As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIC3046 Drive and operate electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive and operate an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements and workplace procedures.

It includes applying train management techniques to manage the movement of a train, conducting all movements and related activities required to meet operational requirements, changing ends, and handing over a train to a relief crew.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when driving electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive train efficiently and effectively	1.1 Train is operated in accordance with relevant codes of practice, workplace procedures and instructions
	1.2 Train is operated safely in accordance with track/road characteristics and route conditions
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Train operations are controlled to minimise wear, maximise efficiency and avoid damage
	1.5 Train is operated with due care for passenger comfort and quality of ride
	1.6 Train is safely operated to specified timetable and schedule in accordance with on-time running standards
	1.7 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and to identify faults, defects and efficiencies
	1.8 Relevant codes of practice, work health and safety (WHS)/occupational health safety (OHS) and environmental requirements are followed to prevent injury and damage
2 Operate train in accordance with operating procedures	2.1 Train documentation is received, interpreted and followed
	2.2 Relevant codes of practice, safeworking and signalling requirements are adhered to throughout train operations
	2.3 Network Control Officer instructions and other instructions are received, interpreted and applied to ensure safe and effective control of train
	2.4 Communications are maintained with relevant personnel during train journey in accordance with relevant codes of practice and safeworking systems
	2.5 Instructions about train operation are given to relevant personnel to ensure safe and efficient running
3 Manage	3.1 Passengers are advised of station identification, emergency

© Commonwealth of Australia, 2025 Industry Skills Australia

communications	situations and other critical information as required, using train communications system
	3.2 Network Control Officer and other instructions are received, interpreted and applied to ensure safe and effective control of train
	3.3 Communications are maintained with Network Control Officer and other relevant personnel during train journey in accordance with workplace procedures, relevant codes of practice and safeworking systems
	3.4 Instructions about train operation are given to relevant personnel to ensure safe and efficient on-time running
	3.5 Instructions are verified as required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements, and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.6 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure actions taken are appropriate and safe
4 Change ends	4.1 Arrival procedures are carried out in accordance with organisational policies and procedures
	4.2 Checks and terminus inspections are carried out in accordance with organisational policies and procedures
	4.3 Departure procedures are carried out in accordance with organisational policies and procedures
5 Carry out in-service inspections	5.1 Train checks are made in accordance with workplace procedures
	5.2 Problems and defects are identified and reported/rectified in accordance with workplace procedures, other regulatory requirements and manufacturer instructions
	5.3 Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures
6 Handover train to relieving driver	6.1 Identity of relieving driver is checked and confirmed as required

© Commonwealth of Australia, 2025 Industry Skills Australia

	6.2 Relieving driver is advised of condition and location of train as required
	6.3 Relieving driver is updated and is made aware of relevant documentation as required
7 Accept train handover as relief driver	7.1 Relieving driver position is taken up at correct time and location in accordance with organisational requirements
	7.2 Identification is presented to train driver being relieved, as required
	7.3 Relevant documentation is identified and referred to in accordance with organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3046A Drive and operate electric passenger train.

Links

Assessment Requirements for TLIC3046 Drive and operate electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trains, associated trains and ancillary equipment
- carrying out train handover in accordance with workplace procedures
- communicating effectively with others
- completing relevant documentation
- driving train efficiently and effectively
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- maintaining on-time running
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring train performance to facilitate optimum safe operation
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise and taking appropriate action
- securing electric passenger train
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others as part of a train crew
- working systematically with required attention to detail without injury to self or others, or damage to vehicles or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- procedures and required protocol for operating electronic communications equipment
- procedures for carrying out in-service checks
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- track and road characteristics including: track limitations, speed limitations, gauge limitation, curves and gradients, location of signals and crossings, crossovers, and yard and siding layouts
- train characteristics
- train equipment and systems including instruments and indicators and their purpose, location and use
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC3047 Stable electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to stable an electric passenger train in accordance with workplace procedures.

It includes conducting pre-stabling checks, stabling an electric passenger train and conducting post-stabling checks in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when stabling electric passenger trains as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Conduct pre-stabling checks	1.1 Train stabling requirements are confirmed through workplace documents and/or relevant personnel
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Location safety requirements are identified and followed in accordance with workplace procedures
2 Stable electric passenger train	2.1 Train is shunted and/or stabled in accordance with workplace instructions and procedures
	2.2 Communications protocols are established and performed in accordance with workplace requirements as required
	2.3 On arrival at stabling location, train is secured and brakes are cut out/isolated
	2.4 Visual inspection of train is conducted in accordance with workplace requirements
3 Conduct post-stabling checks	3.1 Post-operational checks of train are conducted in accordance with workplace procedures
	3.2 Problems and defects are identified and reported/rectified in accordance with workplace procedures, regulatory requirements and manufacturer instructions as required
	3.3 Safety devices are activated or put in position to ensure safety of personnel and equipment as required
	3.4 Reporting/documentation is completed in accordance with workplace procedures as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIC3047 Stable electric passenger train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- carrying out required pre-stabling, stabling and post-stabling checks of train
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities to cater for variations in workplace contexts and environment
- monitoring and anticipating operational hazards and taking appropriate action
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- responding appropriately to abnormal situations, safety incidents and emergencies
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- stabling electric train in more than one location including sidings and depots/yards
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures
- operational instructions including shut-down procedures
- procedures and required protocol for operating electronic communications equipment
- procedures for carrying out terminus checks
- procedures for pre-stabling and post-stabling operational checks
- relevant safety, WHS/OHS and environmental procedures and regulations
- train controls, instruments and indicators and their purpose, location and use
- yard or siding information including layout, entry and exit requirements and emergency procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

TLIC3048 Shunt, couple and uncouple electric passenger trains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shunt, couple and uncouple an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures. This includes planning and preparing for shunting operations, shunting the train, coupling and uncoupling the train, and using a coupling adaptor.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when shunting, coupling and uncoupling electric passenger trains to operational requirements, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for shunting operation	1.1 Shunting requirements are confirmed through workplace documents and/or relevant personnel
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Local safety requirements are identified and followed in accordance with workplace procedures
	1.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage
2 Shunt trains	2.1 Points, levers and/or switches are operated as required in accordance with workplace requirements
	2.2 Audible signals, hand signals and other line of sight communications are used to assist the control of train movements
	2.3 Hand, light and radio shunting commands are responded to in accordance with workplace requirements
	2.4 Pre-movement inspection/tests are carried out prior to moving trains
	2.5 Train is shunted and positioned in accordance with operational/workplace requirements
	2.6 Train is secured after shunt movement in accordance with workplace requirements
3 Couple trains	3.1 Type of connections required are identified prior to coupling
	3.2 Trains to be coupled are positioned in accordance with operating procedures and workplace requirements
	3.3 Trains to be coupled are fully secured
	3.4 Alignment of couplers in the appropriate position for type of connection required is ensured
	3.5 Prior to coupling trains, safety requirements are ensured

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.6 Trains are coupled in accordance with operating procedures and workplace requirements
	3.7 Post-coupling inspection/tests are carried out in accordance with operating procedures and workplace requirements
4 Uncouple trains	4.1 Trains to be uncoupled are identified and pre-uncoupling checks and, as required, procedures, are conducted in accordance with operating procedures and workplace requirements
	4.2 Prior to uncoupling trains, safety requirements are ensured
	4.3 Train to remain after uncoupling is fully secured
	4.4 Trains are uncoupled in accordance with operating procedures and workplace requirements
	4.5 Post-uncoupling inspection/tests are carried out in accordance with operating procedures and workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIC3048 Shunt, couple and uncouple electric passenger trains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying rail safety practices and workplace procedures
- assessing shunting, coupling and uncoupling defects
- carrying out pre-shunting checks in accordance with workplace requirements
- communicating effectively with others
- coupling an electric passenger train
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and assessing electric passenger train defects and deficiencies, and taking appropriate action to report, isolate, repair or replace identified defective equipment, in accordance with workplace procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in trains and related equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable minimum standards and approved compliance codes and/or guidelines
- communications protocols
- coupling systems, their components and their operation
- electric passenger train shunting, coupling and uncoupling diagnostic techniques
- emergency procedures
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations, including codes of practice for manual handling
- shunting procedures and requirements
- types of couplers and their purpose
- types of coupling adaptors, their purpose and use.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIC3052 Assist with shunting, coupling and uncoupling electric passenger trains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assist a train driver to shunt, couple and uncouple an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assisting with: planning and preparing for shunting operations, shunting the train, coupling and uncoupling the train, and using a coupling adaptor.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed with minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to assist with shunting, coupling and uncoupling electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for TLIC3052 Assist with shunting, coupling and uncoupling electric passenger trains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least two** separate occasions and **in two** separate locations and include:

- applying relevant safeworking and workplace procedures
- assisting with shunting trains in more than one location including sidings and depots/yards
- carrying out pre-shunting checks in accordance with workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions defects promptly, in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communications protocols
- coupling systems, their components and their operation
- diagnostic techniques relating to shunting, coupling and uncoupling electric passenger trains
- emergency procedures
- relevant rail danger zones
- relevant sections of applicable state/territory legislated rail safety and safeworking requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice for manual handling
- shunting workplace procedures and requirements
- types of couplers and their purpose
- types of coupling adaptors and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Resources for assessment include:
- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, safeworking system, codes of practice and operation manuals.

TLIC3057 Perform guard duties as part of electric passenger train operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to perform guard duties as part of electric passenger train operations in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes assisting in all movements and related activities required to achieve operational requirements, changing work locations, handing over a train to a relief crew, providing customer service and maintaining customer safety.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when performing train guard duties in traffic for an electric passenger train in accordance with operational requirements, as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Perform on-train role/duties efficiently and effectively	1.1 On-train duties are performed in accordance with relevant codes of practice, workplace procedures and instructions
	1.2 Right of way activities are performed to ensure train is operated safely within the confines of platform or station limits
	1.3 On-train duties are performed in a manner that provides optimal customer safety and comfort
	1.4 On-train duties are performed to meet specified timetable and schedule in accordance with on-time running standards
	1.5 Train carriages, and equipment performance and operation are monitored to optimise running conditions by identifying faults, defects and deficiencies
	1.6 Relevant workplace procedures, work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements are followed to prevent injury and damage
2 Complete train journey	2.1 Train documentation is received, interpreted and applied in accordance with relevant workplace procedures and safeworking systems
	2.2 Relevant workplace procedures, safeworking and signalling requirements are followed throughout train operations
	2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant workplace procedures and safeworking systems
	2.4 Assistance is provided to customers as required in accordance with workplace requirements
	2.5 Correspondence and/or cash and/or valuables are carried in cooperation with relevant personnel
	2.6 Platform duties are performed in accordance with workplace procedures
3 Manage	3.1 Passengers are advised of station identification, emergency

© Commonwealth of Australia, 2025 Industry Skills Australia

communications		situations and other critical information, using train communications system in accordance with workplace procedures
	3.2	Instructions from network control officer and other relevant personnel are received, interpreted and applied to ensure safe and effective control of train
	3.3	Communications are maintained with network control and other relevant personnel during train journey in accordance with workplace rules and procedures, and safeworking systems
	3.4	Instructions concerning train operation are given to relevant personnel to ensure safe and efficient on-time running
	3.5	Instructions are verified as required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements, and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.6	Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with safeworking systems and organisational policies and procedures
4 Carry out inspections during train journey	4.1	Train visual checks are made in accordance with workplace procedures
	4.2	Identified problems and or defects are reported and/or rectified in accordance with workplace procedures, other regulatory requirements and manufacturer instructions
	4.3	Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures
	4.4	Safety of train is monitored through on-board surveillance systems
5 Change ends	5.1	Arrival procedures are carried out in accordance with workplace procedures
	5.2	Checks and terminus inspections of train are carried out in accordance with workplace procedures
	5.3	Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

6 Conduct train handover to relieving crew	6.1 Identity of relieving crew is checked and confirmed
	6.2 Relevant personnel are advised of condition and location of train
	6.3 Relieving crew is updated and documentation is completed and/or handed over as required
7 Accept train handover as relief guard	7.1 Relieving guard position is taken up at correct time and location in accordance with organisational requirements
	7.2 Identity of train guard is confirmed
	7.3 Train status and/or other relevant information and/or documentation is received and referred to in accordance with organisational requirements as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3057A Perform guard duties as part of electric passenger train operations.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIC3057 Perform guard duties as part of electric passenger train operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trains and ancillary equipment
- applying information about track or road to train operations
- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring journey schedule
- monitoring train performance and security to facilitate optimum safe operation
- monitoring train performance including passenger safety and comfort during service
- performing handover and relief activities in accordance with workplace procedures
- performing on-train guard duties in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise and taking appropriate action
- working systematically with required attention to detail without injury to self or others, vehicles or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice

© Commonwealth of Australia, 2025 Industry Skills Australia

and/or guidelines
- on-train controls, instruments and indicators and their purpose, location and use
- procedures for carrying out in-service checks
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation
- track and road characteristics
- train characteristics
- train equipment and systems
- workplace procedures and operating requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC3063 Operate vehicle carrying special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely operate a vehicle carrying a special load in accordance with road traffic authority and other relevant government regulations and company policies, and to effectively manage hazardous situations.

It involves carrying out pre-operational checks, driving a vehicle carrying special loads, and applying routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle carrying a special load across a variety of driving contexts.

Driving must be carried out in accordance with relevant state/territory roads and traffic authority licence and permit requirements and regulations and specific regulatory and permit requirements for the special load being carried.

Driving is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out pre-operational checks	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Pre-operational checks for special purpose vehicle and associated ancillary equipment are carried out in accordance with manufacturer requirements, government regulations, and workplace policies and procedures
	1.3 Faults and defects identified during checks are repaired or reported in accordance with workplace procedures
2 Drive a vehicle carrying special loads	2.1 Vehicle is manoeuvred in accordance with regulations/permit requirements for vehicle class involved and load being carried
	2.2 Vehicles carrying explosives or dangerous goods are driven along designated routes in accordance with relevant codes, government regulations and workplace policies
	2.3 Load is transported and vehicle is manoeuvred in accordance with required precautions relating to load unusual/special characteristics and/or relevant government regulations for special load including the current Australian Dangerous Goods (ADG) Code and the current Australian Code for the Transport of Explosives by Road and Rail
	2.4 Signs, placards or indicators are fixed to vehicle as required
	2.5 Appropriate procedures are followed for load concerned in a driving emergency
	2.6 Documentation is completed and proofread in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3063A Operate vehicle carrying special loads.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIC3063 Operate vehicle carrying special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle, its equipment and load, and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing vehicle and its equipment in terms of maintenance schedule and operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions and related action that can be taken by a driver
- fatigue management strategies including on-road techniques
- lifestyles that promote effective long-term fatigue management
- map reading and road navigation techniques
- pre-operational checks carried out on vehicle and related action
- procedures to be followed in a driving emergency
- relevant Australian regulations and codes of practice for handling and transporting dangerous goods and hazardous substances, including the current Australian Dangerous Goods (ADG) Code and the current Australian Code for the Transport of Explosives by Road and Rail
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- vehicle controls, instruments and indicators, and their use
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical assessment must be in vehicles designed to carry special loads, for example concrete agitator, livestock transporter, armoured car, tanker, refrigerated vehicle, waste vehicle, fresh produce vehicle, car carrier, container carrier, recovery vehicle.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Industry Skills Australia

requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, current ADG Code, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC3064 Operate car carrier vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare for and transport a load while operating a car carrier vehicle.

It includes preparing for a trip, loading car carrier vehicle, transporting load and unloading car carrier vehicle.

Work must be carried out in accordance with relevant state/territory roads and traffic authority licence requirements and regulations for heavy vehicles.

Work is performed with limited or minimum supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for trip	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Inventory of equipment is completed in accordance with organisational requirements
	1.3 Driver clothing is selected in accordance with organisational and customer requirements
	1.4 Vehicles assessed as unsuitable for car carrier are excluded from loading in accordance with organisational requirements
	1.5 Inspection documentation for vehicles to be loaded is completed in accordance with organisational and customer requirements
	1.6 Delivery instructions, including verbal instructions for pick-up points and destinations, are checked to ensure they are consistent with manifest, and inconsistencies are remedied in accordance with organisational requirements
	1.7 Suitable route is selected to ensure most efficient, safe and secure route for load
2 Load car carrier vehicle	2.1 Car carrier vehicle is loaded without damage to vehicles, in the correct order and in accordance with organisational requirements
	2.2 Vehicles are loaded onto car carrier vehicle in accordance with regulatory requirements, and organisational safety and operating procedures, and adjustments are made as required when loading commercial vehicles
	2.3 Vehicles are parked in gear and brakes are applied
	2.4 Load is secured with correct tie down methods for transporting vehicles in accordance with organisational requirements
	2.5 Checks are made to ensure loaded car carrier complies with legal requirements for height, weight, width and axle loading
	2.6 Ancillary equipment attached to car carrier is operated in accordance with operating instructions
3 Transport load	3.1 Driving techniques are used, when operating car carrier, to minimise risk of damage to loaded vehicles in accordance

© Commonwealth of Australia, 2025 Industry Skills Australia

		with eco-driving considerations
	3.2	Load is conveyed to meet customer requirements for delivery times and road traffic laws are complied with
	3.3	Loaded vehicle car keys are secured in accordance with organisational requirements
4 Unload car carrier vehicle	4.1	Identity of persons taking delivery of vehicles is confirmed in accordance with delivery instructions
	4.2	Vehicle unloading procedures are followed in accordance with organisational and customer requirements for safety, and in a manner that minimises inconvenience to other road users
	4.3	Unloaded vehicles are inspected and documentation of their condition is completed
	4.4	Variances from initial vehicle inspection are reported, in accordance with organisational and customer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3064A Operate car carrier vehicle.

Assessment Requirements for TLIC3064 Operate car carrier vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying correct techniques and methods for loading and unloading a car carrier
- applying eco-driving techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- identifying requirements for accepting correct vehicle for cartage
- interpreting and following operational instructions and prioritising work
- loading vehicles to ensure:
  - overhang does not exceed 1.2 meters at front or rear of vehicle
  - they do not touch each other during transit
  - they are loaded in reverse sequence of planned unloading sequence
  - adjustments are made when loading commercial vehicles
- making accurate estimates in a range of situations
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle, its trailers and its equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing vehicle and its equipment in terms of maintenance schedule and standard operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- customer requirements when delivering cars
- driving hazards and related defensive driving techniques
- efficient driving techniques and eco-driving considerations
- engine power management and safe driving strategies
- factors involved in trip preparation
- factors that may cause traffic delays and diversions, and related action that can be taken
- heavy vehicle handling procedures
- load restraint guide
- loading and unloading techniques for car carrying
- relevant legislation and workplace procedures
- WHS/OHS operational procedures
- workplace documentation
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Practical assessment must be undertaken in a vehicle typical of that used in industry.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, national Load Restraint Guide (LRG), codes of practice and operation manuals

TLIC3071 Operate an agitator

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely operate an agitator (also known as a concrete mixer), in accordance with relevant state/territory roads and traffic authority licence requirements and regulations for an agitator.

It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, and managing vehicle condition and performance.

It also includes preparing a vehicle, monitoring and maintaining vehicle performance, delivering concrete to site and finalising concrete delivery.

Work is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare vehicle	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Pre-operational agitator check is completed in accordance with workplace procedures
	1.3 Concrete is charged to agitator and slump is adjusted in accordance with customer requirements and organisational procedures
	1.4 Vehicle exterior is cleaned in accordance with organisational policy and regulatory requirements
	1.5 Most efficient route of travel is determined to achieve customer and regulatory requirements
	1.6 Traffic and road conditions are constantly monitored and acted on to enable safe operation
	1.7 Emergency procedures are followed in a driving emergency
2 Monitor and maintain vehicle performance	2.1 Performance position and efficiency of vehicle operation are monitored during use
	2.2 Defective or irregular performance and malfunctions are reported to appropriate authority
	2.3 Vehicle records are updated and maintained, and information is processed in accordance with workplace procedures
3 Deliver concrete to site	3.1 Pre-site check is completed before entry onto worksite in accordance with regulatory and workplace requirements
	3.2 Personal protective equipment (PPE) is worn in accordance with workplace policy
	3.3 Vehicle is parked and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
	3.4 Ancillary equipment is attached and operated in accordance with workplace procedures and regulatory requirements
	3.5 Concrete is discharged in accordance with customer requirements, and workplace policy and procedure

© Commonwealth of Australia, 2025 Industry Skills Australia

4	**Finalise concrete delivery**	4.1 Relevant documentation is completed on delivery of concrete, in accordance with customer requirements and workplace policy and procedure
		4.2 Vehicle is cleaned in accordance with organisational policy and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3071A Operate an agitator.

Assessment Requirements for TLIC3071 Operate an agitator

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adjusting slump of concrete to meet customer requirements
- applying knowledge of relevant regulations and workplace procedures
- applying map reading and road navigation techniques to agitator operation
- applying precautions and required action to minimise, control or eliminate identified hazards
- cleaning vehicle in accordance with workplace, environmental and regulatory standards
- communicating effectively with others
- completing relevant documentation
- conducting pre-site worksite checks
- correcting positioning and charging of agitator
- discharging concrete using concrete pump, wheelbarrow, kibble and chutes
- following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring vehicle performance and taking appropriate action as required
- operating agitator and ancillary equipment
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and rectifying within limits of own role, identified problems, faults and malfunctions in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment, conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using ancillary equipment
- working collaboratively with others.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- driving hazards and related defensive driving techniques
- effect of different slumps on vehicle stability
- factors that may cause traffic delays and diversions, and related action that can be taken
- map reading and vehicle navigation
- pre-operational vehicle checks and related action
- pre-site check workplace procedures
- procedures for measuring mass to ensure compliance with axle weight
- procedures to be followed in a driving emergency
- procedures to be followed when concrete is charged and discharged
- relevant state/territory roads and traffic authority road rules, regulations, permit and licence requirements
- relevant WHS/OHS and environmental procedures and regulations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must ensure access to:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

Simulation/online assessment is not suitable for final assessment of this unit.

TLIC3072 Conduct the duties of an assistant on a heritage locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct the duties of an assistant on a heritage locomotive in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.

It includes carrying out or assisting with the following activities on a heritage locomotive in accordance with organisational requirements: checking, preparing and starting up prior to operation; coupling, uncoupling and shunting; assisting with operations and stabling.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines when conducting the duties of an assistant on a heritage locomotive.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Prepare to assist with operating a heritage locomotive	1.1 Roster is checked and interpreted for day's operational activities
	1.2 Allocation of locomotive is checked and confirmed
	1.3 Train schedules/notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures
	1.4 Personal protective equipment required for operating locomotive is obtained
	1.5 Hazards are identified, risks are assessed and control measures are implemented
	1.6 Trackside safety and basic electrification awareness procedures are followed while locating allocated locomotive
2 Assist with preparing and starting a heritage locomotive	2.1 Logbook is checked to confirm serviceability of locomotive
	2.2 Locomotive is confirmed as being securely stabled prior to commencing preparation and safety checks
	2.3 Preparation and safety checks are conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other workplace policies and procedures
	2.4 Fluid levels and mechanical equipment are checked and appropriate action is taken as required
	2.5 Locomotive is started in accordance with manufacturer and/or organisational instructions
	2.6 For critical or serious equipment faults that cannot be readily rectified, locomotive is shut down, faulty equipment is isolated and tagged, and problem is reported for rectification
	2.7 All instruments and gauges are observed, readings are interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine cause and to rectify or report the situation
	2.8 Fluid levels are rechecked after starting and appropriate action is taken as required

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.9	Assistance is provided with pre-departure checks
	2.10	Logbook and other service records on the locomotive are completed in accordance with organisational requirements
3 Assist with coupling, uncoupling and securing rail vehicles	3.1	Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
	3.2	Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles
	3.3	Connecting hoses and electrical couplings are connected/disconnected in accordance with organisational policies and procedures
	3.4	Hand brakes and other securing devices are applied/released and attached/removed in accordance with organisational policies and procedures
4 Assist with operating a heritage locomotive	4.1	Safeworking activities are undertaken in accordance with organisational and/or network owner policies and procedures
	4.2	Supervisory controls and indicators are monitored and operated in accordance with organisational policies and procedures
	4.3	Assistance is provided with communications for network control officer and ground staff
	4.4	Observation of all aspects of the rail corridor and environs is maintained and communicated to driver in accordance with organisational and/or network owner policies and procedures
	4.5	If driver is incapacitated train is stopped, Network Control Officer is informed and instructions are followed in accordance with organisational policies and procedures
	4.6	Assistance with locomotive operation is provided as requested by driver
5 Assist with stabling a heritage	5.1	Locomotive is secured in accordance with directions, organisational procedures and rail regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

locomotive	5.2 Locomotive is shut down in accordance with manufacturer and/or operator instructions
	5.3 Logbook and other service records on the locomotive are completed in accordance with organisational requirements
	5.4 Cab is secured in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC3072 Conduct the duties of an assistant on a heritage locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- assisting with pre-operational activities in accordance with workplace procedures
- checking and replenishing fluids and carrying out lubrication requirements on a heritage locomotive
- communicating effectively with others when inspecting and preparing a heritage locomotive
- completing relevant documentation
- conducting a visual inspection of a heritage locomotive and associated equipment
- documenting outcomes of visually inspecting a heritage locomotive
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following instructions and prioritising work
- preparing a heritage locomotive prior to service
- reading, interpreting and following relevant instructions, procedures, information and signs
- working collaboratively with others as part of a train crew.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- braking and safety system procedures for a heritage locomotive
- emergency procedures
- external features of a heritage locomotive that must be checked during a pre-operational visual inspection
- functions of auxiliary systems on a motive power unit and related checks for correct operation
- in-cab pre-operational checks for a heritage locomotive
- lubrication requirements for a motive power unit
- operating controls to start, accelerate, decelerate and stop a heritage locomotive
- operating procedures for a heritage locomotive
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for checking fuel and fluid levels, and carrying out lubrication processes on a heritage locomotive
- procedures for identifying equipment defects and assessing for appropriate action
- procedures for managing and controlling hazardous situations when preparing and starting up a heritage locomotive
- procedures for starting and operating auxiliary systems on a heritage locomotive
- relevant rail danger zones
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation when inspecting and preparing a heritage locomotive
- start-up procedures for a heritage locomotive
- visual inspection procedures for a heritage locomotive
- workplace procedures and operating requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals

TLIC3073 Fire a steam locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct the duties of an assistant on a steam locomotive in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.

It includes preparing for operations, preparing and starting the locomotive, assisting with un/coupling and securing the locomotive, and assisting in operating and stabling the locomotive in accordance with organisational requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines to fire a steam locomotive.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C - Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare to assist with operating a steam locomotive	1.1 Roster is checked and interpreted for day's operational activities
	1.2 Allocation of locomotive is checked
	1.3 Train schedules/notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures
	1.4 Personal protective equipment required to operate the locomotive is obtained
	1.5 Trackside safety and electrification awareness procedures are followed while locating allocated locomotive
2 Prepare and start a steam locomotive	2.1 Logbook is checked to confirm serviceability of locomotive
	2.2 Locomotive is confirmed as being securely stabled prior to commencing preparation and safety checks
	2.3 Preparation and safety checks are conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS) and other organisational policies and procedures
	2.4 Water levels and fuels are checked and replenished as required
	2.5 Mechanical equipment is checked and appropriate action is taken as required
	2.6 Fire is lit and steam is raised in accordance with organisational instructions, with consideration for thermal expansion and in accordance with environmental procedures and practices
	2.7 For critical or serious equipment faults that cannot be readily rectified, fire is dropped, faulty equipment is isolated and problem is reported for rectification
	2.8 All indicators and gauges are continuously monitored and readings are interpreted to confirm effective pressure, water level and air operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
	2.9 Operation of locomotive equipment is established and verified
	2.10 Locomotive lubrication, cleaning, preparation, and provisioning are undertaken in accordance with organisational requirements
	2.11 Logbook and other service records on the locomotive are

© Commonwealth of Australia, 2025 Industry Skills Australia

		completed in accordance with organisational requirements
3	**Assist with coupling, uncoupling and securing rail vehicles**	3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
		3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles
		3.3 Connecting hoses and electrical couplings are connected/disconnected in accordance with organisational policies and procedures
		3.4 Hand brakes and other securing devices are applied/released and attached/removed in accordance with organisational policies and procedures
4	**Assist with operating a steam locomotive**	4.1 Safeworking activities are undertaken in accordance with organisational and/or network owner policies and procedures
		4.2 Gauges and indicators are monitored and operated in accordance with organisational policies and procedures
		4.3 Boiler is fired to meet load requirements in accordance with environmental procedures and practices
		4.4 Water level is maintained to ensure safe boiler operation meets load requirements and track characteristics
		4.5 Assistance with communications is provided when communicating with Network Control Officer and ground staff
		4.6 Observation of all aspects of the rail corridor and environs is maintained and communicated to driver in accordance with organisational and/or network owner policies and procedures
		4.7 In case of driver being incapacitated, train is stopped, Network Control Officer is informed and instructions are followed in accordance with organisational policies and procedures
		4.8 Assistance with locomotive operation is provided as requested by driver
5	**Assist with stabling a steam locomotive**	5.1 Locomotive is secured in accordance with directions, workplace procedures and rail regulations
		5.2 Boiler water levels are checked and replenished as required
		5.3 Locomotive is shut down in accordance with operator instructions

© Commonwealth of Australia, 2025 Industry Skills Australia

5.4 Ash is disposed of responsibly in accordance with network owner and operator policies

5.5 Assistance is provided to conduct a post-operational inspection

5.6 Logbook and other service records on the locomotive are completed in accordance with organisational requirements

5.7 Controls are secured in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3073A Fire a steam locomotive.

Assessment Requirements for TLIC3073 Fire a steam locomotive

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- assisting with pre-operational activities in accordance with operational procedures
- checking and replenishing fluids and carrying out lubrication requirements on a steam locomotive
- communicating effectively with others when inspecting and preparing a steam locomotive
- completing relevant documentation
- conducting a visual inspection of a steam locomotive and associated equipment
- documenting outcomes of visually inspecting a steam locomotive
- firing a steam locomotive
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- inspecting and operating a steam locomotive boiler in accordance with relevant codes of practice and operational procedures
- interpreting and following instructions and prioritising work
- maintaining steam and water levels in accordance with operating requirements
- preparing a steam locomotive prior to service
- reading, interpreting and following relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- braking and safety system procedures for a steam locomotive
- emergency procedures
- external features of a steam locomotive that must be checked during a pre-operational visual inspection
- functions of auxiliary systems on a motive power unit and related checks for correct operation
- in-cab pre-operational checks for a steam locomotive
- lubrication requirements for a motive power unit
- operating controls to start, accelerate, decelerate and stop a steam locomotive
- principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- procedures for:
    - checking fuel and fluid levels and carrying out lubrication processes on a steam locomotive
    - identifying equipment defects and assessing appropriate action
    - managing and controlling hazardous situations when preparing and starting up a steam locomotive
    - starting and operating auxiliary systems on a steam locomotive
    - visually inspecting a steam locomotive
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements for completing relevant documentation when inspecting and preparing a steam locomotive
- steam locomotive boiler code of practice
- start-up procedures for a steam locomotive
- workplace procedures and operating requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIC3082 Operate a locomotive by portable remote control

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a motive power system by a portable remote control unit in accordance with safeworking and manufacturer instructions, and organisational procedures.

It includes preparing a locomotive, setting up portable remote control equipment, operating the system after set up is complete and shutting it down after operation.

This equipment is used to control a locomotive remotely when loading, unloading and/or shunting trains within defined limits, terminals, yards or sidings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C - Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Set up locomotive for portable remote	1.1 Locomotive is set up for portable remote control operation in accordance with manufacturer instructions and/or

© Commonwealth of Australia, 2025 Industry Skills Australia

operation	organisational procedures
	1.2 Portable remote control equipment is installed as required in accordance with manufacturer instructions and/or organisational procedures
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Remote control system is tested and operation is confirmed in accordance with manufacturer instructions and/or organisational procedures
	1.5 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and damage to equipment
2 Operate locomotive using portable remote control equipment	2.1 Warning signage is placed as required in accordance with organisational procedures
	2.2 Portable remote control equipment is operated and monitored in accordance with operational requirements during train movements to provide safe train handling and control within defined limits
	2.3 Portable remote control equipment is operated with an awareness that not all people in work area vicinity may know locomotive is being operated remotely
	2.4 Operational difficulties encountered are addressed by re-establishing control of locomotive with minimum risk to personnel and equipment
3 Shut down portable remote control equipment	3.1 Locomotive is secured against unintentional movement in a safe location in accordance with organisational procedures
	3.2 Portable remote control equipment is shut down in accordance with manufacturer instructions and/or organisational policies and procedures
	3.3 Portable remote control equipment is removed from locomotive as required in accordance with manufacturer instructions and/or organisational policies and procedures
	3.4 Relevant WHS/OHS requirements are followed to prevent injury and damage to equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC3082A Operate a locomotive by portable remote control.

Assessment Requirements for TLIC3082 Operate a locomotive by portable remote control

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- setting up portable remote control equipment in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- braking and safety system procedures
- defined limits
- locomotive operating techniques
- procedures for identifying defects in portable remote control units, and assessing appropriate action to be taken

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures for managing hazardous situations involving portable remote control systems
- procedures for operating portable remote control equipment
- relevant rail danger zones
- relevant rail safety, WHS/OHS and environmental procedures and regulations
- relevant workplace operational instructions
- shunting and marshalling procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

TLIC3083 Operate a front lift mobile compaction/collection vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a front lift mobile compaction/collection vehicle.

Vehicle must be operated in compliance with relevant state/territory road traffic authority vehicle licence requirements and regulations.

Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

TLIC3085 Operate a liquid waste collection vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a liquid waste collection tanker (the 'vehicle').

It includes following safety requirements, loading product into vehicle, unloading product and completing documentation.

These vehicles can be used to collect septic waste, grease trap waste and industrial liquid wastes.

Vehicle must be operated in compliance with relevant state/territory and traffic authority vehicle licence requirements and regulations.

Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Follow safety requirements	1.1 Operator and third party safety is maintained in accordance with organisational, manufacturer and legislative requirements
	1.2 Safe work area controls are implemented in accordance with organisational and waste generator requirements
	1.3 Vehicle is positioned on stable ground to ensure vehicle safety and stability for loading in accordance with organisational and manufacturer requirements
	1.4 Vehicle controls are checked and operated in accordance with organisational and manufacturer requirements
	1.5 Appropriate safety items are selected, used and re-stowed in accordance with organisational and manufacturer requirements
	1.6 Hazards are identified, risks are assessed and control measures are implemented
	1.7 Defective equipment is reported in accordance with organisational and manufacturer requirements
2 Load product into vehicle	2.1 Pit and trap lids/hatches are opened and removed in accordance with organisational and waste generator requirements
	2.2 Vehicle is checked for readiness to operate in accordance with organisational and manufacturer requirements
	2.3 Provided documentation is used to determine collection location
	2.4 Product streams are checked before loading, incorrect product streams are identified and appropriate action is taken in accordance with organisational requirements
	2.5 Product stream is transferred into vehicle tank via hoses in accordance with organisational, manufacturer and legislative requirements
	2.6 Blockages are cleared and non-compliant product is reported in accordance with organisational, manufacturer and legislative requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.7 Load volumes are monitored to ensure gross vehicle mass (GVM) is not exceeded and excess product is unloaded to an approved point as required
	2.8 Hoses and surrounding areas are cleaned and cleared in accordance with organisational and manufacturer requirements
	2.9 Hoses are returned to transit position, pit and trap lids/hatches at waste generators premises are put back in place and secured, and vehicle hatches and vents are closed
3 Unload product and complete documentation	3.1 Vehicle is positioned for unloading on level, stable ground to ensure vehicle safety and stability in accordance with site, organisational, manufacturer and legislative requirements
	3.2 Waste liquid is discharged via vacuum, pressure or gravity feed in accordance with organisational, manufacturer and legislative requirements
	3.3 Tanker is cleaned in accordance with organisational and manufacturer requirements
	3.4 Return of equipment used to transit position is ensured
	3.5 Documentation for unloaded product is completed in accordance with organisational, manufacturer and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC3085 Operate a liquid waste collection vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate techniques for loading and unloading vehicle
- applying eco-driving techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- identifying, loading and transporting product streams in accordance with organisational, manufacturer and legislative requirements
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- monitoring performance of vehicle and equipment, and taking appropriate action as required
- operating a liquid waste collection vehicle across three different workplace job functions
- operating all vehicle functions correctly including in cabin, pump and tank controls whether fixed or remote
- operating and adapting to differences in equipment in accordance with operating procedures
- reading, interpreting and following instructions, procedures, information and signs
- using correct manual handling techniques when operating vehicle and/or product containers
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- concepts of vacuum and pressure in relation to collecting liquid waste
- customer requirements when picking up product or delivering product to a product collection facility efficient driving techniques and eco-driving considerations
- factors involved in trip preparation
- factors that may cause traffic delays and diversions
- gross vehicle mass (GVM) of liquid waste collection vehicle
- initial spill response procedures
- relevant dangerous goods (DG) information relating to operating the vehicle
- relevant legislation, and organisational and manufacturer procedures for transporting product in the vehicle
- relevant state/territory road rules, regulations, permits and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations relating to vehicle operations and proper disposal of liquid waste
- safe pickup and delivery of product to and from site
- vehicle loading and unloading procedures
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a liquid waste collection tanker
- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

Use of a simulator is not suitable for final assessment of this unit of competency.

TLIC3086 Operate a multi-lift collection vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a multi-lift collection vehicle (the 'vehicle').

It includes following safety requirements, loading product bin onto vehicle, unloading product from vehicle and completing documentation, and unloading product bin from vehicle.

Vehicle must be operated in compliance with relevant state/territory and traffic authority vehicle licence requirements and regulations.

Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Assessment Requirements for TLIC3089 Operate a side loading mobile compaction/collection vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying appropriate techniques for loading and unloading vehicle
- applying precautions and required action to minimise, control or eliminate identified hazards
- reporting defective equipment in accordance with organisational/manufacturer requirements
- identifying, load and transport product streams in accordance with organisational, manufacturer and legislative requirements
- interpreting and following operational instructions and prioritise work
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle and equipment, and taking appropriate action as required
- operating a side loading mobile compaction-collection vehicle across three different workplace job functions
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating vehicle cabin functions correctly
- positioning product bins manually
- reading, interpreting and following relevant instructions, procedures, information and signs
- using correct manual handling techniques when operating vehicle and/or product containers
- working collaboratively with others.

TLIC4006 Drive multi-combination vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive a multi-combination vehicle safely, including maintaining systematic and efficient control of all vehicle functions, coupling and uncoupling dollies, monitoring traffic and road conditions, managing vehicle condition and performance and effectively managing hazardous situations.

Driving must be carried out in accordance with relevant state/territory roads and traffic authority licence requirements and regulations for multi-combination vehicles.

Driving is performed with limited supervision, and duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

1 Drive multi-combination vehicle	1.1 Multi-combination vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturer instructions
	1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
	1.3 Multi-combination vehicle braking system is managed and operated to ensure effective control of vehicle under all conditions
	1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
	1.5 Multi-combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
	1.6 Multi-combination vehicle is parked, shut down, uncoupled and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
	1.7 Appropriate signage and lights are checked for operational effectiveness and for conformity to prescribed traffic regulations
	1.8 Appropriate procedures are followed in a driving emergency
2 Monitor traffic and road conditions	2.1 Most efficient and permissible route of travel is taken by monitoring and anticipating traffic flows and conditions, road standards and other factors likely to cause delays or route deviations
	2.2 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
3 Monitor and maintain vehicle performance	3.1 Vehicle performance is maintained through pre-operational inspections and vehicle checks
	3.2 Prime mover, dollies and trailer are aligned and coupled in proper sequence in accordance with manufacturer instructions and workplace procedures
	3.3 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm it is fully operational
	3.4 Performance and efficiency of vehicle operation is monitored

© Commonwealth of Australia, 2025 Industry Skills Australia

during use

3.5 Defective or irregular performance or malfunctions are reported to appropriate authority

3.6 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC4006A Drive multi-combination vehicle.

Assessment Requirements for TLIC4006 Drive multi-combination vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids and carrying out lubrication processes
- completing relevant documentation
- monitoring and anticipating traffic hazards and taking appropriate action
- monitoring performance of vehicle, its trailers and its equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on drivers
- differences between transmission types
- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- factors that increase fatigue-related accidents
- factors that may cause traffic delays and diversions and related action that can be taken
- fatigue management strategies including on-road techniques

© Commonwealth of Australia, 2025 Industry Skills Australia

- lifestyles that promote effective long-term fatigue management
- map reading and road navigation techniques
- multi-combination vehicle controls, instruments and indicators, and their use
- multi-combination vehicle handling procedures
- pre-operational checks carried out on multi-combination vehicle and related action
- principles of operation of air brakes and procedures for their use
- principles of stress management when driving a vehicle
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory road traffic authority.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC4019 Drive train to operational requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to drive a train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes applying train management techniques to manage the movement of a train and, as the driver of a motive power unit, to conduct all movements and related activities required to achieve operational requirements. It also includes responding effectively to external factors and emergencies, handing over a train to a relief crew and stabling it at the end of a journey.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when driving trains as part of workplace activities across a variety of operational contexts within the Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive train efficiently and effectively	1.1 Motive power unit is operated in accordance with relevant codes of practice, workplace procedures and instructions
	1.2 Motive power unit is operated safely within track/road characteristics and conditions, to minimise wear and fuel use and to avoid damage
	1.3 Train is driven with due care for passenger comfort and/or condition of freight
	1.4 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and to identify faults, defects and inefficiencies
	1.5 Relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental requirements are followed to prevent injury and damage
2 Complete train journey in accordance with operational requirements	2.1 Train documentation is received, interpreted and followed
	2.2 Train is operated in accordance with documentation and procedures
	2.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route
	2.4 Relevant codes of practice, safeworking and signalling requirements are followed throughout train operations
	2.5 Network control officer instructions are received, interpreted and applied to ensure safe and effective control of train
	2.6 Communications are maintained with network control officer and other relevant personnel during train journey in accordance with relevant codes of practice and safeworking systems
	2.7 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running
3 Respond to changed external operating	3.1 Instructions regarding changed external operating factors are verified, interpreted and followed, in accordance with

© Commonwealth of Australia, 2025 Industry Skills Australia

factors		relevant codes of practice, safeworking systems, and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.2	Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems, and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.3	Hazardous situations are recognised and appropriate action is taken to minimise risk to passengers/freight and equipment
	3.4	Emergency situations are recognised and actions are taken that are appropriate and safe
4 Prepare train for crew handover	4.1	Relevant personnel are advised of condition and location of train
	4.2	Documentation is updated and faults identified en route are reported to relevant personnel in accordance with established policies and procedures
	4.3	Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with workplace policies and procedures
5 Stable train	5.1	Location for stabling of train is confirmed with relevant personnel
	5.2	Train is shunted and secured in accordance with directions, workplace procedures and relevant rail regulations
	5.3	Safety devices are activated or put in position to ensure safety of personnel and equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIC4019 Drive train to operational requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in trains, associated motive power units and ancillary equipment
- applying track or road information/characteristics to train operations
- checking and replenishing fluids and carrying out lubrication processes as part of train operations in accordance with workplace requirements
- communicating effectively with others
- completing relevant documentation
- driving train in accordance with equipment and track/road characteristics
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment in accordance with organisational requirements
- monitoring journey schedule in accordance with train documentation
- monitoring train performance and security of load to facilitate optimum safe operation
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when driving a train, and taking appropriate action
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others

© Commonwealth of Australia, 2025 Industry Skills Australia

- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- defects that can occur on a motive power unit and related action that should be taken
- motive power unit controls, instruments and indicators and their purpose, location and use
- motive power unit equipment and systems including monitoring devices, braking and drive equipment, and ancillary systems
- operating controls to start, accelerate, decelerate and stop
- procedures and required protocol for operating electronic communications equipment
- procedures for identifying equipment faults and defects, and assessing for appropriate action
- procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit
- procedures for operating and monitoring the performance of ancillary systems on a train
- procedures for refuelling and lubricating a motive power unit
- procedures for responding to hazardous situations and emergencies
- processes for adjusting controls to maximise efficient and safe running
- relevant WHS/OHS and environmental procedures and regulations
- requirements for completing relevant documentation
- start-up and shut-down procedures
- techniques and procedures for complying with speed and load limits
- track and road characteristics
- train operating characteristics.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

© Commonwealth of Australia, 2025 Industry Skills Australia

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail workplace.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC4023 Operate train with due consideration of route conditions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a train with due consideration of route conditions in accordance with safeworking and regulatory requirements, and workplace procedures.

It includes identifying route requirements, applying route knowledge to planning a train journey, and using route knowledge during a train journey in accordance with workplace requirements and standards.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures when operating a train with due consideration of route conditions as part of workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and interpret route information	1.1 Information on anything likely to affect critical aspects of a train route is accessed in accordance with workplace procedures
	1.2 Information on critical aspects of a train route is interpreted and analysed for use when planning a train journey and operating a train during a journey
2 Apply route knowledge when planning a train journey	2.1 Route information is applied to planning a train journey in accordance with workplace procedures and safeworking codes of practice and regulations
	2.2 Events and circumstances likely to affect planned running schedule are communicated to relevant personnel
	2.3 Relevant codes of practice, safeworking and signalling requirements are applied when planning train operations
	2.4 Instructions concerning planned train operation are communicated to relevant personnel to ensure safe and efficient on-time running
3 Use route knowledge during a train journey	3.1 Route information is evaluated and applied to managing train operations during a train journey in accordance with workplace procedures and safeworking codes of practice and regulations
	3.2 Hazardous situations along train route are recognised and appropriate action is taken to minimise risk to personnel and equipment
	3.3 Communications are maintained with Network Control Officer and other relevant personnel during train journey in accordance with relevant codes of practice, safeworking systems and workplace procedures
	3.4 Network Control Officer information and other instructions are received, interpreted and applied to ensure safe and effective operation of train

Assessment Requirements for TLIC4023 Operate train with due consideration of route conditions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying route knowledge to train operations
- communicating effectively with others including using fixed and hand signals, and train communications equipment
- completing relevant documentation
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring train performance and its security to facilitate optimum safe operation
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, route information and signs
- reporting and/or rectifying identified problems that may occur promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- driving procedures
- motive power unit controls, instruments and indicators and their purpose, location and use
- motive power unit systems and equipment including monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- procedures for adjusting controls to maximise efficient and safe running
- procedures for complying with speed and load limits
- procedures for identifying and/or anticipating route problems and related action that can be taken
- procedures for managing hazardous situations
- procedures for operating ancillary systems
- procedures for operating controls to start, accelerate, decelerate and stop
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- route information including track/bridge limitations, speed limitations, gauge limitation, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, end of safeworking system locations, stations and platforms, abnormal weather conditions along route, track work along route, reports of accidents or breakdowns along route, yard and siding layouts and typical problems that can occur along a train route
- safe operational procedures and techniques for optimising efficiency, minimising wear and tear on rolling stock and motive power units
- workplace procedures and operating requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIC4026 Operate and monitor a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor a motive power unit in accordance with relevant workplace procedures, rail regulations and codes of practice.

It includes operating motive power unit controls, monitoring performance and maintaining operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures when maintaining the safety and operation of a motive power unit across a variety of operational contexts in the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate motive power unit	1.1 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
	1.2 Acceleration and braking techniques are applied safely within track, road and weather conditions
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Motive power unit and rolling stock movement between sections is monitored and vehicles are positioned safely in accordance with relevant codes of practice, safeworking systems and related requirements
2 Operate and monitor on-board equipment	2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and to identify faults, defects and deficiencies
	2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with Network Control Officer as required
	2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel
3 Respond effectively to external operating factors	3.1 Instructions are verified as required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe
	3.2 Fixed and hand signals, and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure actions taken are appropriate and safe
	3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment in accordance with workplace procedures and applicable regulatory requirements
4 Work collaboratively	4.1 Safe operation and monitoring of motive power unit is maintained in collaboration with relevant personnel, in accordance with workplace procedures and applicable

© Commonwealth of Australia, 2025 Industry Skills Australia

	regulatory requirements
	4.2 Potential or actual conflicts or grievances with train crew, Network Control Officer and other relevant personnel when operating motive power unit are recognised and resolved, in accordance with workplace procedures
	4.3 Rail resource management principles are applied as required in all rail operations involving motive power unit, in accordance with workplace procedures
	4.4 Regular communication is maintained with train crew, Network Control Officer, drivers of other trains and other relevant personnel when operating motive power unit, in accordance with workplace procedures and regulatory requirements
	4.5 Train crew, Network Control Officer, drivers of other trains and other relevant personnel are advised of operational problems, delays, and safety incident and emergency situations
	4.6 Information provided by train crew, Network Control Officer, drivers of other trains and other relevant personnel relevant to ongoing operation of motive power unit is interpreted and applied to driving activities, in accordance with workplace procedures and applicable regulatory requirements
5 Follow all applicable rail regulatory requirements	5.1 Rail regulatory requirements applicable to operating motive power unit, and train and track or road concerned are accessed, clarified as required and interpreted
	5.2 Relevant rail regulatory requirements are applied and followed when operating motive power unit
	5.3 Rail resource management principles are applied in all rail operations involving motive power unit in accordance with workplace procedures and applicable rail regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIC4026 Operate and monitor a motive power unit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in motive power units and associated equipment and procedures
- applying handling techniques and track and road knowledge in accordance with workplace procedures
- communicating effectively and maintaining appropriate levels of communication with appropriate personnel
- completing relevant documentation
- identifying and responding different types of signals, including fixed and hand signals and verbal commands
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring motive power unit performance
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- recognising problems that may arise when operating and monitoring a motive power unit, and taking appropriate action
- reporting problems and carrying out repairs (depending on level and extent of work required), or isolating and tagging faulty equipment and advising appropriate personnel of fault and need for repair or replacement
- selecting and using required personal protective clothing and equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- braking and safety system procedures
- emergency procedures
- motive power unit controls, instruments and indicators and their purpose, location and use
- operating controls to start, accelerate, decelerate and stop a motive power unit
- procedures and required protocol for operating electronic communications equipment
- procedures for adjusting controls to maximise efficient and safe running
- procedures for identifying equipment defects and assessing them for appropriate action
- procedures for managing safety incidents and hazardous situations
- procedures for minor maintenance, cleaning, lubricating and servicing a motive power unit
- procedures for operating and monitoring a motive power unit
- procedures for operating and monitoring ancillary equipment on a motive power unit
- relevant rail danger zones
- relevant safeworking systems
- relevant WHS/OHS and environmental procedures and regulations
- requirements for communicating and working collaboratively with relevant personnel
- requirements for completing relevant documentation during and after operating and monitoring a motive power unit
- speed and load limits for a motive power unit
- track and road
- train schedules, motive power unit allocation and operational instructions
- typical faults that can occur on a motive power unit and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- workplace procedures and operating requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIC4068 Operate heavy recovery ancillary equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a range of heavy recovery ancillary equipment used in the towing and recovery process.

It includes checking job requirements, preparing heavy recovery ancillary equipment for use, operating ancillary equipment, and shutting down heavy recovery ancillary equipment.

This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Check job requirements**	1.1	Job is reviewed to identify equipment and operating requirements
		1.2	Ancillary equipment, materials and personnel requirements for safe, effective and efficient operation are identified and organised
		1.3	Suitable personal protective equipment and clothing are selected, used, maintained and stored in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
2	**Prepare heavy recovery ancillary equipment for use**	2.1	Routine pre-operational checks are carried out in accordance with organisational requirements and manufacturer specifications
		2.2	Operational systems are checked and calibrated for correct operation in accordance with organisational requirements and manufacturer specifications
		2.3	Faulty equipment is identified, safety tagged and reported promptly in accordance with organisational procedures
		2.4	WHS/OHS hazards associated with equipment operation are identified, and risk is assessed and handled in accordance with organisational procedures
		2.5	Environmental implications associated with operations are identified, assessed and reported in accordance with organisational procedures
3	**Operate ancillary equipment**	3.1	Operational area is checked and personnel in that area are informed of initiation of operation
		3.2	Equipment is started up using correct sequence in accordance with organisational requirements and manufacturer specifications
		3.3	Equipment is operated in a safe and controlled manner in accordance with manufacturer specifications, and is monitored for performance and efficiency
		3.4	Input materials are monitored and non-conformances are identified and handled in accordance with organisational requirements
		3.5	Processing outputs are monitored and adjustments to equipment operation are made in accordance with job requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

4	**Shut down heavy recovery ancillary equipment**	4.1 Shut-down procedures for equipment are completed in accordance with organisational requirements and manufacturer specifications
		4.2 Routine maintenance of equipment is carried out in accordance with organisational requirements and manufacturer specifications
		4.3 Equipment is stored and secured in accordance with organisational requirements
		4.4 Malfunctions, faults, irregular performance and damage to equipment are detailed and reported in accordance with organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC4068A Operate heavy recovery ancillary equipment.

