural groups.
Policies and constraints may include:	• complaints • customer service • disputes • exchanges • refunds • staff grievance • costs and budgets • lack of availability of replacement products or services • organisational policy on refunds or exchange.
Causes of workplace conflict may include:	• changes to practices and procedures • complaints • cultural misunderstanding

© Commonwealth of Australia, 2025 Industry Skills Australia

- lack of empathy
- lack of information
- poor communication
- rostering issues
- workplace systems.

SITXEVT605 Develop event transport plans

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXEVT018B Develop a transport strategy for an event. Simplified title. Re-worked Elements, Performance Criteria, Required skills and Required knowledge to more fully articulate content. Re-worked Evidence Guide to better articulate rigorous assessment requirements.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to analyse event transport needs and develop appropriate plans and procedures for transporting people to, from and between event venues. It requires the ability to use critical thinking, planning and organisational skills, combined with a knowledge of transport management issues and options.

Application of the Unit

Events are diverse in nature and this unit is relevant to any type of event coordinated in any industry context, including the tourism, hospitality, sport, cultural and community sectors.

This unit applies to event managers who operate with significant autonomy and who are responsible for making a range of strategic event management decisions. They may work in event management companies, in event venues, or in organisations that organise their own events.

The unit may have particular application in the transport industry, where transport companies may be called upon to work on the development of an event transport strategy. However, the unit does not cover the specialist skills required to manage and monitor large transport fleets, as these roles are undertaken by people working as transport specialists.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

© Commonwealth of Australia, 2025 Industry Skills Australia

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Analyse transport needs.	1.1 Determine ***event*** transport needs based on analysis of ***key event information***. 1.2 Identify and assess transport needs of different ***event stakeholders***, including those with special needs. 1.3 Assess need for assistance from transport specialists or involvement of ***authorities*** in the transport planning process.
2. Develop transport strategies.	2.1 Identify and analyse ***transport options and resources*** in consultation with relevant suppliers. 2.2 Assess ***transport issues and risks*** presented by event location and geography. 2.3 Analyse and respond to compliance requirements. 2.4 Analyse and incorporate transport issues and risks into transport strategy development. 2.5 Evaluate and respond to ***broader event management constraints and issues*** as they relate to event transport. 2.6 Consult with event stakeholders about transport strategies at appropriate times prior to the event. 2.7 Develop ***evaluation criteria*** for the transport strategy in consultation with stakeholders.
3. Develop transport operational plan.	3.1 Develop and document ***transport procedures*** for event components, including ***contingency procedures***. 3.2 Determine and document internal and external ***resource requirements*** to maximise efficient use, cost effectiveness and profitability. 3.3 Identify critical tasks and allocate responsibilities and

© Commonwealth of Australia, 2025 Industry Skills Australia

	timelines. 3.4 Develop contractor specifications as required. 3.5 Obtain approval for plan from relevant stakeholders. 3.6 Provide ***operational information*** to staff and other stakeholders.
4. Evaluate transport strategies.	4.1 Evaluate efficiency and effectiveness of the transport strategy based on agreed evaluation criteria. 4.2 Incorporate outcomes of evaluation into future planning.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to consult with diverse stakeholders on complex management and operational issues
- critical thinking skills to:
  - analyse complex event information to determine nature of transport requirements
  - develop practical and operationally sound event transport solutions
- literacy skills to:
  - interpret complex event documentation
  - develop plans and operational documents for the management of event transport
- numeracy skills to work with event budgets
- planning and organisational skills to develop cohesive operational plans and procedures
- problem-solving skills to anticipate and respond to potential transport risks and problems with effective strategies and procedures.

Required knowledge

- role of transport planning in the overall context of event management
- types of events that require the development of dedicated transport strategies
- sources of specialist assistance for complex transport planning
- transport alternatives for consideration in the planning process:
  - private
  - public
  - air, land and sea
- legislation, regulations and industry codes that affect transport planning
- transport strategy resource requirements:
  - financial
  - human
  - physical

© Commonwealth of Australia, 2025 Industry Skills Australia

- issues and risks associated with event transport:
  - access
  - availability of services
  - congestion
  - distance
  - sustainability considerations.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• develop transport plans for events involving:
	  • comprehensive event plans
	  • dedicated event budgets
	  • formal communications plans
	  • multiple operational components
	  • an event operations team
	  • a wide range of stakeholders
	• analyse event transport needs and develop resource and cost efficient strategies and operational plans for multiple and diverse events
	• integrate knowledge of:
	  • transport alternatives
	  • legislation, regulations and industry codes that affect transport planning
	  • transport strategy resource requirements
	  • issues and risks associated with event transport.

Context of and specific resources for assessment	Assessment must ensure use of: • real or simulated events for which transport plans are developed. Events may be created for the specific purpose of skills assessment, but must still meet the requirements outlined under Critical aspects of assessment, and have commercial, community or business relevance. Small personal events are not appropriate as a means of assessing an individual's skills and knowledge

© Commonwealth of Australia, 2025 Industry Skills Australia

- comprehensive event plans
- dedicated event budgets
- formal communications plans
- current industry documentation and publications relating to transport options
- event stakeholders with whom the individual consults.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- evaluation of event transport strategies and operational plans prepared by the individual
- use of case studies to assess individual's ability to develop transport strategies for a range of different events
- written or oral questioning to assess detailed knowledge of different event transport issues and options
- review of portfolios of evidence and third party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, organisation and job role.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Events may include:

- business and corporate
- entertainment and leisure
- exhibitions, expositions and fairs
- festivals
- fundraising
- government and civic
- marketing
- meetings and conventions
- social
- sports.

Key event information may relate to:

- dates and times
- duration

© Commonwealth of Australia, 2025 Industry Skills Australia

- management structures
- general nature of event
- level of government involvement
- location
- number and type of activities
- numbers attending
- scope of physical staging elements.

Event stakeholders may include:

- attendees:
  - audience
  - competitors
  - delegates
  - participants
  - spectators
  - VIPs
- authorities:
  - emergency services
  - local government
  - roads authorities
- media
- officials
- organising committees
- staff:
  - paid
  - voluntary.

Authorities may include:

- emergency services
- land management and protection agencies
- government:
  - local
  - state
- industry bodies.

Transport options and resources may include:

- private transport system, including:
  - airlines
  - coach services
  - taxis
  - hire cars, minibuses and limousines
  - private vehicles
  - charter services
  - dedicated disabled transport, including taxis and buses
  - animal transport

© Commonwealth of Australia, 2025 Industry Skills Australia

	• public transport system, including:
	  • trains
	  • bus network
	  • ferries
	  • light rail and trams.

Transport issues and risks may relate to:	• access:
	  • road surface
	  • terrain
	• availability of services
	• communication considerations:
	  • mobiles
	  • radios
	  • walkie talkies
	• congestion:
	  • pedestrian
	  • traffic
	• distance:
	  • between event venues
	  • between event venues and other facilities such as accommodation and service centres
	• environmental sensitivity
	• location type:
	  • major metropolitan
	  • regional
	  • country
	  • remote
	• security:
	  • access restrictions
	  • accreditation
	  • threats
	• signage.

Broader event management constraints and issues may include:	• overall event management structures • specific event objectives • budget • human resources • other staging requirements • factors external to the event, such as other events • requirements to manage minimal impact to the natural environment of access to and the site itself.
Evaluation criteria may relate to:	• attendance targets

© Commonwealth of Australia, 2025 Industry Skills Australia

- efficient use of combined transport options to maximise profitability for the event operator
- environmental targets
- financial targets
- service quality
- time targets for movement of people and equipment.

Transport procedures may relate to:

- adequate provision for buses
- adequate provision for disabled people
- arrival of clients – dump or trickle
- communication
- contingency and backup options
- emergency services presence and access
- human resource requirements:
  - drivers
  - guides
  - marshals
  - site supervisors
- parking
- pick-up and drop-off
- security
- timetabling
- training requirements
- vehicle refuelling.

Contingency procedures may relate to:

- breakdown
- delays:
  - internal
  - external
- illness
- weather.

Resource requirements may be:

- financial
- human:
  - drivers
  - guides
  - interpreters
  - marshals
  - on-site supervisors
  - volunteers
- physical:
  - equipment
  - signage
  - vehicles

© Commonwealth of Australia, 2025 Industry Skills Australia

	• vessels.

Operational information may include:	• contingency procedures
	• emergency information
	• event information:
	  • rosters
	  • running sheets
	  • schedules
	• maps and other geographical information:
	  • route maps between venues and sites
	  • information for venues, sites and local area.

SITXFIN402 Manage finances within a budget

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXFIN004A Manage finances within a budget.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to take responsibility for budget management where others may have developed the budget. It requires the ability to interpret budgetary requirements, allocate resources, monitor actual income and expenditure and report on budgetary deviations.

The skills and knowledge for budget development are found in unit SITXFIN501 Prepare and monitor budgets.

Application of the Unit

This unit applies to all tourism, hospitality and event sectors and the budget may be for an entire organisation, for a department or for a particular project or activity.

It applies to those people who operate independently or with limited guidance from others. This includes supervisors and departmental managers.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Allocate budget resources.	1.1 Allocate funds according to ***budget*** and agreed priorities. 1.2 Discuss changes to income and expenditure priorities with appropriate colleagues prior to implementation. 1.3 Consult with and inform all relevant personnel about resource decisions. 1.4 Promote awareness of the importance of budget control. 1.5 Maintain detailed records of resource allocation according to organisational control systems.
2. Monitor financial activities against budget.	2.1 Use ***financial records*** to regularly check actual income and expenditure against budgets. 2.2 Include financial commitments in all documentation to ensure accurate monitoring. 2.3 Identify and report deviations according to significance of deviation. 2.4 Investigate appropriate options for more effective management of deviations. 2.5 Advise ***appropriate colleagues*** of budget status in relation to targets.
3. Identify and evaluate options for improved budget performance.	3.1 Assess existing costs and resources and proactively identify areas for improvement. 3.2 Discuss desired budget outcomes with relevant colleagues. 3.3 Undertake appropriate ***research to investigate new approaches*** to budget management. 3.4 Define and communicate the benefits and disadvantages of new approaches. 3.5 Take account of impacts on customer service levels and colleagues in developing new approaches. 3.6 Present clear and logical recommendations for budget management.
4. Complete financial and statistical reports.	4.1 Complete ***financial and statistical reports*** within designated timelines. 4.2 Prepare and present clear and concise information to enable informed decision making.

© Commonwealth of Australia, 2025 Industry Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to discuss budget requirements and to seek and provide feedback
- critical thinking skills to analyse resource use and costs
- initiative and enterprise skills to proactively identify better resource usage and budgetary improvements
- literacy skills to:
  - read and interpret a wide range of business and financial documents
  - research options for more effective budgetary control
  - write budget reports and recommendations
- numeracy skills to interpret and use budget figures in day-to-day work operations, and to calculate budget estimates and scenarios for performance improvement
- planning and organising skills to produce budgetary reports within designated timelines
- problem-solving skills to identify budget deviations and deficiencies and develop options for improved budgetary performance
- self-management skills to take responsibility for budget management
- teamwork skills to discuss desired budget outcomes with team members and provide direction on resource usage
- technology skills to use accounting software packages.

Required knowledge

- a range of formats for, use and contents of:
  - budgets
  - financial reports
  - statistical reports
- budget terminology
- for the specific industry sector and organisation:
  - use of budgets to control costs and enhance profitability
  - importance of budget control
  - techniques for maximising budget performance
  - financial reporting procedures and cycles
  - features and functions of accounting software programs used to manage budgets.

© Commonwealth of Australia, 2025 Industry Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • interpret and manage multiple budgets to meet specific and differing workplace needs • monitor income and expenditure and evaluate budgetary performance over a budgetary life-cycle • use correct budget terminology • integrate knowledge of the formats, use and contents of budgets, financial and statistical reports • complete financial reports within designated timelines.
Context of and specific resources for assessment	Assessment must ensure use of: • a real or simulated tourism, hospitality or event industry business operation or activity for which budgets are managed • computers, printers and accounting software packages currently used by the tourism, hospitality and event industries • budgets for specific projects, events or operational activities.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
	• projects and activities that allow assessment of the individual's ability to:
	  • interpret and manage budgets; monitor income and expenditure
	  • produce financial and statistical reports
	  • report on overall budgetary performance
	• evaluation of reports produced by the individual detailing the processes undertaken to manage finances within a budget
	• written or oral questioning to assess knowledge of budget terminology, format and content
	• review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

© Commonwealth of Australia, 2025 Industry Skills Australia

Guidance information for assessment	The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example: • BSBPMG501A Manage projects • SITXFIN401 Interpret financial information • SITXFIN501 Prepare and monitor budgets.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Budget may include:	• budgets for micro, small, medium or large businesses • cash budgets • cash flow budgets • departmental budgets • event budgets • project budgets • purchasing budgets • sales budgets • wage budgets • whole of organisation budgets.
Financial records may include:	• bank deposit documentation • bank statements • banking summaries • business activity statements • cheque books • credit card transaction statements • invoices • journal entries • labour and wages reports • merchant statements • merchant summaries • transaction reports.
Appropriate colleagues may include:	• internal or external financial specialists • managers

© Commonwealth of Australia, 2025 Industry Skills Australia

	• operational staff.
Research to investigate new approaches may include:	• discussions with existing suppliers • evaluating staffing and rostering requirements • potential roster changes • reviewing operating procedures • sourcing new suppliers.

Financial and statistical reports may relate to:	• cash flow
	• commercial account activity
	• commission earnings
	• covers and financial return
	• daily, weekly and monthly transactions
	• expenditure
	• income
	• occupancy rates and financial return
	• performance of:
	  • department
	  • project
	  • products and services
	• sales performance
	• sales returns
	• staff costs
	• stock levels
	• variance in income and/or expenditure
	• wastage
	• yield.

SITXFSA101 Use hygienic practices for food safety

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXOHS002A Follow workplace hygiene procedures. Updated and re-categorised to Food Safety.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use personal hygiene practices to prevent contamination of food that might cause food-borne illnesses. It requires the ability to follow predetermined organisational procedures and to identify and control food hazards.

Application of the Unit

This unit applies to all tourism, hospitality and catering organisations with permanent or temporary kitchen premises or smaller food preparation or bar areas.

This includes restaurants, cafes, clubs, hotels, bars, tour operators, attractions, function, event, exhibition and conference caterers, educational institutions, aged care facilities, correctional centres, hospitals, defence forces, cafeterias, kiosks, canteens, fast food outlets, residential caterers, in-flight and other transport caterers.

It applies to food handlers which can be any person who directly handles food or food contact surfaces food such as cutlery, plates and bowls. People at many levels use this skill in the workplace during the course of their daily activities, including cooks, chefs, caterers, kitchen stewards, kitchen hands, bar and food and beverage attendants and sometimes room attendants and front office staff.

Licensing/Regulatory Information

Food handlers must comply with the requirements contained within the Australia New Zealand Food Standards (ANZFS) Code (the Code).

© Commonwealth of Australia, 2025 Industry Skills Australia

In some states and territories businesses are required to designate a food safety supervisor who is required to be certified as competent in this unit through a registered training organisation.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Follow hygiene procedures and identify food hazards.	1.1 Follow organisational ***hygiene procedures***. 1.2 Promptly report ***unsafe practices*** that breach hygiene procedures. 1.3 Identify ***food hazards*** that may affect the health and safety of customers, colleagues and self. 1.4 Remove or minimise the hygiene hazard and report to appropriate person for follow up.
2. Report any personal health issues.	2.1 Report any personal ***health issues*** likely to cause a hygiene risk. 2.2 Report incidents of food contamination resulting from personal health issues. 2.3 Cease participation in food handling activities where a health issue may cause food contamination.
3. Prevent food contamination.	3.1 Maintain clean clothes, wear required personal protective clothing and only use organisation-approved bandages and dressings. 3.2 Prevent food contamination from clothing and ***other items worn***. 3.3 Prevent unnecessary direct contact with ready to eat food. 3.4 Avoid ***unhygienic personal contact*** with food or ***food contact surfaces***.

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.5 Avoid ***unhygienic cleaning practices*** that may cause food-borne illnesses.
4. Prevent cross contamination by washing hands.	4.1 ***Wash hands at appropriate times*** and follow hand washing procedures consistently. 4.2 Wash hands using ***appropriate facilities***.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to verbally report hygiene hazards and poor organisational practice
- literacy skills to comprehend workplace documents or diagrams that interpret the content of:
  - organisational food safety program
  - hygiene and food safety procedures
  - Hazard Analysis and Critical Control Points (HACCP) practices
- problem-solving skills to identify and report hygiene hazards.

Required knowledge

- basic aspects of national, state or territory food safety laws, standards and codes. This would include:
  - meaning of contaminant, contamination and potentially hazardous foods as defined by the Code
  - hygiene actions that must be adhered to by businesses to avoid food-borne illnesses
  - employee responsibility to participate in hygienic practices
  - reasons for food safety programs and what they must contain
  - role of local government regulators
  - ramifications of failure to observe food safety law and organisational policies and procedures
- basic aspects of HACCP method of controlling food safety
- for the specific industry sector and organisation:
  - major causes of food contamination and food-borne illnesses
  - sources and effects of microbiological contamination of food
  - workplace hygiene hazards when handling food and food contact surfaces
  - basic content of organisational food safety program
  - the contents of hygiene and food safety procedures
  - hygienic work practices for individual job roles and responsibilities.

© Commonwealth of Australia, 2025 Industry Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- integrate the use of predetermined hygiene procedures and food safety practices within day-to-day food handling work functions
- integrate, into daily work activities, knowledge of the basic aspects of food safety standards and codes and the ramifications of disregarding this.

Context of and specific resources for assessment

Assessment must ensure use of:

- an operational commercial food preparation area, bar or kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment Guidelines; this can be a:
  - real industry workplace
  - simulated industry environment such as a training kitchen servicing customers
- food ingredients and ready to eat food items
- current plain English regulatory documents distributed by the national, state, territory or local government food safety authority
- the Code
- current commercial food safety programs, policies and procedures used for the management of food safety.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the candidate using hygienic work practices during an integrated assessment of operative functions, such as cleaning and tidying bars, cooking at a camp site, preparing meals in a commercial kitchen, storing unused foodstuffs
- use of problem-solving exercises so the individual can respond to a range of situations where food hazards exist
- written or oral questioning to assess knowledge of the content of hygiene procedures and food safety standards and codes
- review of portfolios of evidence and third-party workplace

© Commonwealth of Australia, 2025 Industry Skills Australia

reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITXFSA201 Participate in safe food handling practices
- SITXFSA202 Transport and store food
- any commercial cookery, commercial catering, patisserie, Asian cookery or food and beverage unit involving food preparation.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hygiene procedures:

- may cover:
  - cleaning and sanitising practices to avoid contamination of food
  - food storage
  - handling and disposal of garbage
  - personal hygiene
  - regular hand washing
  - safe and hygienic handling of food and beverages
  - safe handling and disposal of linen and laundry
  - suitable dress and personal protective equipment and clothing
  - use of cleaning equipment, clothes and materials to avoid contamination of food
- may be:

© Commonwealth of Australia, 2025 Industry Skills Australia

- covered by staff training programs
- documented in the organisational food safety program
- required by the national food safety code.

Unsafe practices may include:

- being asked to participate in unhygienic work practices
- food handling practices that may result in the contamination of food
- ignoring the direction of:
  - hygiene signage
  - supervisors
  - managers
- lack of:
  - required hygiene signage
  - training in hygiene procedures
- outdated practices not in keeping with current organisational procedures
- poor personal hygiene and cleaning practices that may result in cross-contamination of food and other items
- practices inconsistent with organisational food safety program
- seeing others using unhygienic work practices
- use of broken or malfunctioning equipment.

Food hazards may include:

- airborne dust
- colleagues without appropriate training or understanding of good hygiene practices, policies and procedures
- contaminated food
- contaminated garbage
- dirty equipment and utensils
- equipment not working correctly, such as fridge and temperature probes
- items, such as linen, tea towels and towels that may be contaminated with human waste, such as blood and body secretions
- use of practices not in keeping with current organisational activities
- vermin.

Health issues may relate to:

- airborne diseases
- food borne diseases
- infectious diseases.

Other items worn may include:

- bandages
- hair accessories
- jewellery
- watches.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unhygienic personal contact may involve:	• transferring micro-organisms by:
	  • blowing nose
	  • coughing
	  • drinking
	  • eating
	  • scratching skin and hair
	  • sneezing
	  • spitting
	  • touching wounds
	• transmitting tobacco products by smoking.

Food contact surfaces may include:	• chopping boards • containers • cooking utensils • crockery • cutlery • glassware • pots and pans • sinks • workbenches.

Unhygienic cleaning practices may involve:	• cleaning food contact surfaces with linen, tea towels and towels that may be contaminated with human waste:
	  • blood
	  • body secretions
	  • faeces
	• using dirty:
	  • cleaning cloths
	  • tea towels
	• spreading bacteria from bathroom or bedroom areas to mini-bar or kitchen areas in an accommodation facility.

Wash hands at appropriate times might include:	• before commencing or recommencing work with food
	• immediately after:
	  • handling raw food
	  • smoking, coughing, sneezing, blowing the nose, eating, drinking, and touching the hair, scalp or any wound
	  • using the toilet.

Appropriate facilities for hand washing may include:	• designated hand washing sink • liquid soap • single use towels • warm running water.

SITXFSA201 Participate in safe food handling practices

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.0	E Replaces and is equivalent to SITXFSA001A Implement food safety procedures. Prerequisite removed. Minor adjustments to expression of content to streamline and improve unit. Change to title for greater consistency across Training Package. Wording adjusted to better reflect regulatory requirements.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to handle food safely during the storage, preparation, display, service and disposal of food. It requires the ability to follow predetermined procedures as outlined in a food safety program.

Application of the Unit

This unit applies to all tourism, hospitality and catering organisations with permanent or temporary kitchen premises or smaller food preparation areas.

This includes restaurants, cafes, clubs, hotels, tour operators, attractions, function, event, exhibition and conference caterers, educational institutions, aged care facilities, correctional centres, hospitals, defence forces, cafeterias, kiosks, canteens, fast food outlets, residential caterers, in-flight and other transport caterers.

Safe food handling practices are based on an organisation's individual food safety program. The program would normally be based on the Hazard Analysis and Critical Control Points (HACCP) method, but this unit can apply to other food safety systems.

It applies to food handlers who directly handle food. People at many levels use this skill in the workplace during the course of their daily activities, including cooks, chefs, caterers, kitchen hands and food and beverage attendants.

Licensing/Regulatory Information

Food handlers must comply with the requirements contained within the Australia New Zealand Food Standards (ANZFS) Code (the Code).

© Commonwealth of Australia, 2025 Industry Skills Australia

In some states and territories businesses are required to designate a food safety supervisor who is required to be certified as competent in this unit through a registered training organisation.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Follow food safety program.	1.1 Access and use relevant information from organisational food safety program. 1.2 Follow ***policies and procedures*** in food safety program. 1.3 Control ***food hazards*** at ***critical control points***. 1.4 Complete ***food safety monitoring*** processes and complete documents as required. 1.5 Identify and report non-conforming practices. 1.6 Take corrective actions within scope of job responsibility for ***incidents*** where food hazards are not controlled.
2. Store food safely.	2.1 Select food storage conditions for specific ***food type***. 2.2 Store food in environmental conditions that protect against contamination and maximise freshness, quality and appearance. 2.3 Store food at controlled temperatures and ensure that frozen items remain frozen during storage.
3. Prepare food safely.	3.1 Use cooling and heating processes that support microbiological safety of the food. 3.2 Monitor food temperature during preparation using required temperature measuring device to achieve microbiological safety. 3.3 Ensure ***safety*** of ***food prepared***, ***served and sold to customers***

© Commonwealth of Australia, 2025 Industry Skills Australia

	under other conditions.
4. Provide safe single use items.	4.1 Store, display and provide single use items so they are protected from damage and contamination. 4.2 Follow instructions for ***items intended for single use***.
5. Maintain a clean environment.	5.1 Clean and sanitise equipment, surfaces and utensils. 5.2 Use appropriate containers and prevent accumulation of garbage and recycled matter. 5.3 Identify and report ***cleaning***, ***sanitising and maintenance*** requirements. 5.4 Dispose of or report chipped, broken or cracked eating, drinking or food handling utensils. 5.5 Take measures within scope of responsibility to ensure food handling areas are free from animals and pests and report incidents of animal or pest infestation.
6. Dispose of food safely.	6.1 Mark and keep separate from other foodstuffs any ***food identified for disposal*** until disposal is complete. 6.2 Dispose of food promptly to avoid cross contamination.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to report food safety hazards
- literacy skills to:
  - read and interpret food safety program, including policies, procedures and flow charts that identify critical control points
  - complete documentation for monitoring food safety
- numeracy skills to calibrate and use a temperature probe and calculate timings
- problem-solving skills to identify and respond to routine food safety issues
- planning and organising skills to coordinate a range of different food handling tasks to take account of food safety issues
- self-management skills to take responsibility for food safety at an operational level.

Required knowledge

- key features of federal, state or territory and local food safety compliance requirements as they impact workers at an operational level, including:
  - contents of national codes and standards that underpin regulatory requirements
  - reasons for food safety programs and what they must contain
  - local government food safety regulations and inspection regimes
  - consequences of failure to observe food safety policies and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

    - meaning of contaminant, contamination and potentially hazardous foods as defined by the Code
- HACCP or other food safety system principles, procedures and processes as they apply to particular operations and different food types, including:
    - critical control points for the specific food production system and the predetermined methods of control, especially time and temperature controls used in the receiving, storing, preparing, processing, displaying, serving, packaging, transporting and disposing of food
    - main types of safety hazards and contamination
    - conditions for development of microbiological contamination
    - environmental conditions, including temperature controls, for storage
    - temperature danger zone and the two-hour and four-hour rule
- contents of organisational food safety program, especially procedures and monitoring documents
- equipment operating procedures, especially how to calibrate, use and clean a temperature probe and how to identify faults
- choice and application of cleaning, sanitising and pest control equipment and materials
- high risk customer groups, such as:
    - children or babies
    - pregnant women
    - aged persons
    - people with immune deficiencies or allergies.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • consistently use safe food handling practices in a range of different food handling circumstances • demonstrate knowledge of food safety program and requirements, including critical control points and methods of food hazard control for each critical control point.
Context of and specific resources for assessment	Assessment must ensure use of: an operational food preparation area or commercial kitchen with the fixtures, large and small equipment and workplace documentation defined in the Assessment Guidelines; this

© Commonwealth of Australia, 2025 Industry Skills Australia

can be a:

- real industry workplace
- simulated industry environment such as a training kitchen servicing customers
- food ingredients and ready to eat food items
- current plain English regulatory documents distributed by the national, state, territory or local government food safety authority
- the Code
- current commercial food safety programs, policies and procedures used for the management of food safety.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct observation of the individual completing tasks in a food handling facility
- use of case studies to assess ability to react to a range of incidents where hazards have not been controlled
- oral or written questioning to assess knowledge of food safety legislative requirements, policies and procedures, including hazard control measures
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITXFSA101 Use hygienic practices for food safety
- any commercial cookery, commercial catering, patisserie, Asian cookery or food and beverage unit involving food preparation.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Policies and procedures may relate to:

- cleaning and sanitation
- hazards:

© Commonwealth of Australia, 2025 Industry Skills Australia

- control methods for each critical control point
- corrective actions
- systematic monitoring of hazard controls and record keeping
- equipment maintenance
- food:
  - receiving
  - storage
  - preparation
  - display
  - service
  - disposal
- personal considerations:
  - dress
  - hygiene
  - protective equipment and clothing
- pest control
- record maintenance
- training.

Food hazards may be:

- actual or potential
- chemical
- insects and vermin
- microbiological:
  - bacteria
  - natural poisons
  - moulds
  - yeast
- physical:
  - broken glass
  - metal
  - foreign objects
- process-related where food is vulnerable to contamination:
  - displayed food
  - need for food to be touched by hand
  - re-thermalisation or defrosting
  - processes involving temperatures that promote rapid growth of micro-organisms.

Critical control points are specific steps

- receiving

© Commonwealth of Australia, 2025 Industry Skills Australia

where control of food hazards is essential to maintain the safety and suitability of the food, including:	• storing • preparing • processing • displaying • serving • packaging • transporting • disposing.
Food safety monitoring may involve:	• bacterial swabs and counts • checking and recording that food is stored in appropriate timeframes • chemical tests • monitoring and recording food temperatures using a temperature measuring device accurate to plus or minus 1 degree Celsius • monitoring and recording temperature of cold and hot storage equipment • visual examination of food for quality review.
Incidents may include:	• customer complaints • existence of pests and vermin • food not under temperature control • food poisoning • misuse of single use items • spoilt or contaminated food • stocks of out-of-date foodstuffs • unclean equipment.
Food type may include:	• dairy • dried goods • eggs • frozen goods • fruit and vegetables • meat and fish.

Safety of food served and sold to customers under other conditions may be achieved by:	• packaging control:
	  • using packaging materials suited to foods
	  • monitoring of packaging damage
	• protective barriers
	• temperature control
	• supervision of food displays
	• utensil control:
	  • providing separate serving utensils for each dish.

Food prepared, served and sold to	• drink dispensing

© Commonwealth of Australia, 2025 Industry Skills Australia

customers under other conditions may relate to:	• pre-packaged food items • self-service food.

Items intended for single use may include:	• disposable items:
	  • cutlery
	  • crockery
	• face wipes and serviettes
	• individually packaged items:
	  • beverages
	  • condiments
	  • jams and spreads.

Cleaning, ***sanitising and maintenance*** may involve:	• cleaning:
	  • dirt
	  • food waste
	  • grease
	  • pest waste removal
	• maintenance:
	  • recalibration of measurement and temperature controls
	  • minor faults
	• sanitising:
	  • eating and drinking utensils
	  • food contact surfaces.

Food identified for disposal must be held and kept separate and either:	• clearly identified as not safe, or suspected of not being safe, for consumption • destroyed • disposed of so that it cannot be used for human consumption • returned to supplier • subject to recall.

SITXMPR404 Coordinate marketing activities

Modification History

The version details of this endorsed unit of competency set are in the table below. The latest information is at the top.

Version	Comments
1.2	Correction to mapping to show non equivalence.
1.0	N Replaces and is not equivalent to SITXMPR004A Coordinate marketing activities. Minor adjustments to expression of content to streamline and improve unit. Added innovation, legal, ethical and sustainability. Added more on new technologies and media.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and coordinate a range of marketing and promotional activities at an operational level. The unit incorporates knowledge of marketing principles.

Application of the Unit

This unit applies to all industry sectors, and to individuals who take responsibility for coordinating marketing activities within the parameters of an established marketing strategy. People working independently with limited supervision undertake this role. This could include marketing coordinators or managers and owner-operators of small businesses.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
1. Plan and organise marketing activities.	1.1 Plan ***marketing activities*** according to marketing plan or other organisational systems. 1.2 Identify, analyse and incorporate relevant market information and ***legal***, ***ethical and sustainability issues*** into short term planning. 1.3 Confirm target markets and marketing medium. 1.4 Evaluate ***potential and suitability*** of marketing opportunities that arise. 1.5 Proactively seek and evaluate innovative marketing opportunities, including use of new technologies and media. 1.6 Develop and implement action plans to address ***operational details***.
2. Undertake a general public relations role.	2.1 Establish and conduct positive relationships with industry and media colleagues. 2.2 Use networks to support marketing activities. 2.3 Develop public relations resources as required, including media releases and industry or media support materials.
3. Review and report on marketing activities.	3.1 Review activities according to agreed evaluation methods and incorporate results into future planning. 3.2 Prepare reports according to organisational policy and required timeframes. 3.3 Present current and clear market intelligence to inform sales and marketing planning.

© Commonwealth of Australia, 2025 Industry Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to establish and conduct positive business relationships
- critical thinking skills to evaluate the potential of different marketing activities
- initiative and enterprise skills to proactively identify and respond to new opportunities
- literacy skills to:
  - interpret market trend information and marketing plans
  - develop detailed action plans for marketing activities
  - prepare media releases and marketing reports
- numeracy skills to work within marketing budgets
- planning and organising skills to coordinate diverse and unpredictable operational details
- problem-solving skills to proactively identify and respond to potentially complex implementation challenges
- self-management skills to take responsibility for the quality and outcomes of marketing activities
- technology skills to work with current web based marketing technologies.

Required knowledge

- content and structure of marketing plans
- key marketing principles, including the marketing management process and the four Ps - product, place, price and promotion
- industry structure and interrelationships, industry networks and information sources
- industry and market knowledge appropriate to the sector and organisation, including:
  - distribution and marketing networks, especially those that support the product or service being promoted, including e-business options and major promotional events
  - commission structures
  - current customer and market trends and preferences
- features, benefits and practical application of marketing activities commonly used in the service industries, including:
  - advertising
  - familiarisations
  - in-house promotions
  - public relations
  - social media
  - trade and consumer shows
  - signage and display
- legal issues that impact on the marketing of products and services, including consumer protection provisions
- ethical considerations for marketing activities, including:

© Commonwealth of Australia, 2025 Industry Skills Australia

  - appropriate use of images and text
  - protection of children
  - targeting of particular groups in the community
- sustainability considerations for marketing activities, including:
  - reducing waste of printed materials
  - sustainability as a marketing tool.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • plan and coordinate multiple and different marketing activities for an operation, product or service • integrate knowledge of the relevant industry, including structure and interrelationships, industry networks, information sources, and distribution and marketing networks • integrate knowledge of the types of marketing activities used in the relevant industry sector and major industry promotional events • demonstrate knowledge of marketing principles and their application to practical workplace activities.
Context of and specific resources for assessment	Assessment must ensure use of: • real or simulated products or services for which the individual can conduct marketing activities • current information and communications technology used by industry for marketing activities • marketing plans and operational marketing documents, such as action plans and marketing reports.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • evaluation of marketing activities planned and conducted by the individual, including reports on lessons to be learned for future activities

© Commonwealth of Australia, 2025 Industry Skills Australia

- evaluation of critiques prepared by the individual about industry marketing activities
- use of case studies to assess the application of marketing knowledge to different industry situations
- written or oral questioning to assess knowledge of marketing principles, structure of the industry, industry interrelationships, distribution networks and legal compliance issues
- review of portfolios of evidence and third-party workplace reports of on-the-job performance by the individual.

Guidance information for assessment

The assessor should design integrated assessment activities to holistically assess this unit with other units relevant to the industry sector, workplace and job role, for example:

- SITXMPR403 Plan and implement sales activities.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Marketing activities may include:

- advertising
- display and signage
- events
- familiarisations:
  - media
  - trade
- industry and public relations activities
- market research
- product development within scope of individual responsibility
- web-based and social media activities.

Information to be incorporated into the planning process may include:

- competitive activity
- financial statistics
- marketing reports
- marketplace trends
- sales reports.

Legal, ***ethical and sustainability issues*** may

- consumer law and trade practices

© Commonwealth of Australia, 2025 Industry Skills Australia

relate to:	• work health and safety obligations • resource conservation • targeting of particular groups • ways of presenting information.

Potential and suitability of promotional activities may relate to:	• consistency with overall marketing direction
	• exposure to be achieved
	• matching of attendees to target markets
	• resource considerations:
	  • financial
	  • human
	• timing of the activity or event.

Operational details may include:	• administrative and procedural requirements • availability of promotional materials • available technology • contracting of other services, such as display • equipment requirements • need for external assistance • potential for cooperative approaches • public relations implications • staffing requirements and briefings • strategies to ensure maximum benefits • travel arrangements.

TAEASS401B Plan assessment activities and processes

Modification History

Version	Comments
TAEASS301B	Released with *TAE10 Training and Education Training Package version 2.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to plan and organise the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system. It also includes the development of simple assessment instruments.

Application of the Unit

This unit typically applies to assessors and workplace supervisors with assessment planning responsibilities; and trainers or other assessors responsible for planning assessment, including RPL.

The unit is suitable for those with an existing assessment strategy which documents the overall framework for assessment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

unit of competency.	*is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Determine assessment approach	1.1 Identify candidate and confirm ***purposes and context of assessment/RPL*** with relevant people according to l***egal, organisational and ethical requirements***
	1.2 Identify and access ***benchmarks for assessment/RPL*** and any specific assessment guidelines
2. Prepare the assessment plan	2.1 Determine evidence and ***types of evidence*** needed to demonstrate competence, according to the ***rules of evidence***
	2.2 Select ***assessment methods*** which will support the collection of defined evidence, taking into account the context in which the assessment will take place
	2.3 Document all aspects of the ***assessment plan*** and confirm with relevant personnel
3. Develop assessment instruments	3.1 Develop ***simple assessment instruments*** to meet target group needs
	3.2 Analyse ***available assessment instruments*** for their suitability for use and modify as required
	3.3 ***Map assessment*** instruments against unit or course requirements
	3.4 Write clear instructions for candidate about the use of the instruments
	3.5 Trial draft assessment instruments to validate content and applicability, and record outcomes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- cognitive interpretation skills to:
  - interpret competency standards and other assessment documentation, including material

© Commonwealth of Australia, 2025 Industry Skills Australia

relating to reasonable adjustment
    - identify opportunities for integrated competency assessment
    - contextualise competency standards to the operating assessment environment, including RPL
    - consider access and equity needs of diverse candidates
- technology skills to use appropriate equipment and software to communicate effectively with others
- research and evaluation skills to:
    - obtain competency standards, assessment tools and other relevant assessment resources
    - research candidate characteristics and any reasonable adjustment needs
    - evaluate feedback, and determine and implement improvements to processes
- literacy skills to read and interpret relevant information to design and facilitate assessment and recognition processes
- communication skills to discuss assessment, including RPL processes with clients and other assessors
- interpersonal skills to:
    - demonstrate sensitivity to access and equity considerations and candidate diversity
    - promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment processes.
- **Required knowledge**
- ethical and legal requirements of an assessor
- competency-based assessment, including:
    - work focused
    - criterion referenced
    - standards based
    - evidence based
- different purposes of assessment and different assessment contexts, including RPL
- how to read and interpret the identified competency standards as the benchmarks for assessment
- how to contextualise competency standards within relevant guidelines
- four principles of assessment and how they guide the assessment process
- purpose and features of evidence, and different types of evidence used in competency-based assessments, including RPL
- rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence
- assessment instruments and their purpose; different types of instruments; relevance of different instruments for specific evidence-gathering opportunities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	• Evidence of the ability to:
	• plan and organise the assessment process on a minimum of two occasions
	• collect evidence that demonstrates:
	  • documented assessment plans
	  • having covered a range of assessment events
	  • catering for a number of candidates
	  • different competency standards or accredited curricula
	  • an RPL assessment
	  • contextualisation of competency standards and the selected assessment tools, where required
	  • incorporation of reasonable adjustment strategies
	  • development of simple assessment instruments for use in the process
	  • organisational arrangements.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. Assessment must ensure access to training products, such as training packages and accredited course documentation.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2025 Industry Skills Australia

Purposes of assessment/ RPL may include:	• recognising current existing competence of candidates • determining if competence has been achieved following learning • establishing candidate progress towards achievement of competence • determining language, literacy and numeracy needs of candidates • certifying competence through a qualification or Statement of Attainment • licensing or regulatory requirements.

Context of assessment/ RPL may include:	• environment in which the assessment/RPL will be carried out, including real or simulated workplace
	• opportunities for collecting evidence in a number of situations
	• relationships between competency standards and:
	  • evidence to support RPL
	  • work activities in the candidate's workplace
	  • learning activities
	• who carries out the assessment/RPL.

Organisational, legal and ethical requirements may include:	• assessment system policies and procedures
	• assessment strategy requirements
	• reporting, recording and retrieval systems for assessment, including RPL
	• quality assurance systems
	• business and performance plans
	• access and equity policies and procedures
	• collaborative and partnership arrangements
	• defined resource parameters
	• mutual recognition arrangements
	• industrial relations systems and processes, awards, and enterprise agreements
	• Australian Quality Training Framework
	• registration scope
	• human resources policies and procedures
	• legal requirements, including:
	  • anti-discrimination
	  • equal employment opportunity
	  • job role, responsibilities and conditions
	• relevant industry codes of practice
	• confidentiality and privacy requirements
	• OHS considerations, including:
	  • ensuring OHS requirements are adhered to during the

© Commonwealth of Australia, 2025 Industry Skills Australia

	assessment process • identifying and reporting OHS hazards and concerns to relevant personnel.
Benchmarks for assessment/RPL may include:	• criterion against which the candidate is assessed or prior learning recognised, which may be: • competency standard/unit of competency • assessment criteria of course curricula • performance specifications of an enterprise or industry • product specifications.
Types of evidence may include:	• direct • indirect • supplementary.
Rules of evidence ensure that evidence collected is:	• valid • sufficient • authentic • current.
Assessment methods are the particular techniques used to gather evidence and may include:	• direct observation, for example: • real work/real time activities at the workplace • work activities in a simulated workplace environment • structured activities, for example: • simulation exercises and role-plays • projects • presentations • activity sheets • questioning, for example: • written questions, e.g. on a computer • interviews • self-assessment • verbal questioning • questionnaires • oral or written examinations (applicable at higher AQF levels) • portfolios of evidence, for example: • collection of work samples compiled by candidate • product with supporting documentation • historical evidence • journal or log book • information about life experience • review of products, for example: • testimonials and reports from employers and supervisors

© Commonwealth of Australia, 2025 Industry Skills Australia

	• evidence of training • authenticated prior achievements • interview with employer, supervisor, or peer.
Assessment plan may include:	• overall planning document describing: • what is to be assessed • when assessment is to take place • where assessment is to take place • how assessment is to take place.
Simple assessment instruments may include:	• instruments developed by an assessor as part of formative or summative assessment activities, including: • profiles of acceptable performance measures • templates and proformas • specific questions or activities • evidence and observation checklists • checklists for the evaluation of work samples • recognition portfolios • candidate self-assessment materials • instruments developed elsewhere that have been modified by the assessor for use with a particular client group.
Available assessment instruments may include:	• commercially available instruments • those created by others inside the registered training organisation.
Map assessment means:	• showing a clear relationship between the evidence and the requirements of the unit.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

1. Prepare for assessment	1.1 Interpret ***assessment plan*** and confirm organisational, legal and ethical requirements for conducting assessment with relevant people 1.2 Access and interpret relevant ***benchmarks for assessment*** and nominated ***assessment tools*** to confirm the requirements for evidence to be collected 1.3 Arrange identified material and physical resource requirements according to assessment system policies and procedures 1.4 Organise ***specialist support*** required for assessment 1.5 Explain, discuss and agree details of the assessment plan with candidate
2. Gather quality evidence	2.1 Use agreed ***assessment methods*** and instruments to gather, organise and document evidence in a format suitable for determining competence 2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence 2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel 2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required
3. Support the candidate	3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL) 3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to ***individual differences*** and enables two-way ***feedback*** 3.3 Make decisions on reasonable adjustments with the candidate, based on candidate's needs and characteristics 3.4 Access required specialist support in accordance with the assessment plan 3.5 Address any OHS risk to person or equipment immediately
4. Make the assessment decision	4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence 4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence 4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan 4.4 Provide clear and constructive feedback to candidate regarding

© Commonwealth of Australia, 2025 Industry Skills Australia

	the assessment decision and develop any follow-up action plan required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and process an assessment report according to agreed assessment procedures 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in ***consultation*** with relevant people to improve own future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
  - break down competency standards
  - interpret assessment tools and other assessment information, including those used in RPL
  - identify candidate needs
  - make judgements based on assessment of available evidence
- observation skills to:
  - recognise candidate's prior learning
  - determine candidate's performance
  - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
  - access required human and material resources for assessment
  - access assessment system policies and procedures
  - access RPL policies and procedures
  - evaluate evidence
  - evaluate assessment process
- cognitive skills to:
  - weigh up the evidence and make a judgement
  - consider and recommend reasonable adjustments
- decision-making skills to:
  - recognise a candidate's prior learning

© Commonwealth of Australia, 2025 Industry Skills Australia

    - make a decision on a candidate's competence
- literacy skills to:
    - read and interpret relevant information to conduct assessment
    - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
    - explain the assessment, including RPL process
    - give clear and precise instructions
    - ask effective questions
    - provide clarification
    - discuss process with other relevant people
    - give appropriate feedback
    - discuss assessment outcome
    - use language appropriate to candidate and assessment environment
    - establish a working relationship with candidate.

Required knowledge

- competency-based assessment, including:
    - vocational education and training as a competency-based system
    - criterion-referenced assessment as distinct from norm-referenced assessment
    - competency standards as the basis of qualifications
    - structure and application of competency standards
    - principles of assessment and how they are applied
    - rules of evidence and how they are applied
    - range of assessment purposes and assessment contexts, including RPL
    - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
    - reasonable adjustments and when they are applicable
    - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
    - potential barriers and processes relating to assessment tools and methods
    - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
    - copyright and privacy laws in terms of electronic technology
    - security of information

© Commonwealth of Australia, 2025 Industry Skills Australia

  - plagiarism
  - training packages and competency standards
  - licensing requirements
  - industry and workplace requirements
  - duty of care under common law
  - recording information and confidentiality requirements
  - anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
  - workplace relations
  - industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for use of relevant personal protective equipment
  - safe use and maintenance of relevant equipment
  - sources of OHS information.
-

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• assess competence of a number of candidates within the vocational education and training context against different units of competency or accredited curricula, following the relevant assessment plan
	• assess at least one candidate for RPL
	• consider reasonable adjustment and the reasons for decisions in at least one assessment
	• cover an entire unit of competency and show:
	  • the application of different assessment methods and instruments involving a range of assessment activities and events
	  • two-way communication and feedback
	  • how judgement was exercised in making the assessment decision
	  • how and when assessment outcomes were recorded and reported

© Commonwealth of Australia, 2025 Industry Skills Australia

	• assessment records and reports completed in accordance with assessment system and organisational, legal and ethical requirements • how the assessment process was reviewed.
Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment plan may include:	• overall planning, describing:
	  • what is to be assessed
	  • when assessment is to take place
	  • where assessment is to take place
	  • how assessment is to take place.

Benchmarks for assessment:	• refer to a criterion against which the candidate is assessed • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications.
Assessment tools include:	• the learning or competency unit(s) to be assessed • the target group, context and conditions for the assessment • the tasks to be administered to the candidate • an outline of the evidence to be gathered from the candidate • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) • the administration, recording and reporting requirements • the evidence of how validity and reliability have been tested and built into the design and use of the tool.

© Commonwealth of Australia, 2025 Industry Skills Australia

Specialist support may include:	• assistance by third party, such as carer or interpreter • support from specialist educator • provision of developed online assessment activities • support for remote or isolated candidates and assessors • support from subject matter or safety experts • advice from regulatory authorities • assessment teams and panels • support from lead assessors • advice from policy development experts.

Assessment methods include:	• particular techniques used to gather different types of evidence, such as:
	  • direct observation
	  • structured activities
	  • oral or written questioning
	  • portfolios of evidence
	  • review of products
	  • third-party feedback.

Individual differences may include:	• English language, literacy and numeracy barriers • physical impairment or disability • intellectual impairment or disability • medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma • learning difficulties • mental or psychological disability • religious and spiritual observances • cultural images and perceptions • age • gender.
Feedback may include:	• ensuring assessment/RPL process is understood • ensuring candidate concerns are addressed • enabling questions and answers • confirming outcomes • identifying further evidence to be provided • discussing action plans • confirming gap training needed • providing information regarding available appeal processes • suggesting improvements in evidence gathering and

© Commonwealth of Australia, 2025 Industry Skills Australia

	presentation.
Consultation may involve:	• moderation with other assessors, or training and assessment coordinators • discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors • technical and subject experts • English language, literacy and numeracy experts.

TAEDEL301A Provide work skill instruction

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conduct individual and group instruction and demonstrate work skills, using existing learning resources in a safe and comfortable learning environment. The unit covers the skills and knowledge required to determine the success of both the training provided and one's own personal training performance. It emphasises the training as being driven by the work process and context.

Application of the Unit

Application of the unit	This unit supports a wide range of applications across any workplace setting and so can be used by any organisation. Its use is not restricted to training organisations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Organise instruction and demonstration	1.1. Gather information about ***learner characteristics*** and learning needs 1.2. Confirm a ***safe learning environment*** 1.3. Gather and check ***instruction and demonstration objectives*** and seek assistance if required 1.4. Access and review relevant ***learning resources*** and ***learning materials*** for suitability and relevance, and seek assistance to interpret the contextual application 1.5. Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6. Notify learners of ***details*** regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1. Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2. Follow the learning program and/or delivery plan to cover all learning objectives 2.3. Brief learners on any ***OHS procedures*** and requirements prior to and during training 2.4. Use ***delivery techniques*** to structure, pace and enhance learning 2.5. Apply ***coaching*** techniques to assist learning 2.6. Use communication skills to provide information,

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	instruct learners and demonstrate relevant work skills 2.7. Provide opportunities for practice during instruction and through work activities 2.8. Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1. Use ***measures*** to ensure learners are acquiring and can use new technical and generic skills and knowledge 3.2. Monitor learner progress and outcomes in consultation with learner 3.3. Review relationship between the trainer/coach and the learner and adjust to suit learner needs
4. Review personal training performance and finalise documentation	4.1. Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2. Maintain, store and secure learner records according to organisational and legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- verbaland non-verbal communication techniques, such as:
  - asking relevant and appropriate questions
  - providing explanations
  - demonstrating
  - using listening skills
  - providing information clearly
- safety skills to implement OHS requirements, by acting and responding safely in order to:
  - identify hazards
  - conduct prestart-up checks if required
  - observe and interpret learner behaviour that may put people at risk
- time-management, skills to:

© Commonwealth of Australia, 2025 Industry Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

- ensure all learning objectives are covered
- pace learning

- reflection skills in order to:
  - identify areas for improvement
  - maintain personal skill development
- literacy skills to:
  - complete and maintain documentation
  - read and follow learning programs and plans
  - read and analyse learner information
- technology skills to operate audio-visual and technical equipment
- interpersonal skills to:
  - engage, motivate and connect with learners
  - provide constructive feedback
  - maintain appropriate relationships
  - establish trust
  - use appropriate body language
  - maintain humour
  - demonstrate tolerance
  - manage a group
  - recognise and be sensitive to individual difference and diversity
- observation skills to:
  - monitor learner acquisition of new skills, knowledge and competency requirements
  - assess learner communication and skills in interacting with others
  - identify learner concerns
  - recognise learner readiness to take on new skills and tasks

Required knowledge

- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency

© Commonwealth of Australia, 2025 Industry Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
procedures • risk controls for the specific learning environment

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• carry out aminimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing:
	  • different learning objectives
	  • a range of techniques and effective communication skills appropriate to the audience.

Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2025 Industry Skills Australia

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Learner characteristics may include:	• language, literacy and numeracy levels • learning styles • past learning and work experiences • specific needs • workplace culture.
Safe learning environment may include:	• exit requirements • personal protective equipment • safe access • safe use of equipment.

Instruction and demonstration objectives may include:	• competencies to be achieved
	• generic and technical skills, which may be:
	  • provided by the organisation
	  • developed by a colleague
	  • individual or group objectives
	  • learning outcomes.

Learning resources may include:	• any material used to support learning, such as:
	  • learner and user guides
	  • trainer and facilitator guides
	  • example training programs
	  • specific case studies
	  • professional development materials
	  • assessment materials
	• a variety of formats
	• those produced locally
	• those acquired from other sources.

Learning materials may include:	• handouts for learners • materials sourced from the workplace, e.g. workplace documentation, operating procedures, and specifications.
Details may include:	• location and time • outcomes of instruction or demonstration • reason for instruction or demonstration • who will be attending instruction session.

© Commonwealth of Australia, 2025 Industry Skills Australia

RANGE STATEMENT	
OHS procedures may include:	• emergency procedures • hazards and their means of control • incident reporting • use of personal protective equipment • safe work practices • safety briefings • site-specific safety rules.
Delivery techniques may include:	• coaching • demonstration • explanation • group or pair work • providing opportunities to practise skills and solve problems • questions and answers.
Coaching may include:	• learning arrangements requiring immediate interaction and feedback • on-the-job instruction and 'buddy' systems • relationships targeting enhanced performance • short-term learning arrangements • working on a one-to-one basis.
Measures may include:	• informal review or discussion • learner survey • on-the-job observation • review of peer coaching arrangements.

TAEDEL404A Mentor in the workplace

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to establish and develop a professional mentoring relationship with a learner, in particular an apprentice or trainee employed by, or undertaking work placement in, a workplace. It includes establishing the need for mentoring, developing a mentoring plan/framework, facilitating and monitoring the mentoring relationship, and evaluating the effectiveness of mentoring.

Application of the Unit

Application of the unit	This unit typically applies to workplace supervisors or other work colleague with responsibility for mentoring in the workplace.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a mentoring plan	1.1. Identify scope and boundaries of the ***mentoring*** relationship according to organisational procedures 1.2. Establish ***ground rules*** and negotiate realistic expectations 1.3. Establish and maintain confidentiality of the relationship in accordance with ***legislation***, ***policy and procedures***
2. Facilitate mentoring relationship	2.1. Develop learner's confidence, self-esteem, respect and trust in the mentoring relationship 2.2. Share personal experiences and knowledge with the person being mentored according to agreed objectives 2.3. Support the person being mentored to develop and use skills in problem solving and decision making 2.4. Use personal and professional networks to assist the person being mentored 2.5. Provide information, guidance and constructive guidance to enhance engagement in the workplace 2.6. Use ***techniques for resolving differences*** without damaging the relationship, and obtain assistance according to organisational policy and procedures
3. Monitor mentoring relationship	3.1. Provide planning assistance and guidance as requested by the person being mentored in a form

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	and style to suit their requirements 3.2. Provide feedback to the person being mentored on progress towards achieving the expectations and goals of the mentoring process 3.3. Recognise and discuss changes in the ***mentoring relationship*** with appropriate ***stakeholders*** 3.4. Negotiate and manage closure of the mentoring arrangement once objectives have been met
4. Evaluate effectiveness of mentoring	4.1. Establish and discuss ***benefits*** gained from the mentoring process 4.2. Reflect on and articulate the personal benefits gained from providing mentoring 4.3. Identify and report the outcomes of the mentoring arrangement and the ***benefits to the organisation*** according to organisational policy and procedures to improve the mentoring system or program

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills

• planning and time-management skills to mentor in a workplace
• oral communication and language skills to motivate learners
• organisational skills to provide guidance and feedback to individuals
• interpersonal skills to:
  • engage in relationship building, including building trust and maintaining confidentiality
  • respond to diversity, including gender and disability
• communication skills to use a range of communication strategies, including listening, questioning, and giving andreceiving feedback
• initiative and enterprise skills to apply procedures relating to OHS and environmentallegislation in the context of workplace mentoring

Required knowledge
• relevant policy, legislation, codes of practice and national standards likely to impact on the provision of workplace mentoring • training contracts and responsibilities of employer, registered training organisation

© Commonwealth of Australia, 2025 Industry Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

(RTO) and funding body
• training plans and responsibilities
• training products and strategies for learning
• mentoring methodologies and strategies
• acceptable behaviour in the mentoring relationship
• equal employment opportunity, equity and diversity principles
• OHS relating to the work role, including:
  • hazards relating to the industry and specific workplace
  • reporting requirements for hazards and incidents
  • specific procedures for work tasks
  • safe use and maintenance of relevant equipment
  • emergency procedures
  • sources of OHS information

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • prepare a mentoring plan between the mentor and learner that reflects the scope and substance expected within a plan prepared for a learner undertaking a contracted apprenticeship or traineeship • facilitate at least three mentoring sessions • provide information on sessions, including comments and notes from both mentor and learner.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	

Mentoring may include:	• long-term focus on personal growth and learning
	• wide range of learning oriented to:
	  • support
	  • guidance in personal or career growth
	• relationship, not just a procedure or activity
	• one person professionally assisting the career development of another.

Ground rules may include:	• training for mentoring partners • mentoring agreement • active involvement of both partners in the mentoring process.

Legislation, ***policy and procedures*** may include:	• commonwealth and state or territory legislation and regulations, such as:
	  • privacy legislation
	  • equal employment opportunity, anti-discrimination and harassment legislation
	  • OHS legislation
	  • user choice
	• organisational policy, procedures and protocols.

Techniques for resolving differences	• finding a mutually beneficial solution • self-disclosure

© Commonwealth of Australia, 2025 Industry Skills Australia

RANGE STATEMENT	
may include:	• inviting discussion • providing explanations • accessing assistance.
Mentoring relationship may include:	• informal workplace development program • formal mentoring process associated with a contracted apprenticeship or traineeship, involving a formal training plan.
Stakeholders may include:	• trainee or apprentice • manager or supervisor • RTO • learning support services, including assistive technology and diagnostic testing • funding organisation • supplier of learning resources.
Benefits may include:	• insights into organisational culture, attitudes and expected behaviours • supportive environment in which successes and failures can be evaluated • networking opportunities • development of workplace competence and self-confidence • recognition and job satisfaction • mutual respect.
Benefits to the organisation may include:	• increased productivity • new competencies in the person being mentored • staff motivation • more committed, involved and responsible learners.

TAEDES401A Design and develop learning programs

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit describes the performance outcomes, skills and knowledge required to conceptualise, design, develop and review learning programs to meet an identified need for a group of learners. The unit addresses the skills and knowledge needed to identify the parameters of a learning program, determine the design, outline the content and review its effectiveness.

Application of the Unit

Application of the unit	This unit typically applies to a trainer or facilitator who designs or develops learning programs. A learning program can be discrete, providing a planned learning approach that relates to specific learning and training needs, or it may form part of the learning design for a qualification.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2025 Industry Skills Australia

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Define parameters of the learning program	1.1. Clarify ***purpose*** and type of learning program with key stakeholders 1.2. Access and confirm the competency standards and ***other training specifications*** on which to base the learning program 1.3. Identify language, literacy and numeracy requirements of the program 1.4. Identify and consider characteristics of the target learner group
2. Work within the vocational education and training (VET) policy framework	2.1. Access relevant ***VET policies*** and frameworks, and apply to work practices 2.2. Identify changes to training packages and accredited courses and apply these to program development 2.3. Conduct work according to organisational quality assurance policies and procedures
3. Develop program content	3.1. Research, develop and document specific subject matter content according to agreed design options 3.2. Evaluate existing learning resources for content relevance and quality 3.3. Specify assessment requirements of the learning program

© Commonwealth of Australia, 2025 Industry Skills Australia

ELEMENT	PERFORMANCE CRITERIA
4. Design structure of the learning program	4.1. Break the learning content into manageable segments and document timeframe for each segment 4.2. Determine and confirm ***delivery strategies*** and required assessment methods and tools 4.3. Document complete learning program in line with organisational requirements 4.4. Review complete program with key stakeholders and adjust as required 4.5. Ensure a safe learning progression by analysing risks in the learning environment and including a risk control plan

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- organisational skills to ensure resources are available and suitable
- evaluation skills to determine the time required for each learning segment and the overall timelines of the learning program
- cognitive skills to develop the learning program content and design its structure
- language and literacy skills to read and interpret a range of documentation, including technical and subject matter documents, references and texts

Required knowledge

- information about training package developers and course accreditation agencies responsible for specific learning program parameters
- training packages and relevant competency standards to be used as the basis of the learning program
- other performance standards and criteria to be used as the basis of the learning program, where relevant
- distinction and relationship between a training package/accredited course, learning strategy and learning program, where linked
- different purposes and focus of learning programs
- sound knowledge of learning principles
- instructional design principles relating to different design options for learning program design and structure
- availability and types of different relevant learning resources, learning materials

© Commonwealth of Australia, 2025 Industry Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
and pre-developed learning activities • methodology relating to developing and documenting new learning activities and related learning materials • different delivery modes and methods • relevant policies, legal requirements, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the VET sector • relevant OHS knowledge relating to the work role, and OHS considerations that need to be included in the learning program

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must address the scope of this unit and reflect all components of the unit. Arange of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• design, develop and review learning programs within the VET context
	• prepare and develop a minimum of two learning programs:
	  • that contain differentiated learning program designs to reflect particular needs, contexts and timelines
	  • at least one of which must be based on competency standards or accredited courses and must cover at least one entire unit of competency or accredited course module.

Context of and specific resources for assessment	Evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment

assessment	units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Purpose may include:	• developing vocational competency or vocational skills • developing language, literacy and numeracy skills • developing general education • meeting legislative, licensing and registration requirements, such as OHS requirements.
Other training specifications may include:	• curriculum specifications • product specifications • organisational work requirements and training needs • induction needs • language, literacy and numeracy development needs • regulatory and licensing requirements.
Vocational education and training policies may include:	• policies and procedures set by national organisations, such as the National Quality Council • Australian Quality Training Framework • other relevant policies.

Delivery strategies may include:	• focus of delivery in terms of size and type of group
	• context of delivery, for example:
	  • in the workplace
	  • in a training room
	  • in a community setting
	• mode of delivery, for example:
	  • face-to-face
	  • online
	  • blended delivery mode
	• delivery methods, for example:

TAETAS501B Undertake organisational training needs analysis

Modification History

Version	Comments
TAETAS501B	Released with *TAE10 Training and Education Training Package version 2.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to undertake a training needs analysis (TNA) to identify the training and assessment needs of an organisation.

Application of the Unit

This unit typically applies to those working in roles that require them to work with organisations to identify training needs.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

1. Identify the organisation's needs	1.1 Discuss with relevant staff from the organisation their ***objectives,*** expectations and organisational requirements 1.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the organisation. 1.3 Identify, analyse and address any existing or potential issues that may impact on the organisation's objectives and requirements 1.4 Identify and access resources in accordance with organisational requirements 1.5 Develop a project plan with relevant persons to be negotiated and agreed by the organisation
2. Conduct training needs analysis	2.1 Use reliable, appropriate and efficient methods for collecting information and data on current, emerging and future training needs 2.2 Analyse the organisation's work roles to determine skills and competencies needed for effective performance 2.3 Follow legal, organisational and ethical requirements to gather information and data to assess the current skills and competencies of staff 2.4 Use reliable and valid data analysis methods to determine current and emerging organisational training needs
3. Provide advice to the organisation	3.1 Provide the organisation with clear advice and recommendations on training and assessment needs 3.2 Provide the organisation with ***options*** for meeting identified training needs 3.3 Obtain feedback and comments from the organisation on the suitability and sufficiency of advice and recommendations 3.4 Use legal requirements to process, complete and present final report to the organisation

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- cognitive skills to analyse and interpret research and conceptualise and synthesise issues

© Commonwealth of Australia, 2025 Industry Skills Australia

around training needs
- communication and interpersonal skills to consult with client and relevant people, to discuss client needs and provide observations and recommendations for training development
- literacy skills to critically evaluate information and prepare reports providing advice and recommendations
- negotiation and facilitation skills for research, presenting and discussing recommendations and obtaining feedback
- numeracy skills to analyse data and present statistical information
- problem solving skills to apply effective approaches to training needs
- research skills to collect information around training needs, including observation and consultation.