Assessment Requirements for TLIC4068 Operate heavy recovery ancillary equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two occasions and include:

- completing relevant documentation
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- operating heavy recovery ancillary equipment
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- factors that may cause traffic delays and diversions
- manufacturer specifications and operator manuals
- relevant dangerous goods information for operating ancillary equipment
- relevant state/territory roads and traffic authority road rules, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace documentation
- workplace driving and operational instructions.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Candidates are required to:

- identify three (3) different types of ancillary recovery equipment and their uses and
- operate two (2) types of heavy recovery ancillary equipment safely.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIC4069 Operate heavy recovery vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a heavy recovery vehicle.

It includes conducting pre-trip check of vehicle and equipment, travelling to recovery scene, assessing recovery scene, selecting an appropriate recovery method, towing disabled vehicle to delivery point and concluding recovery operations.

This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Conduct pre-trip check of vehicle and equipment**	1.1 Fuel level is checked to ensure it is appropriate for driving task
		1.2 Vehicle is inspected visually to ensure it is serviceable
		1.3 Condensation is drained from air tanks
		1.4 Recovery/towing equipment and fittings are checked to ensure they are not damaged or misplaced, and are clean and serviceable
		1.5 Chains, shackles and fittings are checked to ensure they are not damaged or misplaced, and are clean and serviceable
		1.6 Necessary licences, logbooks and mass permits are checked for currency and that they are located in vehicle
		1.7 Personal protective equipment (PPE) is checked to ensure it is available, ready for use, and meets regulatory requirements
2	**Travel to recovery scene**	2.1 Route is planned in accordance with regulatory and organisational requirements
		2.2 Recovery vehicle is driven and manoeuvred in accordance with legal requirements, taking into consideration eco-driving techniques, and courtesy and professionalism is exhibited toward other road users
		2.3 Situational awareness is maintained in following planned route
		2.4 When recovery vehicle is legally authorised to drive on hard shoulder and there are stationary queues, extreme care is taken and speed is reduced to minimise danger to vehicles and pedestrians
3	**Assess recovery scene**	3.1 Directions of enforcement officers and ambulance officers are obeyed
		3.2 Recovery vehicle is parked in a position to avoid obstruction to authorities, traffic flow and hazard warning lights or beacons
		3.3 Recovery vehicle is parked in a safe position with regard to size of recovery unit and ability to protect scene
		3.4 PPE is used in accordance with regulatory and organisational procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.5	Scene reconnaissance is promptly conducted and results are reported
	3.6	Hazards and environmental conditions are assessed and required action is taken to minimise, control or eliminate identified hazards
	3.7	Communication with others is maintained using appropriate techniques and terminology
	3.8	Health, safety and security procedures are followed in accordance with organisational policy and relevant legislation
4 Select recovery method appropriate to desired outcome	4.1	Recovery method is determined based on situation requirements and consideration of mass and dimension
	4.2	Resources required and their availability are determined
	4.3	Recovery method selected is communicated and forthrightly justified to person with responsibility
	4.4	Approval is gained to start work
	4.5	Exclusion zone is set up with permission of person with responsibility
	4.6	Communication with others is maintained to explain recovery progress
5 Tow disabled vehicle to delivery point	5.1	Disabled vehicle is hooked up and checked to ensure conformity with regulatory requirements
	5.2	Heavy towing permit conditions are applied to plan a route that ensures most efficient, safe, secure and legal transport operation
	5.3	Driving techniques appropriate to heavy towing and driver legal responsibility for damage and loss to towed vehicles, fitted equipment, and personal possessions are applied
	5.4	Recovery vehicle is driven within heavy towing special speed limits
	5.5	Situational awareness is maintained for potential problems with disabled vehicle
	5.6	Disabled vehicle is safely manoeuvred into position and unhooked in accordance with organisational and customer

© Commonwealth of Australia, 2025 Industry Skills Australia

		requirements
6	**Conclude recovery operations**	6.1 Heavy vehicle recovery documentation is completed in accordance with regulatory and workplace requirements
		6.2 Recovery vehicle and equipment are cleaned and serviced in accordance with organisational procedures and manufacturer guidelines, prior to standing down from operation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIC4069A Operate heavy recovery vehicle.

Assessment Requirements for TLIC4069 Operate heavy recovery vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required actions to minimise, control or eliminate identified hazards
- checking recovery equipment visually, and stowing appropriately
- conducting a pre-trip check of a heavy recovery vehicle
- positioning vehicle correctly at an incident
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- recognising and producing appropriate licences and permits used in the recovery industry
- recognising and producing appropriate manufacturer handbooks
- selecting and using required personal protective equipment, conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing heavy recovery vehicle equipment in terms of maintenance schedule and operating procedures
- using communications equipment in a recovery situation
- using eco-driving techniques when operating a heavy recovery vehicle.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques and eco-driving considerations
- factors that may cause traffic delays and diversions, and related action that can be taken
- fatigue management regulations
- guidelines for incidents and hazards

© Commonwealth of Australia, 2025 Industry Skills Australia

- manufacturer manuals
- mass and dimension legislation and effects on recovery operations
- procedures for using communications systems effectively
- regulatory requirements for heavy recovery
- relevant state/territory roads and traffic authority road rules, regulations, permit and licence requirements
- relevant WHS/OHS and environmental procedures and regulations relating to operating heavy recovery vehicle
- trip planning requirements
- vehicle pre-trip checks and preparation
- workplace documentation
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment is to be carried out in a heavy recovery vehicle in a workplace environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

Simulation is not suitable for final assessment of this unit

TLIC4070 Tow a disabled heavy vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to hook-up and unhook a damaged or disabled heavy vehicle.

It includes preparing and responding to a call, implementing road safety procedures to commence hook-up, hooking up disabled vehicle, unhooking disabled vehicle and completing towing operations.

This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.	
1	**Prepare and respond to call**	1.1 Equipment is checked, serviced and made operationally ready for use
		1.2 Tow task information is obtained and type of heavy vehicle and event is determined
		1.3 Personal protective equipment is selected relevant to nature of towing operation
		1.4 Further details of event are received en route
2	**Implement road safety procedures to commence hook-up**	2.1 Disabled vehicle is approached and recovery vehicle is parked in accordance with safe roadside working procedures
		2.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		2.3 Appropriate action is taken to ensure the safety of all disabled vehicle occupants
		2.4 Occupants are moved to recovery vehicle safety, away from road and recovery vehicle equipment
		2.5 Beacons are placed at immediate approach to breakdown scene
		2.6 Authorities are notified if there is likelihood of danger or undue delays
		2.7 All movements between vehicles are confined to nearside if possible
3	**Hook-up disabled vehicle**	3.1 Exact nature of problem is correctly diagnosed to decide on correct towing method
		3.2 Driver of damaged or disabled heavy vehicle is informed about recovery procedures that will be undertaken
		3.3 Recovery vehicle is safely manoeuvred into position to facilitate recovery and to minimise inconvenience to traffic flow
		3.4 Towing hook-up procedures are used to connect up disabled vehicle for recovery, ensuring safety standards are adequate for tow weight
		3.5 Disabled vehicle brake control system is interconnected so brakes can be operated from recovery vehicle

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.6	Driveline is disconnected in accordance with manufacturer guidelines and secured
	3.7	Under lift boom is retracted to shortest position suitable for towing, and lock and check turning clearance
	3.8	Warning lights and signs are attached in accordance with regulatory requirements
	3.9	Final checks are undertaken and hook-up of disabled vehicle is completed in accordance with organisational and regulatory requirements
	3.10	Disabled vehicle is safely towed using appropriate defensive driving techniques and procedures
4 Unhook disabled vehicle	4.1	Disabled vehicle is safely manoeuvred into position in accordance with job requirements
	4.2	Disabled vehicle brakes are engaged and vehicle is chocked
	4.3	Unhook procedures are used correctly to safely disconnect disabled vehicle
	4.4	Removed driveline components that were disconnected are placed near disabled vehicle
	4.5	Disabled vehicle is positioned in accordance with organisational and customer requirements
5 Conclude towing operations	5.1	Recovery vehicle and equipment are cleaned and serviced in accordance with organisational procedures and manufacturer guidelines, prior to standing down from operation
	5.2	Operational documentation is completed in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIC4070 Tow a disabled heavy vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required actions to minimise, control or eliminate identified hazards
- applying signage in accordance with legislative requirements
- checking recovery equipment visually and stowing appropriately
- conducting an equipment check of heavy recovery ancillary equipment
- conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- driving and operating recovery vehicle in accordance with legislative requirements
- implement contingency plans
- interconnecting brakes and lights from recovery vehicle to disabled vehicle in accordance with legislative requirements
- isolating fault/s to componentry engine, differential, gearbox, chassis
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating traffic hazards and taking appropriate action
- operating and adapting to differences in equipment in accordance with operating procedures
- positioning vehicle at an incident correctly
- selecting and using required personal protective equipment including:
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radio
  - protective clothing
  - high visibility clothing
  - eye wash kit
- servicing heavy recovery vehicle equipment in terms of maintenance schedule and standard operating procedures
- using communications equipment in a recovery situation

© Commonwealth of Australia, 2025 Industry Skills Australia

- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislative procedures and codes including:
  - environmental protection legislation and regulations
  - fatigue management regulations
  - roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
  - road rules
  - WHS/OHS legislation
- appropriate hook-up and unhook processes when towing disabled vehicles including:
  - road registered vehicle with a mechanical failure
  - registrable vehicle with a mechanical failure
  - vehicle as described in legislation
- distinguishing features of different types of registrable heavy transport vehicles including:
  - heavy combination
  - heavy rigid
  - light rigid
  - medium rigid
  - multi-combination
  - special circumstance vehicle
- documentation and records including:
  - relevant Australian Standards and certification requirements
  - relevant internal data entry books, including logbooks, data sheets and load sheets
  - transport emergency response plan (TERP)
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - workplace policies and procedures
- major components of modern heavy vehicles, including engine, transmission, differential and braking systems

© Commonwealth of Australia, 2025 Industry Skills Australia

- manufacturer guidelines for operating towing equipment
- manufacturer guidelines for recovering vehicles and equipment
- procedures for using communications systems effectively
- relevant persons of authority and their roles
- risk assessment procedures to identify hazards and potential hazards
- techniques for driving safely when towing, with regard to mass and dimension, and other road users
- vehicle pre-trip equipment checks and preparation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must ensure access to:

- a recovery vehicle that is consistent with current industry standards for a heavy recovery vehicle
- a vehicle that can be used as a disabled vehicle for the purposes of assessment
- relevant material, tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities.

Simulation is not suitable for final assessment of this unit.

TLIC4071 Establish and operate train braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, establish and operate a train braking system after it has been marshalled and deals with brake system faults and failures.

It includes identifying and operating train braking system, and locating and rectifying or isolating system faults during operation in accordance with organisational procedures.

This unit covers activities carried out in a rail yard or on a main line.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and establish train braking system	1.1 Brake system and type to be used are identified
	1.2 Confirmation is made that motive power unit is

© Commonwealth of Australia, 2025 Industry Skills Australia

	appropriate for braking system to be used
	1.3 Correct coupling of braking system to motive power unit is established and/or confirmed in accordance with organisational policies and requirements
	1.4 Air brake system is charged to required pressures in accordance with manufacturer requirements and tolerances
2 Operate and monitor train braking system	2.1 Relevant brake system tests are conducted in accordance with organisational policies and requirements
	2.2 Hazards are identified, risks are assessed and risk control measures are implemented
	2.3 Train brakes are applied and released under normal operational conditions in accordance with correct train handling and organisational policies and procedures
	2.4 Train brake system is monitored in accordance with organisational and/or operational requirements
3 Identify and rectify train braking system faults during operation	3.1 Train braking system faults are identified during operation
	3.2 Safe location to bring train to a stand is identified in accordance with train handling and organisational policies and procedures
	3.3 Train brake system fault is located and rectified or isolated in accordance with manufacturer and/or organisational procedures
	3.4 Relevant brake system tests are conducted in accordance with organisational policies and requirements
	3.5 Train is operated in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIC4071 Establish and operate train braking system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant rail safety practices and workplace procedures
- assessing brake system defects
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- interpreting capabilities of train braking systems
- modifying activities depending on operational contingencies, risk situations and environments
- modifying driving in accordance with brake capabilities and characteristics
- operating and adapting to differences in brakes and related equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and organisational procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- brake systems, their components and their operation
- capabilities and characteristics of train braking systems
- diagnostic techniques
- pneumatic systems and their operations
- releasing train brakes after emergency application in accordance with organisational policies and procedures
- relevant environmental protection legislation, regulations, codes of practice, policies and procedures
- relevant information and documents
- relevant state/territory legislated rail safety requirements, rail industry standards, rules, codes of practice and/or guidelines
- relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures
- tools and equipment applications
- types of brake tests and their purpose.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC4072 Operate and monitor a motive power unit on a main line

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor a motive power unit on a main line in accordance with safeworking requirements, network owner and/or organisational policies and procedures.

It includes driving, monitoring and controlling train running and responding to changing operating factors on a railway main line. It also includes stabling or handing over a motive power unit in accordance with organisational requirements.

This unit can be applied to single motive power units or multiple consist freight, heavy haul or passenger trains.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive and monitor train	1.1 Motive power unit is operated in accordance with manufacturer instructions, and organisational policies and procedures
	1.2 Motive power unit is operated safely with consideration of train consist and loading to minimise wear and fuel use, and to avoid damage
	1.3 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load
	1.4 Hazards are identified, risks are assessed and risk control measures are implemented
	1.5 Equipment and rolling stock are monitored to maintain optimum running conditions and to identify faults, defects and inefficiencies
	1.6 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit
2 Control and monitor train running	2.1 Events and circumstances affecting planned running schedule are communicated to relevant personnel in accordance with organisational policies and procedures
	2.2 Instructions received from network control officer, are interpreted and applied to ensure safe and effective control of train
	2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant safeworking systems, network requirements, and organisational policies and procedures
	2.4 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running
3 Respond to changed operating factors	3.1 Instructions regarding changed operating factors are confirmed, interpreted and followed, in accordance with safeworking systems, network owner requirements, and organisational policies and procedures
	3.2 Temporary signs and/or signals, hand signals and verbal movement commands are interpreted and followed, in accordance with safeworking systems, network owner requirements, and organisational policies and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to passengers/freight and equipment
	3.4 Emergency situations are recognised and actions are taken in accordance with safeworking systems, network owner requirements, and organisational policies and procedures
4 Stable or handover train	4.1 Train is stabled in accordance with safeworking system requirements, operational instructions and organisational procedures
	4.2 Safety devices are activated or put in position in accordance with organisational policies and procedures
	4.3 Prior to stabling/handover, documentation relevant to train and activities undertaken en route is updated and provided to relief crew or completed and forwarded to appropriate personnel, in accordance with organisational policies and procedures
	4.4 Prior to stabling/handover, relevant housekeeping activities are completed in accordance with organisational policies and procedures
	4.5 Relevant personnel are advised of condition and location of train in accordance with organisational policies and procedures
	4.6 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIC4072 Operate and monitor a motive power unit on a main line

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- identifying and assessing motive power unit defects and deficiencies and taking appropriate action to report, isolate, repair or replace identified defective equipment in accordance with organisational procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating and monitoring a motive power unit on a main line
- reading and interpreting instructions, procedures and information relevant to train operations
- selecting and using relevant equipment and materials
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- appropriate motive power unit and rolling stock systems
- emergency workplace procedures
- problems that can occur with train operations and action that should be taken
- procedures for fixed and hand signalling, and voice communication
- relevant documents
- relevant environmental protection legislation, regulations and procedures
- relevant legislated rail safety requirements, codes of practice and/or guidelines
- relevant WHS/OHS legislation, regulations and procedures
- safeworking systems and requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations on a railway main line.

A simulator assessment is not suitable for the final assessment of this unit of competency

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIC4073 Set up, operate and shut down a distributed power system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to set up, operate and shut down a distributed power system in accordance with organisational procedures, relevant codes of practice and rail industry standards.

It includes setting up a remote control system; setting up a lead control system; and operating, monitoring and shutting down a distributed power system.

Distributed power refers to the physical distribution, at intermediate points throughout the length of a train, of separate motive power units. Such motive power units may be single units or multiple consists, remotely-controlled from the lead locomotive.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare train for set up of distributed power system	1.1 Distributed motive power units are positioned as required in train consist
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Train sections are marshalled to form one train as required
2 Set up remote distributed motive power units	2.1 Distributed power is set up on all remote units
	2.2 Distributed power system is tested in accordance with manufacturer instructions and/or organisational policies and procedures ready for linking with lead control unit
	2.3 Start-up procedures for remote distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures
3 Set up lead distributed motive power units	3.1 Distributed power system is set up by conditioning/activation of required systems
	3.2 Distributed power system is tested in accordance with manufacturer instructions and/or organisational policies and procedures
	3.3 Start-up procedures for lead distributed motive power unit are followed in accordance with manufacturer instructions and/or organisational policies and procedures
	3.4 Full control of distributed motive power units is established after linking process has been completed and required function tests have been conducted
4 Operate and monitor distributed power train	4.1 Distributed power system is operated and monitored during train operation to ensure safe train handling and control in accordance with operational requirements
	4.2 Operational difficulties/faults are identified and rectified ensuring operational safety and efficiency
	4.3 Shut-down procedures for distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures
5 Shut down distributed power systems	5.1 Distributed power train is secured against movement as required prior to system shut down
	5.2 Shut-down procedures for distributed motive power units are followed in accordance with manufacturer instructions and/or

Assessment Requirements for TLIC4073 Set up, operate and shut down a distributed power system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- monitoring equipment performance
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and organisational procedures
- setting up, operating and shutting down a distributed power system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- controls, instruments and indicators of a distributed power system and their purpose, location and use
- critical distributed power system control information including compatible coupling, braking, drive equipment and ancillary systems
- manufacturer instructions for distributed power units
- procedures for identifying equipment defects in distributed power system and assessing identified defective units for appropriate action
- procedures for managing hazardous situations involving distributed power system
- relevant distributed power system documents
- relevant applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes, policies and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIC4074 Shunt, couple and uncouple rail vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to safely shunt rail vehicles in accordance with safeworking and organisational, policies and procedures.

It includes preparing to shunt rail vehicles for loading/unloading, making up or breaking up trains and placing vehicles for operational and/or maintenance purposes. It also includes coupling, uncoupling and securing rail vehicles.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

C – Vehicle Operation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to shunt	1.1 Shunting instructions are interpreted and confirmed

© Commonwealth of Australia, 2025 Industry Skills Australia

rail vehicles	1.2 Location of rail vehicles and required movements are identified
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Allocated motive power unit is confirmed as appropriate for intended activities
2 Shunt rail vehicles	2.1 Points, levers, switches and signals are operated as required, in accordance with organisational policies and procedures to control rail vehicle movement
	2.2 Uniform line of sight and radio shunting commands are used in accordance with organisational policies, procedures and requirements
	2.3 Rail vehicles are positioned in accordance with operational requirements
	2.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and to avoid damage to equipment
	2.5 Defect/fault cards are checked and appropriate action is taken in accordance with organisational policies and procedures as required
	2.6 Rail vehicle movements are controlled to prevent damage of rail vehicles and loads/contents in accordance with organisational policies and procedures
3 Couple, uncouple and secure rail vehicles	3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
	3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles in accordance with manufacturer and organisational requirements
	3.3 Handbrakes and other securing devices are applied/released and attached/removed in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

TLID1001 Shift materials safely using manual handling methods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shift loads safely using manual handling methods. Work must be carried out in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning the manual handling and movement of loads.

It includes assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assess risks associated with	1.1 Products, goods or materials to be relocated are identified and assessed to determine appropriate relocation method

© Commonwealth of Australia, 2025 Industry Skills Australia

relocating load	1.2	Storage locations are determined and potential routes to be followed are identified
	1.3	Effect of load relocation on original load base is predicted
	1.4	Points of balance are estimated
	1.5	Required clearances are compared to available space and adjustments are made to moving loads to reflect required clearance
	1.6	Effects of moving contents, which may be loose, liquid, dangerous or hazardous, are considered
	1.7	Risks in potential routes are considered
	1.8	Risks to self are identified arising from the required lifting, load carrying, set down or movement of the goods
	1.9	Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
	1.10	Team lifting processes are considered when moving loads
	1.11	Appropriate personal protective equipment is determined
	1.12	Size to weight ratio of items to be manually handled are identified
2 Plan load relocation	2.1	Relocation of the load is planned, consistent with the code of practice for manual handling and in accordance with the risk assessment
	2.2	Process for relocating load is proposed including predicting and planning for potential difficulties
	2.3	Proposed process is checked for compliance with code of practice and workplace procedures
3 Relocate load	3.1	Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and WHS/OHS requirements
	3.2	Applications appropriate for team relocation of load are identified
	3.3	Team lifting tasks are coordinated
	3.4	Planned process and route are followed

© Commonwealth of Australia, 2025 Industry Skills Australia

3.5 Relocated materials are set down without damage to goods, personnel or equipment and are checked for stability

3.6 Relocation is checked to see it meets work requirements and variance/s are reported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID1001A Shift materials safely using manual handling methods.

Assessment Requirements for TLID1001 Shift materials safely using manual handling methods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods
- applying relevant legislation and workplace procedures
- communicating effectively with others when manually lifting and handling materials and goods
- implementing contingency plans when manually lifting and handling, materials and goods
- interpreting and following operational instructions and prioritising work
- interpreting manual handling risks
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in loads and materials in accordance with standard operating procedures
- reading and interpreting instructions, procedures and information relevant to the manual lifting and handling of materials and goods
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- using correct manual handling practices
- working collaboratively with others when manually lifting and handling materials and goods
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- relevant WHS/OHS procedures and guidelines concerning the manual lifting and movement of loads
- risks when manually lifting and handling materials and goods, and related precautions to control the risk, including:
- controlled actions on a movement during lifting
- distance over which load is to be shifted
- frequency of shifting operations
- load on the spine during lifting
- postures and positions during lifting
- rotation and side movement of the spine during lifting
- time allowed for shifting the load
- type, weight and position of the load
- work layout
- site layout and obstacles
- workplace procedures and policies for manual handling.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice

TLID1002 Shift a load using manually-operated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shift loads using manually-operated mechanical equipment in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulation within the transport and logistics industry.

It includes assessing the risks associated with relocating the load, planning the relocation process, carrying out the relocation with the aid of the equipment in accordance with the plan and refurbishing the equipment and worksite.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D - Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assess risks	1.1 Products, goods or materials to be relocated are identified and

© Commonwealth of Australia, 2025 Industry Skills Australia

associated with relocating load		assessed for the appropriate relocation method
	1.2	Storage location is determined
	1.3	Routes to be followed are identified
	1.4	Points of balance are estimated
	1.5	Effect of moving contents, which may be loose, liquid, dangerous or hazardous, are considered
	1.6	Risks in potential route/s are considered
	1.7	Lifting equipment to minimise potential risks is identified
	1.8	Appropriate personal protective equipment is determined and worn
	1.9	Tools, load shifting equipment and other materials are selected and checked for serviceability and defects are reported to supervisor
2 Plan load relocation	2.1	Load is examined to determine condition, length, bulk and weight
	2.2	Load shifting equipment is selected in accordance with workplace procedures
	2.3	Safe procedures for using lifting equipment are identified, including the calculation of safe working load (SWL) and/or working load limit (WLL) for weight of goods to be moved
	2.4	Process for relocating load is proposed including predicting and planning for potential difficulties
	2.5	Proposed process is checked against relevant code of practice and workplace procedures for compliance
	2.6	Lifting equipment and accessories are checked for safe operation in accordance with manufacturer’s instructions and workplace procedures
	2.7	Personal protective equipment is selected and worn in accordance with WHS/OHS requirements
3 Relocate load	3.1	Unsafe equipment is reported to appropriate personnel in accordance with workplace procedures
	3.2	Load is broken down, where applicable, to allow handling and moving a number of single items to ensure the maximum

© Commonwealth of Australia, 2025 Industry Skills Australia

	weight of 500 kg is not exceeded
	3.3 Mechanical aids and field machines are constructed, when required, by the approved shifting method, so the load can be shifted in accordance with job instructions
	3.4 Safe working limits for lifting equipment are identified and maintained
	3.5 Planned process and route are followed using equipment within necessary range of limitations
	3.6 Relocated materials are set down without damage to goods, personnel or equipment and are checked for stability
	3.7 Relocation is checked to see it meets work requirements and variances are reported
4 Refurbish equipment and worksite	4.1 Site is cleaned and cleared of debris and unwanted material
	4.2 Field machines, tools and equipment are cleaned, inspected, serviced, maintained and stored in accordance with standard procedures
	4.3 Documentation is completed in accordance with standard procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID1002 Shift a load using manually-operated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when shifting loads using manually-operated equipment
- communicating and working effectively with others when using manually-operated equipment to shift loads
- completing documentation related to work activities
- identifying load limits for lifting
- identifying manual operating equipment and their capabilities
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting instructions, procedures, information and signs relevant to shifting loads using manually-operated equipment
- relocating a load safely
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- method for splicing and maintaining cordage and SWL
- problems that may arise when using manually-operated equipment to shift loads, and actions that should be taken to prevent or solve these problems
- relevant knots and lashings
- relevant WHS/OHS procedures and guidelines concerning the use of manually-operated equipment to shift loads
- relevant slings and securing devices
- risks when using manually-operated equipment to shift loads, and related precautions to control these risks
- site layout and obstacles
- workplace procedures and policies for shifting goods and materials using manually-operated equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLID2003 Handle dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances in accordance with relevant work health safety (WHS)/occupational health and safety (OHS) regulations concerning the safe handling of dangerous goods and hazardous substances, within the transport and logistics industry.

It includes identifying requirements for working with dangerous goods and/or hazardous substances, confirming site incident procedures and selecting handling techniques.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Identify requirements for working with dangerous goods and/or hazardous substances	1.1 Dangerous goods/hazardous substances are identified from information including class labels, manifests and other documentation
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Storage requirements for dangerous goods/hazardous substances are identified and applied
	1.4 Legislative requirements for dangerous goods/hazardous substances are used to plan work activities
	1.5 Handling procedures for different classes and characteristics of goods are observed
	1.6 Confirmation is sought from relevant personnel where dangerous goods/hazardous materials do not appear to be appropriately marked
2 Confirm site incident procedures	2.1 Incident reporting processes are identified
	2.2 Emergency equipment is located and checked in accordance with workplace procedures and statutory regulations
	2.3 Emergency procedures are identified and confirmed
3 Select handling techniques	3.1 Load handling and shifting procedures are selected in accordance with identified requirements for particular goods
	3.2 Handling equipment is checked for conformity with workplace requirements and manufacturer guidelines
	3.3 Suitable signage or placards are checked for compliance with workplace procedures, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID2003 Handle dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others
- completing relevant documentation
- determining required permits
- estimating weight and dimensions of load and any special requirements
- identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances
- identifying and selecting safety requirements for handling dangerous goods/hazardous substances
- identifying containers and goods coding, markings and emergency information panels for mode of transport storage selected
- identifying dangerous goods/hazardous substances using labels, International Maritime Dangerous Goods (IMDG) Code markings, HAZCHEM signs and other relevant identification criteria
- identifying job and site hazards, and planning work to minimise risks
- implementing contingency plans
- maintaining workplace records and documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule, predicting consequences and identifying improvements
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, regulations, information and signs
- recognising hazards and applying precautions and required action to minimise, control or eliminate recognised hazards
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- selecting appropriate equipment and work systems including PPE
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment applications, capacities, configurations, safety hazards and control mechanisms
- housekeeping standards and procedures
- permit and licence requirements
- problems that may arise when handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve these problems
- relevant aspects of current Australian Dangerous Goods (ADG) Code and relevant Australian Standards
- relevant regulations and codes concerning handling dangerous goods/hazardous substances
- risks when handling dangerous goods/hazardous substances and related precautions to control risk
- workplace procedures for handling and storing dangerous goods/hazardous substances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

TLID2004 Load and unload goods/cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to load and unload goods and cargo in accordance with relevant state/territory roads and traffic authority regulations/permit requirements.

It includes loading and unloading goods and cargo, securing and protecting a load and completing all required documentation.

Work is performed under general supervision within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Load and unload goods/cargo**	1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading workplace procedures
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Dangerous or hazardous goods are identified and handled in accordance with the current Australian Dangerous Goods (ADG) Code and other relevant regulations/permit requirements
		1.4 Load is packed/unpacked to make safe and effective use of available spaces
		1.5 Goods/cargo are loaded in accordance with relevant mass and loading regulations and workplace procedures
		1.6 Lifting aids and appliances are selected and used to aid loading procedures in accordance with workplace procedures and safety legislation
		1.7 Unloading activities are conducted in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and balance of remaining load
		1.8 Goods requiring special handling and/or documentation are identified and workplace procedures are followed
		1.9 Relocated material is restacked appropriate for transport method, safe height, weight loading, size and crushability of goods
2	**Secure and protect load**	2.1 Load distribution is checked to ensure it is even, legal and within safe working capacity
		2.2 Load is checked to ensure dangerous goods and hazardous substances are appropriately segregated in accordance with current ADG Code
		2.3 Load is secured using correct load restraint and protection equipment for different loads, carrying and storage conditions
		2.4 Load is protected in accordance with legal and workplace safety requirements
3	**Complete**	3.1 Load is inspected and checked for security to travel, in accordance with relevant regulations/permit requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

documentation		and current ADG Code, as required
	3.2	All required goods documentation is completed in accordance with workplace requirements including current ADG Code, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2004A Load and unload goods/cargo.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLID2004 Load and unload goods/cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying required action to minimise, control or eliminate identified hazards
- completing relevant documentation
- estimating load size, shape and special requirements and taking appropriate action
- identifying containers and goods coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels, and taking appropriate action
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in cargo and equipment in accordance with operating procedures
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures, information, signs and labels
- applying relevant legislation and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- chain of responsibility workplace procedures
- housekeeping workplace procedures
- national load restraint guidelines
- problems that may arise when loading and unloading goods and cargo and actions that should be taken to prevent or solve these problems
- relevant Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances
- relevant Australian Standards and regulations including state/territory mass and loading regulations
- risks when loading and unloading goods/cargo and related precautions to control risk
- safe work methods for securing load
- security awareness requirements when loading and unloading vehicles and in particular recognising, isolating and reporting suspicious cargo and goods
- site layout and obstacles
- WHS/OHS procedures and guidelines concerning the lifting and movement of loads
- workplace procedures and policies for loading and unloading goods/cargo.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, national Load Restraint Guide (LRG), codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in

TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check forklift condition	1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task
	1.2 Attachments are checked to ensure appropriate adjustment and operation
	1.3 Mirrors and seats are adjusted for safe operation by driver
	1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements
2 Drive forklift	2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions
	2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
	2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
	2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
	2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures
3 Operate forklift to handle loads	3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected
	3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures
4 Monitor site conditions	4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made
	4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

© Commonwealth of Australia, 2025 Industry Skills Australia

5 Monitor and maintain forklift performance	5.1 Performance and efficiency of vehicle operation is monitored during use
	5.2 Defective/irregular performance and malfunctions are reported to relevant personnel
	5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2010A Operate a forklift.

Assessment Requirements for TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2012 Operate specialised load shifting equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate specialised load shifting equipment in accordance with codes, permits, workplace requirements and relevant regulatory requirements, as part of work undertaken in the stevedoring, transport, warehousing and logistics industries.

It includes planning work for current working conditions; using controls and equipment operating systems to manage moving the unit and accessory operations; locating load and identifying load characteristics; moving materials and loads; monitoring and operating controls; and stopping, parking and securing equipment after operation.

Safety checks and equipment tests are performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work for current working conditions	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Traffic flow and work area conditions are constantly assessed and anticipated to ensure no injury to people, or damage to equipment, loads or facilities
	1.3 Load characteristics are taken into account to ensure appropriate attachments are used to transport load as required
	1.4 Safe working load (SWL) or working load limit (WLL) is calculated
	1.5 Occurrences in work area that affect safety and efficiency of operations are reported to appropriate personnel
2 Use controls and equipment operating systems to manage moving unit and accessory operations	2.1 Equipment is prepared and appropriate attachment is fitted
	2.2 Gear and operational levers are checked to ensure they are in neutral position prior to inserting ignition key and starting engine
	2.3 Engine is started in accordance with manufacturer guidelines to bring engine up to speed
	2.4 Instruments and gauges are monitored during start up and operations to ensure operation is within manufacturer specifications and workplace procedures
	2.5 Engine power is managed to ensure efficiency of equipment movement and economy of equipment operations
	2.6 Equipment operations are conducted in accordance with manufacturer specified torque range
	2.7 Faults or damage to equipment are immediately reported to appropriate personnel in accordance with workplace procedures
3 Locate load and identify load characteristics	3.1 Load is located and identified in accordance with workplace procedures
	3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations
	3.3 Load characteristics are taken into account to ensure appropriate loading and unloading workplace procedures are

© Commonwealth of Australia, 2025 Industry Skills Australia

			followed
		3.4	Hazardous goods are identified and relevant procedures are taken into account when planning and conducting work
		3.5	Load weight and dimensions are established within equipment capacity
4	**Move materials and loads**	4.1	Equipment is manoeuvred and positioned using smooth and controlled movements
		4.2	Manoeuvres are made within equipment limits and in accordance with manufacturer specifications
		4.3	Materials are moved ensuring no injury to personnel or damage to equipment or goods
5	**Monitor and operate controls**	5.1	Equipment controls are monitored and operated in accordance with manufacturer operating instructions
		5.2	Control systems are interpreted and acted on in accordance with statutory authority regulations, manufacturer guidelines and site workplace procedures
		5.3	Control faults are identified and reported in accordance with manufacturer instructions and workplace guidelines
6	**Stop, park and secure equipment**	6.1	Equipment is brought to a controlled halt in accordance with manufacturer guidelines
		6.2	Equipment is parked without injury to personnel or damage to equipment, loads or facilities in accordance with company procedures
		6.3	Equipment is secured on a flat, even surface, clear of doorways, aisles, access ways or blind corners in accordance with securing procedures for appropriate equipment
		6.4	Problems, faults or malfunctions are reported and/or rectified in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID2012 Operate specialised load shifting equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes during work activities
- communicating effectively with others
- completing relevant documentation
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- monitoring performance of specialised load shifting equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- planning own working, predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions, procedures, information and signs
- selecting and using relevant gear and accessories
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- conveyed material potential for toxicity, reactiveness, material grade, type and purpose including information from relevant safety data sheets (SDSs)/material safety data sheets (MSDSs) and current Australian Dangerous Goods (ADG) Code documentation
- documentation, record requirements and housekeeping standards including:
  - relevant permit and licence requirements
  - site layout and obstacles
- operational safety requirements and precautions for specialised load shifting equipment concerned
- operational work systems, equipment, management and site operating systems for operating specialised load shifting equipment
- problems that may occur and appropriate action that can be taken to resolve these problems
- purpose, characteristics, capabilities, requirements and limitations of specialised load shifting equipment
- relevant regulations for operating specialised load shifting equipment, including current ADG Code and relevant bond, quarantine or other legislative requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies for operating specialised load shifting equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2013 Move materials mechanically using automated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to move materials mechanically using automated equipment such as automatic guided vehicles, tow motors, low level order pickers, conveyor systems and mechanised pallet movers.

It includes selecting appropriate mechanical moving equipment, moving materials/goods in accordance with operational requirements, checking condition of materials/goods and completing all required documentation.

Work must be carried out in compliance with relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning moving materials mechanically using automated equipment.

Work is performed under limited or minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Select load moving equipment	1.1 Mechanised handling equipment, route to be taken and procedures to be used are selected appropriate to goods characteristics
	1.2 Dangerous goods and hazardous materials are identified and handled in accordance with codes of practice, WHS/OHS requirements and workplace procedures
2 Move goods	2.1 Hazards are identified, risks are assessed and control measures are implemented
	2.2 Goods are moved using selected materials handling equipment in accordance with WHS/OHS regulations, manufacturer instructions and workplace procedures
	2.3 Problems moving goods and materials using automated equipment are identified and reported in accordance with workplace procedures
3 Check goods and complete documentation	3.1 Relocated goods are inspected for possible damage during transit/movement and appropriate action is taken
	3.2 Appropriate documentation is completed to track moved goods in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID2013 Move materials mechanically using automated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes during work activities
- communicating effectively with others
- ensuring servicing of automated equipment in terms of maintenance schedule and standard operating procedures
- implementing contingency plans
- monitoring and prioritising work activities in terms of planned schedule
- monitoring performance of automated equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for using automated equipment to move materials mechanically
- problems that may occur and appropriate action that can be taken to resolve these problems
- purpose, characteristics, capabilities, requirements and limitations of automated materials moving equipment
- relevant regulations, workplace procedures and policies for using automated equipment to move materials mechanically
- relevant WHS/OHS and environmental protection procedures and guidelines
- risks when using automated equipment to move materials and related precautions to control the risks
- site layout and obstacles.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2016 Load and unload explosives/dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to load and unload explosives/dangerous goods in a range of operational situations, in accordance with relevant Australian and state/territory regulations including current Australian Dangerous Goods (ADG) Code, current Australian Code for the Transport of Explosives by Road and Rail (AE Code), and mass and loading regulations.

It includes identifying explosives/dangerous goods, loading and unloading explosives/dangerous goods using appropriate equipment, securing and protecting vehicle load, and checking vehicle to ensure load is secure and vehicle is marked in accordance with regulatory requirements.

Work is performed under limited or minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Prepare to load and unload vehicle**	1.1 Explosives/dangerous goods are identified and their characteristics are taken into account in accordance with relevant emergency procedures when determining appropriate handling, loading and storage procedures
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Compatibility of explosives/dangerous goods is taken into account when assembling and segregating cargo for loading
		1.4 Vehicle/loading equipment is checked to ensure it is suitable to handle/carry load
2	**Load/unload vehicle**	2.1 Vehicle is loaded/unloaded in accordance with workplace procedures and current ADG/AE Code as required
		2.2 Load is segregated according to class and subsidiary risk, and load distribution is checked in accordance with workplace procedures, relevant mass and loading regulations, and current ADG/AE Code as required
		2.3 Personal protective equipment is used during loading/unloading operations as required for type of explosives/dangerous goods concerned
		2.4 Emergency procedures are followed in an incident or accident when loading or unloading explosives and/or dangerous goods
3	**Secure and protect vehicle load**	3.1 Vehicle load is secured using correct load restraint and protection equipment for different loads, vehicles and carriage conditions concerned
		3.2 Load is protected in accordance with legal and workplace safety requirements
		3.3 Load distribution is checked to ensure it is even, legal and within safe working capacity of vehicle
		3.4 Vehicle is clearly marked/placarded to indicate carriage of explosives and/or dangerous goods, in accordance with government regulations and workplace procedures
4	**Check vehicle**	4.1 Loaded vehicle is inspected and checked to ensure it is suitable to carry explosives/dangerous goods, and load

© Commonwealth of Australia, 2025 Industry Skills Australia

weight and dimensions are within vehicle safe carrying capacity and equipment capability

4.2 Loaded vehicle is checked to ensure it can be safely parked and secured

4.3 Dangerous goods declaration and required transportation documentation for cargo is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2016A Load and unload explosives and dangerous goods.

Links

Assessment Requirements for TLID2016 Load and unload explosives/dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating and working effectively with others
- completing relevant documentation
- estimating size, shape and special requirements of loads
- identifying and interpreting containers and goods coding, markings and emergency information panels for mode of transport/storage selected
- identifying load characteristics, loading equipment and related practices
- identifying load label in accordance with identified classification and subsidiary risk information
- identifying markings/placards for vehicle in accordance with relevant regulatory requirements
- implementing contingency plans and modifying activities depending on operational contingencies, risk situations and environments
- loading and unloading explosives/dangerous goods safely, in accordance with workplace procedures and current Australian Dangerous Goods (ADG)/current Australian Code for the Transport of Explosives by Road and Rail (AE Code) requirements
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting /rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- segregating, distributing and securing load for safe transport in accordance with regulations and current ADG/AE Code requirements
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- using manual handling techniques and operating manually-operated load shifting equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of various classes of explosives/dangerous goods relevant to handling and transport
- compatibility of various types of explosives and/or dangerous goods
- housekeeping standards and procedures
- manual handling techniques and manually-operated load shifting equipment required for loading, unloading and handling explosives/dangerous goods
- methods of placarding or marking a vehicle carrying explosives and/or dangerous goods
- methods of securing a load on a vehicle
- WHS/OHS procedures and guidelines concerning lifting and moving loads
- relevant Australian explosives and/or dangerous goods codes and state/territory regulations for identifying, handling and marking explosives/dangerous goods
- relevant state/territory mass and loading regulations
- risks and hazards when loading, unloading and handling explosives/dangerous goods, and related precautions to control the risk
- workplace procedures and policies for loading and unloading explosives/dangerous goods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, ADG/AE Code,

TLID2018 Handle furniture and effects

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to handle furniture and effects, and to apply basic principles and routine procedures in a range of furniture removal contexts in accordance with relevant industry codes of practice.

It includes preparing for removal, moving furniture items in accordance with the removal plan and loading/unloading furniture onto/from the removal vehicle.

Work is performed under limited or minimum supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare for removal	1.1 Appropriate removal equipment and materials are selected and work areas are organised in consultation with client upon arrival at client's premises
	1.2 Hazardous items are identified through consultation with client in accordance with workplace procedures
	1.3 Protective coverings and drop cloths are placed in packing and traffic areas in accordance with workplace procedures
	1.4 Checks are made that client has prepared specific items for removal as required by workplace policy
	1.5 Routes for lifting and moving furniture and effects to vehicle are identified, and floors, pathways and/or stairs are checked to ensure they are free of obstacles and hazards before goods are handled
2 Move furniture items	2.1 Furniture and effects are selected, lifted, moved and loaded onto vehicle in accordance with removal documentation, work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures
	2.2 Special lifting and moving equipment is selected and used in accordance with WHS/OHS regulations and workplace procedures
3 Load vehicle	3.1 Vehicle/container is prepared for loading process, and furniture and effects are stowed and secured in accordance with removal documentation, client requirements and workplace procedures
	3.2 Furniture and effects are unloaded from vehicle/container and stored in accordance with removal documentation and workplace policy
	3.3 Required removal documentation is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID2018 Handle furniture and effects

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- identifying and correctly using relevant equipment
- identifying dangerous goods and other items that are prohibited carriage during a removal and taking appropriate action in accordance with regulatory requirements and operating procedures
- implementing contingency plans and modifying activities
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in furniture, equipment and operating environment in accordance with operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to furniture or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- housekeeping standards and procedures
- insurance rights and responsibilities
- methods of securing a load on a removal vehicle
- risks for handling furniture and effects during a removal and related precautions to control risks
- specialised lifting equipment and procedures for its use
- WHS/OHS procedures and guidelines for lifting and moving loads
- workplace procedures and policies for handling furniture and effects.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2019 Pack and unpack cartons during a removal

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to pack and unpack cartons during a removal, in compliance with relevant industry codes of practice in a range of furniture removal contexts.

It includes preparing for packing, packing and unpacking cartons, and completing packing/unpacking processes

Work is performed under limited or minimum supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for packing	1.1 Convenient, suitable and unrestricted work area for packing process is selected and prepared in consultation

	with client
	1.2 Items for removal are identified and order of packing is determined in accordance with removal documentation
	1.3 Cartons, protective and other materials are selected and located in an accessible area
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Items ineligible for removal are identified in accordance with industry standards and company policy, and appropriate action is taken in consultation with client
2 Pack and unpack cartons	2.1 Items for removal are wrapped and packed in accordance with industry standards and workplace procedures
	2.2 Fragile or valuable items are specially wrapped and positioned in accordance with workplace procedures and industry standards
	2.3 Cartons are sealed and labelled in accordance with removal documentation and workplace procedures
	2.4 Cartons are unpacked and goods are unwrapped and stored in accordance with removal documentation and workplace procedures
	2.5 Hazardous items are identified and actioned in accordance with removal documentation and workplace procedures
3 Complete packing/unpacking process	3.1 Used cartons are folded and removed, and rubbish is disposed of in accordance with workplace procedures
	3.2 Required removal documentation is completed in accordance with workplace requirements

Foundation Skills

TLID2021 Use specialised bulk transfer equipment (dry)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use specialised bulk transfer equipment for dry materials in accordance with relevant state/territory regulations.

It includes planning work, transferring material, monitoring and operating controls, and completing all operations, as required.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work	1.1 Job hazards are identified and required action is taken to

© Commonwealth of Australia, 2025 Industry Skills Australia

		minimise, control or eliminate identified hazards
	1.2	Dangerous or hazardous (including regulated waste) or other materials requiring specialised handling are identified, and relevant workplace procedures are taken into account when planning work
	1.3	Traffic flow and work area conditions are assessed and anticipated to ensure safe operation and no injury to people or damage to equipment, loads, facilities or environment
	1.4	Load characteristics are taken into account when selecting method, equipment and appropriate attachments to transfer load, as required
	1.5	Potential occurrences in work area that may affect the safety and efficiency of operations are reported to appropriate personnel
	1.6	Bulk transfer of dry materials is planned, taking into account load requirements, transfer method, storage facility and transport mode, load weight, dimensions, and equipment capacity
	1.7	Required personal safety equipment, signage, barriers and special precautions are identified in plan and utilised
	1.8	Procedures to deal with spills, leakages and ruptures are identified
	1.9	Customer requests for variation to agreed operations are actioned within scope of authority or referred to appropriate personnel
2 Transfer material	2.1	Equipment is prepared and appropriate attachment/s is fitted
	2.2	Equipment controls are checked for correct operational status before commencing transfer
	2.3	Adjustments are made to process, to accommodate special requirements such as temperature control, combustion
	2.4	Instruments and gauges are monitored during operations to ensure operation is consistent with workplace procedures, manufacturer specifications, enterprise schedule and safety requirements
	2.5	Speed of operation is managed for safety and efficiency of materials movement and equipment operations

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.6	Faults or damage to equipment are immediately reported to appropriate personnel
3 Monitor and operate controls	3.1	Equipment controls are monitored and operated in accordance with manufacturer operating instructions and workplace procedures
	3.2	Control systems are monitored to ensure operation is consistent with workplace procedures, manufacturer specifications, workplace schedule, safety requirements and statutory regulations
	3.3	Materials are moved ensuring no injury to personnel or damage to equipment or goods
	3.4	Faults are identified and reported in accordance with workplace procedures
4 Complete operations	4.1	Equipment is shut down in accordance with manufacturer guidelines, without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures
	4.2	Clean up methods for transfer equipment are completed in accordance with workplace procedures
	4.3	Equipment is cleaned and secured in accordance with workplace procedures
	4.4	Documentation is completed and filed in accordance workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID2021 Use specialised bulk transfer equipment (dry)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- estimating mass, volume and special requirements of dry bulk products
- identifying and correctly using equipment required to transfer dry bulk product
- identifying goods coding, Australian Dangerous Goods (ADG) Code markings and emergency information panels
- implementing contingency plans
- monitoring equipment performance
- monitoring and prioritising work activities in terms of planned schedule and modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) workplace procedures
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to product or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- current ADG Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting dry bulk product
- housekeeping standards and procedures
- methods of securing a vehicle following transfer of dry bulk product
- relevant regulatory, permit and licence requirements
- relevant WHS/OHS procedures and guidelines for using specialised bulk transfer equipment
- risks when transferring dry bulk product and related precautions to control the risk
- workplace procedures and policies for efficient use of specialised equipment to transfer dry bulk loads.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2022 Conduct weighbridge operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct weighbridge operations in accordance with regulatory requirements and workplace procedures, within the transport and logistics industry.

It includes setting up for weighbridge operations, weighing loaded and unloaded vehicles, finalising weighbridge operations, and completing required records and documentation.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Set up for weighbridge operations**	1.1 Weighbridge systems, including equipment, computer and recording arrangements, are checked for operational status
		1.2 Tests to confirm accuracy of weighbridge operation and related functions are conducted in accordance with workplace procedures, manufacturer instructions and relevant legislation
		1.3 Accurate reporting of results of inspection and testing is kept in accordance with statutory requirements, workplace procedures and industry guidelines
		1.4 Hazards are identified, risks are assessed and control measures are implemented
		1.5 Faults/discrepancies in weighbridge operation are identified and appropriate action is undertaken in accordance with workplace procedures
2	**Weigh loaded vehicles**	2.1 Vehicles likely to exceed weighbridge weight limit are turned away in accordance with workplace procedures
		2.2 Vehicles are directed onto platform to obtain accurate weight
		2.3 Weight of loaded stationary vehicle is registered against vehicle and load identification
		2.4 Vehicle and load information is entered into workplace recording system and driver is issued with receipt and/or statement
		2.5 Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures
3	**Weigh unloaded vehicles**	3.1 Vehicles are directed onto platform to obtain accurate weight
		3.2 Weight of unloaded stationary vehicle is registered against vehicle
		3.3 Proposed load weight is assessed for conformance to statutory requirements
		3.4 Loading operations are commenced in accordance with legal loading weight, customer requirements and workplace procedures, and vehicle is re-weighed to establish final load weight, as required
		3.5 Vehicle and load information are entered into workplace recording system and invoice is issued to driver, as required

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.6	Driver signatures on weighbridge documents, invoices or receipts are obtained in accordance with statutory and workplace requirements
	3.7	Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures
4 Complete weighbridge operations	4.1	Weighbridge systems, including equipment, computer and recording arrangements are secured or made ready for next shift
	4.2	Record of operations is maintained and filed in accordance with workplace procedures and statutory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID2022 Conduct weighbridge operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- identifying, selecting, and efficiently and effectively using weighbridge equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- monitoring performance of weighbridge equipment
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- reading, interpreting and following relevant instructions, procedures and information
- reporting and/or rectifying identified problems, errors or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- setting up and maintaining weighbridge equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- calculation method and approaches for metric and imperial systems
- classification procedures
- correct weighing procedures including statutory and workplace requirements
- emergency response procedures
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- problems that may occur when conducting weighbridge operations and appropriate action that can be taken to resolve these problems
- records and documentation requirements for weighbridge operations
- relevant regulations for conducting weighbridge operations including current Australian Dangerous Goods (ADG) Code
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout
- weights and measures regulations
- workplace procedures for conducting weighbridge operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2029 Prepare articles for delivery

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare mail articles for delivery in accordance with relevant regulations for transporting articles for courier delivery.

It includes checking, organising and storing articles for delivery, and maintaining all required records.

Work is performed under indirect supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check and organise	1.1 Hazards are identified, risks are assessed and control

TLID2045 Operate specialised light load shifting equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate specialised light load shifting equipment, in accordance with relevant state/territory codes, licence and/or permit and workplace requirements and regulations in the stevedoring, transport, warehousing and/or logistics industries.

It includes planning work for current working conditions; using controls and equipment operating systems to manage moving a unit and accessory operations; locating load and identifying load characteristics; moving materials and loads; monitoring and operating controls; and stopping, parking and securing equipment after operation.

Safety checks and equipment tests are performed under limited supervision.