Required knowledge

- competency standards and Training Packages/accredited courses
- Australian Quality Training Framework (AQTF) requirements and standards
- risk identification and management strategies
- industry and enterprise knowledge
- evaluation and research methodologies
- relevant social, political, economic and technological developments
- principles of intellectual property
- training and development strategies
- change management concepts/strategies
- occupational health and safety (OHS) relating to undertaking an organisational training needs analysis.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to:
	• research, conduct and provide advice through a training needs analysis
	• prepare at least two training needs analyses for one or more organisations
	• collect evidence that demonstrates:
	  • processes that were used to determine the organisation's needs
	  • details of research methods undertaken to identify

© Commonwealth of Australia, 2025 Industry Skills Australia

	suitable training and/or assessment • planning for the training needs analysis • presentations that outline advice and recommendations.
Context of and specific resources for assessment	Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.
Method of assessment	
Guidance information for assessment	

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Objectives may include:	• improved individual learning outcomes for new or existing staff • access to government training incentives and funding • productivity improvement • developing administration and records management systems • compliance with, or knowledge of, legislative or government regulatory requirements • individualised organisational training and skill requirements.
Options may include:	• developing in-house capacity to meet identified needs • identifying training and/or assessment organisations to meet needs • identifying specific units of competency, qualifications/courses to meet needs • consultancy services.

TLIA0001 Complete import procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete importation procedures as part of an international freight forwarder's role.

It includes ensuring compliance with all Australian government regulations, workplace requirements and other compliance requirements, and meeting customer needs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for import	1.1 Parties involved and their responsibilities are identified
	1.2 Various sources of necessary information are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.3 Shipment details and customer requirements are verified
	1.4 Working relationships with all parties concerned are established
	1.5 Communication with relevant parties and authorities is undertaken to prepare for freight arrival
	1.6 Discrepancies are noted and appropriate actions are undertaken in accordance with workplace procedures
2 Complete and check documentation	2.1 All relevant documents required for import are identified
	2.2 Documentation is checked for accuracy against import details
	2.3 Workplace documentation is prepared and issued in accordance with workplace procedures and customer requirements
	2.4 Cargoes or shipments where permits or other regulatory documents are required, are identified
	2.5 Required information is reported to relevant authorities in accordance with regulatory requirements
	2.6 Issues of non-conformance and discrepancies are actioned and a resolution is sought with relevant parties
3 Communicate with relevant parties	3.1 Various communication methods are identified as required by workplace procedures
	3.2 Communication with suppliers about arrival and shipment details is established
	3.3 Communication is undertaken with government authorities within required timeframes
	3.4 Arrival details are communicated to relevant parties
	3.5 Problems arising from import process are identified and action is taken to resolve problems in accordance with workplace procedures
4 Prepare cargo for final delivery	4.1 All relevant regulatory and workplace procedures are completed and compliance is achieved
	4.2 Authorisation for cargo release is checked and approval is determined
	4.3 Delivery orders or release authorities are issued in accordance

© Commonwealth of Australia, 2025 Industry Skills Australia

	with regulatory requirements and workplace procedures
	4.4 Clearance statuses are checked prior to shipment release
	4.5 Special requirements are identified and discussed with clients in accordance with workplace requirements
	4.6 Import charges and freight costs are accurately calculated and any discrepancies are actioned
5 Manage records	5.1 Records of all communications and shipment details are retained and filed in accordance with regulatory requirements and workplace procedures
	5.2 Copies of relevant records are forwarded to client in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit.

Assessment Requirements for TLIA0001 Complete import procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- calculating import charges and freight costs
- communicating effectively with a range of parties
- confirming customer requirements
- developing working relationships
- identifying discrepancies
- identifying necessary information
- identifying special requirements
- maintaining records of communications
- making decisions
- managing time effectively
- preparing workplace documents
- reporting information
- solving problems
- verifying details.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- how to resolve issues of non-conformance
- import charges and freight costs
- parameters of freight forwarder role in import processes
- permits, authorities and other regulatory documents
- purpose of shipment details
- responsibilities of import parties

© Commonwealth of Australia, 2025 Industry Skills Australia

- sources of information
- variety of communication methods to use with suppliers, regulators and customers
- workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA0002 Prepare cargo for export

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare cargo for export and includes confirming correct preparation of the consignment, organising cargo loading and processing documentation.

Work must be must be carried out in compliance with relevant international and domestic legislation, regulations and codes of practice for exporting cargo.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving prescribed outcomes.

Work involves the application of routine freight forwarding principles and procedures to prepare cargo for export.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Confirm correct preparation of consignment	1.1 Consignment is checked to ensure cargo is consistent with packing specification and is suitable for mode and method of transport
	1.2 Consignment is checked to ensure labelling and marking of cargo conforms with domestic and international regulations, and workplace requirements and that packaging of cargo conforms to regulatory requirements and is appropriate for transport method
	1.3 Cargo is checked for dangerous goods or explosives and conformance of packaging and labelling with Australian and international dangerous goods or explosives codes is confirmed as required
	1.4 Discrepancies in composition or preparation of cargo are noted and appropriate action is undertaken in accordance with workplace procedures
2 Organise cargo loading	2.1 Handling methods and equipment suitable for goods, transport mode and method are selected
	2.2 Goods transfer methods between modes of transport are selected as required
	2.3 Procedures for cargo loading are organised and followed in accordance with legislative and workplace requirements
3 Process documentation	3.1 All relevant documentation is consolidated and checked for completion and accuracy
	3.2 Discrepancies in documentation are identified and appropriate action is undertaken in accordance with workplace procedures
	3.3 Dangerous goods declaration is obtained from consignor as required
	3.4 Copies of documents are retained in accordance with regulatory requirements and workplace procedures

Assessment Requirements for TLIA0002 Prepare cargo for export

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing information and making decisions based on information provided
- applying relevant legislation and workplace procedures
- assessing and reporting unusual occurrences in relation to cargo export
- communicating effectively with others
- completing documentation related to organising cargo export
- identifying and solving problems that may occur when organising cargo export
- interpreting client requirements
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, labels and documents
- responding appropriately to cultural differences in the workplace
- working collaboratively with others when organising cargo export
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable legislation, regulations and codes including:
  - Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances, including:
    - Australian Dangerous Goods (ADG) Code
    - Australian and international explosives codes
    - Australian Marine Orders and the International Maritime Dangerous Goods (IMDG) Code
    - International Air Transport Association (IATA) Dangerous Goods Regulations (DGR)
    - international transport regulations, codes and procedures
  - relevant Australian and international standards and certification requirements
  - relevant international and Australian state/territory road rules and transport regulations
  - relevant legislative requirements, codes and regulations for cargo export
  - relevant state/territory environmental protection legislation
  - relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) legislation
- contacts and sources of information/documentation needed when organising cargo export
- procedures for batching, dating and numbering
- procedures for calculating weights, volumes and dimensions
- procedures for completing consignment documentation
- procedures for reviewing transport options and availability of carriers
- workplace customer service policies and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIA1001 Secure cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to secure cargo in accordance with procedures and regulatory requirements as part of work activities within the transport and logistics industry.

It includes preparing to secure cargo/containers, lashing and unlashing cargo, protecting cargo from weather, and packing and unpacking cargo.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to secure	1.1 Work area is prepared and maintained in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

	cargo/containers		national standards, safety codes and site operating procedures
		1.2	Unsafe work practices and/or equipment are reported to appropriate personnel
		1.3	Appropriate protective clothing, equipment and fittings are selected
		1.4	Formwork is erected where no lashing points exist
		1.5	Lashing plan is read and interpreted
2	**Lash and unlash cargo**	2.1	Work is conducted in accordance with industry standards, statutory requirements, safety codes, site operating requirements and any special cargo requirements
		2.2	Lashing points are identified and appropriate fittings and lashing equipment are used for each lashing point
		2.3	Cargo is lashed and secured to lashing points ensuring the correct spread of lashings and that lashings are secured, attached and tensioned
		2.4	Tensioners are securely fastened
		2.5	When unlashing, fittings are released, disconnected and removed from the cargo
		2.6	Lashing equipment is placed in designated storage areas or cleared from work area
		2.7	No injury to personnel or damage to machinery or cargo during lashing/unlashing operations is ensured
		2.8	Lashing is completed in accordance with lashing plan
3	**Protect cargo from weather**	3.1	Cargo is covered/uncovered safely ensuring appropriate covering and lashing, no injury to personnel or damage to cargo or equipment
		3.2	Work is conducted in accordance with the requirements of national standards, safety codes and site operating procedures
4	**Pack and unpack cargo**	4.1	Damaged cargo is identified and reported in accordance with enterprise procedures
		4.2	Cargo is sorted and stacked prior to packing or after unpacking, ensuring the stack is in the correct location, in accordance with national standards, safety codes, and site operating procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

4.3 Cargo is identified through the interpretation of marks or numbers

4.4 Tight stow of cargo is maintained

4.5 Cargo is handled ensuring no injury to personnel or damage to cargo or equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA1001 Secure cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when securing cargo or freight
- completing documentation related to securing cargo or freight
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and where applicable, emergency information panels
- identifying, selecting and using relevant equipment, processes and procedures when securing cargo or freight
- interpreting and following operational instructions and prioritising work
- operating and adapting to differences in cargo handling equipment in accordance with standard operating procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting instructions, procedures, information and labels relevant to securing cargo or freight
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using lashing and protection equipment
- working collaboratively with others when securing cargo or freight
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international standards, codes and regulations relevant to securing cargo or freight including ADG and IMDG codes
- cargo marking and numbering systems
- focus of operation of work systems, equipment, management and site operating systems for securing cargo or freight
- problems that may occur when securing cargo or freight and appropriate action that can be taken to resolve these problems
- procedures for managing and controlling hazardous situations when carrying out work activities
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant WHS/OHS and environmental procedures and regulations
- workplace procedures and policies for securing cargo or freight.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIA2003 Connect and disconnect reefer units

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to connect and disconnect reefer units in accordance with workplace requirements as part of work activities in the stevedoring, transport, distribution and allied industries.

It includes plugging and unplugging reefer units to/from power sources, attaching and detaching reefer units, and identifying and reporting any problems with reefer unit operation.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIA2009 Complete and check import/export documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete and check import and export documentation in accordance with the requirements of Customs and related legislation and workplace procedures.

It includes identifying procedures required for documenting import/export of goods, completing documentation to meet legislative and workplace requirements, checking documentation to ensure it meets legislative requirements and lodging documentation for processing.

Work is performed under some supervision generally within a team environment. Work is undertaken in a range of environments including small to large worksites in the customs broking and freight forwarding industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others when completing import and export documentation
- completing and checking documentation and records to meet relevant Customs legislation, related legislation and workplace requirements
- completing and/or assessing accuracy of import and export documentation
- identifying procedures required for documentation for import/export of goods
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- providing customer/client service
- reading, interpreting and following import and export instructions, procedures and labels
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant communications, computing and office equipment when completing import and export documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international standards, codes, conventions and regulations relevant to importing and exporting cargo and freight
- Customs Act 1901and related legislation
- documentation requirements for importing and exporting cargo and freight
- focus of operation of work systems, equipment, management and site operating systems for completing import/export cargo and freight documentation

© Commonwealth of Australia, 2025 Industry Skills Australia

- problems that may occur when completing import and export documentation and appropriate action that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- workplace procedures and policies for completing import and export documentation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA2011 Package goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to package goods in accordance with regulatory and workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes selecting materials, packing, and labelling packaged products/loads to the required labelling standards.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select materials and pack products	1.1 Packaging specifications and order packaging documentation are correctly interpreted

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Packaging technology suitable for the goods to be packed is selected
	1.3 Packaging materials are identified and matched to specifications
	1.4 Work plan is followed, materials are used economically and appropriate packaging is used to minimise loss and damage in transit or storage
	1.5 Work is planned in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
	1.6 Completed packed goods are stacked to minimise damage from within and outside
2 Label packaged products/loads	2.1 Workplace labelling standards are identified
	2.2 Appropriate goods handling, labelling and other identification symbols are used
	2.3 Invoices and picking slips are attached as required
	2.4 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2011A Package goods.

Assessment Requirements for TLIA2011 Package goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- checking operation of packaging equipment in terms of service schedule and standard operating procedures
- communicating and working effectively with others when packaging goods
- completing documentation related to work activities when packaging goods
- estimating the size, shape and special requirements of goods and loads
- implementing contingency plans when packaging goods
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance when packaging goods
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting instructions, procedures and labels relevant to packaging goods
- selecting and using relevant communications, computing equipment and materials when packaging goods
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to packaging goods
- documentation requirements for packaging goods, such as a workplan
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for packaging goods
- problems that may occur when packaging goods and appropriate action that can be taken to resolve these problems
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for packaging goods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIA2012 Pick and process orders

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to pick and process orders in accordance with relevant codes, regulations and workplace requirements within the transport and logistics industry.

It includes identifying workplace order picking processes, policies and procedures; picking and despatching orders; and recording stock levels.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify workplace order picking processes, policies	1.1 Workplace procedures for order picking and related workplace documentation are interpreted
	1.2 Stock allocation and location systems are identified and

© Commonwealth of Australia, 2025 Industry Skills Australia

	and procedures		located
		1.3	Appropriate manual handling equipment is selected in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures
2	**Pick and despatch an order**	2.1	Work requirements are planned and appropriate equipment and documentation is assembled
		2.2	Warehouse zones where required products are stored, are identified and located
		2.3	Pick path is established
		2.4	Appropriate pallet/s for orders are selected and stacked to minimise stock damage and to maximise stability, as required
		2.5	Products are selected and consolidated
		2.6	Products/pallets are located in despatch areas
		2.7	Products are assembled to meet workplace schedules
		2.8	Orders are consolidated, secured, arranged and placed in storage zones in accordance with schedules
3	**Record stock levels**	3.1	Storage areas are checked and stocks are noted for replenishment in accordance with workplace procedures
		3.2	Workplace records are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

TLIA2014 Use product knowledge to complete work operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use product knowledge to complete work operations in accordance with workplace requirements and relevant regulations, as part of work activities within the transport and logistics industries.

It includes identifying products in a subsection of a warehouse or other storage area, examining quality, reporting on products, as well as using inventory and labelling systems to identify and locate products.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify products in a	1.1 Products are identified against specified criteria in

© Commonwealth of Australia, 2025 Industry Skills Australia

subsection of a warehouse or other storage area	accordance with workplace procedures
	1.2 Storage and handling characteristics are identified and applied consistently
	1.3 Products are described to internal customers identifying features that may affect location, safety or storage requirements
2 Examine quality and report on products	2.1 Products are inspected in accordance with workplace quality assurance procedures
	2.2 Workplace procedures are followed to replace, return or dispose of stock/products that are not useable
	2.3 Non-conforming products are recorded/reported in accordance with workplace procedures
3 Use inventory and labelling systems to identify and locate products	3.1 Inventory and labelling systems are used to locate products within the workplace
	3.2 Goods are physically located and identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIA2014 Use product knowledge to complete work operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in products and services in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when handling, transporting and storing products and providing information on products and services
- completing documentation related to work activities
- estimating the size, shape and special requirements of goods and loads
- identifying containers and goods coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and where applicable, emergency information panels
- reading and comprehending simple statements in English
- reading, interpreting and following instructions, procedures, information and signs relevant to handling, transporting, storing products and providing information on products and services
- selecting and using relevant communications, computing and load handling equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Australian codes and regulations relevant to products being identified, handled, transported, stacked and/or stored as part of work operations
- categories or groups of products and requirements for special handling, stacking and storage
- documentation requirements including reports and records concerning damaged or contaminated goods
- focus of operation of work systems, equipment, management and site operating systems for packaging goods
- housekeeping standards and procedures
- purpose and use of cataloguing and labelling systems
- site layout and obstacles
- strategies to seek out sources of product knowledge and to use this information to inform work
- types of equipment and storage areas appropriate for different categories of goods including perishable, fragile, dangerous, composition/state goods
- workplace procedures and policies for identifying, handling, stacking and storing particular categories of products.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIA2020 Replenish stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to replenish stock in accordance with workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes applying product knowledge to participate in stock rotation activities, interpreting and filling replenishment requests, and completing all required stock replenishment tasks.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Participate in stock rotation activities	1.1 Stock levels are counted against appropriate documentation
	1.2 Stock levels are recorded and reported
	1.3 Stocks are replenished, adjusted or rotated in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

	workplace procedures
	1.4 Stock re-ordering processes are activated when appropriate
	1.5 Routine and non-routine problems with products or storage systems are reported in accordance with workplace procedures
2 Interpret and fill replenishment request	2.1 Order request documentation is interpreted
	2.2 Product/s in order are noted and workplace location/s are identified
	2.3 Workplace and product knowledge is used to plan sequence of work
	2.4 Appropriate materials handling equipment is selected in accordance with workplace procedures and timeframes, and work health and safety (WHS)/occupational health and safety (OHS) regulations
	2.5 Required schedules for order movement and despatch or storage are identified
3 Complete stock replenishment	3.1 Products are sorted, assembled and consolidated in the appropriate storage areas
	3.2 Work is checked in accordance with company procedures
	3.3 Documentation and records are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA2021 Despatch stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when organising despatch operations
- completing documentation related to organising despatch operations
- estimating size, shape and special requirements of goods and loads
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in goods and equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures and labels relevant to organising despatch operations
- selecting and using relevant equipment and communications technology when organising despatch operations
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and record requirements for despatch operations
- equipment used during despatch operations and the precautions and procedures that should be followed in its use
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for despatching goods
- problems that may occur when despatching goods and appropriate action that can be taken to resolve these problems
- regulations relevant to despatch operations, including the Australian Dangerous Goods (ADG) Code and relevant bond, quarantine or other legislative requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for organising despatch operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA2022 Participate in stocktakes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to participate in stocktakes in accordance with relevant regulations and workplace requirements within the transport and logistics industry.

It includes product knowledge, preparing and conducting stocktakes, counting and identifying stock discrepancies and completing all required documentation.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for stocktake	1.1 Goods to be counted and appropriate inventory systems are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Required resources including equipment and record keeping systems are identified
	1.3 Allocated tasks, zones and work requirements are identified
	1.4 Sequencing of work activities is planned in a time effective manner
2 Stocktake and count stock	2.1 Stocktaking and cyclical counts are undertaken in accordance with workplace policies and procedures
	2.2 Inventory data is interpreted
	2.3 Inventory data is confirmed to match stock
	2.4 Stock levels are accurately counted and documented
3 Identify stock discrepancies	3.1 Discrepancies in type, number and quality of stock are accurately recorded and documented
	3.2 Products stored in inappropriate storage locations are relocated and stock records are adjusted
4 Complete documentation	4.1 Inventory data is reconciled to match warehouse stock in accordance with workplace procedures
	4.2 Workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

TLIA2041 Manually sort mail and parcels

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manually sort mail and parcels in accordance with workplace requirements, as part of work activities in the postal and allied industries.

It includes carrying out required preparations of the work area, manually sorting mail and parcels as well as finalising the required sorting processes.

The sorting processes include accurately and efficiently organising mail and parcels into groups for further processing or distribution, and containerising processed mail and parcels ready for transfer to the next processing or distribution point.

Work is normally performed under general supervision, usually in a team or outstation environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

essential outcomes.	demonstrate achievement of the element.
1 Prepare to sort mail and parcels manually	1.1 Individual and work team priorities and responsibilities are identified and confirmed
	1.2 All work health and safety (WHS)/occupational health and safety (OHS) and environmental protection workplace procedures and requirements are identified, accessed and applied
	1.3 Availability of mail and parcels to be processed is identified and confirmed
	1.4 Mail and parcels to be processed are transferred to processing point
	1.5 Labels for identifying the destination of mail are created and affixed to trays
2 Sort mail and parcels manually	2.1 Internal operating procedures and standards are applied to the manual processing of parcels and mail
	2.2 Mail and parcels are inspected to ensure all criteria have been met
	2.3 Mail and parcels are sorted accurately and correctly in compliance with priority for processing and manual sorting procedures
	2.4 Mail and parcels are handled safely to minimise risk of injury to people and damage to mail and parcels
	2.5 Mail and parcels that are damaged, underpaid, incorrectly classified, or are non-conforming are identified, separated and re-processed in accordance with workplace procedures
	2.6 Legal requirements and workplace policies and procedures in relation to the security of mail and parcels are followed
3 Complete process for manually sorting mail and parcels	3.1 Mail and parcel sorting frames/bag racks are cleared down, and mail and parcel containers/bags are sealed and labelled in accordance with workplace procedures
	3.2 Mail and parcels are transferred to next processing or distribution point using appropriate shifting equipment and labels are scanned as required
	3.3 Information required to complete records of mail and parcels processed is provided and recorded

© Commonwealth of Australia, 2025 Industry Skills Australia

3.4 Excess equipment is removed and work area is prepared for next activity/shift

Foundation Skills

TLIA2044 Carry out delivery operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to deliver mail and/or consignments to residential and business customers, in accordance with regulations and workplace requirements within the transport and logistics industry.

It includes carrying out required preparations, delivering mail and/or consignment to special routes in accordance with workplace procedures, and reporting on delivery activity.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare to deliver mail and/or consignment	1.1 Mail and/or consignment for delivery and associated items are identified and collected promptly from specific locations
	1.2 Mail and/or consignment is sorted accurately into route order
	1.3 Mail and/or consignment is handled in a manner that minimises the risk of damage
	1.4 Special items are identified accurately
	1.5 Mail and/or consignment is organised into bundles and is kept in sequence for delivery
	1.6 Mail and/or consignment is handled securely
2 Deliver mail/consignment to specific route	2.1 Established laws, by-laws and procedural guidelines are confirmed and applied
	2.2 Mail and/or consignment is delivered in good condition and in specified sequence
	2.3 Deliveries are completed within specified times
	2.4 Mail and/or consignment is kept secure to minimise the risk of damage, theft, mis-delivery and loss
	2.5 Items requiring special treatment are delivered as specified and relevant documentation is completed accurately
	2.6 Contact with customers is conducted courteously and in a manner that encourages customers to continue to use and recommend mail services
	2.7 Hazards associated with delivery round are identified and required action is taken to minimise, control or eliminate identified hazards
3 Report on delivery activity	3.1 Incidents involving customers and/or identified hazards are reported accurately to relevant person
	3.2 Opportunities for developing workplace business, together with competitor activity, identified during delivery operations are recorded and reported to appropriate person
	3.3 Undelivered and undeliverable mail/consignment is processed in accordance with workplace policies and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

3.4 Documents are completed, checked for accuracy and returned promptly to appropriate person

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

TLIA2045 Process international parcels and letters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare and process international parcels and letters for both air and surface movement, in accordance with regulations and workplace requirements within the transport and logistics industry.

It includes preparing to process international parcels and mail, processing airmail parcels and letters, and processing economy air surface parcels.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare to process international parcels and mail	1.1 Individual and work team priorities and responsibilities are identified and confirmed
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 All work health safety (WHS)/occupational health and safety (OHS) and workplace environment protection procedures and requirements are identified, accessed and applied
	1.4 Availability of parcels and mail for processing is identified and confirmed
	1.5 Parcels and mail received from streaming are segregated into airmail, economy air and surface categories
	1.6 Mail and parcels are weighed prior to processing
2 Process airmail parcels and letters	2.1 Operating procedures and performance standards are applied to sorting parcels and letters
	2.2 Parcels are handled safely to minimise risk of injury to people and damage to parcels and letters
	2.3 Airmail parcels are quarantined for stipulated period
	2.4 Parcels and letters are sorted accurately and correctly by nation, in accordance with established priorities
	2.5 Parcels and letters are documented and placed in appropriate containers
	2.6 Completed bags are weighed and labels are generated and scanned
	2.7 Containers of parcels are moved to consolidation/despatch area
	2.8 Excess equipment is removed and work area is prepared for next activity/shift
	2.9 International parcels and letters processes and surveys are conducted as required
	2.10 Parcels and letters incorrectly classified and non-conforming items are identified, separated and re-sorted
3 Process economy air surface parcels	3.1 Operating procedures and performance standards are applied to sorting parcels and mail

© Commonwealth of Australia, 2025 Industry Skills Australia

3.2 Economy air and surface parcels and mail are held in temporary storage for the service standard time

3.3 Parcels and mail are scanned and sorted accurately and correctly by nation in accordance with established practices

3.4 Parcels and mail are documented and placed in containers

3.5 Containers of parcels and mail are moved to consolidation/despatch area using correct shifting equipment and labels

3.6 Excess equipment is removed and work area is prepared for next activity/shift

3.7 Information required to complete record of mail and parcels is provided and recorded, and records are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2045A Process international parcels and letters.

Assessment Requirements for TLIA2045 Process international parcels and letters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- applying safety and security precautions and required action to minimise, control or eliminate identified hazards
- communicating and working effectively with others
- completing relevant documentation
- identifying, selecting and using relevant equipment, processes and procedures
- implementing contingency plans
- interpreting and applying relevant agreements, codes of practice, workplace procedures and other legislative requirements
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions, procedures and labels
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to mail or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational work systems, equipment, management and site operating systems for processing international parcels and letters
- performance standards and regulations relevant to mail operations
- problems that may occur when processing international parcels and letters and appropriate action that can be taken to resolve/avoid these problems
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements of international parcels processing systems, operations and relevant equipment
- safety and security hazards that may occur when processing international parcels and letters, and ways of controlling the risks involved
- site layout
- workplace procedures and policies for the processing of international parcels and letters.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA2046 Process parcels and letters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manually process parcels and letters in accordance with regulations and workplace requirements.

It includes preparing and carrying out the processing of parcels and mail manually, and completing all processing operations. It also includes all actions after receipt, from streaming up to immediately prior to despatch, as part of work activities.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare to process parcels and mail manually	1.1 Individual and work team priorities and responsibilities are identified and confirmed
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 All work health safety (WHS)/occupational health and safety (OHS) and environment protection procedures and requirements for the workplace are identified, accessed and applied
	1.4 Availability of parcels and mail to be processed is identified and confirmed
	1.5 Appropriate sort-plan is identified, accessed and applied
	1.6 Parcels and mail to be processed are transferred to processing point
	1.7 Labels for identifying mail destination are created and affixed to trays
2 Process parcels and mail manually	2.1 Operating procedures and performance standards are applied to manual processing of parcels and mail
	2.2 Parcels and mail are processed accurately and correctly in accordance with priority for processing
	2.3 Parcels and mail are handled safely to minimise risk of injury to people and damage to parcels
	2.4 Parcels and mail incorrectly classified and non-conforming items are identified, separated and re-processed
	2.5 Parcels and mail are sorted to their correct destination and placed in appropriate mail container for distribution
3 Complete parcels and mail process	3.1 Parcel and mail containers/bag racks are cleared down, sealed and labelled
	3.2 Parcel and mail containers are weighed and labelled in accordance with workplace procedures
	3.3 Information required to complete records of parcels and mail processed is provided and recorded, and records are processed in accordance with workplace procedures
	3.4 Parcels and mail are transferred to next processing point using appropriate shifting equipment, and labels are scanned as required

© Commonwealth of Australia, 2025 Industry Skills Australia

3.5 Excess equipment is removed and work area is prepared for next activity/shift

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2046A Process parcels and letters.

TLIA2047 Stream mail

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to stream mail in readiness for the next stage of processing, in accordance with regulations and workplace requirements.

It includes preparing to stream mail and carrying out the task of streaming mail in accordance with workplace procedures, and finalising all required streaming operations.

Work is normally performed under general supervision, usually within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

TLIA2050 Lash and unlash cargo and containers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to lash and unlash cargo and containers in compliance with relevant regulations and workplace requirements in the stevedoring, transport, distribution and allied industries.

It includes preparing to lash and unlash cargo and containers, implementing the container lashing plan, and completing lashing and unlashing operations.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to lash and	1.1 Work area and safety zones are prepared and maintained

unlash cargo and containers		in accordance with national standards, safety codes and site operating procedures
	1.2	Work area hazards are identified and corrective action is taken prior to commencing lashing and unlashing operations
	1.3	Relevant information and documentation are identified and accessed
	1.4	Appropriate personal protective equipment, lashing equipment and fittings are selected and used
	1.5	Work cage and/or working at height (WAH) requirements are identified and appropriate WAH equipment is selected
	1.6	Marks, numbers and/or codes are used to identify cargo and containers
	1.7	Cargo is sorted and stacked in correct location in accordance with national standards, safety codes and site operating procedures
	1.8	Containers are stowed in accordance with stowage plan, and reefer containers are identified and connected in accordance with ship procedures, national standards and safety codes
	1.9	Damaged cargo and containers are identified, reported and dealt with in accordance with site operating procedures
	1.10	Potential unsafe work practices and/or equipment are reported to appropriate personnel
2 Implement cargo and container lashing and unlashing procedures	2.1	Cargo or container lashing and unlashing plan is accessed and read, and potential issues are clarified with supervisor
	2.2	Procedures for managing and controlling hazardous situations when carrying out work activities are implemented
	2.3	Safety procedures and safety zones are implemented when working with mobile equipment and cranes in accordance with national standards, safety codes and site operating procedures
	2.4	Work is conducted in accordance with industry standards, statutory requirements, safety codes, site operating

© Commonwealth of Australia, 2025 Industry Skills Australia

	requirements, cargo and container requirements
	2.5 Work cage and/or WAH is completed in accordance with national standards, safety codes and site procedures
	2.6 Appropriate and effective communication is maintained in work area
	2.7 Cargo and container are lashed and unlashed in accordance with site procedures, and cargo and containers are lashed and unlashed in accordance with lashing and unlashing plan
	2.8 Correct manual handling techniques are used when lashing and unlashing cargo and containers
	2.9 Identified problems, faults and malfunctions are promptly reported and/or rectified in accordance with regulatory requirements and workplace procedures
	2.10 Contingency plans are implemented as required
3 Complete cargo and container lashing and unlashing operations	3.1 Cargo and container are covered and uncovered safely ensuring appropriate covering and lashing, no injury to persons in work area or damage to cargo, container and equipment
	3.2 Lashing equipment and tools are cleared from work area and placed in designated storage areas
	3.3 All safety equipment and radios are returned to designated area
	3.4 Relevant documentation is completed and filed in accordance with site operating procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIA2050 Lash and unlash cargo and containers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying appropriate fatigue management techniques as required
- applying precautions and required action to minimise, control or eliminate identified hazards
- being aware of own ability and limits to rectify irregularities or faults
- communicating effectively with others
- fastening tensioners securely
- identifying and correctly using relevant equipment
- identifying cargo, containers and goods, Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- identifying lashing points
- maintaining tight stow of cargo
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in cargo and container lashing and unlashing equipment in accordance with standard operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- receiving, acknowledging and sending messages with available communications equipment
- releasing fittings, and disconnecting and removing them from cargo
- securing cargo to lashing points ensuring correct spread of lashings and that lashings are secured, attached and tensioned
- selecting and using required:
    - personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
    - work cage and/or working at height (WAH) personal protective equipment conforming

© Commonwealth of Australia, 2025 Industry Skills Australia

to industry and WHS/OHS standards
- using appropriate fittings and lashing equipment for each lashing point
- working systematically with required attention to detail and without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- basic fatigue management techniques
- cargo and container marking and numbering systems
- operation of work systems, equipment, management and site operating systems for lashing and unlashing cargo and containers
- problems that may occur and appropriate action that can be taken to resolve them
- relevant Australian and international standards, codes of practice and regulations required to perform the job requirements relating to this unit, including:
  - ADG Code
  - Australian and international explosives Codes
  - IMDG Code
  - International Air Transport Association (IATA) Dangerous Goods Regulations (DGR)
  - Marine Orders
- relevant WHS/OHS and environmental procedures and regulations
- relevant workplace procedures and policies.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where lashing and unlashing cargo and containers can be demonstrated. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Industry Skills Australia

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including:
  - ADG Code
  - Australian and international explosives Codes
  - IMDG Code
  - IATA DGR
  - Marine Orders
- personal protective clothing and equipment, including:
  - fall arrest safety harness
  - gloves
  - high visibility clothing
  - protective clothing
  - safety glasses
  - safety headwear and footwear
- relevant materials, tools and equipment currently used in industry, including:
  - chains
  - chocks
  - fibre ropes
  - lashing bars
  - racks
  - twistlocks
  - turnbuckles
  - webbing straps and ratchets
  - wire ropes.

TLIA3002 Maintain container/cargo records

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain container/cargo records, in accordance with relevant regulations and workplace requirements as part of work activities within the transport and logistics industry.

It includes processing container and/or cargo documentation, maintaining records of container/cargo movements, monitoring container/cargo including reefer units and maintaining records.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Assessment Requirements for TLIA3002 Maintain container/cargo records

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- estimating size, shape and special requirements of loads
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) Code/International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- interpreting and following operational instructions and prioritising work
- reading and interpreting relevant instructions, procedures, information and labels
- receiving, acknowledging and sending messages with available communications equipment
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Australian and International Standards, codes of practice and regulations relevant to maintaining container and cargo records including the current ADG Code
- cargo marking and numbering systems
- focus of operation of work systems, equipment, management and site operating systems for maintaining container and cargo records
- problems that may occur when maintaining container and cargo records and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes of practice
- site layout and location of reefer units
- workplace procedures and policies for maintaining container and cargo records.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

TLIA3004 Process receipt and delivery of containers and cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to process the receipt and delivery of containers and cargo, in accordance with relevant regulations and workplace requirements as part of work activities within the transport and logistics industry.

It includes checking the stacking/discharge list at commencement of a shift, assessing and planning container/cargo consolidation, allocating stack positions, identifying and checking containers/cargo, and checking and completing required documentation.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Check stacking/ discharge list at shift commencement	1.1 Yard or terminal stacking/discharge lists are checked against container/cargo documentation and operational order of work, taking into account both ship and shore operations
	1.2 Stacking discharge lists are continually updated to reflect correct location of containers and cargo
2 Assess and plan container/cargo consolidation	2.1 Yard or terminal plans are assessed and consolidation of container/cargo within the yard or terminal is planned as required
	2.2 Consolidation plans are prepared to ensure efficiency of operations and efficient use of available yard/terminal space
	2.3 Final yard/terminal positions are obtained from consolidation plans and are recorded
3 Allocate stack positions	3.1 Stack positions are allocated based on nature of container/cargo concerned and requirements of yard/terminal operations
	3.2 Stacking plan is communicated to relevant personnel in accordance with workplace procedures
4 Identify and check containers/cargo	4.1 Containers/cargo are identified and checked at point of entry to yard and prior to stacking
	4.2 Agreement between numbers and marks on container/cargo and shipping documentation is confirmed
	4.3 Cargo/containers are inspected and appropriate action is taken to report identified damage or defects in accordance with workplace procedures
	4.4 Stacking plans are followed and efficient movement within the yard is facilitated
	4.5 Documentation is checked prior to performing completion procedures, in accordance with workplace procedures and regulatory requirements

Assessment Requirements for TLIA3004 Process receipt and delivery of containers and cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying effective eye-hand coordination
- applying relevant legislation and workplace procedures
- communicating effectively with others
- estimating size, shape and special requirements of loads
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) Code/International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- identifying, selecting and using relevant equipment, processes and procedures
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures and labels
- receiving, acknowledging and sending messages using appropriate communications equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Australian and International Standards, codes and regulations relevant to processing the receipt and delivery of containers and cargo including current ADG Code
- cargo marking and numbering systems
- operational work systems, equipment, management and site operating systems for the receipt and delivery of containers and cargo
- problems that may occur when processing the receipt and delivery of containers and cargo, and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- site layout, stacking plans and available stacking space
- workplace procedures and policies for processing the receipt and delivery of containers and cargo.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, ADG Code, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA3008 Transfer cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to transfer cargo in accordance with relevant regulations, and workplace requirements as part of work activities in the transport and logistics industry.

It includes preparing for load transfer, safely transferring cargo using appropriate lifting equipment, finalising a transfer, and completing all required documentation.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare for load transfer	1.1 Load characteristics are identified to determine special handling or equipment requirements
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Location of load in yard is confirmed and transfer method is determined
	1.4 Pathway for load transfer is established consistent with workplace procedures, and obstacles and particular safety precautions are noted
	1.5 Working area is prepared in accordance with national standards, safety codes and site operating procedures
	1.6 Personal protective equipment and other safety equipment is assembled
	1.7 Safe working load (SWL) or working load limit (WLL) is calculated using appropriate formulae for type of lifting equipment
	1.8 Lifting equipment is inspected, before it is used, to identify any manufacturing faults or damage, in accordance with manufacturer specifications and workplace procedures
	1.9 Unsafe equipment is isolated, marked as unsafe and reported to appropriate personnel
2 Transfer cargo	2.1 Cargo is steadied and secured using appropriate devices
	2.2 Load is lifted and shifted safely following national standards, safety codes and site operating procedures
	2.3 Load is transferred and set down, ensuring no injury to personnel or damage to machinery or cargo
3 Complete transfer	3.1 Securing arrangements are released from load, ensuring no injury to personnel or damage to machinery or cargo
	3.2 Relevant documentation is completed including reporting of damaged cargo in accordance with workplace reporting requirements
	3.3 Equipment is returned to store and work area is returned to normal working condition

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA3008A Transfer cargo.

Assessment Requirements for TLIA3008 Transfer cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting checks on equipment used when transferring cargo and freight in terms of service schedule and operating procedures
- estimating size, shape and special requirements of loads
- identifying, selecting and using relevant equipment, processes and procedures
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of load transfer equipment
- operating and adapting to differences in equipment in accordance with operating procedures
- prioritising work
- reading and interpreting relevant instructions, procedures, information and signs
- receiving, acknowledging and sending messages using appropriate communications equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and International Standards, codes and regulations relevant to transferring cargo/freight including the current Australian Dangerous Goods (ADG) Code
- cargo marking and numbering systems
- high risk licencing lifting equipment requirements
- lifting equipment manufacturer specifications
- operational work systems, equipment, management and site operating systems for transferring cargo/freight
- problems that may occur when transferring cargo/freight and appropriate action that can be taken to resolve these problems
- relevant load handling and safety codes of practice and guidelines
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements for safe working load (SWL) and working load limit (WLL) of load shifting equipment
- types of equipment used to transfer loads in terminals/wharves, their applications and procedures and precautions for their use
- workplace procedures and policies for transferring cargo and freight.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, ADG Code, national Load Restraint Guide (LRG), codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in

TLIA3010 Coordinate goods to bond premises

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate goods to bond premises in accordance with regulatory and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying and listing goods for bonding, arranging the transfer of goods to a bond store, and preparing and issuing bond lists.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and list cargo that requires	1.1 Goods are identified for bonding when not cleared for release by Australian customs or quarantine

© Commonwealth of Australia, 2025 Industry Skills Australia

bonded movement	1.2 Types of cargo for underbond movements are identified
	1.3 Appropriate facilities are identified for storage of uncleared cargo
	1.4 Facility licencing requirements are identified for storage of bonded cargo in accordance with regulatory requirements and workplace procedures
2 Arrange transfer of goods to bond store	2.1 Arrangements for the transfer of goods to bond store are made in accordance with regulatory requirements and workplace procedures
	2.2 Carrier and/or bond facility is notified of storage or yard location, marks and quantity, and is provided with relevant documentation in accordance with regulatory requirements and workplace procedures
3 Prepare and issue bonded movement	3.1 Bonded movements are prepared in accordance with workplace requirements and relevant Australian government regulations
	3.2 Bonded movements, endorsed with the relevant information, is issued to carrier and/or bond facility in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

TLIA3015 Complete receival/despatch documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete receival/despatch documentation in accordance with relevant regulations and workplace requirements as part of work activities within the transport and logistics industry.

It includes analysing orders to identify work requirements to fill order, following workplace order documentation processes, and finalising documentation in accordance with workplace procedures and any relevant regulatory requirements.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

TLIA3016 Use inventory systems to organise stock control

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use inventory systems to organise stock control in accordance with relevant regulations and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying inventory and stock control systems in use in the workplace, using re-order procedures to maintain stock levels, organising cyclical stock counts and reporting discrepancies or variances.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify inventory	1.1 Workplace inventory and stock control equipment, software

TLIA3017 Identify products and store to specifications

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify products and store to specifications, in accordance with relevant regulations and workplace requirements, as part of work operations in the transport and logistics industry.

It includes identifying and categorising products, matching products to locations based on specified criteria, and assisting individuals to solve stock identification and location problems.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and categorise	1.1 Products are identified in terms of specified criteria in

© Commonwealth of Australia, 2025 Industry Skills Australia

products	accordance with workplace procedures
	1.2 Products are categorised in terms of specified criteria in accordance with workplace requirements
2 Match products to locations based on specified criteria	2.1 Locations for products are determined based on specified criteria
	2.2 Labels, inventory systems and other information sources are used to assist in identifying products, and handling and storage requirements
3 Assist individuals to solve stock identification and location problems	3.1 New stock items are identified and particular product information is brought to the attention of relevant personnel
	3.2 Stock queries are predicted and team members are assisted to locate and assimilate information relevant to these products
	3.3 Personnel are assisted with routine and non-routine stock enquiries and actions are taken to update product information for relevant personnel
	3.4 Personnel are encouraged to maintain and build product knowledge by accessing product information and applying problem solving and information analysis skills
4 Identify appropriate transfer and handling requirements	4.1 Resources used to transfer different products through the storage zones are identified and evaluated
	4.2 Work in receival and despatch areas is supported by identifying and reporting variances
	4.3 Stock re-ordering is informed by knowledge of product source, frequency of pick destination or seasonality of products and potential for supply problems
	4.4 Relevant documentation is completed in accordance with workplace procedures
5 Contribute to continuous improvement	5.1 Knowledge of customer requirements is used to determine work design
	5.2 Potential problems are predicted and notified to appropriate personnel
	5.3 Opportunities for improvements to own work methods are identified and notified to appropriate personnel

- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant communications, computing and office equipment
- using information on products/stock to determine, plan and organise processes used for receival, storage, goods movement, despatch, stock levels and re-ordering processes
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- codes of practice and regulations relevant to workplace activities
- documentation requirements including reports and records concerning damaged or contaminated goods
- housekeeping standards and procedures
- information on various categories or groups of products including their key characteristics and hazards, and any special handling, stacking and storage requirements
- operational work systems, equipment, management and site operating systems
- product sources, destinations and potential problems
- re-ordering procedures and just-in-time planning principles
- requirements for workplace documentation, inventory systems and records
- site layout and obstacles
- sources of product information
- strategies to seek out sources of product knowledge and to use this information to inform work
- types of equipment and storage areas appropriate for different types of goods including perishable, fragile and/or dangerous/hazardous goods
- workplace procedures and policies relevant to the application of product knowledge to the organisation of workplace operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Resources for assessment include:
- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA3018 Organise despatch operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise despatch operations in accordance with codes/regulations and workplace requirements in the transport and logistics industry.

It includes planning and organising despatch operations, organising the storage and despatch of stock, and completing all required documentation and records.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and organise despatch operations	1.1 Knowledge of product characteristics and workplace procedures are applied to stock analysis

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Resources including manual handling equipment, employee competencies, storage areas and goods management equipment are identified to match product characteristics
	1.3 Deadlines are scheduled to meet order requirements
	1.4 Work processes are planned to meet deadlines
2 Organise the storage and despatch of stock	2.1 Employees, equipment and storage areas are allocated and supervised
	2.2 Individuals are informed of work requirements and deadlines
	2.3 Work processes are monitored to ensure that human resources and equipment are maintained at productive levels in accordance with workplace procedures and work health and safety (WHS)/occupational health and safety (OHS) requirements
	2.4 Stock discrepancies are noted and reported in accordance with company procedures
3 Complete documentation	3.1 Required despatch documentation and records are confirmed
	3.2 Required despatch documentation and records are completed clearly and proofread
	3.3 Required despatch documentation and records are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLIA3018A Organise despatch operations.

Assessment Requirements for TLIA3018 Organise despatch operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- estimating size, shape and special requirements of goods and loads
- identifying relevant stock and goods coding and labelling, including Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment and communications technology
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and record requirements for despatch operations
- equipment used when organising despatch operations, and the precautions and procedures that should be followed in its use
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for organising despatch operations
- problems that may occur and appropriate action that can be taken to resolve these problems
- regulations relevant for organising despatch operations, including the ADG Code and relevant bond, quarantine or other legislative requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for organising despatch operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIA3019 Organise receival operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise receival operations in accordance with regulations, codes of practice and workplace requirements in the transport and logistics industry.

It includes planning and organising receival operations, storing received stock and completing all required documentation and records.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

TLIA3023 Coordinate stocktakes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate stocktakes in accordance with relevant regulations and workplace requirements within the transport and logistics industry.

It includes planning and coordinating stocktake activities, identifying stock discrepancies and adjusting documentation.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan stocktake	1.1 Goods to be counted and appropriate inventory systems are identified
	1.2 Required resources including equipment, record keeping systems and personnel are identified
	1.3 Team members are instructed and assisted
	1.4 Team members are allocated to particular tasks and zones and given clear directions for work requirements
	1.5 Stocktake sequence and operations are planned in a time effective manner
2 Coordinate stocktake	2.1 Stocktaking and cyclical counts are coordinated in accordance with workplace policies and procedures
	2.2 Inventory data is interpreted
	2.3 Inventory data is confirmed to match stock
	2.4 Stock levels are accurately counted and documented
3 Identify stock discrepancies	3.1 Discrepancies in type, number and quality of stock are accurately recorded and documented
	3.2 Possible reasons for discrepancies are identified
	3.3 Products stored in inappropriate storage locations are relocated and stock records are adjusted in accordance with workplace procedures
4 Adjust documentation	4.1 Inventory data is reconciled to match warehouse stock in accordance with regulations, workplace practices, policies and procedures
	4.2 Information is reconciled with audit requirements
	4.3 Workplace documentation is completed

Foundation Skills

TLIA3026 Monitor storage facilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to monitor storage facilities in accordance with relevant regulations and workplace requirements in the transport and logistics industry.

It includes determining site functions and operations, monitoring storage operations and taking appropriate action in response to identified discrepancies, changes to storage requirements or breaches in operational procedures.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine site	1.1 Layout of storage facilities, work flow and activities undertaken

Assessment Requirements for TLIA3026 Monitor storage facilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- monitoring equipment performance
- operating and adapting to differences in equipment in accordance with operating procedures
- reading, interpreting and following relevant instructions, procedures and signs
- using information on products and stock to determine, plan and organise processes used for monitoring storage facilities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes and regulations, permit and licence requirements relevant to workplace activities
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- operational work systems, equipment, management and site operating systems
- housekeeping standards and procedures
- information on various categories or groups of products including their key characteristics and hazards, and the special handling, stacking and storage requirements for each
- problems that may occur and appropriate action that can be taken
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- requirements for workplace documentation reports and records
- site layout
- types of storage areas and related equipment appropriate for different types of goods including perishable, fragile and/or hazardous/dangerous goods
- workplace procedures and policies relevant to the monitoring of storage facilities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIA3038 Control and order stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control and order stock for a workplace store in accordance with relevant codes of practice, regulations and workplace procedures.

It specifically covers maintaining stock levels and records, organising and administering stocktakes, identifying stock losses, processing stock orders and following up orders.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Maintain stock levels	1.1 Stock levels are monitored and maintained at levels

© Commonwealth of Australia, 2025 Industry Skills Australia

and records		prescribed by workplace specifications
	1.2	Stock security systems are monitored and adjusted as required
	1.3	Stock re-order cycles are maintained, monitored and adjusted as required
	1.4	Colleagues are informed about their individual responsibilities for recording stock
	1.5	Stock storage and movement records are maintained in accordance with workplace procedures
	1.6	Stock performance is monitored and fast/slow moving items are identified and reported in accordance with workplace procedures
2 Organise and administer stocktakes	2.1	Stocktakes are organised at the appropriate time and responsibilities are allocated to staff
	2.2	Accurate reports on stocktake data are produced within designated timelines
3 Identify stock losses	3.1	Losses are accurately identified, recorded and assessed against potential loss as forecast, on a regular basis
	3.2	Identified losses are reported in accordance with workplace procedures
	3.3	Avoidable losses are identified, reasons are established, and appropriate solutions are recommended and implemented to prevent future avoidable losses
4 Process stock orders	4.1	Orders for stock are accurately processed in accordance with workplace procedures
	4.2	Stock ordering and recording systems are accurately maintained
	4.3	Purchase and supply agreements are correctly used and appropriate details are recorded
	4.4	Negotiated purchase and supply agreements are recorded accurately and filed for retrieval
5 Follow up orders	5.1	Delivery process is monitored to meet agreed deadlines
	5.2	Appropriate liaison is undertaken with colleagues and suppliers to ensure continuity of supply

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.3 Routine supply problems are followed up or referred to the appropriate person in accordance with workplace policy
	5.4 Stock is distributed in accordance with agreed allocations
6 Complete documentation	6.1 Required records and documentation are confirmed
	6.2 Required records and documentation are completed clearly and proofread
	6.3 Required records and documentation are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA3038A Control and order stock.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in stock and systems in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- monitoring stock levels
- reading and interpreting relevant instructions, procedures and labels
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant communications and computing equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contacts and sources of information and documentation needed when controlling and ordering stock
- customer service policies and procedures
- how to interpret workplace specifications and orders for supplies
- principles of stock control
- problems that may occur and appropriate action that can be taken to resolve these problems
- procedures for ordering stock
- protocols and procedures for liaising with supplier representatives, drivers and colleagues using appropriate technology
- relevant codes of practice and legislative requirements (for example dangerous goods regulations, health and hygiene regulations)

© Commonwealth of Australia, 2025 Industry Skills Australia

- site layout
- stock control documentation and systems used in workplace stores
- stock security systems
- systems for completing relevant records and documentation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA3039 Receive and store stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to receive and store stock for a workplace store in an enterprise/organisation in a transport, logistics, production, hospitality, retail or other relevant industry sector, in compliance with relevant codes of practice, regulations and workplace procedures.

Work must be carried out for receiving and storing stock in a workplace store. It specifically covers taking delivery of stock, storing, rotating and maintaining stock received, and completing documentation.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Take delivery of stock	1.1 Incoming stock is accurately checked against orders and delivery documentation in accordance with workplace procedures
	1.2 Variations are accurately identified, recorded and communicated to appropriate person
	1.3 Items are inspected for damage, quality, use-by dates, breakages and discrepancies, and records are made in accordance with workplace policy
2 Store stock	2.1 Hazards are identified, risks are assessed and control measures are implemented
	2.2 Stock is promptly and safely transported to appropriate storage area without damage
	2.3 Stock is stored in appropriate location within area and in accordance with workplace security procedures
	2.4 Appropriate personal protective equipment is correctly used during receival and storage operations
	2.5 Stock levels are accurately recorded in accordance with workplace procedures
	2.6 Stock is labelled in accordance with workplace procedures
3 Rotate and maintain stock	3.1 Stock is rotated as required in accordance with workplace policy
	3.2 Stock is moved using appropriate equipment in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements, relevant regulations and workplace procedures
	3.3 Quality of stock is checked and reported
	3.4 Appropriate action is taken where stock quality is identified as outside specified standards
	3.5 Stock is placed in storage or disposed of in accordance with workplace policy

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Complete documentation	4.1 Required documentation procedures and processes are confirmed
	4.2 Records and documentation are completed legibly and proofread
	4.3 Records and documentation are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA3039A Receive and store stock.

TLIA3055 Coordinate terminal/wharf equipment operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate terminal/wharf equipment operations in accordance with workplace requirements.

It includes identifying, assessing and managing potential risks; monitoring work performance and progress; monitoring the status of pending work; solving problems and making decisions; completing all shift requirements; and preparing for the next shift.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Coordinate equipment,	1.1 Equipment, machinery and personnel are coordinated to facilitate the safe and efficient loading and unloading of ship

© Commonwealth of Australia, 2025 Industry Skills Australia

	machinery and personnel	and terminal yard, in accordance with operational plan
		1.2 Liaison is maintained with supervisors to ensure availability of adequate resources
2	**Identify, assess and remove potential risks**	2.1 Potential risks are identified and assessed, and appropriate solutions are developed and applied in accordance with workplace procedures and in consultation with supervisors
		2.2 Potential risks to safe and efficient operations are removed from work area or other arrangements are made to ensure conditions for safe work
		2.3 Supervisors are advised of potential risks or emergency situations and liaison is maintained until risk has been removed or emergency situation has been alleviated
3	**Monitor work performance and progress**	3.1 Work performance and progress is monitored through an appropriate terminal management system to ensure work is performed in accordance with established guidelines and procedures, and that safe work practices are maintained
		3.2 Methods and procedures of work are monitored and refined in consultation with supervisors and operational personnel
		3.3 Work performance rates are monitored through an appropriate terminal management system and delays are minimised to ensure work program objectives are met
		3.4 Work practices are monitored to ensure compliance with national standards and safety codes
		3.5 Environmental conditions are monitored to ensure safe working conditions are maintained
		3.6 Operational delays, equipment or maintenance issues are monitored and reported to supervisor in accordance with workplace operational procedures and processes
4	**Monitor status of pending work**	4.1 Status of pending work is monitored, in order of priority, in accordance with needs of ship and terminal/wharf
		4.2 Issues that will impact on work performance and progress are identified, and plans are amended or work flows are altered to ensure efficiency is maintained throughout operation

Assessment Requirements for TLIA3055 Coordinate terminal/wharf equipment operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- estimating size, shape and special requirements of loads
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) Code/International Maritime Dangerous Goods (IMDG) Code markings, emergency information panels
- identifying and correctly using relevant equipment
- implementing contingency plans
- maintaining container terminal tracking operations systems efficiently and effectively
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- receiving, acknowledging and sending messages with appropriate communications equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate personal protective equipment (PPE) conforming to industry, work health and safety (WHS)/occupational health and safety (OHS) and Australian standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- Australian and international standards, codes and regulations relevant to operating terminals/wharves including the ADG Code and the IMDG Code
- cargo marking and numbering systems
- operational work systems, equipment, management and site operating systems for organising and monitoring terminal/wharf operations
- problems that may occur and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout of container or cargo terminal or wharf
- workplace procedures and policies for organising and monitoring terminal/wharf operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including controlled or open environments, exposed conditions and limited or restricted spaces.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools and equipment currently used in industry

© Commonwealth of Australia, 2025 Industry Skills Australia

- personal protective clothing and equipment, including:
  - gloves
  - high visibility clothing
  - protective clothing
  - safety glasses
  - safety headwear and footwear
  - two-way radios.

TLIA4005 Check and evaluate records and documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check and evaluate records and documentation in accordance with regulatory and workplace requirements, as part of work activities within the transport and logistics industry.

It includes checking documentation, and analysing and evaluating records.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check documentation	1.1 Documentation regulatory and workplace requirements are confirmed
	1.2 Documentation is checked to ensure compliance with

© Commonwealth of Australia, 2025 Industry Skills Australia

	regulatory and workplace requirements
	1.2 Documentation is checked regularly and personnel responsible for documentation are advised of deadlines
	1.3 Appropriate systems are used to ensure maintenance of records complies with regulatory and workplace requirements
2 Analyse and evaluate records	2.1 Records are analysed to identify unexpected deviations from plans or possible future problems with plant and/or equipment
	2.2 Advice is provided to appropriate personnel when problems are identified
	2.3 Security of records and documentation is maintained at all times and access is granted to authorised personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA4025 Regulate temperature controlled stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- checking refrigeration equipment operation in terms of maintenance schedule and standard operating procedures
- communicating effectively with others
- implementing contingency plans
- operating and adapting to differences in stock and equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures and labels
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment, processes and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of work systems, equipment, management and site operating systems for regulating temperature controlled stock
- hazards when regulating and working with temperature controlled stock and appropriate action to control the risks involved
- problems that can occur with temperature controlled stock and appropriate action that can be taken
- procedures for pre-cooling and snap freezing

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant codes of practice, food safety standards and regulations for temperature controlled stock
- relevant work health safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- special handling, stacking and storage requirements for temperature controlled stock
- workplace procedures and policies for regulating temperature controlled stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIA4028 Assess and monitor optimum stock levels

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assess and monitor optimum stock levels in accordance with workplace requirements and relevant regulations, as part of work activities undertaken within the transport and logistics industry.

It includes assessing projected demand, assessing variables that impact on optimum stock levels, and determining and monitoring optimum inventory levels.

Work is performed under general guidance on progress and outcomes of work. It requires the exercise of discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Assess projected demand	1.1 Information/data from sales plan or stock movement is analysed
	1.2 Projected high and low volume periods are determined from the analysis of sales plan and/or stock movement data
	1.3 Seasonal nature of stock demand is determined from the analysis of sales plan and/or stock movement data
	1.4 Required inventory levels at different production and sales cycle stages are determined from the analysis of sales plan and/or stock movement data
2 Assess variables that impact on optimum stock levels	2.1 Stock manufacturing/supply and consignment delivery lead times are determined
	2.2 Internal processing and distribution times are determined
	2.3 Spoilage and obsolescence times are calculated as required
	2.4 Maximum stock carrying capacity is assessed
	2.5 Physical and human resources are assessed in relation to projected required stock levels
	2.6 Contingencies are developed for abnormal distribution stoppages/slow-downs to supply chain
3 Determine optimum inventory levels	3.1 Production and sales cycle stages are correlated to stock manufacturing supply and distribution lead times
	3.2 Safety stock levels are calculated
	3.3 Optimum inventory levels are identified
4 Monitor optimum inventory levels	4.1 Inventory benchmarks are continually compared to current and known future sales turnover/production requirements
	4.2 Adjustments to inventory levels are undertaken in accordance with reassessed sales turnover/production requirements, workplace procurement processes and within scope of authority
	4.3 Changes and/or requests for adjustments to inventory levels are documented in accordance with workplace policies
	4.4 Resources are assembled in accordance with identified optimum inventory levels

Assessment Requirements for TLIA4028 Assess and monitor optimum stock levels

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- planning and organising resource availability including the competencies of individuals in a team or group
- reading, interpreting and following relevant instructions, procedures and policies
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying relevant technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes and regulations relevant to optimising stock levels
- computer records/documentation requirements when assessing and monitoring optimum stock levels
- focus of operation of supply arrangements, resources, management and workplace operating systems
- problems that may occur when assessing and monitoring optimum stock levels and

© Commonwealth of Australia, 2025 Industry Skills Australia

appropriate action that can be taken to resolve these problems
- purpose and use of key information required when optimising stock levels including supply requirements, supplier information, enterprise contract procedures, sales plan and distribution times
- workplace business policies and plans including procedures for maintaining confidentiality
- workplace procedures and policies for assessing and monitoring optimum stock levels
- worksite layout and organisational structure.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA4031 Consolidate freight

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to consolidate freight in accordance with relevant codes of practice and regulations, and to apply routine principles, procedures and regulations to effectively and efficiently combine and consolidate freight prior to shipment.

It includes assessing the scope to consolidate freight, combining or consolidating multiple shipments of products into higher volume shipments, and preparing related consignment documentation.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Assess scope to consolidate freight	1.1 Capacity and capability of different transport modes available to the organisation are assessed against proposed task
	1.2 Individual consignment loads are evaluated to identify relevant information needed to combine or consolidate freight
	1.3 Information is analysed to determine where opportunities for freight consolidation exist
	1.4 Regulatory packaging and labelling requirements for consolidated cargo are followed
	1.5 Procedures for loading cargo are planned in accordance with established industry practice and Australian Dangerous Goods (ADG) Code
	1.6 Hazards are identified, risks are assessed and control measures are implemented
	1.7 Volumes and dimensions of proposed consolidation are calculated
	1.8 Proposed consolidation is matched against operational capacity and capability of carrier
2 Prepare consignment documentation	2.1 Consignment documentation required for consolidated cargo is confirmed
	2.2 Labelling and marking requirements of cargo are documented in accordance with domestic and international regulations, ADG Code and workplace requirements
	2.3 Consignment documentation is completed and filed/stored in accordance with workplace procedures including dangerous goods declaration as required
	2.4 Freight is consolidated taking into account segregation requirements for dangerous goods as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIA4031 Consolidate freight

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in freight and equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- selecting and using required computer and communications equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, include knowledge of:

- customer service policies and procedures
- problems that may occur and appropriate action that can be taken
- procedures for planning freight/cargo loading such as:
  - using available space efficiently

© Commonwealth of Australia, 2025 Industry Skills Australia

  - packing goods for ease of inspection and to meet delivery and customer requirements
  - securing goods and ensuring no damage to contents
  - ensuring weight and volume of consolidated cargo conforms to specifications
- procedures for calculating volumes and dimensions
- procedures for completing consignment documentation
- procedures for identifying and evaluating information needed to facilitate freight consolidation
- relevant codes of practice and legislative requirements including local and international freight regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- sources of information and documentation for consolidating freight.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIA4032 Organise transport of freight or goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise the transport of freight or goods in compliance with relevant codes of practice and regulations, and to apply routine principles and procedures to organise the transport of freight or goods prior to shipment.

It includes planning transport operations, organising freight transport, completing the required documentation and finalising organisational processes.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

operations	are applied to the transportation analysis process
	1.2 Domestic and international regulations, codes and procedures for transporting freight are identified
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Resources including manual handling equipment, employee competencies, storage areas, goods management equipment and transportation equipment are identified to match the task
	1.5 Work processes are planned to meet agreed timelines
	1.6 Types of transportation required for the freight or goods is identified to match customer requirements, freight type and delivery time
	1.7 Multiple transport modes are identified as required
	1.8 Goods transfer methods between modes of transport are selected as required
2 Organise freight transport	2.1 Employees, equipment and temporary storage areas (as required) are allocated and supervised
	2.2 Freight is secured ensuring no damage to contents
	2.3 Handling methods suitable to the goods and transport method are selected
	2.4 Individuals are informed of work requirements and timelines
	2.5 Work processes are monitored to ensure human resources and equipment are maintained at productive levels in accordance with workplace and work health and safety (WHS)/occupational health and safety (OHS) requirements
	2.6 Discrepancies in freight are noted and appropriate action is undertaken in accordance with workplace procedures
3 Complete organisational processes	3.1 Monitoring processes to track freight movement are implemented
	3.2 Reporting requirements are communicated to appropriate personnel
	3.3 Workplace documents and records are checked for completion and are filed/stored in accordance with workplace procedures

TLIA4033 Organise international transport of freight

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise the international transport of freight in accordance with relevant codes of practice and regulations.