Where the specialised light load shifting equipment operated is considered to be high risk work, the operator must hold a high risk work licence.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work for current working conditions	1.1 Traffic flow and work area conditions are constantly assessed and anticipated to ensure no injury to people, or damage to equipment, loads or facilities
	1.2 Load characteristics are taken into account to ensure appropriate attachments are used to transport load as required
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Occurrences in work area that affect safety and efficiency of operations are reported to appropriate personnel
2 Use controls and equipment operating systems to manage moving unit and accessory operations	2.1 Light load shifting equipment is prepared and appropriate attachment is fitted
	2.2 Gear and operational levers are checked to ensure they are in neutral position prior to inserting ignition key and starting engine
	2.3 Engine is started in accordance with manufacturer guidelines to bring engine up to speed
	2.4 Instruments and gauges are monitored during start up and operations to ensure operation is within manufacturer specifications and enterprise safety requirements
	2.5 Engine power is managed to ensure efficiency of equipment movement and economy of equipment operations
	2.6 Equipment operations are conducted in accordance with manufacturer specified torque range
	2.7 Faults or damage to equipment are immediately reported to appropriate personnel
3 Locate load and identify load characteristics	3.1 Load is located and identified in accordance with instructions
	3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations
	3.3 Load characteristics are taken into account to ensure appropriate loading and unloading procedures are followed

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4	Hazardous goods are identified and relevant procedures are taken into account when planning and conducting work
	3.5	Load weight and dimensions are established within equipment capacity
4 Move materials and loads	4.1	Light load shifting equipment is manoeuvred and positioned using smooth and controlled movements
	4.2	Manoeuvres are made within equipment limits and in accordance with manufacturer specifications
	4.3	Materials are moved ensuring no injury to personnel or damage to equipment or goods
5 Monitor and operate controls	5.1	Light load shifting equipment controls are monitored and operated in accordance with manufacturer operating instructions
	5.2	Control systems are interpreted and acted on in accordance with statutory authority regulations, manufacturer guidelines and site operating procedures
	5.3	Control faults are identified and reported in accordance with manufacturer instructions and workplace guidelines
6 Stop, park and secure light load shifting equipment	6.1	Light load shifting equipment is brought to a controlled halt in accordance with manufacturer guidelines
	6.2	Light load shifting equipment is parked without injury to personnel or damage to equipment, loads or facilities in accordance with company procedures
	6.3	Light load shifting equipment is secured on a flat, even surface, clear of doorways, aisles, access ways or blind corners in accordance with securing procedures for appropriate equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2045A Operate specialised light load shifting equipment.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLID2045 Operate specialised light load shifting equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule, predicting consequences and identifying improvements
- monitoring performance of equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant gear and accessories when operating specialised light load shifting equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- conveyed material potential for toxicity, reactiveness, material grade, type and purpose including information from relevant safety data sheets (SDSs)/material safety data sheets (MSDSs) and current Australian Dangerous Goods (ADG) Code documentation
- documentation, record requirements and housekeeping procedures including:
  - relevant permit and licence requirements
  - site layout and obstacles
- operational safety requirements and precautions for specialised light load shifting equipment concerned
- operational work systems, equipment, management and site operating systems for operating specialised light load shifting equipment
- problems that may occur and appropriate action that can be taken to resolve these problems
- purpose, characteristics, capabilities, requirements and limitations of specialised light load shifting equipment
- relevant regulations for operating specialised light load shifting equipment, including current ADG Code and relevant bond, quarantine or other legislative requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies for operating specialised light load shifting equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

TLID2047 Prepare cargo for transfer with slings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare cargo for the transfer with slings in accordance with workplace requirements and relevant regulatory requirements, within the transport and logistics industry.

It includes preparing for cargo transfer, calculating safe working load (SWL) or working load limit (WLL) of slings and loads, slinging and unslinging cargo, and strapping and unstrapping goods.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated high risk work licence requirements and to comply with relevant codes of practice and/or guidelines.

Safety checks and equipment tests are performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare cargo transfer	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Working area is prepared and maintained in accordance with national standards, safety codes and site operating procedures
	1.3 Unsafe work practices and/or faulty equipment is reported in accordance with enterprise procedures
	1.4 Correct protective equipment is identified and worn/used
2 Calculate safe working load or working load limit of slings and loads	2.1 SWL or WLL is calculated using standardised formulae for different types of lifting cables
	2.2 Lifting equipment is checked to determine SWL
	2.3 Slinging gear is checked for conformity with safety equipment
3 Sling and unsling cargo	3.1 Cargo is slung/unslung in accordance with national standards, safety codes and site operating procedures
	3.2 Correct securing devices are identified and used
	3.3 Load is steadied by tag lines as required
	3.4 Damaged cargo is identified and reported in accordance with enterprise procedures
	3.5 Slinging attachments are released from load ensuring no injury to personnel or damage to machinery or cargo
4 Strap and unstrap goods	4.1 Cargo is strapped and unstrapped in accordance with national standards, safety codes and site operating procedures
	4.2 Mechanical strapping equipment is used in accordance with manufacturer instructions
	4.3 Damaged cargo is identified and reported in accordance with enterprise reporting procedures
	4.4 Strapping arrangements are secured/released to/from load ensuring no injury to personnel or damage to machinery or

TLID3011 Conduct specialised forklift operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift with specialised attachments or all-terrain equipment, in accordance with relevant state/territory high risk work licence requirements and regulations, in a variety of operational contexts.

It includes checking attachments and worksite for suitability, selecting type of forklift and accessories for required workplace task, shifting load and completing work in accordance with operational requirements.

Specialised operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of equipment operation principles and procedures to maintain the safety and specialised operation of a forklift

A person who operates a forklift must hold a high risk work licence.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Check attachments and worksite for suitability**	1.1 Suitable work area is selected for operations
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Work area is checked for overhead obstructions and proximity to service delivery lines
		1.4 Barriers or warning signs are erected in areas subject to passing traffic
		1.5 Attachments and platforms are securely fixed to carriage or tines
		1.6 Personnel support platforms are inspected to ensure accordance with relevant Australian Standard/s
2	**Select type of forklift and accessories for required workplace task**	2.1 Special equipment, accessories or attachments are identified to match load characteristics and work requirements
		2.2 Appropriate specialised equipment is selected
		2.3 Existing attachments are removed and stored in accordance with workplace procedures
		2.4 Specialised equipment is fitted in accordance with manufacturer instructions and workplace procedures
		2.5 Designated staff are notified about specialist operations
3	**Shift load and complete work**	3.1 Equipment is operated within safe working limits and to maximise efficiency of operations
		3.2 Load is lifted, carried and set down in accordance with workplace and manufacturer procedures, and regulatory requirements
		3.3 Documentation is completed damage or faults to goods or equipment are reported to appropriate personnel
		3.4 Specialist equipment and forklift are returned to appropriate storage/parking area

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID3011 Conduct specialised forklift operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids and carrying out lubrication processes during work activities
- checking forklift compliance plate for safe weight limits
- communicating effectively with others
- completing relevant documentation
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- handling procedures for forklifts involved in specialised operations
- high risk work licence workplace requirements
- operating hazards, and related defensive driving and hazard control techniques
- pre-operational checks carried out on forklift and accessories, and related action
- procedures to be followed in an operational emergency
- relevant duty of care requirements for specialised operation of a forklift
- relevant WHS/OHS and environmental procedures and regulations
- safe weight limits
- site layout and obstacles
- types of forklift accessories and ancillary equipment, their purposes and procedures for their use
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3014 Load and unload vehicles carrying special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to load and unload vehicles carrying special loads, in accordance with relevant state/territory roads and traffic authority licence and permit requirements and regulations, as well as specific code, regulatory and permit requirements.

It includes loading and unloading special loads onto and from a vehicle, securing and protecting vehicle and load, and completing all required documentation.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Load and unload vehicle**	1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading procedures
		1.2 Hazardous cargo is identified and handled in accordance with required workplace procedures for hazardous and dangerous cargo
		1.3 Vehicle is loaded in accordance with vehicle loading regulations and workplace safety requirements
		1.4 Lifting aids and appliances are selected and used to aid loading procedures in accordance with workplace procedures and safety legislation
		1.5 Vehicle is unloaded or partially unloaded in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and balance of remaining load
		1.6 Ancillary equipment is operated in accordance with company procedures and manufacturer instructions during loading and unloading operations
2	**Secure and protect vehicle and load**	2.1 Vehicle load is secured using correct load restraint and protection equipment for different loads, vehicles and carriage conditions
		2.2 Load is protected in accordance with legal and workplace safety requirements
		2.3 Load distribution is checked to ensure it is even, legal and within vehicle safe working capacity
		2.4 Loaded vehicle is inspected and checked for security to travel
3	**Complete documentation**	3.1 Documentation is completed and proofread in accordance with workplace procedures
		3.2 All required cargo transportation documentation is completed in accordance with workplace requirements

Assessment Requirements for TLID3014 Load and unload vehicles carrying special loads

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- applying techniques for load security
- communicating effectively with others
- completing relevant documentation
- estimating size, shape and special requirements of loads
- identifying and correctly using equipment required to load and unload various types of special loads
- identifying and interpreting containers and goods coding, International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- interpreting and following operational instructions and prioritising work
- loading and unloading a load safely
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment and conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- using manual handling techniques safely
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of various types of special loads
- containers and goods coding, IMDG Code markings and emergency information panels, including their meaning and implications for loading and unloading processes
- housekeeping standards and procedures
- methods for securing various types of special loads
- national Load Restraint Guide (LRG)
- relevant state/territory mass and loading regulations for various types of special loads, including current Australian Dangerous Goods (ADG) Code and Australian Code for the Transport of Explosives by Road and Rail
- risks and hazards when loading and unloading various types of special loads, and related precautions to control the risk
- site layout and obstacles
- WHS/OHS procedures and guidelines for lifting and moving loads
- workplace procedures and policies for loading and unloading vehicles designed to carry special loads.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

TLID3015 Identify and label explosives/dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify and label explosives/dangerous goods, in accordance with relevant Australian state/territory regulators and authorities concerned with the carriage of explosives and dangerous goods. This includes the current Australian Dangerous Goods (ADG) Code, Australian Code for the Transport of Explosives by Road and Rail (AE Code) and workplace procedures.

It includes assessing, handling and labelling explosives and/or dangerous goods, and complying with all required documentation.

Work is performed under limited or minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

essential outcomes.	demonstrate achievement of the element.
1 Assess explosives/dangerous goods	1.1 Load is checked for explosives/dangerous goods in accordance with relevant codes and government regulations
	1.2 Types of explosives/dangerous goods are identified from labels, current ADG/AE Code declarations and placarding, in accordance with workplace procedures and all required action is taken to ensure compliance with relevant government regulations and current ADG/AE Code, as required
	1.3 Load hazards are identified from labels and safety data sheets (SDSs)/material safety data sheets (MSDSs) and required action is taken to minimise, control or eliminate identified hazards
2 Handle explosives/dangerous goods	2.1 Identified explosives/dangerous goods are handled and loaded/unloaded in accordance with regulatory requirements, codes, national Load Restraint Guide (LRG) and workplace procedures
	2.2 Appropriate personal protective equipment is used when handling explosives/dangerous goods in accordance with class, subsidiary risk and SDS/MSDS information
	2.3 Identified hazards posed by explosives/dangerous goods concerned are taken into account when handling different types of load
	2.4 When loading/storing explosives/dangerous goods, segregation procedures are followed in accordance with class and subsidiary risk information
3 Label explosives/dangerous goods	3.1 All packages/containers are labelled with class and subsidiary risk information, in accordance with current ADG/AE Code and workplace procedures as required
	3.2 Dangerous goods declaration is included with manifest and other shipping documents
	3.3 Vehicles carrying explosives/dangerous goods are placarded in accordance with current ADG/AE Code, as required
4 Complete documentation	4.1 Required transport documents are confirmed
	4.2 All required transport documents are completed in accordance with current ADG/AE Code and workplace procedures as required

Assessment Requirements for TLID3015 Identify and label explosives/dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- completing relevant documentation
- correctly marking/labelling explosives and dangerous goods
- handling explosives and/or dangerous goods in accordance with regulatory requirements, codes, national Load Restraint Guide (LRG) and employer policy as required
- identifying and using required personal protective equipment
- identifying explosives and dangerous goods from labels, in accordance with regulatory requirements and practices
- identifying hazards from labels of explosives and dangerous goods
- interpreting and following operational instructions and prioritising work
- interpreting safety data sheets (SDSs)/material safety data sheets (MSDSs), containers and goods coding, markings and other information describing explosives and dangerous goods including emergency information panels for mode of transport/storage selected
- locating, interpreting and applying relevant codes and regulations
- maintaining workplace records for explosives and dangerous goods
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment, and conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of explosives and dangerous goods relevant to handling and transport
- compatibility of various types of explosives and dangerous goods
- housekeeping standards and procedures
- relevant Australian and state/territory regulations and codes for identifying and labelling explosives and dangerous goods including the current Australian Dangerous Goods (ADG) Code and Australian Code for the Transport of Explosives by Road and Rail (AE Code)
- risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risk
- site layout and obstacles
- WHS/OHS procedures and guidelines concerning lifting and moving loads
- workplace procedures and policies for identifying and labelling explosives and dangerous goods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, current ADG/AE Code, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID3020 Care for livestock in transit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare and care for livestock in transit, in accordance with relevant regulations and industry codes of practice for caring for livestock in transit.

It includes making preparations to transport livestock, caring for and controlling livestock in transit, and using appropriate animal husbandry techniques, as required.

Work is performed under limited or minimum supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Prepare to transport livestock**	1.1	Condition, quality and quantity of livestock to be transported is checked prior to transport operation, in accordance with client requirements and workplace procedures
		1.2	Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3	Poor quality livestock is identified and reported to specified personnel in accordance with workplace procedures
		1.4	Feed provisions and other requirements for livestock, prior to and during transit, are identified and organised
		1.5	Portable stockyards are assembled as required
2	**Care for and control livestock in transit**	2.1	Condition of livestock is regularly monitored during loading, transit and unloading, and appropriate action is taken in accordance with relevant government regulations, workplace procedures, and humane and permit requirements
		2.2	Working dogs and appropriate handling equipment are used to aid handling of livestock during loading and unloading operations, in accordance with regulations and workplace procedures
		2.3	Required action is taken for care and wellbeing of animals in an accident during transit
		2.4	Distressed stock is handled in an appropriate manner in accordance with government regulations and workplace procedures
3	**Use animal husbandry techniques**	3.1	Symptoms of animal diseases and parasites are identified and appropriate action is taken to control them in accordance with relevant government regulations, workplace procedures, and humane and permit requirements
		3.2	Documentation is completed and proofread in accordance with workplace procedures
		3.3	Prescribed medication is administered to livestock in accordance with veterinary directions and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3020A Care for livestock in transit.

Assessment Requirements for TLID3020 Care for livestock in transit

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using required equipment
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures and information
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to animals or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Australian animal welfare standards and guidelines for transporting livestock by land
- housekeeping standards and procedures when caring for livestock during transit
- insurance rights and responsibilities
- methods of securing livestock during transit
- relevant regulations for caring for livestock in transit
- risks when caring for livestock in transit and related precautions to control the risk
- specialised livestock handling equipment and procedures for its use
- work health and safety (WHS)/ occupational health and safety (OHS) procedures and guidelines for lifting and moving loads
- workplace procedures and policies for caring for livestock in transit.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLID3023 Use specialised liquid bulk gas transfer equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use specialised bulk gas transfer equipment to load and unload liquid bulk gas in accordance with the current Australian Dangerous Goods (ADG) Code and relevant state/territory regulations.

It includes planning work, transferring gas in accordance with regulatory and operational requirements, monitoring and operating controls, and completing all operations, as required.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan work	1.1	Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2	Gas transfer method is identified for loading and unloading as liquefied or gaseous state
	1.3	Precautions are undertaken to eliminate all ignition sources
	1.4	Specialised handling requirements for particular gas are identified and relevant workplace procedures are taken into account when planning work
	1.5	Traffic flow, vehicle positioning and work area conditions are assessed to ensure safe operation and no injury to people, or damage to equipment, loads or facilities
	1.6	Characteristics of gas, transfer and holding method are taken into account when evaluating procedural requirements, special precautions for method, equipment and, as required, appropriate attachments to transfer load
	1.7	Potential occurrences in work area that may affect safety and efficiency of operations are reported to appropriate personnel
	1.8	Gas transfer is planned, taking into account requirements of load, transfer method, storage facility, transport mode, load weight, volume, viscosity and equipment capacity
	1.9	Load is checked prior to and at completion of transfer to ensure ullage and/or maximum permitted capacity complies with current ADG Code
	1.10	Adjustments are made to process to accommodate special requirements such as temperature control and combustion
	1.11	Required personal protective equipment, signage, barriers and special precautions are identified in plan and utilised
	1.12	Workplace procedures to deal with leakages and ruptures are identified
2 Transfer material	2.1	Equipment is prepared and appropriate attachment is fitted
	2.2	Equipment controls are checked for correct operational status before commencing transfer
	2.3	Instruments and gauges are monitored during operations to ensure operation is within manufacturer specifications, enterprise schedule and safety requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.4	Speed of operation is managed for safety and efficiency of materials movement and equipment operations
	2.5	Faults or damage to equipment are immediately reported to appropriate personnel
3 Monitor and operate controls	3.1	Equipment controls are monitored and operated in accordance with manufacturer operating instructions
	3.2	Control systems are monitored in accordance with statutory authority regulations, manufacturer guidelines and site workplace procedures
	3.3	Gas is transferred ensuring no injury to personnel or damage to equipment or goods
	3.4	Faults are identified and reported in accordance with workplace procedures
4 Complete operations	4.1	Equipment is shut down in accordance with manufacturer guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures
	4.2	Clean up methods for transfer equipment are completed in accordance with workplace procedures
	4.3	Equipment is secured in accordance with workplace procedures for appropriate equipment
	4.4	Workplace documentation is completed and filed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID3023 Use specialised liquid bulk gas transfer equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of transfer equipment
- operating and adapting to differences in transfer equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, workplace procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing transfer equipment in terms of maintenance schedule and standard workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to product or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- current Australian Dangerous Goods (ADG) Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting liquid bulk gas
- hazard management consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- housekeeping standards and procedures
- methods of securing a vehicle following transferring liquid bulk gas
- relevant permit and licence requirements
- risks when transferring liquid bulk gas and related precautions to control the risk
- work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines for using specialised bulk transfer equipment
- workplace procedures and policies for efficiently using specialised equipment to transfer liquid bulk gas.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment Requirements for TLID3024 Use specialised liquid bulk transfer equipment (gravity/pressurised)

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking equipment compliance plate for equipment capability
- communicating effectively with others
- completing relevant documentation
- estimating mass, volume and special requirements of liquid bulk product
- identifying and correctly using equipment required to transfer liquid bulk product
- identifying goods coding, International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- interpreting and following operational instructions and prioritising work
- monitoring transfer equipment performance
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in transfer equipment in accordance with manufacturer and operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing transfer equipment in terms of maintenance schedule and operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian Dangerous Goods (ADG) Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting liquid bulk product
- hazards involved in transferring liquid bulk product using specialised equipment and ways and means of controlling the risks involved
- hazard management consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- housekeeping standards and procedures
- manufacturer operators instructions/manuals
- methods of securing a vehicle following transfer of liquid bulk product
- problems, faults or malfunctions that may occur when transferring liquid bulk product using specialised equipment and action that should be taken to prevent or resolve these problems
- relevant permit, and health and safety requirements
- risks when transferring liquid bulk product and related precautions to control the risk
- WHS/OHS procedures and guidelines for using specialised liquid bulk transfer equipment
- workplace procedures and policies for efficiently using specialised gravity and/or pressurised equipment to transfer liquid bulk product.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3027 Prepare for transport of dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare for the transport of dangerous goods as part of work activities undertaken within the transport and logistics industry. This is undertaken in accordance with relevant state/territory regulations for transporting dangerous goods, including the current Australian Dangerous Goods (ADG) Code.

It includes checking dangerous goods load, assessing vehicle suitability to transport intended load, checking emergency procedures and equipment, evaluating documented route plans, and completing required assessment process.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Check dangerous goods load	1.1 Load is compared against transport documentation and discrepancies are noted
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Load is checked to ensure dangerous goods labels are clearly visible and legible, and packaged goods are correctly labelled
	1.4 Load is checked to ensure containers are not damaged
	1.5 Vehicle load is checked for compatibility or, where not compatible, is checked for appropriate segregation in accordance with regulatory requirements
	1.6 Load is assessed to ensure it is stowed and secured in or on vehicles in accordance with the current ADG Code and national Load Restraint Guide(LRG)
	1.7 Shipping documentation and other relevant documents are located in cabin in accordance with regulatory requirements
2 Assess vehicle suitability to transport intended load	2.1 Vehicle is assessed for suitability and appropriateness to carry designated dangerous goods including classification, mass and configuration
	2.2 Licence and insurance requirements are checked for conformity with current ADG Code and/or other applicable regulatory requirements as required
	2.3 Load restraint system/s is checked for serviceability and appropriateness to secure intended load
	2.4 Vehicle is checked to ensure it is correctly and clearly marked/placarded for load being carried
3 Check emergency procedures and equipment	3.1 Emergency information for each type of transported dangerous good is noted
	3.2 Regulatory and workplace procedures for an incident are noted including notification of relevant personnel and authorities and, as required, use of equipment for containment, clean up or recovery
	3.3 Personal protective equipment and safety equipment are checked for operational capability and appropriateness to proposed load

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4	Emergency information is located in cabin in accordance with current ADG Code requirements
4 Evaluate documented route plan	4.1	Selected route plan and potential difficulties including regulatory restrictions, traffic flow and conditions, obstacles, road standards and construction activities are assessed
	4.2	Regulatory and workplace procedures for driving, parking, loading and unloading are identified including actions for disengaging and/or securing vehicle
5 Complete documentation	5.1	Load is inspected and checked for security to travel in accordance with relevant regulations/permit requirements and current ADG Code
	5.2	All required documentation for dangerous goods is completed in accordance with regulatory and workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLID3027 Prepare for transport of dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying hierarchy of hazard control
- assessing operational suitability of equipment and vehicles for dangerous goods transportation
- communicating effectively with others
- completing relevant documentation
- determining required permits
- estimating mass, volume and special requirements of load
- estimating weight and dimensions of load and special requirements
- identifying and correctly using equipment required to load dangerous goods
- identifying goods coding, markings and emergency information panels for mode of transport/storage selected
- identifying hazards and applying precautions and required action to minimise, control or eliminate identified hazards
- identifying hazards and planning work to minimise risks
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- maintaining workplace records and documentation including completion of dangerous goods declaration
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work

© Commonwealth of Australia, 2025 Industry Skills Australia

health safety (WHS)/occupational health and safety (OHS) standards
- selecting appropriate equipment and work systems to enable safe, efficient work
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- current Australian Dangerous Goods (ADG) Code
- housekeeping standards and procedures
- methods of securing a vehicle following loading of dangerous goods
- problems that may occur when preparing to transport dangerous goods and action that should be taken to prevent or solve these problems
- relevant permit and licence requirements
- relevant state/territory mass and loading regulations for vehicles transporting dangerous goods
- risks when transporting dangerous goods and related precautions to control the risk
- WHS/OHS procedures and guidelines for transporting dangerous goods
- workplace procedures and policies for preparing dangerous goods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3031 Rig load

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare and rig all types of loads in preparation for lifting by a crane in accordance with relevant state/territory authority high risk work licence requirements and regulations, in a variety of operational contexts.

It includes preparing for load transfer, assessing lifting requirements, securing and detaching load.

Work is performed with general supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

A person who rigs a load must hold a high risk work licence.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Prepare for load transfer	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Working area is prepared and maintained in accordance with industry standards, codes of practice and workplace operating procedures
	1.3 Unsafe work practices and/or faulty equipment are reported in accordance with workplace procedures
	1.4 Correct personal protective equipment is identified and worn
2 Assess lifting requirements	2.1 Work operations plan is examined and lift requirements are identified including job method and sequence, control measures and safety procedures
	2.2 Coordination requirements with other site personnel are confirmed
	2.3 Load mass, dimensions and centre of gravity are determined
	2.4 Appropriate lifting gear/equipment/packing, including slings, ropes, shackles, eye bolts, spreaders is selected from safety charts and safe working load (SWL)/working load limit (WLL) tags, and is assembled and checked for serviceability
	2.5 Damaged or worn items are tagged, rejected and reported to appropriate personnel for follow-up action
3 Secure load	3.1 Lifting/anchorage points are correctly identified
	3.2 Lifting gear/equipment/packing is connected to load, and load is secured to lifting device in accordance with workplace and manufacturer specifications, guidelines and regulatory requirements
	3.3 Load is lifted, suspended off lifting plane and checked to ensure it is appropriately rigged and secured

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4	Corrective action is undertaken when preliminary lift assessment reveals unacceptable operational situation
	3.5	Tag lines are fixed to load in accordance with work operation plan and/or, in consultation with other personnel, as required due to wind conditions and site hazards/obstacles
4 Detach load	4.1	Slinging attachments are released from load without injury to personnel or damage to workplace operating procedures
	4.2	Damage to load/site is identified and reported in accordance with workplace procedures
	4.3	Lifting gear/equipment/packing is maintained and stored in accordance with workplace and manufacturer specifications, guidelines and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3031A Rig load.

Assessment Requirements for TLID3031 Rig load

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant high risk work legislation and workplace procedures
- calculating safe working load (SWL)/working load limit (WLL)
- communicating effectively with others
- identifying and correctly using equipment, processes and procedures
- inspecting equipment prior to use
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition and performance of gear and equipment and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing gear and equipment in terms of maintenance schedule and workplace operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dogging and rigging licence to perform high risk work requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work systems and equipment
- how to prioritise and multi-tasking work
- problems that may arise when rigging a load during mobile crane operations and actions that should be taken to prevent or solve these problems
- relevant road rules, regulations, permit and high risk work licence requirements for rigging loads during mobile crane operations
- relevant WHS/OHS and environmental procedures and regulations
- SWL/WLL requirements
- workplace procedures for rigging loads during mobile crane operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID3033 Operate a vehicle-mounted loading crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a vehicle-mounted loading crane to shift loads with a capacity of less than 10 metre tonnes.

It includes positioning and stabilising a vehicle-mounted crane, operating a vehicle-mounted crane, monitoring lift conditions, packing up a vehicle-mounted crane after operations, and completing all required job records.

Work must be carried out in accordance with the relevant state/territory authority licence/permit requirements and regulations pertaining to vehicle-mounted loading cranes.

Work is performed under general supervision. It involves the application of routine principles and procedures when operating a vehicle-mounted loading crane in a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Not applicable.

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Position and stabilise vehicle-mounted crane	1.1 Crane is driven to position as specified in job plan to ensure safe operation in accordance with applicable Australian standards, codes of practice, manufacturer specifications, and relevant regulatory and local government requirements
	1.2 Barriers, fencing, temporary boundaries and signage are used as required to isolate working area in accordance with safe working practice and lift requirements
	1.3 Ground is checked to ensure it is firm enough to bear load to be taken
	1.4 Appropriate plates or packing are correctly used to adequately distribute load
	1.5 Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions, appropriate Australian standard and other relevant statutory regulations or local authority requirements
	1.6 Outrigger packing is checked for adequacy prior to and after load is taken
2 Operate vehicle-mounted crane	2.1 Planned hazard control strategies are implemented
	2.2 Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards
	2.3 Load mass is assessed and correlated with crane lifting capacity throughout proposed radii of operation
	2.4 Appropriate lifting gear is selected and load is secured
	2.5 Load is hoisted and lowered into position using crane movements in accordance with appropriate Australian standard
	2.6 Crane controls are operated smoothly
	2.7 Crane is shut down and secured during periods of non-operation in accordance with manufacturer specifications and workplace procedures
3 Monitor lift conditions	3.1 Load is constantly monitored to ensure load and structural stability

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.2 Conditions that may affect continuing stability of crane are identified and monitored
	3.3 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
	3.4 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions or conflict with customer request
	3.5 Supervisor/allocator is advised of concerns about completing job within timeframe
	3.6 Shut-down procedures are implemented in an emergency in accordance with manufacturer instructions
	3.7 Relevant motion locks and brakes are applied
	3.8 Crane is shut down using correct sequence of procedures in accordance with manufacturer specifications and workplace procedures
	3.9 Routine post-operational equipment checks are carried out in accordance with manufacturer specifications
4 Pack up vehicle-mounted crane	4.1 All lifting equipment and crane components are checked for any signs of deterioration or damage in accordance with the appropriate Australian standard
	4.2 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
	4.3 Crane equipment is correctly stowed and secured in accordance with manufacturer instructions and the appropriate Australian standard
	4.4 Crane is immobilised and secured for travel in accordance with manufacturer instructions, workplace guidelines and regulatory requirements
5 Complete job records	5.1 Customer feedback is sought regarding satisfaction with completed job and areas of concern are reported in accordance with workplace procedures
	5.2 Customer signature is obtained on job completion documentation
	5.3 Required workplace records are updated accurately and promptly, and processed in accordance with workplace

Assessment Requirements for TLID3033 Operate a vehicle-mounted loading crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- checking and replenishing fluids, and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- monitoring performance of crane and its equipment, and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant agreements, codes of practice and other legislative requirements
- hazard management that is consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- high risk work licence requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work procedures concerning setting up and rigging a mobile crane at a worksite
- operational work systems and equipment
- prioritising and multi-tasking work
- problems that may arise when operating a vehicle-mounted loading crane and actions that should be taken to prevent or solve these problems
- relevant WHS/OHS and environmental procedures and regulations
- relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Operate a vehicle-mounted loading crane with a capacity of less than 10 metre tonnes.

TLID3035 Operate a boom type elevating work platform

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a boom type elevating work platform less than 11 metres boom length, in accordance with relevant state/territory licence/permit requirements and regulations, in a variety of operational contexts.

It includes inspecting and testing elevating work platform, assessing job and work requirements, planning work and setting up for lift, and carrying out elevation. It also includes implementing planned hazard controls and strategies, and packing up work platform after operations.

Work is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Inspect and test elevating work platform	1.1 Work platform is visually inspected prior to operation for evidence of damage, structural weakness or interference in accordance with pre-operational safety check procedures
	1.2 Routine pre-operational equipment checks are carried out in accordance with available checklists
	1.3 Work platform logbook is checked, service requirements are noted and maintenance personnel are advised of requirements
	1.4 Elevating work platform is started in accordance with manufacturer guidelines and start-up procedures for operations, and abnormal noise or movement is reported to authorised person for corrective action
	1.5 Start-up checks are conducted in accordance with manufacturer specifications and company procedures to ensure work platform and equipment are operating correctly
	1.6 Faults are corrected or reported to authorised person for corrective action in accordance with company procedures
	1.7 Operating and emergency controls are checked for correct operation in accordance with manufacturer specifications, including use of emergency decent device
	1.8 Boom is lowered under simulated emergency conditions to check for operational effectiveness
	1.9 Gear and accessories are checked and damaged or worn gear is segregated and reported to authorised person for testing/repair/destruction
	1.10 Results of inspections are recorded and reported in accordance with company procedures
2 Assess job requirements and work	2.1 Briefing, handover details, authorisations and clearances are received, interpreted and clarified in accordance with company and site procedures, and legislative requirements
	2.2 Work area is inspected, potential hazards are identified and appropriate elimination or control measures are selected
	2.3 Weight of load including personnel and equipment, is correctly estimated to ensure job is within limits of work platform capacity

© Commonwealth of Australia, 2025 Industry Skills Australia

3	**Plan work and set up for lift**	3.1 Work plan is developed and agreed with relevant workplace personnel, including hazard prevention/control measures, and safety and emergency procedures in line with applicable Australian Standards
		3.2 Suitable firm and level standing is chosen and prepared for location of elevating work platform
		3.3 Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions and appropriate Australian Standards
		3.4 Appropriate plates or packing are correctly used under footplates as required to adequately distribute loading
		3.5 Ground is checked before and after packing is installed to ensure it is firm enough to bear load
		3.6 Job plan is developed including hazard prevention/control measures and safety procedures in accordance with applicable Australian Standards and equipment manufacturer specifications
		3.7 Work platform load chart is located and information on permissible loads, radii and heights is taken into account in planning job
		3.8 Job requirements, and workplace rules and procedures are taken into account in job plan
		3.9 Job plan is discussed and confirmed with relevant personnel
		3.10 Work gear and tools are properly stowed in elevating work platform in accordance with Australian Standards, company procedures and guides
4	**Carry out elevation**	4.1 Configuration and operation of elevating work platform are checked as required to ensure safe lift
		4.2 Operation of work platform is carried out in accordance with job plan, appropriate Australian Standard and manufacturer specifications
5	**Implement planned hazard control strategies**	5.1 Load is constantly monitored to ensure safety of personnel, load and structural stability
		5.2 Unplanned situations are responded to in accordance with company procedures, in a manner that minimises risk to personnel and equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.3	Required signals are correctly given, interpreted and followed in accordance with appropriate Australian Standards
6 Pack up work platform	6.1	Elevating work platform is shut down using correct sequence of procedures in accordance with manufacturer instructions
	6.2	Routine post-operational equipment checks are carried out in accordance with manufacturer instructions and available checklists, and defects are recorded and reported in accordance with company procedures
	6.3	Elevating work platform is dismantled in accordance with job plan, manufacturer instructions and relevant statutory regulations
	6.4	Outriggers and stabilisers are secured and stowed in accordance with manufacturer instructions
	6.5	Elevating work platform is correctly stowed and secured in accordance with manufacturer instructions and company procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3035A Operate a boom type elevating work platform.

Assessment Requirements for TLID3035 Operate a boom type elevating work platform

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- planning own work, predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, regulations, codes of practice and manuals
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and workplace operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- boom type elevating work platform applications, capacities, configurations, safety hazards and control mechanisms
- capability on boom type elevating work platform compliance plate
- operational work systems and equipment
- problems that may arise when operating a boom type elevating work platform and actions that should be taken to prevent or solve these problems
- relevant road rules, regulations, permit and licence requirements for boom type elevating work platform operation
- relevant WHS/OHS and environmental procedures and regulations
- risks and hazards involved in operating a boom type elevating work platform and associated action that can be taken to eliminate or minimise the risk/hazards concerned
- wind speed equipment capability (wind loading)
- workplace procedures for operating a boom type elevating work platform less than 11 metres boom length, at a worksite.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3036 Lift and move load using a mobile crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to lift and move a load using a non-slewing mobile crane or a slewing mobile crane, in a variety of operational contexts.

It includes operating mobile crane to complete job requirements, monitoring lift conditions, implementing shut-down procedures, packing up crane after operations and completing all required job records.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated high risk work licence requirements and to comply with relevant codes of practice and/or guidelines for mobile crane operations.

Work is performed with limited supervision and duty of care responsibility for self and others, in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate mobile crane	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 In ascent and descent to/from crane, correct use is made of means provided, in accordance with relevant codes of practice and workplace procedures
	1.3 Required signals are correctly given, interpreted and followed in accordance with appropriate workplace procedures
	1.4 Boom is positioned to ensure load to be lifted is plumbed under hook
	1.5 Load is hoisted and lowered into position using crane movements, in accordance with appropriate workplace procedures
	1.6 Crane controls are operated smoothly
	1.7 Crane is shut down and secured during periods of non-operation, in accordance with manufacturer specifications and workplace procedures
2 Monitor lift conditions	2.1 Load is constantly monitored to ensure load and structural stability
	2.2 Conditions that may affect continuing stability of crane are identified and monitored
	2.3 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
	2.4 Dogger is advised of new information that affects lift
	2.5 Necessary changes to job plan are discussed and confirmed with rest of crew
	2.6 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions, or conflict with customer request

© Commonwealth of Australia, 2025 Industry Skills Australia

		2.7	Supervisor/allocator is advised of concerns about completing job within timeframe
3	**Implement shut-down procedures**	3.1	Relevant motion locks and brakes are applied
		3.2	Crane is shut down using correct sequence of procedures in accordance with manufacturer specifications and workplace procedures
		3.3	Routine post-operational equipment checks are carried out in accordance with manufacturer specifications
4	**Pack up crane**	4.1	Crane is de-rigged with other crane personnel in accordance with manufacturer instructions
		4.2	All lifting equipment and crane components are checked in consultation with crane personnel for signs of deterioration or damage in accordance with appropriate Australian Standard
		4.3	Damaged or worn equipment is segregated and reported to authorised person for testing/repair/destruction
		4.4	Crane and equipment are correctly stowed and secured in accordance with manufacturer instructions and appropriate Australian Standard
5	**Complete job records**	5.1	Customer feedback is sought about satisfaction with completed job, and areas of concern are reported in accordance with workplace procedures
		5.2	Customer signature on job completion documentation is obtained
		5.3	Required workplace records are updated accurately and promptly, and processed in accordance with workplace procedures

Assessment Requirements for TLID3036 Lift and move load using a mobile crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant high risk work legislation and workplace procedures
- applying risk assessment and management procedures
- calculating safe working load (SWL) and working load limit (WLL)
- communicating and working effectively with others
- completing relevant documentation
- effectively completing pre-operational checks, positioning, stabilising, set-up, post-operational checks of mobile crane
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- operating crane, including all functions to their maximum extension, in lifting and moving a load
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing equipment in terms of maintenance schedule and standard operating procedures
- using load charts to determine crane limitations and/or required crane set-up
- using mathematical procedures to determine load weight and lifting equipment required for lift.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems used during a lift
- hazard management, using the principle of hierarchy of control
- high risk work licence requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational work systems and equipment
- problems that may occur during a lift, and associated action that can be taken to address these problems
- relevant road rules, regulations, permit and licence requirements for mobile crane operation
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- risks and hazards involved in mobile crane operations, and associated action that can be taken to eliminate or minimise the risk
- workplace procedures for operating a mobile crane at a worksite.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- mobile crane, of the type currently used in industry
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID3040 Control lift and movement of crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control the lift and movement of a crane when the load is out of the crane operator's view, in accordance with workplace principles, procedures and regulations.

It includes providing lift instructions to the crane operator using appropriate communication methods, monitoring the lift and placing and securing a load.

Work must be carried out in compliance with the relevant state/territory authority licence/permit requirements and regulations for operating mobile cranes up to and including 20 tonnes.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Provide lift instructions	1.1 Load movement is performed in accordance with planned hazard prevention and control measures in line with appropriate Australian standards, codes of practice, guidelines and manufacturer specifications
	1.2 Agreed communication and signal methods are used to safely coordinate load movement
	1.3 Clear, precise and concise verbal communication and signals are used
	1.4 All relevant parameters are taken into account in instructions to ensure a safe, stable and smooth lift
2 Monitor lift	2.1 Load is constantly monitored to ensure it remains stable
	2.2 Load conditions that may affect continuing stability are identified and monitored
	2.3 Temporary bracing and/or load support is maintained until continuing stability is ensured
	2.4 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
	2.5 Site emergency procedures are followed
3 Place and secure load	3.1 Appropriate materials for fixing and anchoring the load are checked and selected in line with manufacturer specifications
	3.2 Appropriate fixing methods are used to secure load in line with manufacturer specifications and guidelines
	3.3 Temporary securing is installed where hazards and weather conditions may vary during the load movement

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID3040 Control lift and movement of crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying and correctly using relevant equipment
- monitoring work activities in terms of planned schedule and modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- planning own work, predicting consequences and identifying improvements
- prioritising and multi-tasking work
- reading and interpreting relevant instructions, procedures, information, technical data, manuals and signs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communication systems used during a lift
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational work systems and equipment
- problems that may occur during a lift and associated action that can be taken to address these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant road rules, regulations, permit and licence requirements for mobile crane operations
- risks and hazards involved in mobile crane operations and associated action that can be taken to eliminate or minimise risks
- workplace procedures for controlling lifting and moving a mobile crane.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID3043 Shift loads using gantry equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shift loads using gantry equipment in accordance with relevant regulations and workplace requirements, as part of work activities in the transport and logistics industry.

It includes planning work for the prevailing working conditions, using controls and operating systems to manage the operation of equipment, and locating and identifying load characteristics. It also includes safely moving the load, monitoring controls and stopping, shutting down and securing equipment after the completion of operations.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan work for the prevailing working conditions	1.1 Traffic flow, weather and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities
	1.2 Load characteristics are taken into account to ensure appropriate attachments/gear are used to move the load as required
	1.3 Occurrences in the work area that may affect the safety and efficiency of operations are reported to appropriate personnel
2 Use controls and operating systems to manage the operation of the equipment	2.1 Equipment is prepared and appropriate attachments are fitted as required
	2.2 Gear and operational levers are checked to ensure they are in the neutral position prior to inserting ignition key and starting engine
	2.3 Engine is started in accordance with manufacturer guidelines to bring engine to speed
	2.4 Instruments and gauges are monitored during start up and operations to ensure operation is within manufacturer specifications, and workplace and regulatory safety requirements
	2.5 Engine power is managed for efficiency of equipment movement and economy of equipment operations
	2.6 Equipment operations are conducted within manufacturer specified torque range
	2.7 Faults or damage to equipment are immediately reported to appropriate personnel
3 Locate load and identify load characteristics	3.1 Load is located and identified in accordance with instructions
	3.2 Requirements for safe working load (SWL) and working load limit (WLL) of gantry equipment are identified
	3.3 Load weight and dimensions are checked to ensure they fall within equipment capacity
	3.4 Loading and unloading plans are followed to ensure efficiency and safety of operations

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.5 Load characteristics are taken into account to ensure appropriate loading and unloading procedures are followed
	3.6 Hazardous cargo is identified and relevant procedures are taken into account when planning and conducting work
4 Safely move load	4.1 Equipment is operated and positioned using smooth and controlled movements
	4.2 Manoeuvres are within equipment limits and in line with manufacturer specifications
	4.3 Load is moved ensuring no injury to personnel or damage to equipment or cargo
	4.4 Continuous communication is maintained with personnel assisting the operator in the load movement operations using appropriate communications technology and procedures
	4.5 In an incident or emergency, equipment is immediately stopped and workplace emergency procedures are followed
	4.6 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements
5 Monitor and operate controls	5.1 Equipment controls are monitored and operated in accordance with manufacturer operating instructions
	5.2 Control systems are confirmed and acted on in accordance with regulatory requirements, manufacturer guidelines and workplace operating procedures
	5.3 Control faults are identified and reported in accordance with enterprise guidelines
	5.4 Hazards in the work area are identified and appropriate measures are adopted to control the risks in accordance with regulatory requirements and workplace procedures
6 Stop, shut down and secure equipment	6.1 Equipment is brought to a controlled halt and is shut down without injury to personnel or damage to equipment, loads or facilities in accordance with manufacturer guidelines and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

6.2 Equipment is secured in accordance with manufacturer instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3043A Shift loads using gantry equipment.

Assessment Requirements for TLID3043 Shift loads using gantry equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying effective eye-hand coordination to operational tasks
- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- estimating size, shape and special requirements of loads
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- identifying, selecting and using relevant equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring equipment performance
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- receiving, acknowledging and sending messages using appropriate communications equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing equipment in terms of maintenance schedule and operating procedures
- working collaboratively with others

© Commonwealth of Australia, 2025 Industry Skills Australia

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes, regulations, licence/permit requirements relevant for using gantry equipment to shift loads
- cargo marking and numbering systems
- operational work systems, equipment, management and site operating systems for using gantry equipment to shift loads
- problems that may occur and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- relevant safety codes and emergency procedures
- requirements for safe working load (SWL) and working load limit (WLL) of gantry equipment
- types of gantry equipment used to shift loads in terminals/wharves, their applications and procedures and precautions for their use
- workplace procedures and policies for using gantry equipment to shift loads.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3046 Operate container side lifter

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a container side lifter (swing lifter, side loader) in accordance with relevant state/territory authority requirements and regulations.

It includes loading a container from the ground onto a vehicle, unloading a container from vehicle to ground, and transferring a container from one vehicle to another.

It also includes maintaining systematic and efficient control of all functions, managing side lifter condition and performance, and effectively managing hazardous situations while operating a container side lifter.

Operation of a container side lifter is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Check a container side lifter and ancillary equipment**	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.2 Load lifting capacity for side lifter and ancillary equipment, as required, is identified in terms of maximum rated capacity
		1.3 Pre-operational checks and inspections are conducted on side lifter, lifting assemblies, specialist lifting equipment, and ancillary equipment, as required, to ensure serviceability and suitability for task and readiness for operation
2	**Ensure site safety**	2.1 Ground conditions are checked to ensure stability
		2.2 Site safety is managed in accordance with workplace policy and procedures
		2.3 Exclusion zones are identified and implemented
3	**Load loaded container from the ground onto side lifter vehicle**	3.1 Container weight is checked to ensure it is within specified maximum lifting capacity of side lifter vehicle
		3.2 Side lifter is positioned, lifter engine is started, and side lifter readiness for lift, including deployment of stabiliser legs, is completed in accordance with manufacturer specifications and organisational requirements
		3.3 Lifting equipment is attached to container, checked, and adjusted as required, in accordance with manufacturer specifications and organisational requirements
		3.4 Pre-lift physical check is performed to ensure side lifter is capable of lifting container safely
		3.5 Container is lifted and placed onto side lifter twist locks in accordance with manufacturer and organisational requirements
		3.6 Loaded container is secured and vehicle is made ready for on-road travel, in accordance with regulatory requirements, manufacturer specifications and workplace procedures
4	**Unload loaded container from side lifter vehicle onto the ground**	4.1 Container weight is checked to ensure it is within side lifter vehicle specified maximum lifting capacity
		4.2 Side lifter is positioned, lifter engine is started, and side lifter is made ready for lift, ensuring that deployment of stabiliser legs is completed in accordance with manufacturer

© Commonwealth of Australia, 2025 Industry Skills Australia

		specifications/organisational requirements
	4.3	Load securing devices are unlocked or removed and lifting equipment is attached to container, checked and adjusted as required, in accordance with manufacturer specifications and/or organisational requirements
	4.4	Pre-lift physical check is performed to ensure side lifter is capable of lifting container safely
	4.5	Container is lifted and placed on ground, in accordance with organisational requirements, allowing access to the container doors and surroundings
	4.6	Lifting equipment is removed from container and side lifter vehicle is made ready for on-road travel, in accordance with manufacturer specifications and regulatory requirements
5 Transfer loaded container from one vehicle to another	5.1	Receiving vehicle and container are checked to ensure they are compatible and that receiving vehicle load capacity is adequate for intended load
	5.2	All vehicles are positioning in accordance with intended transfer requirements
	5.3	Lifter engine is started and side lifter is made ready for lift
	5.4	Load securing devices are unlocked or removed and lifting equipment is attached to container, checked, and adjusted as required, in accordance with manufacturer specifications and/or organisational requirements
	5.5	Pre-lift physical check is performed to ensure side lifter is capable of lifting container safely
	5.6	Container is transferred to receiving vehicle in accordance with manufacturer and organisational requirements
	5.7	Lifting equipment is removed from container and both vehicles are made ready for on-road travel, in accordance with regulatory requirements and manufacturer specifications and workplace procedures
	5.8	Loaded container is secured in accordance with regulatory requirements and manufacturer specifications
	5.9	Documentation is completed in accordance with workplace procedures

Assessment Requirements for TLID3046 Operate container side lifter

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- conducting a pre-operational check including:
  - checking and replenishing fluids and carrying out lubrication processes during work activities
  - visually checking vehicle and ancillary equipment
  - checking operation of vehicle lights and indicators
  - checking all levers and operational gauges on ancillary equipment
- communicating effectively with others
- completing relevant documentation
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of vehicle, its trailers and its equipment and taking appropriate action as required
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- relocating a container from one vehicle to another with container at ≥60% capacity
- relocating a container using a side lifter from ground to vehicle with container at ≥60% capacity
- relocating a container using a side lifter from vehicle to ground with container at ≥60% capacity
- servicing vehicle and its equipment in terms of maintenance schedule and standard operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe driving strategies
- pre-operational checks carried out on side lifter and ancillary equipment
- relevant national heavy vehicle legislation and regulatory requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant personal protective equipment for side lifter operations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- side lifter vehicle handling procedures
- workplace driving and operational instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment of the task to operate a container side lifter must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, national Load Restraint Guide codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

A simulator is not suitable for final assessment of this unit of competency.

TLID3047 Shift loads using ship mounted crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to shift loads using ship cranes in accordance with workplace and regulatory requirements as part of work activities in the stevedoring, transport, distribution and allied industries.

It includes planning work for the prevailing working conditions; using controls and operating systems to manage operating the crane; locating load and identifying load characteristics; safely moving load; monitoring controls; and stopping, shutting down and securing crane after completing operations.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan work for current working conditions	1.1 Crane movement areas are assessed to ensure they are clear of personnel and other obstructions and hazards
	1.2 Traffic flow and work area conditions in proximity of load landing area are assessed to ensure safety of personnel, and to ensure there is no damage to equipment, loads and facilities
	1.3 Load characteristics are taken into account to ensure appropriate attachments/gear are used to move load
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Occurrences in work area that may impact on safety and efficiency of operations are reported to appropriate personnel
2 Check controls and crane operating systems	2.1 Crane is prepared for operation in accordance with workplace procedures
	2.2 Relevant aspects of Marine Orders are explained and applied
	2.3 Crane is started in accordance with manufacturer guidelines and workplace procedures
	2.4 Radio communication is confirmed with personnel assisting operator in load shifting
	2.5 Instruments and gauges are monitored during start-up and operations to ensure operation is in accordance with manufacturer specifications and workplace/regulatory safety requirements
	2.6 Crane movements are tested in a trial run over water if possible
	2.7 Faults or damage to crane are immediately reported to appropriate personnel
3 Identify load characteristics	3.1 Load weight and dimensions are confirmed to ensure they fall within crane capacity
	3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations
	3.3 Load characteristics are taken into account to ensure appropriate loading and unloading procedures are followed
	3.4 Hazardous cargo is identified and relevant procedures are taken into account when planning and conducting work

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.5 Non routine cargo lifts are identified and appropriate lifting methods and equipment are arranged
4 Safely move load	4.1 Crane is operated using smooth and controlled movements, and allowances are made for any vessel trim or list movements during load transfer
	4.2 Crane movements are efficiently managed to control block or load swing
	4.3 In sudden ship movement or excessive trim or list, warnings are immediately communicated to personnel
	4.4 Simultaneous crane operations are planned as required and controlled appropriately in accordance with relevant procedures
	4.5 Continuous communication is maintained with personnel assisting operator with load movement operations using appropriate communications technology and procedures
	4.6 Wharf and vessel work area conditions are constantly assessed and anticipated to ensure crane movement areas are clear of personnel and other obstructions
	4.7 In a safety incident or emergency, crane is immediately stopped and workplace emergency procedures are followed
	4.8 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements
5 Monitor controls	5.1 Crane controls are monitored and operated in accordance with operating instructions
	5.2 Control systems are explained and acted on in accordance with regulatory requirements, manufacturer guidelines and workplace procedures
	5.3 Control faults are identified and reported in accordance with workplace guidelines
6 Stop, shut down and secure equipment	6.1 Crane is brought to a controlled halt in accordance with operating guidelines and is shut down without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures
	6.2 Crane is secured after operations in accordance with operating instructions and workplace procedures

Assessment Requirements for TLID3047 Shift loads using ship mounted crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying effective eye-hand coordination to operational tasks
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers in large, medium or small workplaces
- estimating size, shape and special requirements of loads
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) Code/International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- identifying and correctly using relevant equipment
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of crane and its equipment, and taking appropriate action as required
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- receiving, acknowledging and sending messages using appropriate communications equipment
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to using cranes to shift loads, including ADG Code, IMDG Code and Marine Orders
- operational work systems, equipment, management and site operating systems for using boom cranes to shift loads
- problems that may occur and appropriate action that can be taken to resolve these problems
- relevant safety codes and emergency procedures
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements for safe working load (SWL) and working load limit (WLL) of cranes
- service and maintenance schedule requirements for lifting equipment
- types of boom cranes used to shift loads in terminals/wharves, their applications and procedures and precautions for their use
- workplace procedures and policies for using cranes to shift loads
- workplace procedures for multiple crane, dual crane and heavy lift operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including controlled or open environments, exposed conditions and limited or restricted spaces.

Assessment processes and techniques must be appropriate to the language, literacy and

numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools and equipment
- personal protective clothing and equipment, including:
  - gloves
  - high visibility clothing
  - protective clothing
  - safety glasses
  - safety headwear and footwear
  - two-way radios.

TLID3048 Pack and unpack furniture and effects

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to pack and unpack furniture and effects in a range of furniture removal contexts, in compliance with relevant industry codes of practice and workplace procedures.

It includes preparing for packing, packing and unpacking cartons, dismantling and reassembling items of furniture, and completing packing/unpacking processes.

Work is performed under limited or minimum supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Prepare for packing and dismantling**	1.1 Removal documentation is checked to identify items of furniture and effects for removal
		1.2 Appropriate materials, tools and equipment are selected to dismantle, reassemble, pack, wrap and protect identified furniture and effects for removal, in accordance with workplace procedures
		1.3 Hazards are identified, risks are assessed and control measures are implemented
		1.4 Convenient, suitable and unrestricted work area for packing, unpacking, dismantling or reassembling is selected and prepared in consultation with client
		1.5 Items for removal are identified and packing order is determined in accordance with removal documentation
		1.6 Cartons, protective and other materials are selected and located in an accessible area
		1.7 Items ineligible for removal are identified in accordance with industry standards and workplace procedures, and appropriate action is taken in consultation with client
		1.8 Items for removal are appropriately prepared for travel in accordance with workplace procedures
2	**Pack cartons**	2.1 Items for removal are wrapped and packed in accordance with industry standards and workplace procedures
		2.2 Fragile or valuable items are specially wrapped and positioned for loading onto vehicle in accordance with workplace procedures and industry standards
		2.3 Cartons are sealed and labelled in accordance with removal documentation and workplace procedures
		2.4 Hazardous items are identified in accordance with removal documentation and workplace procedures, and appropriate action is taken in consultation with client
3	**Dismantle and reassemble furniture items**	3.1 Identified removal items are dismantled in accordance with industry standards, workplace procedures and manufacturer requirements
		3.2 Dismantled items of furniture are packed, wrapped and stored in accordance with removal documentation and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.3	Dismantled items of furniture are reassembled in accordance with industry standards, workplace procedures and manufacturer requirements
	3.4	Client is advised of potential furniture reassembly restrictions at the destination
4 Complete unpacking	4.1	Cartons are unpacked and items are stowed in accordance with removal documentation and workplace procedures, and in consultation with client
	4.2	Used cartons are folded and removed, and rubbish is disposed of in accordance with workplace procedures
	4.3	Required removal documentation is completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3048A Pack and unpack furniture and effects.