It includes confirming customer requirements, organising freight arrangements and communicating with shipping agents and authorities.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIA4040 Implement and monitor stevedoring regulations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor stevedoring regulations in accordance with relevant Australian and international stevedoring regulations, codes of practice and workplace requirements, as part of work activities in the stevedoring and/or allied industries.

It includes accessing appropriate information on relevant regulations and codes, interpreting regulations and codes relevant to workplace activities, implementing and monitoring compliance with identified regulations and codes, and completing all required documentation in accordance with regulatory and workplace requirements.

Work is performed under limited supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Access information on relevant regulations and codes	1.1 Australian and international regulations and codes of practice relevant to workplace stevedoring operations are identified in accordance with workplace procedures and in consultation with relevant personnel
	1.2 Information on identified regulatory and/or code requirements relevant to workplace functions and limits of responsibility are accessed in accordance with workplace procedures
2 Interpret relevant regulations and codes	2.1 Information on identified regulatory and/or code requirements relevant to workplace functions and limits of responsibility is examined and interpreted in terms of its impact and implications for workplace activities
	2.2 Compliance requirements are clarified and obligations under regulations falling within limits of responsibility and duty of care of various staff/team members are confirmed in accordance with workplace procedures
	2.3 Staff/team members/team leaders/supervisors are made aware of the identified regulatory/code requirements as they relate to workplace roles and responsibilities
3 Implement and monitor compliance with regulations and codes	3.1 Regulatory requirements relevant to workplace activities are implemented in accordance with relevant regulations/codes and workplace procedures
	3.2 Appropriate information, training and/or instruction are organised to ensure personnel are aware of compliance requirements
	3.3 Procedures for monitoring compliance with operations in terms of regulatory requirements and workplace policies and procedures are followed
	3.4 Problems that may lead to non-compliance are promptly and fully identified
	3.5 Timely remedial action is taken to ensure continuity in workplace compliance with relevant regulations
	3.6 Failure to comply with regulatory requirements and workplace policy is identified and action is taken in accordance with workplace policies and procedures
4 Complete required documentation	4.1 Advice/reports on compliance issues are provided to relevant personnel and authorities in accordance with workplace procedures and relevant regulatory requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

4.2 Documentation, records, reports and other information required within regulatory requirements are completed, proofread and processed in accordance with the regulations and workplace procedures

4.3 Documentation is kept secure in accordance with workplace procedures and policy

4.4 Workplace computer backup procedures are followed

Assessment Requirements for TLIA4040 Implement and monitor stevedoring regulations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and negotiating effectively with others
- coordinating compliance activities in the workplace
- dealing with internal or external customers in large, medium or small workplaces
- following processes for monitoring compliance with regulatory requirements
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant regulatory requirements, instructions, procedures and labels
- reporting and/or rectifying identified breaches of stevedoring regulations promptly, in accordance with regulatory requirements and workplace procedures
- reporting on compliance related issues
- resolving everyday conflict situations
- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when implementing and monitoring stevedoring regulations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- operational work systems, equipment, management and site operating systems for stevedoring operations
- problems that may occur when implementing and monitoring compliance with stevedoring regulatory requirements, and appropriate action that can be taken to resolve these problems
- relevant Australian and international regulations and codes of practice
- relevant customs, bond, quarantine and other legislative requirements including International Maritime Dangerous Goods (IMDG) Codes and Marine Orders
- relevant WHS/OHS and environmental protection procedures and guidelines
- roles and responsibilities of various workplace personnel in terms of workplace activities and regulatory requirements
- site layout of container or cargo terminal or wharf
- workplace/standard operating procedures and policies for implementing and monitoring compliance with stevedoring regulatory requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions where implementing and monitoring stevedoring regulation can be demonstrated.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools and equipment
- personal protective equipment, including
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radios
  - protective clothing
  - high visibility clothing

TLIA4062 Implement safety stock systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement safety stock systems in various contexts in the transport and logistics industry. It has particular application in a storage facility such as a warehouse.

It includes planning, preparing and maintaining safety stock levels as well as reviewing the safety stock system.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare safety stock levels	1.1 Determined optimum safety stock levels are maintained to ensure constant productivity

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Purchase, receipt, storage and issue of stock is undertaken as required
	1.3 Safety stock is valued using the nominated valuation method, as required
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Safety stock rotation procedures are implemented
2 Maintain safety stock levels	2.1 Records are checked against stock and continuously adjusted and updated as required
	2.2 Safety stock levels are maintained in accordance with organisational policy and procedures, and safety stock plan
	2.3 Records are stored for future access
	2.4 Safety stock levels are reconciled with paperwork and discrepancies are rectified or reported to nominated person/section within designated timelines
3 Review safety stock system	3.1 Safety stock records are reviewed for discrepancies regarding target outcomes
	3.2 Improvements of safety stock system reviewed with all variables affecting discrepancies, are identified
	3.3 Required improvements are reported in accordance with organisational policy and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA4062 Implement safety stock systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- reading, interpreting and following relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- definitions of commonly used terminology such as lead time, lead time demand, forecast, demand history, order cycle
- principles, purpose and location of controls, monitoring devices and systems
- procedures for identifying problems with the safety stock system in use
- procedures for operating electronic communications equipment
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation including commonly used methods to estimate required safety stock levels

© Commonwealth of Australia, 2025 Industry Skills Australia

- steps involved in planning work activities
- typical problems that can occur and related action that should be taken.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA4063 Coordinate stevedoring clerical functions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate stevedoring clerical functions in accordance with relevant standards, regulations and workplace requirements, as part of work activities in the stevedoring, transport, distribution and/or allied industries.

It includes monitoring clerical functions; solving operational problems; arranging container/cargo inspection/survey; preparing for the next shift, and completing and handing over the shift.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor clerical	1.1 Duties and the relationship of the duties to organisational procedures are outlined and explained in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

functions	workplace procedures
	1.2 Clerical work is monitored to ensure it meets workplace requirements
2 Solve operational problems	2.1 Potential and actual problem/s are identified and or anticipated
	2.2 Information and evidence surrounding the problem is collected and analysed
	2.3 Options are identified, evaluated and optimal solution is selected
	2.4 Chosen solution is implemented in accordance with workplace procedures
	2.5 Effectiveness of the solution is evaluated against workplace requirements to resolve the problem
3 Arrange container/cargo inspection/survey	3.1 Arrangements are made to allow access to identified containers/cargo by authorised personnel
	3.2 Records of allowed access are completed in accordance with workplace procedures
4 Prepare for next shift	4.1 Personnel requirements for next shift are determined to ensure safe and efficient operations
	4.2 Container/cargo movements in the yard are checked and recorded to ensure incoming shift has up-to-date information on work status and container/cargo location

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA4063 Coordinate stevedoring clerical functions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when coordinating clerical functions at a container or cargo terminal or wharf
- completing documentation related to work activities
- dealing with internal and external customers in small, medium or large workplaces
- identifying, selecting and using relevant equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol when coordinating clerical functions at a container or cargo terminal or wharf
- reading and interpreting relevant instructions, procedures and labels
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when coordinating clerical functions at a container or cargo terminal or wharf
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international standards, codes and regulations relevant to operating terminals or wharves including the Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG)Codes
- cargo marking and numbering systems
- focus of operation of work systems, equipment, management and site operating systems relevant to coordinating clerical functions at a container or cargo terminal or wharf
- problems that may occur when coordinating clerical functions at a container or cargo terminal or wharf and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- site layout of container or cargo terminal or wharf
- types of cargo including goods with specialist requirements, temperature controlled goods and dangerous goods
- workplace procedures and policies for coordinating clerical functions at a container or cargo terminal or wharf.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including limited or restricted spaces, exposed conditions and controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA5029 Plan and manage storage of dangerous goods and hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and manage the storage of dangerous goods and hazardous substances in accordance with all relevant regulatory requirements, standards, and workplace procedures including the current Australian Dangerous Goods (ADG) Code.

It includes defining the objectives of required handling and storage operations, specifying equipment and system performance requirements, evaluating and selecting bulk handling and storage resources and completing all required documentation.

Work is carried out under general guidance. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Define objectives of required handling and storage operation	1.1 Requirements for bulk handling and storage activities are identified in accordance with workplace requirements
	1.2 Current best practice and future trends for handling and storage equipment are assessed and compared to present operations
	1.3 Consideration of workplace goals and present capabilities and constraints is undertaken when selecting bulk handling and storage resources
2 Specify equipment and system performance requirements	2.1 Bulk handling and storage equipment and system requirements are documented
	2.2 Performance measures for equipment and system operations are developed and documented
	2.3 Consultations are conducted with relevant employees and management to verify documented requirements
3 Evaluate and select bulk handling and storage resources	3.1 Range of bulk handling and storage equipment and facilities that meet specifications are researched for costs and benefits as well as potential adaptability for new business opportunities
	3.2 Rating system is instigated to facilitate comparisons of cost/benefit and other qualitative properties of bulk handling and storage equipment and systems
	3.3 Analysis of current employee competency in relation to required competency is undertaken and documented
	3.4 Equipment is selected based on comparisons of performance specifications including cost, output, set-up requirements, maintenance and retraining
4 Complete documentation	4.1 Workplace documentation is completed as required
	4.2 Handling and storage requirements are documented and communicated to relevant personnel
	4.3 Reports are compiled and forwarded to appropriate personnel

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA5029A Plan and manage storage of dangerous goods and hazardous substances.

Assessment Requirements for TLIA5029 Plan and manage storage of dangerous goods and hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others when planning and managing the storage of dangerous goods and hazardous substances
- completing documentation as required for the storage of dangerous goods and hazardous substances
- controlling risks
- determining required permits/licences
- estimating weight and volume of goods to be stored and any special requirements
- identifying container markings and HAZCHEM codes
- identifying potential hazards and planning work to minimise risks when storing dangerous goods and hazardous substances
- planning and assessing options for the safe and efficient storage of dangerous goods and hazardous substances to regulatory requirements, as a minimum
- prioritising work and coordinating self and others in relation to activities
- providing leadership to others when planning and managing the storage of dangerous goods and hazardous substances
- reading, interpreting and following procedures, technical data, drawings, instructions and manuals relevant to planning and managing the storage of dangerous goods and hazardous substances
- recognising hazards and applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- selecting and applying appropriate technology, information systems and procedures when planning and managing the storage of dangerous goods and hazardous substances
- undertaking a hazard analysis and risk assessment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of all relevant Australian and International Standards
- application of current competencies within functional activity
- Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances
- coaching and mentoring approaches to support team members to share knowledge and skills
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- hierarchy of risks and hazards related to the storage of dangerous goods and hazardous substances, and ways of controlling the risks involved
- operational procedures for safe transfer and storage of dangerous goods and hazardous substances
- operational work systems, resources, management and workplace operating systems
- problems that may occur when planning and managing the storage of dangerous goods and hazardous substances, and action that can be taken to resolve or report these problems
- relevant permit and licence requirements
- relevant regulations, codes of practice and legislative requirements including local and international regulations relevant to handling and storage
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team and group
- workplace procedures for planning and managing the storage of dangerous goods and hazardous substances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIA5035 Manage international freight transfer

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and manage international freight transfer, according to relevant regulatory requirements and workplace procedures, including the Australian Dangerous Goods (ADG) and International Dangerous Goods (IDG) codes.

It includes analysing freight transfer requirements, planning and establishing processes, monitoring and coordinating systems and processes for international freight transfer and completing all required documentation.

Work is carried out under general guidance. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Analyse freight transfer requirements	1.1 Australian and international codes and regulations, and workplace policies for international freight transfer are identified
	1.2 Information on current and potential customers, and their international freight requirements is obtained and analysed in accordance with workplace procedures
	1.3 Special characteristics and customer requirements for the types of freight to be transferred are identified, interpreted and considered in accordance with workplace procedures
	1.4 Appropriate options for international freight transfer are evaluated in terms of identified special requirements, customer need and relevant regulatory requirements, including Australian and international codes for the transfer of dangerous goods and hazardous substances
	1.5 Selected options for freight transfer arrangements are documented in accordance with workplace policy and related regulations
2 Plan systems and processes for international freight transfer	2.1 Workplace policies and mission statement are interpreted to define the process requirements for international freight transfer
	2.2 Appropriate systems are evaluated and established/coordinated to facilitate the organisation of international freight transfer, including suitable risk analysis
	2.3 Human resources needed to organise international freight transfer are identified and documented
	2.4 Action is initiated to ensure staff are assigned, recruited and/or trained in accordance with identified human resource requirements
	2.5 Office, computer and communications equipment is identified and action is initiated for appropriate assignment or procurements
	2.6 Quality standards and procedures for proposed international freight transfer processes are documented/updated in accordance with workplace procedures
3 Monitor and coordinate systems	3.1 International freight forwarding operations are monitored against identified quality standards and for compliance with

© Commonwealth of Australia, 2025 Industry Skills Australia

and processes for international freight transfer		Australian and international regulatory requirements
	3.2	Non-compliance with quality standards or regulatory requirements is identified and appropriate action is initiated to report and rectify identified problems
	3.3	Customer satisfaction with international freight transfer services is monitored using appropriate methods
	3.4	Customer concerns and suggestions for service improvements are acted upon in accordance with workplace procedures
	3.5	Reports and other required documentation related to international freight transfer operations are completed and referred to relevant personnel in accordance with workplace procedures
	3.6	Any changes in Australian and international regulations and codes of practice relevant to international freight transfer are monitored, identified and appropriate action is initiated to ensure ongoing compliance of workplace processes and systems

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA5035 Manage international freight transfer

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing international freight transfer operations
- completing documentation related to managing international freight transfer operations
- maintaining workplace records and documentation when managing international freight transfer operations
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in freight and systems in accordance with standard operating procedures
- planning and organising systems and activities when managing international freight transfer operations
- providing leadership to others when managing international freight transfer operations
- reading and interpreting instructions, procedures, information and labels relevant to managing international freight transfer operations
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate technology, information systems and procedures when managing international freight transfer operations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant Australian Standards and associated certification requirements
- contacts and sources of information/documentation needed when managing international freight transfer systems
- operational requirements for the safe transfer and storage of dangerous goods and hazardous substances
- operational work systems, resources, management and workplace operating systems
- procedures for establishing and monitoring suitable international freight transfer operations
- procedures for liaising with relevant Australian and international contacts using appropriate technology
- procedures for reviewing options for international freight transfer systems
- procedures for identifying and evaluating information needed to manage the international transfer of freight
- procedures for identifying and interpreting requirements of current and potential clients
- quality and customer service policies and procedures
- relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- relevant permit and licence requirements
- relevant workplace documentation procedures applicable to the international transfer of freight.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIA5058 Manage facility and inventory requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

his unit involves the skills and knowledge required to manage a facility and its inventory requirements, in various contexts within the transport and logistics industry.

It includes identifying space, safety and security requirements; developing a documentation system; designing storage zones and evaluating facility utilisation.

This unit generally applies to those who provide leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify space requirements	1.1 Organisational medium-term and long-term storage needs are assessed to facilitate planning, in accordance with the enterprise business plan and legislative requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage
	1.3 Facility is assessed to determine stock holding and handling requirements for each inventory item
	1.4 Volume requirements are calculated to ensure ongoing stock holding needs are met
	1.5 Total space requirement is calculated and used to formulate a space utilisation plan
2 Identify safety and security requirements	2.1 Assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities
	2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented
	2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements
	2.4 Evacuation plan is developed in accordance with the enterprise safety program
3 Develop and implement documentation system	3.1 System for recording and tracing stock location, receival, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met
	3.2 System for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement
4 Design storage zones	4.1 Space requirements and equipment operation are accurately assessed to facilitate warehouse zone planning
	4.2 Assessment is made of the facility to enable the most effective use of available space
	4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with planning process data
	4.4 Provision for maintenance and cleaning is catered for
5 Evaluate facility	5.1 Continual system of review is used involving regular checks to ensure storage areas and systems are functioning at

© Commonwealth of Australia, 2025 Industry Skills Australia

utilisation	optimum levels
	5.2 Receiving and despatching systems are assessed to ensure they provide efficient operations
	5.3 Storage and handling systems are assessed to ensure they provide ease of access and comply with ergonomic principles
	5.4 Product handling and storage process are assessed to ensure minimisation of product damage, contamination and stock losses
	5.5 Flexibility of facility layout to meet changing storage and handling requirements is maintained
	5.6 Appropriate reporting systems are established and used to capture and maintain data to design improved facilities and systems

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIA5058 Manage facility and inventory requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when managing facility and inventory requirements
- developing and implementing contingency plans
- prioritising work and coordinating the work of others
- providing leadership to others when managing facilities and inventory requirements
- reading and interpreting plans, diagrams, regulations, codes of practice and other documentation relevant to managing facilities and inventory requirements
- reporting and/or rectifying identified problems promptly
- selecting and applying appropriate technology, information systems and procedures when managing facility and inventory requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- enterprise business policies and plans including procedures for facility operations
- operational warehouse systems, resources, management and workplace operating systems
- principles, purpose and location of controls, monitoring devices and systems
- procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to storing materials

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures for operating electronic communications equipment
- relevant sections of national and state/territory regulatory requirements and codes of practice, including applicable facility fire safety and building regulations
- requirements for completing relevant documentation
- selection and appropriate application of technology, information systems and procedures
- throughput and storage requirements for specific types of inventory.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA5059 Plan and organise the international forwarding of freight by sea and multimodal transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and organise international forwarding of freight by sea and multimodal transport (covering importing, exporting and transiting freight).

Typically, individuals work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select routing for sea and multimodal freight transport	1.1 Requirements for international sea and multimodal freight transport services are confirmed and clarified with customer
	1.2 Critical logistics aspects of freight transport are determined, analysed and considered in planning freight forwarding solution/s
	1.3 Checks are made to ensure all routing requirements for international sea and multimodal freight transport are fulfilled
	1.4 Special transport services advice is sought as required
	1.5 Suitable routing for sea or multimodal transport is selected after considering options available and analysing risks involved
	1.6 Alternative routing options are identified for use in contingencies
2 Advise on and organise packaging, packing, stowage and storage of freight for sea and multimodal freight transport	2.1 Given cargo type, transport mode, destination and selected route/s, suitable options for packaging, packing, stowage and storage of freight are determined
	2.2 Container types suitable for sea and multimodal transport and appropriate for freight type, are reviewed and appropriate options are selected
	2.3 Advice is provided to customer on packaging, packing, stowage and storage of freight, including loading and packing of suitable container types
	2.4 Pricing of containers and other forms of suitable freight packaging is calculated and advice is provided to customer
	2.5 Appropriate actions are taken to organise for planned forwarding project

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.6 Shipping documents required for selected containers or other forms of packaging are prepared in accordance with regulatory requirements and standard operating procedures
3 Assist in organising insurance for sea and multimodal freight transport	3.1 Risks involved in planned sea or multimodal freight forwarding solution are identified and analysed
	3.2 Transport and liability insurance requirements for proposed forwarding solution are evaluated and considered
	3.3 Assistance in selecting and organising appropriate insurance options is provided to customer in accordance with applicable regulatory requirements and standard operating procedures
4 Organise permits and authorisations needed for sea and multimodal freight transport	4.1 Documentation requirements are determined for cargo, transport mode/s) and selected routing concerned, including all permits and authorisations
	4.2 Documentation requirements are organised, completed and processed in accordance with applicable regulatory requirements and standard operating procedures
5 Liaise with freight forwarding global network	5.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is undertaken to plan and organise freight forwarding project
	5.2 Appropriate information is communicated when liaising with the freight forwarding global network in accordance with regulatory requirements and standard operating procedures
6 Track international cargo being forwarded by sea or multimodal freight transport	6.1 International cargo being transported by sea or multimodal freight transport is tracked using available systems and technologies
	6.2 Problems with transiting freight identified during tracking activities are evaluated and appropriate actions are initiated to address these problems
	6.3 Advice on progress of shipment and any action

© Commonwealth of Australia, 2025 Industry Skills Australia

	taken to address unexpected contingencies, is provided to customer
7 Complete required documentation and records	7.1 All forms and other documentation required for freight forwarding project are completed in accordance with applicable regulatory requirements and standard operating procedures
	7.2 Records of arrangements and transactions made are kept in accordance with applicable regulatory requirements and standard operating procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA5059A Plan and organise the international forwarding of freight by sea and multimodal transport.

Links

Assessment Requirements for TLIA5059 Plan and organise the international forwarding of freight by sea and multimodal transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant codes of practice and applicable legislative requirements to the task
- communicating effectively with others including checking to confirm messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is a second language)
- completing documentation accurately
- completing freight forwarding estimates and calculations of variables such as size, weight, distance, risks and costs
- interpreting and following operational instructions and prioritising work
- liaising with the freight forwarding global network and modifying activities as needed
- monitoring work activities in terms of planned schedule and deadlines
- organising permits and authorisations needed for sea and multimodal freight transport
- reading and interpreting instructions, procedures, information and signs
- reporting and/or rectifying identified problems in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting routing for sea and multimodal freight transport
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable regulations and legislation:
  - Australian and international regulations, conventions and codes of practice for international forwarding of freight
  - Australian and international standards and certification requirements
  - relevant Australian and international environmental protection legislation
  - relevant Australian and international transport security and safety legislation
  - relevant regulations for importing and exporting cargo
  - relevant regulations for international trading and financial transactions
- Australian and international regulations and conventions applicable to planning and organising international freight forwarding by sea or multimodal transport (including importing, exporting and transiting goods)
- cargo types, consignments and consolidations
- containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
- definitions, purpose and uses of Incoterms and Combiterms
- major trade routes, services, conferences, ports and freight terminals as they apply to maritime and multimodal freight transport
- maritime terminals, cargo handling and terminal equipment at major worldwide ports and freight terminals
- packaging cargo for transit by sea
- parameters of freight transport services
- principles and forms of maritime and multimodal freight transport
- principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- principles of international trade and commerce
- principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- processes for chartering vessels – types of charter, terms and contracts
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- sources of information and documentation for planning and organising international freight forwarding by sea or multimodal transport, including regulatory bodies, permits and authorisations
- standard procedures, codes of practice and protocols for planning and organising international freight forwarding by sea or multimodal transport (including importing, exporting and transiting goods)
- types of marine cargo vessels – their applications, capacity and routes
- types of multimodal transport
- types of pre-transport issues in freight forwarding , including adequacy of insurance and packaging, security, stowage and handling in transit
- typical problems that can occur when planning and organising international freight forwarding by sea or multimodal transport and related appropriate action that can be taken to prevent or solve these problems.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment port must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIA5060 Plan and organise the international forwarding of freight by air transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and organise international forwarding of freight by air transport (covering importing, exporting and transiting freight).

Typically these individuals work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select routing for air freight transport	1.1 Requirements for international air freight transport services are confirmed and clarified with customer
	1.2 Critical logistics aspects of freight transport are analysed and considered in planning freight forwarding solution/s
	1.3 Checks are made to ensure all routing requirements for international sea and multimodal freight transport are fulfilled
	1.4 Special transport services advice is sought as required
	1.5 Suitable routing for air freight transport is selected after considering options available and analysing risks involved
	1.6 Alternative routing options are identified for possible use in contingencies
2 Advise on and organise packaging, packing, stowage and storage of freight for air transport	2.1 Given cargo type, transport mode, destination and selected route/s, suitable options for packaging, packing, stowage and storage of freight are determined
	2.2 Container types suitable for sea and multimodal transport and appropriate for freight type are reviewed and appropriate options are selected
	2.3 Advice is provided to customer on packaging, packing, stowage and storage of freight, including loading and packing of suitable container types
	2.4 Pricing of containers and other forms of suitable freight packaging is calculated and advice is provided to customer
	2.5 Appropriate actions are taken to organise for planned forwarding project
	2.6 Air freight documents required for selected containers or other forms of packaging are prepared

© Commonwealth of Australia, 2025 Industry Skills Australia

	in accordance with regulatory requirements and standard operating procedures
3 Assist in organising insurance for air freight transport	3.1 Risks involved in planned air freight forwarding solution are identified and analysed
	3.2 Transport and liability insurance requirements for proposed forwarding solution are evaluated and considered
	3.3 Assistance in selecting and organising appropriate insurance options is provided to customer in accordance with applicable regulatory requirements and standard operating procedures
4 Organise permits and authorisations needed for air freight transport	4.1 Documentation requirements for cargo, transport mode/s and selected routing concerned, including all permits and authorisations, are determined
	4.2 Documentation requirements are organised, completed and processed in accordance with applicable regulatory requirements and standard operating procedures
5 Liaise with freight forwarding global network	5.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is undertaken to plan and organise freight forwarding project
	5.2 Appropriate information is communicated when liaising with freight forwarding global network in accordance with regulatory requirements and standard operating procedures
6 Track and trace international cargo being forwarded by air transport	6.1 International cargo being transported by air freight transport is tracked and traced during a freight forwarding project using available systems and technologies
	6.2 Problems with transiting freight identified during tracking activities are evaluated and appropriate action is initiated to address these problems in accordance with standard operating procedures
	6.3 Advice is provided to customer on progress of international air freight transport project and action taken to address unexpected contingencies is provided to customer
7 Complete required	7.1 All forms and other documentation required for planned freight forwarding project are completed in

© Commonwealth of Australia, 2025 Industry Skills Australia

documentation and records	accordance with applicable regulatory requirements and standard operating procedures
	7.2 Records of arrangements and transactions made are kept in accordance with applicable regulatory requirements and standard operating procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA5060A Plan and organise the international forwarding of freight by air transport.

Assessment Requirements for TLIA5060 Plan and organise the international forwarding of freight by air transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assisting in organising insurance for air freight transport
- communicating effectively with others and confirming messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is a second language)
- completing documentation and records required for air freight transport accurately
- completing freight forwarding estimates and calculations for air freight transport
- interpreting and following operational instructions and prioritising work
- liaising with the freight forwarding global network when organising air freight transport
- monitoring work activities in terms of planned schedule and deadlines
- organising permits and authorisations needed for air freight transport
- reading and interpreting instructions, procedures, information and relevant signs
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting routing for air freight transport
- tracking international cargo being forwarded by air transport
- working collaboratively with others
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select routing for road and rail freight transport	1.1 Requirements for international road and rail freight transport services are confirmed and clarified with customer
	1.2 Critical logistics aspects of freight transport are determined, analysed and considered in planning freight forwarding solution/s
	1.3 Checks are made to ensure all conventions for international road and rail freight transport are fulfilled
	1.4 Special transport services advice is sought as required
	1.5 Suitable routing for road and rail freight transport is selected after considering options available and analysing risks involved
	1.6 Alternative routing options are identified for possible use in contingencies
2 Advise on and organise packaging, packing, stowage and storage of freight for road and rail transport	2.1 Given cargo type, transport mode, destination and selected route/s, suitable options for packaging, packing, stowage and storage of freight are determined
	2.2 Container types suitable for road and rail freight transport and appropriate for freight type, are reviewed and appropriate options are selected
	2.3 Restrictions on dimensions of containers for transport by road and/or rail are considered when selecting container types
	2.4 Pricing of containers and other forms of freight packaging suitable for road and rail freight transport is calculated and advice is provided to customer
	2.5 Advice is provided to customer on selection, loading and packing of suitable container types

© Commonwealth of Australia, 2025 Industry Skills Australia

	and other forms of freight packaging
	2.6 Documentation required is prepared in accordance with regulatory requirements and standard operating procedures
	2.7 Advice on packaging, packing, stowage and storage of freight is provided to customer
3 Assist in organising insurance for road and rail freight transport	3.1 Risks involved in the planned road and rail freight forwarding solution are identified and analysed
	3.2 Transport and liability insurance requirements for the proposed forwarding solution are evaluated and considered
	3.3 Assistance in selecting and organising appropriate insurance options is provided to the customer as per applicable regulatory requirements and standard operating procedures
4 Organise permits and authorisations needed for road and rail freight transport	4.1 Documentation requirements are determined for cargo, transport mode/s and selected routing concerned, including all permits and authorisations
	4.2 Documentation requirements are organised and processed in accordance with standard procedures and applicable regulatory requirements
5 Liaise with freight forwarding global network	5.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is conducted to plan and organise freight forwarding project
	5.2 Appropriate information is communicated when liaising with the freight forwarding global network in accordance with regulatory requirements and standard operating procedures
6 Track international cargo being forwarded by road and rail transport	6.1 International cargo being transported by road or rail freight transport is tracked and traced during freight forwarding project using available systems and technologies
	6.2 Problems with transit of freight identified during tracking activities are evaluated and appropriate actions are initiated to address these problems in accordance with standard procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	6.3 Advice on progress of international road and rail freight transport project and actions taken to address unexpected contingencies, is provided to customer
7 Complete required documentation and records	7.1 All forms and other documentation required for planned freight forwarding project are completed in accordance with applicable regulatory requirements and standard operating procedures
	7.2 Records of arrangements and transactions made are kept in accordance with applicable regulatory requirements and standard operating procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIA5061 Plan and organise the international forwarding of freight by road and rail transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant codes of practice and applicable legislative requirements
- assisting in organising insurance for road and rail freight transport
- communicating effectively with others including checking to confirm messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is a second language)
- completing documentation and records required for road and rail freight transport
- completing freight forwarding calculations for road and rail freight transport
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- liaising with the freight forwarding global network
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule and deadlines
- organising permits and authorisations needed for road and rail freight transport
- performing required estimates and calculations of variables such as size, weight, distance, risk and costs
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting routing for road and rail freight transport
- tracking international cargo being forwarded by road and rail transport
- working collaboratively with others
- working with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable regulations and legislation:
  - Australian and international regulations, conventions and codes of practice for international forwarding of freight
  - Australian and international standards and certification requirements
  - relevant Australian and international environmental protection legislation
  - relevant Australian and international transport security and safety legislation
  - relevant regulations for importing and exporting cargo
  - relevant regulations for international trading and financial transactions
- Australian and international regulations and conventions applicable to planning and organising international freight forwarding involving road and rail transport (including importing, exporting and transiting goods)
- definitions, purpose and use of Incoterms and Combiterms
- forms of road and rail freight transport
- freight handling and terminal equipment at major worldwide road and rail freight terminals
- freight types, consignments and consolidations
- major road and rail routes, services, conferences, road and rail freight terminals as they apply to road and rail freight transport
- packaging cargo for transit by road and rail
- parameters of freight transport services
- principles of international trade and commerce
- quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- relevant environmental regulations
- road and rail containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
- sources of information and documentation needed when planning and organising international freight forwarding by road and rail transport, including permits and authorisations
- standard procedures, for planning and organising international freight forwarding involving road and rail transport
- types of pre-transport issues in freight forwarding , including adequacy of insurance and packaging, security, stowage and handling in transit
- types of road vehicles, trains and rolling stock – their applications, capacity and routes
- typical problems that can occur and related appropriate actions that can be taken to prevent or solve these problems.

TLIB0117 Assist with preparation of a train prior to operation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assist with the preparation of a train prior to operation in accordance with organisational procedures, and the requirements of relevant safeworking rules and codes of practice.

It includes preparing for and implementing the prescribed pre-departure checks, completing required train documentation and confirming the train can proceed.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed in conjunction with a train driver. It involves the application of routine operational principles and procedures when preparing for train operations, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for pre-departure checks	1.1 Required checks and relevant procedures and standards are identified
	1.2 Purpose of the journey and activities to be undertaken are identified
	1.3 Constraints and special instructions that may apply for the journey are identified
	1.4 Hazards are identified, risks are assessed and risk control measures are implemented
	1.5 Documentation is read to identify and confirm consist, attach/detach information and characteristics of the train
2 Implement pre-departure checks	2.1 Train, or relevant portion of the train, is checked to ensure that rolling stock is coupled and sequenced correctly
	2.2 Rolling stock is checked to ensure it is fit for operation in accordance with regulatory requirements and organisational procedures
	2.3 Assistance is provided when train braking systems are tested to ensure they are operating effectively
	2.4 Visual inspection is conducted to identify obvious faults or defects that would prevent safe transit
	2.5 Action is taken within limits of own role to rectify faults and ensure minimum delay to planned running schedule
	2.6 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage
3 Confirm train can proceed	3.1 Documentation is completed after checking rolling stock and train equipment in accordance with organisational procedures
	3.2 Relevant personnel are promptly advised of the result of completed checks
	3.3 Authority to proceed relevant to the operational situation is obtained and followed

Assessment Requirements for TLIB0117 Assist with preparation of a train prior to operation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- carrying out all pre-departure checks in accordance with workplace procedures
- communicating effectively with others when preparing a train for operation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults and defects for the type of rolling stock being operated
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and rectifying within limits of own role identified problems, faults and malfunctions, in accordance with workplace procedures
- testing braking systems in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements and relevant codes of practice and/or guidelines
- contingency management processes
- emergency procedures
- pre-departure train testing procedures
- procedures for preparing a train for operation
- relevant methods to overcome identified faults and defects
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safeworking systems and requirements
- train characteristics and specifications
- train coupling equipment and methods
- train preparation documentation procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB0127 Certify rolling stock prior to handover

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to certify rolling stock as fit for purpose in accordance with relevant organisational procedures, rail industry standards, rules, regulations and codes of practice.

It includes completing certification and documentation in accordance with organisational or client requirements.

This unit applies to workers required to carry out these activities as part of a maintenance role within a defined location on behalf of their own or a client's organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Complete certification requirements	1.1 Certification requirements for particular rolling stock are confirmed by reference to applicable specifications
	1.2 Planned activities are identified in accordance with organisational procedures
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Completed maintenance activities are verified against planned activities
	1.5 Completed maintenance activities are validated as required in accordance with organisational procedures
	1.6 Where maintenance activities are not completed an assessment is carried out to confirm rolling stock is fit for purpose in accordance with organisational procedures
	1.7 Completed maintenance activities are confirmed against operational performance requirements
	1.8 Certificate is issued in accordance with organisational procedures
2 Complete documentation	2.1 Required documentation procedures and processes are confirmed
	2.2 Documentation is filled in legibly and proofread, in accordance with organisational procedures and regulatory requirements
	2.3 Required documentation is archived in accordance with organisational procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB0127A Certify rolling stock prior to handover.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIB0127 Certify rolling stock prior to handover

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading and interpreting relevant procedures and standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable specifications for the type of rolling stock being certified
- organisational requirements for certifying rolling stock
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and relevant regulations
- requirements for completing relevant documentation when certifying rolling stock prior to handover
- requirements of organisational maintenance systems, procedures, rail industry standards, codes of practice and schedules.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

© Commonwealth of Australia, 2025 Industry Skills Australia

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

TLIB0128 Conduct pre-movement checks on motive power units

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct pre-movement checks on motive power units in accordance with relevant organisational procedures, rules and codes of practice.

It includes conducting pre-start checks, and starting and positioning motive power units in accordance with workplace requirements.

This unit applies to people required to carry out these activities as part of a maintenance role within a defined location.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Carry out pre-start checks	1.1 Allocation of motive power units is checked in conjunction with appropriate personnel
	1.2 Motive power unit to be inspected and prepared is located
	1.3 Completion of all maintenance activities is confirmed
	1.4 Checks for safety controls are conducted in accordance with organisational procedures
	1.5 Internal and external integrity checks are conducted in accordance with organisational procedures
	1.6 Fluid levels are checked and appropriate action is taken as required
2 Start motive power unit	2.1 Motive power unit is started in accordance with manufacturer instructions and/or organisational procedures, and faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
	2.2 Hazards are identified, risks are assessed and risk control measures are implemented
	2.3 For critical or serious equipment faults that cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged, and problem is reported for rectification
	2.4 All instruments and gauges are observed, readings are interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
	2.5 Fluid levels are rechecked after starting and appropriate action is taken as required
	2.6 Pre-movement checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move
3 Complete documentation	3.1 All required documentation concerning inspecting the motive power unit is completed and processed in accordance with organisational procedures and regulatory requirements
	3.2 Logbook and other maintenance records on the motive power unit are completed and processed in accordance with organisational procedures and regulatory requirements
4 Position motive power unit	4.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

4.2 Relevant personnel are made aware that motive power unit is about to be moved in accordance with organisational procedures

4.3 Motive power unit is operated in accordance with standard procedures and regulatory requirements, and within operating and operational constraints

4.4 Motive power unit is positioned in accordance with operational requirements and directions

4.5 Motive power unit performance is monitored during operation to confirm effective operation and/or to identify defects

4.6 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance

4.7 Relevant work health and safety (WHS)/occupational health and safety (OHS) and regulatory requirements are followed to ensure safety and to prevent injury and damage

4.8 Relevant personnel are advised that the motive power unit is secured in the required position and is ready for service

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB0128A Conduct pre-movement checks on motive power units.

Assessment Requirements for TLIB0128 Conduct pre-movement checks on motive power units

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- applying relevant workplace procedures
- communicating effectively with others when inspecting and preparing a motive power unit
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying who is responsible for authorising the movement of rolling stock
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
- procedures for conducting pre-movement checks prior to moving a motive power unit
- relevant work health and safety (WHS)/occupational health and safety (OHS) and rail safety requirements
- requirements for completing relevant documentation when inspecting and preparing a motive power unit
- start-up requirements for a motive power unit and associated manufacturer instructions and organisational procedures.

TLIB0132 Start up and shut down a single locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to start up and shut down a single locomotive.

It includes inspecting, preparing and starting up a single locomotive; conducting in-cab and post start-up checks; completing start-up documentation; stabling locomotive; and carrying out post-operational checks.

Locomotives may include:

- diesel locomotives
- electric locomotives
- railcars.

This work is conducted as part of operating locomotives and may be carried out by different personnel working within rail operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Inspect and prepare locomotive	1.1 Identification and location of locomotive is confirmed
	1.2 Logbook and locomotive are checked for out of service indications and to confirm serviceability
	1.3 Locomotive kit and equipment are checked as required, and defects and deficiencies are recorded and rectified, isolated, tagged or reported as required, in accordance with organisational procedures
	1.4 Fuel, lubricating oils, water, coolant and sand equipment are checked as required and then replenished as required, in accordance with manufacturer and/or organisational procedures
	1.5 Hazards are identified, risks are assessed and control measures are implemented
	1.6 External visual checks are conducted in accordance with manufacturer and/or organisational policies and procedures
2 Start up locomotive	2.1 Locomotive is started in accordance with manufacturer instructions and/or organisational procedures
	2.2 Operating faults are identified, diagnosed, rectified and/or reported and recorded in appropriate records
	2.3 All instruments and gauges are observed and readings are interpreted to confirm effective operation in accordance with manufacturer and/or organisational procedures
	2.4 Fluid levels are rechecked after starting, as required, and appropriate action is taken as required
3 Conduct in-cab checks	3.1 Locomotive in-cab checks are conducted in accordance with manufacturer and/or organisational policies and procedures
	3.2 Vigilance and safety controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
	3.3 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not

© Commonwealth of Australia, 2025 Industry Skills Australia

	working correctly
	3.4 Personal in-cab equipment and crew comfort requirements are checked and adjusted for correct functionality and comfort
	3.5 Auxiliary and emergency equipment is checked and confirmed to be operational in accordance with operating requirements
4 Conduct post start-up checks	4.1 Post start-up checks are carried out to ensure locomotive is braking and powering effectively and is safe to move, in accordance with manufacturer and/or organisational policies and procedures
	4.2 Communications equipment is obtained and checked, as required, to ensure it is functional
	4.3 Pantographs are raised or lowered and confirmed to be operational, as required, in accordance with manufacturer instructions and/or organisational procedures
5 Complete start-up documentation	5.1 All required documentation concerning inspecting the locomotive is completed and processed in accordance with organisational policies and procedures
	5.2 Logbook and other locomotive service records are completed and stored in accordance with organisational policies and procedures
6 Stable locomotive	6.1 Location for stabling locomotive is identified and confirmed with appropriate personnel
	6.2 Directions of appropriate personnel are interpreted and followed as required
	6.3 Locomotive is stabled and shut down in accordance with manufacturer and/or organisational procedures
	6.4 Locomotive is secured in accordance with organisational policies and procedures
	6.5 Control equipment and cab are secured in accordance with organisational policies and procedures
	6.6 Additional protection is set in place as required, in accordance with organisational policies and procedures
7 Carry out post-operational checks	7.1 Fuel, oil, water and sand levels are checked as required and then replenished as required
	7.2 Outcomes of post-operational checks are recorded and

© Commonwealth of Australia, 2025 Industry Skills Australia

processed in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB0132 Start up and shut down a single locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in locomotives and associated equipment and procedures
- communicating effectively with others
- completing all pre start-up checks on a locomotive
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary systems on a locomotive, and related checks and workplace procedures
- braking and safety system procedures for a locomotive
- defects that can occur on a locomotive and related action that should be taken
- external features of a locomotive that must be checked during a visual inspection
- functions of all supervisory indicators and controls, and related checks for correct operation
- inspection procedures for a locomotive
- lubrication requirements for a locomotive
- procedures and required protocol for operating electronic communications equipment
- purpose and location of controls, monitoring devices, braking, power source and traction systems

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB1024 Clean transportation units and facilities for passenger use

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to clean transportation units and facilities for passenger use in accordance with workplace and codes/regulatory requirements as part of work activities within the transport and logistics industry.

It includes identifying and preparing for cleaning, cleaning the facility or unit, identifying minor maintenance requirements of transportation units and facilities, and completing all work requirements.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Identify and prepare for cleaning**	1.1	Transportation units and facilities are inspected for hygiene and cleanliness on an ongoing basis
		1.2	Customer complaints regarding lack of hygiene and cleanliness within transport units and facilities are investigated
		1.3	Transport units or areas requiring cleaning and the nature of the material to be cleaned is identified to determine appropriate response
		1.4	Cleaning procedures are identified, and cleaning materials and equipment are organised in accordance with workplace procedures
		1.5	Areas that require cleaning that breach work health and safety (WHS)/occupational health and safety (OHS) regulations or workplace standards are cordoned off to prevent access by staff and customers
2	**Clean facility or unit**	2.1	Transportation units and facilities are cleaned or detailed to workplace standards
		2.2	Cleaning equipment is operated in accordance with WHS/OHS regulations, codes of practice, and workplace procedures
		2.3	Chemicals are used in accordance with WHS/OHS legislation, codes of practice, policies and procedures
		2.4	Hazardous and general waste is removed in accordance with WHS/OHS regulations, codes of practice and workplace procedures
3	**Identify minor maintenance requirements of transportation units and facilities**	3.1	Transport units and facilities are inspected to identify maintenance requirements
		3.2	Minor maintenance of transport units and facilities is conducted in accordance with workplace policies and procedures
		3.3	Minor maintenance actions are reported in accordance with workplace procedures
		3.4	Further maintenance requirements of transport units or facilities are reported in accordance with workplace procedures
4	**Complete the work**	4.1	Cordoned off area is re-opened for use when safe for staff

© Commonwealth of Australia, 2025 Industry Skills Australia

and customer access

4.2 Transportation units/facilities cleanliness and appearance is verified prior to being released for service

4.3 Cleaning equipment stocks are monitored and replenished as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB1024A Clean transportation units and facilities for passenger use.

Assessment Requirements for TLIB1024 Clean transportation units and facilities for passenger use

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when cleaning transportation units and facilities
- applying relevant legislation and workplace procedures in reference to cleaning transportation units and facilities for passenger use
- communicating and working effectively with others when cleaning transportation units and facilities
- completing documentation related to work activities
- demonstrating an understanding of work health and safety (WHS)/occupational health and safety (OHS) requirements for cleaning transportation units and facilities
- demonstrating an understanding of WHS/OHS requirements for cordoning off an area to the public when cleaning transportation units and facilities
- handling and storing hazardous substances and materials
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communication equipment to required protocol
- reading, interpreting and following instructions, procedures, information and signs relevant to cleaning transportation units and facilities
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and safely using relevant equipment and materials when cleaning transportation units and facilities
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- selecting, mixing and applying appropriate cleaning materials
- working systematically with required attention to detail without injury to self or others,

© Commonwealth of Australia, 2025 Industry Skills Australia

or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication requirements when cleaning transportation units and facilities
- documentation and record requirements
- equipment, chemicals and materials used when cleaning transportation units and facilities for passenger use, and the precautions and procedures to be followed in their use
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for cleaning transportation units and facilities for passenger use
- problems that may occur when cleaning transportation units and facilities, and appropriate action that can be taken to resolve these problems
- regulations relevant to cleaning transportation units and facilities for passenger use including, where relevant, the Australian Dangerous Goods (ADG) Code and relevant health and hygiene requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout
- workplace procedures and policies for cleaning transportation units and facilities for passenger use, including discharging waste and charging water containers.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Performance is demonstrated consistently over time and in a suitable range of contexts.

© Commonwealth of Australia, 2025 Industry Skills Australia

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

TLIB1028 Maintain and use hand tools

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain and use hand tools in accordance with workplace procedures and safeworking codes across a variety of operational workplace contexts within the transport and logistics industry.

It includes selecting and using hand tools to complete workplace tasks, maintaining basic hand tools in accordance with manufacturer's instructions, and securing and storing hand tools in accordance with workplace procedures.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select and use	1.1 Correct tools are chosen to complete workplace tasks and to

© Commonwealth of Australia, 2025 Industry Skills Australia

hand tools		ensure efficient and safeworking conditions
	1.2	Appropriate personal safety protection is used to minimise personal injury risk
2 Maintain hand tools	2.1	Equipment is cleaned and maintained in accordance with manufacturer's specifications and/or local instructions to ensure correct functionality of equipment
	2.2	Unserviceable tools are repaired, replaced or reported to relevant personnel to ensure correct functionality
3 Secure and store hand tools	3.1	Tools are transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment
	3.2	Tools are stored and secured according to manufacturer's or workplace procedures to prevent damage to, and losses of, equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB1028A Maintain and use hand tools.

TLIB1030 Undertake general site maintenance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake general site housekeeping and maintenance in depots, sub-depots, factories, compounds and campsites according to safeworking and regulatory requirements and workplace procedures.

It includes preparing for work, conducting site housekeeping functions, applying pest and vegetation control measures, and completing all work requirements.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for work	1.1 Works order including drawings, sketches and material lists is received/accessed, analysed and confirmed as required by

© Commonwealth of Australia, 2025 Industry Skills Australia

	site inspection	
	1.2	Resources, including equipment and materials, are identified and obtained
	1.3	Liaison and communication issues with other personnel at the site are resolved
	1.4	Hazards are identified prior to commencing work
	1.5	Site safety requirements are observed
2 Conduct site housekeeping functions	2.1	Stores, materials and equipment are loaded/off-loaded safely and secured
	2.2	Site, including stores and materials, is laid out to plan
	2.3	Stores and materials are checked for serviceability, cleaned as required and prepared for use
	2.4	Minor earthwork maintenance is conducted
	2.5	Excess materials and refuse are disposed of/returned, as required by workplace procedures
3 Apply pest and vegetation control measures	3.1	Pest and vegetation control requirements are identified and appropriate control measure is selected in accordance with workplace procedures
	3.2	Chemical control agents are prepared in accordance with safety requirements and workplace procedures
	3.3	Pest control measures are applied, monitored and varied to maintain effectiveness
	3.4	Control measures are applied, and pests and vegetation are removed/neutralised
4 Complete work	4.1	Worksite is rehabilitated
	4.2	Work completion details are finalised and recorded/advised to appropriate personnel

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when carrying out general site maintenance
- completing documentation related to general site maintenance
- identifying and organising resources required for work activities
- implementing contingency plans and modifying activities depending on operational contingencies, risk situations and environments that may occur when carrying out general site maintenance
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communication equipment to required protocol
- reading, interpreting and following instructions, procedures, information, labels and signs relevant to general site maintenance
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using hand tools and minor plant
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of plant and equipment, transport, structures, hardware and electrical components used in work activities
- contents of workplace technical manuals and instructions relating to the work activities concerned
- hazardous chemicals used in general site maintenance, and related precautions and personal protection measures
- hazards that may exist during site maintenance activities and ways of controlling the risks involved
- impact on work activities of regulatory requirements
- problems that may occur during site maintenance activities, and action that can be taken to report or resolve these problems
- relevant WHS/OHS and environmental procedures and regulations
- relevant recording and documentation procedures
- relevant sections of applicable regulatory requirements
- workplace documentation and records system management related to the work concerned
- workplace procedures for general site maintenance.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

TLIB1031 Clean up plant, equipment and worksite

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with state/territory Acts and regulations, nationally approved compliance codes and/or guidelines and workplace procedures.

Work is undertaken as part of workplace activities across a variety of operational contexts within the transport and logistics industry.

It includes planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Plan and prepare work**	1.1	Details of cleaning requirements are identified by instructions, inspections, work orders and schedules
		1.2	Materials and equipment are identified and obtained
		1.3	Relevant legislative, statutory and workplace requirements and standards are identified and built into the planning process
		1.4	Environmental regulatory requirements are identified and built into the planning process to ensure site is left in an environmentally sound condition
		1.5	Required materials to be removed and methods of removal are identified to facilitate clean up
2	**Arrange clear up and disposal/ reclamation of material**	2.1	Storage/disposal areas and quarantine zones are identified and arranged to ensure environmentally sound disposal
		2.2	Reclaimed material is removed to storage areas using appropriate methods
		2.3	Non-required materials/services are removed and disposed of in appropriate manner to ensure clean and environmentally stable site
		2.4	Site is inspected for overlooked materials to minimise wastage and losses
3	**Operate cleaning equipment and mobile plant**	3.1	Cleaning equipment and mobile plant are operated to site and manufacturer’s requirements
		3.2	Operator maintenance is performed to manufacturer’s/site standards
		3.3	Cleaning equipment is cleaned and stored
4	**Finalise work and restore site**	4.1	Drainage is established/restored as necessary to ensure well drained site
		4.2	Re-vegetation/environmental repair is arranged as required to return site to environmentally sound condition
		4.3	Barriers are removed or checked for integrity to ensure access to correct areas
		4.4	Access roads are closed as required to prevent unauthorised access to closed site

© Commonwealth of Australia, 2025 Industry Skills Australia

4.5	Site level and surface condition are left in a suitable state to ensure an environmentally sound, safe and clean site

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB1031A Clean up plant, equipment and worksite.

Links

Assessment Requirements for TLIB1031 Clean up plant, equipment and worksite

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying cleaning agents, sealants and chemicals
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when cleaning up plant, equipment and worksites
- completing documentation related to cleaning up plant, equipment and worksites
- handling hazardous materials
- identifying and reclaiming salvageable materials
- identifying and removing water/waste/surplus materials
- implementing contingency plans when cleaning up plant, equipment and worksites
- levelling and re-vegetating sites
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment and sites in accordance with standard operating procedures
- operating and maintaining relevant mobile plant and mobile plant equipment
- operating electronic communication equipment to required protocol
- reading, interpreting and following instructions, procedures, information and signs relevant to cleaning up plant, equipment and worksites
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- using barriers correctly
- using hand and power tools
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislated safety requirements including state/territory Acts, regulations and nationally approved compliance codes and/or guidelines
- applications and characteristics of plant and equipment
- cleaning agents/sealants and their properties and precautions for their use
- cleaning equipment, related materials and their applications
- hazards that may exist when cleaning up plant, equipment and worksites and ways of controlling the risks involved
- manufacturer instructions for servicing and cleaning equipment
- permit to work system
- plant and equipment cleaning procedures and instructions
- problems that may occur when cleaning up plant, equipment and worksites, and action that can be taken to report or resolve these problems
- relevant recording and documentation requirements
- workplace procedures for cleaning up plant, equipment and worksites.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIB1080 Use, clean and maintain towing equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use, clean and maintain towing equipment in accordance with regulations, workplace procedures and workplace requirements.

It includes carrying out pre-operation checks on equipment, carrying out basic routine servicing of equipment, using towing equipment, cleaning equipment, and recording and reporting check results.

Persons achieving competence in this unit will need to fulfil relevant work health and safety (WHS)/occupational health and safety (OHS) legislation and regulations covering using, cleaning and basic servicing of a towing vehicle and equipment concerned.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Visually inspect vehicle and towing equipment	1.1 Towing vehicle and equipment are visually inspected prior to operations in accordance with standard pre-operational functional and safety check workplace procedures and manufacturer specifications
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Aspects of vehicle or equipment found to be faulty or outside manufacturer or workplace specifications are reported to designated persons for appropriate action
2 Check vehicle and towing equipment for operational capability	2.1 Towing vehicle and equipment are checked to ensure they can be operated in accordance with manufacturer specifications and workplace procedures
	2.2 All safety systems are checked for operational effectiveness
	2.3 Routine servicing and lubrication checks of towing vehicle and its equipment are carried out in accordance with the service schedule for a vehicle and the equipment concerned
3 Identify and assess impact of faults on towing operations	3.1 Effect of identified faults on the operation of a towing vehicle and equipment is assessed
	3.2 Faulty equipment or components that may affect the safe operation of a vehicle and equipment are isolated, tagged and reported to appropriate personnel for rectification
4 Use towing equipment on vehicle	4.1 Towing equipment is operated in accordance with manufacturer specifications and regulatory requirements
	4.2 Attachment points used in towing operation and weight of vehicle being towed or load being carried are checked to ensure they are consistent with established towing practice, regulatory requirements and permissible safe working loads for towing vehicle and its associated towing equipment
	4.3 Safety precautions are followed when using towing equipment on a towing vehicle in accordance with workplace procedures and WHS/OHS requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.4 Personal protective equipment (PPE) is worn in accordance with workplace procedures and WHS/OHS requirements
5 Clean towing vehicle and its equipment	5.1 Appropriate cleaning process is selected for type of towing vehicle and its equipment in accordance with workplace procedures
	5.2 Cleaning materials are prepared in accordance with manufacturer's instructions and workplace procedure
	5.3 Required PPE and safety equipment is selected and used in accordance with regulatory requirements and workplace procedures
	5.4 Towing vehicle is cleaned using appropriate cleaning materials and tools in accordance with workplace procedures
6 Record and report results of visual inspection and operational checks	6.1 Results of visual inspection and operational checks are accurately reported in accordance with regulatory requirements, workplace policy and workplace procedures
	6.2 Clear, unambiguous and concise records are kept in accordance with workplace policy
	6.3 Clear reference is made to any items that may affect the future safety of a towing vehicle or equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB1080A Use, clean and maintain towing equipment.

Assessment Requirements for TLIB1080 Use, clean and maintain towing equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in towing vehicles, associated equipment and workplace procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on towing contexts, risk situations and environments
- planning own work, predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures and labels
- recognising problems concerning the safety and operational capability of a towing vehicle and its equipment and taking appropriate action
- selecting and using relevant equipment, tools and cleaning agents
- using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards including the operation of portable fire extinguishers
- working safely and collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- characteristics, capabilities and limitations of towing vehicle and its equipment
- documentation and record requirements when using, cleaning and servicing a towing vehicle and its equipment
- focus of operation of work systems, equipment, management and workplace operating systems for using, cleaning and servicing a towing vehicle and its equipment
- hazards that may exist when using, cleaning and servicing a towing vehicle and its equipment, and the precautions and action that should be taken to minimise or eliminate hazards concerned
- housekeeping standards and procedures
- operational safety requirements for towing vehicle and equipment concerned
- problems that may occur and appropriate action that can be taken to resolve these problems
- relevant regulations and standards
- relevant WHS/OHS and environmental protection procedures and guidelines
- safe working loads for towing vehicle
- tools, materials and equipment for using , cleaning and maintenance of a towing vehicle and its equipment, and the precautions and procedures that should be followed in their use
- workplace procedures and policies for using, cleaning and servicing of a towing vehicle and its equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

TLIB1093 Clean equipment and restore worksite

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when cleaning up plant, equipment and worksite, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan and prepare work	1.1 Details of cleaning requirements are identified by referring to instructions, inspections, work orders and schedules
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Cleaning material and equipment are identified and obtained
	1.4 Required materials to be removed and methods of removal are identified to facilitate clean up
2 Clear up and dispose of or reclaim material	2.1 Storage/disposal areas and quarantine zones are identified to ensure environmentally sound disposal
	2.2 Reclaimed material is removed to storage areas using appropriate methods
	2.3 Non-required material/services are removed and disposed of appropriately to ensure clean and environmentally stable site is maintained
	2.4 Site is inspected for overlooked material to minimise wastage and losses
3 Operate cleaning equipment and mobile plant	3.1 Cleaning equipment and mobile plant are operated safely to minimise risk of injury to people and equipment damage
	3.2 Personal protective equipment required to operate cleaning equipment and mobile plant is identified, obtained and worn as required
	3.3 Site/manufacturer requirements for operating cleaning equipment and mobile plant are confirmed, clarified as required and followed
	3.4 Site/manufacturer requirements for maintaining cleaning equipment and mobile plant are confirmed, clarified as required and followed
	3.5 Cleaning equipment is cleaned and stored in accordance with site/manufacturer requirements
4 Finalise work and restore site	4.1 Barriers are removed or checked for integrity to ensure access to correct areas as required

© Commonwealth of Australia, 2025 Industry Skills Australia

4.2 Site is left in suitable surface condition to ensure an environmentally sound, safe and clean site

4.3 Required documentation is completed and processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB1093 Clean equipment and restore worksite

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying cleaning agents, sealants and chemicals in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- applying relevant workplace procedures
- completing relevant documentation
- disposing of waste materials in accordance with workplace procedures
- identifying and obtaining correct materials and equipment
- identifying and reclaiming salvageable materials
- identifying and removing water/waste/surplus materials
- interpreting and following operational instructions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- leaving site in a suitable condition
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment and sites in accordance with operating procedures
- operating and maintaining relevant cleaning equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures
- using quarantine zone and barriers in accordance with environmental and workplace procedures when disposing of material
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cleaning agents/sealants and their properties and precautions for their use
- cleaning equipment and related materials, and their applications
- hazards that may exist when cleaning up plant, equipment and worksites, and ways of controlling the risks involved
- manufacturer instructions for cleaning equipment
- problems that may occur when cleaning up plant, equipment and worksites, and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation requirements
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and codes of practice
- SDSs/MSDSs, manufacturer instructions and organisational procedures
- workplace procedures for cleaning up plant, equipment and worksites.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2001 Check and assess operational capabilities of equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment in accordance with regulations, workplace procedures and requirements, within the transport and logistics industry.

It includes inspecting equipment and the work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting inspection and testing results.

Safety checks and equipment tests are performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Inspect equipment and	1.1 Equipment is inspected prior to start-up in accordance with workplace pre-operational functional safety check

© Commonwealth of Australia, 2025 Industry Skills Australia

work area	procedures and manufacturer's specifications
	1.2 Aspects of equipment/work area found to be outside manufacturer's and/or workplace specifications are reported to designated persons for appropriate action
2 Check equipment operational capability	2.1 Equipment and components are tested after start-up in accordance with manufacturer's specifications and workplace procedures
	2.2 Warning systems are checked for operational effectiveness
3 Identify and assess impact of faults on work requirements	3.1 Faults are identified and assessment is made of the potential effect on the operation of the equipment for the required work
	3.2 Faults that may affect the safe operation of the equipment are reported to the appropriate personnel for rectification
4 Record and report inspection and testing results	4.1 Inspection and testing results are accurately reported in accordance with regulatory requirements, workplace policies and industry guidelines
	4.2 Clear, unambiguous and concise records are kept, in accordance with workplace policies
	4.3 Clear reference is made to any items that may affect the future safety of the equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB2001 Check and assess operational capabilities of equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes during work activities
- communicating and working effectively with others when checking and assessing equipment operational capability
- completing documentation related to checking and assessing equipment operational capability
- implementing contingency plans and modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures, information, labels and signs relevant to the checking and assessing of the operational capability of equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment and communications technology when checking and assessing equipment operational capability
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment characteristics, capabilities, limitations and operational safety requirements
- housekeeping procedures
- operational work systems, equipment, management and site operating systems for checking and assessing equipment operational capability
- problems that may occur when checking and assessing equipment operational capability and appropriate action that can be taken to resolve these problems
- site layout and obstacles
- tools and equipment used when checking and assessing equipment operational capability and the precautions and procedures to be followed in their use.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB2003 Carry out vehicle servicing and maintenance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out basic servicing and maintenance of a commercial vehicle, in accordance with relevant roads and traffic authority regulations.

It includes actions to implement vehicle manufacturer specifications for routine checks and maintenance, to ensure all specified safety requirements are met, and to ensure vehicle is operational to workplace requirements and relevant state/territory roads and traffic authority regulations.

Work is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Maintain and service vehicle systems	1.1 Hazards are identified, risks are assessed and control measures are implemented
	1.2 Fluid levels are checked and adjusted in accordance with manufacturer specifications and workplace procedures
	1.3 Air levels are checked and adjusted in accordance with manufacturer specifications and workplace procedures
	1.4 Routine checks are made of vehicle systems and appropriate action is initiated for maintenance as required in accordance with workplace procedures
	1.5 Appropriate precautions and procedures are followed when servicing/maintaining a vehicle to ensure adequate protection of the environment
	1.6 Work health and safety (WHS)/occupational health and safety (OHS) procedures are followed when carrying out routine servicing and maintenance of a vehicle
2 Carry out minor vehicle repairs	2.1 Vehicle components are removed, repaired or replaced and refitted to vehicle using correct tools in accordance with manufacturer instructions and workplace procedures
	2.2 Tyres on vehicle are repaired or replaced in accordance with workplace procedures and manufacturer instructions
	2.3 Worn brakes are identified and action is taken in accordance with workplace procedures and manufacturer specifications
	2.4 Need for more complex maintenance procedures is identified and problem is correctly referred in accordance with workplace procedures
3 Diagnose minor vehicle faults and undertake repairs for the	3.1 Minor faults in vehicle systems are identified, diagnosed and repaired in accordance with

Assessment Requirements for TLIB2003 Carry out vehicle servicing and maintenance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- monitoring performance of equipment
- operating and adapting to differences in equipment in accordance with workplace procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to vehicle or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic fault finding procedures required for routine servicing and maintenance of vehicles
- basic principles for operating systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres and brakes
- housekeeping standards for routine servicing and maintenance
- problems that may occur during vehicle routine servicing and maintenance and appropriate action and solutions
- procedures for checking, and routine servicing and maintenance of a commercial vehicle, in accordance with workplace and manufacturer requirements, and established safety rules and regulations
- procedures for use and maintenance of materials, tools and parts required for routine servicing and maintenance
- procedures required to minimise waste during routine servicing and maintenance
- recognition and diagnosis of faults and vehicle irregularities
- relevant duty of care requirements for routine servicing and maintenance of vehicles
- relevant WHS/OHS and pollution control procedures
- reporting and documentation requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in *the Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

TLIB2004 Carry out vehicle inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out an inspection of a commercial vehicle, in accordance with relevant roads and traffic authority regulations for inspecting commercial vehicles.

It includes action to implement vehicle manufacturer specifications for routine checks, to clean vehicle, to ensure all specified safety requirements are met, and to ensure vehicle is operational to workplace requirements and relevant state/territory roads and traffic authority regulations.

Work is performed with limited or minimum supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check vehicle	1.1 Vehicle hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Visual check of internal and external condition of vehicle is carried out in accordance with workplace procedures
	1.3 Pre-operational inspections and checks of the vehicle tyres, suspension, fluid levels and other critical features are carried out to ensure conformance with relevant roads and traffic authority requirements, manufacturer specifications and workplace procedures
	1.4 Associated equipment is tested to ensure it functions correctly to manufacturer specifications
	1.5 Post start-up and shut-down checks are carried out after engine is started to identify possible engine or electrical problems
	1.6 Warning systems (instruments and gauges) are checked to ensure they are operational
	1.7 Vehicle monitoring device is logged on/off in accordance with manufacturer instructions and workplace procedures as required
2 Clean vehicle	2.1 Vehicle is cleaned in accordance with workplace procedures
	2.2 Vehicle associated equipment is cleaned in accordance with workplace procedures
3 Complete documentation	3.1 Vehicle faults are identified and/or diagnosed, and appropriate action is taken to report or remedy identified faults as required by workplace procedures
	3.2 Records of inspection are updated and recommended repairs are documented in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2004A Carry out vehicle inspection.

TLIB2009 Check conveyor operational status

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check conveyor operational status, in accordance with workplace procedures and relevant regulatory requirements within the transport and logistics industry.

It includes inspecting conveyor system and work areas, checking equipment operational capability, identifying and assessing faults and reporting inspection results.

Safety checks and equipment tests are performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Inspect conveyor system and work area	1.1 Conveyor equipment is checked prior to start-up in accordance with workplace procedures and manufacturer safety checks and specifications, to ensure it is free from damage and obstructions that may limit operational capability
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Work area is checked to ensure it is safe and appropriate for required task
2 Check equipment operational capability	2.1 Conveyors are inspected after start-up in accordance with manufacturer specifications, and workplace inspection specifications and procedures
	2.2 Warning systems are checked for operational effectiveness
	2.3 Records are checked to determine maintenance history and requirements and goods carried
3 Identify, assess faults and report inspection and testing results	3.1 Faults are identified and assessments are made of potential effect on equipment operation for required work, and details are forwarded to relevant personnel in accordance with workplace procedures
	3.2 Accurate reporting of inspection and testing results is kept in accordance with regulatory requirements, workplace policy and industry guidelines
	3.3 Clear reference is made to any items that may affect future equipment safety/operation
	3.4 Conveyor system is continually monitored for safe and efficient operation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- conveyor purpose, characteristics, capabilities, requirements and limitations
- documentation and record requirements
- focus of operation of work systems, equipment, management and site operating systems for checking and assessing conveyor operational capability
- function and principles of operation of belt cleaning systems
- housekeeping procedures
- operational safety requirements for conveyor concerned
- problems that may occur when checking and assessing conveyor operational capability and appropriate action that can be taken to resolve these problems
- regulations relevant to checking and assessing conveyor operational capability including:
  - current Australian Dangerous Goods (ADG) Code and relevant bond, quarantine or other legislative requirements
  - safe guarding of plant and equipment
  - conveyor operations guidelines
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- tools and equipment used and precautions and procedures that should be followed in their use
- workplace procedures and policies for checking and assessing conveyor operational capability.

Assessment Conditions

TLIB2022 Diagnose and rectify minor faults

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults in accordance with regulations, safe working codes of practice and workplace requirements, across a variety of operational transport contexts.

It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, checking and reporting minor repairs and/or maintenance, and providing support in accordance with workplace procedures.

Work is performed without supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Identify maintenance/repair requirements	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Condition of vehicle and/or motive power unit ancillary equipment are assessed
	1.3 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
	1.4 Required equipment and tools are identified and obtained
	1.5 Work areas and equipment are prepared and made safe for repair/maintenance/component exchange activities
2 Conduct minor maintenance and routine repairs	2.1 Minor repair/maintenance/component exchange activities are carried out to comply with manufacturer specifications and workplace procedures
	2.2 Required equipment, tools and materials are operated, applied and handled to conform to work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications, to prevent injury and damage
3 Check and report minor repairs/maintenance	3.1 Minor repair/maintenance/component exchange activities are checked for accordance with safety requirements and workplace procedures
	3.2 Equipment is checked to confirm it has been restored to operational standards
	3.3 Repair/maintenance/component exchange activities are documented in appropriate records or logbooks
4 Provide support	4.1 Repairs/maintenance/component exchange activities requiring support are identified and level of support is established
	4.2 Assistance to repair/maintenance/component exchange activities is provided as required
	4.3 Repair/maintenance/component exchange work not able to be undertaken or completed is reported to appropriate personnel for follow-up action
	4.4 Work site is checked for cleanliness and operational safety, and appropriate action is taken to restore site and equipment

TLIB2023 Provide sanitation and water services support to passenger transportation units

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to provide sanitation and water services support to passenger transportation units in accordance with workplace and regulatory requirements, in the transport and logistics industry.

It includes planning the decanting and watering of passenger vehicles, carriages or vessels; providing a decanting and watering service; and completing all decanting and watering operations.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Plan decanting and watering of passenger vehicles/carriages/vessels**	1.1 Transport systems vehicles, carriages or vessel type are identified to assess nature and extent of servicing required
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Sanitary waste removal and water system refill are planned to ensure minimal inconvenience and delay to customers and services
2	**Provide decanting service**	2.1 Decanting unit is connected to transport unit waste tanks in accordance operational requirements
		2.2 Transport unit waste is removed to holding tanks in accordance with workplace procedures
		2.3 Decanting unit is disconnected from transport unit and unit is cleaned in accordance with workplace and health and hygiene regulations
3	**Provide water service**	3.1 Water supply is connected to transport unit water storage tanks in accordance with operational requirements
		3.2 Transport unit water storage tanks are filled in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulations
		3.3 Water supply is disconnected from transport unit and unit is cleaned in accordance with workplace and health and hygiene regulations
4	**Complete decanting and watering**	4.1 Sanitary waste is removed and stored in accordance with environmental workplace procedures
		4.2 Housekeeping and equipment storage requirements are maintained in accordance with workplace procedures
		4.3 Documentation is completed and proofread in accordance with workplace procedures

Assessment Requirements for TLIB2023 Provide sanitation and water services support to passenger transportation units

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- handling and storing hazardous substances and materials
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- selecting and safely using relevant equipment and materials
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- selecting, mixing and applying appropriate cleaning materials
- storing cleaning materials and equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communication requirements, including radio operation
- current Australian Drinking Water Guidelines (ADWG)
- documentation and record requirements
- equipment, chemicals and materials used and the precautions and procedures that should be implemented in their use
- food safety standards
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for providing sanitation and water services support to passenger transportation units
- problems that may occur when providing sanitation and water services support to passenger transportation units and appropriate action that can be taken to resolve these problems
- site layout
- workplace policies, procedures and guidelines for:
  - discharging/decanting of waste and charging water containers
  - environmental protection
  - providing sanitation and water services support to passenger transportation units
  - sanitary waste storage
  - WHS/OHS.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, food safety standards, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use and maintain minor mechanical equipment in accordance with workplace procedures, safe working codes of practice and regulatory requirements across a variety of operational workplaces within the transport and logistics industry.

It includes carrying out pre-operational checks on equipment, operating mechanical equipment, conducting routine maintenance, and securing and storing equipment. Minor mechanical equipment may encompass hand and power tools.

Work is performed under some supervision, generally in a team environment.

Where required to operate mechanical plant or equipment, the operator must hold the relevant licence, permit or certificate for the class/type of equipment being operated.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out pre-operational checks	1.1 Pre-operational checks are conducted to manufacturer specifications to ensure optimum equipment functionality
	1.2 Necessary adjustments to equipment are made in accordance with manufacturer instructions to ensure efficient operation
	1.3 Faulty equipment is reported to relevant person to ensure equipment is safe and effective to use
2 Operate mechanical equipment	2.1 Equipment is operated in accordance with manufacturer and workplace operating instructions to ensure safe and effective operation
	2.2 Appropriate personal safety protection is used to minimise risk of injury
	2.3 Work operational hazards are eliminated or controlled appropriately when using equipment to ensure safe working conditions
	2.4 Assisting personnel are given clear instructions about their duties to ensure safe and effective working conditions, as required
3 Conduct routine maintenance	3.1 Equipment is cleaned and maintained in accordance with manufacturer specifications to ensure optimum functionality
	3.2 Detailed and accurate records are maintained in accordance with workplace procedures
4 Secure and store mechanical equipment	4.1 Equipment is handled and transported in a safe, secure and efficient manner to minimise risk of injury to personnel and damage to equipment
	4.2 Equipment is stored and secured according to manufacturer and workplace procedures to prevent damage to and loss of equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2029B Use and maintain minor mechanical equipment.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIB2029 Use and maintain minor mechanical equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- carrying out one routine maintenance in a safe manner
- communicating and working effectively with others
- completing a pre-operational check on one piece of equipment used in the job function
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace procedures
- operating mechanical equipment to manufacturer and workplace requirements
- reporting identified problems, faults and malfunctions promptly, in accordance with organisational procedures
- selecting and using required personal protective equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- problems that can occur when using and maintaining minor mechanical equipment and

© Commonwealth of Australia, 2025 Industry Skills Australia

related action that should be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- tools and equipment for using and maintaining minor mechanical equipment, and the procedures and precautions for their care, use and storage
- workplace documentation and records requirements
- workplace procedures for using and maintaining minor mechanical equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIB2034 Maintain poles and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain poles and associated hardware, in accordance with safeworking and regulatory requirements and workplace procedures.

It includes planning for the maintenance of poles and associated hardware, preparing the worksite, conducting the maintenance of poles and associated hardware, and completing all of the work requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining poles and associated hardware, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for maintenance of poles and associated hardware	1.1 Works order is received/accessed, analysed and confirmed, as required by site inspection
	1.2 Resources required for the job are identified and scheduled
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Replacement or additional poles, associated hardware and plant/equipment are transported to the worksite
	1.5 Liaison and communication issues are acknowledged and resolved
2 Prepare the worksite	2.1 Personnel participating in task, including plant operators and contractors, are fully briefed
	2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided
	2.3 Safeworking rules are observed within the rail corridor
	2.4 Replacement or additional poles and associated hardware are placed in planned assembly and/or pre-lift location
	2.5 Excavation/foundation is inspected and confirmed as being in accordance with the works order or specification
3 Conduct maintenance of poles and associated hardware	3.1 Actual maintenance requirement is confirmed by site inspection
	3.2 Pole and associated hardware to be maintained is stabilised as required
	3.3 Maintenance of pole and associated hardware is carried out in accordance with the work order and workplace requirements
4 Complete work	4.1 Worksite is rehabilitated, and work is completed in an agreed time and with minimum waste

© Commonwealth of Australia, 2025 Industry Skills Australia

4.2 System data and pole records are updated in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2034A Maintain poles and associated hardware.

Links

Assessment Requirements for TLIB2034 Maintain poles and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in tools and equipment in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety and safeworking requirements, relevant codes of practice and/or guidelines
- characteristics, capabilities, uses, limitations and location standards for different types of poles

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and records systems related to pole management
- hazards that may exist when maintaining poles and associated hardware and ways of controlling the risks involved
- pole maintenance techniques and processes
- pole treatment chemicals and HAZCHEM requirements in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- procedures for support plant and equipment
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including WHS/OHS instructions related to pole erection, site safety and rescue techniques
- responsibilities in relation to other authorities, clients and land-owners
- workplace procedures for maintaining poles and associated hardware
- workplace technical manuals and instructions for maintaining poles and associated hardware.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, SDSs/MSDSs, regulations, codes of practice and operation manuals.

TLIB2073 Clean road tankers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to clean road tankers in accordance with workplace procedures and work health and safety (WHS)/occupational health and safety (OHS) and environmental protection regulations.

It includes preparing for cleaning operations, steam cleaning a tanker, cleaning a tanker using water and detergent, finalising cleaning operations, and completing all required documentation.

Work is performed under some supervision, usually in a team environment. Work involves the application of routine principles and procedures to clean commercial tankers across a variety of operational contexts.

Work must be carried out in accordance WHS/OHS and environmental protection regulations and workplace procedures.

No licencing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for cleaning operations	1.1 Vehicle is positioned under gantry in accordance with workplace procedures
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Documentation is obtained from vehicle driver to determine product that has been previously carried in tanker
	1.4 Vehicle keys are taken from driver to prevent accidental drive off, before cleaning process is completed
	1.5 Appropriate cleaning process is selected for type of tanker/load in accordance with workplace procedures
	1.6 Cleaning materials are prepared in accordance with manufacturer instructions and workplace procedures
	1.7 Required personal protective equipment and safety equipment is selected and used in accordance with regulatory requirements and workplace procedures
2 Steam clean a tanker	2.1 Vehicle is earthed to prevent sparks and explosions
	2.2 Valves are opened to allow draining of wash materials and hoses are attached in accordance with manufacturer instructions and workplace procedures
	2.3 All access points, including vents and washing points, are opened and heat-sensitive auto fill probes are removed in accordance with workplace procedures
	2.4 Where tank has held oil/diesel, a wash consisting of detergent wash and hot water rinse is carried out followed by the application of steam
	2.5 Where tank has only held petrol, a steam clean only is carried out in accordance with workplace procedures
	2.6 After wash, unit is left to drain until liquid ceases to drain from outlet valves and steam stops leaving vents on top of tank

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.7	All vents and valves are closed and auto fill probes are reconnected
	2.8	Plastic seals are placed on valves to signify completed cleaning of tanker as required in accordance with workplace procedures
3 Clean a tanker using water and detergent	3.1	High pressure water and detergent are used to clean around top of tanker vents and hatches to remove dirt, and then top of tanker vents and hatches are rinsed clean with water
	3.2	Valves on outlet manifold are opened and connected with flexible pipes to waste storage facility or recycling tanks for tank cleaner
	3.3	All hatches are opened, spray balls are placed into tanks after visually checking tank condition, and solid materials present are washed out with high pressure water, prior to starting cleaning cycle
	3.4	Tank is rinsed, washed with tank wash until waste is clear and recycled into a holding tank for reuse, leaving tanker tank to drain
	3.5	Water in holding tank is topped up, ph is tested and solution is replaced as required in accordance with workplace procedures
	3.6	Tank is rinsed with water in short bursts until liquid leaving tank is clear
	3.7	Top of tank is hosed off again with water, and spray balls are removed
	3.8	Tank is visually checked through hatches with a torch, for cleanliness
	3.9	When cleanliness standards have not been achieved, tanker is rewashed or re-rinsed as required and hatches are closed
	3.10	At conclusion of cleaning operations, drainage hoses are removed, manifold is checked for cleanliness, and drainage valves are closed and sealed to indicate completed process in accordance with workplace procedures
4 Complete cleaning operations	4.1	Due care is taken to ensure disposal of used cleaning materials is in accordance with environmental protection regulations and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

4.2 Wash water is suitably treated using available water cleaning and separation processes before draining into sewerage system

4.3 Cleaning equipment is cleaned, dried, checked and stored in accordance with workplace procedures

4.4 Cleaning operations documentation is completed in accordance with workplace procedures and is returned to driver along with vehicle keys

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB2073 Clean road tankers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- carrying out required cleaning operations
- communicating effectively with others
- interpreting and following operational instructions and prioritising work
- minimising waste during cleaning operations
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, labels and manuals
- selecting and using appropriate cleaning equipment and materials
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when cleaning road tankers and ways of controlling the risks involved
- housekeeping standards
- materials identification, handling and storage
- precautions and procedures to dispose of or reprocess cleaning waste in accordance with environmental protection requirements
- procedures for cleaning a commercial tanker in accordance with workplace and

© Commonwealth of Australia, 2025 Industry Skills Australia

manufacturer requirements, and established safety rules and regulations
- relevant codes such as the current Australian Dangerous Goods (ADG) Code
- relevant duty of care requirements for routine tanker cleaning
- relevant legislation and workplace procedures
- relevant recording and documentation procedures
- relevant technical knowledge to clean road tankers
- relevant WHS/OHS and pollution control procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations

TLIB2079 Set up and secure a towing situation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan a towing job and to set up towing with reference to regulations and standard operating procedures.

It includes obtaining and confirming job instructions, assessing towing requirements, determining a plan of action, and carrying out all required action to set up and secure a towing situation.

Persons achieving competence in this unit will need to fulfil the applicable work health and safety (WHS)/occupational health and safety (OHS) legislation and other relevant regulations covering setting up and securing a towing situation.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Obtain information on towing job	1.1 Information on towing job is obtained from base or depot in accordance with operating procedures
	1.2 Further information on towing requirements is obtained at scene of job
2 Assess towing requirements	2.1 Equipment requirements and techniques to carry out towing job are assessed
	2.2 Potential hazards that may be experienced at towing site and during towing operation are identified and appropriate precautions and strategies are adopted to manage and control the risks involved
	2.3 Type of vehicle to be towed is identified and critical aspects of vehicle design are determined
3 Determine appropriate plan of action	3.1 Sequence of action and plan for towing activity and safety and security of persons, vehicles and property, are determined in accordance with regulatory requirements and standard operating procedures
	3.2 Towing vehicle and associated equipment to carry out job are organised to be available for the work
4 Set up and secure towing situation	4.1 Setting up and securing of towing situation is carried out in accordance with established action plan
	4.2 Safety equipment, witches hats and safety signs are deployed in accordance with standard operating procedures and regulatory requirements
	4.3 Onlookers and other personnel in the vicinity of towing situation are managed in accordance with applicable safety management procedures and security requirements
	4.4 Vehicle or equipment to be towed is manoeuvred into position using relevant equipment in accordance with standard operating procedures and regulatory requirements
	4.5 Vehicle or equipment to be towed is secured using appropriate winches, ropes and cables in accordance with relevant load restraint regulations and standard operating

© Commonwealth of Australia, 2025 Industry Skills Australia

	procedures
5 Record and report inspection and testing results	5.1 Assessment of towing situation and action taken are accurately reported in accordance with regulatory requirements, workplace policy and industry guidelines
	5.2 Clear, unambiguous and concise records are kept in accordance with workplace procedures
	5.3 Clear reference is made to issues, hazards or incidents that may have arisen when attending towing situation and related action taken

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB2079 Set up and secure a towing situation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on workplace contexts, risk situations and towing situations
- planning and prioritising own work, predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures and information
- recognising problems and taking appropriate action
- selecting and use personal protective equipment in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
- selecting and using relevant equipment and tools
- working safely and collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and record requirements when checking and assessing equipment operational capability
- hazards that may exist when setting up and securing a towing situation and precautions and action that should be taken to minimise or eliminate identified hazards
- housekeeping standards and procedures
- operational of work systems, equipment, management and workplace standard operating systems for checking and assessing equipment operational capability
- operational safety requirements for equipment concerned
- problems that may occur when setting up and securing a towing situation and appropriate action that can be taken to resolve these problems
- regulations and standards relevant to setting up and securing a towing situation
- relevant WHS/OHS and environmental protection procedures and guidelines
- tools and equipment used when setting up and securing a towing situation and the precautions and procedures that should be followed in their use
- towing equipment characteristics, applications, capabilities and limitations
- workplace procedures and policies for checking and assessing equipment operational capability.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2081 Repair timber structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to repair timber structures and their components, in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements; preparing and maintaining components, and performing repairs; cleaning up the site after maintenance activities; and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing structures and their components, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine job requirements	1.1 Structures are inspected as required to locate defects
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Job requirements are determined in accordance with workplace procedures, and scope of work and resources required are identified
2 Prepare component for repair	2.1 Components requiring replacement are checked against standards and are measured for preparation of replacement component
	2.2 Materials required for job are identified and organised as required to enable appropriate replacement of components
	2.3 Replacement components are cut and shaped to the required standard in accordance with workplace procedures
	2.4 Surfaces of components are treated using appropriate methods and materials as required
3 Perform repairs	3.1 Component is replaced to required standard in accordance with workplace procedures
	3.2 Connections between timber members are tightened, repaired or replaced using approved material and techniques
	3.3 External timber deficiencies in components are treated with suitable materials as required to minimise degradation of components
4 Clean up site	4.1 Workplace procedures and environmental regulations and standards relevant to site clean-up are confirmed and clarified as required
	4.2 Waste is minimised and reused or disposed of in accordance with relevant workplace procedures, and environmental regulations and standards
	4.3 Cleaning products and materials are disposed of in accordance with relevant workplace procedures, and environmental regulations and standards

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.4 Established site restoration practices are followed and problems with these practices are identified and reported
5 Complete documentation	5.1 Required documentation procedures and processes are confirmed
	5.2 Documentation is filled in legibly and proofread
	5.3 Documentation is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2081A Repair timber structures.

Assessment Requirements for TLIB2081 Repair timber structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three separate occasions** and include:

- adapting to differences in tools, equipment and work requirements in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others
- following operational instructions and work sequences when undertaking timber structures repair
- identifying defects in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant plans and specifications
- repairing a range of defect types
- repairing existing timber structures using a range of repair techniques
- replacing timber components in accordance with workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant tools and equipment
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- carpentry principles
- functions of different types of timber structures
- hazards that may exist when repairing structures and/or components, and ways of controlling the risks involved
- problems that may occur during the repair of structures and/or components, and action that can be taken to report or resolve the problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- timber structures repair methods and techniques
- types of timber and their characteristics and features
- workplace procedures for the repair of timber structures and/or components.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Practical assessment must occur in an appropriate range of situations, techniques and defect types in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulated practical and knowledge assessments
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB2082 Repair steel structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to repair steel structures and their components in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, preparing and maintaining components, performing repairs, cleaning up the site after maintenance activities and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing structures and their components, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine job requirements	1.1 Structures are inspected as required to locate defects
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Job requirements are determined in accordance with workplace procedures, and scope of work and resources required are identified
2 Prepare component for repair	2.1 Components requiring repair are prepared in accordance with requirements
	2.2 Materials required for job are identified and organised as required to enable appropriate repair of components
	2.3 Surfaces of components are treated using appropriate methods and materials as required
	2.4 Components are assembled using appropriate lifting methods to ensure safety
	2.5 Connection locations are checked for clearances and tolerances to allow smooth fitting of components
	2.6 Fastening of components is performed to specification as required
3 Perform repairs	3.1 Steel members are accurately marked, drilled and cut in accordance with workplace procedures
	3.2 Component is replaced or repaired to required standard in accordance with workplace procedures
	3.3 Replaced or repaired components are connected to the structure by approved methods in accordance with workplace procedures
	3.4 Connections between steel members are tightened, repaired or replaced using approved material and techniques
	3.5 External steel deficiencies in components are treated with suitable materials as required to minimise degradation of components

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Clean up site	4.1 Workplace procedures and environmental regulations and standards relevant to site clean-up are confirmed and clarified as required
	4.2 Waste is minimised and reused or disposed of in accordance with relevant workplace procedures and environmental regulations and standards
	4.3 Cleaning products and materials are disposed of in accordance with relevant workplace procedures and environmental regulations and standards
	4.4 Established site restoration practices are followed and problems with these practices are identified and reported
5 Complete documentation	5.1 Required documentation procedures and processes are confirmed
	5.2 Documentation is filled in legibly and proofread
	5.3 Documentation is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2082A Repair steel structures.

Assessment Requirements for TLIB2082 Repair steel structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- adapting to differences in tools and equipment and work requirements in accordance with operating procedures
- applying relevant workplace procedures
- following operational instructions and work sequences when undertaking steel structures repair
- identifying defects in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant plans and specifications
- repairing a range of defect types in accordance with workplace procedures
- repairing existing steel structures using a range of repair techniques
- replacing steel components in accordance with workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant tools and equipment in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- basic steel component assembly techniques
- functions of different types of steel structures
- hazards that may exist when repairing structures and/or components and ways of controlling the risks involved
- information on the use of epoxy and grouts for mortar pads in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- problems that may occur during the repair of steel structures and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- steel structures repair methods and techniques
- workplace procedures for repairing steel structures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Practical assessment must occur in an appropriate range of situations, techniques and defect types in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulated practical and knowledge assessments
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

TLIB2085 Apply track fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply fundamentals of track maintenance and construction, and to carry out basic track measurement, in accordance with approved rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes identifying track terminology, track components and track tools and equipment; and undertaking basic track measurement.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the fundamentals of track maintenance and construction, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Assessment Requirements for TLIB2085 Apply track fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- completing documentation related to basic track measurement
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information, technical data, standards and drawings
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting equipment used for basic track measurement
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- authorisation/approval processes and procedures
- fundamentals of track layout and geometry
- fundamentals of track structures
- hazards that may exist when measuring track and ways of controlling the risks involved
- problems that may occur when measuring track and action that can be taken to report or

© Commonwealth of Australia, 2025 Industry Skills Australia

resolve these problems
- relevant safeworking systems and procedures
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- tools and equipment used in track construction and repair
- track components including rails, rail connectors, sleepers, ballast, points, and crossings (and substitute devices, as required)
- workplace procedures for measuring track.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2086 Apply awareness of structures fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply awareness of structures fundamentals in accordance with approved rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes identifying types of structures, structures terminology and conventions, and defect categories; and locating and identifying defects in structures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when applying awareness of structures fundamentals, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

TLIB2090 Use communication systems in a taxi

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use taxi cab communications systems by applying established communications principles and practices for taxi drivers.

It includes identifying features of taxi communications system and operating it effectively, using appropriate communications protocols and communicating with a base. It also includes identifying faulty communications equipment operation and taking appropriate action, and using technical and colloquial language and vocabulary in day-to-day communications.

Communication systems are used in accordance with codes/regulations and workplace requirements relevant for using taxi communications systems in the taxi industry.

Safety checks and equipment tests are performed with limited or no supervision, and with full accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining taxi driver accreditation. As requirements may vary between states and territories, people seeking taxi accreditation should contact their state/territory taxi regulator.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify features of taxi communications system	1.1 Features and functions of taxi radio system are identified
	1.2 Features and functions of taxi computer dispatch system are identified
	1.3 Features and functions of taxi duress alarm system are identified
2 Operate taxi communications system	2.1 Checks are carried out to confirm communications system is operational in accordance with manufacturer instructions and workplace procedures
	2.2 Communications system is used in a manner consistent with road laws and safe driving practices
	2.3 Communications security is maintained in accordance with workplace procedures
3 Use appropriate communications protocols	3.1 Received messages are interpreted and recorded as required in accordance with workplace procedures
	3.2 Messages are transmitted clearly and precisely with due observation of ethics and protocols required of users
	3.3 Incoming messages are received and are answered promptly and courteously within operating procedures and regulatory requirements
	3.4 Clear, unambiguous vocal communication is used in accordance with operating procedures, language requirements and codes
	3.5 Appropriate protocols and procedures are followed when using communications systems in emergencies
4 Maintain communications equipment operational status	4.1 Equipment is checked and monitored in accordance with workplace procedures
	4.2 Minor faults in communications systems are identified, diagnosed and repaired or reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIB2090 Use communication systems in a taxi

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out minor routine monitoring procedures for communications equipment
- communicating effectively with others when using communications systems in a taxi, including during transmission and at receipt of information, in a manner consistent with road laws and safe driving practices
- communications systems including:
  - computer dispatch
  - mobile phone – on person or hands-free
  - vehicle mounted radio
  - security equipment, including duress alarm and camera
- completing documentation related to using communications systems in a taxi
- identifying, reporting and/or rectifying problems that may arise when using communication systems in a taxi in accordance with workplace procedures
- monitoring communications equipment operational status
- operating and adapting to differences in equipment in accordance with operating procedures
- operating taxi and other electronic communications systems effectively and to required protocol
- reading, interpreting and following relevant operating instructions, procedures, information and signs
- responding appropriately to cultural differences in the workplace
- undertaking pre-operational checks for communications systems and equipment
- using communications systems in emergencies
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic barriers to effective communication and how to overcome them
- basic communication techniques including the phonetic alphabet
- basic principles of effective communication, which includes:
  - active listening
  - two-way conversation
  - questioning to obtain information and/or to clarify information and understanding
  - routine oral reporting
- features of various communications systems such as:
  - taxi radio systems
  - taxi computer dispatch systems
  - taxi duress alarm systems
- procedures and protocols for using communications systems in an emergency
- relevant codes of practice and legislative requirements including local regulations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures and policies for using communication systems in a taxi.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment of this unit must be undertaken on actual taxi radio equipment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice

© Commonwealth of Australia, 2025 Industry Skills Australia

and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry including:
  - taxi communications equipment
  - taxi duress alarm system.

TLIB2091 Measure and record track geometry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to measure and record track geometry in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes measuring and recording track geometry, and reporting results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when measuring and recording track geometry, across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Measure geometry	1.1 Equipment and tools appropriate to task are selected and checked for correct operation in accordance with manufacturer instructions and workplace procedures
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Equipment is operated in accordance with manufacturer and work instructions to provide appropriate data for analysis
2 Record results	2.1 Data is recorded in a complete and accurate manner
	2.2 Documentation is completed in accordance with workplace procedures, as required
3 Process data	3.1 Data is compared to maintenance/construction tolerances in accordance with workplace procedures
	3.2 Results are reported in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2091A Measure and record track geometry.

Assessment Requirements for TLIB2091 Measure and record track geometry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information, plans, drawings and specifications
- reading recorded track geometry data
- recording and reporting results accurately in accordance with workplace procedures
- reporting and/or rectifying identified problems, in accordance with workplace procedures
- using appropriate measurement tools to measure a range of geometry elements
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when measuring and recording track geometry, and ways of controlling the risks involved
- problems that may occur when measuring and recording track geometry, and action that can be taken to report or resolve these problems

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant records procedures
- relevant rail industry standards
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safeworking procedures
- track geometry parameters including the horizontal and vertical alignment, cross-level and cant of the track
- workplace procedures for measuring and recording track parameters.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2092 Operate minor mechanical equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and maintain minor mechanical equipment in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes carrying out pre-operation checks on equipment, operating mechanical equipment, conducting routine maintenance, and securing and storing equipment.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine procedures when operating and maintaining minor mechanical equipment across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out pre-operation checks	1.1 Pre-operational checks are conducted in accordance with manufacturer specifications to ensure optimum functionality of equipment
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Necessary adjustments to equipment are made to ensure efficient operation, in accordance manufacturer instructions
	1.4 Faulty equipment is tagged-out and reported to relevant person to ensure equipment is safe and effective to use
2 Operate mechanical equipment	2.1 Equipment is operated in accordance with manufacturer and workplace operating instructions to ensure safe and effective operation
	2.2 Appropriate personal safety protection is used to minimise the risk of injury to operator
	2.3 Work operational hazards are identified and eliminated or controlled appropriately when using equipment, to ensure safeworking conditions
	2.4 Assisting personnel are given clear instructions about their duties as required to ensure safe and effective working conditions
3 Conduct routine maintenance	3.1 Equipment is cleaned and maintained in accordance with manufacturer specifications to ensure optimum functionality
	3.2 Records are maintained according to workplace procedures
4 Secure and store equipment	4.1 Equipment is handled and transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment
	4.2 Equipment is secured in storage area in accordance with operational procedures
	4.3 Equipment is stored in accordance with manufacturer and workplace procedures to prevent loss and damage to equipment

Assessment Requirements for TLIB2092 Operate minor mechanical equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and efficiently and effectively using relevant tools and equipment
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- reading and interpreting relevant manufacturer instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency procedures
- problems that can occur when operating and maintaining minor mechanical equipment, and related action that should be taken
- relevant manufacturer operating procedure or manual
- relevant safety, WHS/OHS and environmental procedures and regulations
- tools and equipment used when operating and maintaining minor mechanical equipment, and the procedures and precautions for their care, use and storage
- workplace documentation and records requirements
- workplace procedures and policies for operating and maintaining minor mechanical equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2096 Repair concrete/masonry structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to repair concrete/masonry structures and their components in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, preparing components, performing repairs and cleaning up the site after maintenance activities.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing concrete/masonry structures and their components, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine job requirements	1.1 Structures are inspected as required to locate defects
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Scope of work and resources required are identified
	1.4 Job is planned in accordance with availability of required resources
2 Prepare components for repair	2.1 Components requiring repair are identified and isolated or marked in accordance with workplace procedures
	2.2 Materials required for job are identified and organised as required to enable appropriate repair of components
3 Perform repairs	3.1 Defective area is removed in accordance with workplace procedures
	3.2 Repairs are carried out to required standard in accordance with workplace procedures
4 Clean up site	4.1 Workplace procedures and environmental regulations and standards relevant to site clean-up are confirmed and clarified as required
	4.2 Waste is minimised and reused or disposed of in accordance with relevant workplace procedures and environmental regulations and standards
	4.3 Cleaning products and materials are disposed of in accordance with relevant workplace procedures and environmental regulations and standards
	4.4 Established site restoration practices are followed and problems with these practices are identified and reported
5 Complete documentation	5.1 Required documentation procedures and processes are confirmed
	5.2 Documentation is filled in legibly and proofread
	5.3 Documentation is processed in accordance with workplace

Assessment Requirements for TLIB2096 Repair concrete/masonry structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- following operational instructions and work sequences
- identifying defects in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant plans and specifications
- repairing a range of defect types
- repairing existing concrete/masonry structures using a range of repair techniques
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant tools and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic concrete construction techniques
- concrete/masonry structure repair methods and techniques
- functions of different types of concrete/masonry structures
- hazards that may exist when repairing concrete/masonry structures and ways of controlling the risks involved

© Commonwealth of Australia, 2025 Industry Skills Australia

- problems that may occur during the repair of structures and action that can be taken to report or resolve these problems
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rail industry standards
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedure information on the use of epoxy and grouts for mortar pads and cracks
- workplace procedures for repairing concrete/masonry structures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations, repair techniques and defect types in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including SDSs/MSDSs, workplace procedures, rail industry standards, regulations, codes of practice and operation manuals.

TLIB2097 Install and maintain guard rails

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to install and maintain guard rails in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, installing guard rails and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Guard rails include guard rails installed on:

- level crossings and sharp curves to prevent derailment
- underbridges and near vulnerable structures to limit lateral movement of derailed wagons.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and maintaining guard rails, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine job requirements	1.1 Worksite is identified
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Obstructions are cleared from gangways/flangeways to ensure safe passage of trains
	1.4 Installation, replacement or repair method is selected in accordance with work requirements, rail industry standards and workplace procedures
	1.5 Plant, equipment and materials are prepared for work
2 Install guard rail	2.1 Existing rail is removed, as required, to enable fitting of new rail
	2.2 New or replacement guard rail is installed to required standards using suitable equipment and fastening system to restore functionality of guard rail
	2.3 Final job is checked for compliance to required standards to enable services to be restored safely
3 Complete documentation	3.1 Required documentation procedures and processes are confirmed
	3.2 Documentation is filled in legibly and proofread
	3.3 Documentation is processed in accordance with workplace procedures

Foundation Skills

Assessment Requirements for TLIB2097 Install and maintain guard rails

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- ensuring completed work meets track geometry requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- installing and maintaining guard rails on underbridges, level crossings in open track in accordance with workplace requirements
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with rail industry standards, regulatory requirements and workplace procedures
- selecting appropriate material for guard rails
- working systematically with required attention to detail without injury to self or others, or damage to materials or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- guard rail installation and maintenance techniques and processes
- hazards that may exist when carrying out the installation and maintenance of guard rails, and ways of controlling the risks involved
- principles of guard rail function

© Commonwealth of Australia, 2025 Industry Skills Australia

- problems that may occur when installing and maintaining guard rails, and action that can be taken to report or resolve these problems
- rail industry standards applicable to guard rails
- relevant rail industry standard
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant technical manuals and instructions
- workplace procedures for installing and maintaining guard rails.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2104 Identify, diagnose and rectify faults on electric passenger trains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, diagnose and rectify faults on electric passenger trains in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, and checking and reporting minor repairs and/or maintenance in accordance with workplace procedures.

Work is generally performed without supervision and within a team environment. It involves the application of routine fault identification, diagnosis and rectification procedures when maintaining the safety and operation of equipment on electric passenger trains operating within Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Diagnose faults	1.1 Electric passenger train and equipment are monitored for potential faults
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Faulty or damaged components or equipment are identified and assessed
	1.4 Equipment and/or tools required to rectify faults are identified and obtained
	1.5 Work area and equipment are prepared and made safe to repair faults or to replace components
2 Carry out fault rectification, repair or replacement	2.1 Rectification, repair or component exchange are carried out in accordance with workplace procedures
	2.2 Required equipment, tools and materials are operated, applied and handled to conform to work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage
	2.3 Activities are carried out in accordance with WHS/OHS and workplace procedures
3 Check and report rectification, repair or replacement	3.1 Rectification, repair, or component exchange activities are checked for compliance with safety requirements and workplace procedures
	3.2 Equipment is checked to confirm it has been restored to operational standards
	3.3 Rectification, repair, component exchange activities are reported and accurately documented in appropriate records or logbooks

Assessment Requirements for TLIB2104 Identify, diagnose and rectify faults on electric passenger trains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing relevant documentation
- explaining and following procedures for reporting faults and inoperable equipment
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults that may occur on electric passenger trains
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- rectifying a range of faults correctly on an electric passenger train
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency procedures
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines, and safeworking system requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection requirements
- tools and equipment used when identifying, diagnosing and rectifying faults, and the procedures and precautions for their care, use and storage
- typical repair problems that can occur and related action that should be taken
- workplace documentation and records requirements
- workplace procedures and policies for diagnosing and repairing faults.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIB2111 Assist with testing train braking system on electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assist with testing the train braking system on electric passenger trains in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for train brake inspection and testing, inspecting and testing train brake operation, dealing with identified faults, and reporting and/or recording brake test results in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures when testing a train braking system, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for train brake inspection and testing	1.1 Work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, policies and procedures are identified and followed
	1.2 Isolation or securing of train is confirmed in accordance with workplace procedures to make the work area safe for the inspection and test
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Readiness of brake system for inspection and testing is confirmed
2 Test train brake operation	2.1 Brake tests are conducted to ensure compliance with required rail industry standards
	2.2 Modified brake tests are conducted in accordance with workplace procedures to meet required rail industry standards, as required
	2.3 Continuity tests are conducted in accordance with workplace procedures to ensure train braking system meets functional specifications
	2.4 Corrective action is taken when faults are identified to ensure operational safety
	2.5 Faults or defects found during brake tests are reported and/or recorded in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2111A Assist with testing train braking system on electric passenger train.

Assessment Requirements for TLIB2111 Assist with testing train braking system on electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices, rail industry standards, rules, codes of practice and guidelines
- assessing brake system defects
- completing relevant documentation
- identifying correct procedures to be followed in a failed brake test
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- performing all types of applicable brake tests in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- brake systems, their components and their operation
- diagnostic techniques for electric passenger train braking systems
- different types of electric passenger train braking systems failures/defects that could occur
- documentation requirements relating to brake testing
- emergency procedures
- relevant sections of applicable state/territory legislated rail safety requirements, rail industry standards, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice
- types of brake tests and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.
-

TLIB2119 Carry out maintenance of trailers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out basic servicing and maintenance of a commercial trailer across a variety of operational contexts.

It includes action to implement trailer manufacturer specifications for routine checks and maintenance, to ensure all specified safety requirements are met, and to ensure trailer is operational to workplace requirements and relevant state/territory roads and traffic authority regulations.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify faults and perform routine maintenance	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Trailer faults are identified and diagnosed in accordance with workplace procedures
	1.3 Trailer components are lubricated in accordance with manufacturer instructions and workplace procedures
2 Carry out repairs on trailers	2.1 Trailer air/hydraulic brake system is inspected and adjusted, and required minor maintenance or repairs are carried out
	2.2 Trailer electrical system is checked for correct operation and required minor maintenance or repairs are carried out
	2.3 Trailer suspension and axles are inspected and identified faults are repaired and/or reported in accordance with workplace procedures
	2.4 Trailer wheels and tyres are inspected, removed, repaired and refitted as required, in accordance with workplace procedures
	2.5 Required documentation is completed in accordance with workplace procedures
	2.6 Records of routine maintenance and repairs are kept in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB2119 Carry out maintenance of trailers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- carrying out lubrication processes in the course of work activities
- communicating and working effectively with others
- completing relevant documentation
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing trailer and equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- basic fault-finding procedures required during routine servicing and maintenance of trailers
- basic principles of operation of systems on commercial trailers, including electrical systems, tyres, brakes and coupling systems
- housekeeping standards required for routine servicing and maintenance
- problems that may occur during routine servicing and maintenance of trailers and appropriate actions and solutions
- procedures for checking, and routine servicing and maintenance of commercial trailers in accordance with workplace procedures, manufacturer requirements and established safety rules and regulations
- procedures for using and maintaining materials, tools and parts required for routine servicing and maintenance
- recognition and diagnosis of faults and trailer irregularities
- relevant duty of care requirements for routine servicing and maintenance of trailers
- relevant national heavy vehicle legislation and regulatory requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and pollution control procedures
- reporting and documentation requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIB2121 Maintain rail joints

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain rail joints in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes identifying and determining parameters or components that require repair, cutting and boring rail, maintaining rail joints and completing required documentation.

People achieving competence in this unit will need to fulfil applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally in a team environment. It involves the application of routine operational principles and procedures when maintaining rail joints, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine parameters or components that require adjustment	1.1 Rail joint condition, component, fastening and anchoring defects affecting rail joints are identified in accordance with organisational procedures
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Appropriate repair method is selected to ensure rail joint meets specifications
	1.4 Scope of work is determined and resources are arranged
2 Check and maintain rail joint	2.1 Surfaces and component parts are checked in accordance with specifications and organisational procedures
	2.2 Rail joint is maintained to specifications in accordance with organisational procedures
3 Complete documentation	3.1 Required documentation procedures and processes are confirmed
	3.2 Documentation is filled in legibly and proofread
	3.3 Documentation is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB2121B Maintain rail joints.

Assessment Requirements for TLIB2121 Maintain rail joints

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- examining rail joints to determine defects and selecting appropriate repair methods
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information, technical data, rail industry standards and drawings
- reporting and rectifying identified problems, faults and malfunctions in accordance with workplace procedures
- selecting and using hand tools, power tools and equipment
- using relevant plant and mechanised equipment in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation requirements
- fundamentals of track structures relating to rail joints
- hazards that may exist when maintaining rail joints and ways of controlling the risks involved
- problems that may occur when maintaining rail joints and action that can be taken to report or resolve these problems
- rail joint components

© Commonwealth of Australia, 2025 Industry Skills Australia

- rail joint defects
- relevant rail industry standards
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track and rail industry standards relating to rail joints
- workplace procedures for maintaining rail joints.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2122 Apply awareness of fundamentals of rail operations in yards or sidings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply an awareness of the fundamentals of rail operations in yards or sidings.

It includes fixed structures, rail vehicles and rolling stock, signals, safety devices, primary activities and safety systems.

This unit is intended as an introduction to rail yards or sidings for people entering the rail industry who will be working on or around rail yards or sidings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Identify yard or siding structures, layout and terminology	1.1 Terminology for track, trackside equipment and fixed structures is identified
	1.2 Features of track, including geography and geometry are identified
	1.3 Infrastructure categories and their purpose are identified
	1.4 Other principal structure types and their purpose are identified
	1.5 Relevant stakeholders for reporting structural faults or anomalies to, are identified
2 Identify above and below ground services	2.1 Principal overhead and/or electrical components and their purpose are identified and explained
	2.2 Power supply voltages are identified
	2.3 Methods of isolation are identified and their purpose is explained
3 Identify rail track vehicles and rolling stock	3.1 Types of trains and rolling stock are identified
	3.2 Types of rail track vehicles are identified
	3.3 Relevant stakeholders for reporting rolling stock faults or anomalies to, are identified
4 Identify signals and safety devices	4.1 Types, location and purpose of signals are identified
	4.2 Types, location and purpose of safety devices are identified
	4.3 Relevant stakeholders for reporting signal or safety device faults or anomalies to, are identified
5 Identify primary rail activities and safety systems	5.1 Primary rail activities and other operators are identified as required
	5.2 Types and purpose of safety systems are identified
	5.3 Relevant stakeholders for reporting safety events to, are identified

Assessment Requirements for TLIB2122 Apply awareness of fundamentals of rail operations in yards or sidings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying activities carried out in a rail yard or siding
- identifying job hazards and possible safety events and taking required action to minimise, control or eliminate identified hazards
- identifying layout, main features and equipment in a rail yard or siding
- interpreting and following operational instructions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- above and below ground services
- features of track, layout and geometry
- overhead and/or electrical infrastructure
- primary rail activities and safety management systems
- rail, rail track vehicles and rolling stock
- relevant communications systems and procedures
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- track components and layout
- track, trackside equipment and yard structure terminology.

TLIB2125 Apply awareness of tram or light rail track fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply an awareness of tram or light rail fundamentals.

It includes identifying tram or light rail track terminology, track and system components, and the tools and equipment used on or around tram or light rail track.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIB2130 Diagnose and rectify minor faults on on-track vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to diagnose and rectify minor faults on on-track vehicles, in accordance with organisational requirements.

It includes identifying repair and maintenance requirements, and conducting repairs and minor maintenance.

It involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of on-track vehicles. This unit only covers minor repairs as defined by organisational policies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Identify repair and maintenance requirements	1.1 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Identified faulty or damaged components outside own scope, as determined by organisational policies, are reported in accordance with organisational procedures
	1.4 Where repair/maintenance/component exchange is appropriate, equipment and tools required are identified and obtained
	1.5 Work areas and equipment are prepared and made safe for repair/maintenance/component exchange activities
2 Conduct minor repairs and maintenance	2.1 Routine repair/maintenance/component exchange is carried out in accordance with manufacturer specifications and organisational procedures
	2.2 Equipment, tools and materials are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage
3 Check and report minor repairs and maintenance	3.1 Minor repair/maintenance/component exchange activities are checked for compliance with manufacturer specifications and workplace procedures
	3.2 Equipment is checked to confirm it has been restored to operational standards
	3.3 Worksite is checked for cleanliness and operational safety, and appropriate action is taken to restore site and equipment
	3.4 Repair/maintenance/component exchange activities are documented and processed in accordance with organisational requirements

Assessment Requirements for TLIB2130 Diagnose and rectify minor faults on on-track vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in on-track vehicles and associated equipment and procedures
- applying relevant workplace procedures
- carrying out minor repairs, maintenance and component exchange on different on-track vehicles
- changing out faulty components in accordance with organisational procedures and manufacturer specifications
- following correct procedure for identifying minor faults
- following correct workplace requirements for reporting identified defects
- identifying equipment checks required for a range of on-track vehicles in the workplace
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults or defects that may occur on on-track vehicles
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- reporting minor faults and completing organisational documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when diagnosing and rectifying minor faults with on-track vehicle/s and ways of controlling the risks involved
- organisational procedures for diagnosing and rectifying minor faults with on-track vehicle/s

© Commonwealth of Australia, 2025 Industry Skills Australia

- problems that may occur when diagnosing and rectifying minor faults with on-track vehicle/s and action that can be taken to report or resolve these problems
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- workplace documentation and records requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

TLIB2131 Prepare train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare a train for operation in accordance with organisational policies and procedures.

It includes conducting pre-departure checks and confirming the required train documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Identify pre-departure checks	1.1 Required checks, and relevant procedures and standards are identified in accordance with organisational policies and procedures
	1.2 Constraints and special instructions that may apply for the journey are obtained
	1.3 Compliance with the Australian Dangerous Goods (ADG) Code and relevant regulatory requirements are identified, as required
2 Implement pre-departure checks	2.1 Motive power unit control systems are set up and checked in accordance with organisational policies and procedures
	2.2 Hazards are identified, risks are assessed and control measures are implemented
	2.3 Train is checked to ensure rolling stock is coupled and sequenced correctly
	2.4 Train braking systems are tested to ensure they are operating effectively, in accordance with organisational policies and procedures
	2.5 Action is taken to rectify identified faults to ensure minimum delay to planned running schedule
3 Confirm train can proceed	3.1 Relevant personnel are advised of the result of completed checks
	3.2 Authority to proceed relevant to the operational situation is obtained and followed in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLIB2131A Prepare train.

Links

Assessment Requirements for TLIB2131 Prepare train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting pre-departure checks and confirming the required train documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications procedures and protocols
- emergency procedures
- maintenance and servicing procedures
- relevant sections of the Australian Dangerous Goods (ADG) Code and any other dangerous goods regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- train preparation documentation procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB2133 Test medium/heavy track vehicle braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to test the braking system on medium/heavy track vehicle/s in accordance with manufacturer specifications and/or organisational procedures.

It includes planning and preparing for track vehicle brake inspecting and testing, inspecting and testing track vehicle brake operations, and completing documentation.

This unit applies to people involved in testing a track vehicle braking system as part of workplace activities within the rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan and prepare for track vehicle brake inspection and testing	1.1 Logbooks and other relevant documentation are checked to establish existing identified defects
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Track vehicle is isolated or secured, in accordance with workplace procedures, to make the work area safe prior to inspection
2 Inspect and test track vehicle brake operation	2.1 Tools and equipment required to inspect and test brake equipment are identified and obtained
	2.2 Visual and acoustic inspections are conducted to identify faults or defects
	2.3 Brakes are applied and released to ensure track vehicle braking system meets functional specifications
	2.4 Identified defects and faults are rectified and/or reported in accordance with manufacturer specifications and/or organisational procedures
3 Complete documentation	3.1 Required documentation procedures and processes are confirmed
	3.2 Logbook and other service records on the track vehicle are completed in accordance with organisational procedures
	3.3 Documentation and records are proofread and processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB2133 Test medium/heavy track vehicle braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in track vehicles and associated equipment and procedures
- completing test result records in accordance with workplace procedures
- conducting inspections and testing of different types of brakes on medium/heavy track vehicle/s
- conducting brake system test on medium/heavy track vehicles in accordance with operational procedures and manufactures specification
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing correct procedure for testing braking system
- implementing workplace procedures to deal with identified defects and faults
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when starting up and shutting down medium/heavy track vehicles and ways of controlling the risks involved
- organisational procedures for conducting brake tests on medium/heavy track vehicles
- problems that may occur when testing brakes on medium/heavy track vehicles and action that can be taken to report or resolve these problems
- relevant rail industry standards
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS)

© Commonwealth of Australia, 2025 Industry Skills Australia

and environmental procedures and regulations
- types of brake system tests and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3002 Test equipment and isolate faults

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to test equipment and to isolate faults in accordance with relevant codes of practice, regulations and workplace requirements within the transport and logistics industry.

It includes scoping and planning operational checks, checking equipment through its full operating range, and isolating faults and/or formulating recommendations for adjustment, repair or replacement.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Scope operational checks	1.1 Physical condition of equipment is observed
	1.2 Test procedures and parameters are identified in accordance with workplace procedures and manufacturer specifications
	1.3 Preliminary observations are recorded
	1.4 Test procedures are confirmed with appropriate staff as required and necessary permission is obtained
2 Plan operational checks	2.1 Specifications and notes from preliminary observations are checked and clarified as required
	2.2 Sequence of tests are planned noting where results and observations should be recorded
	2.3 Hazards are identified, risks are assessed and control measures are implemented
	2.4 Safe area for testing is identified
	2.5 Arrangements are made to obtain additional resources and staff, as required
3 Check equipment through its full operating range	3.1 Tests are undertaken in accordance with relevant safety and operational requirements
	3.2 Results are recorded and findings are confirmed
4 Isolate fault and/or formulate recommendations	4.1 Proposals for equipment repair are recorded based on faults found, cost/time implications and workplace approval systems
	4.2 Report is explained to relevant workplace personnel including options and recommendations
	4.3 Parts are procured and/or repairs are undertaken in accordance with enterprise procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB3002 Test equipment and isolate faults

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant meters, gauges, equipment and tools when testing equipment and isolating faults
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- characteristics, capabilities and limitations of equipment concerned
- documentation and record requirements
- fault-finding techniques including identification of cost/time effective rectification procedures
- faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify identified equipment or component faults
- guidelines relating to the safe use of machinery and equipment including tagging unserviceable or damaged items
- housekeeping standards and procedures
- operational safety requirements for equipment concerned
- operational work systems, equipment, management and site operating systems for testing equipment and isolating faults
- relevant sections of regulatory requirements applicable to testing equipment and isolating faults
- site layout and obstacles
- tools, meters, gauges and equipment used when testing equipment and isolating faults and the precautions and procedures that should be followed in their use
- workplace procedures and policies for testing equipment and isolating faults, including tagging and reporting faulty equipment and components.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3005 Carry out maintenance of vehicles designed to carry special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out basic servicing and routine maintenance of a commercial vehicle designed to carry a special load, across a variety of operational contexts.

It includes action to implement manufacturer specifications for routine checks and maintenance of vehicle and its associated ancillary equipment, to ensure all specified safety requirements are met, and to ensure vehicle and its ancillary equipment are operational to workplace requirements and relevant state/territory roads and traffic authority regulations.

Work must be carried out in accordance with relevant roads and traffic authority regulations, and workplace procedures and policy for vehicle maintenance.

Work is performed with limited supervision and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Diagnose vehicle faults and undertake repairs for safe vehicle operation	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Faults in vehicle and/or ancillary equipment electrical system are identified, diagnosed and repaired, in accordance with manufacturer specifications and workplace procedures
	1.3 Faults in fuel system are identified, diagnosed and repaired in accordance with manufacturer specifications and workplace procedures
2 Maintain the vehicle systems	2.1 Fluid levels in vehicle and/or ancillary equipment are checked and adjusted in accordance with manufacturer specifications and workplace procedures
	2.2 Air/hydraulic fluid levels in vehicle and/or ancillary equipment are checked and adjusted in accordance with manufacturer specifications and workplace procedures
	2.3 Safety equipment is inspected in accordance with regulatory requirements and workplace procedures
3 Carry out minor repairs to a vehicle	3.1 Vehicle components are removed, repaired or replaced and refitted to vehicle using correct tools in accordance with manufacturer instructions and workplace procedures
	3.2 Tyres are repaired or replaced on vehicle in accordance with workplace procedures and manufacturer instructions
	3.3 Need for more complex maintenance procedures is identified and problem is correctly referred in accordance with workplace procedures
	3.4 Work health and safety (WHS)/occupational health and safety (OHS) procedures are followed throughout maintenance activities
	3.5 Required documentation is completed in accordance with workplace procedures
	3.6 Records of routine maintenance and repairs are kept in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic fault finding procedures required for routine servicing and maintenance of vehicles designed to carry special loads
- basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust system, tyres, brakes, and relevant ancillary systems
- housekeeping standards
- problems that may occur during routine servicing and maintenance of a vehicle and its associated ancillary equipment, and appropriate action and solutions
- procedures for checking, and routine servicing and maintenance of a commercial vehicle designed to carry special loads in accordance with workplace procedures and manufacturer requirements, and established safety rules and regulations
- procedures for using and maintaining materials, tools and parts required for routine servicing and maintenance
- procedures required to minimise waste during routine servicing and maintenance
- recognition and diagnosis of faults and vehicle/ancillary system irregularities
- relevant duty of care requirements for routine servicing and maintenance of vehicles designed to carry special loads
- relevant national heavy vehicle legislation and regulatory requirements
- relevant WHS/OHS and pollution control procedures
- reporting and documentation requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3006 Carry out inspection of vehicles designed to carry special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out an inspection of a commercial vehicle designed to carry a special load, in accordance with relevant roads and traffic authority regulations, and workplace policy and procedures concerning vehicle inspection.

It includes action to implement manufacturer specifications for routine checks of vehicle and its associated equipment, to clean the vehicle and its associated equipment, to ensure all specified safety requirements are met, and to ensure vehicle and equipment are operational to workplace requirements and relevant state/territory roads and traffic authority regulations.

Work is performed with limited supervision, with duty of care responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to inspect a commercial vehicle designed to carry special loads, across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check vehicle	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Visual check of internal and external condition of vehicle is carried out in accordance with workplace procedures
	1.3 Pre-operational inspections and checks of vehicle tyres, suspension, fluid levels and other critical features are carried out to ensure conformance with road safety standards
	1.4 Associated equipment is tested to ensure it functions correctly to manufacturer specifications
	1.5 Post start-up and shut-down checks are carried out after engine is started to identify possible engine or electrical problems
	1.6 Warning systems (instruments and gauges) are checked to ensure they are operational
	1.7 Vehicle-monitoring device is logged on/off in accordance with manufacturer instructions and workplace procedures, as required
2 Clean vehicle and ancillary equipment	2.1 Vehicle and associated equipment is cleaned in accordance with workplace procedures
	2.2 Special purpose ancillary equipment is cleaned in accordance with relevant government regulations and workplace procedures
3 Complete documentation	3.1 Basic faults are identified and/or diagnosed and appropriate action is taken to report or remedy them as required by workplace procedures and legislation
	3.2 Records of inspection are updated and recommended repairs are documented in accordance with workplace procedures

Assessment Requirements for TLIB3006 Carry out inspection of vehicles designed to carry special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- interpreting and following operational instructions and prioritise work
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, technical data and drawings
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of operation of systems on commercial vehicles including:
  - electrical systems
  - fuel systems
  - cooling systems
  - steering systems
  - exhaust systems

© Commonwealth of Australia, 2025 Industry Skills Australia

  - tyres, brakes
  - relevant ancillary systems
- problems that may occur during routine inspection of a vehicle and its associated ancillary equipment, and appropriate actions and solutions
- procedures for checking and routine inspection of a commercial vehicle designed to carry special loads, in accordance with workplace and manufacturer requirements and established safety rules and regulations including:
  - visual inspection
  - pre-operational checking
  - warning systems checking
- relevant duty of care requirements for routine inspection of vehicles designed to carry special loads
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant recording and documentation procedures
- techniques for recognising faults and vehicle/ancillary system irregularities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIB3011 Set up and rig crane for lift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift. It includes the systematic positioning and stabilisation of the crane and its assembly prior to lift in a variety of operational contexts.

Work must be carried out in compliance with the relevant state/territory authority mobile crane operations licence/permit requirements and regulations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Position and	1.1 Crane is directed to position in accordance with job plan,

© Commonwealth of Australia, 2025 Industry Skills Australia

stabilise crane		applicable Australian Standards, codes of practice and manufacturer specifications to ensure safe operation
	1.2	Ground is checked to ensure it is firm enough to bear the load
	1.3	Appropriate plates or packing are correctly used to adequately distribute load
	1.4	Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions, appropriate Australian Standard and other relevant statutory regulations
	1.5	Outrigger packing is checked for adequacy prior to and after lift is taken
2 Assemble crane	2.1	Block is reeved in accordance with manufacturer instructions
	2.2	Counterweights are installed in accordance with manufacturer specifications
	2.3	Attachments are set up in accordance with manufacturer instructions
	2.4	Qualified rigger is consulted and other personnel are assisted as necessary to ensure efficient and safe assembly and set-up of crane
	2.5	Straight fly jibs and luffing fly jibs are assembled and fitted in accordance with manufacturer instructions

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3011 Set up and rig crane for lift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying procedures for fitting attachments and fly jibs
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- fitting fly jibs and attachments
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule and modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition of equipment
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- company work procedures for setting up and rigging a mobile crane at a worksite
- hazard management strategies consistent with the principle of hierarchy of control (with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment)
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work systems and equipment
- procedures for fitting attachments and fly jibs
- procedures for identifying and correctly using equipment, processes and procedures
- relevant agreements, codes of practice or other legislative requirements
- relevant WHS/OHS and environmental procedures and regulations
- relevant road rules, regulations, permit and licence requirements for mobile crane operations and rigging mobile cranes.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment of setting up and rigging a mobile crane for a lift must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and involve the movement of equipment, goods, materials and vehicular traffic.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
  - state/territory regulations and licence/permit requirements pertaining to mobile cranes
  - state/territory road rules
  - state/territory WHS/OHS legislation

© Commonwealth of Australia, 2025 Industry Skills Australia

    - state/territory environmental protection legislation
- relevant materials, tools and equipment
- personal protective clothing and equipment, including:
    - gloves
    - safety headwear and footwear
    - sunscreen, sunglasses and safety glasses
    - two-way radios
    - high visibility clothing.

TLIB3012 Plan job and set up work areas

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan a lifting job and to set up work areas prior to positioning and setting up a mobile crane in compliance with the licence/permit requirements and regulations in a variety of operational contexts.

It includes obtaining and confirming job instructions and work specifications; coordinating the loading of gear and equipment; assessing job requirements of work areas; designing job plans and setting up work area.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Obtain and confirm job instructions/work specifications	1.1 Job instructions are obtained and checked to ensure specifications include all necessary information
	1.2 Lift plan and other work specifications are interpreted and clarification is sought as required
2 Coordinate loading of gear and equipment	2.1 Specific gear necessary for job is identified and obtained
	2.2 Equipment is properly packed and secured in accordance with company procedures to ensure injury and damage are avoided during transportation
3 Assess job requirements and work area	3.1 Adequate site access and egress is identified
	3.2 Potential hazards are identified and appropriate elimination or control measures selected
	3.3 Weight and dimensions of load are estimated or confirmed in consultation with customer and relevant personnel to ensure job is within limits of crane capacity
	3.4 Site information is interpreted and requirements are confirmed with site supervisor
	3.5 Area is assessed to ensure there is sufficient space to establish crane and conduct lift
	3.6 Need to move mobile crane is assessed and route to be travelled is planned as required, to ensure crane traverses firm surfaces and slopes are avoided where possible
	3.7 Lift safety or feasibility concerns are discussed with customer and if not resolved, reported to supervisor
	3.8 Payment arrangements are confirmed with customer as required
	3.9 Customer requirements are anticipated and suggestions are made to maximise safety and efficiency, and to minimise inconvenience
4 Design job plan	4.1 Job plan is developed to include hazard prevention/control measures and safety procedures in accordance with applicable Australian Standards, codes of practice and equipment manufacturer specifications
	4.2 Cranes load chart is consulted and information on permissible loads, radii, weights, boom and jib configurations is taken into account in job plan

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.3 Job requirements, customer priorities, and workplace rules and procedures are taken into account in job plan
	4.4 Job plan is discussed and confirmed with relevant personnel
	4.5 Job plan details are documented as required
5 Set up work area	5.1 Site personnel and public are advised of potential danger and site/work area is isolated as required in accordance with legislative, regulatory and customer requirements
	5.2 Site safety procedures are followed
	5.3 Required protective equipment is identified and fitted in accordance with manufacturer guidelines and customer requirements
	5.4 Ancillary equipment is assembled and erected as required
	5.5 Load destination and as required, travel route, are prepared to accept load

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3012A Plan job and set up work areas.