Links

Assessment Requirements for TLID3048 Pack and unpack furniture and effects

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards
- applying relevant legislation, workplace procedures and industry standards
- communicating effectively with others
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in furniture and effects in accordance with operating procedures
- reading, interpreting and following relevant instructions, procedures, information and signs
- working collaboratively with others when packing and unpacking furniture and effects during a removal
- working systematically with required attention to detail without injury to self or others or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable regulations and legislation such as:
    - relevant state/territory environmental protection legislation
    - relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) legislation
- appropriate loading techniques such as labelling items
- appropriate use of materials and tools

© Commonwealth of Australia, 2025 Industry Skills Australia

- client service requirements including language, courtesy, behaviour and problem solving
- different locations where work may be conducted:
    - client's home/workplace
    - controlled or open environments
    - exposed conditions
    - restricted spaces
    - vehicle on the road
    - workplace, warehouse or depot
- furniture dismantling and reassembly techniques
- housekeeping standards and procedures during a removal
- methods of securing a load on a removal vehicle
- packing techniques for various types of furniture and effects
- relevant information/documents such as:
    - award, enterprise bargaining agreement and other industrial arrangements
    - client instructions
    - relevant codes of practice
    - emergency procedures
    - industry codes for furniture removal operations
    - manufacturer instructions
    - quality assurance procedures
    - removal documentation
    - standards and certification requirements
    - workplace procedures and policies for packing and unpacking cartons, furniture and effects
- risks when packing, unpacking, dismantling and reassembling furniture and effects during a removal and related precautions to control these risks
- special precautions required for some furniture and effects
- WHS/OHS procedures and guidelines concerning packing, unpacking, disassembling and reassembling furniture and effects
- workplace procedures and policies for packing, unpacking, dismantling and reassembling furniture and effects.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare for packing and wrapping	1.1 Documents required to prepare for international removal are completed in accordance with workplace requirements
	1.2 International removal documentation is checked to identify items of furniture and effects for removal
	1.3 Appropriate materials, tools and equipment are selected to dismantle, pack, wrap and protect identified furniture and effects for international removal, in accordance with workplace procedures
2 Confirm onsite packing and wrapping requirements	2.1 Items of furniture and effects for international removal are identified, and packing and wrapping needs are determined in accordance with international removal documentation
	2.2 Hazards are identified, risks are assessed and control measures are implemented
	2.3 Additional packing and wrapping needs are identified and arrangements are made to access additional materials, tools and equipment as required
	2.4 Furniture and effects requiring offsite packing are identified and segregated, and appropriate personnel are advised in accordance with workplace procedures
	2.5 Special requirements are identified in consultation with client and documented, in accordance with workplace procedures
	2.6 Items ineligible for international removal are identified in accordance with applicable regulations, industry standards and company policy, and appropriate action is taken in consultation with client and appropriate personnel
	2.7 Client is advised of any pre-damaged or damage-risked items and appropriate documentation is completed
3 Pack, wrap and label furniture and effects	3.1 Convenient, suitable and unrestricted work areas are selected and prepared for packing and wrapping in consultation with client
	3.2 Items for international removal are packed, wrapped and labelled in accordance with industry standards and workplace procedures
	3.3 Identified items for international removal are dismantled in accordance with industry standards, workplace procedures and manufacturer requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.4 Dismantled items are packed, wrapped, labelled and stored in accordance with removal documentation and workplace procedures
	3.5 Client is advised of potential furniture reassembly restrictions that could apply at the destination
4 Complete packing and wrapping process	4.1 Tools, equipment and unused packing and wrapping materials are removed, and rubbish is disposed of in accordance with workplace procedures
	4.2 Required international removal documentation is completed in accordance with workplace requirements
	4.3 Furniture and effects for international removal are fully prepared for uplift in accordance with workplace procedures

TLID3050 Coordinate furniture removal

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate the removal of furniture and effects, in accordance with workplace procedures, relevant standards and certification requirements.

It includes correctly parking a removal vehicle; determining access arrangements; identifying potential hazards; developing, communicating and monitoring an appropriate removal plan prior to uplift; and completing all relevant records.

Work is performed under some supervision, generally in a team environment. Defined accountability and responsibility for self and others in achieving the required outcomes is involved.

This unit involves the application of standard furniture removal procedures by removal crew members when coordinating removal across a variety of removal contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Park vehicle	1.1 Vehicle is parked with due consideration of critical factors
	1.2 Need for use of visual safety equipment is determined and this equipment is positioned in accordance with workplace procedures, local authority requirements and state/territory requirements
	1.3 Access to vehicle is planned to minimise traffic wear on gardens and lawns, and to avoid obstructions
	1.4 Potential external hazards are identified and vehicle is parked to minimise risk of injury and/or damage to items and equipment during removal activities
2 Define job requirements	2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion based on written removal consultant appraisal
	2.2 In consultation with customer, removal consultant/client inventory is checked for accuracy and discrepancies are made known to appropriate workplace personnel in accordance with workplace procedures
	2.3 Initial inspection of total job is undertaken with customer and an appropriate loading sequence is ascertained
	2.4 Potential internal hazards are identified and appropriate action is planned to minimise risk or injury and/or damage to items, equipment or structure
	2.5 Special requirements are identified and negotiated with customer
	2.6 Customer is appropriately advised of any pre-damaged or damage-risked items and appropriate documentation is completed
	2.7 Dangerous or hazardous items that are unacceptable for removal are identified and customer is appropriately informed
	2.8 Confirmation is made that items have been appropriately prepared for travel, in accordance with workplace procedures
3 Plan and monitor	3.1 Loading plan is confirmed in consultation with appropriate

© Commonwealth of Australia, 2025 Industry Skills Australia

loading		onsite removal team members
	3.2	Potential external hazards are identified and appropriate action is planned to minimise risk of injury and/or damage to items and equipment during removal activities
	3.3	Confirmed loading plan is communicated to all onsite removal team members
	3.4	Relevant information about loading plan is communicated to despatch staff or other appropriate personnel in accordance with workplace procedures
	3.5	Removal team performance is monitored to ensure requirements of loading plan are met
4 Complete records	4.1	Records are updated accurately, legibly and promptly in accordance with workplace procedures
	4.2	Records are checked to ensure they include all required information relevant to job

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation, workplace procedures and industry standards
- communicating effectively with others
- identifying hazardous or dangerous items unacceptable for removal
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of removal/loading plan
- operating electronic communications equipment to required protocol
- providing leadership and encouragement to team members
- reading, interpret and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others or damage to furniture or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- critical factors for parking vehicles
- customer service requirements including appropriate language, courtesy, behaviour and problem solving
- furniture removal procedures and codes of practice
- hazards and related hazard control measures
- items unsuitable for removal and associated reasons
- load restraint
- organisational workplace procedures
- records and signed agreements that are completed during an initial removal survey and related procedures
- relevant agreements and legislation applicable to furniture removal
- relevant state/territory road traffic authority licence and traffic regulations
- relevant vehicle parking safety requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection legislation and policies
- special requirements that may need to be addressed in a removal and related procedures to be applied.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID3051 Segregate waste according to waste types

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to segregate waste based on waste type in an on-the-job environment.

It includes identifying and segregating waste at a range of plant sites.

It also includes contributing to the implementation of workplace policies and procedures, systems and plans, as well as recognising potential hazards and controlling risks.

This unit requires the ability to apply safe work practices while working with all types of waste.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Organise for work	1.1 Waste segregation plan is established in accordance with workplace policies and procedures, and regulatory requirements
	1.2 Job requirement hazards are identified, risks are assessed and risk controls are implemented in accordance with workplace policies and procedures, and state/territory regulations and legislation
	1.3 Emergency and personal protective equipment (PPE) is selected, correctly fitted and worn in accordance with job requirements, manufacturer specifications, workplace requirements and relevant regulatory requirements
	1.4 Segregation receptacles/areas are set up to ensure safe and effective segregation of waste in accordance with workplace requirements and relevant regulatory requirements
	1.5 Equipment to be used for segregation is identified in accordance with waste segregation plan and workplace procedures
2 Conduct identification and segregation activity	2.1 Waste is identified and appropriate handling process is implemented in accordance with waste type, workplace requirements and relevant state/territory regulatory requirements
	2.2 Equipment used for segregation is operated in accordance with manufacturer specifications, workplace policies and procedures and external licensing authorities
	2.3 Waste is segregated into categories and labelled in accordance with waste type, workplace policies and procedures, and regulatory requirements
	2.4 Sorted waste is placed into correct waste category receptacles/areas in accordance with workplace policies and procedures, and legislative environmental practices
	2.5 Storage capacity of waste receptacles/areas is monitored in accordance with workplace policies and procedures, and environmental licence requirements
	2.6 Waste receptacles/areas are emptied in accordance with environmental practices and/or replaced in accordance with workplace policies and procedures, and with minimal disruption to work processes
3 Conduct quality	3.1 Quality control inspections are undertaken to ensure

© Commonwealth of Australia, 2025 Industry Skills Australia

control inspection	compliance with segregation requirements, in accordance with workplace policies and procedures, and environmental licence requirements
	3.2 Quality control inspection details are documented in accordance with workplace policies and procedures, and environmental authority regulations
4 Clean up area	4.1 Sorting site and equipment are cleaned in accordance with workplace policies and procedures
	4.2 Waste products from cleaning process are disposed of in accordance with environmental licence requirements
	4.3 PPE is checked and stored, and damaged or faulty PPE is reported and replaced in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLID3051 Segregate waste according to waste types

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- asking questions
- cleaning and fitting personal protective equipment (PPE) in accordance with organisational requirements, manufacturer specifications and regulatory requirements
- conducting work practices safely and efficiently
- consulting with others as required
- facilitating:
  - equipment cleaning and maintenance
  - plant and equipment operations
  - equipment selection
- handling waste non-conformances
- identifying potential risks and hazards for waste sorting and waste non-conformances
- identifying waste types and waste non-conformances
- labelling waste
- listening actively
- organising sorting receptacles/areas in designated areas
- organising work methodically
- providing information
- reading and interpreting:
  - job sheets
  - work requirements and safety data sheets (SDSs)/material safety data sheets (MSDSs)
  - safe systems of work
  - job safety and environmental analysis
  - work method statements
- reporting on waste segregation outcomes
- segregating valuable resources in composite materials
- segregating waste types, including potentially hazardous waste
- selecting emergency and PPE

© Commonwealth of Australia, 2025 Industry Skills Australia

- storing PPE in accordance with workplace policies
- using emergency and PPE that includes:
    - communications equipment
    - eye protection such as goggles and protective glasses
    - eyewash kit
    - fire extinguishers
    - first aid kit
    - footwear
    - gloves
    - overalls and protective clothing
- working in a team environment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency response procedures
- emergency spill kits
- environmental issues and relevant regulations
- equipment and materials required to clean and maintain plant and equipment
- hazardous and dangerous goods
- how to measure and calculate volume and weight
- industry environmental standards and relevant legislation
- recycling procedures
- resource recovery options and procedures
- segregation methods for dangerous goods and chemical substances
- waste containment, segregation and disposal procedures
- waste disposal and recovery routes
- waste management issues, including:
  - chemicals used in industry
  - client requirements
  - coding systems
  - duty of care
  - organisational requirements
  - reporting requirements
  - waste storage requirements
  - waste management hierarchy
- waste non-conformances and waste non-conformance procedures
- waste types, streams and characteristics.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so;

© Commonwealth of Australia, 2025 Industry Skills Australia

where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment, and personal protective equipment currently used in industry.

TLID4008 Monitor crane operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to monitor crane operations in accordance with workplace procedures and regulatory requirements, as part of work activities in the stevedoring, transport, distribution and allied industries

It includes monitoring work performance and progress, monitoring personnel working in operational areas, solving problems concerning crane operations and making decisions.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor work performance and progress	1.1 Work is performed in accordance with workplace requirements and objectives to ensure safe work practices are maintained in accordance with statutory authority regulations, national and industry safety codes and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Crane operations and compliance with operational procedures are monitored regularly and refined in consultation with supervisor, crane drivers and other employees
	1.3 Work performance rates are maintained and delays are minimised to ensure work program objectives are met
	1.4 Safety in the work area is continually monitored during crane operations and required action is taken to identify hazards and to control risks
2 Monitor personnel working in operational area	2.1 Vigilance is maintained when personnel are working in the cranes operational area in accordance with statutory requirements, national standards and safety codes
	2.2 Personnel are checked out of operational area before securing operational area/storage location/ships hold after completing shift and when task is completed, ensuring all personnel are safely out of the area/hold
	2.3 Personnel working in the operational area/storage location/ships hold are warned of any danger in accordance with workplace procedures and regulatory requirements
	2.4 Personnel working in the operational area/storage location/ships hold are alerted when required and emergency responses are initiated to provide assistance to personnel in hold
3 Solve problems and make decisions	3.1 Problems are solved and decisions are made to ensure optimum efficiency of operations in accordance with management and client objectives
	3.2 Employees are encouraged to contribute their opinions to facilitate effective decisions and resolution of problems

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID4008A Monitor crane operations.

Assessment Requirements for TLID4008 Monitor crane operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when monitoring crane operations
- completing relevant documentation
- dealing with internal and external customers in small, medium and large worksites
- estimating the size, shape and special requirements of loads
- identifying, selecting and using relevant equipment, processes and procedures when monitoring crane operations
- identifying cargo, container and goods, coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and emergency information panels
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting relevant instructions, procedures, information, labels and signs
- receiving, acknowledging, sending messages and giving signals using required communications equipment and protocols
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and

© Commonwealth of Australia, 2025 Industry Skills Australia

work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when monitoring crane operations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to crane operations, including the ADG and IMDG Codes
- cargo marking and numbering systems
- operational work systems, equipment, management and site operating systems for crane operations
- problems that may occur during crane operations and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements for safe working load (SWL) and working load limit (WLL) of cranes
- types of cargo including goods with specialist requirements, temperature controlled goods and dangerous goods
- types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their application and the regulations, procedures and precautions for their operation
- workplace procedures and policies for monitoring crane operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

© Commonwealth of Australia, 2025 Industry Skills Australia

assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including limited or restricted spaces, exposed conditions, controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry, including
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radios
  - protective clothing
  - high visibility clothing
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLID4009 Direct crane operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to direct crane operations in accordance with workplace and regulatory requirements, as part of work activities in the stevedoring, transport, distribution and allied industries.

It includes checking work area, checking cargo, receiving and interpreting directions, anticipating cargo transfer sequence, directing crane operators and transferring loads in accordance with job requirements.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check work area	1.1 Work area is checked to ensure area is in accordance with relevant safety codes and national standards

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Unsafe work areas are identified and reported to appropriate personnel
2 Check cargo	2.1 Cargo/containers are checked to ensure they are safe to handle in accordance with national standards and industry safety codes
	2.2 Unsafe or damaged cargo is identified and reported to appropriate personnel
3 Interpret and provide directions	3.1 Directions are provided using the required communications technology/mode
	3.2 Directions are confirmed to ensure any unclear instructions are checked and clarified with relevant staff
4 Anticipate cargo transfer sequence	4.1 Cargo transfer sequence is anticipated to ensure compliance with operating procedures and safe and efficient transfer operations
	4.2 Cargo sequence is anticipated by referral to ship stowage plans/required sheets
5 Direct crane operators and transfer loads	5.1 Crane operators are directed to work locations to ensure cargo/containers are transferred in accordance with workplace procedures and regulatory requirements
	5.2 Crane drivers are immediately alerted to unsafe conditions, safety incidents and emergencies in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLID4009A Direct crane operations.

- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to crane operations, including the ADG and IMDG Codes
- cargo marking and numbering systems
- focus of operation of work systems, equipment, management and site operating systems for crane operations
- problems that may occur during crane operations and appropriate action that can be taken to resolve these problems
- relevant bond, quarantine or other legislative requirements
- relevant handling and safety codes
- relevant WHS/OHS and environmental protection procedures and guidelines required
- requirements for safe working load (SWL) and working load limit (WLL) of cranes
- types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their application and the regulations, procedures and precautions for their operation
- workplace procedures and policies for directing crane operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions including limited or restricted spaces, exposed

TLID4030 Supervise mobile crane operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to supervise mobile crane operations, in compliance with the licence/permit to perform high risk work requirements and relevant state/territory regulations for mobile crane operations.

It includes implementing the operational plan for a mobile crane lift, directing operations, supporting crane personnel in their work, and negotiating and resolving site problems on request.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures when supervising mobile crane operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Implement operational plan**	1.1	Checks are made that customer has fulfilled agreed obligations and required personnel and equipment are on site
		1.2	Plan is implemented in accordance with legislative and workplace requirements
		1.3	Check is made that hazards have been identified and hazard control strategies implemented
2	**Direct operations**	2.1	Customer is kept advised of changes to operation method and concerns are addressed promptly
		2.2	Crane personnel are encouraged to provide input to the operation
		2.3	Options for unexpected situations are developed and discussed with site and crane personnel
		2.4	Emergency situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment
		2.5	Responsibilities of crane personnel are clarified throughout operation
		2.6	Crane personnel are coordinated and directed to ensure safe and efficient operation
3	**Support crane personnel**	3.1	Assistance with rigging/operating duties is provided as required in accordance with legislative and site requirements
		3.2	Additional equipment and personnel are arranged as necessary in line with legislative requirements
		3.3	Facilities and amenities are arranged as necessary
4	**Resolve site problems on request**	4.1	Where feasible, problem is clarified prior to site visit to enable prioritising of work
		4.2	Problem is assessed through on-site consultation with crane personnel
		4.3	Customer’s perspective on the problem is sought as required
		4.4	Decision is made regarding appropriate solutions to problems, taking into account safety and workplace requirements, and customer expectations
		4.5	Action to be taken is agreed with crane personnel and

© Commonwealth of Australia, 2025 Industry Skills Australia

customer

4.6 Agreed commitments are met in a timely manner and undertakings of others are followed up to ensure personnel and customer satisfaction with the outcome

4.7 Workplace records are updated accurately, legibly and promptly as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID4030A Supervise mobile crane operations.

Assessment Requirements for TLID4030 Supervise mobile crane operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking and workplace procedures
- calculating safe working load (SWL) and working load limit (WLL)
- communicating effectively with others
- completing documentation related supervising mobile crane operations
- discussing and negotiating with clients and crew on issues related to site access, setting up the crane and lift operations
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and directing the use of equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment and operating environment in accordance with operating procedures
- planning and guiding the work of others, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- consultation and communication risk mitigation workplace procedures
- emergency management workplace procedures
- focus of operation of work systems and equipment
- how to calculate total mass of the load (including the mass of the lifting gear) and its distribution
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- prioritising and multi-tasking work
- problems that may arise when supervising mobile crane operations and actions that should be taken to prevent or solve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant rigging operations code of practice and regulations
- relevant road rules, high risk work regulations, permits and high risk licence requirements pertaining to mobile crane operation
- SWL and WLL of mobile crane and lifting gear
- workplace procedures for supervising mobile crane operations at a worksite.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including high risk workplace procedures, regulations, codes of practice and operation manuals.

TLID4032 Plan and conduct specialised lift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and conduct specialised lift by a mobile crane (excluding demolition work).

It involves a lift that may be specialised in terms of job and equipment requirements, load qualities, or critical aspects of lift location/s.

It includes inspecting site, planning lift, setting up lift, working effectively in a team, lifting and moving load, and following up on a job.

Work must be carried out in accordance with high risk work licence/permit requirements and relevant state/territory authority regulations for specialised mobile crane operations.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures for planning and conducting of specialised lifts in a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Inspect site	1.1 Site is inspected as required with other relevant personnel, to assess job requirements
	1.2 All necessary parameters are measured to ensure accuracy of calculations
	1.3 Hazards are identified through inspection of site and load, and required action is taken to minimise, control or eliminate identified hazards
	1.4 Additional information about load and possible hazards is sought from customer and expert personnel, as required
	1.5 Special site requirements are identified
2 Plan lift	2.1 Operation plan is developed in consultation with other relevant personnel, including hazard prevention/control measures in accordance with workplace procedures, applicable Australian Standards and codes of practice
	2.2 Approval to carry out lift is obtained from appropriate statutory authority, as required
	2.3 Multiple crane lifts are planned, as required, to encompass determination of types of cranes suitable for use and an assessment of load share to be carried by each crane
	2.4 Crane load chart is interpreted and information on permissible loads, radii, weights, boom and jib are taken into account in planning job
	2.5 Safe working load (SWL) or working load limit (WLL) is calculated
	2.6 Appropriate drawings and simulations are created to check feasibility of planned operations
	2.7 Information from previous lifts is used in developing operational plan
	2.8 Range of alternatives is considered to ensure effective and safe lift

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.9	Unsolicited, irrelevant information is disregarded to focus on task at hand
	2.10	Need for additional/specialised equipment is ascertained and arrangements are made for collection/delivery to site
	2.11	Communications system is determined and all team members are briefed on its use when conducting lift
3 Set up lift	3.1	Site measurements and SWL/WLL are checked to verify accuracy
	3.2	Operating and emergency controls are checked to ensure crane is in safe working order
	3.3	Appropriate personal protective equipment is selected and worn in accordance with manufacturer specifications and site requirements
	3.4	Site is isolated as required and assistance is sought to ensure public safety as required
	3.5	Other personnel on site are directed, as required to ensure risks to personnel and equipment are minimised
	3.6	Variables that affect operation predictability are eliminated wherever possible
4 Work effectively in a team	4.1	Consultation with all team members is sought in developing operational plan
	4.2	Ideas are discussed and evaluated with team members to determine viability and to reach consensus on an effective plan
	4.3	Individual roles and responsibilities are clarified and agreed
	4.4	Other team members are assisted as required, to ensure operation can be completed safety and efficiently
5 Lift and move load	5.1	Nominated authorised person is recognised as being in control and instructions are followed
	5.2	Test runs are conducted as required to ensure a safe lift
	5.3	Load is hoisted and lowered into position using crane movements in accordance with the appropriate Australian Standard

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.4	Danger is anticipated by monitoring crane and load, and instruction to stop operation is given, when there are concerns lift is not proceeding as planned
	5.5	Potential impact of change in one area of operation on lift as a whole, is recognised
	5.6	In unanticipated situations, contribution is made to developing alternative operational plan
6 Follow up on job	6.1	Specialised equipment is checked and re-stored in accordance with workplace procedures
	6.2	Operation is reviewed in consultation with relevant personnel and contribution is made to recommendations for review of procedures as required
	6.3	Need for further after-job debriefing or counselling is recognised and appropriate action is taken
	6.4	Records are completed promptly in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID4032A Plan and conduct specialised lift.

Assessment Requirements for TLID4032 Plan and conduct specialised lift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- calculating safe working load (SWL) or working load limit (WLL)
- communicating and working effectively with others
- completing relevant documentation
- developing contingency plans
- ensuring use of required personal protective equipment conforms to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapt to differences in equipment in accordance with workplace operating procedures
- planning own work, predicting consequences and identifying improvements
- prioritising and multi-tasking work
- providing leadership and working collaboratively with others
- reading and interpreting relevant instructions, procedures, information, technical data, manuals and signs
- reporting and/or rectifying problems promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- calculations for SWL or WLL
- focus of operation of work systems and equipment
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- hazard management, consistent with the principle of hierarchy of control
- high risk work licence requirements
- problems that may arise when planning and supervising a specialised lift using a mobile crane and actions that should be taken to prevent or solve these problems
- relevant agreements, codes of practice or other legislative requirements
- relevant road rules, regulations, permit and licence requirements for mobile crane operation
- relevant WHS/OHS and environmental procedures and regulations
- safe work method statement
- workplace procedures for crane crews
- workplace procedures for setting up and rigging a mobile crane at a worksite.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- mobile crane, of the type currently used in industry
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID4048 Top load a dangerous goods tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to top load a tanker carrying liquid dangerous goods.

It includes loading a top load vehicle, working at heights on a dangerous goods tanker and completing load documentation.

This unit applies to those working in the road transport industry and transporting petroleum products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIC0001 Operate chemical tanker

or

TLIC0002 Operate fuel tanker

or

TLIC0003 Operate LP gas tanker

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Top load vehicle	1.1 Prior load is determined and prescribed switch load procedures are followed
	1.2 Product type and quantity to be loaded are checked to determine whether they are in accordance with delivery documentation, and are within safe carrying capacity and gross weight limitations of vehicle
	1.3 Discrepancies are rectified in accordance with company procedures
	1.4 Locations of emergency equipment and emergency procedures are identified before loading commences
	1.5 Personal protective equipment (PPE) is identified and worn in accordance with regulatory and site requirements
	1.6 Vehicle is checked to ensure it is correctly placarded for product to be loaded
	1.7 Product transfer equipment is connected and bonded in accordance with organisational and site procedures
	1.8 Site procedures are followed for commencement of loading process
	1.9 Vehicle is safely loaded with product using only approved equipment, in accordance with organisational requirements and site procedures
	1.10 Loading process and fill levels are monitored in accordance with company and site procedures
	1.11 At completion of loading process, all valves on vehicle and load-out facility are closed, and all transfer equipment is secured in accordance with site procedures
	1.12 Loaded vehicle is checked to be within legal weight limitations, and compliant with regulatory requirements and company procedures
	1.13 Pre-departure inspection of loaded vehicle is undertaken to ensure hoses, pipes and cables are disconnected and secure,

© Commonwealth of Australia, 2025 Industry Skills Australia

			brake interlock is deactivated, and any obstacles are cleared in accordance with company procedures
		1.14	Site is restored to a clean and tidy condition in accordance with site procedures
		1.15	Vehicle is moved from loading area without damage to property or injury to people in accordance with site procedures
2	**Work at heights on a dangerous goods tanker**	2.1	Prior to ascending or descending vehicle ladders, required fall restraint safety equipment is connected to vehicle in accordance with safety regulations and site procedures
		2.2	When operating on top of vehicle, all fall restraint safety equipment is connected, in accordance with site and safety regulations
3	**Complete load documentation**	3.1	Pre-load documentation is submitted prior to loading and is checked for accuracy of expected load
		3.2	Shipping documentation is completed, checked and secured in vehicle, in accordance with organisational and legislative requirements, at completion of load

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID4048A Top load a dangerous goods tanker.

Assessment Requirements for TLID4048 Top load a dangerous goods tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying manual handling practices
- applying correct methods for ascending and descending a tanker ladder
- checking integrity of dangerous goods by checking:
  - caps
  - hatches
  - valves
- completing documentation required for top loading a dangerous goods tanker including:
  - dangerous goods shipping documentation, current Australian Dangerous Goods (ADG) Code
  - relevant Australian Standards and certification requirements
  - relevant internal data entry books, including logbooks, data sheets and load sheets
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - workplace policies and procedures
- ensuring gross weight limitation of a tanker complies with:
  - manufacturer safe fill levels and vehicle mass limits
  - National Heavy Vehicle Accreditation Scheme (NHVAS) requirements
  - state/territory legislation
  - transport emergency response plan (TERP)
- identifying and preparing product transfer tanker equipment including:
  - bonding devices
  - brake interlock
  - delivery hoses
  - external piping and fittings
  - overfill protection systems
  - valves

    - warning devices
- identifying dangerous goods and hazardous materials
- identifying product and volume of goods
- using emergency equipment including:
    - emergency shutdown controls
    - evacuation controls
    - eye wash equipment and safety showers
    - fire extinguishers
    - spill control equipment
- using personal protective equipment (PPE) and safety measures including:
    - chemical resistant gloves
    - communications switch
    - high visibility clothing and safety vest
    - intrinsically safe, full cover protective clothing
    - safety headwear and footwear
    - safety glasses.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislative procedures and codes including:
    - current ADG Code
    - environmental protection legislation and regulations
    - fatigue management regulations
    - relevant state/territory roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
    - road rules
    - work health and safety (WHS)/occupational health and safety (OHS) legislation
- control operation
- placarding requirements for dangerous goods carrying vehicles
- potential hazards when top loading a dangerous goods tanker
- preparation methods for tanker equipment
- safe loading procedures
- TERP
- working at heights controls and safe methods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Practical assessment must be in an appropriate vehicle such as:

- AB-Quad
- B-Double combinations
- B-Triple
- rigid vehicle
- road train combinations
- semi combinations
- truck and dog combinations.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, TERP, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry
- vehicle as listed above.

Online assessment is not suitable for final assessment of this unit of competency.

TLID4049 Bottom load a dangerous goods tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to bottom load a dangerous goods tanker.

It includes conducting pre-loading activities, preparing for loading, bottom loading tanker and leaving loading rack.

This unit applies to those working in the road transport fuel/gas industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIC0001 Operate chemical tanker

or

TLIC0002 Operate fuel tanker

or

TLIC0003 Operate LP gas tanker

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Conduct pre-loading activities	1.1 Documentation is submitted prior to loading and is checked for accuracy of expected load
	1.2 Loading area is checked for hazards
	1.3 HAZCHEM signage and product tumblers are checked or changed in accordance with regulatory requirements, and site and organisational procedures
	1.4 Integrity of dangerous goods is checked prior to loading, in accordance with workplace procedures
2 Prepare for loading	2.1 Loading console instructions are followed and authorisation is gained
	2.2 Tanker equipment is prepared for loading in accordance with organisational and facility procedures
	2.3 Product and volume to be loaded are selected in accordance with loading documents
	2.4 Final check of product type and quantity to be loaded is made in accordance with delivery documentation, safe carrying capacity, and gross weight limitations of tanker
	2.5 Discrepancies are rectified in accordance with organisational procedures
3 Bottom load tanker	3.1 Locations of emergency equipment and emergency procedures are identified before loading commences
	3.2 Vapour recovery product transfer equipment is connected in accordance with organisational requirements
	3.3 Site procedures are followed for commencement of loading process
	3.4 Tanker is safely loaded with product using only approved equipment, in accordance with organisational requirements and site procedures
	3.5 Loading process is manoeuvred at console in accordance with organisational and site procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.6	Valves on tanker and load-out facility are closed, and all transfer equipment is secured at completion of loading process in accordance with site procedures
4 Leave loading rack	4.1	Loaded tanker is checked to ensure it is within legal weight limitations and complies with regulatory and organisational procedures
	4.2	Pre-departure inspection of loaded tanker is undertaken to ensure all hoses, pipes and cables are disconnected and secured, brake interlock is deactivated, and any obstacles are cleared, in accordance with organisational procedures
	4.3	Tanker is slowly moved from loading area without damage to property or injury to people, in accordance with site procedures
	4.4	Tanker is parked in designated area and checked to ensure correct placarding
	4.5	Load documentation is completed, checked and secured in tanker in accordance with regulatory requirements
	4.6	Tanker is driven safely from site in accordance with site procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID4049A Bottom load a dangerous goods tanker.

Assessment Requirements for TLID4049 Bottom load a dangerous goods tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking integrity of dangerous goods by checking:
  - caps
  - hatches
  - valves
- completing documentation required for bottom loading a dangerous goods tanker including:
  - dangerous goods shipping documentation, current Australian Dangerous Goods (ADG) Code
  - relevant Australian Standards and certification requirements
  - relevant internal data entry books, including logbooks, data sheets and load sheets
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - workplace policies and procedures
- ensuring gross weight limitation of a tanker complies with:
  - manufacturer safe fill levels and vehicle mass limits
  - National Heavy Vehicle Accreditation Scheme (NHVAS) requirements
  - state/territory legislation
  - transport emergency response plan (TERP)
- identifying and preparing product transfer tanker equipment including:
  - bonding devices
  - brake interlock
  - delivery hoses
  - external piping and fittings
  - master switch
  - pressure and ullage gauges
  - pressure vessels
  - scully systems

© Commonwealth of Australia, 2025 Industry Skills Australia

  - valves
  - warning devices
- identifying dangerous goods and hazardous materials
- identifying volume of goods
- making accurate estimates
- reading and interpreting complex legislative and regulatory requirements
- TERP
- using emergency equipment including:
  - emergency shutdown controls
  - evacuation controls
  - eye wash equipment and safety showers
  - fire extinguishers
  - spill control equipment
- using personal protective equipment (PPE) and safety measures including:
  - chemical resistant gloves
  - communications switch
  - high visibility clothing and safety vest
  - intrinsically safe, full cover protective clothing
  - safety headwear and footwear
  - safety glasses.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislative procedures and codes including:
  - current ADG Code
  - environmental protection legislation and regulations
  - fatigue management regulations
  - relevant state/territory roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
  - road rules
  - work health and safety (WHS)/occupational health and safety (OHS) legislation
- control operations
- placarding requirements for parking procedures
- potential hazards when bottom loading a dangerous goods tanker
- preparation methods for tanker equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant WHS/OHS and environmental procedures and regulations
- safe loading procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID4050 Discharge a dangerous goods tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to pump discharge a dangerous goods tanker.

It includes conducting pre-discharge activities, preparing for discharge, following discharge requirements and procedures, working at heights on a dangerous good tanker and finishing unloading.

This unit applies to those working in the road transport fuel/gas industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Conduct pre-discharge activities**	1.1 Delivery location is checked against site plan and delivery job sheet
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Tanker is positioned to enable discharging to be carried out in accordance with site procedures without injury to people or damage to property
		1.4 Park brake is applied, engine turned is off and battery is isolated, as required
		1.5 Personal protective equipment is used in accordance with site and organisational procedures
		1.6 Site authority to proceed is obtained, as required, and followed in accordance with site organisational procedures
2	**Prepare for discharging**	2.1 Delivery location is checked for hazards and set up, in accordance with regulatory requirements and organisational procedures
		2.2 Lids on spillbox are lifted and spillbox is drained of liquid
		2.3 Identification (ID) markers and tumblers are checked against safe discharge unload plan to verify load will fit, as required
		2.4 Hoses are removed from tanker and test date is checked
3	**Follow discharge requirements and procedures**	3.1 Site product type, quantity and discharged quantity are checked to determine whether receiving vessel can accept to load, and discrepancies are rectified in accordance with organisational procedures
		3.2 Locations of emergency equipment and emergency procedures are identified before discharging commences
		3.3 Product transfer equipment is connected in accordance with regulatory and organisational requirements
		3.4 Internal valve is opened
		3.5 Checks are completed prior to commencing discharge, in accordance with organisational procedures
		3.6 Valve is fully opened and product is discharged safely, in accordance with regulatory and organisational requirements and site procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.7	Discharging process is monitored in accordance with regulatory requirements, and company and site procedures
	3.8	Tanks and compartments are changed in accordance with regulatory and organisational requirements and site procedures
4 Work at heights on a dangerous tanker	4.1	Safety equipment is connected to tanker prior to ascending tanker ladders, as required, in accordance with safety regulations and site procedures
	4.2	Safety equipment is connected when operating on top of tanker, as required, in accordance with site and safety regulations
	4.3	Work is completed in accordance with regulatory and organisational requirements and site procedures
5 Finish unloading	5.1	All valves on tanker and receiving facility are closed and transfer equipment is secured in accordance with site procedures
	5.2	Site is re-dipped and readings are recorded on delivery documentation
	5.3	Site is restored to a clean and tidy condition in accordance with site procedures and site defects are reported
	5.4	Final safety inspection of tanker and site is conducted
	5.5	Tanker is moved from unloading area without damage to property or injury to people and in accordance with site procedures
	5.6	Delivery documentation is completed, checked and adjusted, and secured in tanker in accordance with regulatory and organisational requirements at completion of discharge
	5.7	Truck and tanker are checked to ensure correct placarding before departure
	5.8	Site plan is followed for exiting site

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Requirements for TLID4050 Discharge a dangerous goods tanker

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying correct methods for ascending and descending a tanker ladder
- completing documentation required for discharging a dangerous goods tanker including:
  - dangerous goods shipping documentation, current Australian Dangerous Goods (ADG) Code
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - relevant Australian Standards and certification requirements
  - workplace policies and procedures
  - relevant internal data entry books, including logbooks, data sheets and load sheets
- connecting transfer equipment
- identifying and interpreting containers and goods coding, markings and emergency information panels for mode of transport/storage selected
- reading and interpreting relevant instructions, procedures, information and signs
- using emergency equipment including:
  - emergency shutdown controls
  - evacuation controls
  - eye wash equipment and safety showers
  - fire extinguishers
  - spill control equipment
- using personal protective equipment and safety measures including:
  - chemical resistant gloves
  - communication devices
  - evacuation controls
  - high visibility clothing and safety vest
  - intrinsically safe, full cover protective clothing
  - safety headwear and footwear

- safety glasses.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislative procedures and codes
  - current ADG Code
  - environmental protection legislation and regulations
  - fatigue management regulations
  - relevant state/territory roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
  - road rules
  - work health and safety (WHS)/occupational health and safety (OHS) legislation
- characteristics of various classes of explosives and dangerous goods relevant to handling the class of explosives and dangerous goods concerned
- compatibility of various types of explosives and dangerous goods
- control operation
- relevant WHS/OHS and environmental procedures and regulations
- risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risks
- workplace procedures and policies for loading and unloading explosives and dangerous goods.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in *the Standards for Registered Training Organisations* current at the time of assessment.

TLIE1003 Participate in basic workplace communication

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to participate effectively in basic workplace communication as an integral part of routine work in the context of the workplace concerned.

It includes communicating information about routine tasks, processes, events or skills; participating in group discussions to achieve appropriate work outcomes; and representing group views to others.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Communicate information about	1.1 Appropriate form of communication is selected

© Commonwealth of Australia, 2025 Industry Skills Australia

routine tasks, processes, events or skills	and used to meet required purpose
	1.2 Effective listening skills are used
	1.3 Questions are used to gain additional information and to clarify understanding
	1.4 Sources of information relevant to communication are identified
	1.5 Information is selected and sequenced correctly
	1.6 Verbal and written reporting is undertaken as required
	1.7 Communication is undertaken in familiar and unfamiliar situations, and with familiar and unfamiliar individuals and groups
2 Participate in group discussions to achieve appropriate work outcomes	2.1 Responses are sought from and ideas are shared with others in the group
	2.2 Constructive contributions are made in terms of the process involved
	2.3 Goals or outcomes are communicated and/or recorded
3 Represent group views to others	3.1 Group views and opinions are interpreted and clarified as required
	3.2 Context of and reasons for representing group views to others are confirmed and explained
	3.3 Groups views and opinions are accurately reflected in representation to others

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIE1003 Participate in basic workplace communication

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when completing basic work activities
- completing relevant documentation
- modifying communication activities depending on operational contingencies and environments
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and/or rectifying identified problems in communication promptly, in accordance with workplace procedures
- responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic communication techniques including barriers to effective communication and how to overcome them
- basic principles of effective communication
- protocols and procedures for communicating with others using relevant workplace technology
- relevant procedures and duty of care requirements
- techniques for communicating effectively with people whose first language is not English

© Commonwealth of Australia, 2025 Industry Skills Australia

- techniques for communicating effectively with people whose understanding of English is limited
- typical communication problems and appropriate action and solutions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE1005 Carry out basic workplace calculations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out basic routine workplace calculations.

It includes carrying out required mathematical operations; preparing basic estimates of mass, size and volume; and interpreting basic graphical representations of mathematical information. It also includes calculations for routine industry-related tasks using manual and electronic processes.

It specifically includes the skills and knowledge needed to estimate/calculate manual load shifting requirements. Calculations are carried out as an integral part of routine work in the context of the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established mathematical principles and techniques in day-to-day work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Carry out calculations	1.1 Items are counted singly and in batches, and sorted numerically as required
	1.2 Calculations needed to complete work tasks are performed using the four basic processes of addition, subtraction, multiplication and division
	1.3 Calculations involving fractions, percentages and mixed numbers, along with using the four basic processes, are performed as required
	1.4 Calculator, numeric keypad or computer are used to perform workplace tasks
	1.5 Numerical information is self-checked and corrected for accuracy
2 Prepare estimates	2.1 Quantities of materials and resources required to complete a work task are estimated
	2.2 Time needed to complete a work activity is estimated
	2.3 Accurate estimates for work completion are made
3 Interpret graphical representations of mathematical information	3.1 Information represented in symbols, diagrams and pictorial representations is recognised
	3.2 Recognised information represented in symbols, diagrams and pictorial representations is interpreted and acted upon

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIE1005 Carry out basic workplace calculations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- carrying out basic calculations as they relate to the job role
- completing documentation related to work activities
- identifying the most common forms of calculations as they relate to the job role
- interpreting graphical representations of mathematical information
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading and interpreting instructions, procedures and information relevant to basic workplace calculations
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic mathematical operations and techniques
- procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- relevant procedures and duty of care requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- typical mathematical problems, and appropriate action and solutions
- ways of representing basic mathematical information.

TLIE2001 Present routine workplace information

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to present routine workplace information in accordance with workplace requirements as part of work activities in the transport and logistics industry.

It includes preparing and presenting routine workplace documents as well as preparing and delivering oral presentations.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

- identifying, selecting and using relevant equipment, processes and procedures when preparing and presenting routine workplace information
- modifying activities depending on operational contingencies and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures and information relevant to preparing and presenting routine workplace information
- receiving, acknowledging and sending messages with available communications equipment
- using computer software presentation packages for slides, overhead projector, computer presentations
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documents, forms and oral presentations required as part of routine workplace activities
- problems that may occur when preparing and presenting routine workplace information and appropriate action that can be taken to resolve these problems
- operational work systems, equipment, management and site operating systems for preparing and presenting routine workplace information
- workplace procedures and policies for preparing and presenting routine workplace information.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
-

TLIE2007 Use communications systems

Modification History

Release. ISC Upgrade - Minor edits to text in Performance Criteria.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use communications systems in accordance with relevant regulations and workplace procedures.

It includes identifying system features, operating a communications system effectively, using appropriate communications system protocols, maintaining equipment and completing documentation.

It involves applying established communication principles and practices, and using local technical, colloquial language and vocabulary in day-to-day communication.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

outcomes.	demonstrate achievement of the element.
1 Check communications system requirements	1.1 System features and control functions are identified
	1.2 Impact of battery and signal levels on system's capability is determined
	1.3 Mobile equipment is set up to optimise communication
	1.4 Channels are selected appropriate to the communication as required
2 Communicate using communications technology	2.1 System checks are carried out to confirm communications system is operational, in accordance with manufacturer's instructions and workplace procedures
	2.2 Communications system is operated safely in accordance with manufacturer's instructions, workplace procedures and regulatory requirements
	2.3 Telephone and radio security is maintained in accordance with workplace procedures
	2.4 Channel selection is appropriate for the location and type of communication
	2.5 Messages are transmitted clearly and precisely, and user ethics and protocols are followed
	2.6 Public address (PA) system is used, as required, to communicate with passengers and/or crew in accordance with standard operating procedures
	2.7 Incoming messages are received and answered promptly and courteously in accordance with operating procedures and regulatory requirements
	2.8 Appropriate language, protocols, procedures and codes are followed when using communications systems
	2.9 Received messages are interpreted and recorded in accordance with workplace procedures
	2.10 Clear and unambiguous vocal communication is used
3 Maintain communications equipment operational status	3.1 Equipment is checked and maintained in working order in accordance with workplace procedures
	3.2 Minor communications systems faults are promptly

© Commonwealth of Australia, 2025 Industry Skills Australia

		identified, diagnosed, and repaired or reported in accordance with workplace procedures
4 Complete documentation	4.1	Appropriate communications records are maintained in accordance with workplace procedures
	4.2	Communications records are stored/filed as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE2007A Use communication systems.

Assessment Requirements for TLIE2007 Use communications systems

Modification History

Release. ISC Upgrade - Minor edits to text in Performance Criteria.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when using communications systems
- communicating and working effectively with others using available communications systems
- completing documentation related to work activities when using communications systems
- following communications security procedures
- identifying and using required communications technology
- implementing contingency plans
- modifying activities depending on differing operational contingencies, risk situations and environments
- monitoring communications equipment performance and taking appropriate action as required
- planning, monitoring and prioritising work activities in terms of planned schedule, including predicting consequences and identifying improvements
- operating and adapting to differences in communications equipment in accordance with standard operating procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- reading, interpreting and following communications systems instructions, procedures and relevant legislation
- using communications equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic communication techniques including barriers to effective communication and how to overcome them
- basic principles of effective communication
- features of various communications systems
- minor routine maintenance procedures for communications equipment
- pre-operational checks for communications systems and equipment
- procedures and protocols for using communications systems during an emergency
- protocols and procedures for communicating with others using relevant communications technology including PA systems
- relevant work health and safety work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- relevant procedures and duty of care requirements
- typical problems that may occur when using communications systems, and appropriate action and solutions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIE2008 Process workplace documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to process workplace documentation in accordance with workplace requirements. Processing documentation is carried out as an integral part of work operations in the context of the workplace concerned.

It includes planning and completing documentation to fulfil an identified purpose.

Work may be performed in team and autonomous working situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan documentation	1.1 Purpose of workplace documentation is identified and confirmed
	1.2 Information for completing workplace documentation is

TLIE2029 Conduct workplace information briefings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct workplace information briefings in accordance with organisational requirements.

It includes preparing and delivering workplace briefings, and completing routine workplace documents as part of routine work.

Work is performed under some supervision generally in a team environment. This unit applies to formal types of briefings such as pre-work briefs, pre-start briefs, toolbox talks, worksite protection briefs and safe work method statement safety briefings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Prepare briefing**	1.1	Purpose of the brief and target audience are identified
		1.2	Sources of information are identified and accessed
		1.3	Information is collected and prepared for presentation in a logical order
		1.4	Briefing style is selected to match purpose and organisational guidelines
		1.5	Information is checked to ensure it is concise and appropriate for target audience
		1.6	Hazards are identified, risks are assessed and control measures are implemented
		1.7	Documents to be issued are checked to ensure they meet organisational requirements
2	**Deliver briefing**	2.1	Purpose of briefing is conveyed to audience
		2.2	Information is presented in accordance with organisational procedures
		2.3	Information is delivered clearly and concisely
		2.4	Appropriate questioning techniques are used to confirm understanding
3	**Complete documentation**	3.1	Required documentation procedures and processes are confirmed
		3.2	Documentation is filled in legibly and proofread
		3.3	Documentation is processed in accordance with organisational policies and procedures

Foundation Skills

Assessment Requirements for TLIE2029 Conduct workplace information briefings

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively with others
- identifying job hazards and documenting required actions to minimise, control or eliminate identified hazards
- modifying activities depending on operational contingencies and environments
- preparing and delivering workplace briefings and completing routine workplace documents
- reading and interpreting relevant instructions, procedures and information
- reporting and rectifying issues promptly, in accordance with regulatory requirements and organisational procedures
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communication barriers and how to deal with them
- documents, forms and presentations required for workplace information briefings
- effective communication techniques, such as open and closed questioning, active listening and positive body language
- organisational procedures and policies for preparing and presenting workplace information briefings
- problems that may occur when preparing and presenting workplace information briefings, and action that can be taken to resolve these problems.

TLIE2032 Assess removal load

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assess a removal load for pre-packing across a variety of removal contexts, in accordance with workplace procedures, relevant standards and certification requirements.

It includes selecting packing materials and equipment, identifying potential hazards, identifying discrepancies against inventory, ensuring all pre-packed items are ready for uplift, and completing all relevant records.

Work is normally performed under general supervision. Defined accountability and responsibility for self and others in achieving the required outcomes is involved.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and calculation

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Check removal requirements	1.1 Potential internal hazards are identified and appropriate action is planned to minimise risk or injury and/or damage to items, equipment or structure
	1.2 In consultation with client, removal consultant/client inventory is checked for accuracy and discrepancies are made known to appropriate personnel in accordance with workplace procedures
	1.3 Special requirements are identified in consultation with client and are documented in accordance with workplace procedures
	1.4 Client is advised of any pre-damaged or damage-risked items and appropriate documentation is completed
	1.5 Items unacceptable for removal are identified and client is appropriately informed
2 Complete uplift process	2.1 Pre-packed items of furniture and effects are stored appropriately at client premises to ensure orderly and efficient uplift
	2.2 Records are updated accurately, legibly and promptly in accordance with workplace procedures
	2.3 Records are checked to ensure they include required information relevant to the job
	2.4 Changes to consultant appraisal are confirmed with office in accordance with workplace procedures
	2.5 Confirmed items are appropriately prepared for travel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIE2032 Assess removal load

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- checking requirements against inventory, ensuring items are ready for uplift and completing records
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- working systematically with required attention to detail without injury to self or others or damage to furniture or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- client service requirements including appropriate language, courtesy, behaviour and problem solving
- company work procedures
- furniture removal procedures and codes of practice
- hazards and related hazard control measures
- items unsuitable for removal and reasons for this unsuitability
- records and signed agreements completed during a removal load assessment and related procedures
- relevant agreements and legislation applicable to furniture removal
- relevant state/territory procedures and codes:
  - environmental protection legislation and regulations
  - road and traffic authority vehicle driver licence requirements
  - traffic Act and related regulations
  - work health and safety (WHS)/occupational health and safety (OHS) legislation and regulations
- special requirements that may need to be addressed in a removal and related procedures to be applied
- uplift requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE3002 Estimate/calculate mass, area and quantify dimensions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to estimate and calculate mass, area and quantify dimensions of loads in accordance with workplace requirements and relevant regulations, as part of work functions within the transport and logistics industry.

It includes estimating loads to be transported or placed in storage, estimating load limits of transport and/or storage systems, and organising a load.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Estimate loads for transport or storage	1.1 Order forms/work orders are read and requirements are noted
	1.2 Shape, balance characteristics, dimensions and mass of load/s are identified
	1.3 Area/volume required for storage is estimated
	1.4 Weights and volumes are totalled to calculate load requirements of transport or storage system
2 Estimate load limits of transport and/or storage	2.1 Allowable load limits for storage and/or transport systems are identified in accordance with workplace procedures
	2.2 Capacity of transport and storage systems in terms of mass, area and volume is calculated
3 Organise load	3.1 Load/s is restricted to allowable range
	3.2 Load/s is spread to ensure safe weighting on pallets, trucks, platforms or other storage or transport systems
	3.3 Appropriate workplace documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE3002A Estimate/calculate mass, area and quantify dimensions.

Assessment Requirements for TLIE3002 Estimate/calculate mass, area and quantify dimensions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying, selecting and using relevant calculators, computing and office equipment
- interpreting and following operational instructions and prioritising work
- performing basic mathematical operations required when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities including addition, subtraction, multiplication and division
- reading and interpreting relevant instructions, procedures, information and labels
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant to workplace activities
- documentation requirements for the workplace activities concerned
- focus of operation of work systems, equipment, management and site operating systems for transporting and/or storing goods and stock
- problems that may occur when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities, and appropriate action that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- workplace procedures and policies for estimating and/or calculating mass, area and volumes of loads, and transport and storage facilities, including the quantification of dimensions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIE3004 Prepare workplace documents

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare workplace documents and forms in accordance with workplace requirements and applicable regulations or codes, as part of work activities within the transport and logistics industry.

It includes planning and preparing simple workplace documents and gathering relevant information enabling the completion of a workplace form.

Work is performed under general supervision within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Plan workplace document**	1.1	Purpose and audience for document are identified
		1.2	Appropriate format for document is established to meet workplace requirements
		1.3	Relevant information is identified and selected for inclusion in document
2	**Prepare workplace document**	2.1	Document is drafted in accordance with workplace procedures and conventions for sentence construction, grammar, spelling, style, punctuation and vocabulary appropriate for reader/s
		2.2	Document is edited and presented in a final version appropriate to task
3	**Complete workplace forms**	3.1	Work related form/s is interpreted to identify information required for its completion
		3.2	Required information for completion of form is gathered from relevant sources in accordance with workplace procedures
		3.3	Form/s is completed in accordance with workplace policy and procedures, and applicable regulations and codes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE3004A Prepare workplace documents.

Assessment Requirements for TLIE3004 Prepare workplace documents

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to work activities
- reading and interpreting relevant instructions, procedures, information and labels
- reading, writing and comprehending simple statements in English
- working collaboratively with others
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- conventions for sentence construction, grammar, spelling, style and punctuation
- equipment and materials required for completing documents and forms, and instructions and precautions for their use
- format and layout of various documents and forms used in workplace activities
- relevant Australian and international codes of practice and regulations relevant to documents and/or forms being prepared
- relevant work health safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- workplace procedures and policies for completing documents/forms.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in *the Standards for Registered Training Organisations* current at the time of assessment.