TLIB3013 Maintain mobile cranes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out routine maintenance on a mobile crane, in compliance with licence/permit requirements, regulations and work requirements in a variety of operational contexts.

It includes obtaining and confirming job instructions and work specifications, coordinating loading of gear and equipment, assessing job requirements and work areas, designing job plan and setting up work area.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan maintenance operations	1.1 Tags, service records, logbooks and crane manufacturer information are read prior to commencing maintenance, and previously identified and manufacturer recommendations are noted
	1.2 Maintenance schedules are read and maintenance tasks are confirmed to match schedule
	1.3 Step by step procedure is worked out to minimise time delays and to sequence maintenance processes consistent with manufacturer recommendations
2 Complete pre-maintenance checks	2.1 Appropriate safe work area is selected for maintenance tasks
	2.2 Required tools, consumables and equipment are identified and assembled
	2.3 Equipment is inspected for visible faults and loose or damaged components
3 Identify and assess faults found	3.1 Conditions found are compared with manufacturer information and intended use of crane
	3.2 Conditions noticed that may cause future difficulties are identified and potential effect on the safe and efficient operation of mobile crane is documented
	3.3 Potential fault conditions are reported to appropriate personnel
4 Conduct maintenance operations and safety checks	4.1 Fluid replacements and lubrication operations are completed
	4.2 Fluid levels are checked and adjusted
	4.3 Mechanical components are checked to ensure attachments and tensions are secure
	4.4 Mechanical adjustments are made
	4.5 Maintenance plan is followed and appropriate adjustments are made to maintenance plan to deal with unexpected

© Commonwealth of Australia, 2025 Industry Skills Australia

	events
	4.6 Own work and crane system operations are checked to ensure crane's operational condition is in accordance with required specifications
	4.7 Tools, equipment and unused consumables are returned to appropriate locations and waste is disposed of in accordance with workplace policy and procedures
5 Complete maintenance records	5.1 Accurate reporting of safety check results and maintenance conducted, is completed and filed in accordance with procedures, industry guidelines and statutory requirements
	5.2 Clear reference in reports is made to any items that may not yet require maintenance but may affect the future working condition or safety of the mobile crane

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3013A Maintain mobile cranes.

Assessment Requirements for TLIB3013 Maintain mobile cranes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- identifying and correctly using relevant equipment
- identifying non-conformities that may compromise operational capability
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned maintenance schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- planning and prioritising own work, multi-tasking, predicting consequences and identifying improvements
- producing a comprehensive maintenance plan
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others, or damage to goods or equipment.

TLIB3014 Load and unload wheeled or tracked crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to unload and load a wheeled or tracked mobile crane from and onto a float, in accordance with licence/permit requirements and regulations.

It includes inspecting the worksite, unloading and loading crane from and onto float, and securing crane prior to travel.

Work is performed under general supervision, with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

essential outcomes.	demonstrate achievement of the element.
1 Inspect site	1.1 Site access and exit routes are identified
	1.2 Site hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Loading and unloading area is selected based on assessment of worksite requirements, physical conditions, proximity to job and safety of operations
2 Unload/load crane from/onto float	2.1 Vehicle is inspected and checked prior to unloading
	2.2 Pre-operational checks are conducted in accordance with manufacturer instructions and workplace procedures
	2.3 Float is positioned on site in designated loading/unloading area noting ground conditions, and potential and identified site hazards
	2.4 Lashings, chains, stabilisers and chocks are safely removed, and correctly stowed and secured in designated areas
	2.5 Loading ramps are secured
	2.6 Crane is driven on/off float ensuring no injury to personnel or damage to equipment and site
	2.7 Crane is stabilised, shut down and secured
3 Secure crane for travel	3.1 Weight and dimensions of crane are established and compared to carrying capacity of vehicle
	3.2 Crane is correctly positioned on float
	3.3 Crane is secured using appropriate securing equipment and is shackled to anchorage points in accordance with workplace/float securing system and manufacturer specifications
	3.4 Securing equipment is tightened to ensure security during travel
	3.5 Ramps are loaded and secured
	3.6 Documentation is completed in accordance with workplace procedures

Assessment Requirements for TLIB3014 Load and unload wheeled or tracked crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- application of relevant agreements, codes of practice and other legislative requirements
- guidelines relating to the safe use of machinery and equipment
- hazard management consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and PPE
- high risk work licence requirements
- identification and correct use of equipment, processes and procedures related to loading and unloading wheeled or tracked cranes
- load restraint guide requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work systems and equipment
- procedures for prioritising and multi-tasking work
- relevant road rules, regulations, permit and licence requirements for mobile crane operation
- wheeled or tracked mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- workplace procedures for loading and unloading wheeled or tracked cranes
- workplace procedures for planning mobile crane jobs and setting up work areas.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3015 Undertake site inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake a site inspection in preparation for a lift requiring a mobile crane in accordance with licence/permit requirements and regulations, in a variety of operational contexts.

It includes arranging a site inspection, clarifying customer requirements, defining job requirements and completing necessary records.

Work is performed with general supervision, with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

essential outcomes.	achievement of the element.
1 Arrange site inspection	1.1 Available information about customer requirements is obtained from relevant personnel
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Need for site inspection is confirmed through appropriate questioning and discussion
	1.4 Mutually acceptable meeting time is arranged with customer
	1.5 Full customer details are recorded in accordance with workplace procedures
2 Clarify customer requirements	2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion
	2.2 Alternative job methods are suggested, as required, and a safe and cost effective method is negotiated with customer
	2.3 Client ability to provide necessary competent personnel is ascertained
3 Define job requirements	3.1 Information about load and movement requirements is accessed and necessary measurements are taken to enable accurate estimation of job requirements
	3.2 Specific scheduling needs are ascertained taking into account legislative and customer requirements
	3.3 Information from site inspection and customer is used to identify hazards and contingencies
	3.4 Specific site and job requirements are identified
	3.5 Lift study is arranged as required, to provide additional information to meet customer expectations
	3.6 Necessity to be on site during lift is assessed in accordance with workplace policy, taking into consideration complexity of job, potential hazards and expertise of available personnel
	3.7 Need for permits/authorisations is determined
4 Complete records	4.1 Required records are updated accurately, legibly and promptly in accordance with workplace procedures
	4.2 All relevant information about job is included in records

Assessment Requirements for TLIB3015 Undertake site inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment and sites in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant agreements, codes of practice and legislative requirements
- guidelines relating to the safe use of machinery and equipment
- hazard management consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- mobile crane applications, capacities, configurations, safety hazards and control

© Commonwealth of Australia, 2025 Industry Skills Australia

mechanisms
- operational procedures for crane crews for conducting a site inspection for a lift using a mobile crane
- operational work systems and equipment
- relevant national heavy vehicle legislation and regulatory requirements
- relevant road rules, regulations, permit and licence requirements for mobile crane operation and safety
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- site inspection procedures and protocols.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIB3016 De-rig, pack and store tools and equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to de-rig a mobile crane, and to pack and store tools and equipment in accordance with licence/permit requirements and regulations.

It includes inspecting tools and equipment, securing outriggers, packing and storing tools and equipment, and completing necessary records.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

1 Inspect tools and equipment	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Rigging gear is removed and inspected for damage and defects
	1.3 Damaged and defective gear is tagged and segregated for testing/repair/disposal by a qualified person
2 Secure outriggers	2.1 Any outriggers, stabilisers, counterweights and attachments are secured and stowed in accordance with manufacturer instructions
	2.2 Outrigger packing is dismantled and stowed securely
3 Pack and store tools and equipment	3.1 Gear is cleaned as required and stored appropriately
	3.2 Additional gear is returned to depot, marked off and stored in accordance with workplace procedures
	3.3 Other personnel are assisted as necessary to ensure efficient pack up
4 Complete records	4.1 Workplace documentation is completed in accordance with workplace procedures
	4.2 Required workplace records are updated and processed accurately and promptly

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3016 De-rig, pack and store tools and equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking condition of equipment
- communicating effectively with others
- identifying and correctly use equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant agreements, codes of practice or other legislative requirements
- defects that may be identified when de-rigging a crane and appropriate action that should be taken
- guidelines and codes of practices relating to the safe use of machinery and equipment
- hazard management consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working

© Commonwealth of Australia, 2025 Industry Skills Australia

practices and personal protective equipment
- high risk work and mobile crane licence requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews concerning de-rigging of cranes, and packing and storing tools and equipment
- operational work systems and equipment
- relevant heavy vehicle national regulations
- relevant road rules, regulations, permit and licence requirements for mobile crane operation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIB3017 Assemble and dismantle boom or jib

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assemble and dismantle a boom and jib on a lattice boom mobile crane, in accordance with licence/permit requirements and regulations, in a variety of operational contexts

It includes planning assembly/dismantling and following correct procedures for boom/jib assembly and disassembly.

Work is performed under general supervision, with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

essential outcomes.	demonstrate achievement of the element.	
1 Plan assembly/dismantling	1.1	Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2	Level as is possible and unobstructed site is selected to assemble/dismantle boom and/or jib
	1.3	Plan for crane assembly and dismantling is developed in accordance with appropriate Australian Standard, other statutory regulations, licensing requirements and manufacturer specifications
2 Assemble/dismantle boom or jib	2.1	Equipment, including personal protective equipment, is assembled and used as appropriate for task requirements
	2.2	Plan for assembly or dismantling of boom/jib is carried out in accordance with manufacturer specifications, appropriate Australian Standards and other relevant statutory regulations and guides
	2.3	All connections on boom and jib pendants and rope anchorages are checked before boom is raised, to ensure they are in good order, tight and secure
	2.4	Documentation is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

TLIB3018 Conduct full train examination

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct a full train examination in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for a train examination, preparing a train for examination, examining rolling stock, examining loads, and documenting and actioning examination results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for examination	1.1 Train consist and information on load detail is established for examination purposes
	1.2 Location for full train examination is confirmed and relevant personnel are notified of examination
	1.3 Customer defect notices/carded wagon information is established for examination purposes
	1.4 Materials and equipment required to conduct full train examination are prepared
	1.5 Hazards are identified, risks are assessed and risk control measures are implemented
	1.6 Work health and safety (WHS)/occupational health and safety (OHS) requirements applicable to the examination are confirmed
	1.7 Relevant train documentation is accessed and reviewed to establish key information on rolling stock required for examination, as required
2 Prepare train for examination	2.1 Applicable safety device or system is used to ensure train is isolated or secured for examination
	2.2 Road is locked out using appropriate techniques to ensure safety during examination
	2.3 Flags, banners, signs and other relevant safety equipment are positioned before and during examination to ensure safety is maintained
3 Examine rolling stock	3.1 Types of rolling stock and capacities are confirmed as appropriate for the safe transportation of passengers or freight
	3.2 Brake systems are checked, all brake tests are conducted and certificates are issued as required
	3.3 Structure of rolling stock and major components are checked and tested to ensure operational safety
	3.4 Rolling stock is carded and information is recorded in organisational system
	3.5 Train irregularities are noted and corrective action is initiated

© Commonwealth of Australia, 2025 Industry Skills Australia

	in accordance with operational requirements
	3.6 End-of-train monitor is attached and correct operation is confirmed
	3.7 WHS/OHS legislation, codes of practice, policies and procedures are observed during the examination to prevent injury and damage
	3.8 Communication is maintained with other personnel involved to ensure safe, efficient and complete examination
4 Examine loads	4.1 Load security is checked and confirmed that it meets operational safety requirements
	4.2 Load contamination is identified and rectified in accordance with WHS/OHS and dangerous goods requirements
	4.3 Load dimensions are confirmed appropriate to wagon type and checked against documentation for accuracy
5 Document and action examination results	5.1 Documentation is completed and forwarded for recording examination results and initiating corrective actions, as required
	5.2 Relevant personnel are informed of remedial or appropriate action required prior to resumption of train service

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3018A Conduct full train examination.

Assessment Requirements for TLIB3018 Conduct full train examination

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing rolling stock defects
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/ occupational health and safety (OHS) standards
- working individually and as part of a team
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communications protocols
- emergency procedures
- rail industry standards and specifications for items requiring examination during a full train examination
- relevant rail danger zones
- relevant safety, WHS/OHS, and environmental procedures and regulations
- signals and signalling systems
- train movement documentation procedures
- workplace procedures for conducting a full train examination.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB3019 Test train braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to test a train braking system in accordance with workplace procedures, safeworking regulations and codes of practice.

It includes planning and preparing for, and testing train brake operation; dealing with identified faults; and recording brake test results in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment.

Testing train braking system can involve:

- air continuity test
- brake leakage test
- hose and pipe components repair or replacement
- modified brake test
- train brake test.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for train brake inspection and testing	1.1 Brake test documentation, rolling stock data and other relevant reports are read and clarified as required to confirm required action
	1.2 Appropriate tools and equipment are obtained as required and checked prior to inspection
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, policies and procedures are identified and followed
	1.4 Hazards are identified, risks are assessed and risk control measures are implemented
	1.5 Train is isolated or secured in accordance with workplace procedures to make the work area safe for inspection
2 Inspect and test train brake operation	2.1 Brake leakage test is conducted to ensure compliance with required standards
	2.2 Modified brake tests are conducted to ensure compliance with required standards
	2.3 Air continuity test is conducted to ensure train braking system meets functional specifications
	2.4 Brakes are applied and released to ensure train braking system meets functional specifications
	2.5 Hoses and pipe components are inspected for defects requiring repair or replacement
	2.6 Defects and faults are identified and rolling stock is carded
3 Deal with identified faults	3.1 Plans and/or procedures for replacement or repair of identified defective components are implemented in accordance with workplace procedures and manufacturer specifications

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.2 Confirmation/verification of minor repairs or replacements is obtained
	3.3 Defective rolling stock not fit to run is identified and detachment arrangements are made in compliance with workplace procedures
4 Record test results	4.1 Brake test records are completed to reflect inspection results in accordance with workplace policies and procedures
	4.2 Records are filed in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3019B Test train braking system.

Assessment Requirements for TLIB3019 Test train braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices and procedures
- conducting inspections and testing brake operations on relevant types of passenger train, freight train or railcar in accordance with workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- brake systems, their components and their operation
- communications protocols
- defects and faults in train braking systems and relevant workplace procedures to deal with identified defects and faults including isolation and tag out procedures
- diagnostic techniques
- documentation requirements relating to brake testing
- procedures for completing relevant documentation
- relevant workplace procedures
- tools and equipment applications
- types of brake tests and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3021 Conduct train roll-by inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct a train roll-by inspection in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing to carry out a roll-by inspection of a moving train, inspecting a moving train in accordance with workplace procedures, and reporting and/or actioning inspection results.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures when conducting a roll-by inspection of a moving train, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Inspecting condition of rolling stock and load may involve:

- air and electrical connections
- bearings
- brake equipment
- dangerous goods condition and separation
- draw gear
- load condition (damage, leaks)
- load securing devices (chains, ropes, pins)
- locking and securing devices
- out-of-gauge conditions
- superstructures
- trailing items (ropes, hoses)
- wheels.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for train roll-by inspection	1.1 Documentation and other relevant reports are read and clarified as required to confirm inspection requirements
	1.2 Individual responsibilities required to complete roll-by inspection are agreed with relevant personnel as required
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Position is taken for roll-by inspection at planned time to ensure complete observation without personal risk
	1.5 Conditions are assessed and necessary actions are taken to ensure roll-by inspection is effective
2 Conduct a roll-by inspection of a moving train	2.1 Train identification and status is confirmed
	2.2 Train hazards are identified, risks are assessed and risk control measures are implemented
	2.3 Condition of rolling stock and load are systematically observed as train passes and specific faults are identified and noted
	2.4 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection
	2.5 Inspection is conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS) workplace

© Commonwealth of Australia, 2025 Industry Skills Australia

	policies and procedures to prevent injury and damage
	2.6 Faults requiring urgent action are noted and appropriate action is taken to initiate immediate response to minimise risk from continued movement of train
3 Report and action roll-by inspection results	3.1 Reports of inspections are completed to reflect inspection results
	3.2 Appropriate personnel are informed of faults or defects requiring rectification
	3.3 Records are circulated and filed in accordance with workplace policies and procedures
4 Report on-train roll-by inspection results	4.1 Outcomes of on-train roll-by inspections are transmitted to appropriate personnel
	4.2 Records of on-train roll-by inspections are made in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3021 Conduct train roll-by inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation
- documenting results of roll-by inspection including faults or defects requiring rectification, in accordance with workplace operational procedures
- identifying and actioning urgent faults to minimise risk from continued movement of train
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying safe position from which to conduct roll-by inspection
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- interpreting documentation and reports to confirm roll-by inspection requirements
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- observing condition of rolling stock and load of moving train systematically
- positioning self at appropriate location and time to conduct roll-by inspection
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- communications protocols
- contingency management processes for conducting a roll-by inspection of a moving train
- documentation requirements for a roll-by inspection
- procedures for planning and carrying out a roll-by inspection of a moving train
- procedures for completing documentation relevant to a roll-by inspection of a moving train
- relevant rail industry standards, rules, codes of practice, guidelines and specifications for items requiring examination.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3026 Prepare for train operation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare for train operation in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for and implementing the prescribed pre-departure checks and confirming required train documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when preparing for train operation, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for pre-departure checks	1.1 Checks and relevant procedures and standards are identified
	1.2 Purpose of journey and activities to be undertaken are identified
	1.3 Constraints and special instructions that may apply for journey are identified
	1.4 Documentation is read and clarified as required to identify and confirm consist, attach/detach vehicle information, loading information and characteristics of the train
	1.5 Hazards are identified, risks are assessed and risk control measures are implemented
	1.6 Compliance with relevant regulatory and Australian Dangerous Goods (ADG) Code requirements are identified, as required
2 Implement pre-departure checks	2.1 Motive power control systems are set up and checked in accordance with workplace policies and procedures
	2.2 Train, or relevant portion of the train, is checked to ensure rolling stock is coupled and sequenced correctly
	2.3 Train braking systems are applied and released to ensure they are operating effectively
	2.4 Visual inspection is conducted to identify obvious faults or defects that would prevent safe transit
	2.5 Corrective action is taken to rectify faults and ensure minimum delay to planned running schedule
	2.6 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage
3 Confirm train can proceed	3.1 Relevant personnel are promptly advised of result of completed checks
	3.2 Authority to proceed relevant to operational situation is obtained and followed

Assessment Requirements for TLIB3026 Prepare for train operation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate procedures to overcome identified faults or defects including isolation and tag out procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- setting up and checking train control systems
- testing air continuity and braking systems
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- communications procedures and protocols
- contingency management processes
- procedures for pre-departure train testing
- procedures for preparing a train for operation
- relevant safety, WHS/OHS, and environmental procedures and regulations
- relevant sections of the Australian Dangerous Goods (ADG) Code and other dangerous goods regulations as they apply to freight operations
- relevant workplace procedures
- safeworking systems, procedures and requirements
- set-up procedures for equipment used when controlling trains
- train characteristics and specifications
- train preparation documentation procedures
- typical faults or defects for the type of rolling stock being operated.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3027 Set up and shut down on-train remote control system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to set up and shut down an on-train remote control system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes setting up the remote control system, setting up the lead control system, and shutting down the remote control equipment.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when setting up and shutting down an on-train remote control system, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Set up remote control system	1.1 Remote control system components are set up in accordance with operational plans and manufacturer instructions
	1.2 Remote motive power units are placed in required operating mode
	1.3 Communications code is entered, and air and electrical systems are activated
	1.4 Brake and traction systems are tested using approved personnel to ensure correct operation
2 Set up lead control system	2.1 Cab console is checked, electrical systems are activated and system self-test is confirmed
	2.2 Communications code is entered and confirmation is obtained that system has entered link mode
	2.3 Full control is obtained and brake tests are conducted using lead control equipment, to ensure correct braking is operational
	2.4 Procedures to establish total control are repeated as required
	2.5 Train is moved using the full range of tests to ensure operational safety and control
3 Shut down remote control equipment	3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and system de-activation
	3.2 Equipment indicators or functions are operated to ensure shut-down process is correct and complete

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB3027 Set up and shut down on-train remote control system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- conducting post set-up tests to ensure remote control system is operating in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- monitoring performance of equipment
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- setting up remote control system in a range of configurations and/or trains
- shutting down remote control system in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- controls, instruments and indicators of an on-train remote control unit and their purpose, location and use

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures for controlling motive power units
- procedures for identifying equipment defects in remote control units and assessing identified defective units for appropriate action
- procedures for managing hazardous situations involving on-train remote control systems
- procedures for operating remote control units
- relevant rail danger zones
- relevant safety, work health and safety(WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures
- set-up and shut-down workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3040 Inspect poles and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to inspect poles and associated hardware in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing for inspection, conducting inspection of poles and associated hardware, and completing inspection.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when inspecting poles and associated hardware, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for inspection	1.1 Inspection program or works order is received/accessed, analysed and confirmed as required by site inspection
	1.2 Resources required for the job are identified and scheduled
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Liaison and communication issues are resolved
	1.5 Personnel participating in task, including plant operators and contractors, are fully briefed
2 Conduct inspection of poles and associated hardware	2.1 Worksite requirements are confirmed by site inspection
	2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided
	2.3 Safeworking rules are observed within the rail corridor
	2.4 Pole structures, including foundations and hardware, are inspected by test or examination against approved specifications
3 Complete the inspection	3.1 Worksite is rehabilitated, and work is completed in an agreed time with minimum waste
	3.2 Inspection reports are completed, pole records are updated and documentation is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB3040 Inspect poles and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others
- communicating plans, intentions and safety criteria to other workers (including plant operators and contractors) prior to work commencing
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant technical instructions and manuals, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using appropriate pole testing equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety and safeworking requirements, and relevant codes of practice, rail industry standards and/or guidelines
- characteristics, capabilities, uses, limitations and location standards of different types of poles
- diagnostic and fault finding techniques relevant to inspecting poles and associated hardware
- hazards that may exist when inspecting poles and associated hardware, and ways of controlling the risks involved
- mechanical principles related to structures
- pole maintenance techniques and processes
- problems that may occur when inspecting poles and associated hardware, and action that can be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations, including WHS/OHS instructions related to inspecting poles and associated hardware
- soil types and stabilisation processes
- workplace documentation and records systems related to pole management
- workplace instructions that relate to pole quality and chemical treatment in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- workplace procedures for inspecting poles and associated hardware
- workplace requirements for traffic control and guidance signals for planned operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3046 Service and clean mechanical signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to service and clean mechanical signalling equipment and infrastructure, in accordance with safeworking and regulatory requirements, and workplace standards and procedures.

It includes cleaning and servicing the equipment/infrastructure, and checking/testing the operation and functionality of the equipment/infrastructure after cleaning.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rail industry standards and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when servicing and cleaning mechanical infrastructure signalling equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Clean and service equipment	1.1 Cleaning and servicing equipment, resources and consumables are confirmed ready for use
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 All rubbish, weeds and obstructions are removed from equipment and housings
	1.4 Initial visual check of operational equipment is performed to identify equipment faults
	1.5 External surfaces are inspected and are prepared/painted to organisational standards as required to protect the equipment
	1.6 All internal and external surfaces and operational components are cleaned and lubricated to ensure operational effectiveness
	1.7 All chemicals, lubricants and consumables are used and disposed of in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs), work health and safety (WHS)/occupational health and safety (OHS) codes and practices, and environmental procedures
2 Check equipment operation	2.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures
	2.2 Track clearance check is made before conducting equipment operation check to ensure safe train movement
	2.3 Authorised equipment operation check is carried out in accordance with operating procedures to identify equipment faults
	2.4 Operational effectiveness of equipment is confirmed through observation during train movements as required
	2.5 Equipment faults are identified, reported and appropriate corrective action is taken
	2.6 Serviced equipment is locked and secured to prevent unauthorised access

© Commonwealth of Australia, 2025 Industry Skills Australia

3 Complete documentation	3.1 Required documentation procedures and processes are confirmed
	3.2 Documentation is filled in legibly and proofread
	3.3 Documentation is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3046 Service and clean mechanical signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- carrying out visual inspection and functional checking tests
- checking operation of equipment in accordance with workplace procedures
- checking/confirming operational requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, diagrams and signs
- reporting identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using chemical cleaning agents, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements and relevant rail industry standards, codes of practice and/or guidelines
- documentation and record keeping requirements
- fault detection techniques
- fundamentals of signalling and operations of mechanical signalling equipment
- hazards that may exist when servicing and cleaning mechanical signalling equipment and infrastructure, and ways of controlling the risks involved
- problems that may occur when servicing and cleaning mechanical signalling equipment and infrastructure, and action that can be taken to report or resolve these problems
- rail/train movement systems
- recording procedures
- relevant WHS/OHS and environmental procedures and regulations
- workplace safeworking authorisation/approval processes and procedures
- workplace standards and procedures for servicing and cleaning mechanical signalling equipment and infrastructure.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3047 Repair and adjust mechanical signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to repair and adjust mechanical signalling equipment and infrastructure (excluding interlocking equipment), in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes diagnosing equipment faults, correcting equipment faults, and testing and adjusting the equipment after repair.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when repairing and adjusting mechanical signalling equipment and infrastructure (excluding interlocking equipment), as part of workplace activities across a variety of operational contexts within the Australian rail system.

Cleaning and lubrication includes:

- all cleaning operations by hand
- chemical or steam cleaning
- applying lubricating oils and greases.

Operational compliance includes the manufacturer and/or safeworking operational specifications for functional movements, operations and outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Diagnose equipment faults	1.1 Out-of-specification or non-operating equipment/components are correctly identified through operational testing
	1.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Work is planned to ensure minimum disruption to train operations and safe repair activities
	1.5 Support/assistance with diagnosis or repair operation is obtained through liaison with appropriate personnel
	1.6 Work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements for a given task area are obtained and clarified as required, in consultation with appropriate personnel
2 Correct equipment faults	2.1 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification
	2.2 Equipment and components are replaced or repaired in accordance with operational specifications to ensure required level of operations
	2.3 Equipment and component adjustment is performed to specifications to ensure required level of operations
	2.4 Viability of repairs to replaced equipment/components is evaluated and equipment is tagged for repair or disposed of in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

		organisational requirements
3	**Test and adjust equipment**	3.1 Final cleaning, lubricating and adjustments to equipment is carried out to ensure operational compliance
		3.2 Equipment functions are tested to ensure operational compliance with required standards
		3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or people
		3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3047A Repair and adjust mechanical signalling equipment and infrastructure.

Assessment Requirements for TLIB3047 Repair and adjust mechanical signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant test procedures
- applying relevant workplace procedures
- checking compliance with operational specification
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating mechanical signalling equipment
- reading and interpreting relevant instructions, procedures, information, diagrams and signs
- repairing and replacing equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- testing and adjusting equipment function after repair has been completed to ensure compliance with manufacturer and operational requirements
- using chemical cleaning agents, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation/authorisation processes and procedures, and technical specifications manuals
- fault detection techniques
- fundamentals of signalling and operations of mechanical signalling equipment
- hazards that may exist when repairing and adjusting mechanical signalling equipment and infrastructure, and ways of controlling the risks involved
- mechanical fitting techniques
- problems that may occur when repairing or adjusting mechanical signalling equipment and infrastructure, and action that can be taken to report or resolve these problems
- recording procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- SDSs/MSDSs for cleaning and lubricating equipment
- workplace procedures and rail industry standards for repairing and adjusting mechanical signalling equipment and infrastructure (excluding interlocking equipment).

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

TLIB3048 Carry out off-site repair, overhaul and assembly of mechanical signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out off-site repair, overhaul and assembly of mechanical signalling equipment in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assessing equipment condition, replacing out-of-specification components, producing components as required, assembling components, and testing and adjusting equipment to ensure overall system integrity.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the off-site repair, overhaul and assembly of mechanical signalling equipment, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assess equipment condition	1.1 Equipment condition is established through tagged repair sheets from the field and initial examination
	1.2 Condition of all out-of-tolerance equipment and components is correctly identified and recorded through detailed inspection and testing
	1.3 Type and extent of required repairs are evaluated to determine viability of repair operations and to estimate time requirements
	1.4 Components requiring disposal are identified and replacement components are arranged to allow work to commence
2 Replace components	2.1 Equipment is dismantled to the extent required to carry out previously identified repairs
	2.2 Components requiring replacement are stored for later repair/disposed of in line with organisational requirements
	2.3 Components are replaced/repaired/returned to operational condition in line with technical specifications and standard workshop practices
3 Produce components	3.1 Components are produced to comply with the defined job requirements and technical specifications
	3.2 Appropriate manufacturing/workshop techniques are applied to ensure required quality components are produced
4 Assemble components	4.1 Assembly methods and sequencing are planned to ensure efficient operations
	4.2 Components are laid out for assembly in accordance with planned processes
	4.3 Assembly of all components, sub-assemblies and equipment is correctly carried out in accordance with planned operations, and job and technical specifications
	4.4 Securing methods and operations are carried out in accordance with job and technical specifications
5 Test and adjust	5.1 Equipment functions are tested to ensure conformance to

© Commonwealth of Australia, 2025 Industry Skills Australia

equipment	drawings and specifications

5.2 Assembly and joining/securing processes and outcomes are checked and tested as required to match the job and technical specifications

5.3 Adjustments are made to ensure all equipment operations meet the technical specifications

5.4 Operational/functional compliance to the job and technical specifications is confirmed and certified

5.5 Required documentation is correctly completed and forwarded to appropriate personnel to confirm the equipment is certified for use

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3048A Carry out off-site repair, overhaul and assembly of mechanical signalling equipment.

Links

Assessment Requirements for TLIB3048 Carry out off-site repair, overhaul and assembly of mechanical signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- carrying out appropriate repairs in accordance with workplace requirements
- carrying out visual inspection and checking in accordance with workplace procedures
- checking/confirming compliance with operational specifications
- identifying faults in accordance with organisational procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- using chemical cleaning agents, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- chemical cleaning agents, solvents and lubricants, SDSs/MSDSs and manufacturer instructions
- fault detection techniques
- fundamentals of signalling and operations of mechanical signalling equipment
- hazards that may exist when off-site repairing, overhauling and assembling mechanical signalling equipment, and ways of controlling the risks involved
- problems that may occur when off-site repairing, overhauling and assembling mechanical signalling equipment, and action that can be taken to report or resolve these problems
- relevant mechanical signalling equipment components and technical specifications
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for off-site repairing, overhauling and assembling mechanical signalling equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rail industry standards, SDSs/MSDSs, regulations, codes of practice and operation manuals.

TLIB3053 Maintain mechanical signalling locking and interlocking devices

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes diagnosing and correcting faults in the devices, and testing and adjusting the repaired equipment to meet workplace and manufacturer standards.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining mechanical signalling locking and interlocking devices, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Diagnose locking/interlocking equipment faults	1.1 Out-of-specification or non-operating mechanical locking and interlocking signalling equipment /components are correctly identified through operational testing
	1.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations
	1.3 Work is planned to ensure minimum disruption to train operations and safe repair activities
	1.4 Support/assistance with diagnosis or repair operations is obtained through liaison with appropriate personnel
2 Correct equipment faults	2.1 Mechanical locking and interlocking signalling equipment and component cleaning/lubrication and adjustment is performed to specifications to ensure required level of operations
	2.2 Equipment and components are replaced or repaired in accordance with operational specifications to ensure required level of operations
	2.3 Viability of repairs to replaced equipment/components is evaluated and equipment is tagged for repair or disposed of in accordance with workplace requirements
	2.4 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification
3 Test and adjust locking/interlocking equipment	3.1 Locking/interlocking equipment functions are tested to ensure operational compliance with required standards
	3.2 Final cleaning, lubricating and adjustments to equipment are carried out to ensure operational compliance
	3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or people
	3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3053A Maintain mechanical signalling locking and interlocking devices.

Assessment Requirements for TLIB3053 Maintain mechanical signalling locking and interlocking devices

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- applying relevant test procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating mechanical signalling equipment
- reading and interpreting relevant instructions, procedures, information and signs
- repairing and replacing mechanical locking and interlocking equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly , in accordance with regulatory requirements and workplace procedures
- selecting and using hand, portable, power and air tools
- using chemicals, solvents and lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- contents of technical specifications and manuals
- documentation/authorisation processes and procedures
- fault detection techniques
- hazards that may exist when repairing and adjusting mechanical locking and interlocking signalling equipment, and ways of controlling the risks involved
- mechanical fitting techniques
- organisational procedures
- principles of railway signalling, particularly those dealing with mechanical locking and interlocking equipment
- problems that may occur when repairing and adjusting mechanical locking and interlocking signalling equipment, and action that can be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- SDSs/MSDSs, manufacturer instructions and workplace procedures for repairing and adjusting mechanical locking and interlocking signalling equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3058 Maintain aerial signal/telecommunications lines and cables

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain aerial signal/telecommunications lines and cables in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes inspecting and servicing line and cable routes, diagnosing identified line and cable faults, and repairing line and cable faults to the standards specified to ensure system integrity.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when maintaining aerial signal/telecommunications lines and cables, as part of workplace activities across a variety of operational contexts within the Australian rail system.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Inspect and service line and cable routes	1.1 Routes are inspected and recorded, and arrangements are made for the removal of any obstructions, damage or infringing vegetation to provide free access to cables/aerials
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Routes are physically inspected to determine breaks, misalignments, damage and insulation wear requiring repair
	1.4 Poles are inspected for deterioration and a safety assessment is made
2 Diagnose line and cable faults	2.1 Permission to test isolated equipment is confirmed prior to work being undertaken
	2.2 Probable location of fault is identified from visual inspection and circuit tests are conducted to isolate fault area
	2.3 Nature of fault is identified from further tests and corrective action required is identified to enable appropriate arrangements for resources and for work to be performed
	2.4 Disconnection/insulation procedures are applied to enable maintenance work to be performed in isolation to systems where lines are in close proximity to high voltage services
3 Repair line and cable faults	3.1 Worksite is made safe in accordance with organisational safety requirements to enable repair work to be safely undertaken
	3.2 Aerial lines/cables are repaired to operational and technical requirements using appropriate jointing or replacement/repair procedures
	3.3 Repaired/replaced line/cable is tested to specified standards to ensure conformity to operational and technical requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

3.4 Appropriate personnel are notified of completed repairs/replacement and appropriate documentation is completed and processed in accordance with organisational requirements and returned to appropriate organisation/department as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3058 Maintain aerial signal/telecommunications lines and cables

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant rail industry standards, codes of practice, guidelines and workplace procedures
- carrying out line/cable/conductor jointing and termination
- communicating effectively with others when maintaining aerial signal/telecommunications lines and cables
- diagnosing and repairing aerial cable faults
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- inspecting aerial signal/telecommunications line routes and poles
- installing aerial signal/telecommunications lines and cables to rail industry standards, rules, codes of practice and guidelines
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, technical data and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using hand tools, power tools and equipment
- using relevant test equipment and aerial cable testing techniques
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislated rail safety and rail industry standards requirements
- clearance and separation procedures from other services for aerial signal/telecommunications lines and cables
- common aerial cable system faults
- documentation and record keeping requirements
- electrical theory and principles relevant to aerial cables
- fault diagnosis/problem solving
- hazards that may exist when maintaining aerial signal/telecommunications lines and cables, and ways of controlling the risks involved
- line/cable technical specifications
- problems that may occur when maintaining aerial signal/telecommunications lines and cables, and action that can be taken to report or resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- separation and installation rail industry standards requirements for aerial signal/telecommunications lines and cables
- static clearance (electrical) as defined by rail industry standards and organisational procedures
- technical requirements for installing and maintaining aerial signal/telecommunications lines and cables
- techniques for operating support equipment
- test equipment and procedures
- workplace procedures for maintaining aerial signal/telecommunications lines and cables.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

TLIB3075 Inspect and prepare a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to inspect, prepare and start a motive power unit in accordance with relevant workplace procedures, rail safety regulations and codes of practice.

It includes checking and preparing a motive power unit, visually examining a motive power unit, conducting in-cab checks, and starting and positioning a motive power unit for service in accordance with workplace requirements.

A motive power unit is a rail vehicle used to provide the power to move itself or other vehicles.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for work activities	1.1 Roster is checked and interpreted for day's train driving activities
	1.2 Allocation of motive power units is checked as required by notices, in conjunction with network control officer and roster clerk
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Trackside safety and basic electrification awareness procedures are followed as required, while locating allocated motive power unit in the yard
	1.5 Motive power unit inspection and preparation duties are identified and interpreted
	1.6 Train schedules, notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
	1.7 Communication equipment required for day's operations is obtained and checked to ensure it is functional
	1.8 Required personal protective equipment is obtained for use prior to day's train driving activities
	1.9 Motive power unit to be inspected and prepared is located in the yard
2 Inspect and prepare motive power unit	2.1 Features, functions and location of motive power unit and associated equipment are identified
	2.2 Logbook is checked to confirm serviceability of unit
	2.3 Preparation and safety checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
	2.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported as required, in accordance with workplace procedures and regulatory requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities are checked against journey requirements as required and appropriate action is taken to replenish them
	2.6 Relevant WHS/OHS and regulatory requirements are followed
3 Start motive power unit	3.1 Motive power unit is started in accordance with manufacturer instructions and/or workplace procedures and operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
	3.2 Where critical or serious equipment faults cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged, and problem is reported
	3.3 Instruments and gauges are observed and readings are interpreted to confirm effective operation
	3.4 Action is taken to determine cause of identified problem in instruments and gauges, and situation is rectified or reported, as required
	3.5 Fluid levels are rechecked after starting and appropriate action is taken as required
	3.6 Pre-departure checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move
4 Conduct in-cab checks	4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
	4.2 Cab layout is checked and confirmed that it meets operating requirements
	4.3 Pre-departure mechanical checks are correctly performed and correct functioning of equipment is confirmed in accordance with workplace procedures and manufacturer operating requirements
	4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
	4.5 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
	4.6 Seat, windows, blinds, air conditioners, heaters and other

© Commonwealth of Australia, 2025 Industry Skills Australia

	personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
	4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements
	4.8 Fire extinguisher and emergency toolbox are checked to confirm they are in position and meet operational requirements
5 Complete documentation	5.1 Required documentation concerning inspecting motive power unit is completed and processed in accordance with workplace procedures and regulatory requirements
	5.2 Logbook and other service records on the motive power unit are completed and filed in accordance with workplace procedures and regulatory requirements
6 Position motive power unit	6.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures
	6.2 Motive power unit is operated in accordance with standard procedures and regulatory requirements, within operating and operational constraints
	6.3 Motive power unit is positioned in accordance with operational requirements and directions
	6.4 Motive power unit performance is monitored during operation to confirm effective operation or to identify defects
	6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance
	6.6 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage
	6.7 Network control officer and other relevant personnel are advised that motive power unit is secured in the required position and is ready for service

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB3075 Inspect and prepare a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication requirements on a motive power unit
- communicating effectively with others
- conducting a visual inspection of a motive power unit and associated equipment
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating electronic communications equipment to required protocol
- preparing a motive power unit prior to service
- reading and interpreting relevant instructions, procedures and information and signs
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures for motive power units
- cleaning requirements for a motive power unit
- communications equipment checks
- emergency procedures
- external features of a motive power unit that must be checked during a pre-operational visual inspection
- fuel tank capacity and range (where applicable)
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of auxiliary systems on a motive power unit and related checks for correct operation
- in-cab pre-operational checks for a motive power unit
- inspection procedures for a motive power unit
- lubrication requirements for a motive power unit
- operating controls to start, accelerate, decelerate and stop a motive power unit
- operating procedures for a motive power unit
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of a motive power unit
- procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
- procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- procedures for operating electronic communications equipment in accordance with required protocol
- procedures for starting and operating auxiliary systems on a motive power unit
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- requirements for completing relevant documentation
- start-up procedures for motive power units
- typical defects that can occur on a motive power unit and related action that should be taken
- workplace procedures and operating requirements.

TLIB3078 Inspect, prepare and start an electrical tram

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to inspect, prepare and start an electric tram in accordance with relevant regulations and workplace practices.

It includes checking and preparing an electric tram, visually examining an electric tram, conducting on-tram checks, and starting and positioning an electric tram for service in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant road rules and tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare electric tram	1.1 Roster is checked and interpreted for day's tram driving activities
	1.2 Allocation of electric trams is checked in conjunction with tram controllers and roster clerk
	1.3 Electric tram inspection and preparation duties are identified and interpreted
	1.4 Tram schedules, notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
	1.5 Communications equipment required for the day's operations is obtained and checked to ensure it is functional
	1.6 Hazards are identified, risks are assessed and risk control measures are implemented
	1.7 Required personal protective equipment is obtained for use prior to tram driving activities
	1.8 Electric tram to be inspected and prepared is located in the depot
	1.9 Depot safety and basic electrical equipment awareness procedures are followed while locating tram in the depot
2 Visually inspect and prepare electric tram	2.1 Features, functions and location of electric tram and associated equipment are identified
	2.2 Logbook is checked to confirm serviceability of unit
	2.3 Pre-start internal and external safety and maintenance checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
	2.4 Electric tram and equipment are checked visually, and defects and deficiencies are recorded and rectified, isolated, tagged or reported as required, in accordance with workplace procedures and regulatory requirements
	2.5 Availability of traction power and sand are checked against journey requirements as required, in accordance with workplace procedures and regulatory requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.6 Relevant WHS/OHS and regulatory requirements are followed
	2.7 Documentation for electric tram inspection and preparation results is completed in accordance with workplace procedures
3 Conduct on-tram checks	3.1 Electric tram is checked in correct sequence and all lights are confirmed as operating to optimum requirements
	3.2 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed in accordance with workplace procedures and manufacturer operating requirements
	3.3 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
	3.4 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
	3.5 Seat, windows, blinds and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
	3.6 Ancillary equipment is checked and is confirmed to be operational in accordance with operating requirements
	3.7 Fire extinguisher, point bars and any other required tools are checked to confirm they are in position
4 Start electric tram	4.1 Electric tram is started in accordance with instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
	4.2 Where critical or serious equipment faults cannot be readily rectified, electric tram is shut down and reported for rectification in accordance with procedures
	4.3 Instruments and gauges are observed and readings are interpreted to confirm effective operation
	4.4 Action is taken to determine cause of identified problem in instruments and gauges, and situation is rectified or reported, as required
	4.5 Sand operation is checked after starting and appropriate action is taken as required if not effectively functioning
	4.6 Pre-departure checks are carried out to ensure electric tram is

© Commonwealth of Australia, 2025 Industry Skills Australia

	braking and powering effectively and is safe to move
5 Position electric tram	5.1 Authority to move and position electric tram is obtained and relevant personnel are advised of intention and procedures
	5.2 Electric tram is positioned in accordance with operational requirements and directions
	5.3 Tram performance is monitored during operation to confirm effective operation or to identify defects
	5.4 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance
	5.5 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage
	5.6 Relevant personnel are advised electric tram is secured in required position and is ready for service
	5.7 Required documentation concerning inspecting, preparing and starting up electric tram is completed and processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3078A Inspect, prepare and start an electric tram.

Assessment Requirements for TLIB3078 Inspect, prepare and start an electrical tram

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trams and associated equipment and procedures
- checking and replenishing sand on an electric tram as required
- checking electric tram equipment in accordance with workplace procedures
- conducting pre-operational and in-cab checks in accordance with workplace operational procedures
- conducting a visual inspection of an electric tram and associated equipment in accordance with workplace procedures
- identifying and assessing tram defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- operating and checking electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information and signs
- selecting and using required personal protective equipment conforming to work health and safety (WHS)/occupational health and safety (OHS) and industry standards.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures for an electric tram
- cleaning requirements for an electric tram
- communication equipment checks
- electric tram controls, instruments and indicators and their purpose, location and use
- emergency procedures
- external features of an electric tram that must be checked during a pre-operational visual inspection
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of ancillary systems on an electric tram and related checks for correct operation
- functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on an electric tram
- monitoring devices, braking and power equipment, safety systems, ancillary systems and any signalling systems
- on-tram pre-operational checks for an electric tram
- operating controls to start, accelerate, decelerate and stop an electric tram
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of an electric tram
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up an electric tram
- procedures for minor maintenance including cleaning
- procedures for operating electronic communications equipment in accordance with required protocol
- procedures for raising and lowering a pantograph or trolley pole on an electric tram
- procedures for starting and operating ancillary systems on an electric tram
- relevant safety, WHS/OHS, and environmental procedures and regulations
- relevant state/territory road traffic authority and tramway operating procedures
- requirements for completing relevant documentation when inspecting, preparing and starting an electric tram
- start-up procedures for an electric tram
- typical defects that can occur on an electric tram and related action that should be taken
- visual inspection procedures for an electric tram.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3087 Examine timber structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to examine timber structures in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes obtaining all relevant previous reports, performing a detailed examination, initiating appropriate actions and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when conducting a detailed timber structures examination, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Obtain previous reports	1.1 Operational history of structure from available sources is reviewed
	1.2 Previous defects identified in reports are noted to enable rechecking of problem areas
	1.3 Relevant personnel are contacted to identify reported complaints or indications of wear or damage
2 Perform detailed examination	2.1 Hazards are identified, risks are assessed and risk control measures are implemented
	2.2 Timber structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures
	2.3 Connections between timber components are visually inspected and checked for signs of wear, looseness, corrosion, deterioration and damage in accordance with workplace procedures
	2.4 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures
3 Take appropriate actions	3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures
	3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner
4 Complete documentation	4.1 Examination schedule or work report data is completed in accordance with workplace procedures
	4.2 Documentation is filled in legibly and proofread
	4.3 Documentation is processed in accordance with workplace requirements

Assessment Requirements for TLIB3087 Examine timber structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others when conducting a detailed timber structures examination
- examining a range of timber structure types
- following operational instructions and work sequences when examining timber structures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using measuring instruments and equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- planning and organising remedial work
- reading and interpreting relevant plans and specifications
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- taking appropriate action for identified defects.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- hazards that may exist when conducting a detailed timber structures examination and ways of controlling the risks involved
- problems that may occur when conducting a detailed timber structures examination and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- timber structures examination methods and fault detection techniques
- workplace procedures for conducting a detailed timber structures examination.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, SDSs/MSDSs, rail industry standards, codes of practice and operation manuals.

Assessment Requirements for TLIB3088 Examine steel structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others when conducting a detailed steel structures examination
- examining a range of structure types
- following operational instructions and work sequences when undertaking steel structures examination
- identifying relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- identifying, selecting and using measuring instruments and equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- planning and organising remedial work
- reading and interpreting relevant plans and specifications
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance workplace procedures
- taking appropriate action for identified steel structures defects
- working collaboratively with others when conducting a detailed steel structures examination.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- fault detection techniques
- hazards that may exist when conducting a detailed steel structures examination and ways of controlling the risks involved
- problems that may occur when conducting a detailed steel structures examination and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- steel structures examination methods and techniques
- workplace procedures for conducting a detailed steel structures examination.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB3094 Check and repair track geometry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check and repair track geometry, in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes determining the job requirements, restoring track geometry, checking track compliance after work and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally in a team environment. It involves the application of routine operational principles and procedures when checking and repairing track geometry, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine job requirements	1.1 Faults and deficiencies in track geometry are identified, and work required to restore track to required standard is determined
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Appropriate repair methods are identified to enable repairs to be effected
	1.4 Job requirements and resources are determined in accordance with workplace procedures and scope of work
2 Restore track geometry	2.1 Survey data is used as required to establish correct geometry
	2.2 Appropriate lifting and lining methods and equipment are used to lift and line track to restore running surface to required geometry in accordance with workplace standards and procedures
3 Confirm compliance after work	3.1 Track geometry is checked for compliance with acceptance rail industry standards
	3.2 Vertical and horizontal structural and overhead clearances are checked against required standards to allow safe passage of trains
	3.3 Track structure where work has been undertaken is checked for compliance with standards required to enable reinstatement of service
	3.4 Appropriate operating conditions are applied in accordance with workplace procedures
4 Complete documentation	4.1 Required documentation procedures and processes are confirmed
	4.2 Documentation is filled in legibly and proofread
	4.3 Documentation is processed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3094B Check and repair track geometry.

Assessment Requirements for TLIB3094 Check and repair track geometry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- assessing and identifying track geometry defects against required rail industry standards and applying appropriate restrictions
- certifying track to operational standards after repair work is completed
- checking the horizontal and vertical alignment, cross-level and cant of the track
- confirming safe clearances of any structure erected adjacent to or over the track
- determining appropriate repair methods for identified faults
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using tools and equipment required for checking and repairing track geometry
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning and organising work, including determining work requirements and work methods
- reading and interpreting relevant instructions, procedures, information, plans, drawings and specifications
- recording and reporting results of track work in accordance with workplace procedures
- reporting and rectifying identified problems within limits of own role, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate lifting and lining methods, and equipment to correct geometry defects
- using appropriate lifting and lining methods, and equipment to restore running surface to required geometry
- using appropriate measurement methods to assess and correct track geometry defects

© Commonwealth of Australia, 2025 Industry Skills Australia

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and/or work authorisation and work completion processes and procedures
- emergency procedures
- fault detection techniques
- hazards that may exist when checking and repairing track geometry, and ways of controlling the risks involved
- maintenance and measuring of track geometry workplace procedures
- problems that may occur when checking and repairing track geometry, and action that can be taken to report or resolve these problems that may occur when measuring track geometry
- relevant rail industry standards, technical specifications and workplace manuals and/or procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant work recording procedures
- track certification requirements
- track geometry acceptance standards
- track geometry maintenance methods and techniques
- track stability and the work requirements for different weather conditions
- workplace procedures for checking and repairing track geometry.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIB3095 Check and repair points and crossings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check and repair points and crossings in accordance with rail industry standards, safeworking and regulatory requirements, and workplace procedures.

It includes determining job requirements, maintaining components and tolerances, installing components, conducting post-installation checks and completing required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when checking and repairing points and crossings, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine job requirements	1.1 Faults and deficiencies in points and crossings are identified and work required to restore track to required standard is determined
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Repair methods are appropriately identified to enable repairs to be made
	1.4 Job requirements are determined in accordance with workplace procedures, and scope of work activities and resources required are identified
2 Maintain components and tolerances	2.1 Clearances are adjusted to specifications to ensure correct functioning
	2.2 Wearing surfaces are cleaned and lubricated as required to minimise wear and ensure correct functioning
3 Install components	3.1 New components are prepared to specifications ready for installation
	3.2 Tools and equipment required for installation are identified and accessed
	3.3 New and replacement components are installed in accordance with rail industry standards and workplace procedures
4 Conduct post-installation checks	4.1 Functional checks are carried out to ensure correct operation
	4.2 Completed work is checked for compliance to acceptance standards in accordance with workplace procedures
	4.3 Operating conditions are applied appropriately, in accordance with workplace procedures
5 Complete documentation	5.1 Required documentation procedures and processes are confirmed

© Commonwealth of Australia, 2025 Industry Skills Australia

5.2 Documentation is filled in legibly and proofread

5.3 Documentation is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB3095 Check and repair points and crossings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- cleaning and adjusting components, and/or preparing and installing components
- completing relevant documentation accurately and to required workplace standards
- determining work requirements and work methods
- identifying defects in special track work affecting safe operation
- identifying faults and appropriate repair methods
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying/locating defects in points and crossings
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, technical data, standards and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and applying appropriate lubricants in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace procedures
- selecting and using appropriate installation and repair techniques and equipment to correct defects in points and crossings
- using appropriate equipment and methods to make accurate measurements on points and crossings
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- component replacement techniques
- defect tolerances and maintenance techniques
- defects that can occur in points and crossings
- documentation and record keeping requirements
- features and principles of operation of points and crossings
- hazards that may exist when checking and repairing points and crossings, and ways of controlling the risks involved
- installation and maintenance requirements for manual points equipment
- measurement techniques
- points and crossings rail industry Standards
- problems that may occur when checking and repairing points and crossings, and action that can be taken to report or resolve these problems
- relevant clearances/tolerances specifications required when checking and repairing points and crossings
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- special maintenance requirements for points and crossings
- types of lubricants and SDSs/MSDSs and manufacturer instructions
- workplace procedures for checking and repairing points and crossings.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

TLIB3098 Examine concrete/masonry structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to examine concrete/masonry structures in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes obtaining all relevant previous reports, performing a detailed examination, initiating appropriate necessary actions and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when conducting a detailed concrete/masonry structures examination, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Obtain previous reports	1.1 Operational history of structure from available sources is reviewed
	1.2 Previous defects identified in reports are noted to enable rechecking of problem areas
	1.3 Relevant personnel are contacted to identify reported complaints or indications of wear or damage
2 Perform detailed examination	2.1 Hazards are identified, risks are assessed and risk control measures are implemented
	2.2 Concrete and masonry structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures
	2.3 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures
	2.4 Defects or deficiencies are identified in accordance with workplace procedures
3 Take appropriate actions	3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures
	3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner
4 Complete documentation	4.1 Examination schedule or work report data is completed in accordance with workplace procedures
	4.2 Documentation on work undertaken is completed and processed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3098A Examine concrete/masonry structures.

Assessment Requirements for TLIB3098 Examine concrete/masonry structures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others when conducting a detailed concrete/masonry structures examination
- examining a range of structure types
- following operational instructions and work sequences when undertaking concrete/masonry structures examination
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using measuring instruments and equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant plans and specifications
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- taking appropriate action for identified defects
- working collaboratively with others when conducting a detailed concrete/masonry structures examination.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- concrete/masonry structures examination methods and techniques
- fault detection techniques
- hazards that may exist when conducting a detailed concrete/masonry structures examination and ways of controlling the risks involved
- problems that may occur when conducting a detailed concrete/masonry structures examination and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant recording and documentation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions
- workplace procedures for conducting concrete/masonry structures examinations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB3099 Examine track infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to examine track and right of way infrastructure in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes preparing for examination, examining track and right of way, analysing examination results, and reporting findings.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when examining track infrastructure, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for examination	1.1 Examination task is reviewed to establish requirements
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Equipment appropriate to task is selected and checked for correct operation in accordance with manufacturer instructions and workplace procedures
2 Examine track	2.1 Examination task is undertaken in accordance with workplace procedures
	2.2 Condition of track or right of way infrastructure being examined is recorded in accordance with workplace procedures
	2.3 Measurements of track or right of way infrastructure being examined are taken and recorded in accordance with workplace procedures
3 Analyse examination results	3.1 Available data is analysed to identify trends, defects or variations from allowable tolerances
	3.2 Appropriate action is taken to appropriately safeguard operation of the rail system
4 Report findings	4.1 Examination schedule or work report data is completed in accordance with workplace procedures
	4.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner
	4.3 Results of analysis are prioritised and reported to relevant personnel in accordance with workplace procedures
	4.4 Documentation is completed as required, in accordance with workplace procedures

Assessment Requirements for TLIB3099 Examine track infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- applying track and right of way infrastructure condition standards
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- measuring, calculating and recording data accurately
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information, plans, drawings and specifications
- reading and interpreting track recording data
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- using and maintaining measurement equipment and tools
- working systematically with required attention to detail without injury to self or others
- writing clear and succinct reports.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- data analysis techniques for analysing track and right of way infrastructure parameters
- hazards that may exist when examining track and right of way infrastructure, and ways of controlling the risks involved
- problems that may occur when examining track, track geometry and right of way and action that can be taken to report or resolve these problems
- relevant records procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track and right of way defects and their causes
- track and right of way infrastructure rail industry standards
- track deterioration rates under differing operating conditions
- track measurement equipment and techniques
- workplace procedures for examining, recording and reporting track and right of way infrastructure.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in appropriate range of situations in the rail environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, rail industry standards, regulations, rules and codes of practice.

TLIB3100 Visually inspect track infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to visually inspect track infrastructure in accordance with safeworking and regulatory requirements, and workplace procedure.

It includes patrolling the track and right of way infrastructure, and recording and documenting identified defects in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when visually inspecting railway track infrastructure, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Patrol track infrastructure	1.1 Appropriate inspection method is used to conduct visual examinations of track and right of way, to identify defects
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Visual examinations are performed in accordance with workplace procedures and inspection schedules
	1.4 Variations from allowable tolerances, defects and deficiencies likely to affect train safety are identified to enable appropriate action to be taken on the repairs required
	1.5 Unsatisfactory conditions are assessed in terms of seriousness and priority
2 Record and document defects	2.1 Defects and deficiencies are reported to enable repairs to be undertaken in a timely manner
	2.2 Inspection schedule or work report data is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3100 Visually inspect track infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- completing relevant documentation
- identifying different types of track and right of way infrastructure defects
- identifying, selecting and using tools and equipment
- implementing contingency plans
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- recording and documenting identified defects in relation to workplace standards
- recording and reporting results of visually inspecting track and right of way in required format
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contents of relevant technical specifications and manuals
- defect deterioration under different operating conditions
- different types of track and right of way defects
- emergency procedures
- fault identification and analysis techniques
- hazards that may exist when visually inspecting track and right of way, and ways of controlling the risks involved
- problems that may occur when visually inspecting track geometry and right of way infrastructure, and action that can be taken to report or resolve these problems
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- techniques for prioritising defect rectification
- track and right of way infrastructure rail industry standards
- workplace procedures for visually inspecting track and right of way infrastructure.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3102 Adjust rail

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to adjust rail in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying and determining the requirements for rail adjustment, undertaking rail adjustment, and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when adjusting rail, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and determine rail adjustment requirements	1.1 Appropriate adjustment method is determined and required resources are arranged
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Adjustment length is established depending on track geometry and location, in accordance with workplace procedures
2 Adjust rail	2.1 Anchor points are identified and created as required to enable rail adjustment to be undertaken in accordance with workplace procedures
	2.2 Track is released and rail is vibrated to achieve stress free state in accordance with workplace procedures
	2.3 Measurements are appropriately taken and used to calculate adjustment requirements in accordance with workplace procedures
	2.4 Rail length is adjusted using appropriate method to achieve desired rail stress
	2.5 Rail is joined using determined appropriate method in accordance with workplace procedures
	2.6 Track fastenings are restored in accordance with workplace procedures
	2.7 Creep control marks are installed or reset in continuous welded rail track as required, in accordance with workplace procedures
3 Complete documentation	3.1 Completed work is checked for compliance with rail industry standards to ensure safe operations of trains and compliance records are processed
	3.2 Documentation is completed and processed, in accordance with workplace procedures

Assessment Requirements for TLIB3102 Adjust rail

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- ensuring track is restored in accordance with operational procedures
- establishing appropriate adjustment length
- identifying and determining appropriate methods for adjusting rail
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- installing and resetting creep control marks in continuous welded rail track, as required
- interpreting and following operational instructions and prioritising work
- measuring and calculating adjustment condition
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- taking appropriate measurements and calculating adjustments
- using rail adjustment procedures for different track configurations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- creep control marks
- documentation and record keeping requirements
- hazards that may exist when adjusting rail and ways of controlling the risks involved
- problems that may occur when adjusting rail and action that can be taken to report or resolve these problems
- rail adjustment methods and critical aspects of rail stress
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- temperature and alignment limitations on rail gap adjustment
- workplace procedures for adjusting rail.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB3105 Prepare electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment prior to an electric passenger train entering service.

It includes inspecting equipment and work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting the results of inspection and testing in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out preparation checks	1.1 Location of train is determined in accordance with allocation procedures
	1.2 Organisational safety controls are identified and acted on
	1.3 Relevant work health and safety (WHS)/occupational health safety (OHS) requirements are followed to prevent injury and damage
2 Inspect, start and test equipment	2.1 Required checks, procedures and standards are identified prior to start up
	2.2 Prior to start up, relevant equipment is inspected in accordance with workplace pre-operational functional safety check procedures and operational instructions
	2.3 Train is started up in accordance with operational instructions
	2.4 Following start up, relevant equipment and components are tested in accordance with workplace procedures
	2.5 Aspects of equipment found to be outside operational specifications are reported for appropriate action
	2.6 Safety warning systems are checked for operational effectiveness
	2.7 Control systems are checked in accordance with workplace policies and procedures
	2.8 Train braking systems are applied and released to ensure they are operating correctly
	2.9 Faults are identified and appropriate corrective action is taken to ensure operational safety
3 Carry out visual inspection and check condition of train	3.1 Visual inspection is conducted in accordance with workplace procedures to identify any defects that would prevent safe transit
	3.2 Communication is maintained with relevant personnel to ensure safe, efficient and complete inspection
	3.3 Condition of train consist is visually inspected and faults are rectified and/or reported

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4 Conditions requiring urgent action are noted and appropriate action is taken to initiate immediate response
	3.5 Passenger facilities are checked to ensure they are clean
	3.6 Passenger operated equipment is visually checked to ensure operational readiness
4 Record and report faults and/or defects	4.1 Faults and/or defects are accurately reported in accordance with organisational requirements
	4.2 Accurate records are kept in accordance with organisational requirements
	4.3 Potential defects that may affect future safety of equipment are reported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3105A Prepare electric passenger train.

Assessment Requirements for TLIB3105 Prepare electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking and testing train equipment in accordance with workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- inspecting electric passenger train exterior visually in accordance with workplace procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment and communications technology when checking and assessing equipment operational capability
- selecting and using required personal protective equipment conforming to work health and safety (WHS)/occupational health and safety (OHS) and industry standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- equipment characteristics, capabilities and limitations
- housekeeping procedures
- operational safety requirements when preparing an electric passenger train for service
- problems that may occur when preparing an electric passenger train for service, and appropriate action that can be taken to resolve these problems
- relevant safety, WHS/OHS, and environmental procedures and regulations
- workplace procedures for checking and assessing equipment operational capability when preparing an electric passenger train for service.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3108 Test operation of electric passenger train braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to test the operation of an electric train braking system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for train brake testing, testing train brake operation, dealing with identified faults, and recording brake test results in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures when testing electric train braking systems, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for train brake testing	1.1 Work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, policies and procedures are identified and followed
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Train is isolated or secured in accordance with workplace procedures to make the work area safe for testing
	1.4 Brake system is checked to ensure it is ready for testing
2 Test train brake operation	2.1 Brake tests are conducted to ensure compliance to required rail industry standards
	2.2 Modified brake tests are conducted in accordance with workplace procedures to meet required rail industry standard, as required
	2.3 Continuity tests are conducted in accordance with workplace procedures to ensure train braking system meets functional specifications
	2.4 Brakes are applied and released on train and their function is confirmed
	2.5 Faults are identified and appropriate corrective action is taken to ensure operational safety
3 Deal with identified faults	3.1 Identified faults are reported, rectified or isolated in accordance with workplace procedures
	3.2 Confirmation/verification to continue is determined in accordance with workplace procedures
	3.3 Detachment/uncoupling arrangements are made in accordance with operational requirements, as required
	3.4 Faults or defects found during brake tests are recorded and/or reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3108 Test operation of electric passenger train braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices and procedures
- assessing brake system defects
- conducting all relevant continuity brake system tests in accordance with workplace procedures and functional specifications
- conducting pre-safety tasks prior to brake test
- documenting outcomes of operation tests in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable minimum rail industry standards and codes of practice and/or guidelines
- brake systems, their components and their operation
- communications protocols
- diagnostic techniques
- documentation requirements relating to brake testing
- emergency procedures
- possible faults and appropriate reporting and rectification/isolation procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures
- types of brake tests and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB3112 Prepare electric passenger train as part of guard duties

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required as part of guard duties to check and assess the operational capabilities of equipment when preparing an electric passenger train prior to entering service.