TLIE3009 Use pilot and escort communication

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use pilot and escort communications equipment and resources, in accordance with relevant state/territory roads and traffic authority licence/permit requirements and regulations.

It includes deploying/operating equipment to communicate with drivers of oversized/overmassed vehicles and other relevant personnel during pilot and escort duties, and maintaining all required records.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Operate communications equipment and resources	1.1 Communications equipment and resources for use in piloting and escorting duties are deployed/operated in accordance with relevant rules, regulations and manufacturer specifications
	1.2 Messages are transmitted and received clearly and precisely with and required ethics and protocols are observed
	1.3 Backup communications strategies are established and relevant personnel are informed of operating and coordination procedures
	1.4 Alternative communications strategies are used to communicate messages in response to communications failures and problems
2 Maintain records	2.1 Records on oversized and overmassed vehicle movements are maintained in accordance with legal and workplace documentation requirements
	2.2 Damage and other incidents are reported clearly and legibly to appropriate authorities in accordance with relevant rules, regulations and company policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIE3009 Use pilot and escort communication

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of communications equipment and resources and taking appropriate action as required
- operating communications equipment, signage and other communications resources required during piloting and escorting operations
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing communications equipment in terms of maintenance schedule and standard operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- available backup communications strategies
- documentation requirements for piloting and escorting oversized and overmassed loads
- permit and licence requirements applicable for piloting and escorting oversized and overmassed loads
- pre-operational checks required for communications equipment, signage and other communications resources needed for piloting and escorting operations, and related action
- procedures for communication during piloting and escorting operations
- procedures to be followed in a piloting or escorting emergency
- relevant state or territory roads and traffic authority road rules, regulations, permit and licence requirements for piloting and escorting oversized and overmassed loads
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- types of communications equipment, signage and other communications resources required for piloting and escorting operations, and their use.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE3010 Estimate furniture removal jobs

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to estimate furniture removal jobs in accordance with organisational procedures.

It includes estimating removal job requirements, interacting with customers about removal job, and preparing removal job documentation. Estimates may include estimates of the volume of a furniture removals job and calculations of expenses, time and resources.

Work is normally performed unsupervised or under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Estimate removal job	1.1 Accurate and complete inventory is taken, which records all

requirements	furniture and effects to be removed
	1.2 Type of goods to be removed is accurately defined so appropriate arrangements for fragile or dangerous goods can be made, in accordance with organisational procedures and legislative requirements
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Job requirements are estimated in relation to size of van, amount of time required, labour required, hazards involved, and other resources needed to complete the job
	1.5 Job costs are calculated on the basis of volume, time and distance
2 Interact with customers regarding removals	2.1 Customer requests and queries are courteously handled face-to-face and on the telephone, in accordance with organisational procedures
	2.2 Customers are appropriately briefed about organisational details, legal liability, insurance and contractual details of removal job, in accordance with organisational procedures
	2.3 Personal contact with customer is maintained during and following removal to ensure customer needs are satisfied and concerns are addressed
3 Prepare documentation for removal job	3.1 Job quotation is documented and submitted to customer as required, in accordance with organisational procedures
	3.2 Removal is scheduled and booking staff are informed as required
	3.3 Removal job is audited against pre-job estimates and recommendations for improvements are made as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIE3010 Estimate furniture removal jobs

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- carrying out required calculations
- communicating effectively with others
- completing relevant documentation
- estimating mass, volume and area and to quantify dimensions
- identifying equipment used in removals, how it is applied and the procedures involved
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following instructions, procedures, information and signs
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- customer service requirements including appropriate language, courtesy, behaviour and problem solving
- documentation to be completed when estimating a removal job
- furniture removal estimation procedures and related codes of practice
- hazards that may be experienced on a removal job and related hazard control measures
- items unsuitable for removal and associated reasons
- relevant agreements and legislation

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant procedures and duty of care requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection legislation and policies
- special requirements that may need to be addressed in a removal and the related procedures to be adopted.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE3012 Consolidate manifest documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to consolidate manifest documentation in accordance with relevant codes of practice and regulations for freight carriage.

It includes identifying and processing documentation required in accordance with workplace procedures.

Work is performed under general supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

TLIE3015 Undertake rigger/dogger and driver communication

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to enable effective communication between riggers or doggers and drivers, and to lift and move loads using slewing and non-slewing mobile cranes up to and including 20 tonnes, in a variety of operational contexts.

It includes establishing an agreed communications system, trialling and configuring communications and communicating effectively during a lift.

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes up to and including 20 tonnes.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Establish agreed communications system	1.1 Forms of signals/communication conforming to Australian Standards and codes of practice are identified
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Communication methods to be used in crane operations are agreed with relevant personnel
2 Trial and configure communications	2.1 Communication is trialled, adjusted and/or confirmed as required to ensure a safe and effective lift
	2.2 Communications equipment is checked for correct operation and configured in line with legislative and workplace requirements
	2.3 Defective equipment is tagged, rejected and reported to authorised personnel for corrective action
	2.4 Signals/communications are given both within sight and out of sight of crane operator
3 Communicate effectively during a lift	3.1 Communication methods and communications systems are used during a lift in accordance with regulatory requirements, manufacturer instructions and workplace procedures
	3.2 Problems identified during communication are reported and immediate action is initiated in accordance with workplace procedures and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIE3015 Undertake rigger/dogger and driver communication

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others during a lift
- identifying and correctly using equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning own work including predicting consequences and identifying improvements
- prioritising and multi-tasking work
- reading and interpreting relevant instructions, procedures, regulations, information and signals
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others during a lift
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communications systems used during a lift
- methods used to signal movement of the load during a lift
- mobile crane applications, capacities, configurations, safety hazards and control measures
- problems that may occur when communicating during a lift and associated action that can be taken to address these problems concerned
- relevant road rules, regulations, permit and licence requirements for mobile crane operations
- risks and hazards involved in mobile crane operations and associated action that can be taken to eliminate or minimise the risk
- workplace procedures and statutory regulations concerning communication between a rigger or dogger and a mobile crane driver before and during a lift.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE3016 Estimate/calculate load shifting requirements for a mobile crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to estimate/calculate load shifting requirements for mobile crane, in accordance with relevant state/territory authority licence/permit requirements and regulations for mobile crane operations.

It includes carrying out required calculations, preparing estimates of loads, and interpreting graphical representations of mathematical information.

Work is performed with limited or minimum supervision. It involves the application of routine principles, procedures and regulations to estimate/calculate load shifting requirements for a mobile crane.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify mathematical information and tools used in the workplace	1.1 Dimensions and/or weights to be measured are identified from work procedures and, as required, work order forms
	1.2 Units of measurement for allowable safe working load (SWL) and working load limits (WLL) for load shifting are identified from crane load chart
	1.3 Information presented in mathematical symbols, diagrams and pictorial representations is recognised, interpreted and used to complete workplace tasks
	1.4 Measuring equipment, features and/or scales and units of measurement are selected as appropriate for task and process
2 Estimate and calculate requirements for load shifting	2.1 Appropriate methods are selected to perform calculations required to complete workplace tasks, including addition, subtraction, multiplication, division, fractions, decimals, percentages and mixed numbers
	2.2 Quantities of materials and resources required to complete work task are calculated
	2.3 Load balance characteristics are identified
	2.4 Time needed to complete a work activity is estimated
	2.5 Calculations required for weight, reach, radii, boom and jib configurations are undertaken and checked for conformity with crane load chart information
	2.6 Load spread is estimated/calculated to ensure safe weighting on pallets, trucks, platforms or other storage or transport systems
	2.7 Measuring instruments are read to limit of tool accuracy
3 Complete documentation using mathematical information	3.1 Appropriate workplace documentation is completed using recognised symbols and mathematical terms for work tasks
	3.2 Numerical information is self-checked and corrected for accuracy

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE3016A Estimate/calculate load shifting requirements for a mobile crane.

Assessment Requirements for TLIE3016 Estimate/calculate load shifting requirements for a mobile crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying mathematical procedures to estimate load shifting requirements including:
  - addition
  - subtraction
  - multiplication
  - division
  - percentages and fractions
- applying relevant legislation and workplace procedures
- calculating safe working load (SWL)/working load limits (WLL)
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment, processes and procedures
- interpreting and following operational instructions and prioritising work
- interpreting permit or licence requirements in terms of height, weight and type of lift
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- reading and interpreting mathematical scales, digital readouts, specifications and customer or workplace instructions
- reporting and/or rectifying any problems promptly, in accordance with workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- calculations for SWL/WLL
- hazard management that follows the principle of hierarchy of control
- high risk work licence requirements
- metric and, as required, imperial measurement systems
- mobile crane applications, capacities, configurations, safety hazards and limitations
- problems that may occur during a lift and associated action that can be taken to address these problems
- relevant regulations, permit and licence requirements for mobile crane operations
- risks and hazards involved in mobile crane operations and associated action that can be taken to eliminate or minimise the risk
- workplace procedures concerning estimating/calculating mobile crane load shifting requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIE3018 Maintain freight records

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to maintain freight records in accordance with regulations and workplace requirements, as part of work activities in the transport and logistics industry.

It includes recording all freight receipts and despatch documentation in manual and/or computer-based systems.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Record freight receipt	1.1 Freight is identified and consignment/cartnote details are confirmed

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Documentation is appropriately actioned in accordance with workplace procedures and legislative requirements
	1.3 Dangerous goods are identified and appropriate documentation is prepared and attached, in accordance with workplace procedures and legislative requirements
	1.4 Freight information is recorded on workplace freight tracking system
	1.5 Freight is directed for loading or storage as indicated by documentation
2 Record freight despatch	2.1 Documentation for freight despatch is checked, verified and forwarded in accordance with workplace procedures
	2.2 Loads not cleared due to incorrect documentation are appropriately processed, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE3018A Maintain freight records.

Assessment Requirements for TLIE3018 Maintain freight records

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- directing freight for loading and storage
- identifying freight including dangerous goods, and preparing and attaching appropriate documentation
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant computer, communications and office equipment when maintaining freight records.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international codes and regulations relevant for maintaining freight records, including the Australian Dangerous Goods (ADG) Code and relevant bond, quarantine or other legislative requirements
- documentation requirements for maintaining freight records including workplace freight tracking systems
- freight transport timetables, yard/terminal facilities, and site layout
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for

© Commonwealth of Australia, 2025 Industry Skills Australia

maintaining freight records
- problems that may occur and appropriate action that can be taken to resolve these problems
- types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- workplace procedures and policies for maintaining freight records, including relevant international code and regulation requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE3021 Work and communicate effectively with others

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to work and communicate effectively with others in accordance with relevant regulations and workplace procedures.

It includes communicating effectively to achieve required outcomes, working with others, communicating using technology, operating a communications system effectively, using appropriate communications protocols when using a system, and maintaining operational status of communications equipment.

Work is performed under some supervision, generally within a team environment. It involves the application of established communications principles and practice.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

outcomes.	demonstrate achievement of the element.
1 Communicate effectively to achieve required work outcomes	1.1 Effective listening skills are applied
	1.2 Questions are used to gain additional information and to clarify understanding
	1.3 Information received is clarified as required, interpreted and accurately communicated and/or reported in accordance with communications protocols and workplace procedures
	1.4 Communication is undertaken in varying situations and with familiar and unfamiliar individuals and groups
	1.5 Appropriate protocols and procedures are followed when using communications systems during emergencies
	1.6 Responses are sought and provided to others in a timely manner
2 Work with others	2.1 Forms of communication appropriate to the activity are used
	2.2 Assistance in completing activities is requested as required
	2.3 Contributions to achieving a required outcome are made
	2.4 Work is undertaken in accordance with specified procedures on an individual and shared basis as required
	2.5 Problems are discussed and resolved where possible through agreed and accepted processes
	2.6 Suggestions for improvements to processes are made and discussed within the team in accordance with workplace procedures
3 Communicate using technology	3.1 Communications system features and control functions are identified
	3.2 Appropriate equipment is selected as fit for purpose for intended communication
	3.3 Hazards are identified, risks are assessed and risk control measures are implemented
	3.4 Equipment is optimised for communication in

© Commonwealth of Australia, 2025 Industry Skills Australia

	accordance with organisational procedures and policies
	3.5 Equipment is operated safely in accordance with manufacturer instructions, workplace procedures and regulatory requirements
4 Operate communications systems	4.1 Telephone and radio security is maintained in accordance with workplace procedures
	4.2 Channel selection is made appropriate to location and type of communication
	4.3 Communications systems are used to communicate with passengers and crew as required, in accordance with operating procedures
5 Maintain operational status of communications equipment	5.1 Equipment is checked and maintained in working order in accordance with workplace procedures
	5.2 Minor communications equipment faults are promptly identified, diagnosed, and repaired or reported in accordance with workplace procedures
	5.3 Faulty communications equipment is reported and/or recorded in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE3021A Work and communicate effectively with others.

Assessment Requirements for TLIE3021 Work and communicate effectively with others

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- communicating effectively in different workplace situations and when using communications equipment
- contributing actively to achieving workplace outcomes
- identifying and using required communications technology in accordance with workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating, adapting to, and monitoring communications equipment and taking appropriate action as required, in accordance with operational procedures
- planning own communication style and identifying improvements
- reading and interpreting relevant instructions and procedures
- reporting and/or recording and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- working systematically with required attention to detail without damage to equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communications techniques including barriers to effective communication and how to overcome them
- features of various communications systems
- instructions, procedures, information and signs relevant to working with others as a team
- minor routine maintenance procedures for communications equipment
- pre-operational checks for communications systems and equipment
- procedures for promptly reporting and/or rectifying identified misunderstandings and problems, and appropriate ways of dealing with them in accordance with workplace procedures
- protocols and procedures for communicating with others using relevant communications technology
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- techniques for communicating effectively with customers with specific needs
- typical problems that may occur when using communications systems, and appropriate action and solutions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

TLIE3022 Complete workplace documents

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to collect, prepare, analyse and process workplace documents in accordance with workplace requirements. It includes collecting, preparing, analysing and interpreting information, and completing documents.

Documents are completed as an integral part of routine work in the context of the workplace concerned.

Work is performed under minimal supervision, generally in a team environment.

Work involves the application of established communications principles and practices, and may include using local technical language and vocabulary in documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Collect and prepare information	1.1 Purpose and audience for document are identified
	1.2 Appropriate document format is identified to meet organisational requirements
	1.3 Relevant information is collected for inclusion in document
	1.4 Active listening skills are applied when collecting information
	1.5 Questioning techniques are used to gain additional information and to clarify understanding
2 Interpret and analyse information	2.1 Relevant information is interpreted, analysed and collated as required for inclusion in document
	2.2 Draft is prepared as required in accordance with organisational procedures
3 Finalise workplace documents	3.1 Document is completed in accordance with organisational policies and procedures
	3.2 Document is edited and a final version appropriate to identified communication purpose is presented

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIE3022 Complete workplace documents

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying methods of analysis and interpretation for workplace documents
- applying relevant workplace procedures
- collecting relevant information for inclusion in workplace documentation
- reading and interpreting relevant instructions, procedures and information
- reporting and rectifying identified problems
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications techniques, including active listening and effective questioning
- format and layout of documents and forms used in workplace activities
- issues that may occur when preparing and completing workplace documents, and action that can be taken to resolve them
- methods used to analyse and interpret information to be included in workplace documents and forms
- organisational procedures and policies for completing workplace documents and forms.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

TLIE3023 Use electronic communication systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use electronic communications systems in accordance with relevant regulations and workplace procedures.

It involves the application of established communication principles and practices and the use of local technical and colloquial language and vocabulary in day-to-day communication.

It includes identifying system features, operating a communications system effectively, using appropriate communication protocols when using a system, ensuring equipment is operational, identifying any system access requirements and completing documentation.

Work is performed under some supervision, generally in a team environment.

This unit covers activities where a number of different communications systems are used concurrently including radios, fixed-line and mobile telephones, and computers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Apply WHS/OHS principles**	1.1 Information about work health and safety (WHS)/occupational health and safety (OHS) requirements when using electronic communications equipment is accessed and interpreted
		1.2 Hazards are identified, risks are assessed and control measures are implemented
		1.3 Posture and ergonomic settings of chair and workstation are adjusted in accordance with WHS/OHS guidelines
		1.4 WHS/OHS and organisational guidelines on the use of periods of rest and exercise are followed when using electronic communications equipment
2	**Identify electronic communications equipment and systems**	2.1 Types of electronic communications equipment, component parts and accessories used in work area are identified
		2.2 Applications for workplace activities of different electronic communications systems and, as required, related software, are interpreted
		2.3 Routine faults in operating systems, software applications and operator errors are identified and reported, as required
3	**Identify communications equipment features**	3.1 Electronic communications systems features and control functions are identified
		3.2 Electronic communications equipment is set up to optimise communication
		3.3 Appropriate communications system is selected, as required
4	**Enter data**	4.1 Text and numeric data are entered into communications system using appropriate technology, as required
		4.2 Entered information is checked and corrected, as required
5	**Use communications equipment**	5.1 System checks are carried out to confirm communications system is operational in accordance with organisational requirements
		5.2 Communications system is operated safely in accordance with organisational procedures and regulatory requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.3	Communications system security is maintained in accordance with organisational procedures
	5.4	Communications system appropriate for location and type of communication is selected, as required
	5.5	Messages are transmitted clearly, unambiguously and precisely in accordance with ethics and protocols required of users as outlined in organisational procedures
	5.6	Messages are received, interpreted and recorded in accordance with operating procedures and regulatory requirements
6 Complete documentation	6.1	Appropriate communications records are maintained in accordance with organisational procedures
	6.2	Documentation is filled in legibly and proofread
	6.3	Documentation is processed in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation guide.

Assessment Requirements for TLIE3023 Use electronic communication systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate potential work health and safety (WHS)/occupational health and safety (OHS) hazards when using communications equipment
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to work activities
- identifying and reporting problems, faults and malfunctions, in accordance with workplace procedures
- identifying and using required communications technology
- prioritising communication activities depending on operational contingencies, risk situations and environments
- using appropriate numeric functions when entering data into a computer system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications techniques, including barriers to effective communication
- features of various communications systems
- problems that can occur when using communications systems and associated corrective actions
- procedures and protocols for using communications systems during an emergency
- procedures for using communications systems
- protocols and procedures for communicating with others using relevant communications technology

© Commonwealth of Australia, 2025 Industry Skills Australia

- WHS/OHS risks and hazards when using communications systems.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE3026 Carry out advanced calculations in the transport and logistics industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out advanced calculations in the transport and logistics industry.

It includes identifying required calculations, applying advanced calculation in workplace tasks, preparing estimates, and interpreting graphical representations of mathematical information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify required	1.1 Nature of calculation required and items involved are

© Commonwealth of Australia, 2025 Industry Skills Australia

	calculations		determined
		1.2	Tools required to perform calculations are identified and sourced
2	**Apply advanced calculations in workplace tasks**	2.1	Calculations involving fractions, percentages and mixed numbers, using the four basic processes, are performed as required to complete workplace tasks
		2.2	Numerical information is checked and corrected for accuracy
3	**Prepare estimates**	3.1	Quantities of materials and resources required to complete work task are estimated and calculated accurately, using fractions, percentages and mixed numbers
		3.2	Accurate estimates for work completion are made using fractions, percentages and mixed numbers
		3.3	Working load limits (WLL) and safe working limits (SWL) of workplace equipment are calculated using advanced calculations
4	**Interpret graphical representations of mathematical information**	4.1	Information represented in symbols, diagrams and pictorial representations is recognised
		4.2	Recognised information represented in symbols, diagrams and pictorial representations is interpreted and acted upon

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIE3026 Carry out advanced calculations in the transport and logistics industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- calculating load limit
- calculating mass and dimension of work function for job role using fractions, percentages and mixed numbers
- completing documentation relating to work activities
- estimating working load limits
- interpreting and analysing a workplace mathematical symbol
- interpreting and following operational instructions and prioritising work
- making accurate estimates in a range of situations
- modifying activities depending on operational contingencies and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- reading complex dials and indicators, non-standard units of measurement, metric and imperial unit conversion, more advanced time estimates
- reading complex legislative and regulatory requirements
- using multiple pieces of mathematical information to perform complex mathematical processes
- using ratios and proportion, and applying rates
- working collaboratively with others
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- accurate estimates including:

© Commonwealth of Australia, 2025 Industry Skills Australia

  - damage
  - gradient
  - included angles
  - mechanical advantage
  - potential snapping path
  - resistance
  - rolling
- advanced mathematical operations and techniques
- advanced mathematical problems, and appropriate action and solutions
- brackets, order, divide, multiply, add, subtract (BODMAS)
- complex numeracy around job functions in transport and logistics
- four basic calculations processes:
  - addition
  - division
  - multiplication
  - subtraction
- methods of representing advanced and complex mathematical information from data collected
- procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- symbols, diagrams and pictorial representations including:
  - graphic representation within transport and logistics operations
  - pie charts
  - spreadsheets
- working load limits (WLL) and safe working limits (SWL) including**:**
  - air cushion (shock absorber that uses an air chamber)
  - force (leverage)
  - horizontal winch pull
  - mass
  - vertical winch pull
  - winch pull (leverage) required for recovery.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

© Commonwealth of Australia, 2025 Industry Skills Australia

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIE3028 Complete a work diary in the road transport industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to compile information required for a national driver work diary used in the road transport industry and to complete the work diary in accordance with national heavy vehicle regulator (NHVR) and heavy vehicle legislative requirements.

It includes identifying legislative and regulatory requirements relating to work diary, compiling information and completing a work diary.

A work diary is completed as an integral part of day-to-day work operations in the road transport industry.

Work is performed under minimum supervision within the road transport industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Identify legislative and regulatory requirements relating to work diary**	1.1 Work diary regulations are identified as they relate to job function
		1.2 Purpose of work diary is determined as it relates to job role
		1.3 Penalties relating to specific job function are identified
2	**Compile information required for the diary**	2.1 Type of information required to complete work diary is compiled in accordance with regulatory requirements and workplace procedures
		2.2 Factual information specific to job function is gathered
		2.3 Information is gathered in a timely manner in accordance with regulatory requirements and workplace procedures
3	**Complete work diary**	3.1 Information is entered into work diary accurately in accordance with regulatory requirements and workplace procedures
		3.2 Work diary is maintained and updated in accordance with regulatory requirements and workplace procedures
		3.3 Work diary is stored in a safe and accessible location for required duration

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLIE3028A Complete a work diary in the road transport industry.

Assessment Requirements for TLIE3028 Complete a work diary in the road transport industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying knowledge of associated state/territory regulations completing a work diary
- applying relevant workplace policy and procedures
- completing all required sections of work diary
- completing an accurate work diary to regulator regulations
- reading, interpreting and organising information required for completing and processing work diaries.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- implications for non-compliance with a work diary
- protocols and procedures for processing work diaries using relevant workplace procedures
- purpose of work diaries
- relevant procedures and duty of care requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) responsibilities
- requirements for work diaries
- sources of information for completing work diaries
- typical problems completing work diaries, and appropriate action and solutions.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in the road transport industry
- work diary consistent with current industry standards.

Simulation and online assessment are not suitable for final assessment of this unit of competency.

TLIE4006 Collect, analyse and present workplace data and information

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to collect, analyse and present workplace data and information as part of workplace operations.

It includes identifying required information, analysing and preparing information for use, explaining information and presenting workplace information to others.

Work is performed under general or limited supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Collect required data	1.1 Purpose of data and information collection is confirmed

© Commonwealth of Australia, 2025 Industry Skills Australia

and information	1.2 Sources of data and information are established
	1.3 Appropriate data and information is identified
2 Prepare data and information for use	2.1 Data and information is collated and analysed in accordance with workplace procedures
	2.2 Data and information are organised and presented in a logical manner
	2.3 Checks for accuracy are made
3 Explain information	3.1 Data and information collection and analysis is explained to others in a way that effectively contributes to workplace operations
	3.2 Outcomes of data and information analysis are presented to others using appropriate presentation modes and resources
	3.3 Questions are answered and appropriate clarification is given
4 Present workplace information	4.1 Information is processed and forwarded to appropriate personnel in accordance with workplace procedures
	4.2 Processed information is collated and stored in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when collecting, analysing and presenting workplace data and information
- completing relevant documentation
- identifying and using required communications and presentation technology
- monitoring and prioritising work activities in terms of planned schedule
- planning own work including predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions and procedures
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- presentation and communication techniques including barriers to effective communication and how to overcome them
- principles of effective presentation and communication of information
- protocols and procedures for the collection, analysis and presentation of workplace data and information using relevant technology
- relevant procedures and duty of care requirements
- sources of data and information and procedures for processing the information for workplace use
- typical presentation and communications problems, and appropriate action and solutions.

TLIE4013 Apply workplace statistics

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply statistical data in the workplace. The application of workplace statistics is carried out as an integral part of work operations in the context of the workplace concerned.

It includes identifying situations where statistics are used in the workplace, collecting numerical data, processing and presenting data, and interpreting trends and patterns from numerical data. It includes applying established statistical principles for work outcomes within workplace operations.

Work is performed under general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify situations where statistics are used in the workplace	1.1 Types of statistical representations of data are identified
	1.2 Users of statistical data in the workplace are identified
	1.3 Statistical data representations are matched for appropriate workplace applications
2 Collect numerical data	2.1 Purpose of data collection is identified
	2.2 Sources of information are established
	2.3 Data collection methods are used
	2.4 Mathematical processes are used to arrange data
	2.5 Data collected is checked for accuracy
	2.6 Potential for inaccurate results arising from variables is estimated and outlined
3 Process and present data	3.1 Data collected is represented in graphs, tables, averages and percentages as required
	3.2 Spreadsheets and flowcharts are used to present data
4 Interpret trends and patterns from numerical data	4.1 Non-conforming results outside of predicted outcome/s are noted and reasons are identified
	4.2 Trends or patterns in data are noted
	4.3 Possible reasons for trends or patterns are generated
	4.4 Potential solutions are identified
	4.5 Appropriate techniques are used to encourage participation of team/group members to interpret and use statistical data
5 Apply outcomes of statistical analysis to workplace operations	5.1 Interpreted data is used to identify possible improvements in work processes and organisation
	5.2 Appropriate action is initiated to implement identified strategies for improving processes or work organisation in accordance with workplace procedures
	5.3 Improvements are statistically monitored and evaluated in accordance with workplace procedures

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- interpreting data and providing appropriate, timely information on the outcomes of data analysis to appropriate personnel
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and appropriately applying technology, information systems and procedures to workplace tasks
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coaching and mentoring approaches to support team members to develop knowledge and skills in statistical collection, collation and analysis
- customer and supplier contact and coordination
- operational recording, reporting and statistical analysis systems and resources
- relevant procedures and duty of care requirements
- resource availability including the processing capacity of equipment and software systems for statistical data analysis

TLIE4025 Prepare and process transport documentation for dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare and process transport documentation relating to dangerous goods.

It includes preparing regulatory documentation for dangerous goods; completing despatch, receival and organisational forms for dangerous goods; and processing documentation.

This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

essential outcomes.	demonstrate achievement of the element.
1 Prepare regulatory documentation for dangerous goods	1.1 Reasons and requirements for reporting and recording are identified
	1.2 Statutory documentation for dangerous goods is used in accordance with regulatory and organisational procedures
	1.3 Information is collected and checked with a range of personnel to confirm its accuracy, relevance and status
	1.4 Need for additional information is established
	1.5 Conclusions drawn and actions taken are checked to ensure they match available information
	1.6 Information is recorded and reported in required format, style, structure and timeframe
	1.7 Documentation is checked to ensure it is in accordance with regulatory requirements
2 Complete despatch and receival documentation for dangerous goods	2.1 Order request information is analysed to identify work requirements to fill order
	2.2 Products are noted and site locations are identified
	2.3 Required schedules for order movement are identified
	2.4 Documentation is completed in accordance with organisational procedures and regulatory requirements
	2.5 Order is checked against schedule and order form
	2.6 Records are completed and appropriate documentation is attached, in accordance with organisational procedures and regulatory requirements
3 Complete organisational forms for dangerous goods	3.1 Correct form for purpose is identified
	3.2 Information for completion of form is collected
	3.3 Relevant sections of form are completed
	3.4 Completion of other sections of form by relevant persons is organised
	3.5 Supporting documentation or information is gathered
	3.6 Signatory requirements are determined and completed

© Commonwealth of Australia, 2025 Industry Skills Australia

4	**Process documentation**	4.1 Documentation is submitted to relevant persons
		4.2 Documentation is adjusted, in response to feedback and comments received
		4.3 Documentation is copied and stored in accordance with regulatory and organisational procedures

Assessment Requirements for TLIE4025 Prepare and process transport documentation for dangerous goods

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- identifying regulatory requirements for completing dangerous goods documentation accurately including:
  - relevant Australian Standards and certification requirements
  - relevant internal data entry books, including logbooks, data sheets and load sheets
  - transport emergency response plan (TERP)
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - workplace policies and procedures
- interpreting and following operational instructions and prioritising work
- preparing current dangerous goods documentation accurately
- processing dangerous goods documentation in accordance with workplace procedures
- reading, interpreting and organising information
- reporting and rectifying, within limits of own role, identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- writing and/or entering information into computer-based documentation systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislative procedures and codes
  - current Australian Dangerous Goods (ADG) Code

© Commonwealth of Australia, 2025 Industry Skills Australia

  - environmental protection legislation and regulations
  - fatigue management regulations
  - relevant state/territory roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
  - road rules
  - work health and safety (WHS)/occupational health and safety (OHS) legislation
- protocols and procedures for preparing and processing dangerous goods documentation
- relevant procedures and duty of care requirements for preparing and processing dangerous goods documentation
- relevant sources of information for preparing and processing dangerous goods documentation
- relevant WHS/OHS responsibilities for preparing and processing dangerous goods documentation
- transport emergency response plan (TERP)
- typical problems in processing workplace documentation, and appropriate action and solutions
- workplace procedures for preparing and processing dangerous goods documentation
- workplace requirements relating to documentation format, style, structure and timeframe.

Assessment Conditions

TLIE4030 Prepare rail safety reports

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare rail safety reports to meet legislative, regulatory and organisational requirements.

It includes collecting, interpreting and evaluating information, composing a rail safety report and editing it prior to submission.

Rail safety reports may be required to meet rail safety national law, regulatory and organisational requirements. They would typically include safety performance reports, regulatory reporting, incident reports and safety system audit reports.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify rail safety	1.1 Reasons for and requirements of rail safety report are identified and established procedures for specific types of report are

© Commonwealth of Australia, 2025 Industry Skills Australia

report needs		followed
	1.2	Target audience for report is identified and appropriate style of recording and reporting is chosen to meet audience needs
	1.3	Timeframe for delivery of report is identified and met
2 Collect and analyse information	2.1	Information is sourced from inside and outside the organisation in accordance with organisational and legislative requirements
	2.2	Information is validated to ensure accuracy, relevance, sufficiency and currency
	2.3	Collected information is analysed and recorded in accordance with organisational requirements and identified report requirements
3 Record information	3.1	Collected information is recorded and reported in required format, style, structure and timeframe
	3.2	Technology available in the workplace is used to store and retrieve data
	3.3	Appropriate measures are taken to ensure all written material complies with legislative requirements and organisational policies and procedures
4 Compose rail safety reports	4.1	Rail safety report purpose, objectives and format are determined in accordance with organisational and regulatory requirements
	4.2	Sourced information is collated in a logical manner and assessed for relevance and inclusion
	4.3	Content, structure and sequencing of materials are determined in line with purpose and intended audience
	4.4	Actions and/or recommendations are included as required
	4.5	Rail safety report is compiled and reviewed to confirm objectives, and organisational and legislative requirements
	4.6	Rail safety report is completed within agreed timeframes
5 Edit final report	5.1	Content of final report is checked and proofread for grammar, spelling and punctuation
	5.2	Information is amended as required, and final report is authorised in accordance with organisational policy and procedures prior to submission

Assessment Requirements for TLIE4030 Prepare rail safety reports

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adjusting written communication to suit audience and situation
- applying appropriate written communication techniques
- applying relevant legislation and workplace procedures
- checking and confirming accuracy and validity of information
- collecting and analysing data
- handling and storing information securely and safely, with an awareness of environmental and sustainable practices
- making conclusions that are clearly based on evidence
- presenting written material in a range of media types used in the workplace
- reading, analysing and interpreting documents containing required information
- recording complete, accurate, clear and objective information
- sorting information into a logical pattern
- writing and editing a rail safety report.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislative requirements and safety reporting obligations
- barriers to effective communication
- format and layout of documents and forms used in workplace rail safety reports
- industry terminology used in rail safety sectors
- organisational report writing procedures, guidelines and requirements
- protocols and procedures for meeting regulator and organisational requirements in written communications

© Commonwealth of Australia, 2025 Industry Skills Australia

- security, freedom and confidentiality of information
- workplace procedures and instructions for notifiable occurrence reports.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIE4032 Use internal communication systems for rail industry regulatory compliance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use internal communication systems for rail industry regulatory compliance.

It includes identifying regulatory compliance requirements, disseminating information, updating systems and managing data.

This unit covers identifying relevant information related to safety management and disseminating the information to the appropriate personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Confirm regulatory compliance requirements	1.1 Regulatory compliance information is received and analysed for relevance and importance
	1.2 Relevant personnel to whom the information is to be communicated are determined in accordance with regulatory and/or organisational requirements
	1.3 Data is formatted into suitable media prior to disseminating information as required
2 Disseminate information	2.1 Method/s of communication is determined in accordance with regulatory and/or organisational requirements
	2.2 Regulatory compliance information is disseminated promptly and, where applicable, receipt of information is confirmed and stored/managed in accordance with organisational requirements
3 Update systems and manage data	3.1 Organisational systems affected by regulatory compliance information are identified and updated in accordance with regulatory and/or organisational requirements
	3.2 Regulatory compliance information is filed or stored in accordance with regulatory and/or organisational document control procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

TLIE4033 Use communications systems to control tram/light rail operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use radio systems to control tram/light rail operations.

It includes identifying equipment types and features, using communications equipment and responding to requests.

This unit covers activities where a number of different communications systems are used concurrently, including radios, fixed-line and mobile telephones and computers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Identify communications equipment systems and features	1.1 Types of communications equipment, component parts and accessories used in the work area are identified
	1.2 Applications for workplace activities of the different communications systems and related software are interpreted as required
	1.3 Communications system features and control functions are identified
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Appropriate communications system is selected depending on type of communication to be made
2 Use communications equipment systems	2.1 System checks are carried out prior to operations to confirm communications system is operational, in accordance with organisational requirements
	2.2 Communications systems are operated safely in accordance with organisational procedures and regulatory requirements
	2.3 Communications system security is maintained in accordance with organisational procedures
	2.4 Messages are received, interpreted and recorded in accordance with operating procedures and regulatory requirements
	2.5 Text and numeric data are entered into communications system using appropriate technology as required
	2.6 Entered information is checked and corrected as required
3 Receive and respond to requests	3.1 Details of the situation are established using effective communication skills, techniques and resources, in accordance with organisational procedures
	3.2 Communication difficulties are acknowledge and efforts are made to overcome these difficulties
	3.3 Complete details of request are accurately recorded in a timely and efficient manner, in accordance with organisational procedures
	3.4 Urgency of request is determined using information

© Commonwealth of Australia, 2025 Industry Skills Australia

	gained from person making the request
	3.5 Suitable response is formulated in accordance with organisational procedures
	3.6 Request is referred in accordance with situation presented and organisational procedures
	3.7 Requests are answered promptly in accordance with organisational procedures
	3.8 Requests are dealt with in a professional manner at all times
	3.9 Appropriate follow-up action is taken, in accordance with needs of the situation and organisational procedures
4 Respond to communications system faults	4.1 Communications system technical faults are identified and appropriate action is taken
	4.2 Back-up or alternative systems are utilised when primary system fails or as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIE4033A Use communications systems to control tram/light rail operations.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Requirements for TLIE4033 Use communications systems to control tram/light rail operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others using available communications equipment
- completing relevant documentation
- identifying and reporting problems, faults or malfunctions
- identifying and using required communications technology
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- prioritising communications activities depending on operational contingencies, risk situations and environments
- terminating calls in accordance with organisational procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems features
- effective communication techniques including barriers to communication and how to overcome them
- manufacturer specifications for communications equipment
- problems that can occur when using communications systems and corrective actions
- procedures and protocols for communicating with others
- procedures and protocols for using communications systems during an emergency
- procedures for using communications systems in the workplace
- relevant sections of legislated rail safety requirements, codes of practice and/or guidelines
- work health and safety (WHS)/occupational health and safety (OHS) risks and hazards

© Commonwealth of Australia, 2025 Industry Skills Australia

when using communications systems
- workplace communication procedures, protocols, checklists and instructions
- workplace communication records.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram/light rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIE5020 Apply knowledge of freight forwarding documentation and permits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop, maintain and apply an in-depth understanding of required documentation, forms and permits for freight forwarding activities.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

E – Communication and Calculation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

Assessment Requirements for TLIE5020 Apply knowledge of freight forwarding documentation and permits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant national and international codes of practice, regulations and legislative requirements
- communicating effectively with others when preparing and processing required documentation, forms and permits, including using unambiguous closed-loop communication and checking to confirm messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is a second language)
- completing the preparation and processing of documentation, forms and permits required in international freight forwarding, including computer data entry
- implementing contingency plans
- interpreting and applying current knowledge of the required documentation, forms and permits to an international freight forwarding role and functions
- interpreting and following operational instructions and prioritising work
- maintaining currency of knowledge about required international freight forwarding documentation, forms and permits through appropriate continuous professional development activities
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in information and communications equipment in accordance with standard operating procedures
- operating applicable information and communications technology to required protocol
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences in the workplace
- selecting and appropriately applying information and communications systems and procedures to complete workplace tasks
- working collaboratively with others when preparing and processing required

© Commonwealth of Australia, 2025 Industry Skills Australia

documentation, forms and permits
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable regulations and legislation:
  - Australian and international regulations, conventions and codes of practice for the international freight forwarding
  - Australian and international standards and certification requirements
  - relevant Australian and international environmental protection legislation
  - relevant Australian and international transport security and safety legislation
  - relevant regulations for importing and exporting cargo
  - relevant regulations for international trading and financial transactions
- Australian customs and border protection requirements:
  - Australian customs and border protection procedures
  - Australian customs and border protection tariffs
  - control of import and export consignments
  - general information on the Australian customs administration
  - definitions, purpose and use of Incoterms and Combiterms
  - import licences for certain types of dangerous goods
  - intellectual property, counterfeit, artefacts, boycott issues
  - international conventions
  - GST (applicable rate and taxable value)
  - veterinarian control and live plant control (phytosanitary control)
- documentation requirements for billing and accounts
- factors impacting on international freight forwarding documentation, forms and permits:
  - bills of lading, waybills or consignment notes
  - cargo manifests
  - commercial invoices with an Incoterm and extra details to ensure proper passage and clearance
  - consular documents
  - container lists
  - delivery notes
  - fumigation or other treatment certificates for shipments containing wood or other

© Commonwealth of Australia, 2025 Industry Skills Australia

materials of plant origin
    - health and phytosanitary certificates
    - industry recognised inspection certificates and reports
    - insurance certificates, claim forms and policies
    - origin certificates
    - packing declarations for wood and other materials of plant origin
    - packing lists
    - pre-advice and pre-alert documents
    - quality analysis or weight/measurement certificates
- international sales contracts – principles, conditions and specifications, consequences of poor preparation or mistakes
- principles and techniques of communications such as checking to confirm messages and responses given or received are unambiguous and are correctly and clearly understood
- principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- procedures and protocols for preparing and processing international freight forwarding documentation, forms and permits
- relevant Australian and international conventions, codes of practice and regulatory requirements for completing international freight forwarding documentation, forms and permits in (including those applicable to importing, exporting and transiting goods)
- responsibilities and liabilities of a freight forwarder in ensuring all required documentation, forms and permits are accurately and correctly prepared
- sources of information about the documentation, forms and permits required when providing international freight forwarding services
- standard International Federation of Freight Forwarders Associations (FIATA) forms and documentation including:
    - Forwarders Certificate of Receipt (FCR)
    - Forwarders Certificate of Transport (FCT)
    - Forwarders Forwarding Instructions (FFI)
    - Forwarders Warehouse Receipt (FWR)
    - House Air Waybill (HAWB)
    - House Bill of Lading (HBL)
    - Master Air Waybill (MAWB)
    - Multimodal Transport Bill of Lading (MTB/L)
    - Negotiable Multimodal Transport Bill of Lading (FB/L)
    - Non-negotiable Multimodal Transport Waybill (FWB)
    - Shippers Declaration for the Transport of Dangerous Goods (SDT)
    - Shippers Intermodal Weight Certification (SIWC)
    - Original Bill of Lading (OB/L)
    - veterinary certificates for materials of biological origin, which are for human consumption
- systems and processes for completing documentation and forms online

TLIF0001 Apply chain of responsibility legislation, regulations and workplace procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify, apply and follow chain of responsibility legislation, regulations and workplace procedures in relation to heavy vehicles as they apply to an individual's own job role.

It includes explaining the chain of responsibility features, applying the requirements, and identifying and reporting breaches in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Explain the chain of responsibility features in the Heavy Vehicle National Law and regulations or applicable state/territory law and regulations	1.1 Principal obligations within chain of responsibility in the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations are identified
	1.2 Principal duties of each party in the chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
	1.3 Breaches and penalties for each party for failure to comply with chain of responsibility as identified in the HVNL and regulations or applicable state/territory law and regulations are explained
	1.4 Reasonable steps to be followed by each party to comply with chain of responsibility as outlined in the HVNL and regulations or applicable state/territory law and regulations are explained
2 Apply chain of responsibility requirements in the Heavy Vehicle National Law and regulations or applicable state/territory law and regulations	2.1 Workplace policies, procedures and other documents that include chain of responsibility as it applies to own job role are identified and explained
	2.2 Methods and requirements to ensure management of speed and fatigue are explained
	2.3 Methods to calculate vehicle dimension and mass limits are explained
	2.4 Methods to ensure loads are secured are explained
	2.5 Workplace documents relating to chain of responsibility are completed and processed to workplace requirements
3 Identify and report chain of responsibility breaches	3.1 Chain of responsibility breaches are identified and explained
	3.2 Workplace procedures and industry practices for reporting chain of responsibility breaches are identified and followed

Assessment Requirements for TLIF0001 Apply chain of responsibility legislation, regulations and workplace procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include:

- applying chain of responsibility obligations relating to own job role on a minimum of three occasions
- explaining the chain of responsibility obligations of own job role and at least two other job roles directly related to own job role
- preparing reports of chain of responsibility breaches on a minimum of three occasions, each about a different type of breach.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action required when possible breaches of the chain of responsibility are identified
- consequences of non-compliance with the chain of responsibility
- methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension
- parties in the chain of responsibility including
  - consignors and consignees
  - drivers/owner drivers
  - employers, prime contractors and operators
  - parties in the extended liability provisions of the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations
  - loaders
  - loading managers
  - packers
  - schedulers
- principal obligations in chain of responsibility in the HVNL and regulations or applicable state/territory law and regulations including
  - consideration of traffic conditions in managing speed and fatigue

© Commonwealth of Australia, 2025 Industry Skills Australia

  - extended liability
  - fatigue, work and rest times
  - securing loads
  - vehicle dimension and load limits
- what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility legislation as they apply to a range of job roles
- where to locate current chain of responsibility information
- workplace policies and procedures around chain of responsibility for own job role.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment Requirements for TLIF0003 Develop and implement policies and procedures to ensure chain of responsibility compliance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- checking how staff implement required policies and procedures
- ensuring continuous quality improvement of relevant policies, procedures and recording requirements to maintain chain of responsibility compliance
- liaising with relevant stakeholders as required
- producing policies and procedures that ensure workplace compliance with chain of responsibility in relation to heavy vehicle laws and regulations.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria include knowledge of:

- action required when possible breaches of the chain of responsibility are identified
- consequences of non-compliance with the chain of responsibility
- methods and requirements to ensure management of fatigue, speed, load restraint, mass and dimension
- parties in the chain of responsibility including
  - consignors and consignees
  - drivers/owner drivers
  - employers, prime contractors and operators
  - loaders
  - loading managers
  - packers
  - parties in the extended liability provisions of the Heavy Vehicle National Law (HVNL) and regulations or applicable state/territory law and regulations
  - schedulers
- principal obligations relating to chain of responsibility in the HVNL and regulations or

© Commonwealth of Australia, 2025 Industry Skills Australia

applicable state/territory law and regulations including
  - extended liability
  - consideration of traffic conditions in managing speed and fatigue
  - fatigue, work and rest times
  - securing loads
  - vehicle dimension and load limits
- what constitutes a duty, a reasonable step, a breach and a penalty to chain of responsibility regulations as they apply to a range of job roles
- where to locate current chain of responsibility information
- workplace policies and procedures around chain of responsibility in the organisation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

TLIF0004 Work effectively in a train-driving environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to work effectively in a train-driving environment.

It includes monitoring own health and wellbeing, maintaining situational awareness, maintaining workplace safety, mitigating threats and errors, and maintaining currency of industry skills and knowledge.

This activity applies to individuals who are engaged in operating rolling stock in the work environment and who are responsible for their own work. This may be in a defined context under direct supervision and/or with some individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Monitor own health and wellbeing	1.1	Health and wellbeing issues that impact on train driving are identified
	1.2	Own health and wellbeing is assessed against identified issues
	1.3	Potential for own health and wellbeing to deteriorate in relation to identified issues is determined
	1.4	Action is taken to improve own health and wellbeing status in relation to identified issues
	1.5	Locomotive cab is set up for individual comfort and optimum safety levels are ensured
2 Manage tasks and workload	2.1	Work activities are planned for the completion of tasks in accordance with organisational requirements
	2.2	Changes to workplace environment and related risks are monitored and managed to ensure a safe outcome to workplace operations, in accordance with guidelines, directions or instructions
	2.3	Attention is focused and distractions are managed in normal and high workload situations
	2.4	Activities are modified depending on work situations and contingencies
	2.5	Tasks, activities and information gathering are prioritised and scheduled, in accordance with their importance and need for action
3 Maintain situational awareness	3.1	Factors that impact on safe train operations are continuously monitored
	3.2	Situational awareness is applied through effective visual scans, use of communication systems, use of rail traffic information and use of systems of safe working, in accordance with workplace procedures
	3.3	Information that impacts on the operation of the train is continually gathered and interpreted to determine whether the current situation matches the expected state
	3.4	Changes in the current situation are anticipated and action is taken to correct or mitigate any negative impacts of these anticipated changes

© Commonwealth of Australia, 2025 Industry Skills Australia

4	**Recognise, manage and mitigate threats and errors**	4.1 Relevant human limitations/conditions of self and others are recognised as threats
		4.2 Strategies for reducing the frequency of errors are implemented
		4.3 Relevant environmental and/or operational threats and errors are identified
		4.4 Operating procedures are applied to avoid identified operational threats and errors occurring
5	**Maintain currency of industry skills and knowledge**	5.1 New and altered policies, processes and procedures are read and implemented
		5.2 Clarification is sought from relevant personnel about anything that is not clear in relation to policies, processes and procedures
		5.3 Feedback regarding policies, processes and procedures is provided to relevant personnel as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces but is not equivalent to TLIF4111A Work effectively in a train-driving environment.

Assessment Requirements for TLIF0004 Work effectively in a train-driving environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing and reassessing situations continually
- being vigilant
- communicating effectively with rail operations staff
- developing and implementing safety and operations plans
- executing response training in critical situations
- familiarising oneself with locomotive and train system being used
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- keeping industry knowledge up-to-date
- performing to track owner requirements, specifications and operational demands
- prioritising safety issues that will impact on work tasks
- prioritising tasks
- remaining alert and active when monitoring train operations
- reporting changes in situations as necessary
- scanning environment at regular intervals or important points in the process.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- decision making processes
- emergency management plan and procedures
- factors that impact on worker health and wellbeing and their effects
- fatigue management strategies
- how preconceptions of what is going to happen can detract from situational awareness

© Commonwealth of Australia, 2025 Industry Skills Australia

- how to interpret and prepare for rosters
- how to make better use of resources (human, equipment, information and procedures) to reduce rail safety occurrences
- how to reduce rail safety occurrences attributable to human error
- human error as a source of risk in rail operations
- impact illness and medication can have on information processing
- notices and directives about new and altered policies, processes and procedures
- operating procedures to avoid identified threats and errors occurring
- relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- risk management processes (hazard identification, risk management and risk controls)
- roles of other rail operations staff as they impact on train driving
- self-management
- situations that can result in a loss in situational awareness
- teamwork
- threat and error management
- tools and techniques to improve and manage human factors.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical assessment must occur in an appropriate range of situations in the rail corridor workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF0005 Apply a fatigue risk management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit of competency involves the skills and knowledge required for heavy vehicle drivers to manage fatigue and to work safely within the Transport and Logistics industry.

It includes applying fatigue risk management strategies, identifying and acting on signs of fatigue, operating within a fatigue risk management system, planning and navigating trips, updating and maintaining records, complying with work and rest limits, and implementing appropriate strategies to minimise fatigue during work activities.

Work is performed under some supervision as a single operator and/or within a team environment.

Legislative and regulatory requirements are applicable to this unit. The primary legislative requirement of this unit of competency is the Heavy Vehicle National Law (HVNL).

Being awarded this unit of competency is a necessary requirement to operate under National Heavy Vehicle Regulator (NHVR) Fatigue Management Accreditation but is only one of the criteria. Prospective applicants should check with the NHVR before undertaking training and/or assessment.

Pre-requisite Unit

Not applicable

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and manage fatigue risk in the road transport sector	**1.1** Potential causes and symptoms of fatigue are identified and action is taken to minimise their effects in accordance with workplace procedures
	1.2 Fatigue symptoms are recognised and necessary steps are taken in accordance with workplace procedures, to ensure that effective work capability and alertness are maintained
	1.3 Own and others' fitness to drive is monitored and assessed in accordance with workplace procedures, and appropriate action is taken as required
	1.4 Factors that increase the risk of fatigue related incidents are managed
	1.5 Counter measures and relevant workplace practices in combating fatigue are adopted and applied
	1.6 Health and wellbeing choices are identified that ensure driver fitness to safely perform workplace duties
2 Operate within a road transport fatigue risk management system	**2.1** HVNL legal requirements, liabilities and responsibilities for effective fatigue management within the workplace are identified, interpreted and complied with
	2.2 Relevant regulations related to driving heavy vehicle offences, and fatigue duty of care are identified and applied in accordance with legislation
	2.3 Heavy vehicle driver regulations and workplace procedures for fatigue risk management, wellbeing, and fitness for work are identified and applied
	2.4 Relevant workplace induction into the road transport fatigue risk management system is completed
	2.5 Workplace fatigue management strategies are identified and implemented to minimise driver fatigue
	2.6 Workplace requirements and responsibilities for fatigue risk management are identified and applied
	2.7 Relevant documentation is carried while in a heavy vehicle

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.8	Legal exemptions for fatigue compliance are identified and applied
	2.9	Concerns related to strategies to address fatigue and associated workplace risks are communicated to relevant personnel
3 Plan and navigate a heavy vehicle trip	**3.1**	Heavy vehicle driver trips are planned, communicated and implemented and potential fatigue hazards are planned for in accordance with workplace procedures
	3.2	Rest and work periods are identified to match heavy vehicle driver fitness and trip conditions
	3.3	Legal requirements as they relate to fatigue management are complied with when changes in schedules, trip conditions and operational requirements are required
	3.4	Deviations made to proposed trip plan prior to departure are communicated with relevant personnel in accordance with workplace procedures
	3.5	Deviations made to proposed trip plan while on route are communicated with relevant personnel in accordance with workplace procedures
4 Comply with work and rest hours	**4.1**	Work and rest options available to heavy vehicle drivers are identified and applied in accordance with workplace procedures and HVNL
	4.2	Relevant work hours including standard, solo and two-up arrangements and long/night hours are complied with in accordance with workplace procedures and HVNL
	4.3	Suitable and minimum rest breaks are complied with in accordance with workplace procedures and fatigue management regulations
	4.4	Information is identified and relevant actions are taken to prevent non-compliance with fatigue management procedures while working in standard hours and within an accredited fatigue risk management system
	4.5	Rest and work periods are counted in accordance with the HVNL
5 Update and maintain records	**5.1**	Heavy vehicle regulatory requirements relating to work diary, records and work duties are applied

© Commonwealth of Australia, 2025 Industry Skills Australia

5.2 Requirements of work diary/records are determined as they relate to heavy vehicle driver duties

5.3 Trip information is gathered in a timely manner and accurately entered into work diary/record in accordance with regulatory requirements and workplace procedures

5.4 Information entered into work diary/records is accurately and legibly maintained in accordance with regulatory requirements and workplace procedures

5.5 Work diary/records are recorded after each work and rest change in accordance with HVNL

5.6 Corrections are accurately and legibly entered into work diary/records in accordance with workplace procedures and regulations

5.7 Work diary/records are stored in an accessible location in accordance with workplace procedures

5.8 Penalties relating to heavy vehicle drivers for failing to record information or making false or misleading entries in work diary/records are identified

5.9 Records are submitted within regulated timeframes to relevant personnel

5.10 Requirements while operating under an exemption notice are recorded and maintained

5.11 Work diary/record/equipment malfunctions are recorded in accordance with regulations and workplace procedures, and are reported to relevant personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF0005 Apply a fatigue risk management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) legislation
- applying relevant workplace policies and procedures
- applying strategies to address signs and symptoms of heavy vehicle driver fatigue
- applying workplace fatigue risk management policies and procedures
- communicating unplanned events and deviations to relevant personnel
- complying with Heavy Vehicle National Law (HVNL) fatigue requirements
- complying with trip work and rest requirements
- counting work and rest time accurately
- identifying and acting on fatigue risk factors as a heavy vehicle driver
- implementing risk mitigation control measures
- planning and navigating a heavy vehicle trip
- preparing and maintaining heavy vehicle driver work diaries/records and relevant documentation in accordance with workplace procedures
- providing feedback on compliance in a fatigue risk management system
- reading and interpreting heavy vehicle driver fatigue management workplace policies and procedures
- recognising breaches of fatigue management strategies and taking appropriate action in accordance with fatigue risk management system
- recording equipment malfunctions in work diary and/or workplace records in accordance with workplace procedures
- recording in work diary and/or workplace records in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- consequences of fatigue risk management non-compliance
- fatigue management hierarchy of risk control
- fatigue management workplace policies and procedures
- HVNL exemption notices or permits related to fatigue
- obligations and requirements of periodic audits of fatigue management documentation/records
- organisation nominated record keeper
- principal obligations relating to fatigue management in HVNL, including:
  - consideration of traffic conditions in managing speed and fatigue
  - fatigue, work and rest times
- record keeping responsibilities and compliance obligations
- relevant WHS/OHS regulation as it relates to fatigue
- risks, hazards and consequences created by fatigue in the workplace
- strategies of fatigue management and evaluating own fitness for work, inclusive of sleep disorders
- symptoms and strategies relevant to heavy vehicle driving fatigue management
- workplace fatigue risk management program
- workplace procedures as they relate to duty of care, fatigue non-compliance, and fatigue regulations penalties as they apply to a heavy vehicle driver.

Assessment Conditions

Registered Training Organisations (RTOs) are required to be approved by the National Heavy Vehicle Regulator (NHVR) to deliver and assess this unit for NHVR accreditation purposes.

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF0006 Administer a fatigue risk management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit of competency involves the skills and knowledge required for road transport schedulers or supervisors/managers to administer a fatigue risk management system within the Transport and Logistics industry.

It includes identifying and managing risks associated with fatigue during heavy vehicle driving, operating within a fatigue risk management system, planning trips and updating records, and developing and implementing policies, procedures and strategies to minimise fatigue in the workplace.

Work is performed under limited supervision generally within a team environment.

Legislative and regulatory requirements are applicable to this unit. The primary legislative requirement of this unit of competency is the Heavy Vehicle National Law (HVNL).

Being awarded this unit of competency is a necessary requirement to obtaining National Heavy Vehicle Regulator (NHVR) Fatigue Management Accreditation but is only one of the criteria. Prospective applicants should check with the NHVR before undertaking training and/or assessment.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Manage heavy vehicle driver fatigue strategies	**1.1** Symptoms of fatigue in heavy vehicle drivers are identified in accordance with workplace procedures and regulations
	1.2 Potential causes and symptoms of fatigue are identified and actions are taken to minimise their effects in accordance with the fatigue risk management system
	1.3 Heavy vehicle driver schedules are planned and implemented in accordance with HVNL regulations, fatigue risk management strategies and driver consultation
	1.4 Compliance within the workplace fatigue risk management system and related workplace procedures is managed
	1.5 Compliance of heavy vehicle drivers operating and under exemption notice, is monitored and reviewed
	1.6 Heavy vehicle drivers are provided with feedback on identified non-compliance with the fatigue risk management system
	1.7 Training and/or counselling is supported by the supervisor to address heavy vehicle driver non compliance
	1.8 Legal requirements and responsibilities for effective management of fatigue within the workplace for drivers are identified and monitored
	1.9 Heavy vehicle driver health, wellbeing and personal fatigue risk management strategies are communicated with drivers and relevant personnel
	1.10 Communication strategies are implemented to ensure heavy vehicle drivers are informed of relevant fatigue compliance obligations
	1.11 Training is provided to develop and enhance heavy vehicle driver workplace fatigue risk management

© Commonwealth of Australia, 2025 Industry Skills Australia

		strategies
2 Operate within a road transport fatigue risk management system	**2.1**	Driver completion of workplace induction in the workplace fatigue risk management system is ensured
	2.2	Road transport fatigue risk management system is reviewed and maintained in accordance with HVNL and workplace procedures
	2.3	Fatigue risk management plans and procedures are distributed to relevant personnel in accordance with workplace procedures
	2.4	Actions are taken in conjunction with relevant parties in the chain of responsibility to ensure compliance with the workplace's fatigue risk management policy and procedures
	2.5	Outcomes of incidents and safety investigations are reviewed and analysed to identify the extent to which fatigue may have been a contributing factor and corrective actions are taken as required
	2.6	External risk factors within the supply chain and chain of responsibility relating to the effects of fatigue are identified and reviewed in accordance with fatigue risk management regulations and corrective actions are taken as required
	2.7	Reports relating to non-compliance are submitted to relevant personnel with details of action taken to prevent recurrences
	2.8	Non-compliance from external parties in the chain of responsibility are recognised and reported in accordance with workplace procedures
	2.9	Exemptions for work, rest, emergency, and/or record keeping are identified and documented, as required
	2.10	Personnel who contribute to a non-compliance with workplace fatigue procedures are provided appropriate feedback
3 Schedule work and rest hours in compliance with a road transport fatigue risk management system	**3.1**	Heavy vehicle driver rest and work hours are scheduled with consideration to the trip and road conditions in accordance with fatigue risk management workplace procedures and regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.2	Heavy vehicle driver input into schedules is obtained and considered in planning heavy vehicle driver trips
	3.3	Changes in schedules/rosters and workplace procedures related to fatigue risk management are identified and managed
	3.4	Legal requirements, liabilities and responsibilities for fatigue risk management within the organisation are identified and applied
	3.5	HVNL fatigue risk management compliance and safety strategies are identified and implemented
	3.6	Reviews are undertaken of scheduled versus actual hours of work and where a non-compliance is identified, appropriate action is taken to analyse the reasons and to take corrective action
4 Plan and navigate heavy vehicle trips	**4.1**	Trip conditions, timelines, work and rest requirements are planned and reviewed to ensure driver fatigue is minimised, in accordance with workplace procedures, driver fitness for work and HVNL
	4.2	Workplace procedures for loading and unloading a heavy vehicle are considered to ensure driver does not become impaired by fatigue
	4.3	Proposed trip is communicated with heavy vehicle driver/s and relevant personnel
	4.4	Deviations to proposed trip plan are communicated to heavy vehicle driver/s and relevant personnel in accordance with workplace procedures and regulations
	4.5	Unplanned situations are responded to in accordance with workplace procedures, in a manner that minimises risk to personnel and equipment
	4.6	Exemption requirements are planned in accordance with workplace procedures and regulations
5 Update and maintain records	**5.1**	Workplace policies and procedures for fatigue risk management record storage and retrieval are implemented and monitored
	5.2	Road transport fatigue risk management system and workplace procedures are reviewed and amended, as required, to ensure compliance with HVNL

© Commonwealth of Australia, 2025 Industry Skills Australia

5.3 Work diary/records are monitored and reviewed for compliance with workplace procedures and HVNL

5.4 Relevant heavy vehicle workplace records are maintained in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit.

Assessment Requirements for TLIF0006 Administer a fatigue risk management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying a road transport fatigue risk management system
- applying fatigue risk management principles when scheduling heavy vehicle drivers:
  - allowing for reasonably foreseeable circumstances when scheduling
- applying strategies to address signs and symptoms of heavy vehicle driver fatigue
- applying work health and safety (WHS)/occupational health and safety (OHS) workplace policies and procedures
- applying workplace fatigue risk management policies and procedures
- communicating with relevant personnel
- communicating unplanned events and deviations to relevant personnel
- complying with relevant fatigue Heavy Vehicle National Law (HVNL) requirements
- dealing effectively with unplanned events in accordance with workplace policies and procedures
- identifying and assisting heavy vehicle drivers with fatigue risk management implementation and issues identified
- identifying fatigue risk factors for heavy vehicle drivers
- implementing compliance with trip, work and rest requirements
- implementing risk mitigation control measures
- interpreting fatigue risk management principles
- monitoring and maintaining work diaries/records and all relevant workplace documentation in accordance with workplace procedures
- monitoring heavy vehicle driver signs and symptoms of fatigue
- participating in internal reviews and periodic audits
- planning and monitoring heavy vehicle trips
- preparing and actioning non-compliance reports
- providing feedback to inform heavy vehicle drivers about compliance when implementing the fatigue risk management system
- reading and interpreting relevant documentation on fatigue risk management regulations
- recognising non-compliance with fatigue risk management strategies and regulations, and

© Commonwealth of Australia, 2025 Industry Skills Australia

taking appropriate action.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- chain of responsibility
- consequences of non-compliance and failure to manage fatigue within the chain of responsibility
- fatigue risk management hierarchy of risk control
- fatigue risk management key performance indicators including:
  - corrective action monitoring
  - trend analysis
- fatigue risk management principles
- fatigue risk management signs, symptoms and strategies
- heavy vehicle fatigue risk management workplace policies and procedures
- management of a fatigue risk management system including:
  - implementing a fatigue risk management system
  - monitoring a fatigue risk management system
  - planning implementation of a fatigue risk management system
  - reviewing a fatigue risk management system
- non-compliance and penalties related to relevant driver fatigue legislation
- parties in the chain of responsibility, including:
  - consignors/consignees
  - drivers and owner drivers
  - employers, prime contractors and operators
  - loaders
  - loading managers
  - packers
  - schedulers
- periodic audit requirements
- principal obligations relating to fatigue risk management in HVNL including:
  - consideration of traffic conditions in managing speed and fatigue
  - fatigue, work, and rest times
  - securing loads
  - trip conditions including vehicle dimension and load limits
- processes and resources for assessing heavy vehicle driver fatigue risk management competence
- program for assisting drivers to assess their level of fatigue and evaluate their own fitness for work, inclusive of sleep disorders
- record keeping responsibilities and compliance obligations

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant fatigue risk management training programs and support resources
- relevant WHS/OHS legislation
- resources for providing training on the implementation of the workplace's fatigue risk management system
- road transport fatigue risk management program
- strategies and requirements to ensure management of fatigue
- strategies required when non-compliance with fatigue HVNL is identified within the chain of responsibility
- training program for heavy vehicle drivers on fatigue risk management.

Assessment Conditions

Registered Training Organisations (RTOs) are required to be approved by the National Heavy Vehicle Regulator (NHVR) to deliver and assess this unit for NHVR accreditation purposes.

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF0007 Manage a fatigue risk management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit of competency involves the skills and knowledge required for road transport business owners and agents of heavy vehicle drivers to oversee and operate a fatigue risk management system within the Transport and Logistics industry.

It includes identifying legal requirements, responsibilities and liabilities for establishing and/or improving fatigue risk management implementation plans; operating within a fatigue risk management system; and managing operations.

It also includes communicating; updating records, policies and procedures; acting appropriately on reports and identified breaches of fatigue management regulations; and ensuring operational systems are compliant with fatigue management regulations and policy.

Agents of heavy vehicle drivers and/or business owners are defined as a ‘relevant party’ under Heavy Vehicle National Law (HVNL), with responsibility for operating policies and procedures; human resources and contract provisions; and arrangements for managing safety and fatigue risk management.

Legislative and regulatory requirements are applicable to this unit. The primary legislative requirement of this unit of competency is HVNL.

This unit is also intended for road transport business owners and agents of heavy vehicle drivers who in future may be required to satisfy National Heavy Vehicle Regulator (NHVR) Fatigue Management Accreditation legislative requirements. Prospective applicants should check with the NHVR before undertaking training and/or assessment.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Implement a heavy vehicle fatigue risk management system	**1.1** Heavy vehicle fatigue risk management system and workplace policies and procedures are planned, developed and implemented
	1.2 Workplace fatigue risk management system and related policies and procedures are managed and maintained
	1.3 HVNL requirements, workplace procedures and duty of care for fatigue risk management are identified and managed in accordance with fatigue hierarchy of risk control
	1.4 External risk factors within the supply chain relating to the effects of fatigue are identified and reviewed in accordance with fatigue management regulations
	1.5 Appropriate action is taken in conjunction with relevant parties in the chain of responsibility to ensure compliance with the workplace's fatigue risk management policy and procedures
	1.6 Appropriate action is taken to ensure communication with drivers and other relevant personnel regarding health, wellbeing and personal fatigue risk management strategies, takes place
	1.7 Training is provided to develop and enhance heavy vehicle driver workplace fatigue risk management strategies
2 Operate within a road transport fatigue risk management system	**2.1** Fatigue risk management plans, policies and procedures are distributed to relevant personnel in accordance with workplace procedures
	2.2 Fatigue risk principles are identified and applied while operating within a fatigue risk management system
	2.3 Action is taken to ensure heavy vehicle driver rest and work periods are audited and managed in compliance with HVNL, taking into account driver fitness
	2.4 Reports relating to non-compliance with workplace fatigue incidents are investigated and details of action

© Commonwealth of Australia, 2025 Industry Skills Australia

		taken to prevent recurrences are documented in accordance with workplace procedures
	2.5	Relevant personnel who contributed to a non-compliance with workplace fatigue procedures are provided with appropriate feedback
	2.6	Outcome of incidents and safety investigations are reviewed and analysed to identify the extent to which fatigue may have been a contributing factor
	2.7	Heavy vehicle regulation compliance and fatigue risk management strategies, are identified and implemented
	2.8	Exemption notice requirements are applied in accordance with workplace procedures and the HVNL
	2.9	Periodic audits of the fatigue risk management system are carried out in accordance with workplace procedures and HVNL
	2.10	Legal requirements, liabilities and responsibilities for effective fatigue risk management in the workplace are managed and complied with
	2.11	Management and scheduling of heavy vehicle driver rest/work hours, with consideration for trip and road conditions, is carried out in accordance with workplace procedures and HVNL
	2.12	Processes are followed to identify signs and symptoms of fatigue in heavy vehicle drivers and action is taken in accordance with workplace procedures and HVNL
	2.13	Potential causes and symptoms of fatigue are identified, documented and actions are taken to manage and minimise their effects in accordance with the fatigue risk management system, workplace policies and procedures
	2.14	Trip conditions, timelines, work and rest requirements are planned and reviewed to minimise driver fatigue in accordance with workplace procedures
	2.15	Deviations to proposed trips are advised to heavy vehicle drivers and relevant personnel in accordance with workplace procedures and HVNL
3 Manage operations within a road transport fatigue	**3.1**	Reviews/comparisons of trip schedules to actual work/rest hours are undertaken and where non-compliance is identified, action is taken to analyse,

risk management system		rectify and document the non compliance in accordance with workplace procedures
	3.2	Heavy vehicle driver input into schedules is obtained and considered when planning trips
	3.3	Trip conditions, timelines, work and rest requirements are planned and reviewed to minimise driver fatigue in accordance with workplace procedures
	3.4	Heavy vehicle driver schedules are managed in accordance with HVNL and workplace procedures
	3.5	Loading and unloading heavy vehicles are managed so as not to contribute to driver becoming impaired by fatigue in accordance with HVNL and workplace procedures
	3.6	Audit requirements are continuously managed in accordance with HVNL and workplace procedures
4 Communicate required information to relevant personnel	**4.1**	Fatigue risk management system policies and procedures are communicated to all personnel, this communication is documented and training is provided to maintain compliance with HVNL
	4.2	Non-compliance involving external parties in the chain of responsibility is recognised, reported and communicated in accordance with workplace procedures and HVNL
	4.3	Heavy vehicle drivers are provided with feedback on identified non-compliance with fatigue risk management strategies
	4.4	Support, training and/or counselling is provided to heavy vehicle drivers to address non-compliance
	4.5	Changes in schedules/rosters and workplace procedures that impact on fatigue risk management are documented and communicated to relevant personnel
5 Update and maintain records	**5.1**	Fatigue risk management record storage and retrieval policies and procedures are followed
	5.2	Road transport fatigue risk management system and workplace policies and procedures are reviewed and amended as required to ensure compliance with HVNL

© Commonwealth of Australia, 2025 Industry Skills Australia

5.3 Work diary/records are monitored and audited for compliance with workplace procedures and HVNL, and audit findings are documented

5.4 Relevant heavy vehicle workplace records are maintained and stored in accordance with workplace policies and procedures, and HVNL

5.5 Potential fatigue hazards and control measures are listed on a fatigue risk management register in accordance with workplace procedures and HVNL

5.6 Exemptions to work and rest hours and/or record keeping are appropriately identified and documented

5.7 Workplace records, systems and procedures are reviewed to ensure compliance with HVNL

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit.

Assessment Requirements for TLIF0007 Manage a fatigue risk management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) legislation
- applying strategies to address signs and symptoms of heavy vehicle driver fatigue
- applying workplace fatigue risk management policies and procedures
- communicating effectively with relevant personnel
- complying with Heavy Vehicle National Law (HVNL) fatigue management requirements
- identifying fatigue risk factors for heavy vehicle drivers
- identifying, preparing and actioning non-compliance reports
- identifying relevant documentation on fatigue risk management and HVNL
- implementing a road transport fatigue risk management system
- implementing compliance with trip, work and rest requirements
- monitoring and maintaining work diaries/records and all relevant workplace documentation in accordance with workplace procedures and HVNL
- participating in internal reviews and periodic audits
- planning and monitoring heavy vehicle trips
- providing training on the fatigue risk management system
- recognising non-compliance with fatigue risk management strategies and HVNL, and taking appropriate corrective action.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- actions required to address non-compliance with fatigue risk management procedures within the supply chain
- fatigue management signs, symptoms and strategies
- fatigue risk management hierarchy of risk control

© Commonwealth of Australia, 2025 Industry Skills Australia

- fatigue risk management principles
- heavy vehicle fatigue risk management workplace policies and procedures
- non-compliance and penalties related to relevant driver fatigue legislation
- parties within the chain of responsibility, including:
  - consignors/consignees
  - drivers and owner drivers
  - employers, prime contractors and operators
  - loaders
  - loading managers
  - packers
  - schedulers
- periodic audit requirements
- principal obligations relating to fatigue risk management in HVNL including:
  - consideration of traffic conditions in managing speed and fatigue
  - fatigue, work and rest options
  - loading and unloading heavy vehicles
  - securing loads
  - trip conditions including vehicle dimension and load limits
- processes and resources for assessing heavy vehicle driver fatigue management competence
- program for assisting drivers to assess their level of fatigue and evaluate their fitness for work in accordance with HVNL
- record keeping responsibilities and HVNL compliance obligations
- relevant WHS/OHS legislation
- risk mitigation control measures
- road transport fatigue risk management system
- strategies and requirements to ensure management of fatigue
- training resources for the workplace's fatigue risk management system
- training programs for heavy vehicle transport operators operating under a fatigue risk management system.

Assessment Conditions

Registered Training Organisations (RTOs) are required to be approved by the National Heavy Vehicle Regulator (NHVR) to deliver and assess this unit for NHVR accreditation purposes.

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Industry Skills Australia

requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, HVNL, codes of practice and operation manuals.

TLIF0075 Demonstrate awareness of interacting with other road users

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to demonstrate awareness of interacting with other road users in accordance with approved standards, safe working and regulatory requirements.

It includes identifying types of road users, the use and reason for road rules, and potential risk consequences of interacting with road users.

Work is performed under supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.	
1	**Identify road users**	1.1 Different road user groups are recognised
		1.2 Interactions between road user groups, both positive and negative, are acknowledged
		1.3 Strategies are suggested to assist in the positive interaction of road users
2	**Identify potential risk consequences of interaction with road users**	2.1 Potential risks for each road user group are recognised
		2.2 Potential consequences for each road user group are explained
		2.3 Potential risk and consequences when road user groups interact are identified
3	**Identify use and reason for road rules**	3.1 Road rules and their purpose are explained
		3.2 Sources of road rules and regulations are identified
		3.3 Rules and regulations for all road users are identified
		3.4 Rules and regulations governing road use are explained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF0075A Demonstrate awareness of interacting with other road users.

Assessment Requirements for TLIF0075 Demonstrate awareness of interacting with other road users

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- demonstrating an understanding of rules and regulations as they apply to road users
- demonstrating an understanding of the purpose of road rules
- identifying other road users
- reading, interpreting and following relevant instructions, procedures and information
- using basic interpersonal and communication skills (including listening, questioning, receiving feedback).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable road regulations and legislation
- consequences of not adhering to road rules including:
  - economic impact
  - emotional reaction
  - financial effect
  - legal repercussions
  - physical injury
  - social repercussions
- risk factors and how they affect driver performance
- road users including:
  - cyclists and skaters
  - farm vehicles
  - heavy commercial vehicles
  - mobility scooters

TLIF0076 Demonstrate awareness of factors to reduce road harm

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to demonstrate awareness of risk factors to reduce road harm in accordance with approved standards, safe working and regulatory requirements.

It includes identifying the significance of safety features of the road network and traffic control devices, and determining environmental factors that may contribute to road harm.

Work is performed under supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Identify safety features of road network and traffic control devices**	1.1	Primary/passive safety features of road network are identified
		1.2	Secondary/active safety features of road network are identified
2	**Identify significance of safety features of road networks and traffic control devices**	2.1	Significance of road markings and their meaning are identified and explained
		2.2	Significance of traffic control devices and their meaning are identified and explained
		2.3	Legal penalties for not obeying road markings and traffic control devices are explained
3	**Determine environmental factors that contribute to road harm**	3.1	Environmental factors affecting road harm are identified
		3.2	Environmental factors affecting road harm are explained
		3.3	Driver actions when environmental factors are encountered are outlined

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

TLIF0077 Demonstrate knowledge of risk factors and consequences in interacting with other road users

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to demonstrate knowledge of risk factors and consequences in interacting with other road users in accordance with approved standards, safe working and regulatory requirements.

It includes identifying types of high risk behaviour, understanding reasons why people engage in high risk behaviour, and identifying high risk behaviour consequences.

Work is performed under supervision, generally within a team environment. This unit does not involve driving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

TLIF0078 Recognise motor vehicle road crash risks and post-crash actions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to recognise motor vehicle road crash risks and post-crash actions in accordance with approved standards, safe working and regulatory requirements.

It includes identifying types of motor vehicle crashes, the risks and causes for these crashes, and post-crash actions.

Work is performed under supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Assessment Requirements for TLIF0078 Recognise motor vehicle road crash risks and post-crash actions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- explaining common causes of major road crashes
- explaining factors that contribute to motor vehicle crashes
- explaining legal obligations of a driver and others post-crash
- explaining the common types of major road crashes
- identifying risk management strategies at a crash scene
- reading interpreting and following instructions, procedures and information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- human, environmental and vehicular factors including:
  - human:
    - fatigue
    - drugs
    - alcohol
    - speed
    - inattention
    - distraction
  - environmental:
    - road surface (gravel/sealed)

    - animals
    - road debris
    - geographical obstacle
    - architectural obstacle
  - vehicular factors:
    - mechanical failure
    - vehicle defects – tyres, brakes
- relevant regulations and rules
- relevant risk factors and how they affect motor vehicle performance
- types of common motor vehicle crashes including:
  - rear end collision
  - side impact collision/adjacent direction collision
  - right turn in front of oncoming traffic
  - run off road on straight collision
  - run off road on curve collision
  - head on collision
  - pedestrian collision
- types of common motor vehicle crashes and their potential causes including:
  - rear end collision:
    - travelling too fast
    - not leaving enough distance between vehicles
  - side impact collision/adjacent direction collision:
    - poor or insufficient scanning of driving environment
    - not sufficiently judging gap in traffic
    - overconfidence in driving ability
  - head on collision:
    - not judging speed or distance correctly when overtaking
    - not detecting hazards early enough
    - impatience
  - run off road on straight collision:
    - travelling too fast for conditions
    - inexperience resulting in over steering or misjudging distances
  - pedestrian collision:
    - pedestrians not judging amount of time it takes a vehicle to stop
    - encountering intoxicated or unpredictable pedestrians
  - right turn in front of oncoming traffic:
    - not judging speed accurately.

TLIF0079 Select a safe vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to select a motor vehicle for safety, in accordance with motor vehicle standards, safe working and regulatory requirements.

It includes identifying types of motor vehicle applicable to first time drivers, recognising safety features of vehicles and how these safety features are affected by road and environmental conditions.

Work is performed under supervision, generally within a team environment

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Identify different motor vehicle types applicable to first time drivers**	1.1	Characteristics of motor vehicles are identified for purchase, that can be used by first time users
		1.2	Licensing requirements for drivers of different motor vehicles that can be used by first time users are outlined
		1.3	Australian new and used car rating system is utilised to select an appropriate vehicle
2	**Recognise safety and design features in motor vehicles**	2.1	Different safety features of vehicles are identified and explained
		2.2	Safety features and their function to protect driver and other road users are explained
		2.3	Primary/passive safety features of motor vehicles are identified
		2.4	Secondary/active safety features of motor vehicles are identified
3	**Identify factors that can affect vehicle safety**	3.1	Corrosion and its effect on vehicle safety is outlined
		3.2	Tyre inflation and tyre wear are recognised
		3.3	Vehicle fluids and their effect on vehicle safety are identified
		3.4	Seat belts, their condition and the effects on road safety are explained
		3.5	Importance of correct motor vehicle safety maintenance is explained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF0079 Select a safe vehicle

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing basic documentation
- explaining major aspects of selecting a safe and appropriate motor vehicle for learner drivers
- identifying criteria for selecting a motor vehicle
- identifying vehicle safety features and evaluating required action to minimise, control or eliminate potential hazards
- reading and interpreting instructions, procedures and information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- active motor vehicle safety features including:
  - anti-lock braking system (ABS)
  - electronic brake assist (EBA)
  - electronic brake force distribution (EBD)
  - electronic stability control (ESC)
  - safety assist technologies (SAT)
  - seat belt pre-tensioners
  - speed alert
  - structural integrity
  - tyres
- motor vehicle hazards and risks rating

© Commonwealth of Australia, 2025 Industry Skills Australia

- motor vehicle standards, regulations and rules
- passive motor vehicle safety features including:
  - air conditioning
  - airbags (front/side/curtain)
  - automatic transmission
  - cargo barrier
  - cruise control
  - daytime running lights
  - frontal impact protection
  - head restraints
  - mirrors
  - over-speed warning devices
  - seat belts
  - seats
  - steering wheel
- workplace procurement procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

Driving a vehicle is not part of the assessment of this unit of competency.

Simulators are not suitable for final assessment of this unit of competency.

TLIF0098 Apply personal and equipment lockouts for rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply personal and equipment lockouts to rolling stock in accordance with legislated rail safety requirements.

It includes following Rail Infrastructure Manager policies, procedures and protocols.

This unit is for rail safety workers required to apply lockouts to defined areas, rolling stock and specific equipment in order to carry out maintenance activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Identify personal and equipment lockout requirements	1.1 Area and rolling stock to be locked out is identified
	1.2 Appropriate lockouts are determined in accordance with activities to be undertaken and organisational policies and procedures
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Appropriate documentation is completed in accordance with organisational procedures
	1.5 Appropriate personnel are informed in accordance with organisational procedures
2 Apply and remove area lockout	2.1 Danger zone is safely accessed in accordance with organisational procedures
	2.2 Where existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures
	2.3 Area lockouts are applied as required in accordance with organisational policies and procedures
	2.4 After all work has been completed and all sub lockouts have been removed, area lockout is removed
3 Apply and remove rolling stock lockout	3.1 Confirmation is made that area is locked out in accordance with organisational procedures
	3.2 Where existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures
	3.3 Rolling stock lockouts are applied as required in accordance with organisational policies and procedures
	3.4 After all work has been completed and all sub lockouts have been removed, rolling stock lockout is removed
4 Apply and remove personal lockouts	4.1 Confirmation is made that area and rolling stock are locked out in accordance with organisational procedures
	4.2 Where existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.3 Personal lockouts are applied as required in accordance with tasks to be performed and organisational policies and procedures
	4.4 After work has been completed all personal lockouts are removed
5 Maintain lockout equipment	5.1 Any damaged or unserviceable equipment is labelled and reported in accordance with organisational procedures
	5.2 Missing or damaged equipment is replaced in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF0098A Apply personal and equipment lockouts for rolling stock.

Assessment Requirements for TLIF0098 Apply personal and equipment lockouts for rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant rail safety legislation and workplace procedures
- communicating effectively with individuals and work groups
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying and following workplace procedures for locking out rolling stock
- identifying unsafe situations and emergencies
- removing rolling stock lockouts in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational safety management system policies, lockout/tag out procedures and/or isolation protocols
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies
- relevant rail danger zones
- relevant workplace procedures for applying personal and equipment lockout systems for rolling stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

© Commonwealth of Australia, 2025 Industry Skills Australia

requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

- Practical assessment must occur in an appropriate range of situations in the rail workplace.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIF1001 Follow work health and safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to follow and apply work health and safety (WHS)/occupational health and safety (OHS) procedures when carrying out work activities in compliance with the relevant WHS/OHS regulations and procedures.

It includes following workplace procedures for hazard identification and risk control, contributing to WHS/OHS management arrangements and completing WHS/OHS records.

Work is performed under some supervision generally within a team environment. It involves applying established WHS/OHS and hazard minimisation principles and procedures to conduct workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Follow workplace procedures for hazard identification and risk control	1.1 Workplace procedures for dealing with accidents, fire and emergencies are identified and followed
	1.2 Workplace procedures for WHS/OHS and related work instructions for controlling risks in a workplace are accurately followed
	1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
	1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities
	1.5 Procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed
	1.6 Personal protection clothing and equipment is correctly used in accordance with established safety practices and procedures
	1.7 Established emergency and contingency plans are followed
2 Contribute to arrangements for managing work health and safety	2.1 WHS/OHS issues and identified safety hazards are raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation
	2.2 Contributions to managing WHS/OHS in the workplace are made in accordance with workplace procedures and relevant legislation
	2.3 WHS/OHS issues are raised with designated personnel in accordance with workplace procedures and relevant legislation
	2.4 Participative arrangements for managing WHS/OHS in the workplace are contributed to in accordance with workplace procedures, and within scope of responsibilities and competence
3 Complete work health and safety records	3.1 WHS/OHS records are completed in accordance with workplace requirements
	3.2 WHS/OHS records and legal requirements for maintaining records of occupational injury and diseases

© Commonwealth of Australia, 2025 Industry Skills Australia

are followed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF1001 Follow work health and safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when following WHS/OHS procedures
- completing documentation related to WHS/OHS in the workplace
- implementing WHS/OHS workplace procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and comprehending simple statements in English
- reading and interpreting relevant safety-related information including safety labels, instructions for safe work, relevant safety data sheets (SDSs)/material safety data sheets (MSDSs), workplace procedures and codes of practice
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others when following WHS/OHS procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency and evacuation procedures
- HAZCHEM symbols and implications for safe work and storage
- housekeeping standards and procedures
- location and use of safety alarms, manifests, emergency shut-off systems, emergency

© Commonwealth of Australia, 2025 Industry Skills Australia

communications systems
- manual and mechanically-assisted lifting and load shifting procedures
- procedures for handling broken or damaged equipment
- relevant terms used in SDSs/MSDSs
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- site layout and obstacles
- storage and use of hazardous substances
- WHS/OHS warning signs and signals.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulation
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF1002 Conduct housekeeping activities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct housekeeping activities in the workplace.

It includes identifying housekeeping requirements, procedures and resources of different areas of the workplace; monitoring and maintaining cleanliness and tidiness in the workplace; and completing assigned housekeeping tasks.

Work is performed under some supervision generally in a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F - Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine housekeeping requirements for different workplace areas	1.1 Workplace housekeeping procedures are identified
	1.2 Equipment and consumables are selected in accordance with work area requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.3 Specific procedures and resources for housekeeping activities in different parts of the work area are identified and followed
2 Monitor and maintain cleanliness and tidiness in the workplace	2.1 Initiative is used to continuously monitor worksite cleanliness and tidiness
	2.2 Housekeeping issues are raised with designated personnel in accordance with workplace procedures
	2.3 Housekeeping equipment is operated in accordance with manufacturer instructions and workplace policy
	2.4 Housekeeping equipment and supplies are maintained and stored
3 Complete assigned housekeeping duties	3.1 Assigned housekeeping duties are conducted in accordance with workplace procedures and ensuring that waste is removed
	3.2 Maintenance requirements of any damaged items are notified to appropriate personnel
	3.3 Schedules and records for housekeeping duties are maintained
	3.4 Work areas are checked and required workplace standards are met
	3.5 Work is carried out following enterprise practices and safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during housekeeping activities
- communicating and working effectively with others when carrying out housekeeping activities
- identifying workplace housekeeping requirements and undertaking housekeeping in the workplace
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition and performance of housekeeping tools and equipment and servicing, in terms of servicing schedule and standard operating procedures
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reporting and rectifying within limits of own role, problems, faults and malfunctions identified when carrying out housekeeping activities, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards
- purpose of housekeeping within the workplace

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant enterprise practices and safeworking procedures for own job role
- risks when carrying out housekeeping tasks and related precautions to control them
- servicing procedures for housekeeping equipment
- site layout and obstacles
- workplace procedures and policies for carrying out housekeeping activities in the workplace.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIF1009 Conduct cleaning operations in enclosed spaces

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct cleaning operations in enclosed spaces.

It includes identifying risks, planning cleaning operations and cleaning the required enclosed space in accordance with safety regulations, procedures and operational requirements.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify risks and plan operation	1.1 Cleaning operation requirements are assessed
	1.2 Potential risks or hazards to self, the environment or others are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.3 Relevant information including workplace procedures and health & safety codes are identified, read and clarified as required
	1.4 Cleaning and personal protective equipment and consumables are identified
	1.5 Requirements are assembled in accordance with national regulations, standards, safety codes and workplace procedures
	1.6 Work is planned identifying critical parameters of the work
2 Clean required enclosed space	2.1 Unauthorised persons are removed from the work area
	2.2 Engineering and personal safety equipment is used
	2.3 Unwanted labels are removed
	2.4 Cleaning products are mixed in accordance with manufacturer's and workplace instructions as required
	2.5 Containers are swept out and washed so that mud, grime and residue from products stored in the containers are removed
	2.6 Security of chemicals and equipment is maintained
	2.7 Run-off is contained and waste is disposed of in accordance with local laws and workplace procedures
	2.8 Relevant documentation is completed
	2.9 Equipment used for the process is checked and stored
	2.10 Worksite is checked and returned to operational status

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIF1009 Conduct cleaning operations in enclosed spaces

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when conducting cleaning procedures in enclosed spaces
- communicating and working effectively with others when conducting cleaning procedures in enclosed spaces
- completing documentation related to conducting cleaning procedures in enclosed spaces
- following routine servicing procedures for cleaning tools and equipment
- identifying and correctly using equipment, emergency equipment and cleaning materials
- implementing contingency plans when conducting cleaning procedures in enclosed spaces
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reading, interpreting and applying relevant legislation, processes and workplace procedures for carrying out cleaning operations in enclosed spaced
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- Critical parameters for cleaning operations in enclosed spaces include:
  - emergency precautions, tests and procedures
  - evacuation and rescue procedures
  - precautions for self, others and work area
  - relevant workplace procedures to be followed
  - sequence of operations
  - workplace personnel
- maintenance procedures for cleaning equipment
- procedures for carrying out tests for contaminant gases in enclosed spaces prior to performing cleaning operations
- relevant industrial regulations and requirements
- relevant WHS/OHS regulations, codes and guidelines concerning cleaning operations in enclosed spaces
- risks when carrying out cleaning operations in enclosed spaces and related precautions to control these risks
- site layout and obstacles
- workplace procedures and policies for carrying out cleaning operations in enclosed spaces.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIF2006 Apply accident-emergency procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply accident-emergency procedures in accordance with work health safety (WHS)/occupational health and safety (OHS) codes of practice, regulations and workplace requirements.

It includes responding to an incident, controlling and assisting at an accident or emergency site, finalising accident-emergency processes and completing records.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Respond to an incident	1.1 Response to incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements
	1.2 Incident cause and effects details are identified and reported
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Assistance requirements for accidents and emergencies are clarified and reported immediately to appropriate parties
	1.5 Requests for assistance are made to relevant personnel and emergency services
2 Control and assist at accident or emergency site	2.1 Site is controlled and protected until arrival of authorised personnel
	2.2 Assistance is provided to injured persons, within limitations of duty of care responsibilities and workplace procedures
	2.3 Relevant authorities at the site are cooperated with and assisted in accordance with workplace policies
3 Finalise accident - emergency process and complete records	3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures
	3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF2006 Apply accident-emergency procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing work environment to identify hazards, assess safety risks and implement appropriate work health and safety (WHS)/occupational health and safety (OHS) control procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- negotiating and resolving issues when responding to an accident or an emergency
- operating electronic communications equipment to required protocol
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- reading and interpreting relevant instructions, procedures and information
- selecting and appropriately applying technology, information systems and policies during a safety incident, accident or emergency
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- relevant WHS/OHS and environmental protection policies and procedures
- relevant regulatory and codes of practice requirements applicable in accident/emergency situations
- site layout
- typical problems that can occur during a safety incident, accident or emergency and related action that can be taken
- workplace emergency, fire and accident procedures
- workplace procedures for accident-emergency response.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF2010 Apply fatigue management strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply fatigue management strategies within the transport and logistics industry. Work is undertaken in compliance with relevant legislation, regulations, codes and guidelines.

It includes identifying and acting on signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and act on signs of fatigue	1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures, to ensure that effective work capability and alertness are maintained
2 Implement strategies to minimise fatigue	2.1 Workplace procedures are assessed to minimise fatigue
	2.2 Factors that increase the risk of fatigue-related accidents and incidents are minimised
	2.3 Fatigue management strategies are implemented in accordance with workplace policy
	2.4 Lifestyle choices are made that promote the effective long-term management of fatigue
	2.5 Effective practices in combating fatigue are adopted and applied
	2.6 Personal fatigue management strategies are communicated to relevant people
	2.7 Appropriate counter measures are planned to combat fatigue

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2010A Apply fatigue management strategies.

Assessment Requirements for TLIF2010 Apply fatigue management strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in rosters and standard operating procedures as they relate to fatigue management
- adjusting lifestyle patterns to ensure effective fatigue management during work activities
- applying precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying fatigue management strategies
- identifying and meeting own learning needs about fatigue management related matters
- modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments
- reading and interpreting instructions, procedures, regulations and signs related to fatigue management and applying them to work activities
- recognising symptoms of fatigue and taking appropriate action in accordance with fatigue management regulations and workplace procedures
- working collaboratively with others to manage and minimise the effects of fatigue during work activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on workers
- factors that increase fatigue-related accidents
- how fatigue affects workplace performance

© Commonwealth of Australia, 2025 Industry Skills Australia

- how fatigue contributes to workplace accidents
- lifestyles that promote effective long-term fatigue management
- relevant fatigue management codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways of managing fatigue
- ways of recognising fatigue
- workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulation
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF2012 Apply safe procedures when handling/transporting dangerous goods or explosives

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply safe handling strategies when handling/transporting dangerous goods or explosives.

It includes driving vehicle concerned in a safe manner and consulting with relevant authorities/persons in accordance with regulatory requirements.

Work must be carried out in accordance with relevant Australian and state/territory regulations and codes, including current:

- Australian Code for the Transport of Explosives by Road and Rail (AE Code)
- Australian Dangerous Goods (ADG) Code
- Code for the Safe Transport of Radioactive Material.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate equipment and/or vehicle in a safe manner	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 Safety equipment is checked for serviceability and required quantities and types
	1.3 Equipment/vehicle is operated safely in accordance with the relevant industry regulations, licence/permit requirements/or standards and as directed by police and/or competent authority
	1.4 Safety guidelines and codes of practice are applied in accordance with workplace procedures
	1.5 Dangerous goods/explosives/hazardous substances are handled/conveyed in accordance with relevant government regulations and current ADG Code
	1.6 Relevant emergency procedures are assessed relative to the dangerous goods/explosives/hazardous substances concerned
	1.7 Emergency procedures are instigated in accordance with current ADG Code, relevant codes of practice and government regulations, to ensure precautions are taken consistent with directions set out in emergency workplace procedures
	1.8 Procedures are implemented to minimise damage to equipment, facilities and the environment, and to minimise injury to personnel
2 Consult with relevant authorities/persons	2.1 Dangerous goods occurrences are reported in specified timeframes to competent authority, fire brigade and/or police using appropriate workplace procedures, in accordance with relevant regulatory requirements
	2.2 Assistance is provided to competent authority as requested
	2.3 Other persons within affected emergency area are warned about hazard/s in accordance with workplace procedures as required

© Commonwealth of Australia, 2025 Industry Skills Australia

2.4 Documentation is completed and proofread in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2012A Apply safe procedures when handling/transporting dangerous goods or explosives.

Assessment Requirements for TLIF2012 Apply safe procedures when handling/transporting dangerous goods or explosives

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- communicating effectively with others
- completing relevant documentation
- handling/transporting dangerous goods/explosives/hazardous substances safely, in accordance with workplace procedures and regulatory requirements
- identifying characteristics and hazards of dangerous goods/explosives/hazardous substances being handled
- identifying, selecting and using appropriate handling/transportation equipment, vehicles, personal protection equipment and related procedures
- interpreting and following operational instructions and prioritising work
- interpreting relevant signs, placards, labels and codes
- locating, interpreting and applying relevant information
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in handling and transportation equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and use required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of various dangerous goods, explosives or hazardous substances and their implications for handling and transport
- company incident reporting system and employer responsibility to report incidents to relevant government authority
- compatibility of various types of dangerous goods, explosives or hazardous substances
- emergency management plan
- housekeeping standards and procedures
- relevant Australian and state/territory regulations and codes pertaining to identifying, handling and marking dangerous goods, explosives or hazardous substances including current ADG Code
- risks and hazards when handling and conveying dangerous goods, explosives or hazardous substances, and related precautions to control the risk
- site layout and obstacles
- WHS/OHS procedures and guidelines for lifting and movement of loads
- workplace procedures for handling and transporting dangerous goods, explosives or hazardous substances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, current ADG/AE Code, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in

TLIF2018 Operate firefighting equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate firefighting equipment. Work is undertaken in accordance with relevant codes of practice, manufacturer's instructions and workplace emergency procedures, as part of work activities within the transport and logistics industry.

It includes checking, identifying, selecting and using the appropriate firefighting equipment.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check firefighting	1.1 Firefighting equipment is checked for serviceability in accordance with manufacturer's specifications and regulatory

© Commonwealth of Australia, 2025 Industry Skills Australia

equipment		requirements
	1.2	Non-functioning equipment or equipment past its service date is identified and reported to designated personnel for replacement or service
2 Use firefighting equipment	2.1	Equipment and personal safety equipment used for fighting fires are correctly selected for type of fire in accordance with manufacturer's instructions
	2.2	Fire is controlled using firefighting equipment in accordance with manufacturer's instructions and workplace emergency procedures
	2.3	Equipment is stored safely in accordance with manufacturer's instructions and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2018A Operate firefighting equipment.

Assessment Requirements for TLIF2018 Operate firefighting equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when fighting fires using firefighting equipment
- identifying and correctly selecting, using and carrying out basic checks on firefighting equipment relevant to own work functions
- interpreting and following operational instructions and prioritising work
- monitoring performance of firefighting equipment and taking appropriate action
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in firefighting equipment and emergency procedures in the workplace
- reading and comprehending simple statements in English
- reading and interpreting instructions, procedures, regulations, signs and labels relevant to using firefighting equipment and applying them to work activities
- selecting and using required personal protective equipment conforming to industry, and work health and safety (WHS)/occupational health and safety (OHS) standards
- working safely and collaboratively with others when fighting fires using firefighting equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Australian codes of practice, regulations and safeworking systems relevant using and checking firefighting equipment
- chemistry of fire, the effects of different types of material in a fire and the principles underlying the spread of fire and its extinguishment firefighting techniques, agents and precautions applicable to different classes of fire
- different classes of fire, their characteristics and strategies, and equipment needed for their extinguishment
- fixed fire prevention and extinguishing installations and their principles of operation
- manufacturer's instructions for checking firefighting equipment
- relevant WHS/OHS and environmental protection procedures and guidelines
- types of firefighting appliances, equipment and systems, their identifying features, principles of operation and the procedures for their use and basic checking of serviceability
- typical problems that can occur with firefighting equipment and operations, and appropriate action and solutions
- workplace procedures and policies for using and checking firefighting equipment.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIF2019 Ensure a safe on-board passenger and working environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to ensure a safe on-board passenger and working environment in accordance with work health and safety (WHS)/occupational health and safety (OHS) regulatory requirements, relevant codes of practice, insurance and workplace requirements, as part of work activities in the transport and logistics industry.

It includes performing checks and inspections, rectifying and reporting work hazards and non-compliances, and completing all required documentation.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIF2062 Apply awareness of safeworking rules and regulations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply a basic awareness of applicable safeworking rules and regulations to work functions in the rail industry.

It includes interpreting and applying safeworking rules and protocols, recognising and reporting unsafe situations, following safeworking procedures, and taking appropriate safety precautions.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

Work is performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of duty of care responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Apply applicable safeworking rules and regulations	1.1 Relevant procedures for applicable safeworking rules and regulations are identified, accessed and interpreted when carrying out work activities as part of rail operations
	1.2 Relevant safeworking regulations are applied to all work activities applicable to rail functions
	1.3 Communications are conducted in accordance with applicable safeworking system requirements
	1.4 Appropriate communications records are maintained as required, in accordance with applicable safeworking system rules and regulations
2 Recognise and report unsafe situations	2.1 Hazards are identified, risks are assessed and control measures are implemented
	2.2 Unsafe situations are identified in accordance with applicable safeworking rules and workplace procedures
	2.3 Situations in the work environment identified as unsafe are reported to appropriate personnel in accordance with applicable safeworking rules and regulations
3 Follow safeworking rules and procedures	3.1 Relevant protocols are followed as specified in applicable safeworking system rules and regulations, as required
	3.2 Appropriate records and documentation pertinent to safeworking protocols are completed in accordance with the requirements of applicable safeworking system rules and regulations
	3.3 Appropriate safety precautions are interpreted and followed during work activities, in accordance with applicable safeworking rules and regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

TLIF2068 Work at height in the stevedoring industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit covers the skills and knowledge required to work at height in the stevedoring industry under the relevant regulatory requirements; it includes using site safe work instructions and procedures for working at height.

Working at height in a stevedoring environment involves the application of workplace safe work instructions, procedures and regulatory requirements as part of work activities. It also includes an understanding of the risk management procedures for working at height.

Working at height tasks are performed by a minimum two-person team under some supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Apply working at height regulations and procedures	1.1 Standards and regulations relevant to working at height are accessed, interpreted and applied
	1.2 Relevant safe work instructions, procedures and risk assessment policies and procedures are accessed, interpreted and applied
	1.3 Hazards are identified, risks are assessed and control measures are implemented
2 Select and inspect equipment for working at height	2.1 Appropriate working at height equipment required for the stevedoring industry is identified and selected in accordance with regulatory requirements and standard operating procedures
	2.2 Working at height equipment is inspected in accordance with regulatory requirements and standard operating procedures
	2.3 Malfunctioning or damaged equipment is recorded and reported to relevant personnel
3 Use working at height equipment in the stevedoring industry	3.1 Working at height safety requirements are interpreted and implemented, and required action is taken to ensure a safe work area in accordance with regulatory requirements and standard operating procedures
	3.2 Correct working at height manual handling techniques are interpreted and used
	3.3 Appropriate action is taken to ensure compliance with working at height site safe work instructions and standard operating procedures
	3.4 Working at height equipment is used in accordance with regulatory requirements and standard operating procedures
	3.5 Working at height equipment is used from a workcage in accordance with regulatory requirements and standard operating procedures
	3.6 Anchorage points are identified and used in accordance with regulatory requirements and standard operating procedures
	3.7 Working at height emergency procedures are interpreted and implemented as required
	3.8 Working at height rescue kit is inspected and appropriate

© Commonwealth of Australia, 2025 Industry Skills Australia

action is taken to rectify or replace defective components

3.9 Working at height rescue kit is used in accordance with regulatory requirements and standard operating procedures

3.10 Working at height procedures are followed during a rescue operation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF2068 Work at height in the stevedoring industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- assisting in a vessel exception risk assessment and ensuring vessel inspection checklist has been completed prior to commencing work on a vessel
- communicating effectively with others
- completing relevant documentation
- complying with applicable legislative and procedural working at height requirements
- employing correct manual handling techniques
- identifying risk factors that might impact on working at height and implementing appropriate response measures
- identifying, selecting and using relevant working at height equipment
- implementing contingency plans
- inspecting working at height equipment
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using appropriate equipment to enable safe and efficient work
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards

© Commonwealth of Australia, 2025 Industry Skills Australia

- using ancillary working at height equipment
- working collaboratively with others
- working from a workcage when working at height
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- Australian Standards, codes and regulations relevant to working at height
- manual handling methods for working at height
- procedures for using portable ladders when working at height
- relevant sections of Marine Orders Part 32 – Cargo handling equipment as promulgated by the Australian Maritime Safety Authority (AMSA)
- relevant WHS/OHS procedures and guidelines
- risk assessment policies and procedures
- risks and hazards involved in working at height and related precautions to control these risks and hazards
- working at height equipment checklist
- working at height rescue procedures
- working at height safe work instructions and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

situations that replicate workplace conditions.

This should be undertaken in a range of work environments, in all weather conditions working in ships' holds, on top of containers, in limited or restricted spaces while in a workbox or workcage.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- personal protective equipment, including:
  - gloves
  - safety headwear and footwear
  - safety glasses
  - protective clothing
  - high visibility clothing
  - full arrest safety harness
- relevant materials, tools and equipment currently used in the industry.

TLIF2072 Comply with safety and security procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to work safely in the taxi industry by following and applying work health and safety (WHS)/occupational health and safety (OHS) and security procedures when carrying out taxi work activities. Work is undertaken in accordance with relevant WHS/OHS regulations and procedures.

It includes identifying and following workplace procedures for safety/security and accident/emergency situations, and identifying, minimising and managing fatigue.

Work is performed with limited or no supervision and with full accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining taxi driver accreditation. As requirements may vary between states and territories, people seeking taxi accreditation should contact their state/territory taxi regulator.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Follow procedures for safety and security	1.1 Procedures for WHS/OHS and security are identified and clarified as required
	1.2 Safe work practices are identified and followed
	1.3 Breaches of safety and security and hazards are identified and appropriate action is taken to minimise or eliminate risk to self, others, vehicle and vehicle equipment
	1.4 Taxi security system features and functions are identified and operated within legal and workplace parameters in accordance with jurisdictional regulations
2 Follow procedures for accident/emergency situations	2.1 Emergency and potential emergency situations are recognised promptly and required actions are determined and taken within the scope of own duty of care responsibility
	2.2 Procedures for dealing with accidents, fire and emergencies are identified and followed
	2.3 Assistance from taxi network and/or other authorities is sought as required
	2.4 Details of emergency situations are reported in accordance with workplace, industry and regulatory policies and procedures
	2.5 Support services are identified for an incident or accident
3 Identify, report and respond to threats of physical violence	3.1 Security equipment is operated within legal and workplace parameters in accordance with jurisdictional regulations
	3.2 Potential circumstances for difficult customer or other road user behaviour are accurately assessed and conflict resolution strategies are used
	3.3 Procedures are followed to minimise escalation of conflict, manage the situation and ensure personal safety
	3.4 Assistance is sought from others including external support staff as required
	3.5 Incidents are reported using appropriate document format, in

© Commonwealth of Australia, 2025 Industry Skills Australia

			accordance with workplace policies and procedures
		3.6	Any follow-up action is implemented in accordance with the appropriate workplace rules, regulations and guidelines
4	**Identify and implement strategies to minimise and manage fatigue**	4.1	Potential causes of fatigue and its effects on driver and road safety are identified
		4.2	Personal warning signs of fatigue are recognised and appropriate action to manage fatigue is taken

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF2072A Comply with safety and security procedures.