It includes preparing for checks; inspecting, starting and testing equipment; checking equipment; carrying out visual checks and reporting the results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines and workplace requirements.

Preparing an electric passenger train will ensure equipment:

- is free from damage, leaks and obstructions that may prejudice safety or limit operational capability
- operates within prescribed limits.

Safety checks and equipment tests are performed without supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for checks	1.1 Location of train is determined in accordance with allocation procedures
	1.2 Organisational safety controls are identified and acted upon
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage
2 Inspect, start and test equipment	2.1 Checks, procedures and standards are identified as required
	2.2 Relevant equipment is inspected in accordance with workplace pre-operational functional safety check procedures and operational instructions
	2.3 Relevant equipment is started and equipment and components are tested in accordance with workplace procedures
	2.4 Aspects of equipment found to be outside operational specifications are reported and/or recorded for appropriate action
	2.5 Warning systems are checked for operational effectiveness
	2.6 Control systems are checked in accordance with workplace policies and procedures
	2.7 Visual inspection of train braking systems is conducted to ensure compliance with organisational specifications
3 Check equipment and visually inspect train	3.1 Visual inspection is conducted in accordance with workplace procedures to identify any defects that would prevent safe transit
	3.2 Communication is maintained with relevant personnel to ensure safe, efficient and complete inspection
	3.3 Condition of train consist is visually inspected and faults are

© Commonwealth of Australia, 2025 Industry Skills Australia

	rectified and/or reported
	3.4 Conditions requiring urgent action are noted and appropriate action is taken to initiate immediate response
	3.5 Passenger facilities are checked to ensure they are clean and fit for service
	3.6 Passenger operated equipment is visually checked to ensure operational readiness
4 Record and report faults and defects	4.1 Faults and defects are accurately recorded and/or reported in accordance with workplace requirements
	4.2 Accurate records are kept in accordance with workplace requirements
	4.3 Potential defects that may affect future safety of equipment are recorded and/or reported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3112A Prepare electric passenger train as part of guard duties.

Assessment Requirements for TLIB3112 Prepare electric passenger train as part of guard duties

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking and testing train equipment is free from damage, leaks and obstructions that may prejudice safety or limit operational capability, in accordance with workplace requirements
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying typical faults/defects that may occur on electric passenger trains
- implementing contingency plans
- inspecting the interior of an electric passenger train visually
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and completing activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- reporting, recording and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment characteristics, capabilities and limitations
- housekeeping procedures
- operational safety requirements when preparing an electric passenger train for service
- problems that may occur when preparing an electric passenger train for service and appropriate action that can be taken to resolve these problems
- workplace procedures for checking and assessing operational capability of equipment when preparing an electric passenger train for service.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3113 Diagnose and rectify minor faults on motive power units and rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults on motive power units and rolling stock in accordance with workplace requirements.

It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, checking and reporting minor maintenance and/or repairs, and providing support in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine minor fault diagnosis and rectification procedures when maintaining the safety and operation of equipment across a variety of operational rail transport contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify maintenance and repair requirements	1.1 Hazards are identified, risks are assessed and risk control measures are implemented
	1.2 Condition of rolling stock and/or motive power unit ancillary equipment is assessed
	1.3 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
	1.4 Equipment and tools required are identified and obtained
	1.5 Equipment is prepared and work areas are checked to ensure maintenance, repair and component exchange activities are carried out in a safe environment
	1.6 Faulty or damaged components or equipment that are not able to be repaired or exchanged are reported for further maintenance in accordance with workplace procedures
2 Conduct minor maintenance and routine repairs	2.1 Minor maintenance, routine repairs and component exchange are carried out in accordance with manufacturer specifications and workplace procedures
	2.2 Equipment, tools and materials required are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage
3 Check and report minor maintenance and repairs	3.1 Minor maintenance, repairs and component exchange activities are checked for compliance with safety requirements and workplace procedures
	3.2 Equipment is checked to confirm it has been restored to operational standards
	3.3 Maintenance, repair and component exchange activities are documented and filed in accordance with workplace procedures and regulatory requirements
	3.4 Work area is checked for cleanliness and operational safety

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3113B Diagnose and rectify minor faults on motive power units and rolling stock.

Assessment Requirements for TLIB3113 Diagnose and rectify minor faults on motive power units and rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out checks on different types of motive power units and rolling stock
- carrying out minor maintenance, repair and component exchange activities correctly
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying possible faults and defects and appropriate corrective measures
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to different tools and equipment
- reading and interpreting relevant instructions, procedures, information and signs
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- relevant sections of applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines, and safeworking system requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection requirements
- tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- typical minor repair problems that can occur, and related action that should be taken in

© Commonwealth of Australia, 2025 Industry Skills Australia

accordance with workplace procedures
- workplace component and material supply system
- workplace documentation and records requirements
- workplace procedures and policies for diagnosing and repairing minor faults.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3118 Apply awareness of railway fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop an awareness of railway fundamentals. This includes the track, trackside equipment, fixed structures, rail vehicles and rolling stock.

This unit is intended for people entering the rail industry who will be required to enter and work in the rail corridor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify track and structures terminology and features	1.1 Basic terminology is explained for track, trackside equipment and fixed structures

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Features of track, including geography, geometry and classes are explained
	1.3 Bridges and other infrastructure categories and their purpose are identified
	1.4 Other principal structure types and their purpose are identified
	1.5 Relevant stakeholders to whom structural faults and anomalies are reported, are identified
2 Identify overhead and/or electrical components	2.1 Principal overhead and/or other electrical components and their purpose are identified
	2.2 Power sources are identified
	2.3 Methods of isolation and their purpose are identified in accordance with organisational procedures
3 Identify rail track vehicles and rolling stock	3.1 Types of trains and rolling stock are identified
	3.2 Types of machines used for track installation and maintenance are identified
	3.3 Types of rail track vehicles are identified
	3.4 Relevant stakeholders to whom rolling stock faults and anomalies are reported, are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

TLIB3120 Test mechanical signalling equipment and isolate faults

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to test mechanical signalling equipment and isolate faults in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes undertaking preparation tasks, conducting testing and/or isolating equipment, checking equipment operation, and finalising the testing and/or isolation of equipment, in accordance with workplace procedures and relevant regulatory requirements.

People achieving competence in this unit will need to fulfil rail industry standards and/or guidelines relevant to testing mechanical signalling equipment and isolating faults.

Work is performed under minimal supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures when testing and isolating faults in mechanical signalling equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to test and/or isolate equipment	1.1 Testing is appropriately sequenced in accordance with job schedule
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Appropriate personnel are consulted to ensure work is coordinated effectively with others involved on the worksite
	1.4 Location of equipment to be tested/isolated is determined from job specifications and diagrams
	1.5 Tools, equipment and testing devices needed to test and/or isolate are obtained in accordance with established procedures and are checked for correct operation and safety
2 Test and/or isolate equipment	2.1 Initial visual check of operational equipment is performed to identify equipment faults
	2.2 Equipment is isolated in accordance with relevant operational rules and procedures
	2.3 Established methods for dealing with unexpected situations are discussed with appropriate personnel and documented
	2.4 Unexpected situations are dealt with safely and with the approval of an authorised person
3 Check equipment operation	3.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures
	3.2 Authorised equipment check is carried out to identify equipment faults in accordance with operating procedures
	3.3 Operational effectiveness of equipment is confirmed through observation during train movements as required
	3.4 Equipment faults are correctly identified and recorded, and appropriate corrective action is taken
	3.5 Service equipment is locked and secured to prevent unauthorised access

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.6 Work completion is documented and appropriate personnel are notified in accordance with established procedures
4 Finalise testing and/or isolation of equipment	4.1 Test results are documented in accordance with organisation requirements
	4.2 Faulty or replaced equipment is tagged and reported to the appropriate personnel for rectification
	4.3 Fully operational equipment is handed over to approved personnel ensuring that hand over procedures are accurately followed and final documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIB3120 Test mechanical signalling equipment and isolate faults

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic mechanical, hydraulic, pneumatic and electrical awareness to testing and fault identification activities
- applying relevant workplace procedures
- checking equipment operation
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant meters, gauges, equipment and tools when testing mechanical signalling equipment and isolating faults
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- characteristics, capabilities and limitations of mechanical signalling equipment
- characteristics, capabilities and limitations of testing devices
- documentation and record requirements
- fault-finding techniques and procedures
- faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify the identified faults in the equipment or its components
- focus of operation of work systems, equipment, management and site operating systems for testing mechanical signalling equipment and isolating faults
- guidelines relating to the safe use of machinery and equipment including the tagging of unserviceable or damaged items
- mechanical, hydraulic, pneumatic and electrical awareness
- operational safety requirements for signalling equipment
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rail industry standards, rules, codes of practice and guidelines, and/or organisational procedures for inspecting, testing, isolating and tagging mechanical signalling equipment and isolating faults
- site layout and obstacles
- tools, meters, gauges and equipment used when testing mechanical signalling equipment and isolating faults and the precautions and procedures that should be followed in their use
- workplace procedures for testing mechanical signalling equipment and isolating faults, including tagging and reporting faulty equipment and components.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB3123 Apply awareness of motive power unit fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply awareness of motive power unit fundamentals.

It includes identifying basic motive power unit types, air/ vacuum systems, electrical systems, mechanical systems, control systems, cooling and lubricating systems, auxiliary equipment, safety system equipment and their basic operations.

This unit is intended as an introduction for people entering the rail industry who will be working on or around motive power units.

A motive power unit is a rail vehicle used to provide the power to move itself or other vehicles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify basic motive power unit types	1.1 Different motive power unit types and/or gauges currently in operation are identified
	1.2 Basic layout of different types of motive power unit is identified
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
2 Identify air/vacuum systems and operation	2.1 Basic air/vacuum components relevant to motive power unit type are located and identified
	2.2 Uses and operation of air/vacuum system are identified
3 Identify electrical systems and operation	3.1 Basic electrical components relevant to motive power unit type are located and identified
	3.2 Uses and operation of electrical system are identified
4 Identify mechanical systems and operation	4.1 Basic mechanical components relevant to motive power unit type are located and identified
	4.2 Uses and operation of mechanical system are identified
5 Identify control systems and operation	5.1 Basic control system components relevant to motive power unit type are located and identified
	5.2 Uses and operation of control systems are identified
6 Identify cooling and lubricating systems and operation	6.1 Basic cooling and lubricating system components relevant to motive power unit type are located and identified
	6.2 Uses and operation of cooling and lubricating systems are identified
7 Identify auxiliary equipment and its operation	7.1 Basic auxiliary equipment components relevant to motive power unit type are located and identified
	7.2 Uses and operation of auxiliary equipment are identified
8 Identify safety system equipment and their	8.1 Safety system equipment and components relevant to motive power types are identified

TLIB3124 Apply awareness of steam locomotive fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply an awareness of steam locomotive fundamentals.

It includes configurations, components, types of equipment and their basic operation.

This unit is intended as an introduction for people entering the rail industry who will be working on or around steam locomotives.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify basic locomotive	1.1 Different locomotive configurations are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

configurations	1.2 Basic layout of different types of locomotive is identified
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
2 Identify boiler construction and components	2.1 Different boiler construction and configurations are identified
	2.2 Primary boiler fittings are identified
	2.3 Boiler secondary fittings are identified
3 Identify air/vacuum systems and operation	3.1 Basic air/vacuum components relevant to locomotive type are located and identified
	3.2 Uses and operation of air/vacuum system are identified
4 Identify electrical systems and operation	4.1 Basic electrical components relevant to locomotive type are located and identified
	4.2 Uses and operation of electrical system/s are identified
5 Identify mechanical systems and operation	5.1 Basic mechanical components relevant to locomotive type are located and identified
	5.2 Uses and operation of mechanical system are identified
6 Identify control systems and operation	6.1 Basic control system components relevant to locomotive type are located and identified
	6.2 Uses and operation of control systems are identified
7 Identify lubricating systems and operation	7.1 Basic lubricating systems and components relevant to locomotive type are located and identified
	7.2 Uses and operation of lubricating systems are identified
8 Identify auxiliary equipment and its operation	8.1 Basic auxiliary equipment components relevant to locomotive type are located and identified
	8.2 Uses and operation of auxiliary equipment are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB3124A Apply awareness of steam locomotive fundamentals.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIB3124 Apply awareness of steam locomotive fundamentals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying equipment on a steam locomotive including:
  - air/vacuum systems and operation
  - auxiliary equipment and its operation
  - boiler construction and components
  - control systems and operation
  - electrical systems and operation
  - lubricating systems and operation
  - mechanical systems and operation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- boiler and/or pressure vessel construction configuration
- fundamentals of track layout
- locomotive boiler code of practice
- relevant railway terminology
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- steam locomotive fundamentals including:
  - auxiliary equipment
  - cooling and lubricating systems

© Commonwealth of Australia, 2025 Industry Skills Australia

- electrical components and equipment, as required
- lubricating systems
- mechanical equipment, as required
- primary boiler fittings
- safety system equipment and components
- secondary boiler fittings
- steam locomotive control systems
- types of air/vacuum equipment

- workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB3126 Assist in the testing of heritage train braking systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assist in testing heritage train braking systems, in accordance with organisational procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes assisting with locomotive brake testing, train brake examination and releasing handbrake.

This unit is intended for people who will be assisting with testing brake systems on steam and/or heritage locomotives and trains under the direction of the driver.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Assist with locomotive brake testing	1.1 Under the direction of the driver, the application of the locomotive brake is observed to ensure it is within operational parameters
	1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements, codes of practice, policies and procedures are identified and followed
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Work area is made safe for testing by ensuring locomotive is isolated and secured in accordance with workplace procedures
	1.5 Problems, faults or malfunctions are identified, responded to and/or reported in accordance with workplace procedures
2 Assist with train brake examination	2.1 Under the direction of the driver, train brake is applied in accordance with organisational procedures
	2.2 Under the direction of the driver, train brake is released in accordance with organisational procedures
3 Apply and release handbrake	3.1 Under the direction of the driver, handbrake is applied in accordance with organisational procedures
	3.2 Under the direction of the driver, handbrake is released in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3126 Assist in the testing of heritage train braking systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying and removing handbrakes and brakes on a heritage locomotive
- applying relevant safeworking system and workplace procedures
- assisting the driver with a heritage train brake test
- communicating effectively with the train driver
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with organisational procedures
- working collaboratively with the driver when testing heritage locomotive and train braking systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- brake systems, their components and their operation
- procedures to test heritage train brake systems
- relevant work health and safety (WHS)/occupational health and safety (OHS) operational procedures and regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- types of brake tests and their purpose
- when it is applicable to release train brake.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIB3129 Conduct pre-movement checks on rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct pre-movement checks on rolling stock in accordance with relevant workplace practices, regulations and codes of practice.

It includes conducting pre-movement checks, moving and stabling the rolling stock in accordance with organisational requirements.

This unit applies to people required to carry out these activities as part of a maintenance role within a defined location.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Carry out pre-movement checks	1.1 Allocation of rolling stock is checked in conjunction with appropriate personnel
	1.2 Rolling stock to be inspected and prepared is located
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Completion of all maintenance activities is confirmed
	1.5 Checks for safety controls are conducted in accordance with organisational procedures
	1.6 Internal and external integrity checks are conducted in accordance with organisational procedures
	1.7 Fluid levels are checked and appropriate action is taken as required
2 Move rolling stock	2.1 Rolling stock is shunted in accordance with manufacturer instructions and/or organisational procedures, and faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
	2.2 For critical or serious equipment faults that cannot be readily rectified, rolling stock shunt is halted, faulty equipment is isolated and tagged, and problem is reported for rectification
	2.3 Functionality of equipment is interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
	2.4 Fluid levels are rechecked after starting and appropriate action is taken as required
3 Stable rolling stock	3.1 Correct clearances for stabling location are confirmed
	3.2 Rolling stock is secured in accordance with organisational procedures
	3.3 Personal or equipment lockouts are applied in accordance with organisational procedures as required
	3.4 Appropriate documentation is confirmed, completed and processed in accordance with organisational procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Requirements for TLIB3129 Conduct pre-movement checks on rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in rolling stock and associated equipment and procedures
- documenting outcomes of inspecting rolling stock
- identifying all activities carried out prior to moving rolling stock in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying rolling stock stabling requirements
- identifying who is responsible for authorising moving rolling stock
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting and following relevant instructions, procedures, information and signs
- shunting rolling stock in accordance with organisational procedures
- working collaboratively with others inspecting and preparing rolling stock.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for managing and controlling hazardous situations when preparing and checking rolling stock
- relevant safeworking system and workplace procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and relevant regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- requirements for completing relevant documentation when inspecting and preparing rolling stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB4042 Conduct inspection of safeworking procedures and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct inspection of safeworking procedures and infrastructure in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning and preparing for inspection, inspecting safeworking infrastructure, inspecting for compliance with safeworking procedures, completing required reports and taking remedial action.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of regulatory requirements and operational principles and procedures when conducting an inspection of safeworking procedures and infrastructure, as part of workplace activities across a variety of operational contexts within the Australian rail system. Safeworking procedures and infrastructure inspected may include any of those in use within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for inspection	1.1 Operational procedures and infrastructure to be inspected are identified
	1.2 Inspections are prioritised in accordance with inspection schedule and availability of required resources
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Relevant instructions and information are gathered
2 Inspect safeworking infrastructure	2.1 Safeworking equipment is inspected to ensure it is appropriately located and operating correctly
	2.2 Safeworking facilities are checked for correct operation and maintenance
3 Inspect for compliance with safeworking procedures	3.1 Safeworking forms are checked for sufficient supply and correct completion
	3.2 Work practices of relevant rail safety workers are checked to ensure compliance with safeworking procedures
4 Complete reports and take remedial action	4.1 Reports are completed and processed in accordance with workplace requirements
	4.2 Follow-up action is taken as required to ensure safe passage of train and equipment and is documented in accordance with safeworking procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

TLIB4071 Install and maintain pole mounted switches and transformers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to install and maintain pole mounted switches and transformers in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes planning installation and maintenance, preparing worksite, installing switches and transformers in accordance with workplace specifications, maintaining switches and transformers, and completing work.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rail industry standards and/or guidelines.

People working on energised overhead or underground systems or electrical equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent to carry out the work involved.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when installing and maintaining pole mounted switches and transformers, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan installation and maintenance	1.1 Works order is analysed and confirmed as required by site inspection
	1.2 Resources required for the job are identified and scheduled in accordance with operational procedures
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Switch equipment and transformer are transported to worksite
	1.5 Liaison and communication issues are resolved in accordance with organisational negotiation procedures
2 Prepare the worksite	2.1 Work plan and resources required are confirmed/checked at worksite
	2.2 Personnel participating in the activity, including plant operators and contractors, are fully briefed
	2.3 Road signs, barriers and warning devices are positioned to ensure a safe worksite
	2.4 Safeworking practices are observed on or about the running track/line
	2.5 Worksite is laid out in accordance with work plan to ensure minimum waste and rework
	2.6 Systems/circuits are isolated as required, proved safe to work on in accordance with works order, and electrical permits are received/accepted/returned as required
3 Install switches and transformers	3.1 Switch equipment, transformers and earthing systems are installed and connected
	3.2 Transformer is tested and voltage output is adjusted

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.3 Visual inspection is carried out to confirm equipment/apparatus is in a safe condition to test and/or commission
	3.4 Commission is carried out in accordance with works order/plan
4 Maintain switches and transformers	4.1 Maintenance requirement is confirmed by detailed site diagnosis
	4.2 Maintenance, including removal, repair, replacement and reinstatement, is carried out in accordance with works order and the condition of equipment
5 Complete work	5.1 Worksite is rehabilitated
	5.2 Appropriate authority is notified on completion of work
	5.3 Records and documentation for updating system data are completed and processed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIB4071 Install and maintain pole mounted switches and transformers

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate repair/testing practices and procedures
- applying relevant workplace procedures
- communicating effectively with others
- communicating plans, intentions and safety criteria to others
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- performing calculations required for installation procedures
- reading and interpreting relevant instructions, procedures, information, technical data, manuals and drawings
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using test equipment and testing techniques
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice, rail industry standards and/or guidelines
- characteristics, capabilities and uses of types of pole mounted switches and transformers
- distribution system earthing procedures as they relate to installing and maintaining electrical switches and transformer equipment
- hazards that may exist when installing and maintaining pole mounted switches and transformers
- live/energised line working techniques and equipment
- problems that may occur when installing and maintaining pole mounted switches and transformers
- relevant electrical/electronic theory and principles
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant organisation and commercial publications, including construction manuals and technical instructions as they relate to installing and maintaining electrical equipment
- relevant recording and documentation procedures
- relevant sections of railway safety management plans, rail industry standards and the Australian/New Zealand Standard for Wiring Rules
- relevant technical regulatory requirements
- statutory/organisation traffic control requirements, work zone regulations and guidance signals for planned operations
- switching or de-energising procedures and maintenance operations
- visual inspection workplace procedures
- workplace procedures for installing and maintaining pole mounted switches and transformers.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB4076 Inspect and prepare a heritage motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to inspect and prepare a heritage motive power unit in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.

It includes checking and preparing a motive power unit, visually examining a motive power unit, conducting in-cab checks, and starting and positioning a motive power unit for service in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Start heritage motive power unit	1.1 Roster is checked and interpreted for day's train driving activities
	1.2 Allocation of motive power units is checked in conjunction with network control officer and roster clerk
	1.3 Motive power unit to be inspected and prepared is located in the yard
	1.4 Motive power unit is started in accordance with manufacturer instructions and operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
	1.5 Where critical or serious equipment faults cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged and problem is reported for rectification
	1.6 Instruments and gauges are observed and readings are interpreted to confirm effective operation, including air and electrical
	1.7 Action is taken to determine cause of identified problems in instruments and gauges, and situation is rectified or reported
	1.8 Fluid levels are rechecked after starting and appropriate action is taken as required
	1.9 Pre-departure checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move
2 Prepare for heritage motive power unit work activities	2.1 Roster is checked and interpreted for day's train driving activities
	2.2 Allocation of motive power units is checked as identified by notices, in conjunction with Network Control Officer and roster clerk
	2.3 Hazards are identified, risks are assessed and risk control measures are implemented
	2.4 Trackside safety and basic electrification awareness procedures are followed while locating allocated motive power unit in the yard

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.5 Motive power unit inspection and preparation duties are identified and interpreted
	2.6 Train schedules, notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
	2.7 Communication equipment required for day's operations is obtained and checked to ensure it is functional
	2.8 Required personal protective equipment is obtained for use prior to day's train driving activities
	2.9 Motive power unit to be inspected and prepared is located in the yard
3 Inspect and prepare heritage motive power unit	3.1 Features, functions and location of motive power unit and associated equipment are identified
	3.2 Logbook is checked to confirm serviceability of unit
	3.3 Preparation and safety checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
	3.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported in accordance with workplace procedures and regulatory requirements
	3.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities, as required, are checked against journey requirements and appropriate action is taken to replenish them as required
	3.6 Relevant WHS/OHS and regulatory requirements are followed
4 Conduct in-cab checks	4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
	4.2 Cab layout is checked and confirmed that it meets operating requirements
	4.3 Pre-departure mechanical checks are correctly performed and correct functioning of equipment is confirmed in accordance with workplace procedures and manufacturer operating requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
	4.5 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
	4.6 Seat, windows, blinds, air conditioners, heaters and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
	4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements
	4.8 Fire extinguisher, emergency toolbox and other required equipment are checked to confirm they are in position and meet operational requirements
5 Complete documentation	5.1 Required documentation concerning inspecting motive power unit is completed and processed in accordance with workplace procedures and regulatory requirements
	5.2 Logbook and other service records on the motive power unit are completed and filed in accordance with workplace procedures and regulatory requirements
6 Position heritage motive power unit	6.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures
	6.2 Motive power unit is operated in accordance with operational procedures and regulatory requirements, within operating and operational constraints
	6.3 Motive power unit is positioned in accordance with operational requirements and directions
	6.4 Motive power unit performance is monitored during operation to confirm effective operation or to identify defects
	6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance
	6.6 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage
	6.7 Network Control Officer and other relevant personnel are

© Commonwealth of Australia, 2025 Industry Skills Australia

	advised that motive power unit is secured in required position and is ready for service

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB4076A Inspect and prepare a heritage motive power unit.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIB4076 Inspect and prepare a heritage motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage motive power units and associated equipment and procedures
- checking and replenishing fluids and carrying out lubrication requirements on a heritage motive power unit
- checking electronic communications equipment is in accordance with required protocol
- conducting a visual inspection of a heritage motive power unit and associated equipment
- documenting outcomes of visual inspection of a motive power unit
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational problems and hazards and taking appropriate action
- preparing a heritage motive power unit prior to service
- reading and interpreting relevant instructions, procedures and information and signs
- working collaboratively with others as part of a train crew.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines, local rail regulations and codes of practice
- braking and safety system procedures for a heritage motive power unit
- cleaning requirements for a heritage motive power unit
- emergency procedures
- external features of a heritage motive power unit that must be checked during a pre-operational visual inspection
- fuel tank capacity and range, where applicable
- functions of all supervisory indicators and controls and related checks for correct operation
- functions of auxiliary systems on a heritage motive power unit and related checks for correct operation
- in-cab pre-operational checks for a heritage motive power unit
- local procedures and operating requirements
- lubrication requirements for a heritage motive power unit
- operating controls procedures to start, accelerate, decelerate and stop a heritage motive power unit
- operating procedures for a heritage motive power unit
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for adjusting controls to optimise the operation of a heritage motive power unit
- procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up a heritage motive power unit
- procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- procedures for operating electronic communications equipment in accordance with required protocol
- procedures for starting and operating auxiliary systems on a heritage motive power unit
- relevant personnel
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- requirements for completing relevant documentation
- start-up procedures for a heritage motive power unit
- typical defects that can occur on a heritage motive power unit and related action that should be taken.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment, and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB4077 Inspect and prepare a heritage steam locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to inspect and prepare a heritage steam locomotive in accordance with relevant workplace practices, rail regulations and codes of practice.

It includes checking and preparing a heritage steam locomotive, visually examining a locomotive, conducting in-cab checks, and moving and positioning a locomotive for service in accordance with workplace procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Light fire and raise steam	1.1 Roster is checked and interpreted for day's train driving activities
	1.2 Allocation of locomotives is checked in accordance with notices and in conjunction with network control officer and roster clerk
	1.3 Locomotive to be inspected and prepared is located in the yard
	1.4 Pre-light-up procedures applicable to the type of fire box are identified and followed to enable safe boiler operation
	1.5 Light-up procedures and safety practices are followed to build up steam within the boiler and to ensure 'smoking' is minimised
	1.6 Instruments and equipment are monitored to ensure safe and efficient operation as steam pressure is raised to operating level
	1.7 Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
2 Prepare for heritage steam locomotive work activities	2.1 Roster is checked and interpreted for day's train driving activities
	2.2 Allocation of locomotives is checked as identified by notices and in conjunction with network control officer and roster clerk
	2.3 Hazards are identified, risks are assessed and risk control measures are implemented
	2.4 Trackside safety and basic electrification awareness procedures are followed while locating allocated locomotive in the yard
	2.5 Locomotive inspection and preparation duties are identified and interpreted
	2.6 Train schedules, notices and other operational and regulatory documentation are accessed and interpreted
	2.7 Communications equipment required for day's operations is obtained and checked to ensure it is functional

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.8 Required personal protective equipment is obtained for use prior to day's train driving activities
	2.9 Locomotive to be inspected and prepared is located in the yard
3 Inspect and prepare heritage steam locomotive	3.1 Features, functions and location of locomotive and associated equipment are identified
	3.2 Logbook is checked to confirm serviceability of locomotive
	3.3 Preparation and safety checks are conducted, in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
	3.4 Locomotive, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported in accordance with workplace procedures and regulatory requirements
	3.5 Availability of appropriate fuel, lubricating oils, water and sand quantities are checked against journey requirements and appropriate action is taken to replenish them as required
	3.6 Relevant WHS/OHS and regulatory requirements are followed
4 Conduct in-cab checks	4.1 Locomotive is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
	4.2 Cab layout is checked and confirmed that it meets operating requirements
	4.3 Pre-departure mechanical checks are correctly performed and correct functioning of equipment is confirmed in accordance with workplace procedures and operating requirements
	4.4 Operational controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
	4.5 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not working correctly
	4.6 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.7 Fire extinguisher, safety equipment, emergency toolbox and any other required equipment are checked to confirm they are in position and meet operational requirements
	4.8 Pre-departure checks are carried out to ensure locomotive is braking and powering effectively and is safe to move
5 Complete documentation	5.1 Required documentation concerning inspecting, preparing and starting up locomotive is completed in accordance with workplace procedures and regulatory requirements
	5.2 Logbook and other service records on the locomotive are completed in accordance with workplace procedures and regulatory requirements
6 Position heritage steam locomotive	6.1 Authority to move and position locomotive is obtained and relevant personnel are advised of intention and procedures
	6.2 Locomotive is operated in accordance with standard procedures and regulatory requirements, within operating and operational constraints
	6.3 Locomotive is positioned in accordance with operational requirements and directions
	6.4 Locomotive performance is monitored during operation to confirm effective operation or to identify defects
	6.5 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance
	6.6 Relevant WHS/OHS and regulatory requirements are followed to ensure safety and to prevent injury and damage
	6.7 Network control officer and other relevant personnel are advised that locomotive is secured in the required position and is ready for service

TLIB4078 Carry out a train roll-by inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out a train roll-by inspection in accordance with organisational policies and procedures, and relevant safeworking requirements.

It includes preparing and conducting a visual roll-by inspection of crossing/passing trains from the ground or on-train to identify equipment, load security or other defects or failure and reporting and/or actioning the inspection results.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare for roll-by inspection	1.1 Appropriate documentation is read to confirm inspection requirements
	1.2 Position is taken at planned time to complete roll-by inspection without personal risk
	1.3 Conditions are assessed and necessary actions are taken to ensure roll-by inspection will be effective
2 Conduct roll-by inspection	2.1 Identification and status of train is confirmed with relevant personnel
	2.2 Condition of rolling stock is observed and identified faults are noted
	2.3 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection
	2.4 Inspection is conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS), network owner and/or organisational policies and procedures to prevent injury and damage
	2.5 Faults requiring immediate action are noted and appropriate action is taken to stop train
3 Report and action roll-by inspection results	3.1 Appropriate personnel are informed of results of roll-by inspection and any faults or defects requiring rectification
	3.2 Inspection results are recorded, reported and/or filed as required, in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB4078 Carry out a train roll-by inspection

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- conducting roll-by inspection of a moving train to identify equipment, load security or other defects or failure
- documenting results of roll-by inspection including faults or defects requiring rectification in accordance with workplace operational procedures
- identifying safe position from which to conduct roll-by inspection
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communications protocols
- contingency management processes
- relevant information/documents
- relevant legislated rail safety requirements, and codes of practice and/or guidelines
- relevant rail danger zones
- relevant safety, WHS/OHS and environmental protection regulations
- relevant sections of the Australian Dangerous Goods (ADG) Code and regulations
- relevant standards, rules, codes of practice, guidelines and specifications for all items requiring examination
- relevant workplace procedures
- types of roll-by inspection of a moving train.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIB4079 Conduct a general train examination

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct a general train examination in accordance with organisational procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for examination; undertaking a general train examination including rolling stock integrity, components and loading; and reporting examination results.

This unit applies to train drivers required to conduct a general train examination.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare for general train examination	1.1 Location of examination and information about items to be examined are obtained and activities are planned
	1.2 Materials, documentation and equipment required for the examination are identified, obtained and prepared for use
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Examination is started at planned time and location to minimise delays to train availability
	1.5 Train identification and status is confirmed and required actions are taken to ensure train remains safe for duration of examination
	1.6 Individual responsibilities required to complete examination are agreed with relevant personnel
	1.7 Conditions are assessed and necessary actions are taken to ensure examination is effective
2 Undertake general train examination	2.1 Examination is undertaken in accordance with organisational procedures
	2.2 Communication is maintained with relevant personnel to ensure safe, efficient and complete examination
	2.3 Condition of rolling stock, couplings and load are examined and dimensions are confirmed appropriate to wagon type and gauge outline requirements
	2.4 Irregularities and load contamination are identified and appropriate action is taken in accordance with organisational and/or network owner policies and procedures
	2.5 Obvious wagon or carriage faults and their locations are reported in accordance with organisational policies and procedures
	2.6 Apparent problems are investigated further and corrected where possible
3 Report examination results	3.1 Conditions requiring urgent action are reported in accordance with organisational policies and procedures, and appropriate action is taken to initiate immediate response
	3.2 Relevant personnel are informed of remedial or other action required prior to completion of examination

Assessment Requirements for TLIB4079 Conduct a general train examination

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- conducting a general train examination
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with organisational procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and organisational procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) requirements
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- contingency management processes
- emergency procedures
- guidelines relating to equipment capability and limitations
- organisational policies and procedures for conducting a general train examination
- rail industry standards and specifications for all items requiring examination
- relevant legislated rail safety requirements, codes of practice and/or guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant rail danger zones
- relevant safety, WHS/OHS, and environmental procedures and regulations
- relevant workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations*, current at the time of assessment.

TLIB4080 Identify, diagnose and rectify minor faults on motive power units and rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults on motive power units and rolling stock in accordance with workplace requirements.

This includes identifying repair requirements, conducting minor repairs, checking and reporting minor repairs.

Work must be carried out in accordance with organisational procedures and regulations, and safeworking codes of practice relevant to fault diagnosis and rectification.

Work involves the application of routine minor fault diagnosis and rectification procedures when maintaining the safety and operation of motive power units and rolling stock across a variety of operational rail transport contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify faults, defects and deficiencies	1.1 Operational capability of rolling stock and/or motive power unit ancillary equipment is evaluated
	1.2 Faulty or damaged components or equipment are identified and assessed
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Impact of faults on work requirements is identified and safe operating capabilities are evaluated
	1.5 Work areas and equipment are made safe for inspection
2 Rectify minor faults	2.1 Minor repairs and/or isolations are carried out in accordance with manufacturer specifications and organisational procedures
	2.2 Equipment, tools and required materials are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications, to prevent injury and damage
3 Check and report minor repairs and/or isolations	3.1 Minor repairs and/or isolations are checked for safety compliance
	3.2 Equipment is checked to ensure it conforms to organisational standards
	3.3 Action taken is reported/recorded in accordance with company procedure
	3.4 Operational capabilities are monitored and further evaluated
	3.5 Communication is maintained with relevant personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB4080 Identify, diagnose and rectify minor faults on motive power units and rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out checks of different types of motive power units and rolling stock
- carrying out minor repairs in accordance with workplace procedures
- communicating effectively with others
- identifying job hazards and required action to minimise, control or eliminate identified hazards
- identifying possible faults, defects and deficiencies, and appropriate remedial activities
- implementing contingency plans
- making decisions based on evaluation of faults, defects, deficiencies and operational capabilities
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating tools and equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- emergency procedures
- isolation systems

© Commonwealth of Australia, 2025 Industry Skills Australia

- operational requirement of rolling stock
- possible faults, defects and deficiencies, and appropriate remedial activities
- relevant rail industry standards and certification requirements
- relevant state/territory regulations, codes of practice and system of safeworking requirements
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures and policies
- tools and equipment required for the task and the procedures and precautions for their care, use and storage
- typical minor repair problems that can occur, and related action that should be taken
- workplace documentation and record requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB4081 Provision a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to provision a motive power unit prior to it entering service.

It includes checking fuel, oil, water and sand levels, and replenishing them as required; restocking consumables; general housekeeping and completing documentation as required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check and replenish fuel, oil, water and	1.1 Motive power unit is positioned and secured at required service point in accordance with organisational requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

sand levels	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Fuel, oil, water and sand levels are checked in accordance with manufacturer and/or organisational procedures
	1.4 Fuel, oil, water and sand levels are replenished as required in accordance with manufacturer and organisational procedures
	1.5 Equipment is used in accordance with manufacturer and organisational procedures
	1.6 Faults and/or deficiencies are identified and reported to relevant personnel
2 Check and restock consumables	2.1 Consumables are checked for availability and serviceability
	2.2 Replacement consumables are acquired in accordance with organisational procedures
	2.3 Faults and/or deficiencies are identified and reported to relevant personnel
3 Carry out general housekeeping	3.1 Rubbish is removed and disposed of in accordance with organisational policies and procedures
	3.2 Relevant areas of motive power unit are cleaned in accordance with organisational policies and procedures
	3.3 Cleaning materials are utilised in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and organisational policies and procedures
	3.4 Faults and/or deficiencies are identified and reported to relevant personnel
	3.5 Documentation is completed in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIB4081 Provision a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking and replenishing consumables in accordance with safety data sheets (SDSs)/material safety data sheets (MSDSs) and/or manufacturer instructions and workplace operational procedures
- checking logbook and service records
- conducting general housekeeping
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following workplace operational instructions
- reading and interpreting relevant instructions, procedures, information, signs, symbols and diagrams.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- potential faults and/or deficiencies
- relevant motive power unit terminology and layout
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant workplace procedures.

TLIB4082 Set up motive power units in multi-coupled consist

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to set up one or more motive power units in multi-coupled consist in accordance with network owner and rail industry standards, rules, codes of practice and guidelines.

It includes preparing, setting up and conducting post start-up checks of motive power units in power or when being hauled dead or offline for multi-consist operation.

These operations are conducted as part of operating motive power units and may be carried out as part of a team of people working within rail operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare motive power units for coupling	1.1 Identification and location of motive power units to be coupled is confirmed
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Motive power units are marshalled into desired position and orientation to meet consist requirements in accordance with organisational policies and procedures
2 Set up motive power units for multi-consist operation	2.1 Motive power units are coupled in accordance with manufacturer instructions and/or organisational procedures
	2.2 Relevant hose pipes and electrical connections are made in accordance with manufacturer instructions and/or organisational procedures
	2.3 Fuel lines are coupled as required in accordance with manufacturer instructions and/or organisational procedures
	2.4 Area is checked before pantographs are raised or lowered to ensure safety in accordance with organisational procedures, as required
3 Set up in-cab controls for multi-consist operation	3.1 Motive power unit controls are set up for multi-consist operation in accordance with manufacturer and/or organisational policies and procedures
	3.2 Vigilance and safety controls are set-up as required to ensure they are functioning correctly in multi-consist operation
	3.3 Motive power unit equipment is set up or adjusted for multi-consist operation in accordance with manufacturer and/or organisational policies and procedures
4 Perform post start-up checks	4.1 Post start-up checks are carried out to ensure all motive power units are braking and powering effectively and are safe to move, in accordance with manufacturer and/or organisational policies and procedures
	4.2 Handbrakes on all motive power units are applied/released in accordance with manufacturer and/or organisational policies and procedures
	4.3 Pantographs are raised or lowered in accordance with manufacturer and organisational procedures, as required
5 Haul dead motive	5.1 Motive power unit controls are set up for being hauled dead in motive power unit consist or in-train in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

power units	manufacturer and/or organisational policies and procedures
	5.2 Vigilance and safety controls are set up as required to ensure they are functioning correctly when being hauled dead in motive power unit consist or in-train
	5.3 Motive power unit equipment is set up or adjusted for being hauled dead in motive power unit consist or in-train in accordance with manufacturer and/or organisational policies and procedures
	5.4 Handbrakes are applied and released in accordance with manufacturer and/or organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB4082 Set up motive power units in multi-coupled consist

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying where systems isolation is required
- implementing isolation where systems isolation is required
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- setting up in-cab controls for multi-consist operations
- setting up motive power units for multi-consist operations
- working collaboratively with others inspecting and preparing a motive power unit.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auxiliary systems on a motive power unit and related checks for correct operation
- braking and safety system procedures for motive power units
- capabilities, compatibilities and types of motive power units
- defects that can occur on motive power units and related action that should be taken
- electrical awareness
- external features of motive power units that must be checked during a visual inspection
- functions of all supervisory indicators and controls, and related checks for correct operation
- inspection procedures for motive power units

© Commonwealth of Australia, 2025 Industry Skills Australia

- isolation systems
- purpose and location of controls, monitoring devices, braking, power source and traction systems
- relevant legislated rail safety requirements, codes of practice and/or guidelines
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes, policies and workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIB5010 Plan and implement maintenance schedules

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and implement maintenance schedules according to relevant regulatory requirements, standards, workplace procedures and codes of practice including the Australian Dangerous Goods (ADG) Code.

It includes establishing maintenance requirements, organising maintenance activities and resources and completing required procedures and documentation.

Work is carried out under general guidance. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policies and procedures.

The unit generally applies to those with responsibility for resource coordination and allocation, who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

B – Equipment Checking and Maintenance

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.	
1 Establish maintenance requirements	1.1	Equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes
	1.2	Special requirements for maintenance of storage zones are identified
	1.3	Comparisons with previous experience, future equipment use, work requirements and standard operating procedures are made to inform the planning process
	1.4	Work plan and work schedule are developed
	1.5	Internal and external contractors and/or maintenance providers are identified
	1.6	Costings for process are identified based on work schedule (equipment/staff off-line), equipment manufacturer recommendations, charges for materials, equipment and consumables and internal/external labour charges
	1.7	Required interruptions, processes and procedures are documented and recorded
	1.8	Clearances for required maintenance costs are obtained
2 Organise maintenance activities	2.1	Work schedules and staff rosters are checked to identify times when maintenance process may be scheduled including optimum timing for any shut down
	2.2	Permission from supervisory personnel is obtained for timing of maintenance to optimise the maintenance process and work
	2.3	Detailed work plans are developed in accordance with work schedules, availability of expertise and resource availability
	2.4	Employees with the required competencies are identified and appropriate training and assessment is facilitated as required
	2.5	Approvals for work schedule, employee work pattern and maintenance schedule adjustments are obtained and work plan is refined to ensure maintenance program will maintain workplace outputs in terms of workplace policy
3 Organise resources	3.1	Required equipment, personnel and consumables are allocated in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.2	Consumables, equipment and expertise are located and coordinated to meet maintenance work schedule
	3.3	Externally sourced equipment, consumables and expertise are identified and appropriate arrangements are made for procurement
4 Complete maintenance procedures	4.1	Completed work is checked against maintenance schedule and work plan
	4.2	Records of work are completed and forwarded to appropriate personnel noting areas where additional maintenance is required to maintain optimum work output and equipment life

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIB5010A Plan and implement maintenance schedules.

Assessment Requirements for TLIB5010 Plan and implement maintenance schedules

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when planning and implementing maintenance schedules
- completing documentation related to planning and implementing maintenance schedules
- ensuring the servicing of equipment in terms of maintenance schedule and standard operating procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting instructions, procedures, information and signs relevant to planning and implementing maintenance schedules
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of current competencies within functional activity
- application of relevant Australian and international standards and associated certification requirements
- characteristics and capabilities of equipment, materials and processes used
- contacts and sources of information/documentation needed when planning and implementing maintenance systems
- operational maintenance systems, resources, management and workplace operating systems
- procedures for establishing and/or monitoring suitable maintenance systems
- procedures for identifying and evaluating information needed to plan and implement maintenance schedules
- procedures for identifying and interpreting maintenance requirements
- procedures for liaising with manufacturers and suppliers
- procedures for operating electronic communications equipment
- procedures for reviewing system options for maintenance operations including appropriate risk analysis
- quality and customer service standards, policies and procedures
- relative features and risks of various maintenance systems, their applications and processes, and issues involved in their use
- relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC0001 Operate chemical tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a chemical tanker in accordance with the current Australian Dangerous Goods (ADG) Code, mass and loading regulations, relevant state/territory road traffic authority vehicle licence requirements and regulations for heavy vehicles.

It includes identifying properties and hazards of chemicals being transported, and features of chemical tankers that transport chemicals. It also includes carrying out a pre-trip inspection, positioning the chemical tanker and loading it with chemicals, and transporting and delivering a load safely and efficiently to a customer site.

A chemical tanker is defined as any bulk road transport vehicle authorised to carry placarded chemical loads.

A chemical tanker is operated with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify properties and hazards of chemicals being transported and features of chemical tankers that transport chemicals	1.1 UN number, product class, its packing group and any sub-risks of fuel being transported are identified in accordance with emergency response documentation
	1.2 Approved handler and approved filler requirements for chemicals being transported are identified in accordance with regulatory requirements
	1.3 Properties of chemicals being transported are identified in accordance with emergency response documentation
	1.4 Hazards associated with chemicals being transported are identified in accordance with emergency response documentation
	1.5 Hazardous atmosphere zones are identified in accordance with organisational requirements
	1.6 Circumstances in which a chemical tanker may be left unattended are explained in accordance with current ADG Code and company procedures
	1.7 Functions of equipment fitted to a chemical tanker are identified in relation to safe transfer and transport of chemicals
	1.8 Factors that cause static electricity and ways of minimising risks associated with it are identified in accordance with organisational requirements
2 Carry out a pre-trip inspection	2.1 Vehicle is inspected to confirm tanker 5-yearly hydrostatic test is current, is tagged and compliant with current ADG Code, and meets company procedures; and non-compliant vehicles or trailers are repaired or reported in accordance with company procedures
	2.2 Vehicle load transfer equipment is inspected to confirm security and state of repair, and all hoses are tested and tagged in accordance with current ADG Code; and non-compliant equipment is repaired or reported in accordance with company procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.3	Safety equipment is inspected to confirm it meets organisational and current ADG Code requirements, is accessible and properly maintained, stowed and secured; and unserviceable items, or items with expired test dates, are replaced or reported in accordance with company procedures
	2.4	Personal protective equipment (PPE) is inspected to confirm it is available, ready for use, and meets current ADG Code requirements
	2.5	Dangerous goods placards are inspected to confirm they are correct for the load being carried and are displayed in accordance with current ADG Code
3 Position chemical tanker and prepare to load	3.1	Vehicle is driven into loading site in accordance with site procedures, using PPE that complies with organisational and regulatory requirements
	3.2	Vehicle is positioned without injury to people or damage to property and in a position that enables loading to be carried out in accordance with site procedures
	3.3	Park brake is applied, engine is turned off and battery is isolated as required
	3.4	Locations of emergency equipment and emergency procedures are identified before loading commences
	3.5	Product type and quantity to be loaded are checked to confirm they are in accordance with delivery documentation and are within safe carrying capacity and gross weight limitations of vehicle, and discrepancies are rectified in accordance with company procedures
	3.6	Product transfer equipment is connected in accordance with organisational requirements
4 Load chemical tanker with chemicals	4.1	Site procedures are implemented for commencement of loading process
	4.2	Products to be loaded are checked for compatibility and correct segregation, also taking account of product sub-risks
	4.3	Products to be loaded are checked to ensure they are compatible with tanker and that tanker is fit for purpose
	4.4	Loading process and fill levels are monitored in accordance with company and site procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.5	Vehicle is safely loaded with chemicals using only approved equipment, and in accordance with organisational and regulatory requirements
	4.6	At completion of loading process, all valves on vehicle and load-out facility are closed and where site procedures specify, all transfer equipment is vented and/or depressurised before being disconnected and stowed, with all equipment secured in accordance with site and company procedures
	4.7	Loaded vehicle is confirmed as being within legal weight limitations and in compliance with company and regulatory procedures
	4.8	Loaded vehicle is inspected pre-departure to ensure all hoses, pipes and cables are disconnected and secure, brake interlock is deactivated as required, and obstacles are cleared in accordance with company and site procedures
	4.9	Site is restored to a clean and tidy condition in accordance with site procedures
	4.10	Vehicle is moved from loading area without damage to property or injury to people and in accordance with site procedures
	4.11	Delivery documentation is completed, checked, and secured in vehicle in accordance with regulatory requirements
	4.12	Vehicle and tanker are checked to ensure correct placarding
5 Transport load safely and efficiently to customer site	5.1	Routes are planned to avoid congested areas, tunnels or areas where people may congregate and to maximise efficiency between delivery sites
	5.2	Prescribed routes are followed in accordance with organisational requirements, and courtesy and professionalism is exhibited toward other road users
	5.3	Tanker is driven and manoeuvred in accordance with legal requirements, taking into consideration vehicle stability and prevailing environmental conditions
	5.4	Eco-driving techniques are applied
	5.5	Action is taken to deal with traffic delays and diversions

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.6	Legislative and organisational procedures are adhered to in driving, parking and leaving tanker standing, or when tanker breaks down or stops on a road
6 Deliver load of chemicals to customer site	6.1	Pre-delivery assessment is made before entering delivery site, and site features that constitute a hazard and/or prevent delivery are rectified or reported in accordance with organisational and site requirements
	6.2	Site instructions and/or restrictions are complied with
	6.3	Vehicle is manoeuvred and positioned in such a way that product can be delivered efficiently and safely, with park brake applied and engine, unless required for pumping, turned off
	6.4	PPE is used in accordance with organisational and regulatory requirements and steps are taken to apply personal safety measures
	6.5	Worksite is marked with signs and/or cones and vehicle is remained with, and delivery and potential hazards are managed in accordance with organisational and site requirements
	6.6	Visible receiving vessel and/or components are checked for damage, and contents are checked to ensure sufficient ullage exists for delivery, with any deficiencies reported or actioned in accordance with company and site procedures
	6.7	Preparation for delivery is consistent with organisational and site requirements
	6.8	Product type and quantity are confirmed against delivery documents
	6.9	Delivery is undertaken in line with product being delivered, company and site procedures, and special delivery instructions
	6.10	Gauges are checked as required, valves are opened and closed in correct sequence, and hoses and connections are visually checked for leaks
	6.11	At completion of delivery, product transfer equipment is disconnected in accordance with product type, and company and site procedures
	6.12	Site is secured and restored to a clean and tidy condition in

© Commonwealth of Australia, 2025 Industry Skills Australia

		accordance with site procedures
	6.13	Delivery documentation is completed to reflect changes in vehicle load and receiving vessel, and distributed in accordance with organisational and regulatory requirements
	6.14	Vehicle is inspected pre-departure in accordance with organisational requirements
	6.15	Vehicle is driven from site safely and in accordance with site and organisational procedures
7 Apply driver emergency procedures in an emergency	7.1	Procedures for emergencies during loading and unloading are implemented in accordance with emergency response documentation and organisational transport emergency response plan (TERP)
	7.2	Procedures for emergencies in transit are identified in accordance with emergency response documentation and organisational TERP
	7.3	Emergency response documentation and organisational requirements are implemented in initial responses to a person exposed to chemicals being transported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Equipment fitted to a chemical tanker must include:	• breakdown triangles • chemical resistant gloves • emergency cones • emergency information holder • emergency shutdown controls • eyewash kit

© Commonwealth of Australia, 2025 Industry Skills Australia

	• fire extinguishers • torch
Loading and unloading sites must include at least one of the following:	• customer site • depot • terminal
Emergency response equipment must include:	• emergency shutdown controls • eyewash kit • fire extinguisher • spill kit
Documentation and records must include:	• emergency procedure guides • state/ territory road rules • shipping documentation • TERP

Unit Mapping Information

This unit replaces but is **not** equivalent to TLIC4065A Operate chemical tanker.

Assessment Requirements for TLIC0001 Operate chemical tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying correct placarding required for product being loaded
- applying eco-driving techniques when operating chemical tankers
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying techniques for loading and unloading a chemical tanker
- completing documentation relating to operating chemical tankers
- identifying compatibility of tanker with product
- identifying personal protective equipment (PPE) required for product being transported
- identifying product and placarding tanker accordingly
- identifying properties of chemicals to be carried
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- meeting customer requirements when delivering fuel to customer site
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of chemical tanker, its trailers and equipment, and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- planning routes to avoid congested areas, tunnels or areas where people may congregate
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required PPE, conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- causal factors of chemical tanker accidents and incidents
- effects of weight distribution on load behaviour and vehicle stability
- efficient driving techniques and eco-driving considerations
- factors involved in trip preparation
- factors that may cause traffic delays and diversions
- loading and unloading procedures for chemical tankers
- procedures to be followed in a driving emergency and in response to a transport emergency response plan (TERP)
- relevant dangerous goods information for operating chemical tankers
- relevant legislation and workplace procedures for transporting chemicals
- relevant road rules, regulations, permit and licence requirements of relevant state/territory roads and traffic authority
- relevant WHS/OHS and environmental procedures and regulations for chemical tanker operations
- safe delivery of chemicals to customer site
- techniques to continually identify and mitigate environmental risks
- workplace documentation
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations, with the exception of Element 7; due to workplace health and safety risks, assessment of Element 7 must occur using simulations in workplace operational situations.

Practical assessment must be undertaken with a chemical tanker that meets all industry compliance and/or licensing requirements.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

© Commonwealth of Australia, 2025 Industry Skills Australia

- eye wash kit, fire extinguisher, torch, chemical resistant gloves, spill kit, and personal protective equipment currently used in industry
- workplace procedures, current Australian Dangerous Goods (ADG) Code, emergency procedure guides, emergency response documentation, shipping documentation, TERP.

A simulator is not suitable for final assessment of this unit of competency.

TLIC0002 Operate fuel tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a fuel tanker in accordance with the current Australian Dangerous Goods (ADG) Code, mass and loading regulations, and relevant state/territory road traffic authority vehicle licence requirements and regulations for heavy vehicles.

It includes recognising the characteristics of fuel and fuel tankers to ensure the safe transfer and transport of fuel, conducting pre-trip inspections, performing tanker loading tests and transporting load to customer site. It also includes preparing a site to accept delivery, managing delivery, completing post-delivery activities and following emergency procedures.

A fuel tanker is defined as any bulk road transport vehicle authorised to carry Class 3 flammable liquid and combustible fuel.

Fuel tankers are operated with limited or minimum supervision, and with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLILIC0001 Licence to transport dangerous goods by road

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Recognise the characteristics of fuel and fuel tankers to ensure safe transfer and transport of fuel	1.1 Properties of fuel being transported are determined in accordance with emergency response documentation
	1.2 Hazards associated with fuel transport are clarified in accordance with emergency response documentation
	1.3 Hazardous atmosphere zones are identified in accordance with organisational requirements
	1.4 Functions of equipment fitted to a fuel tanker are identified, including work health and safety(WHS)/occupational health and safety (OHS) and emergency response equipment
	1.5 Factors that cause static electricity and ways of minimising associated risks are identified in accordance with organisational requirements
	1.6 Switch loading is identified in accordance with industry procedures
2 Comply with legislative and organisational requirements for safe transfer and transport of fuel	2.1 UN number, product class, packaging group and any sub-risks of fuel being transported are identified in accordance with emergency response documentation
	2.2 Approved handler and approved filler requirements for fuel being transported are identified in accordance with the current ADG Code and Australian Institute of Petroleum (AIP) site requirements
3 Conduct pre-trip inspection	3.1 Tanker is checked for current terminal entry compliance
	3.2 Tanker is checked to ensure dangerous goods (DG) compliance plate is attached to tanker in accordance with current ADG Code requirements
	3.3 Tanker load transfer equipment is checked to confirm security and state of repair, and that all hoses are tested and tagged in accordance with current ADG Code requirements
	3.4 Tanker is checked to ensure safety equipment is accessible, properly maintained, and stowed and secured in accordance with current ADG Code requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.5	Tanker is checked to ensure personal protective equipment (PPE) is available, ready for use and meets current ADG Code requirements
	3.6	Tanker is checked to ensure DG placards are correct for the load and are displayed in accordance with current ADG Code requirements
	3.7	Fire extinguisher is checked for current date and pressure gauge
	3.8	Shipping documentation is checked for accuracy and availability of emergency information in accordance with current ADG Code requirements
	3.9	Non-compliant vehicles and equipment are reported in accordance with organisational procedures
4 Perform tanker loading tests	4.1	Tanker is driven into loading site in accordance with site procedures
	4.2	Tanker is positioned to enable loading to be carried out in accordance with site procedures, without injury to people or damage to property
	4.3	Park brake is applied, engine is turned off and battery is isolated as required
	4.4	PPE is used in accordance with site and organisational procedures
	4.5	Transfer equipment is checked for compatibility
	4.6	Loading activities are controlled within level of responsibility, company regulations and legislative requirements
	4.7	Emergency procedures are followed in a spill or leak during loading
	4.8	Static control measures are applied
5 Transport load to customer site	5.1	Routes are planned to avoid congested areas, tunnels or areas where people may congregate and to maximise efficiency between delivery sites
	5.2	Prescribed routes are followed in accordance with regulatory and organisational requirements, and courtesy and professionalism are exhibited toward other road users

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.3	Tanker is driven and manoeuvred in accordance with legal requirements, and vehicle stability and prevailing environmental conditions are considered
	5.4	Eco-driving techniques are applied
	5.5	Action is taken to deal with traffic delays and diversions
	5.6	Legislative and organisational procedures are adhered to when driving, parking and leaving tanker standing, or when a tanker breaks down or stops on a road
6 Prepare site to accept delivery	6.1	Pre-delivery assessment is made before entering delivery site
	6.2	Site features that present a hazard and/or prevent delivery are rectified or reported in accordance with organisational requirements
	6.3	Site instructions and/or restrictions are complied with
	6.4	Tanker is manoeuvred and positioned to ensure product can be delivered safely and efficiently
	6.5	Park brake is applied, and engine is turned off and battery is isolated as required
	6.6	PPE is used in accordance with site and organisational procedures, and steps are taken to apply personal safety measures and to manage potential hazards
	6.7	Discharge area of delivery site is marked with signs and/or cones in accordance with workplace and state/territory legislative requirements
7 Manage delivery	7.1	Static control measures are applied
	7.2	Visible receiving vessel and/or components are checked for damage
	7.3	Contents of receiving vessel/s are checked to ensure sufficient ullage exists for delivery
	7.4	Product type and quantity are confirmed against delivery documents
	7.5	Gauges, valves, hoses and connections are visually checked for serviceability and leaks
	7.6	Vehicle and/or delivery site emergency shut down is identified and checked in accordance with workplace

© Commonwealth of Australia, 2025 Industry Skills Australia

		requirements
	7.7	Hoses are connected for discharging to ensure correct product is delivered into correct vessel in correct sequence
	7.8	Product is delivered in accordance with organisational and site procedures, and special delivery instructions are observed
	7.9	Emergency procedures are followed in a spill or leak during delivery
8 Complete post-delivery activities	8.1	Product transfer equipment is disconnected in accordance with product type and organisational procedures
	8.2	After-dip of tank is conducted to ensure product is in correct tanks and load has been fully delivered
	8.3	Site is secured and restored to a clean and tidy condition in accordance with site procedures
	8.4	Delivery documentation is completed in accordance with organisational procedures
	8.5	Shipping documentation is amended to reflect changes in vehicle load
	8.6	Pre-departure inspection of tanker is conducted in accordance with organisational procedures
	8.7	Tanker is driven safely from site in accordance with site procedures
9 Follow emergency procedures	9.1	Incident is reported to police or fire services as soon as possible
	9.2	Incident is reported to nominated person as soon as practicable in accordance with the transport emergency response plan (TERP)
	9.3	Reasonable assistance is provided as required by an authorised officer or officer of the emergency services to deal with the situation
	9.4	Warnings are provided to other vehicles and persons in the vicinity who may be at risk
	9.5	Escape of fuel is prevented or minimised
	9.6	Incident is reported in accordance with legislative

© Commonwealth of Australia, 2025 Industry Skills Australia

requirements or as nominated in the TERP

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Sites must include at least one of the following:	• customer site • depot • terminal
WHS/OHS equipment fitted to a fuel tanker must include:	• breakdown triangles • chemical resistant gloves • emergency cones • emergency information holder • emergency shutdown controls • eyewash kit • fire extinguishers • torch
Emergency response equipment must include:	• emergency shutdown controls • eyewash kit • fire extinguisher • spill kit
Documentation must include:	• emergency procedure guides • shipping documentation • state/ territory road rules • TERP

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces but is **not** equivalent to TLIC4066A Operate fuel tanker.

Assessment Requirements for TLIC0002 Operate fuel tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying precautions and required actions to minimise, control or eliminate identified hazards
- communicating effectively with others in the workplace
- completing documentation relating to operating a fuel tanker
- completing post-delivery activities
- correctly positioning a fuel tanker when loading and unloading
- discharging fuel using gravity, pressure and suction methods
- identifying tanker and product compatibility
- identifying product correctly, and placarding fuel tanker accordingly
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- loading fuel
- meeting customer requirements when delivering fuel to customer site
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of tanker, its trailers and its equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with standard operating procedures
- preparing a route to maximise safety and efficiency, and to meet organisational route requirements
- reading and interpreting relevant instructions, procedures, information and signs
- safely unloading fuel at a customer site
- selecting and using required personal protective equipment, conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- undertaking a pre-trip inspection of a fuel tanker
- using eco-driving techniques when operating a fuel tanker
- working collaboratively with others when operating fuel tankers
- working systematically with required attention to detail without injury to self or others, or

© Commonwealth of Australia, 2025 Industry Skills Australia

damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- causal factors of fuel tanker accidents and incidents
- effects of weight distribution on load behaviour and vehicle stability
- efficient driving techniques and eco-driving considerations
- factors involved in trip preparation
- factors that may cause traffic delays and diversions, and related action that can be taken
- fatigue management strategies
- how to select and use required personal protective equipment, conforming to industry and WHS/OHS standards
- procedures to be followed in a driving emergency and response to an emergency using a company transport emergency response plan (TERP)
- properties of fuel to be carried
- relevant dangerous goods (DG) information for using fuel tankers
- relevant legislation and industry workplace procedures for transporting fuel
- relevant organisational requirements including policies and procedures
- relevant state/territory roads and traffic authority road rules, regulations, permit and licence requirements
- relevant WHS/OHS and environmental procedures and regulations relating to fuel tanker operations
- techniques and procedures for loading and unloading a fuel tanker safely
- techniques for safe delivery of fuel to a customer site
- techniques to continually identify and mitigate environmental risks
- workplace documentation
- workplace driving and operational instructions
- working at heights procedures for fuel tanker drivers.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

© Commonwealth of Australia, 2025 Industry Skills Australia

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations, with the exception of Element 9; due to workplace health and safety risks, assessment of Element 9 must occur using simulations in workplace operational situations.