Links

Assessment Requirements for TLIF2072 Comply with safety and security procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying information about accident and emergency policies and procedures and duty of care responsibilities
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- applying safe work practices
- communicating effectively with others
- completing relevant documentation
- completing work health and safety (WHS)/occupational health and safety (OHS), and accident and emergency records/reports as required
- diffusing threats of physical violence
- following correct fatigue management precautions and procedures
- following established procedures for WHS/OHS, security, hazard identification and risk controls
- identifying difficult customer or road user situations and applying conflict resolution or avoidance behaviour
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring passenger and road user behaviour
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- seeking assistance, as required, from external emergency support services in accordance with established procedures
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate reporting procedures including emergency, fire and accident procedures
- codes and systems for breaches of security
- cultural sensitivities that may lead to angry responses
- culturally appropriate responses to potential problematic situations
- emergency response procedures
- fatigue management techniques, causes and effects of fatigue on drivers and how fatigue contributes to workplace accidents
- lifestyles that promote effective long-term fatigue management
- location and use of safety alarms, emergency shut-off systems, and emergency communications systems
- manual lifting and manual assisted lifting
- potentially difficult situations, such as poorly lit pick-up areas, fare evasion, intoxication, over crowding
- procedures and protocols for safety and security procedures
- recognising risks and hazards created by fatigue and ways of managing them
- relevant codes of practice and legislative requirements
- relevant WHS/OHS procedures and guidelines
- safe work practices relevant to individual work roles
- sources of information and documentation for complying with safety and security procedures
- typical problems that can occur when complying with safety and security procedures and related appropriate action that can be taken to prevent or solve these problems.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of duress alarm and security cameras is to be conducted on actual equipment used in the taxi industry.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry including:
  - taxi security/communication equipment
  - duress alarm.

TLIF2080 Safely access the rail corridor

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to enter the rail corridor.

It includes taking appropriate safety precautions to:

- access the danger zone
- access the rail corridor
- respond appropriately in an emergency.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

This unit involves the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

This unit applies to all people accessing the rail corridor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Take appropriate safety precautions to access the rail corridor	1.1 Authority to enter the rail corridor is obtained from Protection Officer/Possession Protection Officer
	1.2 Appropriate personal protective equipment (PPE) is worn conforming to Rail Infrastructure Manager requirements
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Rail corridor is entered and a visual assessment is maintained to monitor and respond appropriately to potential risks
2 Take appropriate safety precautions to access the danger zone	2.1 Direction of approaching trains and maximum speed is recognised
	2.2 Safe place is identified
	2.3 Types of warning provided are recognised and confirmed
	2.4 Changed local conditions are identified, impact on safety is determined and safety precautions are modified as required
	2.5 Communications with other personnel are maintained in accordance with workplace procedures
	2.6 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures
3 Take appropriate action in an emergency	3.1 Emergencies and potential emergencies are identified
	3.2 Range of appropriate responses for specific emergencies are outlined
	3.3 ‘Emergency’ or ‘danger’ response signal is given as required

Assessment Requirements for TLIF2080 Safely access the rail corridor

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- accessing the rail corridor safely
- applying relevant workplace rules and procedures
- communicating effectively with individuals and/or groups
- following workplace policies, procedures and protocols
- identifying the danger zone and safe places
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- using personal protective equipment (PPE) that conforms to Rail Infrastructure Manager requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- extent of rail corridor and relevant rail danger zones
- Rail Infrastructure Manager defined entry requirements and limitations
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies within the limits of the role being undertaken
- Rail Infrastructure Manager rules and procedures for working around electrical infrastructure and/or power sources
- rail terminology as defined by the applicable Rail Infrastructure Manager safeworking system
- safety management system.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate a rail corridor.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate PPE, materials, tools and equipment currently used in the rail industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, rules and codes of practice.

TLIF2081 Perform lookout duties

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to perform lookout duties on a rail network, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes taking up looking position, conducting lookout duties and taking action in unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Take up lookout position	1.1 Danger zone is safely accessed in accordance with workplace procedures
	1.2 Location of lookout position is confirmed in accordance with workplace procedures
	1.3 Sighting distance of rail traffic is calculated in accordance with workplace procedures
	1.4 Unsafe and/or ineffective lookout positions are identified and reported in accordance with workplace procedures
	1.5 Audible warning equipment is tested as required
	1.6 Changed local conditions are identified and impact on lookout position is determined
	1.7 Effectiveness of lookout placement and method of communicating rail traffic movements is tested and confirmed
2 Conduct lookout duties	2.1 Vigilance is maintained at all times
	2.2 Approach of rail traffic is communicated using agreed methodology in accordance with workplace procedures
	2.3 Hand signals are used to confirm safe conditions to rail traffic in accordance with workplace procedures
3 Take action in unsafe situations or emergencies	3.1 Unsafe situations and/or emergencies are identified, and appropriate action is taken to minimise risk in accordance with workplace procedures
	3.2 Emergencies and incidents are recorded and reported to relevant personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

Assessment Requirements for TLIF2081 Perform lookout duties

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and work groups
- complying with worksite protection plan
- complying with relevant workplace safeworking system rules and procedures
- identifying job hazards including unsafe and ineffective lookout positions and taking required action to minimise, control or eliminate identified hazards
- providing sufficient warning time for workers and equipment to move to a safe place
- taking up lookout position that enables effective communication of rail traffic movements
- using hand signals (with or without a flag or light) to communicate with rail traffic crew in accordance with workplace instructions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- audible warning equipment and its use
- emergency management plan and workplace procedures
- rail terminology as defined by the applicable Rail Infrastructure Manager
- relevant rail danger zones and safeworking systems
- relevant Rail Infrastructure Manager policies, procedures, rules and protocols for identifying unsafe situations or emergencies
- relevant Rail Infrastructure Manager rules, procedures and protocols.

TLIF2082 Perform handsignaller duties

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to perform handsignaller duties, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes identifying site protection requirements, taking up hand signaller positions, using hand signal commands to manage rail traffic, and taking action in unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for performing handsignaller duties.

A hand signal is a signal given by hand movements, with or without a flag or light.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify site protection requirements	1.1 Worksite protection plan briefing conducted by relevant personnel is attended
	1.2 Responsibilities as handsignaller for protection are identified and clarified as required
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Tools and equipment required for handsignalling duties are identified, obtained and checked for functional condition
	1.5 Communications equipment to be used is tested and set to correct channel
2 Take up handsignaller position	2.1 Danger zone is safely accessed in accordance with workplace procedures
	2.2 Unsafe and/or ineffective signalling positions are identified and reported in accordance with workplace procedures
	2.3 Handsignalling positions that conform to worksite protection plan and workplace procedures are identified and the most appropriate position is chosen
	2.4 Situational awareness is conducted to identify potential risks
	2.5 Audible track warning devices are applied in accordance with workplace procedures as required
	2.6 Effectiveness of handsignalling position and communications protocols are confirmed
3 Use hand signal commands to manage rail traffic	3.1 Vigilance is maintained at all times
	3.2 Protection Officer is alerted to approaching rail traffic in accordance with workplace procedures
	3.3 Correct hand signal is displayed to rail traffic in accordance with Protection Officer instructions
	3.4 Verbal instructions are provided to train driver as required
	3.5 Railway track signals are replaced as required

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Take action in unsafe situations or emergencies	4.1 Unsafe situations and/or emergencies are identified, and appropriate action is taken to minimise risk in accordance with workplace procedures
	4.2 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF2082 Perform handsignaller duties

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying and responding to hand, light and flag signals during the day and at night
- applying Rail Infrastructure Manager procedures for using railway track signals
- communicating effectively with individuals and work groups
- ensuring effectiveness of handsignalling placement
- explaining appropriate action in an unsafe situation and/or emergency in accordance with workplace procedures
- following workplace policies, procedures and safeworking protocols
- giving and interpreting STOP and ALL CLEAR hand signals in accordance with Rail Infrastructure Manager workplace procedures
- identifying and selecting correct equipment and ensuring equipment functional condition
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe and ineffective handsignalling positions
- taking appropriate safety precautions when accessing the danger zone in accordance with workplace procedures
- taking up handsignalling position that enables effective communication with rail traffic crew
- using hand signal commands to instruct a rail traffic crew in a clear and timely manner.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- hand, light and flag signals used during the day and at night
- operational communications protocols and safeworking systems
- positioning requirements for handsignallers
- Rail Infrastructure Manager and organisational policies, procedures, rules and protocols relevant to handsignaller duties
- Rail Infrastructure Manager emergency management plan
- rail terminology as defined by the applicable Rail Infrastructure Manager
- railway track signals and their use
- relevant rail danger zones
- worksite protection plan in accordance with workplace briefing and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF2097 Use audible track warning devices

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to access, place and remove audible track warning devices (ATWDs) in accordance with legislative and regulatory requirements.

It includes accessing, placing and removing ATWDs in accordance with legislative requirements, organisational and/or network owner policies and procedures.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

ATWDs are used to warn rail traffic crews and rail safety workers within the rail corridor. ATWDs are also known as:

- railway track signals
- audible safety signalling devices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Assessment Requirements for TLIF2097 Use audible track warning devices

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and transporting, placing, removing and disposing of audible track warning devices (ATWDs)
- communicating effectively with individuals and groups
- completing documentation
- complying with site safety plans, work health and safety (WHS)/occupational health and safety (OHS) regulations and rail safety regulatory requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading and interpreting organisational procedures for placing and removing ATWDs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational procedures for lost and stolen ATWDs
- organisational procedures for placing and removing ATWDs
- relevant ATWDs and/or railway track signal workplace procedures for storing and transporting dangerous goods
- relevant rail danger zones
- relevant rail safety, WHS/OHS and environmental procedures and regulations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

TLIF2106 Respond to emergencies and abnormal situations when driving medium/heavy on-track vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving a medium/heavy on-track vehicle, in accordance with regulatory requirements, relevant codes of practice and workplace procedures.

It includes identifying emergencies or abnormal situations, responding to emergencies or abnormal situations and completing incident reports.

It involves the application of workplace procedures and regulatory requirements when responding to emergencies and abnormal situations, as part of work activities in a range of contexts across the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assess emergencies or abnormal situations	1.1 Emergencies, potential emergencies or abnormal situations are identified and needs are prioritised in accordance with organisational and/or network emergency response plans and procedures
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Implications of the emergency, potential emergency or abnormal situation are evaluated in accordance with organisational and/or network requirements and procedures
2 Respond to emergencies or abnormal situations	2.1 Potential actions are considered in accordance with organisational and/or network procedures and regulatory requirements
	2.2 Relevant personnel are alerted to the emergency, potential emergency or abnormal situation in accordance with organisational and/or network emergency procedures and plans
	2.3 Communications are maintained with relevant personnel to determine appropriate course of action
	2.4 Response is taken in accordance with organisational and/or network procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan
	2.5 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care
	2.6 Information is provided to relevant emergency service personnel in accordance with regulatory and organisational and/or network procedures
3 Complete incident reports	3.1 Required incident reporting procedures and processes are confirmed
	3.2 Incident reports are filled in legibly and proofread
	3.3 Incident reports are processed in accordance with regulatory requirements and organisational and/or network procedures

Assessment Requirements for TLIF2106 Respond to emergencies and abnormal situations when driving medium/heavy on-track vehicles

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safety management system actions and workplace safeworking procedures
- communicating effectively with network control officer and/or protection officer
- communicating effectively with relevant personnel
- completing incident reports
- explaining possible responses to identified emergency or abnormal situation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards that may exist when responding to emergencies and abnormal situations and ways of controlling the risks involved
- organisational procedures for using communications systems for on-track vehicle operation
- principles of effective communication
- relevant rail danger zones
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations

© Commonwealth of Australia, 2025 Industry Skills Australia

- safety management plan.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager including rules, workplace procedures, regulations, codes of practice and operation manuals.

TLIF3003 Implement and monitor work health and safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor work health and safety (WHS)/occupational health and safety (OHS) procedures, in compliance with relevant WHS/OHS regulations.

It includes accessing information about WHS/OHS workplace policies and procedures, and implementing and monitoring procedures for identifying and assessing hazards and controlling risks. It also includes planning and supervising housekeeping arrangements, and implementing and monitoring procedures for dealing with hazardous events.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Access information about WHS/OHS and workplace policies and procedures	1.1 Relevant provisions of WHS/OHS legislation and codes of practice are accurately followed
	1.2 Information on workplace WHS/OHS health and safety policies, procedures and programs is stored in a readily accessible location and manner
	1.3 Information is accurately and clearly explained to work team
	1.4 Information about risk identification outcomes and control procedures is provided to appropriate personnel
2 Implement and monitor procedures for identifying and assessing hazards	2.1 Existing and potential hazards in work area are identified and reported
	2.2 Identified hazards are assessed in relation to relative risk
	2.3 Appropriate action is initiated to minimise and control risks/hazards
3 Implement and monitor procedures for controlling risks	3.1 Incorporation of hierarchy of risk control measures within hazard register is checked
	3.2 Existing risk control measures are implemented, monitored and reviewed
	3.3 Work procedures to control risks are implemented and adherence to them by work group is monitored
	3.4 Required improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel
4 Plan and supervise housekeeping arrangements	4.1 Housekeeping tasks are identified and incorporated in enterprise work roles
	4.2 Housekeeping equipment is maintained
	4.3 Team members are allocated housekeeping tasks and are supervised in performing allocated tasks

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.4 Housekeeping practices are planned to conform with environmental and WHS/OHS health and safety requirements
5 Implement and monitor procedures for dealing with hazardous events	5.1 Workplace procedures for dealing with hazardous events are implemented as required to ensure prompt control action is taken
	5.2 Hazardous events are investigated to identify causes
	5.3 Risk control measures are implemented to prevent recurrence and to minimise risks of hazardous events or issues, and are reported to appropriate personnel for implementation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF3003A Implement and monitor occupational health and safety procedures.

Links

Assessment Requirements for TLIF3003 Implement and monitor work health and safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- ensuring that precautions and required action are taken to minimise, control or eliminate identified hazards
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency and evacuation procedures
- HAZCHEM symbols and implications for safe work and storage
- hierarchy of risk controls
- housekeeping standards and procedures
- location and use of safety alarms, manifests, emergency shut-off systems, emergency communications systems
- manual and mechanically operated lifting and load shifting procedures
- procedures for storing and using flammable materials
- procedures for storing and using hazardous substances
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- risks when using manually-operated equipment to shift loads and related precautions to control these risks
- signs and signals for WHS/OHS warnings
- site layout and obstacles
- terms used in safety data sheets (SDSs)/material safety data sheets (MSDSs)
- transport requirements for transporting goods within a workplace.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF3004 Organise work health and safety procedures in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise work health and safety (WHS)/occupational health and safety (OHS) procedures in the workplace, in accordance with WHS/OHS codes/regulations and workplace requirements in the transport and logistics industry.

It includes interpreting and applying information about WHS/OHS policies and procedures and duty of care responsibilities. It also includes identifying and assessing hazards and risks in the workplace, negotiating to control workplace hazards and risks, resolving complaints about WHS/OHS and instituting appropriate risk management strategies.

Safety checks and equipment tests are performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Use information about WHS/OHS policies and procedures	1.1 Relevant provisions of WHS/OHS legislation and codes of practice are accurately followed
	1.2 Workplace WHS/OHS policies, procedures and programs are promoted to employees in relevant work group
	1.3 Implications of risks and requirements for safe work are accurately and clearly explained to work group
	1.4 Information about risk assessment outcomes and control procedures is used in the design/redesign of work procedures
2 Identify hazards and assess risk	2.1 Existing and potential hazards in work area are identified through audit, monitoring of processes, equipment and products used, and in response to employee complaints and questions
	2.2 Identified hazards are assessed in relation to relative risk and impact on workplace operations and employee health, safety and welfare
	2.3 Priorities for hazard resolution are established and reported to appropriate personnel
3 Negotiate to control risks and resolve complaints about WHS/OHS	3.1 Existing risk control measures are implemented, monitored and possible improvements are identified
	3.2 Required improvements to existing risk control measures are implemented and identified
	3.3 Required resources for implementation are established and reported to appropriate personnel
	3.4 Negotiations with management and employees to revise work procedures are conducted within workplace issue resolution procedures
4 Institute risk management strategies	4.1 Workplace procedures for hazard, accident and incident reporting are used
	4.2 Cooperative working relationships with other employees and external authorities involved in WHS/OHS procedures are established and maintained
	4.3 Legislative provisions for improvement notices and inspections are followed

Assessment Requirements for TLIF3004 Organise work health and safety procedures in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing the working environment to identify hazards, assess safety risks, and design and implement appropriate WHS/OHS management systems
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- developing policies for precautions and required action to minimise, control or eliminate identified hazards
- ensuring the application of fatigue management knowledge and techniques in the workplace
- ensuring the systematic use of required personal protective equipment conforms to industry and WHS/OHS standards
- implementing contingency plans and modifying activities
- interpreting and following operational instructions and prioritising work
- negotiating and resolving WHS/OHS issues
- planning work activities, predicting consequences and identifying improvements
- providing leadership and working collaboratively with others
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and policies to implement WHS/OHS compliance and reporting procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards and associated safety risks in the workplace, including the range of control measures available for safety risks, considerations for choosing between different control measures, and how to identify when expert advice is needed
- principles and practices of effective WHS/OHS including elements of an effective WHS/OHS system, hazard control and risk management, hierarchy of hazard and risk control measures, arrangements for WHS/OHS participation and consultation, and incident and accident investigation arrangements
- relevant WHS/OHS and environmental protection policies and procedures
- relevant regulatory and codes of practice requirements
- significance of other management systems and procedures for WHS/OHS
- systems of risk control recognising the significance of WHS/OHS for effective workplace operation
- training, coaching and mentoring approaches appropriate for use in WHS/OHS training programs
- typical problems that can occur and related action that can be taken
- workplace protocols and procedures for managing personal work priorities and professional development.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF3013 Coordinate breakdowns and emergencies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate breakdowns and emergencies when driving a commercial vehicle, in accordance with relevant licence requirements and regulations.

It includes evaluating breakdown and emergency situations, consulting with relevant personnel/emergency authorities, coordinating activities at a breakdown/emergency site, and completing all required reports and documentation.

Work is performed with limited or minimum supervision. It involves judgement and discretion when coordinating breakdowns and emergencies that occur when driving a commercial vehicle.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Evaluate breakdown and emergency situations	1.1 Causes and effects of breakdown/emergency situations are identified and clarified
	1.2 Breakdown/emergency coordination procedures are applied in accordance with workplace policies
	1.3 Assistance is provided to injured persons within limitations of duty of care responsibilities and workplace requirements
	1.4 Load is identified and nature of risks and hazards are established and communicated to relevant authorities
	1.5 Appropriate precautions and actions are taken where load is identified as including dangerous goods, explosives or hazardous substances, in accordance with relevant codes of practice, regulations and related procedures
2 Consult with relevant persons and authorities	2.1 Details of causes and effects of breakdown/emergency are reported in accordance with workplace procedures
	2.2 Assistance and cooperation is provided to relevant authorities within legal and workplace limitations
	2.3 Information about breakdown/emergency is obtained and/or exchanged in accordance with legal and workplace requirements
3 Coordinate breakdown and emergency situations	3.1 Suitable measures are taken to control, warn, stop or divert traffic at breakdown/emergency site
	3.2 Personal security precautions are taken in accordance with workplace procedures
	3.3 Assistance is requested to minimise possibility of further damage to persons or property, in accordance with workplace policy, and relevant rules and regulations
	3.4 Appropriate measures are taken to control and protect breakdown/emergency site
	3.5 Traffic at breakdown/emergency site is controlled, as required, in accordance with regulatory requirements and workplace procedures
4 Complete documentation	4.1 Required breakdown/emergency documentation and report procedures and processes are confirmed
	4.2 Documentation and reports are filled in legibly and proofread

© Commonwealth of Australia, 2025 Industry Skills Australia

4.3 Documentation and reports are processed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF3013 Coordinate breakdowns and emergencies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- controlling traffic at breakdown or emergency site
- identifying and correctly using emergency equipment at breakdown or emergency site
- identifying containers and goods coding, markings and emergency information panels
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and comprehending simple statements in English
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others when coordinating a response to a breakdown or emergency
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of various dangerous goods/explosives/hazardous substances and their implications in breakdown/emergency situations
- duty of care requirements in a breakdown and/or emergency situation
- procedures to be followed in a breakdown and/or emergency
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- relevant state/territory road traffic authority road rules, regulations, permit and licence requirements
- risks and hazards that can exist in breakdown/emergency situations and related precautions to control the risks
- types of breakdowns and emergencies that can occur when driving a vehicle and appropriate action that can be taken in each case
- types of emergency equipment, their purpose, and the procedures for their use.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF3014 Operate as an off-sider in the waste management industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate as an off-sider on a waste collection vehicle, which involves getting in and out of the vehicle or on or off the vehicle at frequent intervals.

It includes following work health and safety (WHS)/occupational health and safety (OHS) requirements, assessing risks, mitigating risks, and using communications systems effectively.

This unit applies to new and experienced workers who take on the role of off-sider in the waste management industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Assessment Requirements for TLIF3014 Operate as an off-sider in the waste management industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- actioning emergency stopping systems in accordance with workplace policies and procedures
- applying correct procedures for alighting from vehicle
- applying correct techniques for standing on vehicle platform
- completing and maintaining required documentation and records in accordance with workplace policies and procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- developing and implementing risk mitigation controls appropriate to the situation
- evaluating risk mitigation controls and implementing identified amendments in accordance with workplace policies and procedures
- identifying and reporting occupational hazards and risks in accordance with workplace policies and procedures
- identifying emergency stopping systems
- reading interpreting and following relevant instructions, procedures, information and signs
- reporting unsuitable personal protective equipment (PPE) in accordance with workplace policies and procedures
- selecting and using required PPE in accordance with organisational, industry and WHS/OHS standards
- using communications strategies effectively, including:
- communications equipment such as a buzzer, two-way radio or horn
- documented hand or other signals and workplace alerts.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- communications strategies
- relevant WHS/OHS legislation, regulations, codes of practice, standards, policies and procedures
- relevant state/territory road and traffic authority road rules, regulations and permits
- workplace documentation, policies and procedures
- workplace alerts and signals
- workplace policies and risk assessment procedures for workers standing on a platform, including:
  - safely positioning feet and hands
  - maximum vehicle speed limits
  - alighting from and boarding vehicle
  - restrictions on riding on a platform.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF3015 Work safely as a non-electrical licensed worker near electrical assets

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to work safely near electrical assets as a non-electrical licensed worker.

It includes preparing to work safely near electrical assets, carrying out work near electrical assets safely, ceasing work near electrical assets when safety is compromised, evaluating additional potential threats, and completing relevant documentation.

This unit applies to workers whose role requires them to work within the vicinity of electrical assets.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Prepare to work safely near electrical assets	1.1 Relevant state/territory safe work legislative requirements are identified
	1.2 Unsafe distances (clearance zones, no go zones or exclusion zones) near low and high voltage power lines are confirmed and applied to safe work planning
	1.3 Safe work practices and procedures are planned for in accordance with state/territory regulatory requirements, codes of practice and workplace policies
	1.4 Safe approach distances are identified and confirmed in accordance with state/territory legislation
	1.5 Potential hazards are identified, risks are assessed and risk control options are prioritised and documented in accordance with workplace operating procedures and state/territory regulatory requirements
	1.6 Incident response plans are developed in accordance with safe systems of work, job safety, environmental analysis, work method statements and state/territory regulatory requirements
2 Carry out work near electrical assets safely	2.1 Work health and safety (WHS)/occupational health and safety (OHS) principles and practices are applied, as required
	2.2 Hazards are identified and monitored during work tasks
	2.3 Changes to assessed risks are monitored
	2.4 Risk control options are implemented, monitored and amended as required to ensure safe work operations
	2.5 Potential risks and hazards are recorded and reported in accordance with workplace policies and state/territory regulatory requirements
	2.6 Emergency procedures and incident response plans are appropriately prepared for all tasks and implemented in an emergency
	2.7 All personnel on the specific task or job site are made aware of the location of emergency procedures and incident response plans
	2.8 Content of emergency procedures and incident response plans is explained

© Commonwealth of Australia, 2025 Industry Skills Australia

3 Cease work near electrical assets when safety is compromised	3.1 Operation of vehicle is stopped immediately contact with electrical assets is made, in accordance with workplace policies and procedures and state/territory regulatory requirements
	3.2 Nature of electrical incident or potential threat is assessed and communicated to relevant personnel in accordance with workplace policies and procedures, and state/territory regulatory requirements
	3.3 Request for emergency services to be contacted is made in accordance with workplace policies and procedures
4 Evaluate additional potential threats	4.1 While remaining in vehicle, additional threats are evaluated and a suitable plan of action to address these additional threats is determined in accordance with workplace policies and procedures, and state/territory regulatory requirements
	4.2 Location of fallen wires and other threats are determined and all parts of vehicle are treated as live and/or dangerous unless otherwise determined, in accordance with workplace policies and procedures, and state/territory regulatory requirements
	4.3 People in close proximity are directed to stay clear until area is electrically safe and situation is resolved, in accordance with workplace policies and procedures, and state/territory regulatory requirements
	4.4 Vehicle is exited in accordance with workplace policies and procedures or as directed by emergency services personnel
5 Complete relevant documentation	5.1 Work schedules and authorisations including safe systems of work, job safety and environmental analysis, work method statements and work permits are documented in accordance with workplace procedures and state/territory regulatory requirements
	5.2 Incident reports are recorded in accordance with workplace policies and procedures, and state/territory regulatory requirements
	5.3 Relevant reports, records and data sheets are accurately recorded and lodged in accordance with workplace policies and procedures, and state/territory regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF3015A Work safely as a non-electrical licensed worker near electrical assets.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIF3015 Work safely as a non-electrical licensed worker near electrical assets

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant WHS/OHS requirements and work practices
- communicating effectively with others
- developing effective planning, risk mitigation and problem-solving documents
- ensuring currency of relevant legislative and regulatory knowledge
- ensuring language used suits target audience
- giving and receiving feedback
- listening
- maintaining situational awareness
- making recommendations for further risk mitigation
- planning and managing time effectively
- planning for and managing contingencies
- planning own work, predicting consequences and identifying improvements
- questioning
- sequencing activities in a way that facilitates the development of competence
- transferring and apply skills and knowledge to new contexts.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- correct use of equipment, processes and procedures appropriate for work tasks
- emergency procedures
- hazard identification process
- identification of electrical asset types

© Commonwealth of Australia, 2025 Industry Skills Australia

- job/role and related environment skills
- relevant company policies and procedures
- relevant legislation, regulations, codes of practice, standards, policies and procedures
- relevant workplace tasks, skills and knowledge including knowledge of safe approach distances (clearance zones, no go zones and exclusion zones) and reasons for being declared as such
- risk assessment processes and controls relevant to worksite
- safe work methodologies and strategies
- safe work practices in relation to local areas of work
- WHS/OHS requirements and work practices.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIF3022 Implement/monitor procedures when warehousing/storing dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor work health and safety (WHS)/occupational health and safety (OHS) policies, safe work procedures and programs for warehousing or storing dangerous goods and hazardous substances in accordance with regulatory requirements, as part of work undertaken in the transport and logistics industry.

It includes accessing and providing information on legislative requirements, workplace policies and procedures; implementing and monitoring procedures for identifying and assessing hazards; and implementing and monitoring procedures for controlling risks.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Provide information on legislative requirements, workplace policies and procedures	1.1 Legislative requirements for dangerous goods and hazardous substances are identified, stored and retrieved as required
	1.2 Information on WHS/OHS policies and safeworking procedures relating to storing dangerous goods and hazardous substances is stored in a readily accessible location and manner
	1.3 Information on legislative requirements, workplace policies and safe work procedures relating to storing dangerous goods and hazardous substances is accurately and clearly explained to work group
	1.4 Information on the outcome of hazard identification, risk assessment and control measure implementation is accurately and clearly explained to work group
2 Implement and monitor procedures for identifying hazards and assessing risks	2.1 Dangerous goods or hazardous substances are identified from information provided, including class labels, manifests, safety data sheets (SDSs)/material safety data sheets (MSDSs) and other documentation
	2.2 Confirmation is sought from relevant personnel where potentially dangerous goods or hazardous substances do not appear to be appropriately marked
	2.3 Risks associated with storing identified dangerous goods or hazardous substances are assessed, reported/recorded in accordance with workplace policy
3 Implement and monitor risk control procedures	3.1 Established risk control measures for safely storing dangerous goods and hazardous substances are implemented, monitored and reviewed in accordance with workplace procedures
	3.2 Workplace procedures to control risks are implemented
	3.3 Adherence to risk control procedures by work group is monitored in accordance with workplace procedures
	3.4 Improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel, as required
	3.5 Procedures for monitoring and controlling risks comply

Assessment Requirements for TLIF3022 Implement/monitor procedures when warehousing/storing dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- assessing handling and storing precautions and requirements for dangerous goods and hazardous substances
- communicating effectively with others when storing or warehousing dangerous goods and hazardous substances
- completing relevant documentation
- determining required permits
- identifying containers and goods coding, markings, labels and emergency information panels for the mode of transport/storage selected
- identifying dangerous goods and hazardous substances special requirements
- identifying dangerous goods and hazardous substances from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria
- identifying job and site hazards, and planning work to minimise risks
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning own work including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards

© Commonwealth of Australia, 2025
Industry Skills Australia

- storing dangerous goods and hazardous substances safely
- working collaboratively with others when storing or warehousing dangerous goods and hazardous substances
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment applications, capacities, configurations, safety hazards and control measures
- housekeeping standards and procedures
- permit and licence requirements
- problems that may occur when storing or warehousing dangerous goods and hazardous substances and action that can be taken to resolve these problems
- relevant regulations and codes for storing dangerous goods and hazardous substances
- risks for storing dangerous goods and hazardous substances and related precautions to control risk
- workplace procedures for handling and storing dangerous goods and hazardous substances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

TLIF3058 Apply safeworking rules and regulations to rail functions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply applicable safeworking rules and regulations to rail functions carried out on rail networks.

It includes correctly using communications protocols; interpreting and responding to radio, hand signal and light commands; interpreting and following relevant safeworking rules and protocols; and taking appropriate action in safety incidents, unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under established safeworking system rules, protocols and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Apply safeworking rules and regulations	1.1 Relevant safeworking system for area where work activities are to be carried out is identified prior to commencing work
	1.2 Relevant rules for the applicable safeworking system are followed when carrying out activities as part of rail operations
	1.3 Work activities are conducted in compliance with relevant state/territory safeworking regulations for activities concerned
2 Apply communications protocols	2.1 Communications protocols are followed in accordance with the applicable safeworking system requirements
	2.2 Appropriate communications records are maintained as required within the applicable safeworking system rules and procedures
3 Use and interpret radio, hand, light and flag commands	3.1 Applicable safeworking system rules and procedures are applied when using and interpreting radio, hand, light and flag commands
	3.2 Hand signals are only used in conditions of good visibility
	3.3 Any command not clearly understood is regarded as a STOP command in accordance with applicable safeworking system rules and regulations
4 Follow safeworking protocols	4.1 Relevant protocols are followed as required and specified in safeworking system rules and procedures
	4.2 Appropriate records and documentation are completed in accordance with the requirements of the applicable safeworking system rules and procedures
5 Take action in unsafe situations or emergencies	5.1 Unsafe situations are identified in accordance with the requirements of the applicable safeworking system rules and procedures
	5.2 Appropriate action is taken to report and/or control safety incidents, identified unsafe situations or emergencies, in accordance with rail safety worker duty of care responsibilities and the requirements of applicable

© Commonwealth of Australia, 2025 Industry Skills Australia

	safeworking system rules and procedures
6 Record unsafe situations or emergencies	6.1 Appropriate records and documentation of safety incidents, identified unsafe situations or emergencies are completed in accordance with the requirements of applicable safeworking system rules and procedures
	6.2 Records of safety incidents, identified unsafe situations or emergencies are maintained in accordance with the requirements of applicable safeworking system rules and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF3058A Apply safeworking rules and regulations to rail functions.

Assessment Requirements for TLIF3058 Apply safeworking rules and regulations to rail functions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying safeworking system rules, protocols and procedures to rail functions
- checking compliance between work and safeworking rules and regulations and taking appropriate action in accordance with operating procedures when non-compliance is identified
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe or emergency situations that could occur in the workplace and appropriate responses
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating electronic communications equipment to required protocol
- reading and interpreting relevant safeworking rules, regulations and instructions
- using and responding appropriately to a range of radio, hand, light and flag signals
- working collaboratively with others to fulfil safeworking requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action to be taken in safety incidents, identified unsafe situations and emergencies within the limits of own responsibility under the applicable safeworking systems
- applicable safeworking system requirements and limitations for applicable rail functions
- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- rail safety worker duty of care responsibilities

© Commonwealth of Australia, 2025 Industry Skills Australia

- rail terminology as defined in the applicable Rail Infrastructure Manager safeworking system
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection legislation and policies
- safeworking system rules and workplace procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIF3060 Control traffic as a pilot vehicle operator

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required by pilot vehicle operators to control traffic in the vicinity of an oversized vehicle.

It includes applying control procedures, coordinating traffic, maintaining effective communication, maintaining equipment using prescribed traffic control stop/slow bats and communicating effectively with persons involved.

Work involves applying basic principles, routine procedures and regulatory requirements to control traffic as a pilot vehicle operator.

Work is performed independently with minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Apply control procedures	1.1 Legislative responsibilities and requirements are identified, interpreted and applied
	1.2 Work health and safety (WHS)/occupational health and safety (OHS) requirements are identified, interpreted and applied
	1.3 Company procedures and requirements are identified, interpreted and applied
	1.4 Appropriate personal protective equipment is selected and used in accordance with workplace operating procedures
	1.5 Traffic control equipment is selected in accordance with task requirements and workplace operating procedures
2 Coordinate traffic	2.1 Vehicles and pedestrians are monitored to ensure safety of persons and property
	2.2 Hazards are identified, risks are assessed and control measures are implemented
	2.3 Adjustments are made for changing conditions and to ensure best traffic flow
	2.4 Handheld signs (bats) are positioned in accordance with operating procedures and maximum visibility is provided
	2.5 Mishaps or accidents are managed in accordance with workplace operating procedures and relevant legislation
3 Maintain effective communication	3.1 Effective communication is maintained between all parties
	3.2 Appropriate language and protocols are used during communication
	3.3 Messages are transmitted concisely in accordance with operating procedures
	3.4 Electronic communications power supply is maintained in accordance with manufacturer recommendation
	3.5 After a period of non-contact, radio or other electronic contact is checked to ensure effective operation in accordance with operating procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Maintain equipment	4.1	Equipment is cleaned, maintained and stored or stowed in accordance with manufacturer specifications and workplace procedures, to ensure operational effectiveness
	4.2	Documentation is completed in accordance with operating procedures and workplace journey requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF3060A Control traffic as a pilot vehicle operator.

Assessment Requirements for TLIF3060 Control traffic as a pilot vehicle operator

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- controlling traffic by:
  - ensuring safe and efficient movement of all vehicular and pedestrian traffic
  - assisting movement of oversized or overmassed (OSOM) vehicle being escorted
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant instructions and operating procedures
- rectifying and/or reporting identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and correctly using signage
- using handheld signs
- using personal protective equipment and clothing in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements
- working collaboratively with others
- working safely in accordance with instructions
- working systematically with required attention to detail without injury to self or others, or damage to goods, vehicles or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electronic communications operating procedures
- emergency management plan
- operating procedures for controlling traffic during piloting duties
- purpose of required personal protective equipment and instructions for its use
- relevant journey documentation
- relevant national heavy vehicle legislation and regulatory requirements
- requirements of traffic control during mishaps or accidents
- verbal and non-verbal communication techniques
- workplace and equipment safety requirements, and relevant WHS/OHS legislation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

- Resources for assessment include:

TLIF3063 Administer the implementation of fatigue management strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to administer the implementation of fatigue management strategies during work operations in a defined workplace in accordance with national and state/territory legislation and relevant regulations.

It includes monitoring the implementation of fatigue management strategies, recognising breaches of fatigue management policies, procedures and regulations, and developing and assessing staff competence in fatigue management.

It also includes providing feedback to staff on shortcomings in their fatigue management skills and knowledge, and reporting to management on the implementation of fatigue management policy.

Work is performed under limited supervision generally as a team leader or supervisor.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor the implementation of fatigue management strategies	1.1 Work activities of employees, subcontractors and suppliers in organisation's products and services supply chain are monitored in accordance with organisation's fatigue risk management implementation plan
	1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation
2 Recognise breaches of fatigue management policies, procedures and regulations	2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures
	2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are recognised and reported in accordance with standard procedures
	2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures
	2.4 Appropriate action is taken in conjunction with employees, subcontractors or suppliers concerned, to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures
3 Develop and assess staff competence in fatigue management	3.1 Appropriate training programs and learning resources are developed and provided to ensure employees understand the organisation's fatigue management policies and procedures, and the risks, causes and consequences of fatigue
	3.2 Employees are assessed to confirm they are competent in understanding the organisation's fatigue management strategies and can apply them to their day-to-day work activities and responsibilities
	3.3 Deficiencies in employee competence to apply organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided to enable employees to achieve required competence

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Provide feedback to staff on shortcomings in fatigue management skills and knowledge	4.1 Evidence of employee shortcomings in implementing fatigue management strategies is obtained and interpreted from observation of signs and symptoms of fatigue in work activities, periodic evaluations of work performance, and assessments of competence carried out as part of training and learning activities
	4.2 Employees are provided with feedback on identified shortcomings in their implementation of fatigue management strategies, and appropriate support and counselling is provided on how they might address these shortcomings
	4.3 Further learning opportunities and information are provided to assist employees implement organisation's fatigue management strategies in their area of work activity, as required
5 Report on the implementation of fatigue management policy	5.1 Periodic audits of the implementation of fatigue management strategies in the work area/s of responsibility are carried out in accordance with standard procedures
	5.2 Accidents and safety incidents are investigated and analysed to identify the extent to which fatigue might have been a contributing factor
	5.3 Reports on implementation of organisation's fatigue risk management system are prepared and submitted to designated personnel in accordance with standard procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Requirements for TLIF3063 Administer the implementation of fatigue management strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant regulations, policies and procedures
- applying relevant legislation and workplace procedures
- assisting employees to identify their own learning needs on matters related to fatigue management
- communicating effectively with others
- modifying activities and taking appropriate initiatives to administer the implementation of organisation's fatigue risk management system depending on contexts, risk situations and environments
- planning and carrying out audits and reviews of organisation's fatigue risk management system
- planning and organising training and learning opportunities for employees on fatigue management and implementing organisation's fatigue risk management system
- reading and interpreting documentation on organisation's fatigue risk management system and related policy, instructions, procedures and regulations and applying this information to supervisory activities
- recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with organisation's fatigue risk management system
- working collaboratively with employees and other management staff to implement organisation's fatigue risk management system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes and consequences of fatigue in relation to employees and organisation
- employee and organisation responsibilities for implementing fatigue management

© Commonwealth of Australia, 2025 Industry Skills Australia

regulations and policies including suppliers and sub-contractors in organisation's services and products supply chain
- factors that increase fatigue-related accidents
- hazards and risks created by fatigue in the workplace
- how fatigue affects workplace performance
- how fatigue contributes to workplace accidents
- lifestyles that promote the effective long-term management of fatigue
- options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient and fatigue management refresher training
- organisation's fatigue risk management system and the workplace policies and procedures related to fatigue management, and the control of factors that can contribute to fatigue and fatigue-related accidents
- organisation's fatigue risk management system as it relates to the operational area/s being administered
- procedures for auditing and reviewing organisation's fatigue risk management system, and related policy and procedures for reporting audit outcomes
- processes and resources for assessing employee fatigue management competence
- relevant codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations
- strategies and ways of managing fatigue
- ways of assisting individuals to assess their own sleep patterns and to evaluate their own fitness for work such as providing information on how to identify sleep disorders and how to obtain appropriate treatment
- ways of providing feedback to employees on identified deficiencies in their competence to implement fatigue management strategies
- ways of recognising fatigue.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF3083 Conduct track protection assessment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct track protection assessments, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes undertaking track assessment and determining the type of track protection required to perform work activities safely.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety.

This unit also provides the authority to position lookout protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Undertake track assessment	1.1 Track work activity to be performed is identified and its complexity is analysed
	1.2 Impact of the work activity on the network is determined
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Track protection requirements are analysed and identified
	1.5 Visual assessment is conducted to assess the characteristics of the track worksite
2 Plan track protection required to perform work activity safely	2.1 Outcomes of the visual assessment and the complexity of the track work activity are analysed to determine type of track protection required
	2.2 Worksite protection plan is prepared in accordance with safety assessment outcomes and Rail Infrastructure Manager rules, procedures and protocols for rail safety
	2.3 Plan is communicated to relevant personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLIF3083B Conduct track protection assessment.

Assessment Requirements for TLIF3083 Conduct track protection assessment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with individuals and work groups
- communicating with Network Control Officer is maintained using appropriate communications systems
- conducting a visual assessment of track worksite characteristics to identify job hazards and taking required action to minimise, control or eliminate identified hazards
- defining the authority boundaries when conducting track protection assessment
- identifying unsafe situations and emergencies
- identifying safe places when conducting track protection assessment
- identifying positions for handsignaller and lookouts when conducting track protection assessment as required
- identifying level and pedestrian crossings when conducting track protection assessment
- identifying fixed rail infrastructure when conducting track protection assessment
- preparing site protection arrangement plans
- preparing worksite protection plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of track worksites
- operational communications protocols and systems
- positioning requirements for handsignallers
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies within workplace role
- Rail Infrastructure Manager rules and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- Rail Infrastructure Manager rules and procedures for working around electrical infrastructure
- rail terminology as defined by the relevant Rail Infrastructure Manager safeworking system
- railway track signals and their use
- relevant rail danger zones and safeworking systems
- relevant safeworking system workplace rules and procedures
- types of track protection and safeworking systems
- types of worksite protection equipment and their use
- work activity complexity
- worksite protection plans.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIF3084 Follow mobile crane safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to follow and apply mobile crane safety procedures, and work health and safety (WHS)/occupational health and safety (OHS) procedures when carrying out mobile crane operations.

It includes identifying and following mobile crane and workplace procedures for hazard identification and risk control, contributing to arrangements for managing WHS/OHS, and completing all relevant safety records.

Mobile crane operations are performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Follow workplace and mobile crane safety procedures for hazard identification and risk control	1.1 Mobile crane and workplace procedures for dealing with accidents, fire and emergencies are identified and followed
	1.2 Mobile crane and workplace procedures for WHS/OHS and related work instructions for controlling risks in a workplace are accurately followed
	1.3 Mobile crane hazards and site hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
	1.4 Safety regulations and established mobile crane and workplace safety and hazard control practices and procedures are obtained, interpreted and applied to mobile crane operations
	1.5 Procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed, as required
	1.6 Personal protective clothing and equipment is correctly used in accordance with established safety practices and procedures
	1.7 Established mobile crane and workplace emergency and contingency plans are followed in an emergency
2 Contribute to arrangements for managing mobile crane safety procedures and WHS/OHS	2.1 Mobile crane safety hazards and WHS/OHS issues are identified and raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation
	2.2 Contributions to WHS/OHS management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation
	2.3 Participative arrangements for mobile crane safety procedures and WHS/OHS management in the workplace are contributed to within relevant workplace procedures, scope of responsibilities and own competence
3 Complete workplace and WHS/OHS records	3.1 Mobile crane and WHS/OHS records are completed in accordance with workplace requirements
	3.2 WHS/OHS records and legal requirements for

© Commonwealth of Australia, 2025 Industry Skills Australia

	maintaining records of occupational injury and diseases are followed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF3084A Follow mobile crane safety procedures.

Assessment Requirements for TLIF3084 Follow mobile crane safety procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying basic fatigue management techniques
- applying mobile crane and work health and safety WHS/OHS recording procedures in accordance with workplace requirements
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation, mobile crane safety procedures and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers in large, medium, or small worksites, demolition sites and/or construction sites
- estimating the size, shape and special requirements of loads
- following procedures for identifying mobile crane safety hazards and WHS/OHS issues
- identifying containers and goods coding, Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings and emergency information panels
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and comprehending simple statements in English
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and

© Commonwealth of Australia, 2025 Industry Skills Australia

WHS/OHS standards
- taking appropriate action to report identified mobile crane and site hazards in the workplace
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- hazards associated with crane operations on a demolition site
- hazards associated with mobile crane operations on a construction site
- HAZCHEM symbols and implications for safe work and storage
- housekeeping standards and procedures
- how to handle broken or damaged equipment
- lifting personnel using a workcage/workbox
- location and use of safety alarms, emergency shut-off systems, emergency communications systems
- manual and mechanically assisted lifting and load shifting procedures
- mobile crane and workplace emergency and evacuation procedures
- relevant mobile crane safety procedures
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- risks associated with mobile cranes, and related precautions to control the risk
- risks associated with multiple crane operations
- signs and signals used for warnings
- site layout and obstacles of container or cargo terminal or wharf
- storage and use of hazardous substances
- terms used in safety data sheets (SDSs)/material safety data sheets (MSDSs)
- transport requirements for goods within a workplace.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and include restricted spaces, exposed conditions and controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
  - Australian Standards
  - general duty of care under WHS/OHS legislation
  - mobile crane codes of practice
  - state/territory WHS/OHS legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics
  - workplace relations regulations
  - workers' compensation regulations
- dangerous goods regulations
- personal protective equipment, including:
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radios
  - high visibility clothing
- relevant materials, tools and equipment currently used in industry.

TLIF3085 Apply local incident response procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply local incident response procedures in accordance with relevant regulations and workplace procedures.

It involves applying basic emergency response principles when dealing with incidents within a defined local area. It also includes responding to an incident, carrying out incident response activities and completing follow-up actions.

Work must be carried out in compliance with relevant regulations and emergency workplace procedures concerning action to be taken in an emergency.

Work is performed under minimal supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

essential outcomes.	demonstrate achievement of the element.
1 Respond to incident	1.1 Details of incident are received, assessed and confirmed
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Immediate response requirements are identified and actioned in accordance with organisational procedures
	1.4 Communication is established with network control personnel and instructions are followed in accordance with organisational policies and procedures
2 Perform incident response activities	2.1 Incident response activities are carried out in accordance with organisational policies and procedures
	2.2 Assistance is provided in accordance with worker duty of care responsibilities and organisational requirements
	2.3 Assistance is provided to relevant authorities in accordance with organisational policy and legislative requirements
	2.4 Information is collected and passed on to relevant personnel in accordance with organisational procedures
3 Complete follow-up actions	3.1 Details of incident are collected, recorded and managed in accordance with organisational procedures
	3.2 Contribution is made to debrief process and recommendations are prepared and submitted, as required
	3.3 Documentation relating to the implementation and coordination of incident responses is completed in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIF3085 Apply local incident response procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying incident response procedures
- applying relevant legislation and workplace procedures
- carrying out incident response activities
- collaborating with others
- communicating clearly and effectively with others
- completing follow-up actions
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- responding to an incident.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan
- layout of area under control and potential obstacles for responding parties
- organisational procedures and policies for responding to incidents, including procedures for responding to and providing practical assistance where required
- procedures for contacting emergency services personnel and other relevant stakeholders
- relevant legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes of practice, procedures and guidelines

© Commonwealth of Australia, 2025 Industry Skills Australia

- risks, hazards and related precautions to control risk
- types of incidents that can occur and appropriate action to be taken in each case.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Follow workplace procedures for hazard identification and risk control	1.1 Workplace procedures for dealing with environmental incidents, accidents, fires and emergencies are identified and followed
	1.2 Workplace procedures for WHS/OHS, environmental and related work instructions for controlling risks in a workplace are identified and followed
	1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
	1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities
	1.5 Hazard and risk control documentation is completed in accordance with organisational requirements as required
	1.6 Personal protective clothing and equipment is correctly used in accordance with established safety practices and procedures as required
	1.7 Established emergency and contingency plans are followed in an emergency
	1.8 Information on workplace WHS/OHS and environmental policies, procedures and programs is stored in a readily accessible location and manner
2 Contribute to arrangements for managing WHS/OHS	2.1 WHS/OHS issues and identified safety hazards are raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation
	2.2 Contributions to managing WHS/OHS in the workplace are made in accordance with workplace procedures and provisions of relevant legislation
	2.3 WHS/OHS issues are raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.4 Participative arrangements for managing WHS/OHS in the workplace are contributed to within workplace procedures, scope of responsibilities and competencies
3 Implement environmental control procedures	3.1 Environmental protection measures are implemented or applied in accordance with organisational policies and procedures
	3.2 Identified improvements to existing procedures are passed on to appropriate personnel
	3.3 WHS/OHS and environmental records and reports are completed in accordance with organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF3087 Follow work health and safety, and environmental procedures in the rail industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and consulting effectively with others
- completing relevant documentation in accordance with workplace procedures
- identifying job and environmental hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- operating and adapting to differences in equipment in accordance with operational procedures
- reading and interpreting relevant safety-related information, workplace procedures and codes of practice
- reporting and rectifying faults and malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) in accordance with industry and work health and safety (WHS)/occupational health and safety (OHS) regulations
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency management plan and evacuation procedures
- location and use of safety alarms and emergency communications systems
- relevant environmental protection regulations
- relevant sections of state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- relevant WHS/OHS procedures, rail industry standards, rules, codes of practice and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- signs and signals used for WHS/OHS warnings
- site layout and obstacles
- typical problems that can occur when caring for the environment when carrying out work activities in the rail industry
- workplace procedures and guidelines for caring for the environment during workplace operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

TLIF3089 Implement fatigue management policies and procedures for rail infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement fatigue management policies and procedure for rail infrastructure.

It includes monitoring the implementation of fatigue management and recognising breaches of fatigue management policies, procedures, programs and regulations. It also includes assessing rail safety worker competence in fatigue management, providing feedback to workers on shortcomings in their fatigue management skills and knowledge, and reporting to management on the fatigue management program implementation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines for managing fatigue in the workplace.

Work is performed under limited supervision within a rail infrastructure environment. It involves the application of relevant rail safety regulations and the principles of fatigue management when administering the implementation of an organisation's fatigue management strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor implementation of fatigue management program	1.1 Work activities of employees, subcontractors and suppliers in supplying products and services are monitored as required, in accordance with the organisation's fatigue risk-management implementation plan
	1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation
	1.3 Deficiencies in the competence of individual employees to apply the organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided
2 Recognise breaches of fatigue management policies, procedures and regulations	2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures
	2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are identified as required and reported in accordance with workplace procedures
	2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures
	2.4 Appropriate action is taken in conjunction with employees, subcontractors and suppliers as required, to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures
3 Provide feedback to employees on shortcomings in fatigue management skills and knowledge	3.1 Employees are provided with feedback on identified shortcomings in their implementation of fatigue management strategies and appropriate support and counselling are provided on how they might address these shortcomings

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.2 Information is provided to employees to assist them in implementing the organisation's fatigue management strategies in their area of work activity
4 Report on implementation of fatigue management policy	4.1 Periodic audits of the implementation of fatigue management policies and procedures in work areas of responsibility are carried out in accordance with organisational policies and procedures
	4.2 Reports on the implementation of the organisation's fatigue risk-management system are prepared and submitted to designated personnel in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF3089 Implement fatigue management policies and procedures for rail infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- assisting rail safety workers identify their own learning needs on fatigue management matters
- identifying training and learning opportunities for rail safety workers on fatigue management
- reading and interpreting documentation on an organisation's fatigue risk-management program and related policy, instructions, procedures and regulations relating to fatigue management, and applying them to supervisory activities
- recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with organisation's fatigue risk-management system
- using appropriate numeric functions when carrying out reporting procedures
- working collaboratively with rail safety workers and other staff.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- causes, ways of recognising, and consequences of fatigue on rail safety workers and the rail organisation, and ways of managing them
- fatigue management symptoms and strategies
- fatigue risk management program
- hierarchy of fatigue risk management
- options and resources for providing training and learning opportunities for rail safety workers on fatigue management and the implementation of an organisation's fatigue risk management program
- organisation's fatigue risk management program as it relates to the operational areas being

© Commonwealth of Australia, 2025 Industry Skills Australia

administered
- processes and resources for assessing rail safety worker competence in fatigue management
- relevant rail safety and work health and safety (WHS)/occupational health and safety (OHS) legislation as they relate to fatigue
- risks and hazards created by fatigue in the workplace
- ways of assisting individuals to assess their own sleep patterns and evaluate their own fitness for work, including information on identifying sleep disorders and obtaining appropriate treatment
- ways of providing feedback to rail safety workers on identified deficiencies in their proficiency to implement the fatigue risk management program.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant fatigue risk management programs, exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Transport Operator system of fatigue risk management including workplace procedures, regulations, codes of practice and operation manuals.