Practical assessment must be undertaken using a fuel tanker that meets all industry compliance and/or licensing requirements.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- eye wash kit, fire extinguisher, torch, chemical resistant gloves, spill kit, and personal protective equipment currently used in industry
- workplace procedures, current ADG Code, emergency procedure guides, emergency response documentation, shipping documentation, TERP.

A simulator is not suitable for final assessment of this unit of competency.

This unit may be assessed with the following unit/s:

- TLID4048 Top load a dangerous goods tanker
- TLID4049 Bottom load a dangerous goods tanker.

TLIC0003 Operate LP gas tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate an LP gas tanker in accordance with the current Australian Dangerous Goods (ADG) Code, mass and loading regulations, and relevant state/territory road traffic authority vehicle licence requirements and regulations for heavy vehicles.

It includes recognising the characteristics of LP gas and LP gas tankers to ensure safe transfer and transport of LP gas, conducting pre-trip inspections, supervising loading and transporting load to customer site. It also includes preparing a site to accept delivery, managing delivery, completing post-delivery activities and following emergency procedures.

An LP gas tanker is defined as any bulk road transport vehicle authorised to carry Class 2 liquid gases.

An LP gas tanker is operated with limited or minimum supervision, and with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLILIC0001 Licence to transport dangerous goods by road

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Assessment Requirements for TLIC0003 Operate LP gas tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- applying correct placarding for product being loaded
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying techniques for loading and unloading an LP gas tanker
- communicating effectively with others
- completing relevant documentation
- identifying eco-driving techniques
- identifying volume of goods
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- making accurate estimates of product volume in loading and unloading situations
- meeting customer requirements when delivering LP gas to customer site
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle, its trailers and its equipment, and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment, conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- causal factors of LP gas tanker accidents and incidents
- effects of weight distribution on load behaviour and vehicle stability
- efficient driving techniques and eco-driving considerations
- factors involved in trip preparation
- factors that may cause traffic delays and diversions, and related action that can be taken
- fatigue management strategies
- procedures to be followed in a driving emergency and in response to an emergency using a company transport emergency response plan (TERP)
- relevant dangerous goods information for operating an LP gas tanker
- relevant legislation and workplace procedures for transporting LP gas
- relevant state/territory roads and traffic authority road rules, regulations, permit and licence requirements
- relevant WHS/OHS and environmental procedures
- safe delivery of LP gas to a customer site
- techniques and procedures for loading and unloading an LP gas tanker safely
- techniques to continually identify and mitigate environmental risks
- workplace documentation
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIC0004 Operate a tip truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct tip truck operations in the transport and logistics industry.

This unit is appropriate for those working in tip truck driving roles.

It includes planning and preparing for tip truck operations, conducting tip truck pre-operational checks and driving a tip truck. It also includes loading, transporting and tipping materials, shutting down a vehicle and cleaning up vehicle, tools, equipment and work area.

Work is performed with limited or no supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Vehicle must be operated in accordance with relevant state/territory licencing authority vehicle licence requirements and regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for tip truck operations	1.1 Vehicle haulage documentation is accessed, interpreted and applied to ensure work activity is compliant
	1.2 Work requirements are obtained, confirmed and applied.
	1.3 Signage requirements are identified, obtained and implemented in accordance with project traffic management plan
	1.4 Appropriate vehicle, tools, equipment and personal protective equipment (PPE) are selected
	1.5 Tools, equipment and PPE are checked for serviceability and faults are rectified or reported
	1.6 Environmental protection requirements are identified, confirmed and applied in accordance with project environmental management plan
2 Conduct tip truck pre-operational checks	2.1 Pre-start, start-up, park and shutdown checks are carried out
	2.2 Tip truck controls and functions, including tray, body, steering, brakes and manoeuvrability are checked for serviceability and faults are rectified or reported
3 Drive tip truck	3.1 Site operating hazards and risks are identified and managed, and safe operating techniques are applied
	3.2 Engine power is managed to ensure efficiency of truck movements, and to minimise strain on engine, drive line and gears
	3.3 Engine power is coordinated with gear selection to ensure smooth transition and operation within torque range
	3.4 Tip truck is operated in accordance with work instructions and manufacturer instructions
	3.5 Road/traffic conditions, traffic flow, distance, load and appropriate speed are monitored and considered to ensure safety of people, property, equipment, loads and facilities
	3.6 Vehicle is stopped smoothly, using engine retarder, gears and

© Commonwealth of Australia, 2025 Industry Skills Australia

			brakes
4	**Load, transport and tip materials**	4.1	Tip truck is positioned at load and discharge points with a minimum of manoeuvre
		4.2	Tip truck movements are carried out in a smooth and controlled manner including raising and lowering tray body
		4.3	Weight and distribution of load is assessed, and type of material and size of vehicle are considered to ensure it is within vehicle capacity
		4.4	Safety and security of load is maintained from loading site to discharge site, including load cover requirements
		4.5	Load is safely discharged in accordance with fill site conditions and work instructions
		4.6	Tip truck body is lowered, excess material is cleared and tray body is secured before leaving site
5	**Shut down and clean up**	5.1	Tip truck is safely parked and prepared for operator maintenance and shutdown
		5.2	Visual and physical inspections are conducted and faults are recorded
		5.3	Vehicle records are maintained/updated and submitted
		5.4	Work area is cleared and materials are disposed of, or recycled in accordance with workplace requirements
		5.5	Vehicle, tools and equipment are cleaned, checked, maintained and stored

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Fill site conditions must include one or more of the following:	• over face • slopes
Work requirements must include one or more of the following:	• handover details • operational details • permit conditions • plans • quality requirements • shift briefings • specifications • work orders

Unit Mapping Information

This is a new unit.

Assessment Requirements for TLIC0004 Operate a tip truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include:

- completing tip truck operations safely, effectively and efficiently, and meeting all required outcomes on a minimum of three (3) separate occasions including:
  - applying load cover
  - carrying out inspections and identifying faults
  - carrying out log-on, pre-start, start-up, park-up and shutdown procedures
  - obtaining and applying signage requirements
  - operating, steering, manoeuvring and positioning tip truck
  - organising work activities to comply with site standards
  - processing written records and reports
  - raising and lowering tray smoothly
  - safely discharging load according to site conditions and work instructions
  - stopping and parking tip truck
- locating and applying relevant documentation, policies and procedures on at least one (1) occasion
- working effectively with others to undertake and complete tip truck operations to meet all required outcomes on at least one (1) occasion including:
  - communicating clearly and concisely with others to receive and clarify work instructions
  - preparing for and organising work activities to meet all task requirements
  - using a range of communication techniques and aids to advise others of work activity and exclusion zones.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- load quantity calculations

© Commonwealth of Australia, 2025 Industry Skills Australia

- operational, maintenance and basic diagnostic procedures
- permit conditions including where and when they apply
- recording and reporting procedures
- reporting faults in vehicles and ancillary equipment
- safety data sheet (SDS)/material safety data sheet (MSDS) and materials handling methods
- safety requirements
- site isolation and traffic control responsibilities and authorities
- start up and shutdown procedures
- tip truck types, characteristics, technical capabilities, limitations and suitability
- vehicle specifications and limitations including:
  - mass
  - dimensions
  - volumes
  - axle weights.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical driving aspects must be assessed in a tip truck vehicle typical of that used in industry.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation such as legislation, regulations, codes of practice, workplace procedures and operation manuals
- relevant materials, tools, equipment, machinery, materials and personal protective equipment currently used in industry.

TLIC0073 Conduct tram/light rail track cleaning operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct tram/light rail track cleaning operations in accordance with rail industry standards, safeworking, regulatory requirements and organisational procedures.

It includes preparing vehicle for operations, operating cleaning vehicle, cleaning rail track and points, disposing of waste and completing all required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated tram/rail/road safety requirements and to comply with relevant rules, codes of practice and/or guidelines.

Operators must hold a medium-rigid vehicle licence.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for operations	1.1 Vehicle logbook is checked in accordance with organisational requirements
	1.2 Pre-operational vehicle checks are conducted
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Identified faults or defects are recorded in accordance with organisational requirements
	1.5 Worn brushes are replaced
2 Operate cleaning vehicle on track	2.1 Vehicle is driven to cleaning location and hazard warning equipment is operated in accordance with organisational policies and procedures
	2.2 Fleet operations are notified when on site and ready to begin cleaning operations
	2.3 Vehicle is correctly aligned with track and trolley is lowered in accordance with organisational and/or manufacturer requirements
	2.4 Brushes are switched on for operation in accordance with organisational requirements
	2.5 Vehicle is driven along the track and brushes are monitored for effective operation
3 Operate cleaning vehicle to clean points	3.1 Correct alignment of points is verified before starting cleaning operations
	3.2 At least 25 metres of track prior to automatic points are cleaned in accordance with organisational policies and procedures
	3.3 Visual contact with assistant is maintained at all times when cleaning points
	3.4 Cleaning vehicle is driven through points and, when points have been changed, reversed back through the points
4 Dispose of waste	4.1 Collected waste is recycled or disposed of in accordance with organisational policies and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.2 Waste collection container/s and surrounding area of vehicle are cleaned
5 Complete documentation	5.1 Required documentation procedures and processes are confirmed
	5.2 Documentation is filled in legibly and proofread
	5.3 Documentation is processed in accordance with organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC0073A Conduct tram/light rail track cleaning operations.

Assessment Requirements for TLIC0073 Conduct tram/light rail track cleaning operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant road rules, rail safeworking system and workplace procedures
- cleaning straight track and points to required workplace procedures
- communicating effectively with others when cleaning rail and points
- completing pre-work checks in accordance with manufacturers specification and operating procedures
- correcting operation when positioning the cleaning vehicle
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions and manuals
- replacing brushes in accordance with workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and record keeping requirements
- hazards that may exist when cleaning rail and points and ways of controlling the risks involved
- problems that may occur when cleaning rail and points and action that can be taken to report or resolve these problems
- relevant communications systems and procedures
- relevant rail danger zones
- relevant Australian road rules
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace procedures for cleaning tram/light rail track and points.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the tram/light rail workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, road rules, codes of practice and operation manuals.

TLIC0079 Operate a motive power unit within defined limits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor a motive power unit within defined limits in accordance with relevant workplace practices, rail regulations and codes of practice.

It includes operating the controls of the motive power unit and monitoring its performance. It also includes working collaboratively with other train crew and relevant personnel.

Defined limits are considered to be yards, terminals or sidings.

This unit is not intended to be used as a qualification for operation of a motive power unit on a main line.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate motive power unit	1.1 Motive power unit is operated at low speed within the defined limits of operation
	1.2 Motive power unit handling techniques are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment and/or rolling stock
	1.3 Acceleration and braking techniques are applied safely to take into account track, road and weather conditions within the defined limits of operation
	1.4 Motive power unit is moved in a way that ensures all rolling stock is positioned safely in accordance with relevant codes of practice, yard or siding operating systems and related requirements
2 Work collaboratively	2.1 Safe operation of motive power unit is maintained in collaboration with relevant workplace personnel in accordance with operational requirements of the defined limits
	2.2 Constant communication is maintained with relevant personnel when operating a motive power unit within the defined limits, in accordance with organisational procedures and regulatory requirements
	2.3 Relevant personnel are advised of any changed/degraded conditions and/or emergency situations
	2.4 Directions provided by relevant personnel to the limited operation of the motive power unit are interpreted and applied to driving activities, in accordance with workplace procedures and applicable regulatory requirements
3 Follow all applicable rail regulatory requirements	3.1 Workplace procedures to operate a motive power unit within the defined limits are used
	3.2 Rail regulatory requirements applicable to operating a motive power unit within the defined limits of the track or road concerned are accessed, interpreted, clarified as required and applied

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC0079A Operate a motive power unit within defined limits.

Assessment Requirements for TLIC0079 Operate a motive power unit within defined limits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- identifying and assessing motive power unit defects and deficiencies, and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- operating a motive power unit within defined limits
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- motive power unit controls, instruments and indicators, and their purpose, location and use
- procedures for managing safety and hazardous situations
- procedures for operating and monitoring a motive power unit within defined limits
- procedures for operating and monitoring ancillary equipment on a motive power unit
- rail transport operator defined limits within the rail corridor
- relevant rail danger zones
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- requirements for communicating and working collaboratively with relevant personnel
- speed and load limits for a motive power unit within the defined limits
- workplace procedures and operating requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant rail transport operator safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIC0083 Access rail track to travel track vehicle under a proceed authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely access the rail track to travel track machines under an Occupancy Authority in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes accessing rail track, travelling track vehicle on track, and removing track vehicle from track.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Access rail track	1.1 Permission to occupy rail track is requested from Network Control Officer
	1.2 Permission to occupy rail track is documented in accordance with Occupancy Authority requirements
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Appropriate personal protective equipment (PPE) is used conforming to Rail Infrastructure Manager requirements
	1.5 Limits of travel are determined and agreed with Network Control Officer
	1.6 Points are operated as required to gain access to the track as authorised by Network Control Officer
	1.7 Situational awareness is maintained to identify local conditions and changed circumstances
	1.8 Communication with Network Control Officer is maintained using communications rules and procedures
2 Travel track vehicle on track	2.1 Speed limit is observed for type and classification of track vehicle and type of track
	2.2 Speed is varied in accordance with local conditions
	2.3 Permission is obtained to pass signals at STOP in accordance with workplace procedures
	2.4 Position of points are identified and operated as required to establish correct direction as authorised by Network Control Officer
	2.5 Signals are identified and obeyed
	2.6 Level crossing protection equipment is operated for the safe passage of track vehicle/s in accordance with workplace procedures
	2.7 Vigilance system is operated, as required in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

		workplace procedures
	2.8	Unsafe situations and/or emergencies are identified, and appropriate action is taken in accordance with workplace procedures
3 Remove track vehicle from track	3.1	Network Control Officer is informed when track vehicle is off and clear of track
	3.2	Occupancy Authority is correctly cancelled or fulfilled

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC0083 Access rail track to travel track vehicle under a proceed authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with network control officers, individuals and work groups
- explaining passing signals in accordance with safeworking rules and procedures
- explaining how to determine limits of travel
- following workplace policies, safeworking procedures and protocols
- identifying and obeying signals in accordance with safeworking and workplace procedures
- identifying appropriate response to typical unsafe situations and/or emergencies
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- travelling the track vehicle on track
- using appropriate personal protective equipment (PPE) conforming to Rail Infrastructure Manager requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- operational communications protocols and systems
- operational vigilance control system
- Rail Infrastructure Manager emergency management plan, procedures and protocols
- Rail Infrastructure Manager and organisational policies, procedures, safeworking rules and protocols
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- recognition of points, signals and location features
- relevant rail danger zones
- safeworking authorities as they relate to accessing rail track to travel track vehicle.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIC0084 Access rail track to travel track vehicles under manual block working conditions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to travel a track vehicle or convoy of track vehicles under manual block working conditions in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes planning for travel movements, accessing track, travelling track vehicle/s on track to worksite, and clearing limit of travel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

All activities are performed under established rules and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for travel movements	1.1 Travel requirements are established and application for approval is initiated
	1.2 Movements are confirmed with Network Control Officer prior to travel
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Pre-start briefing is conducted with track vehicle operators to clarify travel movements and their responsibilities, in accordance with advertised approval and workplace procedures
2 Access track	2.1 Permission to occupy track is requested from Network Control Officer and documented as required
	2.2 Appropriate personal protective equipment (PPE) is used in accordance with Rail Infrastructure Manager requirements
	2.3 Limits of travel are identified and protection of the route by Network Control Officer is confirmed
	2.4 Stand alone signalling control equipment is identified and points are operated as required to gain access to the track as authorised by Network Control Officer
	2.5 Changed local conditions are identified
	2.6 Communications with Network Control Officer is maintained using appropriate communications protocols and systems, in accordance with Rail Infrastructure Manager requirements and workplace procedures
3 Travel track vehicle/s on track to worksite	3.1 Communications protocols and systems are used to coordinate the convoy as required
	3.2 Speed limit is maintained for type of vehicle/s and track conditions
	3.3 Speed limit is varied in accordance with local conditions
	3.4 Permission is obtained to pass signals at STOP in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.5 Track vehicle is managed to be able to stop short of other track vehicles or obstruction on track
	3.6 Stand alone signalling control equipment is identified and points are operated as required, to establish correct direction as authorised by Network Control Officer
	3.7 Signals are identified and obeyed
	3.8 Level crossing protection equipment is operated as required, for the safe passage of track vehicle/s in accordance with workplace procedures
	3.9 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures
4 Clear limit of travel	4.1 Network Control Officer is informed when track vehicle/s has arrived and is clear of limit of travel
	4.2 Stand alone signalling control equipment is identified and points are operated as required
	4.3 Authority to travel is recorded in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC0084A Access rail track to travel track vehicles under manual block working conditions.

Assessment Requirements for TLIC0084 Access rail track to travel track vehicles under manual block working conditions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with Network Control Officer, individuals and work groups
- explaining appropriate response to unsafe situations and/or emergencies
- following workplace policies, safeworking procedures and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- planning travel movements and identifying limits of travel
- travelling track vehicle on track to worksite
- using appropriate personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- Rail Infrastructure Manager safeworking system and organisational requirements, rules, policies, workplace procedures and protocols
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies relevant to accessing rail track to travel track vehicles under manual block working conditions
- rail terminology as defined by the Rail Infrastructure Manager safeworking system
- recognition of points, signals and location features
- relevant rail danger zones.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIC1013 Ride courier/delivery bicycle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to ride a courier or delivery bicycle while safely carrying loads.

It includes carrying out pre-operational checks of the bicycle; systematically, safely and efficiently controlling all functions; and effectively managing hazardous situations.

Work is generally performed with limited or minimum supervision, with full accountability and responsibility for self in achieving the prescribed outcome.

Work must be carried out in accordance with the regulations/permit requirements of the relevant state/territory roads and traffic authority pertaining to the riding of the bicycle on public roads.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Inspect bicycle for operational capability**	1.1 Work area is checked to ensure operational checks of bicycle may be conducted safely
		1.2 Bicycle is checked prior to operation to ensure it is free from damage that may limit operational capability, in accordance with manufacturer safety checks, specifications and workplace procedures
		1.3 Component operation is tested in accordance with manufacturer specifications and workplace procedures
		1.4 Warning systems are checked for operational effectiveness
		1.5 Air pressure and lubrication are checked against specifications
		1.6 Appropriate products are used to maintain specified levels as required
		1.7 Faults are identified and assessments are made of their potential affect on the operation of the bicycle for the required work, and are reported to appropriate personnel for rectification
		1.8 Personal protective equipment is identified, worn and adjusted to meet recommended Australian Standards, legislative, regulatory and policy requirements
2	**Ride bicycle**	2.1 Road area is checked for hazards prior to and during journey
		2.2 Bicycle is steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and workplace policy
		2.3 Gears are managed to ensure efficiency and performance, and to minimise gear damage and fatigue
		2.4 Hazards are identified and/or anticipated and avoided or controlled through defensive riding
		2.5 Bicycle is parked and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
		2.6 Bicycle is securely loaded and manoeuvred in accordance with required precautions related to characteristics of the load and/or relevant government regulations pertaining to special loads

© Commonwealth of Australia, 2025 Industry Skills Australia

		2.7	Required signs or indicators are fixed to the bicycle
3	**Monitor traffic and road conditions**	3.1	Most efficient route of travel is taken through monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
		3.2	Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
4	**Monitor and maintain bicycle performance**	4.1	Performance of bicycle operation is monitored during use
		4.2	Defective or irregular performance or malfunctions are reported to appropriate authority
		4.3	Records are maintained/updated and information is processed in accordance with workplace procedures
		4.4	Clear reference in reports is made to items that may affect future efficient use and/or safety of equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIC1013 Ride courier/delivery bicycle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- controlling all functions of the courier delivery bicycle
- completing relevant documentation
- monitoring bicycle and equipment performance and taking appropriate action as required
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- bicycle handling procedures
- cycling hazards and related defensive riding techniques
- emergency procedures
- factors that may cause traffic delays and diversions, and related action that can be taken by a courier or delivery cyclist
- map reading and road navigation techniques
- pre-operational checks carried out on bicycle and related action
- procedures and policies identifying, accepting and carrying of dangerous/hazardous goods
- relevant state/territory road traffic authority road rules, regulations, permit and licence

© Commonwealth of Australia, 2025 Industry Skills Australia

requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements of courier or delivery work systems/operations and relevant equipment
- workplace operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards *for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical riding aspects must be assessed on a courier or delivery bicycle typical of that used in industry Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC1051 Operate commercial vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain the safety of and to operate, a commercial vehicle across a variety of job roles.

It includes monitoring traffic and associated equipment, managing vehicle condition and performance, and effectively managing hazardous situations.

Driving must be carried out in accordance with relevant state/territory roads and traffic authority licence requirements and regulations.

Driving is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

Licensing, legislative, regulatory or certification requirements are applicable to this unit. Provisional car licence must be held prior to commencement of this unit of competency.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Operate commercial vehicle**	1.1 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage
		1.2 Driving hazards are identified and/or anticipated and avoided
		1.3 Vehicle lights and indicators are used in accordance with traffic regulations and manufacturer instructions
		1.4 Vehicle is secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
		1.5 Appropriate procedures are followed in a driving emergency
		1.6 Appropriate low-risk driving behaviour is displayed towards other road users in accordance with workplace procedures
		1.7 Vehicle is positioning and moved conveniently and safely for loading and unloading in accordance with regulatory and workplace instruction
		1.8 All associated equipment is operated in accordance with manufacturer and workplace instructions
2	**Monitor traffic and road conditions**	2.1 Most efficient route of travel is taken by monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
		2.2 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
3	**Monitor and maintain vehicle performance**	3.1 Vehicle performance and safety is maintained through vehicle pre-operational inspections and
		3.2 Performance and efficiency of vehicle operation is monitored during use
		3.3 Vehicle is driven in a manner that incorporates eco driving principles
		3.4 Defective or irregular performance or malfunctions are repaired as a minor repair or reported to appropriate authority
		3.5 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC1051A Operate commercial vehicle.

Links

Assessment Requirements for TLIC1051 Operate commercial vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- completing relevant documentation
- demonstrating low-risk driving behaviours
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle and taking appropriate action
- operating a commercial vehicle and its associated equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs .

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on drivers
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions, and related action that can be taken
- fatigue management strategies including on-road techniques

© Commonwealth of Australia, 2025 Industry Skills Australia

- lifestyles that promote effective long-term fatigue management
- low-risk driving behaviours
- map reading and road navigation techniques
- pre-operational checks carried out on vehicle and related action
- principles of stress management when driving a vehicle
- procedures to be followed in a driving emergency
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental/emissions procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- vehicle controls, instruments and indicators and their use
- vehicle handling procedures
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

A simulator/online assessment is not suitable for the final assessment of this unit of competency.

TLIC2002 Drive light rigid vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive a light rigid vehicle safely, in accordance with relevant state/territory roads and traffic authority licence requirements and regulations for light rigid vehicles.

It includes systematic and efficient control of all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial light rigid vehicle across a variety of driving contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

TLIC2009 Drive taxi

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive a taxi safely across a variety of driving contexts, in compliance with relevant state/territory roads and traffic authority licence requirements and regulations for a commercial taxi.

It includes maintaining systematic and efficient control of all taxi functions, monitoring traffic and road conditions, managing taxi condition and performance, and effectively managing hazardous situations.

Driving is performed with limited or no supervision, and with full accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining taxi driver accreditation. As requirements may vary between states and territories, people seeking taxi accreditation should contact their state or territory taxi regulator.

Pre-requisite Unit

Not applicable.

Assessment Requirements for TLIC2009 Drive taxi

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying map reading and road navigation techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation, work health and safety (WHS)/occupational health and safety (OHS) practices and workplace procedures
- applying safe driving techniques to avoid potential hazards
- checking and replenishing fluids, and refuelling and carrying out lubrication processes during work activities
- completing relevant documentation
- driving a taxi, including:
  - driving in reverse
  - managing engine power
  - parking, shutting down and securing taxi
  - positioning taxi
  - starting taxi
  - steering and manoeuvring taxi
  - stopping taxi
- driving in typical road transport situations including:
  - on a private road
  - on the open road
  - typical weather conditions
  - while at a depot or base
  - while at a customer workplace or worksite
- driving taxi in accordance with traffic regulations and manufacturer specifications
- monitoring and prioritising work activities
- monitoring performance of taxi and its equipment and taking appropriate action as required
- reading and interpreting instructions, procedures, information and signs relevant to driving a taxi
- reporting and/or addressing identified problems, security incidents, faults or malfunctions

© Commonwealth of Australia, 2025 Industry Skills Australia

promptly, in accordance with regulatory requirements and workplace procedures
- using taxi controls and equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- differences between transmission types
- driving hazards and related safe driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that may cause traffic delays and diversions and related action that can be taken
- pre-operational checks carried out on taxi and related action
- procedures to be followed in an emergency or breakdown
- relevant state/territory road traffic/taxi control authority road rules, regulations, permit and licence requirements taxi handling procedures
- relevant WHS/OHS and environmental procedures and regulations
- taxi security procedures and precautions
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical driving aspects must be assessed in a vehicle typical of that used in industry, be roadworthy and driven on typical road transport conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIC2012 Ride courier/delivery motorcycle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to ride a courier/delivery motorcycle while safely carrying loads, in accordance with relevant state/territory roads and traffic authority regulations/permit requirements for riding a motorcycle on public roads.

It includes making motorcycle pre-operational checks; systematically, safely and efficiently controlling all functions; and effectively managing hazardous situations.

Driving involves the application of routine procedures to pick up and deliver products, documents and materials from and to customers across a variety of operational contexts.

Work is generally performed with limited supervision, and with duty of care responsibility for self in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Ride courier motorcycle	1.1 Motorcycle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and workplace procedures
	1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
	1.3 Driving hazards are identified and/or anticipated, and avoided or controlled through defensive driving
	1.4 Motorcycle is parked, shut down and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
	1.5 Motorcycles carrying dangerous goods are driven along designated routes in accordance with current Australian Dangerous Goods (ADG) Code, relevant government regulations and workplace policies and procedures
	1.6 Load is checked to confirm accordance with motorcycle load limit
	1.7 Load is secured, transported and motorcycle is manoeuvred with due consideration to any required precautions related to load characteristics and/or relevant government regulations for special loads
	1.8 Required signs or indicators are fixed to motorcycle
	1.9 Personal protective equipment and clothing is identified, worn and adjusted to meet legislative, regulatory and policy requirements
2 Monitor traffic and road conditions	2.1 Most efficient route of travel is taken by monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
	2.2 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
3 Monitor and maintain motorcycle performance	3.1 Motorcycle performance is maintained through pre-operational inspections and motorcycle checks
	3.2 Performance and efficiency of motorcycle operation is monitored during use

© Commonwealth of Australia, 2025 Industry Skills Australia

3.3 Defective or irregular performance or malfunctions are reported to appropriate authority

3.4 Motorcycle records are maintained/updated and information is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC2012A Ride courier/delivery motorcycle.

Assessment Requirements for TLIC2012 Ride courier/delivery motorcycle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- demonstrating low-risk riding behaviours
- monitoring performance of motorcycle and taking appropriate action
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- factors that may cause traffic delays and diversions and related action that can be taken
- map reading and road navigation techniques
- motorcycle handling procedures
- motorcycling hazards and related defensive riding techniques
- pre-operational checks carried out on motorcycle and related action
- procedures and policies for identifying, accepting and carrying dangerous/hazardous goods
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant WHS/OHS and environmental procedures and regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- workplace operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical riding aspects must be assessed on a motorcycle suitable for courier-delivery work as currently used in industry.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, current Australian Dangerous Goods (ADG) Code, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC2025 Operate four wheel drive vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a four wheel drive vehicle safely in a range of conditions in accordance with the relevant state/territory legislated roads and traffic licence requirements.

It includes driving a four wheel drive vehicle on roads, traversing gradients, ascending and descending steep gradients, and operating in rugged terrain. It also includes using vehicle equipment/controls and completing pre- and post-operational checks.

Recognised driver's licence or provisional car licence must be held prior to commencing this unit of competency.

Driving involves the application of four wheel drive vehicle operating principles and procedures to maintain the safety and operation of a four wheel drive vehicle across a variety of on-road and off-road contexts.

Driving is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate four wheel drive vehicles on roads	1.1 Pre-start checks of vehicle and equipment are carried out in accordance with manufacturer specifications and roadworthy requirements
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Tyres are checked for pressure suitable for terrain and/or changed in accordance with manufacturer and workplace procedures
	1.4 Vehicle fuel, water and any ancillary equipment are checked before starting vehicle journey in accordance with manufacturer and workplace procedures
	1.5 Loads are secured in accordance with workplace and legislative requirements
	1.6 Vehicle is driven on-road and off-road in accordance with legislative and workplace requirements, at appropriate operating speeds for road or track conditions and hazards
	1.7 Vehicle equipment/controls are set and operated in accordance with manufacturer instructions for operation in surrounding terrain
	1.8 Road conditions are constantly monitored, negotiated and appropriate operations and control techniques are used to ensure safe vehicle operation and no injury to people or damage to vehicle, tracks or loads is sustained
	1.9 Vehicle is parked and shut down in accordance with workplace and manufacturer requirements
2 Operate vehicle on, or across a gradient	2.1 Intended vehicle path is inspected prior to negotiating **gradient**
	2.2 Loads are secured in accordance with workplace and legislative requirements
	2.3 Appropriate gear and/or range are selected and engine revolutions are maintained to ensure constant traction

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.4	Vehicle is driven on-road and off-road in accordance with legislative and workplace requirements at appropriate speeds for conditions and gradient hazards
	2.5	Vehicle equipment/controls are set and operated in accordance with manufacturer instructions for operation in, on or across a gradient
	2.6	Gradient conditions are constantly monitored, and appropriate operations and control techniques are used to ensure safe vehicle operation and no injury to people or damage to vehicle, tracks or loads is sustained
3 Operate vehicle ascending a steep gradient	3.1	Intended vehicle path is inspected prior to negotiating ascent
	3.2	Appropriate gear and/or range are selected to ascend grade, and engine revolutions are maintained to ensure constant traction
	3.3	Vehicle equipment/controls are set and operated in accordance with manufacturer instructions for operation while ascending a steep gradient
	3.4	Stall recovery techniques are applied in accordance with manufacturer and workplace procedures
	3.5	Ascent conditions are constantly monitored, and appropriate operations and control techniques are used to ensure safe vehicle operation and no injury to people or damage to vehicle, tracks or loads is sustained
4 Operate vehicle descending a steep gradient	4.1	Intended vehicle path is inspected prior to negotiating gradient
	4.2	Appropriate gear and/or range are selected to descend grade, and engine revolutions are maintained to ensure constant traction
	4.3	Vehicle equipment/controls are set and operated in accordance with manufacturer instructions for operation while descending a steep gradient
	4.4	Stall recovery techniques are applied in accordance with manufacturer and workplace procedures
	4.5	Descent conditions are constantly monitored, and appropriate operations and control techniques are used to ensure safe vehicle operation and no injury to people or damage to vehicle, tracks or loads is sustained

© Commonwealth of Australia, 2025 Industry Skills Australia

5 Operate vehicle in rugged terrain	5.1	Intended vehicle path is inspected prior to negotiating rugged terrain
	5.2	Appropriate gear and/or range are selected to negotiate rugged terrain and engine revolutions are maintained to ensure constant traction
	5.3	Vehicle equipment/controls are set and operated in accordance with manufacturer instructions for operation in surrounding terrain
	5.4	Vehicle chains are fitted in accordance with manufacturer instructions and environmental conditions, as required
	5.5	Vehicle load is inspected, positioned and secured to maximise traction for four wheel driving
	5.6	Rugged conditions are constantly monitored, and appropriate operations and control techniques are used to ensure safe vehicle operation and no injury to people or damage to vehicle, tracks or loads is sustained
6 Complete operations	6.1	Vehicle is parked and shut down in accordance with workplace and manufacturer requirements
	6.2	Faults or malfunctions are corrected and/or reported in accordance with manufacturer and workplace requirements
	6.3	Vehicle and equipment are cleaned and stored after use in accordance with workplace requirements
	6.4	Documentation and journey reports are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC2025 Operate four wheel drive vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- cleaning and storing vehicles and equipment
- communicating effectively with others
- completing relevant documentation
- conducting pre-start checks
- demonstrating low-risk driving behaviours
- identifying and correcting minor operational faults
- identifying job hazards and taking required action
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- using and adjusting vehicle equipment/controls as required:
  - brakes
  - electronic traction control
  - freewheeling hubs
  - gears/range
  - heating and cooling systems
  - jacks
  - tyres
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and record keeping requirements
- effect of hard surface driving (such as transmission wind up) on a 4x4 system
- effect of loads while negotiating a gradient
- effect on centre of gravity of changing fluid loads
- efficient driving techniques and safe driving strategies
- environmental impact of 4x4 driving
- hazards and risks associated with traversing cross gradients
- hazards that may exist when operating a four wheel drive vehicle in on-road and off-road situations, and action to minimise, control or eliminate identified hazards
- low risk driving behaviours:
  - creating and maintaining crash avoidance space
  - protecting crash avoidance space
  - road rules and directions
  - space and time management
- pre- and post-operational checks and related action
- problems that may occur when operating a four wheel drive vehicle, and action that can be taken to report or resolve the problems
- relevant land management procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- vehicle equipment/controls, instruments and indicators, and their use
- vehicle handling procedures and techniques for a range of road and track conditions
- workplace procedures for operating a four wheel drive vehicle in both on-road and off-road situations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment must occur in workplace operational situations, where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions in a four wheel drive vehicle typical of that used in industry.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

A simulator/online assessment is not suitable for the final assessment of this unit of competency.

TLIC2040 Provide wheelchair accessible taxi services to passengers with disabilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate wheelchair accessible taxis used to transport people with disabilities, in varying driving contexts.

It includes carrying out pre-operational checks of the taxi and its ancillary equipment, communicating effectively with passengers, securing passengers and ancillary/mobility equipment, providing appropriate support to passengers during their journey, and manoeuvring the taxi with due consideration of the passenger's disability.

This unit applies to all taxi drivers who are authorised to drive a wheelchair accessible taxi. Work involves transferring passengers and applying the aid of equipment/appliances to do this.

Driving is performed with limited or no supervision, and with full accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining taxi driver accreditation. As requirements may vary between states and territories, people seeking taxi accreditation should contact their state or territory taxi regulator.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out pre-operational checks on taxi	1.1 Pre-operational checks for taxi and its associated ancillary equipment are carried out in accordance with manufacturer requirements, government regulations and workplace policies and procedures
	1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures
2 Communicate effectively with passengers	2.1 Appropriate communication methods are selected and used to meet the requirements of passengers with disabilities
	2.2 Appropriate and effective verbal and non-verbal communication skills are used including appropriate body language and language style
	2.3 Effective listening skills are applied
	2.4 Questions are used to gain appropriate information
3 Assist passengers into and out of a taxi in a manner suited to their disability	3.1 Passenger characteristics are identified and taken into account when determining appropriate assistance into and out of a taxi
	3.2 Hazards are identified, risks are assessed and control measures are implemented
	3.3 Compatibility of passenger mobility device with taxi loading, anchoring and carrying equipment is assessed in accordance with regulations
	3.4 Passengers are assisted into and out of a taxi, in accordance with regulations and workplace safety requirements
	3.5 Passengers and their mobility device/wheelchair are secured safely in accordance with taxi and equipment specifications and regulations
	3.6 Taxi equipment is operated and stowed in accordance with company procedures and manufacturer instructions
	3.7 Ancillary equipment is stowed safely in taxi in accordance with relevant regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.8	Passengers are picked up and set down in a safe and efficient manner, taking into account suitable locations and safe use of equipment
	3.9	Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and passenger welfare are considered
4 Drive a taxi used by passengers with disabilities	4.1	Ongoing support is provided to passengers to maximise their travelling comfort
	4.2	Taxi is driven safely in accordance with regulations for the class of vehicle involved
	4.3	Taxi is driven in accordance with road and traffic conditions and with due consideration to any required precautions related to passenger disability and relevant government regulations
	4.4	Signs or indicators are fixed to taxi as required
	4.5	Documentation/transactions relevant to providing the taxi subsidy scheme is completed
5 Plan and organise daily work activities	5.1	Workload is assessed and prioritised
	5.2	Daily routine is planned to take into account work schedules and network/communication bookings
	5.3	Clarification of requirements of tasks is sought as required
	5.4	Achievable time and other performance measures are agreed
	5.5	Tasks are completed and variations to plan are identified and reported
6 Apply ethical behaviour	6.1	Ethical behaviour is applied to ensure any form of sexual harassment, physical or mental abuse, intimidation towards passengers with disabilities or fraudulent behaviour does not occur
	6.2	Behaviour is applied that does not allow for any form of discrimination

Assessment Requirements for TLIC2040 Provide wheelchair accessible taxi services to passengers with disabilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying procedures for taxi subsidy scheme bookings and payments
- applying relevant codes of practice and legislative requirements
- applying techniques for manoeuvring and driving a wheelchair accessible taxi, including:
  - accelerating and braking
  - reversing a taxi
  - managing taxi blind spots and height restrictions
  - operating taxi controls and equipment
  - using safe driving techniques
- assessing risks and hazards when assisting passengers with disabilities into and out of a taxi
- assisting passengers into and out of a taxi in accordance with workplace procedures
- carrying out pre-operational checks on taxi and ancillary equipment used by passengers with disabilities and taking related action in accordance workplace procedures
- communicating and working effectively with others
- completing relevant workplace documentation
- exercising all required safety precautions and procedures during loading, unloading and driving operations
- following safe handling procedures for taxis used by passengers with disabilities
- following work health and safety (WHS)/occupational health and safety (OHS) regulations and legislation
- identifying driving hazards and using appropriate safe driving techniques
- implementing contingency plans
- implementing emergency procedures
- maintaining the comfort and dignity of passengers with disabilities
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities
- monitoring performance of taxi and its equipment and taking appropriate action as required

© Commonwealth of Australia, 2025 Industry Skills Australia

- monitoring traffic and road conditions
- operating and adapting to differences in equipment in accordance with operating procedures
- participating in a range of interactions with passengers with disabilities
- reading, interpreting and following relevant instructions, procedures, information and signs
- recognising and applying ethical behaviour that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers with special needs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- reporting and/or rectifying identified vehicle faults or malfunctions in accordance with manufacturer instructions and workplace procedures
- responding appropriately to cultural differences in the workplace
- securing passengers for safe transport in accordance with relevant taxi industry standards and operating procedures
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- taking precautions to control risk when assisting passengers with disabilities into and out of a taxi
- taxi handling procedures including:

  starting a taxi

  steering and manoeuvring a taxi

  managing engine performance and its effect on the environment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternate transport modes if mobility aids cannot be safely secured in a wheelchair accessible taxi
- duty of care responsibilities when transporting passengers with disabilities
- equal opportunity/anti-discrimination legislation
- etiquette/protocols for interacting with passengers with disabilities
- general characteristics of various permanent/temporary and multiple disabilities including intellectual, physical, congenital and acquired disabilities
- methods of securing a range of wheelchair/mobility devices and passengers with various disabilities
- passengers who cannot be seated in or on certain mobility aids while in transit

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures and protocols for providing wheelchair accessible taxi services to passengers
- procedures to be followed in a driving emergency
- relevant state/territory road traffic authority road rules, regulations and licence requirements including the need to give priority to wheelchair passengers
- relevant WHS/OHS and environmental procedures and regulations
- sources of information and documentation when providing wheelchair accessible taxi services to passengers
- taxi transport subsidy scheme bookings and fare concessions
- typical problems that can occur when providing wheelchair accessible taxi services to passengers, and related appropriate action that can be taken to prevent or solve these problems
- various types of mobility aids that cannot be secured safety in wheelchair accessible taxis
- vehicle and ancillary equipment controls, instructions and indicators and their use
- workplace, company and customer service policies and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical assessment must occur using a wheelchair accessible taxi or taxi approved by state/territory regulations.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC2049 Operate heavy vehicle on unsealed roads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a heavy vehicle on unsealed roads safely, in accordance with relevant state/territory roads and traffic authority licence requirements and regulations for heavy vehicles.

It includes maintaining systematic and efficient control of all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations while operating a heavy vehicle on unsealed surfaces.

Operation of a heavy vehicle on unsealed roads involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a heavy vehicle across a variety of driving contexts and job roles.

Operation of a heavy vehicle on unsealed roads is performed with limited or minimum supervision, and with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Anticipate and transfer from sealed to unsealed road surfaces	1.1 Unsealed road surfaces are identified by sight
	1.2 Adjustments are made to driving techniques before unsealed surface is encountered
	1.3 Vehicle speed and line are adjusted for smooth transition from sealed to unsealed surfaces
	1.4 Control of vehicle is maintained throughout transition
	1.5 Appropriate signage and lights are checked for operational effectiveness on exiting sealed surfaces
	1.6 While entering unsealed surfaces, heavy vehicle is managed and operated to ensure effective vehicle control
2 Operate heavy vehicle on unsealed surfaces	2.1 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage when operating on unsealed surfaces
	2.2 Braking system of heavy vehicle is managed and operated to ensure effective vehicle control while operating on unsealed surfaces
	2.3 Driving hazards on unsealed surfaces are identified and/or anticipated and avoided or controlled through defensive driving techniques
	2.4 Appropriate procedures are followed in a driving emergency
	2.5 Surrounding environmental sensitivity is considered when operating heavy vehicle on unsealed roads
3 Anticipate and transfer from unsealed to sealed road surfaces	3.1 Sealed road surfaces are identified by sight
	3.2 Adjustments are made to driving techniques before sealed surface is encountered
	3.3 Vehicle speed and line are adjusted for smooth transition from unsealed to sealed surfaces
	3.4 Control of vehicle is maintained throughout transition

© Commonwealth of Australia, 2025 Industry Skills Australia

3.5 Appropriate signage and lights are checked for operational effectiveness on exiting unsealed surfaces

3.6 While exiting unsealed and sealed surfaces, heavy vehicle is managed and operated to ensure effective vehicle control

3.7 Heavy vehicle is inspected and cleared of road debris prior to re-entering sealed surfaces

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC2049A Operate heavy vehicle on unsealed roads.

Assessment Requirements for TLIC2049 Operate heavy vehicle on unsealed roads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- demonstrating low-risk driving behaviours
- identifying awareness of environmental sensitivities when driving on unsealed roads
- identifying techniques for entering and exiting sealed and unsealed road surfaces
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle, its trailers and its equipment and taking appropriate action as required
- reading and interpreting instructions, procedures, information and signs relevant to the driving of a heavy vehicle on unsealed roads.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- heavy vehicle handling procedures
- principles of operation of air brakes and procedures for their use

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant road-bridge classification of unsealed roads
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical driving aspects must be assessed in a vehicle typical of one of the following classes:

- medium rigid
- heavy rigid
- heavy combination
- multi-combination.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

A simulator/online assessment is not suitable for the final assessment of this unit of competency.

TLIC2050 Operate a terminal tractor

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely operate a terminal tractor and associated equipment.

It includes operating a terminal tractor, and monitoring and maintaining vehicle performance.

Operation is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate a terminal	1.1 Job hazards are identified and required action is taken to

tractor		minimise, control or eliminate identified hazards
	1.2	Vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and workplace procedures
	1.3	Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
	1.4	Vehicle is safely driven in reverse, maintaining visibility and achieving accurate positioning for coupling to a trailer
	1.5	Trailer is coupled, tug test is performed, legs are sufficiently raised from the ground, and air and electrical leads are connected in preparation for manoeuvring, in accordance with manufacturer instructions and relevant workplace policies and procedures
	1.6	Clear travel path is identified and coupled vehicle is moved and positioned in a manner safe for loading, unloading or parking, in accordance with workplace procedures
	1.7	Trailer legs are lowered sufficiently for unhitching, air and electrical leads are disconnected, turntable is released for uncoupling and vehicle is safely manoeuvred from underneath trailer
	1.8	Vehicle lights and indicators are used in accordance with traffic regulations, manufacturer instructions and workplace procedures
	1.9	Vehicle is parked, shut down and secured in accordance with manufacturer specifications and workplace procedures
	1.10	Vehicle positioning and movement are made convenient and safe for loading and unloading in accordance with workplace procedures
	1.11	Associated equipment is operated in accordance with manufacturer and workplace procedures
2 Monitor and maintain vehicle performance	2.1	Vehicle performance is safely maintained through pre-operational inspections and vehicle checks
	2.2	Performance and efficiency of vehicle operation is monitored during use
	2.3	Vehicle is driven in a manner that incorporates eco driving

© Commonwealth of Australia, 2025 Industry Skills Australia

principles

2.4 Defective or irregular performance or malfunctions are repaired as a minor repair or reported to appropriate authority

2.5 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

TLIC2054 Access rail track to run track vehicle within defined worksite

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely access the rail track to run a track vehicle within a defined worksite on a rail network during rail work activities.

It includes accessing defined worksites, running track vehicle within defined worksite and exiting defined worksite.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager safeworking system rules, procedures and protocols for rail safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Access defined worksite	1.1 Authority to enter the defined worksite is confirmed with protection officer
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Appropriate personal protective equipment (PPE) is used in accordance with Rail Infrastructure Manager requirements
	1.4 Limits of defined worksite and type of track protection provided are identified and confirmed
	1.5 Communication with protection officer is maintained in accordance with workplace procedures
2 Run track vehicle within defined worksite	2.1 Permission for all rail movements within worksite is obtained from protection officer
	2.2 Speed limit is observed for type or classification of track vehicle and type of track
	2.3 Speed limit is varied to meet local conditions
	2.4 Track vehicle is managed to be able to stop short of any workers or obstruction on track
	2.5 Unsafe situations and/or emergencies are identified, and appropriate action is taken in accordance with workplace procedures
3 Exit defined worksite	3.1 Protection Officer is notified when clear of the defined worksite
	3.2 Communications with Network Control Officer is maintained using appropriate communications protocols and systems, in accordance with Rail Infrastructure Manager requirements and workplace procedures

Assessment Requirements for TLIC2054 Access rail track to run track vehicle within defined worksite

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and work groups
- explaining appropriate response to identified unsafe situations and/or emergencies
- explaining how to safely access defined worksite
- explaining how to safely exit defined worksite
- following workplace procedures and protocols
- identifying changed conditions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- observing speed limit appropriate for type of vehicle, type of track and local conditions
- operating under track protection rules
- using required personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- points and signals recognition
- Rail Infrastructure Manager and organisational rules, policies, procedures and protocols
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- rail terminology as defined by relevant Rail Infrastructure Manager safeworking system
- safeworking systems and track protection.

TLIC2058 Travel medium or heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to travel a medium or heavy self-propelled track vehicle on a rail network in accordance with the rail network owner policies and procedures.

It includes performing pre-operating checks, obtaining appropriate authority to travel, stabling medium or heavy self-propelled track vehicle, performing post-operational procedures and completing documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines to operate each individual piece of equipment.

This unit involves the application of Rail Infrastructure Manager operational procedures to travel a medium or heavy self-propelled track vehicle, as part of workplace activities across a variety of operational contexts.

Medium or heavy self-propelled track vehicles may include:

- ballast cleaner
- ballast regulator
- dynamic stabiliser
- inserter/remover (TR10)
- rail crane
- rail grinder
- spot tamper
- tamper
- track layer
- track recorder.

Operators will need to have fulfilled licence and certification requirements for the type of equipment being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Perform pre-operational checks	1.1 Hazards are identified, risks are assessed and control measures are implemented
	1.2 Detailed pre-operational checks are conducted in accordance with manufacturer specifications and organisational procedures
	1.3 Logbooks are checked and completed in accordance with organisational requirements and manufacturer specifications
	1.4 Problems are identified and rectified in accordance with organisational procedures
	1.5 Identified problems are reported and documented in accordance with organisational procedures
2 Obtain appropriate authority to travel	2.1 Authority is obtained from appropriate person to travel from siding or on/off tracking location to designated location in accordance with Rail Infrastructure Manager procedures
	2.2 Communications with Network Control Officer is maintained using appropriate communications protocols and systems, in accordance with Rail Infrastructure

© Commonwealth of Australia, 2025 Industry Skills Australia

	Manager requirements and workplace procedures
	2.3 Authority to travel is recorded in accordance with organisational procedures
3 Travel vehicle	3.1 Vehicle is travelled in a safe and efficient manner in accordance with relevant codes of practice, safeworking systems, manufacturer specifications, and organisational and Rail Infrastructure Manager procedures
	3.2 Contingencies are responded to appropriately
4 Stable medium or heavy self-propelled track vehicle	4.1 Approval is requested from appropriate person to stable self-propelled track vehicle
	4.2 Nominated stabling location and timing is confirmed
	4.3 Vehicle is moved to nominated stabling location
	4.4 Appropriate person is contacted and informed that vehicle is at nominated location and intact
	4.5 Vehicle is stabled as directed and left in appropriate manner to ensure security and protection of vehicle and ancillary equipment
5 Perform post-operational procedures	5.1 Post-operational checks are conducted in accordance with manufacturer specifications and organisational procedures, to identify defects and maintenance requirements
	5.2 Identified problems are reported in accordance with organisational procedures
	5.3 Post-operational service schedules are conducted in accordance with organisational procedures
6 Complete documentation	6.1 Required documentation procedures and processes are confirmed
	6.2 Documentation is filled in legibly and proofread
	6.3 Documentation is processed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC2058A Travel medium or heavy self-propelled on-track equipment.

Assessment Requirements for TLIC2058 Travel medium or heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others when travelling medium or heavy self-propelled track vehicles
- following operational instructions
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- reporting and rectifying within limits of own role, identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when travelling medium or heavy self-propelled track vehicles.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plans and procedures
- hazards that may exist when travelling medium or heavy self-propelled track vehicles, and ways of controlling the risks involved
- organisational procedures for travelling medium or heavy self-propelled track vehicles
- problems that may occur when travelling medium or heavy self-propelled track vehicles, and action that can be taken to report or resolve these problems
- Rail Infrastructure Manager rules and regulations applicable to track protection
- relevant rail danger zones

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant rail safety work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur on medium or heavy self-propelled on-track equipment in an appropriate range of situations in the workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIC2059 Propel and operate light on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to propel and operate light on-track equipment as part of workplace activities across a variety of rail operational contexts.

It includes performing pre-operational equipment checks, obtaining approval to place equipment on track, operating light equipment on track and stabling or moving equipment off track.

Light on-track equipment is considered to be less than 10 tonnes that may be lifted on or off track mechanically and may include:

- ballast scarifiers
- dog screw setters/drivers
- joint lifters
- multi-spindle borers
- power track jacks
- profile grinders
- rail-mounted compressors
- small sleeper spacers
- spike drivers
- spike pullers (ride on)
- various fastening applicators.

Light on-track equipment requires a basic operator skill level in manipulation, coordination, alignment and functional activity, with little complexity or variance in overall activity. This typically covers equipment carrying out basic repetitive and alignment type activities.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements, to comply with relevant codes of practice and/or guidelines, and to meet organisational requirements to operate each individual piece of equipment.

Operators will need to have fulfilled licence and/or certification requirements for the type of equipment being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Perform pre-operational equipment checks	1.1 Hazards are identified, risks are assessed and control measures are implemented
	1.2 Detailed pre-operational equipment checks are conducted in accordance with manufacturer specifications and organisational procedures
	1.3 Logbooks are checked and accurately completed as required, in accordance with organisational requirements and manufacturer specification
	1.4 Problems with equipment are identified and rectified in accordance with workplace procedures
	1.5 Identified problems are reported and documented in accordance with organisational procedures
2 Obtain approval to place equipment on track	2.1 Protection officer or person in charge of work (PICOW) is contacted to obtain approval to place light on-track equipment on track and to move it to designated location in accordance with network owner's procedures
	2.2 Communications with Network Control Officer is maintained using appropriate communications systems, in accordance with network owner procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.3 Approval is recorded in accordance with organisational procedures
3 Operate light equipment on track	3.1 Equipment is travelled to designated location in accordance with network owner's procedures
	3.2 Equipment is prepared for work
	3.3 Equipment is operated in a safe and efficient manner in accordance with relevant codes of practice, safeworking systems, manufacturer and organisational procedures
	3.4 Equipment is operated to meet organisational standards and specifications
	3.5 Warning systems are monitored and appropriately responded to as required during operation
4 Stable or off track equipment	4.1 Protection officer or PICOW is contacted to direct where and when to stable or off track equipment
	4.2 Equipment is propelled to nominated stabling or off-track location
	4.3 Equipment is stabled or off tracked as directed
	4.4 Protection officer or PICOW is contacted and informed when light on-track equipment is stabled or off tracked
	4.5 Equipment is left stored in appropriate manner and location to ensure security and protection of equipment
5 Perform post-operational equipment procedures	5.1 Post-operational equipment checks are conducted in accordance with manufacturer specifications and organisational procedures to identify defects and maintenance requirements
	5.2 Identified problems are reported in accordance with organisational procedures
	5.3 Post-operating service schedules are conducted in accordance with organisational procedures
6 Complete documentation	6.1 Logbooks are checked and completed as required
	6.2 Documentation is completed and processed in accordance with organisational procedures

TLIC2074 Couple and uncouple track maintenance vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely couple/uncouple track vehicles in accordance with safeworking and organisational, policies and procedures.

It includes preparing to couple track maintenance vehicles, coupling track maintenance vehicles, and uncoupling and securing track maintenance vehicles.

This unit is intended for all types of track maintenance vehicles required to be coupled and uncoupled as part of operational requirements. Track maintenance vehicles may include:

- overhead wiring maintenance vehicle
- road/rail vehicles
- shunting tractors
- track inspection vehicles
- track machines
- wagon.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to couple track maintenance vehicles	1.1 Coupling instructions are interpreted and confirmed as meeting minimum operating standards
	1.2 Location of vehicles and required movements are identified
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Communication methods to be used are agreed and confirmed
	1.5 Vehicle/s to be coupled are secured in accordance with organisational procedures
2 Couple track maintenance vehicles	2.1 Setting of route and having correct authority in place is ensured prior to movement of track vehicles
	2.2 Warning is given before vehicle is moved
	2.3 Vehicle is moved in a controlled manner to enable safe coupling and prevent damage
	2.4 Coupling mechanisms are checked to ensure they are correctly engaged
	2.5 Connecting brake hoses and/or electrical couplings are connected as required, in accordance with organisational procedures and/or manufacturer specifications
	2.6 Securing devices are released/removed in accordance with organisational procedures
3 Uncouple and secure track maintenance vehicles	3.1 Hazards are identified, risks are assessed and control measures are implemented
	3.2 Vehicles are positioned to meet uncoupling requirements in accordance with organisational procedures
	3.3 Securing devices are applied/attached in accordance with organisational procedures
	3.4 Brake hoses and/or electrical couplings are disconnected in accordance with organisational procedures and/or

Assessment Requirements for TLIC2074 Couple and uncouple track maintenance vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others
- coupling and uncoupling track maintenance vehicles
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- securing vehicles in accordance with manufacturer specifications, before coupling and after uncoupling has been completed
- using correct communications methods
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications protocols
- operating requirements for coupling and uncoupling track maintenance vehicles
- principles of operation of protective devices, air and electrical couplings, handbrakes, derailers and coupling equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant manufacturer specifications for coupling and uncoupling of track maintenance vehicles
- relevant rail danger zones
- relevant state/territory legislated work health and safety (WHS)/occupational health and safety (OHS) and rail safety requirements, codes of practice, guidelines and manufacturer specifications.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIC2075 Drive and monitor medium or heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive and monitor medium/heavy self-propelled on-track equipment in accordance with safeworking requirements, network owner and/or organisational policies and procedures.

It includes driving and monitoring medium/heavy self-propelled on-track equipment, controlling and monitoring medium/heavy self-propelled on-track equipment, and responding to changed operating factors.

Medium/heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed. Medium/heavy self-propelled track vehicles may include:

- ballast cleaner
- ballast regulator
- dynamic stabiliser
- inserter/remover (TR10)
- rail crane
- rail grinder
- spot tamper
- tamper
- track layer
- track recorder.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with any codes of practice and/or guidelines as they apply to driving and monitoring medium or heavy self-propelled on-track equipment.

This unit does not cover operating medium/heavy self-propelled on-track equipment to complete work activities. This must be covered by individual assessments for the equipment concerned.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive and monitor medium/heavy self-propelled on-track equipment	1.1 Authority is obtained from relevant personnel to travel vehicle in accordance with network owner procedures
	1.2 Vehicle is driven in accordance with manufacturer instructions and organisational procedures
	1.3 Vehicle handling techniques are applied to eliminate or minimise risk of injury to personnel or damage to equipment
	1.4 Vehicle is monitored and faults, defects and inefficiencies are identified to maintain optimum running conditions
	1.5 Appropriate action is taken in response to identified faults, defects and inefficiencies to ensure safe operation of vehicle
2 Control and monitor medium/heavy self-propelled on-track equipment	2.1 Events and circumstances affecting planned running schedule are communicated to relevant personnel in accordance with organisational procedures
	2.2 Instructions received from relevant personnel are interpreted and applied to ensure safe and effective control of vehicle
	2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant safeworking systems, network requirements and

© Commonwealth of Australia, 2025 Industry Skills Australia

	organisational procedures
	2.4 Instructions concerning vehicle operation are given to relevant personnel to ensure safe and efficient running
3 Respond to changed operating factors	3.1 Temporary signs and/or signals, hand signals and verbal movement commands are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures
	3.2 Hazardous/emergency situations are recognised and appropriate actions are taken in accordance with safeworking systems, network owner requirements and organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC2075A Drive and monitor medium or heavy self-propelled on-track equipment.

Assessment Requirements for TLIC2075 Drive and monitor medium or heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and organisational procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring medium or heavy self-propelled on-track equipment in accordance with manufacturer instructions and organisational procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting instructions, procedures and information relevant to vehicle operations
- responding to trackside signs and signals in accordance with safeworking systems and workplace procedures
- using correct communications protocols
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plans and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant medium or heavy self-propelled on-track equipment manufacturer specifications and organisational procedures
- relevant rail danger zones and safeworking system
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant sections of state/territory legislated rail safety requirements, codes of practice and guidelines
- use of communications equipment in accordance with operational procedures and rail safeworking systems .

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur on a medium/heavy self-propelled on-track vehicle in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Vehicles may include:

- attached rolling stock
- single medium/heavy self-propelled on-track equipment
- vehicles coupled together.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIC2076 Establish and operate braking system on medium/heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to establish, test and operate the braking system on a medium or heavy self-propelled on-track maintenance vehicle and to deal with brake system faults and failures.

It includes identifying and establishing track maintenance vehicle braking system; testing, operating and monitoring track maintenance vehicle braking system; and identifying and rectifying track maintenance vehicle braking system faults in transit.

Medium or heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed.

This unit is intended for rail safety workers who will drive medium/heavy self-propelled on-track equipment to ensure the braking system is suitable for operation prior to the on-track equipment being driven and to identify any faults when in transit. Depending on the type of test being used this activity may require the assistance of a second person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and establish track maintenance vehicle braking system	1.1 Brake system and type to be used are identified
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Correct coupling of vehicle braking system is established and/or confirmed as required in accordance with organisational procedures
	1.4 Air brake system is charged to required pressures in accordance with organisational procedures
2 Test, operate and monitor track maintenance vehicle braking system	2.1 Relevant brake system tests are conducted in accordance with organisational procedures
	2.2 Vehicle brakes are applied and released under normal operational conditions in accordance with correct handling and organisational procedures
	2.3 Vehicle brakes are applied and released under emergency conditions in accordance with correct handling and organisational procedures
	2.4 Vehicle brake system is monitored in accordance with organisational and/or operational requirements
3 Identify and rectify track maintenance vehicle braking system faults in transit	3.1 Braking system faults are identified while in transit
	3.2 Suitable location to bring vehicle to a stand is identified in accordance with vehicle handling and organisational procedures
	3.3 Vehicle brake system fault is located and rectified or isolated in accordance with manufacturer and/or organisational procedures
	3.4 Relevant brake system tests are conducted as required, in accordance with organisational procedures

Assessment Requirements for TLIC2076 Establish and operate braking system on medium/heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- assessing brake system defects
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying possible brake faults that may occur
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- operating brake systems when driving on-track vehicle
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate state/territory legislated rail safety requirements, rail industry standards, relevant codes of practice and/or guidelines
- brake systems, their components and operation

© Commonwealth of Australia, 2025 Industry Skills Australia

- manufacturer specifications and workplace procedures for medium/heavy self-propelled on-track equipment
- relevant rail danger zones and safeworking systems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- types of brake system tests and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur on medium/heavy self-propelled on-track equipment, in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIC2078 Identify and respond to signals and trackside signs

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, interpret and respond to fixed signals and trackside signs in accordance with network owner and/or organisational policies and procedures.

It includes identifying and responding to running signals, indicators, shunting signals and subsidiary signals; interpreting and responding to trackside signs; and reporting defective or irregular signals or trackside signs.

This unit is suitable for rail safety workers who are required to identify and respond to trackside signals and signs as part of their job role. They may be working within a rail operational or infrastructure environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Assessment Requirements for TLIC2078 Identify and respond to signals and trackside signs

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- completing required documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information (including numerical information)
- responding to different indications and aspects displayed by fixed signals in rail networks
- responding to different trackside signs in rail networks
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- signalling system for each network
- types of fixed signals used in rail networks
- types of trackside signs used in rail networks
- use of communications equipment
- workplace procedure for responding to illegal or irregular indications displayed by running signals or shunting signals.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

TLIC2080 Start up, shut down and stable medium/heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to start up, prepare, shut down and stable a medium/heavy self-propelled on-track vehicle on a rail network in accordance with network owner policies and procedures.

It includes inspecting and preparing track vehicle, starting up track vehicle, conducting in-cab check, stabling medium heavy self-propelled track vehicle, shutting down track vehicle and performing post operational procedures.

Medium or heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed.

Medium or heavy self-propelled on-track vehicles may include:

- ballast cleaner
- ballast regulator
- dynamic stabiliser
- inserter/remover (TR10)
- rail crane
- rail grinder
- spot tamper
- tamper
- track layer
- track recorder.

This unit is suitable for rail safety workers required to start up and prepare a medium/heavy self-propelled on-track vehicle prior to leaving a stabling location. It also covers stabling a medium/heavy self-propelled track vehicle, including shutting the vehicle down and securing it.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Inspect and prepare track vehicle	1.1 Identification and location of track vehicle is confirmed
	1.2 Logbook and track vehicle are checked for out of service indications and to confirm serviceability and logbook is completed accurately in accordance with organisational requirements or manufacturer specification
	1.3 Track vehicle kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged or reported in accordance with organisational procedures, as applicable
	1.4 Consumables are checked and replenished as required
	1.5 External visual checks are conducted in accordance with manufacturer and/or organisational procedures
	1.6 Problems are identified and rectified in accordance with organisational procedures
	1.7 Identified problems are reported and/or documented in accordance with organisational procedures
2 Start up track vehicle	2.1 Track vehicle is started in accordance with manufacturer instructions and/or organisational procedures
	2.2 Operating faults are identified, diagnosed, rectified and/or reported and recorded in accordance with organisational

© Commonwealth of Australia, 2025 Industry Skills Australia

	procedures
	2.3 Appropriate instruments and gauges are observed and readings are interpreted to confirm effective operation in accordance with manufacturer and/or organisational procedures
	2.4 Fluid levels are rechecked after starting and appropriate action is taken as required
3 Conduct in-cab checks	3.1 Track vehicle in-cab checks are conducted in accordance with manufacturer and/or organisational procedures
	3.2 Driver safety systems are checked to ensure they are functioning correctly and appropriate action is taken if they are not
	3.3 Communications equipment is checked to ensure it is functioning correctly and appropriate action is taken if it is not
	3.4 Auxiliary and emergency equipment is checked and confirmed to be operational in accordance with operating requirements
	3.5 Documentation concerning inspecting track vehicle is completed and processed as required in accordance with organisational procedures
4 Stable medium/heavy self-propelled track vehicle	4.1 Approval is requested from appropriate person to direct when and where to stable self-propelled track vehicle
	4.2 Track vehicle is moved to nominated stabling location
	4.3 Appropriate person is contacted and informed that track vehicle is at nominated location and intact
	4.4 Track vehicle is stabled as directed
	4.5 Track vehicle is left in appropriate manner to ensure security and protection of vehicle and ancillary equipment
5 Shut down track vehicle	5.1 Track vehicle is shut down in accordance with manufacturer and/or organisational procedures
	5.2 Track vehicle is secured in accordance with organisational procedures
	5.3 Control/isolation equipment and cab are secured in accordance with organisational procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

6 Perform post-operational procedures	6.1 Post-operational checks are conducted in accordance with manufacturer specifications and/or organisational procedures to identify defects and maintenance requirements
	6.2 Identified problems are reported in accordance with organisational procedures
	6.3 Post-operating service schedules are conducted in accordance with organisational procedures
	6.4 Documentation is completed and processed as required, in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC2080 Start up, shut down and stable medium/heavy self-propelled on-track equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant workplace procedures
- communicating effectively with others
- following operational instructions
- identifying correct shut-down procedures in accordance with manufacturer instructions and workplace procedures
- identifying correct start-up procedures in accordance with manufacturer instructions and workplace procedures
- modifying activities depending on operational contingencies, risk situations and environments
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- securing vehicles in accordance with manufacturer instructions and workplace procedures, when stabling on-track equipment
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plans and procedures
- hazards that may exist during start up and shut down of medium/heavy self-propelled track vehicles and ways of controlling the risks involved
- network owner rules and regulations applicable to starting up, shutting down and stabling medium/heavy self-propelled on-track equipment
- organisational procedures for starting up and shutting down medium/heavy self-propelled

© Commonwealth of Australia, 2025 Industry Skills Australia

on-track equipment
- problems that may occur when preparing and stabling medium/heavy self-propelled on-track equipment and action that can be taken to report or resolve these problems
- relevant documentation concerning inspecting on-track equipment
- relevant manufacturer specifications and workplace procedures for medium/heavy self-propelled on-track equipment
- relevant rail danger zones and safeworking systems
- relevant rail safety work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur on medium/heavy self-propelled on-track equipment, in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice, manufacturer specifications and operation manuals.

TLIC2081 Pilot rail traffic within work on track authority limits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to pilot rail traffic within Work On Track Authority limits, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements. It includes entering and exiting work on track authority limits.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

essential outcomes.	achievement of the element.
1 Enter Work On Track Authority limits	1.1 Protection officers /possession protection officers are informed that rail traffic has arrived at the Work On Track Authority limits and confirmation that it is safe to enter is sought and obtained
	1.2 Communication with Network Control Officer is maintained using appropriate communications systems, in accordance with Rail Infrastructure Manager requirements and workplace procedures
	1.3 Permission to enter Work On Track Authority limits is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
	1.4 Authority to enter track protection is provided to rail traffic driver
	1.5 Hazards are identified, risks are assessed and control measures are implemented
	1.6 Rail traffic is piloted into the Work On Track Authority limit
	1.7 Advice regarding operating restrictions and conditions is given to rail traffic crew
2 Exit Work On Track Authority limits	2.1 Rail traffic is piloted to limit of the Work On Track Authority limits
	2.2 Permission is obtained from Network Control Officer for rail traffic to exit Work On Track Authority limits
	2.3 Advice regarding operating restrictions and conditions is given to rail traffic crew

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC2081 Pilot rail traffic within work on track authority limits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying safeworking procedures
- communicating effectively with individuals and work groups
- explaining procedures for granting permission for rail traffic to enter Work On Track Authority limit
- following safeworking workplace policies, procedures, rules and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Rail Infrastructure Manager safeworking system policies, procedures, rules and protocols
- Rail Infrastructure Manager emergency management procedures and protocols for identified unsafe situations or emergencies
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- worksite protection plan.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

TLIC3003 Drive medium rigid vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive a medium rigid vehicle safely in accordance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to medium rigid vehicles.

It includes systematically and efficiently controlling vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Types of vehicles include all medium rigid vehicles, for example any 2-axle rigid vehicle, including trucks and buses greater than 8 tonnes gross vehicle mass (GVM).

Driving is performed with limited or minimum supervision, within duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive medium rigid vehicle	1.1 Medium rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturer instructions
	1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage
	1.3 Engine operation is maintained within manufacturer specified torque range and temperature, through effective transmission use
	1.4 Braking system of medium rigid vehicle is managed and operated to ensure effective control of vehicle under all conditions
	1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
	1.6 Medium rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
	1.7 Medium rigid vehicle is parked, shut down and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
	1.8 Appropriate procedures are followed in a driving emergency
2 Monitor traffic and road conditions	2.1 Most efficient travel route is taken through monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
	2.2 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
3 Monitor and maintain vehicle performance	3.1 Vehicle performance is maintained through pre-operational vehicle inspections and checks
	3.2 Performance and efficiency of vehicle operation is monitored during use
	3.3 Defective or irregular performance or malfunctions are reported to appropriate authority
	3.4 Vehicle records are maintained/updated and information is

© Commonwealth of Australia, 2025 Industry Skills Australia

processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3003A Drive medium rigid vehicle.

Assessment Requirements for TLIC3003 Drive medium rigid vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- carrying out pre-operational checks
- checking and replenishing fluids and carry out lubrication processes
- completing relevant documentation
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring equipment performance
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on drivers
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions, and related action that can be taken by a driver
- fatigue management strategies including on-road techniques

© Commonwealth of Australia, 2025 Industry Skills Australia

- lifestyles that promote effective long-term management of fatigue
- map reading and road navigation techniques including the use of a global positioning system (GPS) device
- medium rigid vehicle controls, instruments and indicators, and their use
- medium rigid vehicle handling procedures
- pre-operational checks carried out on vehicle and related action
- principles of operation of air brakes and procedures for their use
- principles of stress management when driving a vehicle
- procedures to be followed in a driving emergency
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory road traffic authority.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Assessment Requirements for TLIC3004 Drive heavy rigid vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- carrying out pre-operational checks
- completing relevant documentation
- demonstrating low-risk driving behaviours
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle and its equipment, and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on drivers
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions, and related action that can be taken
- fatigue management strategies and on-road techniques
- heavy rigid vehicle controls, instruments and indicators, and their use

© Commonwealth of Australia, 2025 Industry Skills Australia

- heavy rigid vehicle handling procedures
- lifestyles that promote the effective long-term fatigue management
- pre-operational checks carried out on heavy rigid vehicle and related action
- principles of operation of air brakes and procedures for their use
- principles of stress management when driving a vehicle
- procedures to be followed in a driving emergency
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory road traffic authority.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC3005 Drive heavy combination vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive a heavy combination vehicle safely.

It includes maintaining systematic and efficient control of all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, coupling and uncoupling a trailer, and effectively managing hazardous situations.

Driving must be carried out in accordance with relevant state/territory roads and traffic authority licence requirements and regulations for heavy combination vehicles.

Driving is performed with limited supervision, and duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
1 Drive heavy combination vehicle	1.1	Heavy combination vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturer instructions
	1.2	Engine power is managed to ensure efficiency and performance, and to minimise engine and gear damage
	1.3	Engine operation is maintained within the manufacturer specified torque range and temperature, through effective gear selection and smooth transition in gear changes
	1.4	Heavy combination vehicle braking system is managed and operated to ensure effective vehicle control under all conditions
	1.5	Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
	1.6	Heavy combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
	1.7	Heavy combination vehicle is parked, uncoupled, shut down and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
	1.8	Over width and overweight permit applications are completed and submitted in accordance with relevant regulatory requirements as required
	1.9	Appropriate signage and lights are checked for operational effectiveness and for conformity to prescribed traffic regulations
	1.10	Appropriate procedures are followed in a driving emergency
2 Monitor traffic and road conditions	2.1	Most efficient route of travel is taken by monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
	2.2	Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment loads and facilities
3 Monitor and maintain vehicle	3.1	Vehicle performance is maintained through pre-operational inspections and vehicle checks

© Commonwealth of Australia, 2025 Industry Skills Australia

performance	3.2	Prime mover and trailer are aligned and coupled in accordance with manufacturer instructions and workplace procedures
	3.3	Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm it is fully operational
	3.4	Performance and efficiency of vehicle operation is monitored during use
	3.5	Defective or irregular performance or malfunctions are reported to appropriate authority
	3.6	Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3005A Drive heavy combination vehicle.

Links

Assessment Requirements for TLIC3005 Drive heavy combination vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying map reading and road navigation techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids and carrying out lubrication processes
- completing relevant documentation
- demonstrating low-risk driving behaviours
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle, its trailers and its equipment, and taking appropriate action as required
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on drivers
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions, and related action that can be taken
- fatigue management strategies including on-road techniques

© Commonwealth of Australia, 2025 Industry Skills Australia

- heavy combination vehicle controls, instruments and indicators, and their use
- heavy combination vehicle handling procedures
- lifestyles that promote effective long-term fatigue management
- map reading and navigation of vehicle and related action
- pre-operational checks carried out on heavy combination vehicle and related action
- principles of operation of air brakes and procedures for their use
- principles of stress management when driving a vehicle
- procedures to be followed in a driving emergency
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of this unit may be undertaken within a licensing examination conducted, by or under the authority of, the relevant state/territory road traffic authority.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry

TLIC3010 Pilot or escort oversized and/or overmassed loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake pilot or escort activities in the movement of oversized and/or overmassed loads.

Work must be carried out in accordance with National Heavy Vehicle Regulator (NHVR) regulations for piloting and escorting oversized and overmassed loads, and relevant state/territory roads and traffic authority licence/permit requirements.

It includes preparing for pilot/escort operation, carrying out communications regarding pilot/escort operation, and fulfilling all functions related to piloting and escorting vehicles carrying oversized and overmassed loads.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for pilot or escort operation	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Maintenance needs of pilot and/or escort vehicles and associated equipment are identified in accordance with maintenance schedule or fault reports
	1.3 Pilot and/or escort vehicles and associated equipment are prepared for operation in accordance with manufacturer specifications, workplace procedures and government regulations
	1.4 Minor vehicle maintenance is carried out in accordance with workplace procedures and manufacturer specifications
	1.5 Post-maintenance inspections and tests of pilot and/or escort vehicles and associated equipment are completed
	1.6 Inspections outcomes, identified faults and repairs are recorded in accordance with workplace procedures
2 Carry out communications regarding pilot or escort operation	2.1 Transport companies whose vehicles are scheduled for escort are consulted to confirm requirements for escort operation
	2.2 Escort permit is verified for completeness and accuracy, and convoy is checked to ensure accordance with permit, government rules, regulations and policy
	2.3 Permit holder is advised of the results of the permit check
	2.4 Convoy is briefed and given instructions and directions about escort operation in accordance with workplace procedures
3 Conduct pilot and/or escort operation	3.1 Required vehicle positioning, traffic warning and directional signalling procedures are implemented to enable safe passage of load
	3.2 Safety equipment is operated and roadside obstacles are positioned to ensure safe passage of load in accordance with government rules and regulations, and workplace procedures
	3.3 Precautions are taken to ensure convoy personnel are aware of road and other conditions that may impact on load and

© Commonwealth of Australia, 2025 Industry Skills Australia

	vehicle security
3.4	All required liaison with relevant authorities is undertaken
3.5	Documentation is completed and proofread in accordance with government rules and regulations, and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3010A Pilot or escort oversized and/or overmassed loads.

Assessment Requirements for TLIC3010 Pilot or escort oversized and/or overmassed loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

TLIC3011 Transport passengers with disabilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate vehicles used for the transport of people who have a disability, in accordance with relevant state/territory road and traffic authority licence requirements and regulations.

It includes undertaking pre-operational vehicle checks and vehicle ancillary equipment; assisting passengers to use restraints and ancillary equipment; providing appropriate support to passengers during their journey; and manoeuvring the vehicle with due consideration of passengers' disabilities and the requirements of relevant government regulations.

Work is performed with limited or minimum supervision, and within duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Carry out pre-operational checks on vehicles	1.1 Pre-operational checks for vehicle and its associated ancillary equipment are carried out in accordance with manufacturer requirements, government regulations and workplace policies and procedures
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Faults and defects identified during checks are repaired and/or reported in accordance with workplace procedures
2 Drive a vehicle used by passengers who have a disability	2.1 Passengers are assisted in a courteous manner, sensitive to the specific needs of their disability
	2.2 Passengers are assisted to use restraints and ancillary equipment that accompanies them as required
	2.3 Ongoing support is provided to passengers to maximise their travelling comfort
	2.4 Ancillary equipment is stowed safely in vehicle in accordance with relevant regulations
	2.5 Vehicle is manoeuvred in accordance with the regulations for the class of vehicle involved
	2.6 Vehicle is manoeuvred with due consideration to required precautions related to the disability of the passenger in accordance with relevant government regulations pertaining to the special load
	2.7 Signs or indicators are fixed to vehicle as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIC3011 Transport passengers with disabilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- controlling all functions of the vehicle
- interacting appropriately with passengers who have a disability
- reading, interpreting and following relevant instructions, procedures, information and signs
- responding appropriately to cultural requirements when interacting with others
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- duty of care responsibilities when driving vehicles used by passengers who have a disability
- pre-operational checks carried out on vehicle, and ancillary equipment and related action
- procedures for operating ancillary equipment
- relevant anti-discrimination legislation
- relevant state/territory road traffic authority road rules, regulations and licence requirements of the relevant
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations

TLIC3017 Shunt rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely shunt rolling stock in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes controlling and directing the physical movement of rolling stock and operating relevant equipment to carry out planned shunting strategy.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when carrying out shunting activities as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for shunting operation	1.1 Shunting requirements are interpreted and clarified, and vehicles and equipment are obtained and prepared in accordance with shunting strategy
	1.2 Rolling stock movements, availability and locations are established to determine appropriate siding and/or track locations for vehicle placement
	1.3 Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, codes of practice, organisational policies and procedures, and safeworking systems and requirements related to shunting are identified
2 Carry out shunting control procedures	2.1 Points, levers, switches, signals and line of sight communications are used to assist the control of rolling stock movement
	2.2 Uniform hand signals, light and radio shunting commands that conform with operational rules and statutory requirements are used
	2.3 Relevant WHS/OHS requirements are followed to prevent injury and damage
	2.4 Wagon cards are checked and wagons are obtained and sorted to comply with shunting requirements
	2.5 Shunting control techniques are applied to prevent damage of rolling stock and loads/contents
3 Shunt rolling stock	3.1 Workplace procedures for shunting are identified and applied
	3.2 Rolling stock is positioned to meet shunting requirements
	3.3 Coupling systems are identified and applied to attach and detach rolling stock
	3.4 Connecting brake hoses, electrical couplings and hand brakes are connected/disconnected and applied/released in accordance with operational and WHS/OHS requirements
	3.5 Rolling stock is shunted with the minimum of necessary moves within governing safety requirements and limitations

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Finalise train consist	4.1 Train consists are made up in accordance with operational procedures and timetabling requirements
	4.2 Irregularities and defects with rolling stock equipment are reported in accordance with operational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3017A Shunt rolling stock.

Assessment Requirements for TLIC3017 Shunt rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking draw gear, vehicle and equipment in terms of service schedule and operating procedures
- communicating effectively with others
- completing relevant documentation
- displaying and correctly interpreting hand, light and radio signals in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritise work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition and performance of equipment and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics and features of wagons and other rolling stock
- defects that can occur on a shunting gear and equipment and related action that should be taken
- draw gear capacities and related operating procedures
- emergency procedures
- loading and unloading procedures
- location and operation of signals and points
- principles of operation of protective devices, air brakes, handbrakes, derailers
- procedures for coupling and uncoupling rolling stock
- procedures for identifying and reporting hazards
- procedures for operating points and signals
- radio communications protocol
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice
- safeworking systems and rule requirements
- shunting plan and instructions
- shunting signals and commands and line of sight communications systems
- track and signal layouts and features in yard.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

TLIC3018 Operate on-train remote control system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate an on-train remote control system in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes positioning equipment and motive power units, operating the system and shutting it down after operation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment.

On-train remote control equipment is any mechanism and operating system that allows the control of one motive power unit, which is part of a train, from another unit that is part of the same train.

It involves the application of routine operational principles and procedures when operating the on-train remote control system, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Position equipment and motive power unit/s	1.1 Remote control equipment and motive power units are positioned in required locations
	1.2 Brake test is conducted on each train section with assistance from appropriate personnel
	1.3 Front and rear train consists are coupled together to form one train, in accordance with safeworking techniques
	1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage
	1.5 Relevant codes of practice, and safeworking systems and requirements are followed
2 Monitor and operate remote control equipment	2.1 Motive power units and control system set-up are checked to ensure safe operational status
	2.2 Remote control equipment is operated and monitored in accordance with operational requirements during train movements to provide safe train handling and control
	2.3 Operational difficulties encountered are addressed by re-establishing control of the motive power unit/s with minimum risk to personnel and equipment
3 Shut down remote control equipment	3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and de-activation of the system
	3.2 Equipment indicators or functions are operated to ensure shut-down process is correct and complete

Assessment Requirements for TLIC3018 Operate on-train remote control system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment and taking appropriate action as required
- monitoring train speeds and movements and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- shutting down remote control system in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- motive power operating techniques
- on-train remote control unit controls, instruments and indicators, and their purpose, location and use
- operational instructions
- positioning procedures
- possible operating difficulties that may occur during the operation using remote control
- procedures for controlling motive power units
- procedures for identifying equipment defects in remote control units and assessing for appropriate action including compatible coupling, braking and drive equipment, ancillary systems and signalling systems
- procedures for managing hazardous situations involving online remote control systems
- procedures for operating remote control units
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- shut-down workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIC3027 Stable a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to stable a motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes determining the required stabling location, shunting and securing the train, stabling and securing the motive power unit, carrying out all required post-operational checks and completing post-operational paperwork.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when stabling and securing a motive power unit, across a variety of operational contexts in the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine stabling location	1.1 Contact is made with appropriate personnel to determine planned location for stabling train and/or motive power unit
	1.2 Location is identified and confirmed with appropriate personnel
	1.3 Directions from appropriate personnel are interpreted and followed
2 Stable motive power unit	2.1 Train is shunted and secured to prevent roll away in accordance with directions and workplace procedures
	2.2 Motive power unit is stabled as directed
	2.3 Motive power unit is secured to prevent roll away, in accordance with directions and workplace procedures
	2.4 Motive power unit is shut down in accordance with manufacturer instructions and workplace procedures
	2.5 Cab is secured in accordance with workplace procedures
	2.6 Derailers are set in place in accordance with workplace procedures as required
3 Carry out post-operational checks	3.1 Fuel and fluid levels are checked and required action is taken to replenish consumables
	3.2 Inspection is made of motive power unit in accordance with workplace procedures
	3.3 Identified faults and defects are fixed and/or reported and recorded in accordance with workplace procedures
	3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged in accordance with workplace procedures and rail regulations
	3.5 Outcomes of post-operational checks are recorded in accordance with workplace procedures
	3.6 Equipment is returned and stowed in accordance with workplace requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

3.7 Required safeworking and post-operational documentation is completed in accordance with workplace procedures and rail regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3027A Stable a motive power unit.

Links

Assessment Requirements for TLIC3027 Stable a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- carrying out post-operational checks on a range of motive power units in accordance with workplace procedures
- communicating effectively with others
- conducting a visual inspection of a motive power unit
- documenting outcomes of motive power unit inspection
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising problems that may arise when stabling a motive power unit and taking appropriate action.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- braking and safety system procedures
- emergency procedures
- motive power unit controls, instruments and indicators, and their purpose, location and use
- operating controls to start, accelerate, decelerate and stop a motive power unit
- procedure for completing relevant documentation when stabling a motive power unit
- procedures and required protocol for operating electronic communications equipment
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing hazardous situations when operating and stabling a motive power unit
- procedures for minor maintenance, cleaning, lubricating and servicing a motive power unit
- procedures for operating and shutting down auxiliary systems
- procedures for securing a motive power unit to prevent roll away
- procedures for stabling a motive power unit
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- relevant workplace procedures and operating requirements
- speed and load limit compliance requirements
- typical defects that can occur on a motive power unit and related action that should be taken.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

TLIC3028 Operate and monitor a heritage motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor a heritage motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes operating the controls of a heritage motive power unit, monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining the safety and operation of a heritage motive power unit across a variety of operational contexts in the Australian heritage rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate heritage motive power unit	1.1 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
	1.2 Acceleration and braking techniques are applied safely within track, road and weather conditions
	1.3 Heritage motive power unit and rolling stock movement between sections is monitored and vehicles are positioned safely in accordance with relevant codes of practice, safeworking systems and related requirements
2 Operate and monitor on-board equipment	2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies
	2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with operations controller as required
	2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel
3 Respond effectively to external operating factors	3.1 Instructions are verified, as required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.2 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.3 Hazardous situations are recognised and interpreted, and appropriate initiatives and action are taken to minimise risk to personnel and equipment, in accordance with workplace procedures and applicable regulatory requirements
4 Work collaboratively	4.1 Safe operation and monitoring of motive power unit is maintained in collaboration with other train crew, network control officers and relevant personnel in accordance with workplace requirements and rail resource management

© Commonwealth of Australia, 2025 Industry Skills Australia

	principles
	4.2 Potential or actual conflicts or grievances with other train crew, network control officers or relevant personnel when operating a motive power unit are recognised and resolved, in accordance with workplace procedures and rail resource management principles
	4.3 Regular communication is maintained with train crew, network control officers, drivers of other trains and relevant personnel when operating a motive power unit in accordance with workplace procedures and regulatory requirements
	4.4 Train crew, network control officers, drivers of other trains and relevant personnel are advised of operational problems, delays, safety incidents and emergency situations
	4.5 Information provided by train crew, network control officers, drivers of other trains and relevant personnel about the ongoing operation of the motive power unit is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements
5 Follow all applicable rail regulatory requirements	5.1 Rail regulatory requirements applicable to operating a motive power unit, and the train and track or road concerned, are accessed, clarified as required and interpreted
	5.2 Relevant rail regulatory requirements are applied and followed when operating a motive power unit
	5.3 Rail resource management principles are applied in all rail operations involving a motive power unit in accordance with workplace procedures and applicable rail regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

2 Stable and shut down heritage steam locomotive	2.1 Hazards are identified, risks are assessed and risk control measures are implemented
	2.2 Carriages or vehicles are shunted and secured in accordance with directions, workplace procedures and rail regulations
	2.3 Steam locomotive is stabled in correct location as directed
	2.4 Derailers are set in place in accordance with workplace procedures and rail regulations
	2.5 Handbrakes are applied
	2.6 Park brakes are secured
	2.7 Steam locomotive is stabled in accordance with operator instructions and workplace procedures
	2.8 Cab is secured in accordance with workplace procedures
3 Carry out post-operational checks	3.1 Fluid and fuel levels are checked and any required action is taken to top up levels
	3.2 Visual check is made of steam locomotive in accordance with workplace procedures
	3.3 Identified faults and defects are fixed or reported and recorded in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged in accordance with workplace procedures and rail regulations
	3.5 Outcomes of post-operational checks are recorded in accordance with workplace procedures
4 Complete post-operational paperwork	4.1 Timesheet or other work record is completed
	4.2 Roster is checked for future work allocation
	4.3 Issues and variations are discussed and resolved with roster clerk
	4.4 Required safeworking documentation and actions are completed in accordance with workplace procedures and rail regulations
	4.5 Equipment is returned and stowed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3031A Stable a heritage steam locomotive.

Assessment Requirements for TLIC3031 Stable a heritage steam locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heritage steam locomotives and associated equipment and procedures
- checking and replenishing fluids and fuel and carrying out lubrication requirements on a heritage steam locomotive
- communicating effectively with others
- completing relevant documentation
- conducting post-operational inspection of a heritage steam locomotive
- determining heritage steam locomotive stabling location
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- managing contingencies in accordance with workplace procedures
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising problems that may arise when stabling a heritage steam locomotive and taking appropriate action.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- braking and safety system procedures
- emergency procedures
- heritage steam locomotive controls, instruments and indicators and their purpose, location and use
- monitoring devices; braking and power equipment, auxiliary systems, and signalling systems
- operating controls to start, accelerate, decelerate and stop a heritage steam locomotive
- procedure for completing relevant documentation
- procedures for identifying equipment defects, assessing and reporting for appropriate action
- procedures for managing hazardous situations
- procedures for minor maintenance, cleaning, lubricating and servicing heritage steam locomotives
- procedures for operating and shutting down ancillary systems
- procedures for operating and stabling a heritage steam locomotive
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- speed and load limits
- typical defects that can occur on a heritage steam locomotive and related action that should be taken.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC3032 Operate and monitor a passenger electric tram

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor a passenger electric tram in accordance with relevant workplace practices, tramway regulations and codes of practice.

It includes planning and preparing a tram for passenger service, operating a passenger electric tram, operating a revenue collection system, monitoring passenger electric tram performance during service, and communicating effectively with other personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant state/territory road rules and tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when operating and monitoring a passenger electric tram across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare passenger electric tram for operations	1.1 Driving requirement is identified and confirmed from roster, shift card or other authorised documentation
	1.2 Sign-on/log-on procedures at the depot are completed and tram to be driven is correctly identified and located
	1.3 Resources are identified and obtained, including documentation
	1.4 Hazards are identified, risks are assessed and risk control measures are implemented
	1.5 Procedures for reporting incidents and the cancellation and non-operation of services are identified and followed
2 Operate passenger electric tram	2.1 Tram is operated within specifications and organisational requirements to meet required schedules, routes, timetables and special services
	2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisational requirements
	2.3 Warning devices and gauges are monitored and responded to in accordance with organisational requirements
	2.4 Operational restrictions established by the organisation and relevant legislation are observed
	2.5 Tram is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all kinds of passengers
	2.6 Destination signs are adjusted in accordance with work schedules
	2.7 Wheelchair equipment where provided is operated when required in accordance with workplace procedures
3 Respond effectively to external operating factors	3.1 Instructions are verified as required, interpreted and followed, in accordance with relevant regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.2 Fixed traffic and hand signals and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
	3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment
	3.4 Defensive driving practices are employed at all times
4 Operate revenue collection systems	4.1 Start-up check is completed in accordance with workplace procedures
	4.2 Ticketing system is activated, operated and updated in accordance with workplace procedures
	4.3 Ticketing system defects are reported in accordance with workplace procedures
	4.4 Ticketing system is closed down, in accordance with authorised organisation procedures
5 Operate and monitor on-board equipment	5.1 Electric tram equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies
	5.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of tram, including communications with operations controller as required
	5.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel
	5.4 Defects are reported and/or recorded
6 Work collaboratively	6.1 Safe operation and monitoring of tram is maintained in collaboration with tram crew, tram controllers and other relevant personnel in accordance with workplace requirements
	6.2 Potential or actual conflicts or grievances with tram crew, tram controllers and other relevant personnel when operating a tram, are recognised and resolved in accordance with workplace procedures
	6.3 Regular communication is maintained with tram crew, drivers of other passenger electric trams and other relevant

© Commonwealth of Australia, 2025 Industry Skills Australia

	personnel when operating a tram, in accordance with workplace procedures and regulatory requirements
	6.4 Tram crew, tram controllers, drivers of other passenger electric trams and other relevant personnel are advised of operational problems, delays, safety incidents and emergency situations
	6.5 Relevant information provided by tram crew, drivers of other passenger electric trams and other relevant personnel is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements
7 Follow all applicable tramway regulatory requirements	7.1 Tramway regulatory requirements applicable to the operation of the tram and the track or road concerned are accessed, clarified as required and interpreted
	7.2 Relevant tramway regulatory requirements are applied and followed when operating a tram

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3032A Operate and monitor a passenger electric tram.

Assessment Requirements for TLIC3032 Operate and monitor a passenger electric tram

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in passenger electric trams and associated equipment and procedures
- checking and refilling sand boxes and carrying out sand system testing processes as required on a passenger electric tram
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- monitoring journey schedule
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when operating and monitoring a passenger electric tram and taking appropriate action
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- emergency procedures
- passenger electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop a passenger electric tram
- passenger electric tram operating characteristics, capabilities and limitations
- principles of defensive driving
- procedures and required protocol for operating electronic communications equipment
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a passenger electric tram
- procedures for operating and monitoring a passenger electric tram
- procedures for operating and monitoring ancillary equipment on the tram
- relevant Australian road rules and traffic authority
- relevant state/territory road and traffic authority and tramway operating procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- speed and load limits for a tram
- track, road and route
- typical defects that can occur on a passenger electric tram and related action that should be taken
- workplace operational instructions.
-

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in the tram industry

TLIC3033 Drive an electric tram to operational requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive an electric tram to operational requirements in accordance with relevant regulations and workplace practices.

It includes operating a tram efficiently and effectively, driving a tram, completing a journey and responding effectively to external factors and emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant Australian road rules and applicable state/territory tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when driving an electric tram as part of workplace activities across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate tram efficiently and effectively	1.1 Electric tram is operated in accordance with relevant codes of practice, workplace procedures and instructions
	1.2 Electric tram is operated safely in accordance with traffic regulations
	1.3 Electric tram is operated with due care of the vehicle
	1.4 Movements are made within limits of vehicle and road dimensions, in accordance with specifications
	1.5 Smooth and controlled movements are made
	1.6 Electric tram performance is monitored to maintain optimum running condition and to identify faults, defects and efficiencies in accordance with organisational requirements
2 Drive tram	2.1 Traffic flows are anticipated and appropriate defensive action is taken to maintain the efficiency of tram operation
	2.2 Electric tram is constantly monitored for malfunctions or factors that may affect tram performance
3 Complete tram journey	3.1 Tram documentation is received, interpreted and followed
	3.2 Electric tram is operated and manoeuvred in accordance with tram documentation and procedures
	3.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route
	3.4 Tram control and other instructions are received, interpreted and applied to ensure safe and effective control of the tram
	3.5 Communications are maintained with tram controllers during tram journey in accordance with relevant organisational requirements
	3.6 Instructions concerning tram operation are given to relevant personnel to ensure safe and efficient running
4 Respond effectively to	4.1 Instructions are verified as required, interpreted and followed, in accordance with relevant regulatory requirements and

© Commonwealth of Australia, 2025 Industry Skills Australia

external operating factors	organisational policies and procedures, to ensure that actions taken are appropriate and safe
	4.2 Fixed traffic and hand signals, and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure actions taken are appropriate and safe
	4.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC3033 Drive an electric tram to operational requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in electric trams, associated trams and ancillary equipment
- applying track and road knowledge
- communicating effectively with others
- completing relevant documentation
- driving defensively, applying precautions and required action to minimise, control or eliminate hazards that may exist when driving an electric tram in accordance with operational requirements
- identifying and assessing tram defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring journey schedule
- operating an electric tram and monitoring its performance to facilitate optimum safe operation
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when driving an electric tram and taking appropriate action
- working collaboratively with others.

TLIC3034 Berth and shut down an electric tram

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to berth and shut down an electric tram.

It includes determining a required berthing location; berthing, shutting down and securing a tram; carrying out all required post-operational activities; and completing post-operational paperwork.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when berthing and shutting down an electric tram, as part of workplace activities across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine berthing location	1.1 Contact is made with tram controller and depot staff, or information is obtained from an information board, to determine planned location for berthing tram
	1.2 Directions of tram controller and depot staff are interpreted and followed
2 Berth and shut down an electric tram	2.1 Hazards are identified, risks are assessed and risk control measures are implemented
	2.2 Electric tram is berthed in accordance with organisational and site requirements
	2.3 Shut-down procedures are carried out in accordance with specifications and organisational requirements
3 Carry out post-operational checks	3.1 Visual and other checks are made of tram in accordance with workplace procedures
	3.2 Identified faults and defects are fixed or reported and recorded in accordance with workplace procedures
	3.3 Faulty and defective equipment that presents a safety risk is reported in accordance with workplace procedures and relevant regulations
	3.4 Outcomes of post-operational checks are recorded in accordance with workplace procedures
4 Secure an electric tram	4.1 Brakes are applied in accordance with workplace procedures
	4.2 Electric tram is secured in accordance with depot requirements
5 Complete post-operational paperwork	5.1 Timesheet or other work record is completed
	5.2 Roster is checked for future work allocation
	5.3 Issues and variations are discussed and resolved with roster clerk
	5.4 All required documentation is completed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

5.5 All equipment is returned and stowed in accordance with workplace requirements

5.6 Electric tram records are completed in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3034A Berth and shut down an electric tram.

TLIC3035 Manage the operation of a tow truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage tow truck operations.

It includes carrying out pre-operational checks on a tow truck, driving a tow truck carrying/towing a load, operating ancillary equipment and completing documentation.

Persons achieving competence in this unit will need to fulfil the applicable legislation and relevant regulations covering the operation of a tow truck and related equipment, including tow truck regulations, road rules, load restraint regulations, work health and safety (WHS)/occupational health and safety (OHS) regulations and environmental protection requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Carry out pre-operational tow truck checks	1.1 Pre-operational tow truck checks are carried out in accordance with government regulations, manufacturer requirements, and workplace policies and procedures
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Faults and defects identified during checks are repaired or reported in accordance with workplace procedures
	1.4 Checks are made to ensure vehicle or load being towed or carried is secured in accordance with tow truck operational practice and regulatory requirements
2 Drive a tow truck carrying or towing a vehicle or other load	2.1 Tow truck is manoeuvred in accordance with established towing practices, regulations/permit requirements for vehicle class involved, and vehicle being towed or load being carried
	2.2 Appropriate defensive driving techniques are applied for prevailing road, traffic and weather conditions
	2.3 Tow truck is driven along appropriate routes in accordance with relevant codes, government regulations and workplace policies
	2.4 Vehicle or load is transported and vehicle is manoeuvred in accordance with required precautions relating to unusual/special characteristics of load and/or relevant government special load regulations
	2.5 Signs or indicators are fixed to vehicle as required
	2.6 In a driving emergency, appropriate procedures are followed taking into account vehicle being towed or load being carried
	2.7 Symptoms of fatigue are recognised and appropriate fatigue management strategies are applied during towing operations
3 Operate ancillary tow truck equipment	3.1 Visual check of internal and external condition of tow truck ancillary equipment is carried out in accordance with workplace procedures
	3.2 Towing equipment is tested to ensure it functions correctly in accordance with manufacturer specifications
	3.3 Towing equipment is operated in accordance with manufacturer specifications and regulatory requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4	Towing operation attachment points and weight of vehicle being towed or load being carried are checked to ensure they are consistent with established towing practice, regulatory requirements and permissible safe working loads for tow truck and its associated towing equipment
4 Complete documentation	4.1	Records of tow truck operations and related maintenance of tow truck and ancillary equipment are kept in accordance with workplace procedures
	4.2	All forms and official record requirements for towing operations are completed in accordance with regulatory requirements and company procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIC3035 Manage the operation of a tow truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying, selecting and using relevant equipment, processes and procedures
- modifying activities and taking appropriate initiative depending on towing contexts, risk situations and environments
- providing information on towing services and their features
- reading and interpreting relevant instructions, procedures, regulations, signs, charts, maps and labels
- recognising problems and taking appropriate action
- recognising symptoms of fatigue and taking appropriate action
- using required personal protective equipment correctly, including operating portable fire extinguishers
- working safely and collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- causes and effects of fatigue on drivers
- differences between transmission types on various types of tow trucks and the implications for driving techniques
- driving hazards and related defensive driving techniques
- efficient driving techniques
- emergency procedures for operating a tow truck including using portable fire extinguishers
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions and related action that can be taken by a driver
- lifestyles that promote effective long-term fatigue management
- map reading and road navigation techniques relevant for area of tow truck operations
- pre-operational checks carried out on a tow truck and its towing equipment and related action that should be taken
- principles of stress management when driving a tow truck
- records and documentation requirements for tow truck operations and procedures for their completion
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant state/territory road traffic authority road rules and related regulations relevant state/territory road traffic authority towing permit and licence requirements
- strategies and techniques to manage on-road fatigue
- tow truck controls, instruments and indicators, and their use
- tow truck handling procedures with and without a tow or load
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

© Commonwealth of Australia, 2025 Industry Skills Australia

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC3036 Apply safe car driving behaviours

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required for higher-order safe driving. This unit applies to driving instructors required to apply safe driving behaviours.

This includes higher-order skills involving broad cognitive, technical, communication and vehicle management. It also requires knowledge about hazard perception, risk control and safe driving behaviour, judgement, decision making and multi-tasking, that builds on driver licence requirements across a range of vehicles and driving situations.

Safe car driving behaviours are applied without supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Apply relevant legislation applicable to safe car driving	1.1 Current road rules and regulations are identified, interpreted and applied
	1.2 Road signs, signals and markings are identified and complied with in safe car driving activities
	1.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow, is interpreted and applied when driving a vehicle
2 Apply safe car driving behaviours	2.1 Requirements for safe car driving are applied
	2.2 Importance of attitude in complying with road rules in relation to level of risk faced by a driver, is applied when driving a car
	2.3 Importance of road sharing principles are applied when driving a car
	2.4 Importance of motivation to drive safely is interpreted and explained
	2.5 Principles of proactive driving methods, that maintain one's driving at a low risk, are identified and applied
	2.6 Contributing risk factors to potential crash risks, are identified and are taken into consideration
3 Apply low-risk driving strategies	3.1 Contributing risk factors to forming opinions and beliefs about low-risk driving are applied
	3.2 Human factors that can influence low-risk driving behaviour are outlined
	3.3 Low-risk driving strategies are applied and their rationale is explained
4 Explain risk factors that contribute to accidents when driving a car	4.1 Contributing risk factors to accidents are recognised
	4.2 External factors that could lead to accidents are outlined
	4.3 Internal factors that could lead to accidents are outlined
	4.4 Consequences of accidents in relation to relevant traffic laws and physical, financial and psychological costs to the individual and society, are explained
	4.5 Functions of vehicle operations and controls, and how to

© Commonwealth of Australia, 2025 Industry Skills Australia

			recover control of a vehicle are explained
5	**Apply operation and car control skills**	5.1	Appropriate action is taken to respond to hazardous situations
		5.2	Principles of braking are applied to a high level of technical competence
		5.3	Principles of steering are applied to a high level of technical competence
		5.4	Slow speed manoeuvres are carried out to a high level of technical competence
		5.5	Vehicle is operated and controlled to a high level of technical competence

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3036A Apply safe car driving behaviours.

Assessment Requirements for TLIC3036 Apply safe car driving behaviours

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in vehicles, including their operations, controls and safety devices
- applying correct selection and application of a braking system
- applying correct steering control techniques in a variety of driving conditions
- applying high-level road craft skills
- applying road rules
- carrying out pre-operational checks and related action on vehicles
- complying with relevant legislative, regulatory and workplace procedures
- dealing with adverse road conditions while driving a vehicle
- evaluating risk and consequences of own driving actions
- following operational instructions
- identifying, monitoring and anticipating traffic hazards and taking appropriate and timely action
- identifying risk factors that might impact on driving behaviours and implementing appropriate low-risk driving response measures
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) requirements and practices when:
  - conducting prestart-up checks
  - identifying hazards
  - minimising, controlling or eliminating hazards
  - observing and interpreting driver behaviour that may put people at risk
- maintaining situational awareness
- making necessary adjustments to suit driving environment
- managing speed and space while driving a vehicle
- manoeuvring a vehicle at slow speed
- monitoring traffic and road conditions and reacting appropriately
- monitoring vehicle performance and taking appropriate action as required

© Commonwealth of Australia, 2025 Industry Skills Australia

- negotiating complex traffic and road conditions
- reading and interpreting relevant instructions, road rules, procedures, jurisdictional requirements, information and signs
- selecting and using vehicle operations, controls and safety devices to enable safe car driving
- working collaboratively with other road users when driving a vehicle.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cognitive factors that may influence performance in car driving activities
- consequences of vehicle accidents
- correct application of braking techniques
- critical factors underpinning high-level driving technical competence
- factors contributing to accidents:
  - age, experience, drugs, alcohol, medication, road conditions, fatigue and time of day
  - driver values, emotions, limitations and personal needs
  - emotional factors, driver's own behaviours and driver's operation at high levels of risk
  - speed, space, vision, road conditions, vehicle condition and environmental conditions
- low-risk driving behaviours including:
  - creating and maintaining crash avoidance space
  - protecting crash avoidance space
  - obeying road rules, safety information and directions
- observation and scanning techniques
- procedures for identifying and responding to hazards
- purpose and benefits of road rules enforcement for safe car driving
- rationale for ongoing development of traffic regulations to meet changing traffic conditions
- relevant road rules and traffic safety legislation including:
  - alcohol and drugs
  - driver licensing
  - vehicle registration
  - vehicle standards
- relevant laws and penalties for demerit point offences, such as driving while unlicensed, disqualified or under the influence of drugs or alcohol
- road signs, signals and markings
- sources and availability of relevant learning resources and learning materials

© Commonwealth of Australia, 2025 Industry Skills Australia

- steering operation and controls
- types of adverse driving conditions commonly encountered during driving activities
- vehicle operation and control including:
  - cabin drill
  - managing accelerator
  - managing brakes
  - managing steering
  - start, move off, shut down and secure.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations in a vehicle typical of that used in industry and on a variety of road conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, Australian Road Rules, codes of practice and operation manuals
- relevant materials, tools and equipment currently used in industry
- suitable vehicle that meets state/territory requirements.

TLIC3037 Apply safe heavy vehicle driving behaviours

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required for higher-order safe driving. This unit applies to heavy vehicle drivers required to apply safe driving behaviours.

This includes higher-order skills involving broad cognitive, technical, communication and vehicle management. It also requires knowledge about hazard perception, risk control and safe driving behaviour, judgement, decision making and multi-tasking, that builds on basic driver licence requirements across a nominated heavy vehicle class and driving situations.

Safe heavy vehicle driving behaviours are applied without supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Apply relevant legislation applicable to safe heavy vehicle driving	1.1 Current road rules and regulations are identified, interpreted and applied
	1.2 Road signs, signals and markings are identified and complied with in safe heavy vehicle driving activities
	1.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow, is interpreted and applied when driving a heavy vehicle
2 Inspect vehicle and secure load for safe transportation of goods/cargo	2.1 Visual safety check of internal and external condition of vehicle/trailer is undertaken, in accordance with manufacturer specifications and workplace procedures
	2.2 Internal controls and gauges relating to safe vehicle operation are inspected
	2.3 Pre-operational inspections and checks of vehicle/trailer brake systems, suspension, axles, electrical systems, wheels and tyres, and couplings are undertaken in accordance with national road safety standards as required
	2.4 Associated equipment is tested to ensure it functions correctly in accordance with manufacturer specifications
	2.5 Distribution of vehicle load is checked to ensure it is even, legal, and within safe working capacity and mass management requirements
	2.6 Load is checked to ensure dangerous goods and hazardous substances are appropriately segregated in accordance with the current Australian Dangerous Goods (ADG) Code, as required
	2.7 Load is secured in accordance with load restraint guidelines and protection equipment for different loads, carrying and storage conditions
	2.8 Load is protected in accordance with legal and workplace safety requirements
	2.9 All required goods documentation is completed in accordance with workplace requirements and the current ADG Code, as required
3 Apply safe heavy vehicle driving	3.1 Requirements for safe heavy vehicle driving are applied
	3.2 Importance of attitude in complying with road rules in

Assessment Requirements for TLIC3037 Apply safe heavy vehicle driving behaviours

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in heavy vehicles, including their controls and safety devices, and the driving environment
- applying correct selection and application of a braking and gear system
- applying correct steering control techniques in a variety of driving conditions
- applying high-level road craft skills
- applying road rules
- carrying out pre-operational checks and related action on heavy vehicles
- complying with appropriate legislative, regulatory and procedural requirements while driving a heavy vehicle
- dealing with adverse conditions while driving a heavy vehicle
- evaluating risk and consequences of own driving actions
- following operational instructions
- identifying risk factors that might impact on driving behaviours and implementing appropriate low-risk driving response measures
- identifying, monitoring and anticipating traffic hazards and taking appropriate and timely action
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) requirements and practices when:
  - conducting prestart-up checks
  - identifying hazards
  - minimising, controlling or eliminating hazards
  - observing and interpreting driver behaviour that may put people at risk
- maintaining situational awareness
- making necessary adjustments to suit driving environment
- managing speed and space while driving a heavy vehicle
- manoeuvring a heavy vehicle at slow speed
- monitoring and anticipating traffic hazards and taking appropriate and timely action

- monitoring heavy vehicle performance and taking appropriate action as required
- monitoring traffic and road conditions and reacting appropriately
- negotiating complex traffic and road conditions and making appropriate decisions
- reading and interpreting relevant instructions, road rules, procedures, jurisdictional requirements, information and signs
- selecting and using vehicle controls and safety devices to enable safe heavy vehicle driving
- working collaboratively with other road users when driving a heavy vehicle.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- additional equipment fitted to heavy vehicles
- cognitive factors that may influence performance in heavy vehicle driving
- consequences of heavy vehicle accidents
- critical factors underpinning high-level heavy vehicle driving technical competence
- driving hazards and related low-risk driving techniques
- factors contributing to accidents:
  - age, experience, drugs, alcohol, medication, road conditions, fatigue and time of day
  - driver values, emotions, limitations and personal needs
  - emotional factors, driver's own behaviours and driver's operation at high levels of risk
  - speed, space, vision, road conditions, vehicle condition and environmental conditions
- heavy vehicle braking systems and techniques for use such as maxi brakes, trailer brakes and exhaust brake system
- load restraint guidelines
- low-risk driving behaviours including:
  - creating and maintaining crash avoidance space
  - protecting crash avoidance space
  - obeying road rules, safety information and directions
- observation and scanning techniques
- procedures for identifying and responding to hazards
- purpose and benefits of road rules enforcement for safe heavy vehicle driving
- range of heavy vehicle and or trailer designs and capabilities (in accordance with manufacturer specifications)
- rationale for ongoing development of traffic regulations to meet changing traffic conditions
- relevant laws and penalties for demerit point offences, such as driving while unlicensed,

© Commonwealth of Australia, 2025 Industry Skills Australia

disqualified or under the influence of drugs or alcohol
- relevant road rules and traffic safety legislation including:
  - alcohol and drugs
  - driver licensing
  - vehicle registration
  - vehicle standards
- road safety issues including heavy vehicle driver fatigue
- road signs, signals and markings
- sources and availability of relevant learning resources and learning material
- steering operation and control
- types of driving conditions commonly encountered requiring correct selection of appropriate gears to avoid losing control of a heavy vehicle
- types of driving conditions commonly encountered requiring steering operation/control to maintain a heavy vehicle under adverse conditions
- use of pre drive documentation requirements
- vehicle operation and control including:
  - cabin drill
  - start, move off, shut down and secure
  - managing accelerator
  - managing brakes
  - managing steering.

Assessment Requirements for TLIC3038 Apply safe motorcycle riding behaviours

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motorcycles, including their operations, controls and safety devices
- applying correct selection and application of a braking system
- applying correct steering control techniques in a variety of motorcycle riding conditions
- applying high-level road craft skills
- applying road rules
- applying safe motorcycle riding strategies
- appropriate use of protective clothing
- carrying out pre-operational checks and related action on motorcycles
- complying with relevant legislative, regulatory and workplace procedures
- controlling a motorcycle during a variety of slow speed manoeuvres
- dealing with adverse road conditions while riding a motorcycle
- evaluating risk and consequences of own riding actions
- following operational instructions
- identifying risk factors that might impact on riding behaviours and implementing appropriate low-risk riding response measures
- identifying, monitoring and anticipating traffic hazards and taking appropriate and timely action
- implementing contingency plans
- implementing work health and safety (WHS)/occupational health and safety (OHS) requirements and practices when:
  - conducting prestart-up checks
  - identifying hazards
  - minimising, controlling or eliminating hazards
  - observing and interpreting rider behaviour that may put people at risk
- maintaining situational awareness
- making necessary adjustments to suit riding environment
- managing speed and space while riding a motorcycle

© Commonwealth of Australia, 2025 Industry Skills Australia

- monitoring motorcycle performance and taking appropriate action as required
- monitoring traffic and road conditions and reacting appropriately
- negotiating a variety of traffic and road conditions and making appropriate decisions
- reading and interpreting relevant instructions, road rules, procedures, jurisdictional requirements, information and signs
- selecting and using motorcycle operations, controls and safety devices to enable safe motorcycle riding
- taking appropriate evasive action as required
- using body weight to increase traction
- using protective clothing appropriately
- working collaboratively with other road users when riding a motorcycle.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- body weight transfer principles
- cognitive factors that may influence performance when riding a motorcycle
- consequences of motorcycle accidents
- correct application of braking techniques
- critical factors underpinning high-level riding competence
- factors contributing to accidents:
  - age, experience, drugs, alcohol, medication, road conditions, fatigue and time of day
  - emotional factors, rider's own behaviours and rider's operation at high levels of risk
  - rider values, emotions, limitations and personal needs
  - speed, space, vision, road conditions, motorcycle condition and environmental conditions
- features and benefits of protective riding apparel
- low-risk riding behaviours including:
  - creating and maintaining crash avoidance space
  - protecting crash avoidance space
  - obeying road rules, safety information and directions
- minimum legal requirements of protective riding apparel
- motorcycle operation and control including:
  - managing accelerator
  - managing brakes
  - managing steering
  - start, move off, shut down and secure
- observation and scanning techniques

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures for identifying and responding to hazards
- purpose and benefits of road rules enforcement for safe motorcycle riding
- rationale for ongoing development of traffic regulations to meet changing traffic conditions
- relevant road rules and traffic safety legislation including:
  - alcohol and drugs
  - rider licensing
  - motorcycle registration
  - motorcycle standards
- relevant laws and penalties for demerit point offences, such as riding while unlicensed, disqualified or under the influence of drugs or alcohol
- road signs, signals and markings
- sources and availability of relevant learning resources and learning materials
- steering operation and controls
- types of adverse riding conditions commonly encountered during riding activities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations on an approved motorcycle for the class typical of that used in industry and on a variety of road conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- a motorcycle for the class typical of that used in industry
- an approved motorcycle helmet and suitable protective clothing
- applicable documentation including workplace procedures, regulations, Australian Road Rules, codes of practice and operation manuals
- relevant materials, tools and equipment currently used in industry.

TLIC3039 Operate and monitor a monorail train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor a monorail train in accordance with relevant workplace practices, regulations and codes of practice.

It includes planning and identifying a monorail train for operations, operating a monorail train, monitoring a monorail train's performance during service, and communicating effectively with Network Control Officer and other personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when operating and monitoring a monorail train across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for monorail train operations	1.1 Driving requirement is identified and confirmed from roster, shift card or other authorised documentation
	1.2 Sign-on/log-on procedures at the depot are completed and monorail train to be operated is correctly identified
	1.3 Essential equipment is identified and obtained
2 Operate and monitor monorail train in normal operational mode	2.1 Monorail train is operated within specifications and organisational requirements to meet required schedules and special services
	2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisation requirements
	2.3 Warning devices and gauges are monitored and responded to in accordance with organisational requirements
	2.4 Operational restrictions established by the organisation and relevant legislation are observed
	2.5 Monorail train is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all passengers
3 Operate monorail train in abnormal situations	3.1 In an abnormal situation, Network Control Officer is contacted and their instructions are requested
	3.2 Appropriate mode of operation is selected and implemented when authorised by Network Control Officer
	3.3 All instructions from Network Control Officer are followed
4 Monitor on-board equipment	4.1 Equipment is monitored to maintain optimum running conditions and to identify faults, defects and deficiencies
	4.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of monorail train, including communications with Network Control Officer as necessary

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.3 Faults, defects and deficiencies are assessed as instructed by Network Control Officer, to determine risk of damage to equipment or injury to personnel
	4.4 Defects are reported and/or recorded
5 Communicate with Network Control Officer	5.1 Regular communication is maintained with Network Control Officer when operating monorail train in accordance with workplace procedures and regulatory requirements
	5.2 Network Control Officer is advised of operational problems, delays, safety incidents and emergency situations
	5.3 Relevant information provided by Network Control Officer is interpreted and applied to driving activities in accordance with workplace procedures and applicable regulatory requirements
6 Follow all applicable regulatory requirements	6.1 Regulatory requirements applicable to operating monorail train are accessed and interpreted
	6.2 Relevant regulatory requirements are applied and followed when operating monorail train

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3039A Operate and monitor a monorail train.

Assessment Requirements for TLIC3039 Operate and monitor a monorail train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying track and road knowledge when driving a monorail train
- communicating effectively with Network Control Officer
- completing relevant documentation
- identifying and assessing train defects and deficiencies, and taking appropriate action to report identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following instructions
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise and taking appropriate action
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency procedures
- monorail train controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the train
- monorail train monitoring devices, braking and drive equipment and ancillary systems
- monorail train operating characteristics, capabilities and limitations including all modes of operation
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing safety incidents and hazardous situations
- procedures for operating and monitoring ancillary equipment on the train
- procedures for operating and monitoring monorail train
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- track limitations, speed limitations, curves and gradients and location of indicators
- typical defects that can occur on a monorail train and related action that should be taken.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC3042 Operate coach/bus

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a passenger coach/bus across a variety of contexts.

It includes maintaining systematic and efficient control of all coach/bus functions, monitoring traffic and road conditions, managing coach/bus condition and performance, and effectively managing hazardous situations.

Operation of a passenger coach/bus is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining coach/bus driver accreditation. As requirements may vary between states and territories, people seeking coach/bus accreditation should contact their state/territory regulatory authority.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Operate coach/bus**	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.2 Coach/bus is started, steered, manoeuvred, positioned and stopped in accordance with manufacturer instructions
		1.3 Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
		1.4 Engine operation is maintained within the manufacturer specified torque range and temperature, by effectively using transmission
		1.5 Coach/bus braking system is managed and operated to ensure effective control of coach/bus under all conditions
		1.6 Road and traffic hazards are identified and/or anticipated and avoided or controlled through defensive driving techniques
		1.7 Coach/bus is driven in reverse, maintaining visibility and achieving accurate positioning in accordance with workplace procedures
		1.8 Coach/bus is parked, shut down and secured in accordance with manufacturer specifications and workplace procedures
		1.9 Low risk driving behaviour is applied towards other road users in accordance with workplace procedures
2	**Monitor and respond to traffic and road conditions**	2.1 Efficient route of travel is taken by monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
		2.2 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
3	**Monitor and maintain coach/bus performance**	3.1 Coach/bus performance is maintained through pre-operational inspections and checks of coach/bus and ancillary equipment
		3.2 Performance and efficiency of coach/bus operation is monitored during use
		3.3 Defective or irregular performance or malfunctions are repaired or reported to appropriate authority in accordance

© Commonwealth of Australia, 2025 Industry Skills Australia

			with workplace procedures
		3.4	Coach/bus records are maintained/updated and information is processed in accordance with workplace procedures
		3.5	Vehicle monitoring devices (such as tachographs) are operated in accordance with workplace procedures
4	**Operate coach/bus safely**	4.1	Passenger positioning and dispersion is undertaken in accordance with manufacturer instructions and workplace procedures
		4.2	Coach/bus doors are operated safely for entry and exit from coach/bus in accordance with manufacturer and workplace procedures
		4.3	Visual checks are conducted on entry to and exit from coach/bus stops in accordance with workplace procedures
		4.4	Vehicle is positioned and moved conveniently and safely for passengers embarking and disembarking, in accordance with regulatory and workplace procedures
5	**Operate coach/bus associated equipment**	5.1	Coach/bus associated equipment is operated in accordance with manufacturer and workplace procedures
		5.2	Faults with coach/bus associated equipment are reported according to manufacturer and workplace procedures
		5.3	Route destination is clearly displayed on vehicle in accordance with workplace procedures
6	**Provide customer service to passengers on coach/bus**	6.1	Comfort and wellbeing of passengers are managed in accordance with workplace instructions
		6.2	Lost property is processed in accordance with workplace procedures
		6.3	Assistance is provided for identified customer specific needs and/or luggage and ancillary equipment requirements in accordance with workplace procedures

Assessment Requirements for TLIC3042 Operate coach/bus

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management techniques
- applying industry and organisational customer service standards
- applying knowledge of relevant legislation and workplace procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- implementing responses to changing road conditions
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of coach/bus and its equipment and taking appropriate action
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol including on-board intercom and communications equipment
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- servicing coach/bus and its equipment in terms of maintenance schedule and standard operating procedures
- undertaking pre-operational checks and vehicle handling procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of driver fatigue
- coach/bus controls, instruments and indicators, and their use
- coach/bus handling procedures
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions and related action that can be taken by a driver
- fatigue management strategies including on-road techniques
- lifestyles that promote effective long-term fatigue management
- map reading and road navigation techniques
- pre-operational checks carried out on coaches/buses and related action
- principles of stress management when driving a vehicle
- procedures to be followed in a driving emergency
- relevant state/territory regulations and procedures in relation to bus stops
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

TLIC3045 Operate road/rail vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate road/rail vehicles on track in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes performing pre-operational and post-operational checks, on tracking and off tracking vehicles, operating equipment, and completing required documentation. It encompasses the operation of all road/rail on-track vehicles.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Operators of road/rail vehicles may need to have applicable road and/or high risk licence or certification requirements for the type of vehicle being used.

It involves the application of routine operational principles and procedures when operating road/rail vehicles as part of workplace activities across a variety of operational contexts.

A road vehicle fitted with retractable rail guidance wheels (also known as a hi-rail vehicle) and may also involve:

- weed sprayer
- light–medium rigid vehicles
- excavators
- pettibone
- tractors
- four-wheel drives.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Perform pre-operational equipment checks	1.1 Pre-operational equipment checks are conducted in accordance with manufacturer specifications or local maintenance schedules and operational procedures
	1.2 Logbooks are checked and accurately completed as required
	1.3 Deficiencies with equipment are identified and rectified in accordance with workplace procedures
	1.4 Relevant people are notified of problems and/or documentation is completed
2 On track and operate road/rail vehicle	2.1 On-tracking location is identified and appropriate on-track permission/authority is obtained
	2.2 Vehicle is placed on track and set up to operate in accordance with manufacturer specifications and organisational requirements
	2.3 Vehicle is operated in a safe and efficient manner in accordance with relevant codes of practice, safeworking systems, and manufacturer and local working instructions
	2.4 Vehicle is operated in accordance with prevailing operating conditions to ensure safe working and to minimise/eliminate potential hazards or accidents
	2.5 Warning systems are monitored and responded to appropriately during operation to maintain correct functionality of vehicle

© Commonwealth of Australia, 2025 Industry Skills Australia

3 Off track road/rail vehicle	3.1 Off-track location is identified and appropriate permissions to off track vehicle are obtained as required
	3.2 Front/rear rail wheels are retracted in accordance with manufacturer specifications
	3.3 Vehicle is driven not less than three metres from running rails, and safety locks are applied to rail wheels
	3.4 Vehicle is confirmed with Network Control Officer as being clear of all running lines
4 Perform post-operational equipment procedures	4.1 Vehicle is left stored in appropriate manner and location to ensure security and protection of equipment
	4.2 Post-operational vehicle checks are conducted in accordance with manufacturer specifications or local maintenance schedules to identify defects and maintenance requirements
	4.3 Deficiencies with equipment are identified and rectified in an appropriate manner to maintain equipment in correct functionality
	4.4 Relevant people are notified of problems and/or documentation is completed in accordance with instructions and relevant codes of practice
	4.5 Required documentation is completed in a timely, accurate and complete manner in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC3045 Operate road/rail vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and interpreting train movement information
- applying relevant safeworking and workplace procedures
- communicating effectively with relevant personnel
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using tools and equipment
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- obtaining appropriate on-track permission/authorities
- on railing and off railing vehicles in accordance with workplace procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- operating road/rail vehicles for which certificated, licensed or approved
- operating road/rail vehicles on rail in accordance with Rail Infrastructure Manager operational procedures
- performing pre- and post-operational checks in accordance with workplace procedures
- planning and organising work
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- defects that can occur on road/rail vehicles and related action that should be taken
- emergency management plan/procedures
- hazards that may exist when operating road/rail vehicles, and ways of controlling the risks involved
- manufacturer specifications and road/rail vehicle operational requirements
- problems that may occur when on tracking and off tracking road/rail vehicles, and action that can be taken to report or resolve these problems in accordance with workplace procedures
- problems that may occur when operating road/rail vehicles, and action that can be taken to report or resolve these problems in accordance with workplace procedures
- relevant rail danger zones
- relevant safety, work health safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- technical specifications and manuals
- track structure and geometry
- types of road/rail vehicles and their applications
- workplace procedures for operating road/rail vehicles.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.