TLIF3091 Apply awareness of dangerous goods and hazardous materials requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify and apply an awareness of hazardous substances and dangerous goods requirements.

It includes identifying legislation relating to hazardous substances and dangerous goods; segregating dangerous goods and hazardous substances; and dealing with incidents involving hazardous substances and dangerous goods.

This unit is intended for people who have minimal or no contact with explosives or hazardous substances and dangerous goods as part of their job role but who require an awareness of how hazardous substances and dangerous goods are labelled and segregated when being transported.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Apply appropriate legislation for transporting dangerous goods and hazardous substances	1.1 Legislation and organisational policies and procedures for transporting hazardous substances and dangerous goods are identified and accessed
	1.2 Labelling of different types of dangerous goods and hazardous substances is identified from accessed documentation
	1.3 Hazardous loads are identified from transport manifests
2 Separate dangerous goods and hazardous substances	2.1 Hazardous substances and dangerous goods class and subsidiary risk information is identified
	2.2 Hazardous substances and dangerous goods are correctly separated in accordance with relevant documentation, and class and subsidiary risk information as required
3 Deal with incidents involving dangerous goods and hazardous substances	3.1 Information is obtained about dangerous goods and hazardous substances involved
	3.2 Hazards are identified, risks are assessed and risk control measures are implemented
	3.3 Documentation is checked for compliance with separation rules as required, in accordance with organisational procedures
	3.4 Information about dangerous goods and hazardous substances is relayed to appropriate people and authorities

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF3091 Apply awareness of dangerous goods and hazardous materials requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- checking relevant dangerous goods and hazardous substances documentation in accordance with operational procedures and instructions
- checking relevant dangerous goods and/or hazardous substances segregation in accordance with class and subsidiary risk information/documentation
- identifying dangerous goods and hazardous substance labels
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying relevant safety data sheets (SDSs)/material safety data sheets (MSDSs), manufacturer instructions, and organisational policies and procedures for dangerous goods and/or hazardous substances
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- labelling of dangerous goods and hazardous substances
- relevant national, state/territory regulations and codes of practice for identifying and labelling dangerous goods and hazardous substances, including appropriate sections of the current Australian Dangerous Goods (ADG) Code and other applicable legislation
- risks and hazards when transporting dangerous goods and hazardous substances.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, industry standards, codes of practice, current ADG Code and operation manuals.

TLIF3096 Carry out emergency response to a dangerous goods incident

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out an emergency response in a dangerous goods incident.

It includes responding to the incident, controlling and assisting at the site, identifying product being carried, and completing reports and other required documentation in accordance with regulatory requirements and workplace procedures.

Work must be carried out in accordance with work health and safety (WHS)/occupational health and safety (OHS) codes of practice and regulations, transport emergency response plan (TERP) and workplace requirements.

Work is performed under limited supervision. It involves the application of regulatory requirements and workplace emergency response procedures when responding to accidents and emergencies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify incident response procedures	1.1 Company procedures for responding to incidents and emergencies are accessed and explained
	1.2 Procedures for accessing first aid are determined
	1.3 Familiarisation with the use of fire safety equipment is demonstrated
2 Respond to incident	2.1 Nature, extent and degree of incident threat are assessed in accordance with emergency procedures
	2.2 Guides for product being carried are located, and UN number and shipping/technical name are obtained from available documents
	2.3 Resources and vulnerability of situation are analysed
	2.4 Key people and relevant support agencies are identified and notified of incident and product details
	2.5 Instructions and support are sought from key people and support agencies in accordance with emergency procedures and TERP
3 Apply emergency strategies	3.1 Safety and security procedures are complied with in all actions
	3.2 Personal protective equipment (PPE) is selected and used in accordance with requirements of the situation, and WHS/OHS and emergency procedures
	3.3 Welfare of people is guarded and protected as the first priority of any action
	3.4 Exclusion zone is established around incident site
	3.5 Safe access and exit are maintained for emergency services in accordance with emergency procedures and situational analysis
	3.6 Controls are selected and applied to achieve objectives with minimum damage to people and the environment

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.7	Immediate response to threat or danger to people is provided while preserving personal safety, in accordance with emergency procedures
	3.8	Emergency first aid treatment of minor injuries is carried out correctly and details of treatment administered are reported accurately to incident response leader
4 Communicate with and complement other personnel	4.1	Effective communication and documentation with key people and support agencies are constantly maintained
	4.2	Activities are consistent with incident response leader's plan of action
	4.3	Work of other key people and support agencies is supported by own actions
5 Monitor the environment and the incident	5.1	Factors that may create or increase risk of injury or damage are constantly assessed and reported to incident response leader
	5.2	Hazard controls are monitored to ensure continued effectiveness
	5.3	Own and others' health and morale are monitored and maintained
	5.4	Changes in conditions and behaviour are identified and reported
6 Assist with recovery from incident	6.1	Evidence relating to incident cause is preserved and recorded as far as possible
	6.2	Appropriate assistance is provided in accordance with emergency procedures
	6.3	Emergency equipment is returned to a state of readiness as soon as is reasonably possible
	6.4	Debriefings are attended and participated in as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF3096 Carry out emergency response to a dangerous goods incident

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying own responsibilities in accordance with company procedures
- collecting evidence of:
  - workplace documentation
  - load documentation
  - incident details
- identifying and describing an incident clearly
- re-stowing emergency equipment
- selecting and using personal protective equipment (PPE) and clothing safely and effectively under emergency conditions
- using effective communication skills during emergencies
- using emergency equipment including:
  - emergency shutdown controls
  - evacuation controls
  - spill control equipment
  - eye wash equipment and safety showers
  - fire extinguishers
- using PPE and safety measures including:
  - chemical resistant gloves
  - safety headwear and footwear
  - safety glasses
  - intrinsically safe, full cover protective clothing
  - high visibility clothing and safety vest
  - evacuation controls
  - two-way radio.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislative and company procedures and codes
- appropriate PPE and clothing
  - current Australian Dangerous Goods (ADG) Code
- documents and records including
  - emergency information procedure (EIP)
  - emergency procedures guide (EPG)
  - environmental protection legislation and regulations
  - fatigue management regulations
- emergency equipment operating characteristics, limitations, hazards, precautions, procedures and general care
- general emergency priorities and strategies
- hazard analysis techniques
- hazards and precautions necessary during control activities
- organisational emergency procedures:
  - relevant Australian Standards and certification requirements
  - relevant internal data entry books, including logbooks, data sheets and load sheets
  - relevant state/territory road rules and roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
  - workplace operating procedures
- survival, rescue and recovery procedures
- tactics for safely handling emergencies involving dangerous goods including:
  - transport emergency response plan (TERP)
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - work health and safety (WHS)/occupational health and safety (OHS) legislation
  - workplace policies and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF4007 Implement and coordinate accident-emergency procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and coordinate accident and emergency procedures in accordance with relevant regulations and workplace procedures.

It includes responding to the incident, coordinating on-site activities and completing follow-up actions.

Work is performed under some supervision generally within a team environment. It involves the application of basic emergency response principles when implementing accident and emergency procedures, and includes providing assistance ranging for simple injuries to applying life support systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Respond to incident	1.1 Details of incidents, accidents and emergencies are received, analysed and confirmed
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Immediate coordination requirements are identified and actioned in accordance with organisation procedures
	1.4 Travel to incident site is undertaken by the shortest, fastest, legal means and routes
2 Coordinate on-site activities	2.1 Control of site activities is assumed on arrival, and operator and other authorities present are informed of this action
	2.2 Assistance is provided to clients and operators within limitations of duty of care and organisational requirements
	2.3 Details of personnel, including names and nature of injuries, are notified to relevant personnel, in accordance with organisational policies and procedures
	2.4 Assistance is provided to relevant authorities within legal and policy limitations
3 Complete follow-up actions	3.1 Details of affected personnel, including names, nature of injuries and follow-up treatments are notified to next-of-kin in accordance with organisational procedures
	3.2 Incidents resulting in a near miss, accident or emergency are investigated and a report, including recommendations, is completed in accordance with organisational policies and procedures
	3.3 Accident procedures and emergency plans are reviewed for effectiveness and recommendations for changes are prepared and submitted to appropriate persons

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF4007 Implement and coordinate accident-emergency procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when implementing and coordinating accident and emergency procedures
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs
- working collaboratively with others when implementing and coordinating accident and emergency procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- means to control and organise an accident scene, provide practical assistance and cooperate with others at the scene
- relevant work health safety (WHS)/occupational health and safety (OHS) and other regulatory codes, procedures and guidelines concerning response to accidents and emergencies
- risks and hazards in the workplace and related precautions to control risk

TLIF4014 Develop and maintain a safe workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop and maintain a safe workplace in accordance with regulations.

It includes planning and implementing safety requirements; informing and training personnel on work health safety (WHS)/occupational health and safety (OHS) legislation, codes and standards; and establishing and maintaining procedures for assessing and controlling safety risks. It also includes monitoring, adjusting and reporting safety performance, and evaluating the WHS/OHS system and related policies, procedures and programs.

Work involves discretion and judgement in developing and maintaining a safe workplace.

Work is performed under minimum supervision with general guidance on progress and outcomes of work.

Work generally involves responsibility for resource coordination and allocation, and provides leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and implement safety requirements	1.1 Health and safety risk assessments are made as part of production planning exercises
	1.2 Policy and procedures are developed to implement requirements for a safe workplace
	1.3 Work practices are planned with colleagues to ensure compliance with workplace and environmental legislation and standards
	1.4 Safe operating procedures are documented and communicated
	1.5 Work practices are implemented in accordance with requirements specified in legislation and standards for safe workplaces and environments
	1.6 Effective induction and supervision is provided to support colleagues in managing their organisational responsibilities
	1.7 Purchasing policy for providing goods and services is informed by WHS/OHS considerations
2 Inform and train personnel on WHS/OHS legislation, codes and standards	2.1 Legislation, standards and organisational policies and practices relevant to creating and maintaining a safe workplace and environment are made available to individuals/teams
	2.2 Arrangements are made to provide information in a language, style and format that is understood by colleagues
	2.3 WHS/OHS training program is developed and implemented to identify and fulfil employee WHS/OHS training needs as part of the organisational general training program
	2.4 Individuals/teams are informed of their legal responsibility for maintaining a safe workplace and environment
	2.5 Implications of an unsafe workplace and environment are made clear to all within the workplace
3 Establish and maintain	3.1 Safety risks presented by identified hazards are correctly

© Commonwealth of Australia, 2025 Industry Skills Australia

procedures for assessing and controlling safety risks	assessed in accordance with WHS/OHS legislation and codes of practice
	3.2 Activities are monitored to ensure procedure is adopted effectively throughout area of managerial responsibility
	3.3 Risk assessment is addressed at the planning, design and evaluation stages of any change within area of managerial responsibility to ensure risk is not increased
	3.4 Measures to control assessed safety risks are developed and implemented in accordance with the hierarchy of controls, relevant WHS/OHS legislation, codes of practice and trends identified from the WHS/OHS records system
	3.5 Activities are monitored to ensure risk control procedure is adopted effectively throughout area of managerial responsibility
	3.6 Risk control is addressed at the planning, design and evaluation stages of any change within area of managerial responsibility to ensure adequate risk control measures are included
4 Monitor, adjust and report safety performance	4.1 Hazards are identified, assessed and prioritised for action
	4.2 Controls are selected to minimise risks to health and safety
	4.3 Waste recycling, reduction and disposal is carried out within legislative and organisational requirements
	4.4 Recommendations for improvements to meet legislation and associated standards are submitted to designated persons/groups
	4.5 Individuals/teams are informed of improvements and alterations to WHS/OHS procedures in the workplace
	4.6 Systems, records and reporting procedures are maintained according to legislative requirements
5 Evaluate WHS/OHS system and related policies, procedures and programs	5.1 Effectiveness of WHS/OHS system and related policies, procedures and programs is assessed in accordance with workplace WHS/OHS aims
	5.2 Improvements to WHS/OHS system are developed and implemented to ensure more effective achievement

© Commonwealth of Australia, 2025 Industry Skills Australia

	workplace WHS/OHS aims and organisational policies and objectives
	5.3 Inadequacies in existing risk control measures are identified in accordance with the hierarchy of controls, and resources enabling implementation of new control measures are sought and/or provided in accordance with appropriate procedures
6 Investigate and report non-conformance	6.1 Conformance with WHS/OHS legislation and codes of practice is assessed to ensure that as a minimum, legal WHS/OHS standards are maintained
	6.2 Non-conformance is investigated and dealt with in accordance with legislative requirements
	6.3 Colleagues are supported to acquire and apply competencies to meet legislative requirements and associated standards
	6.4 Changes to operations and practices are implemented to ensure non-conformance is not repeated
7 Establish and maintain a WHS/OHS records system	7.1 WHS/OHS record requirements are confirmed to identify patterns of occupational injury and disease within area of managerial responsibility
	7.2 WHS/OHS records system is set up to meet WHS/OHS record requirements
	7.3 Employees are trained in the use of the WHS/OHS records system
	7.4 Changes are made to the WHS/OHS records system to ensure effective achievement of workplace WHS/OHS aims
	7.3 WHS/OHS records are used as the basis for developing and submitting relevant workplace WHS/OHS reports to management

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF4014 Develop and maintain a safe workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing the working environment to identify hazards, assess risks, implement control measures, and design and implement appropriate WHS/OHS management systems
- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others when establishing a safe workplace
- completing relevant documentation when establishing a safe workplace
- designing and implementing appropriate WHS/OHS management systems
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocols
- planning work activities, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information, labels and signs
- reporting and/or rectifying identified problems that may arise, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and procedures to improve WHS/OHS conformance, information systems and reporting requirements
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working collaboratively with others when developing and maintaining a safe

© Commonwealth of Australia, 2025 Industry Skills Australia

workplace
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate links to other management systems, for example contractors, maintenance and purchasing
- arrangements for participation and consultation over WHS/OHS
- considerations for choosing between different control measures
- elements of an effective WHS/OHS management system
- hazards and associated safety risks that exist in the workplace
- hierarchy of controls
- how to identify when expert advice is needed
- incident and accident investigation arrangements
- principles of risk management
- range of control measures available
- relevant WHS/OHS and environmental protection policies and procedures
- relevant regulatory and code requirements
- role of technical information and experts in designing risk control measures, monitoring systems and health surveillance procedures
- significance of other management systems and procedures for WHS/OHS
- systems of risk control, recognising the significance of WHS/OHS for effective workplace operation
- training, coaching and mentoring approaches appropriate for use in WHS/OHS training programs
- typical problems that can occur when managing WHS/OHS systems and related action that can be taken
- workplace business policies and plans related to WHS/OHS issues
- workplace protocols and procedures for managing personal work priorities and professional development.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF4061 Respond to electric tram-driving emergencies and abnormal situations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving an electric tram in accordance with regulatory requirements and workplace procedures.

It includes identifying and responding to emergency and abnormal situations, arranging follow-on support and assistance, and communicating with staff and passengers in accordance with workplace procedures and relevant regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines, as well as relevant state/territory road rules and tramway regulatory requirements.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures when responding to electric tram-driving emergencies and abnormal situations as part of workplace activities across a variety of operational contexts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify emergency or abnormal electric tram-driving situation	1.1 Emergency, potential emergency or abnormal situation is promptly recognised and assessed, and needs are prioritised in accordance with workplace emergency response plan/procedures
	1.2 Implications of emergency, potential emergency or abnormal situation are evaluated in accordance with workplace requirements
	1.3 Options for reporting the situation and/or taking action are considered in accordance with workplace procedures and regulatory requirements
	1.4 Network Control Officer and relevant personnel are alerted to emergency, potential emergency or abnormal situation as required, in accordance with workplace operating and emergency procedures and plans
	1.5 Communications are maintained with relevant personnel to determine appropriate course of action
2 Respond to emergency or abnormal electric tram-driving situation	2.1 Emergency, potential emergency or abnormal situation is responded to in accordance with workplace procedures, received instructions, regulatory requirements and emergency response plan
	2.2 Hazardous substances and dangerous goods class and subsidiary risk information is identified
	2.3 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of rail safety worker duty of care responsibilities
	2.4 Responsibilities are fulfilled in accordance with workplace emergency response plan and code/regulatory requirements
	2.5 Assistance is provided in controlling the site prior to and following arrival of emergency services
	2.6 In an emergency, assistance is provided to other staff and emergency services personnel conducting initial scene

© Commonwealth of Australia, 2025 Industry Skills Australia

	survey
	2.7 Directions of the Network Control Officer and controlling emergency services authority are followed and all possible assistance is provided in response to those directions
	2.8 Incident reports are completed accurately in accordance with regulatory and workplace procedures
3 Arrange follow-on support and assistance	3.1 In an accident or illness, medical assistance and support is arranged as required in accordance with workplace procedures
	3.2 First aid is provided until medical assistance arrives, within limits of own responsibility and competence in accordance with workplace procedures
4 Communicate with staff and passengers	4.1 Staff and passengers are provided with relevant, appropriate and timely advice on emergency and abnormal situations
	4.2 Instructions are provided to relevant personnel and/or passengers in accordance with workplace procedures, consistent with the nature of the emergency or abnormal situation
	4.3 Evacuation procedures for personnel and/or customers are explained and/or demonstrated as required in accordance with workplace procedures
	4.4 Customer service and safety needs arising from emergency or abnormal situation are identified and acted on in accordance with regulatory and workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIF4061 Respond to electric tram-driving emergencies and abnormal situations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in electric trams and ancillary equipment
- completing required documentation and reports
- following emergency response plan in accordance with workplace procedures
- identifying hazards and taking appropriate action to minimise, control or eliminate identified hazards
- identifying, solving and/or reporting problems promptly, in accordance with workplace procedures
- modifying activities depending on workplace contexts, risk situations and environments
- providing first aid within limits of own responsibility and competence
- reading and interpreting relevant instructions, procedures and information
- responding to incidents, emergencies or abnormal situations in accordance with operational procedures and workplace emergency response plan
- selecting and using relevant communications and other equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- focus of operation of work systems, equipment, management and site operating systems when responding to electric tram-driving emergencies or abnormal situations

© Commonwealth of Australia, 2025 Industry Skills Australia

- hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies
- problems that may occur when responding to electric tram-driving emergencies and abnormal situations, and action that can be taken to resolve these problems
- procedures for communications protocol
- relevant documentation and reporting requirements
- relevant state/territory road and traffic authority and tramway operating procedures
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures for responding to electric tram-driving emergencies and abnormal situations .
-

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate tram workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, emergency management plan, codes of practice and operation manuals.

TLIF4064 Manage fatigue management policy and procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage organisational fatigue management policy and procedures in accordance with relevant legislation and regulations.

It includes identifying legal requirements, liabilities and responsibilities for establishing and/or improving fatigue management implementation plans, policies and procedures. It also includes acting appropriately on reports and identified breaches of fatigue management regulations.

It also includes ensuring operational systems are compliant with fatigue management regulations and policy; planning and organising adequate resources and operational systems; and facilitating the training and assessment of staff on their responsibilities and fatigue management techniques.

Work is performed under minimum supervision generally as a manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Identify or confirm fatigue management legal requirements and responsibilities	1.1 Current legal requirements, liabilities and responsibilities for effective fatigue management within the organisation are identified and interpreted
	1.2 Existing fatigue management plans, policies and procedures are obtained and reviewed
	1.3 Internal risks concerning the potential effects of fatigue are identified or confirmed and reviewed
	1.4 External risks within the organisational services and/or products supply chain concerning the potential effects of fatigue are identified or confirmed and reviewed in accordance with fatigue management regulations and the related chain of responsibility
2 Establish and improve fatigue management policy and procedures	2.1 Organisational fatigue risk management system implementation plan is developed or reviewed and improved
	2.2 Organisational fatigue risk management policy and procedures are developed or reviewed and improved in conjunction with relevant personnel
	2.3 Feedback is obtained on the implementation plan and related policies and procedures from key stakeholders internal and external to the organisation
	2.4 Appropriate adjustments are made to the plan, policies and procedures based on the feedback received
	2.5 Managerial approval for the fatigue risk management system implementation plan and related policies and procedures is obtained in accordance with organisational procedures
	2.6 Fatigue risk management system implementation plan and the related policies and procedures are distributed and presented to relevant organisational personnel for implementation
3 Act upon reports on the implementation of fatigue management policy	3.1 Reports from designated personnel on the implementation of the organisational fatigue risk management system implementation plan and related policies and procedures are received and interpreted
	3.2 Accidents and safety incidents are reviewed and/or investigated and analysed to identify the extent to which

© Commonwealth of Australia, 2025 Industry Skills Australia

	fatigue might have been a contributing factor
	3.3 Information provided in the reports indicating that fatigue management policy and procedures are not being correctly implemented is analysed and an appropriate managerial response and related action is initiated
	3.4 Opportunities for improvements to the organisational fatigue risk management system implementation plan and related policies and procedures are identified and appropriate action is taken to make the necessary adjustments
4 Act upon identified fatigue management regulations breaches	4.1 Identified or reported fatigue management policy breaches are investigated in accordance with organisational procedures and regulatory requirements
	4.2 Action is taken to ensure internal and/or external personnel who may have contributed to any breach of fatigue management policy are provided with appropriate feedback and information to avoid recurrence of the breakdown in planned fatigue management processes
	4.3 Where organisational procedures or culture is found to have contributed to a breach in fatigue management policy, appropriate action is taken to improve procedures or to address the culture in ways that aim to avoid a recurrence of the breakdown in planned fatigue management processes
	4.4 Report on breaches of fatigue management policy is prepared and submitted to designated personnel with details of action taken to prevent a recurrence, in accordance with organisational procedures
5 Ensure that operations systems are compliant with fatigue management regulations and policy	5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisational fatigue management regulations and policy
	5.2 Where necessary, changes are made to operations systems and standard operating procedures to ensure that they are compliant
	5.3 In accordance with the chain of responsibility principles, appropriate discussions are held with relevant personnel in supplier or subcontractor companies in the organisational supply chain to ensure their operational systems and standard operating procedures are compliant with the fatigue management regulations and policy

© Commonwealth of Australia, 2025 Industry Skills Australia

6 Plan and organise adequate resources and operational systems	6.1 Organisational budgets and resource allocation strategies are planned to provide adequate resources for the implementation of the organisational fatigue risk management system
	6.2 Periodic reviews are undertaken of budgetary and resource allocation arrangements as they relate to implementing the organisational fatigue risk management systems and appropriate improvements are made as required
7 Facilitate the training and assessment of staff on fatigue management policy and procedures	7.1 Organisational training systems are planned to provide competency-based on-the-job and off-the-job training and assessment opportunities as detailed in the organisational strategic plan
	7.2 Team leaders, supervisory and training staff are provided with adequate opportunities to develop the required expertise to contribute to the organisational fatigue management training and assessment activities
	7.3 Periodic reviews are undertaken of fatigue management training systems and appropriate improvements are made as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF4064A Manage fatigue management policy and procedures.

Assessment Requirements for TLIF4064 Manage fatigue management policy and procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to fatigue management
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when implementing the organisational fatigue risk management system
- facilitating systems that assist employees to identify their own learning needs about fatigue management
- modifying activities and taking appropriate initiative to manage the implementation of an organisational fatigue risk management system depending on differing contexts, risk situations and environments
- organising audits and reviews of an organisation’s fatigue risk management system
- planning and organising budgetary requirements and resource allocation for implementing an organisational fatigue risk management system
- reading and interpreting documentation on fatigue management legislation and the organisational fatigue risk management system and applying them to management activities
- recognising breaches of fatigue management strategies and regulations and taking appropriate action in accordance with the organisational fatigue risk management system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- budgetary and resource requirements for implementing an organisational fatigue risk management system
- causes and effects of fatigue on employees
- components of a fatigue risk management system, and policies and procedures related to fatigue management, and the control of factors that can contribute to fatigue and

© Commonwealth of Australia, 2025 Industry Skills Australia

fatigue-related accidents
- factors that increase fatigue-related errors and accidents
- fatigue reduction and proofing strategies available to an organisation that can minimise the risk of errors and safety incidents due to fatigue such as assigning low risk tasks to periods when fatigue risk is higher
- how fatigue affects workplace performance
- how fatigue contributes to workplace accidents
- lifestyles that promote the effective long-term management of fatigue
- options and resources for providing training and learning opportunities for employees about fatigue management and implementing an organisational fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management
- procedures for auditing and reviewing an organisational fatigue risk management system and related policies and procedures, and for reporting audit outcomes
- processes and resources for assessing employee fatigue management competence
- relevant legislation, regulations, permit and licence requirements related to fatigue management
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- responsibilities of an organisation and individual employees for implementing fatigue management regulations and policies, including requirements agreed with suppliers and sub-contractors in the supply chain about organisational services and products
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways to manage fatigue
- strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fatigue is a contributing factor
- systems for auditing the effectiveness and efficacy of organisational fatigue risk management strategies, policies and procedures
- ways of recognising fatigue.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

TLIF4065 Ensure compliance with Australian Dangerous Goods Code

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to ensure compliance with the current Australian Dangerous Goods (ADG) Code as part of work undertaken in various contexts within the transport and logistics industry.

It includes ensuring responsibilities for handling and transporting dangerous goods are defined, managing performance and controlling risks, maintaining records and evaluating effectiveness.

The unit generally applies to those who lead others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Ensure responsibilities for handling dangerous goods are defined	1.1 Responsibilities and duties for transporting and handling dangerous goods are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions
	1.2 Any relevant licensing requirements for employees are confirmed
2 Manage performance and control risks	2.1 Ongoing system for controlling risks based on a hierarchy of control is developed, and is integrated within general work procedures
	2.2 Measures to control assessed risks and to monitor conformance are developed and implemented, in accordance with relevant dangerous goods transport regulations, code of practice and workplace priorities
	2.3 Non-conformance is investigated and procedures for rectification are instituted
	2.4 Inadequacies in dangerous goods transport procedures are identified and measures are implemented to improve workplace practice
3 Maintain records	3.1 Dangerous goods records system is established in accordance with relevant legislative framework
	3.2 Accurate and legible records for operation within the workplace are completed in accordance with dangerous goods transport enterprise policies and legislative requirements
4 Evaluate effectiveness	4.1 Feedback about effectiveness of dangerous goods transport policies, procedures and programs is collected from work group and is provided to senior management
	4.2 Improvements to dangerous goods transport procedures are proposed to senior management

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF4065 Ensure compliance with Australian Dangerous Goods Code

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- complying with applicable regulations and current Australian Dangerous Goods (ADG) Code
- complying with workplace documentation and current ADG Code
- identifying hazards and applying precautions and required action to minimise, control or eliminate identified hazards
- implementing contingency plans, particularly to deal with any potential ADG Code breaches
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities of team members in terms of planned schedule
- reading and interpreting current ADG Code, related documents and procedures, and information and materials provided as guidance notes
- using effective communication techniques
- working collaboratively with others to ensure compliance with health and safety requirements, and current ADG Code.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant required documentation
- relevant sections of national and state/territory regulatory requirements and codes of practice, including current ADG Code, conditions and duty holders to whom it applies
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations particularly as they overlap with the current ADG Code
- workplace procedures for:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency management plan
- managing and controlling hazardous situations when carrying out work activities
- safe transfer and storage of dangerous goods and hazardous materials
- transport emergency response plan (TERP).

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF4066 Implement and supervise transport regulations compliance systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and supervise transport regulations compliance systems within the transport and logistics industry.

It includes identifying and interpreting relevant regulations, carrying out operations that comply with transport regulations and reviewing operation process.

The unit generally applies to those who lead others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

TLIF4069 Monitor and respond to traffic flow

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to monitor and respond to traffic flow when operating in a road network control room, in accordance with workplace procedures and regulatory requirements.

It includes monitoring and maintaining traffic flow in a road network and implementing changes to traffic flow as required. It also includes developing an understanding of risk management procedures for monitoring and responding to traffic flow.

It involves the application of workplace safe work instructions and procedures and regulatory requirements as part of work activities.

Tasks are performed individually within a controlled environment. The role may at times be required to work within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

TLIF4070 Operate fire and life safety system within a tunnel

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate fire and life safety systems within a tunnel and to activate safety system procedures.

It includes the application of workplace safe work instructions and procedures and regulatory requirements in operating, and maintaining fire and life safety systems. It also includes developing an understanding of the risk management procedures for operating fire and life safety systems within a tunnel.

Tasks are performed individually within a control environment. The role may at times be required to work within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for TLIF4070 Operate fire and life safety system within a tunnel

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- activating tunnel fire and life safety system as it applies to the workplace and within the job role
- applying fatigue management knowledge and techniques
- briefing emergency services accurately about tunnel layout, and available equipment and its use
- communicating effectively and calmly with others when operating within a road tunnel control room environment
- completing documentation/updating traffic management systems related to operating fire and life safety systems within a tunnel
- evacuating a tunnel
- identifying all relevant liaisons that apply when required to activate tunnel fire and life safety systems
- identifying and correctly using equipment in accordance with environmental protection regulations and guidelines
- identifying maintenance requirements/scheduling of fire and life safety systems in accordance with workplace procedures
- identifying tunnel layout
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment availability in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems and faults in accordance with regulatory requirements and workplace procedures.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- electrical distribution system as it applies to the workplace and job role
- emergency procedures
- emergency services liaison
- emergency vehicle access to tunnel
- fire and life safety systems as they apply in the workplace
- purpose and operations of fire and safety systems used in a tunnel, including electrical distribution system, pumps and drainage system, ventilation system
- site layout/tunnel familiarisation
- ventilation and deluge systems as they apply to relevant environmental procedures and guidelines, the workplace and job role
- workplace procedures and guidelines for operating fire and life safety systems within a road tunnel and relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Online assessment is not suitable for final assessment of this unit of competency.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- fire and life safety systems
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIF4086 Control and coordinate incident responses

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control and coordinate incident responses in accordance with organisational and regulatory procedures.

It includes applying emergency response principles when responding to an incident, coordinating incident response activities and completing follow-up actions.

Work must be carried out in compliance with relevant regulations and workplace procedures concerning action to be taken in an emergency.

Work is performed under minimal supervision generally in a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Respond to incident	1.1 Details of incident are received, analysed, confirmed and prioritised
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Immediate coordination requirements are identified and actioned in accordance with organisational and regulatory procedures
2 Coordinate incident response activities	2.1 Control and coordination of incident response activities are assumed, and relevant personnel and other authorities are informed of this action
	2.2 Assistance to be provided to clients and operators is arranged in accordance with rail safety worker duty of care responsibilities and organisational requirements
	2.3 Assistance is provided to relevant authorities in accordance with workplace policy and legislative requirements
	2.4 Information is collected and passed on to relevant personnel/stakeholders in accordance with workplace procedures
3 Complete follow-up actions	3.1 Details of incident are collected, recorded and managed in accordance with organisational procedures
	3.2 Contribution is made to debrief process and recommendations are prepared and submitted, as required
	3.3 Documentation relating to the implementation and coordination of incident responses is completed in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLIF4086A Control and coordinate incident responses.

Assessment Requirements for TLIF4086 Control and coordinate incident responses

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- applying relevant legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes of practice, procedures and guidelines
- collaborating with others
- communicating clearly and effectively with others
- identifying involvement of the following in an incident:
- Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings
- containers and goods coding
- emergency information panels
- implementing contingency plans
- interpreting and following operational procedures and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reporting and rectifying faults and malfunctions promptly in accordance with rail safety worker duty of care responsibilities, regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency management plan
- layout of area under control, and potential obstacles for responding parties
- means to control an incident and to provide practical assistance where required
- procedures for contacting emergency services personnel and other relevant stakeholders
- relevant legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- relevant WHS/OHS legislation, regulations, codes of practice, procedures and guidelines concerning incident response
- risks, hazards and related precautions to control risk
- types of incidents that can occur and appropriate action to be taken in each case.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including emergency management plan, workplace procedures, regulations, codes of practice and operation manuals.

TLIF4088 Implement and coordinate rail safety and WHS risk-control strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and coordinate rail safety and work health and safety (WHS)/occupational health and safety (OHS) risk management strategies, in accordance with regulatory and legislative requirements.

It includes accessing rail safety and WHS/OHS information, developing risk-control procedures, selecting and implementing risk controls, and contributing to monitoring and evaluating their effectiveness.

This unit covers the requirements to implement and coordinate rail safety and WHS/OHS risk management strategies and to identify, assess and control risks associated with people, plant, environment, rail infrastructure, and associated interfaces.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Access information about rail safety, WHS/OHS and organisational policies and procedures	1.1 Relevant provisions of rail safety and WHS/OHS legislation and codes of practice are identified
	1.2 Information on organisational rail safety and WHS/OHS policies and procedures is stored in a readily accessible location and manner
	1.3 Information is accurately interpreted and clearly explained to the appropriate personnel
2 Develop options to control rail safety and WHS/OHS risks	2.1 Hazard register, outcomes of previous incident investigations, and risk assessments are reviewed to identify possible rail safety and WHS/OHS hazards and/or risks requiring control action
	2.2 Rail safety, WHS/OHS legislation and standards are used to develop a range of options to control specific risks in the workplace
	2.3 Principles of the hierarchy of control are applied when developing risk-control options
	2.4 Input is sought from stakeholders and workplace personnel as required
	2.5 Advice from rail safety officers and WHS/OHS specialists and technical advisors is sought as required
3 Select appropriate options to control rail safety and WHS/OHS risks	3.1 Outcomes of risk assessments are used to select appropriate options to control risks
	3.2 Selected risk controls are prioritised
	3.3 Factors that may potentially limit effectiveness of controls are identified
	3.4 Stakeholders and workplace personnel are consulted when selecting appropriate control options as required
	3.5 Recommended risk controls are communicated to stakeholders and workplace personnel
4 Implement rail safety and WHS/OHS risk controls	4.1 Appropriate authority and relevant resources to implement controls are identified and applied

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.2 Actions required to control risks are implemented
	4.3 Stakeholders and workplace personnel are consulted with and involved in implementing risk controls
5 Contribute to monitoring and evaluating the effectiveness of risk controls	5.1 Effectiveness of implemented risk controls is evaluated, in consultation with stakeholders as required
	5.2 Compliance with any new procedures is monitored and documented in accordance with organisational procedures
	5.3 Workplace sources of information and data are accessed if required, to evaluate effectiveness of risk controls and to check for new hazards introduced as a result of controls
	5.4 Areas for further improvement are identified in consultation with stakeholders and appropriate action is taken
	5.5 Assistance is provided in developing and documenting an improvement plan when requested

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF4088A Implement and coordinate rail safety and OH&S risk-control strategies.

Assessment Requirements for TLIF4088 Implement and coordinate rail safety and WHS risk-control strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and rectifying within limits of own role, problems, faults and malfunctions
- reviewing previous incidents and hazard register for relevant existing workplace risk management controls.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan and evacuation procedures
- housekeeping standards and procedures
- rail safety management system
- relevant rail safety and work health and safety (WHS)/occupational health and safety (OHS) legislation, procedures and guidelines
- reporting procedures for unsafe situations, hazards and workplace risks
- signs and signals used for WHS/OHS warnings.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including safety management system, workplace procedures, regulations, rules, codes of practice and operation manuals.

TLIF4090 Implement safeworking rules and regulations for network control activities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and coordinate systems of safeworking rules and regulations for network control activities.

It includes implementing safeworking rules and regulations; applying and managing safeworking protocols and communications; and taking appropriate action in safety incidents, unsafe situations or emergencies.

Work is performed using established operational procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes with terminology as defined by the applicable Rail Infrastructure Manager safeworking system .

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

It covers the activities required by network control officers in the operation of safeworking procedures within their area of control.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Conduct network control activities following safeworking rules and procedures	1.1 Relevant rules for the applicable safeworking system are followed when carrying out network control activities as part of rail operation
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 All network control activities are conducted in compliance with relevant state/territory safeworking rules and regulations
	1.4 Requirements of the safeworking systems are implemented and managed in accordance with applicable safeworking system rules and regulations
2 Apply and manage communications	2.1 Communication protocols are applied and managed in accordance with applicable safeworking system requirements
	2.2 Authorities required by safeworking systems are issued in accordance with applicable safeworking system rules and regulations using communication systems
	2.3 Appropriate records of communications are managed as required within the applicable safeworking system rules, regulations and procedures
3 Apply safeworking protocols	3.1 Relevant protocols are managed as specified in the applicable safeworking system rules and regulations
	3.2 Appropriate records and documentation pertinent to safeworking protocols are completed and managed in accordance with the requirements of the applicable safeworking system rules and regulations
4 Take action in unsafe situations or emergencies	4.1 Unsafe situations are identified in accordance with the requirements of applicable safeworking system rules and regulations
	4.2 Where a safety incident, emergency or unsafe situation has been identified, appropriate action is taken to report and/or control the incident or situation in accordance with the requirements of applicable safeworking system

© Commonwealth of Australia, 2025 Industry Skills Australia

rules and regulations

4.3 Appropriate records and documentation of an identified unsafe situation, emergency or safety incident are maintained in accordance with the requirements of applicable safeworking system rules and regulations and organisational procedures

4.4 Reports of the identified unsafe situation, emergency or safety incident are completed in accordance with organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF4090A Implement safeworking rules and regulations for network control activities.

Assessment Requirements for TLIF4090 Implement safeworking rules and regulations for network control activities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- reading, interpreting and following relevant rules, regulations and instructions
- working collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- action to be taken in safety incidents, identified unsafe situations and emergencies applicable to own area of responsibility and/or control
- communications protocols as they relate to the functions of the safeworking systems concerned
- emergency management plan
- relevant work health and safety (WHS)/occupational health and safety (OHS), rail safety and environmental protection legislation and policies
- route integrity requirements, including general requirements, position of points and route occupancy requirements
- safeworking system rules and protocols applicable to own area of responsibility and/or control
- safeworking system types, requirements and limitations
- safeworking systems and occupancy authority

© Commonwealth of Australia, 2025 Industry Skills Australia

- terminology as defined by the applicable Rail Infrastructure Manager system of safeworking including workplace procedures, regulations, rules and codes of practice.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation and terminology as defined by the relevant Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIF4095 Apply work health and safety requirements for driving operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake work health and safety (WHS)/occupational health and safety (OHS) requirements for driving operations.

It includes identifying WHS/OHS legislative requirements for vehicle driving operations, identifying and assessing risks in vehicle driving operations, identifying hazardous materials and other vehicle driving operations hazards, planning and preparing for safe work practices, applying safe work practices and contributing to managing WHS/OHS.

This unit applies to those working in the road transport fuel/gas and heavy recovery industry. It does not include salvage operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify WHS/OHS legislative requirements for vehicle driving operations	1.1 WHS/OHS legislative requirements relevant to own work role and responsibilities in vehicle driving operations are identified and explained
	1.2 WHS/OHS legislative requirements relevant to others involved in vehicle driving operations are identified
	1.3 Duty of care requirements for vehicle driving operations are identified
	1.4 Vehicle WHS/OHS requirements are identified
	1.5 Information for safe operation of ancillary equipment is sourced and followed
	1.6 Own responsibilities that comply with safe work practices are identified
	1.7 Information about workplace and site WHS/OHS policies and procedures is made readily available in vehicle
	1.8 WHS/OHS communication and reporting processes are identified
2 Identify and assess vehicle driving operations risks	2.1 Vehicle driving operations hazards are identified, assessed and reported to designated personnel
	2.2 Vehicle driving operations safety risks are identified, assessed and reported to designated personnel
	2.3 Safe work practices, duty of care requirements and safe work instructions for vehicle driving operations are followed to control risks
3 Identify hazardous materials and other vehicle driving operations hazards	3.1 Hazardous materials in vehicle driving operations are correctly identified, handled and used in accordance with organisational and legislative procedures
	3.2 Measures for controlling risks are applied effectively and immediately
	3.3 Hazardous materials that have safety implications for self and others are secured, using appropriate signs and signals
	3.4 Existing and potential hazards are identified and reported in accordance with site and company procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Plan and prepare for safe work practices	4.1	Correct personal protective equipment (PPE) and clothing are identified, correctly fitted, used and stored in accordance with organisational procedures
	4.2	Tools, equipment and materials are selected and tasks are organised in accordance with organisational procedures
	4.3	Required signage and barricades are determined and used during vehicle driving operations and at the site
	4.4	Safety data sheets (SDSs)/material safety data sheets (MSDSs), relevant to vehicle driving operations are accessed and followed in accordance with regulatory and workplace procedures
	4.5	Job safety analysis (JSA) is undertaken or safe work method statements (SWMSs) are prepared, relevant to vehicle driving operations and are used to inform work processes in accordance with regulatory and workplace procedures
5 Apply safe work practices	5.1	Task is performed in a manner that is safe for operator, other personnel and the general community in accordance with legislative requirements and organisational procedures
	5.2	Hazards, incidents and injuries are reported in accordance with legislative requirements and organisational procedures
	5.3	Site safety signs and symbols are identified and followed
	5.4	Site is cleared and maintained to prevent and protect self and others from accidents and incidents, and to meet environmental requirements
6 Contribute to managing WHS/OHS	6.1	WHS/OHS issues are raised with designated personnel in accordance with organisational and legislative procedures
	6.2	Contributions are made to participative arrangements for WHS/OHS management in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF4095A Apply occupational health and safety requirements for driving operations.

Links

Assessment Requirements for TLIF4095 Apply work health and safety requirements for driving operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying emergency evacuation procedures
- applying work health and safety (WHS)/occupational health and safety (OHS) requirements
- completing documentation related to WHS/OHS in the workplace including:
  - transport regulations as they apply to the enterprise, including local authority regulations and procedures
  - workplace policies and procedures relating to chain of responsibility regulations
  - relevant Australian Standards and certification requirements
- identifying hazards and other WHS/OHS issues
- implementing contingency plans
- interpreting and following safe work procedures including:
  - safety data sheets (SDSs)/material safety data sheets (MSDSs)
  - job safety analysis (JSA) or safe work method statements (SWMSs)
  - standard operating procedures or workplace procedures and policies
- maintaining environmental requirements on site
- recognising safety signs and symbols
- using emergency equipment including:
  - emergency shutdown controls
  - evacuation controls
  - spill control equipment
  - eye wash equipment and safety showers
  - fire extinguishers
- using personal protective equipment (PPE) and safety measures including:
  - chemical resistant gloves
  - safety headwear and footwear
  - safety glasses
  - intrinsically safe, full cover protective clothing

© Commonwealth of Australia, 2025 Industry Skills Australia

  - high visibility clothing and safety vest
  - two-way radio
- using signs and signals for WHS/OHS warnings
- using terms in a SDSs/MSDSs
- working collaboratively with others.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable legislative procedures and codes:
  - current Australian Dangerous Goods (ADG) Code
  - Australian Road Rules
  - environmental protection legislation and regulations
  - fatigue management regulations
  - national heavy vehicle regulations
  - relevant state/territory roads and traffic authority driving regulations and licence or permit requirements for operating heavy vehicles on unsealed roads
  - WHS/OHS legislation
- containers and goods coding including:
  - ADG Code markings
  - International Maritime Dangerous Goods (IMDG) Code markings
  - relevant horticultural product markings
- handling broken or damaged equipment safely
- hazardous materials implications
- HAZCHEM symbols and implications for safe work and storage
- location and procedures for safety alarms, manifests, emergency shut-off systems, and emergency communication systems
- procedures for storage and use of hazardous substances
- relevant duty of care requirements
- relevant internal data entry books, including logbooks, data sheets and load sheets
- reporting procedures for:
  - safety incidents
  - unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- relevant workplace WHS/OHS procedures and guidelines
- safe work practices
- transport emergency response plan (TERP).

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools equipment, and personal protective equipment currently used in industry.

TLIF4099 Develop an application for, or variation to, rail accreditation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop an application for or variation to rail safety accreditation.

This unit covers the requirements to develop an application for new rail transport operator accreditation and/or for a variation to current accreditation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify application	1.1 Documentation and requirements relevant to the application for

© Commonwealth of Australia, 2025 Industry Skills Australia

requirements		or variation to accreditation is accessed and interpreted
	1.2	Policies and objectives that express the organisation's commitment to regulatory compliance management are developed
	1.3	Plan is prepared for the development of compliance requirements
	1.4	Required resources are identified and maintained to support the plan and approval from relevant personnel is gained
	1.5	Framework for the regulatory compliance management system is established and implemented
	1.6	Scope of proposed compliance requirements and resources is determined in consultation with relevant personnel and regulatory compliance is integrated into relevant documentation
	1.7	Consultation process is documented, information on the regulatory compliance system and procedures is explained and ready access to this information by all relevant stakeholders is ensured
2 Collate, compile and submit application	2.1	Relevant documentation relating to governance, scope of operations, safety management system and procedures to meet application requirements is collected
	2.2	Endorsement and sign off of documents by relevant authorising officers is ensured
	2.3	Required resources to meet scope of operations are identified and documented
	2.4	Completed application with supporting evidence is verified prior to sign off by senior management
	2.5	Finalised application is submitted to relevant jurisdiction regulatory body
	2.6	Requests for further details or additional information are acted upon in a timely manner

Assessment Requirements for TLIF4099 Develop an application for, or variation to, rail accreditation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to rail accreditation application activities
- applying relevant legislation and workplace procedures
- communicating effectively with others
- developing a new application, exemption, notification of change or variation to an accreditation
- identifying relevant internal and external contact people
- reading and interpreting relevant documentation
- working collaboratively with employees and management.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- components of and policies and procedures related to rail accreditation systems
- organisational systems for risk management and risk mitigation
- relevant legislation, regulations, permit and licence requirements related to rail accreditation and rail safety management systems
- responsibilities of organisation and individual employees related to rail accreditation systems
- workplace procedures and instructions for notifiable occurrence reports.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF4100 Identify and meet rail safety regulatory compliance requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to identify and meet rail safety regulatory requirements.

It involves interpreting rail safety legislation for specific scope and nature of rail transport operator railway operations.

Rail safety regulatory compliance requirements can be defined by a range of rail safety operating principles such as:

- identifying and managing risk
- protecting persons from injury
- protecting property from damage
- ensuring emergencies and incidents are properly managed
- ensuring interfaces between different organisations are properly defined and managed
- track access
- train separation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Establish rail regulatory requirements	1.1 Legislation applicable to organisational railway operations is confirmed
	1.2 Issues relating to rail safety regulation are determined in accordance with legislation, and the impact of these issues on railway operations and management, rail safety and systems interfaces is identified
2 Maintain currency in regulatory requirements	2.1 Changes in safety regulation are monitored and the implications of these changes for rail industry operations and technology are identified
	2.2 Changes in rail safety regulatory requirements are monitored and available information, training and awareness sessions are accessed to maintain knowledge and skill base
	2.3 Regular contact and information exchange with appropriate personnel within the railway organisation are undertaken to ensure compliance with regulatory requirements
3 Apply knowledge of rail regulatory requirements	3.1 Rail safety operating principles are identified and confirmed
	3.2 Applicable current national and international standards, codes and local rules are identified and the relevance of these rules to rail safety regulation is confirmed
	3.3 Accreditation requirements and/or conditions applicable to organisational railway operations are identified
	3.4 Requirements of rail industry standards applicable to organisational railway operations are identified in the context of safety management systems and risk management
	3.5 Implications of using particular rail industry standards for rail safety compliance are explained as required, in accordance with organisational needs
4 Identify principles underpinning rail	4.1 Role, function and purpose of co-regulation in the rail industry are identified and explained

© Commonwealth of Australia, 2025 Industry Skills Australia

safety regulation	4.2 Role, function and purpose of an organisational safety management system and accreditation in the context of legislation and guidelines are identified
	4.3 Functions and obligations of duty holders and their general duties in the context of rail safety legislation are identified
5 Establish and maintain rail regulatory relationships	5.1 Appropriate regulatory channels are identified and lines of communication are established and maintained
	5.2 Interests and requirements of the organisation are represented and promoted
	5.3 Feedback is exchanged and used to improve regulatory outcomes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF4100A Identify and meet rail safety regulatory compliance requirements.

Assessment Requirements for TLIF4100 Identify and meet rail safety regulatory compliance requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using relevant rail safety industry standards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- identifying, networking and establishing relationships with a diverse range of rail industry stakeholders
- identifying regulatory requirements
- interpreting complex information relating to rail safety regulation and communicating this to team members
- researching information relevant to the rail industry, including rail safety regulations
- reviewing and communicating regulatory information changes.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- changes in rail industry operations and technology and the implications for rail safety regulation
- duty holders and their duties under rail safety national law
- key concepts and definitions relating to rail safety national law regulation
- key principles and practices associated with railway operations
- key regulatory and standards participants in the rail industry
- organisational systems for risk management and risk mitigation
- rail industry and rail industry terminology, including terminology used in technical standards
- rail regulatory framework

© Commonwealth of Australia, 2025 Industry Skills Australia

- rail safety management systems
- relevance of national and international standards to the rail industry
- role of Rail Industry Safety and Standards Board (RISSB).

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIF4101 Implement and maintain a rail safety culture

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and maintain a rail safety culture within a rail organisation in accordance with organisational safety management system.

People achieving competence in this unit must be able to assess compliance with safety culture requirements and confirm that organisational policies and practices are consistent with principles that support the development of a positive safety culture.

Applying this unit in the workplace will involve promoting the benefits of developing a positive safety culture such as:

- awareness and recognition of safety improvement opportunities
- encouraging open communication
- executive safety role of line management
- importance of leadership and commitment of senior management
- positively addressing human factors
- involving rail safety workers at all levels
- promoting a just culture and environment
- willingness to devote resources to safety.

A just culture and environment are based on occurrence investigation, which acknowledges human error and encourages honest reporting of errors while establishing clear accountability for errors.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Explain key principles relating to a rail safety culture	1.1 Current information related to rail safety is obtained and confirmed in accordance with organisational policies and procedures
	1.2 Principles that encourage a rail safety culture are identified and promoted to people within an organisation in accordance with organisational policies, procedures and guidelines
2 Apply rail safety culture to organisational activities	2.1 Concepts related to a positive rail safety culture are promoted to people within an organisation using appropriate communications strategies
	2.2 Integration of a positive rail safety culture within an organisation is identified and implemented
	2.3 Rail safety information is used to cross-check the presence or absence of a rail safety culture within all organisational rail safety documentation and practices
	2.4 Rail safety culture is applied equally with engineering, technical and other factors that reduce the potential for incidents
	2.5 Documentation that includes information related to the safety culture are clearly expressed in appropriate terms, to reinforce general understanding within an organisation
	2.6 Behaviours and skills required for safe and effective work performance are identified and their contribution to a rail safety culture is promoted within an organisation
3 Review safety culture within an organisation	3.1 Behaviour of personnel is monitored to determine whether a positive rail safety culture exists
	3.2 Resources committed to rail safety activities relative to the

© Commonwealth of Australia, 2025 Industry Skills Australia

size and complexity of operations are evaluated

3.3 Attitudes, behaviours or systems that might be detrimental to a positive rail safety culture are identified and corrective actions are determined

3.4 Evidence of just culture principles are identified and promoted in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF4101 Implement and maintain a rail safety culture

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating relevant information
- conducting a review of rail safety culture within an organisation/project
- identifying available media for dissemination of rail safety information
- identifying positive rail safety culture factors
- influencing others positively
- reading and comprehending relevant complex and formal documents, such as literature and guidelines
- researching information
- solving problems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate safety survey tools
- behavioural marker system for rail safety
- concept and key elements of a positive rail safety culture
- key principles relating to rail safety culture
- legislation and guidelines relating to rail safety culture
- organisational policies, procedures and systems relating to developing and maintaining a positive rail safety culture
- organisational systems for risk management and risk mitigation
- principles and application of rail safety
- rail environment.

TLIF4102 Implement and maintain safety management plans

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and maintain rail safety management plans.

It includes identifying safety management plans appropriate to organisational activities, implementing plans, monitoring their effectiveness, and identifying and reporting on non-compliance issues.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Identify appropriate rail safety management plans	1.1 Compliance documentation relevant to rail safety for the activities being carried out is accessed and interpreted
	1.2 Relevant personnel are consulted about the content of rail safety management plans
	1.3 Rail safety management plans are developed or adapted to meet organisational and regulatory requirements
	1.4 Strategies for managing ongoing changes that may affect rail safety management plans are identified and communicated to relevant organisational personnel
	1.5 Information relating to rail safety management plans is disseminated to organisational personnel in appropriate language, style and format
	1.6 Implications of non-compliance are clarified with relevant organisational personnel
2 Implement rail safety management plans	2.1 Implementation of rail safety management plans is planned in collaboration with others to ensure compliance with rail safety management systems (SMSs) and organisational requirements
	2.2 Implementation of rail safety management plan work activities is monitored to ensure compliance with rail SMSs and organisational requirements
	2.3 Training needs of personnel are identified and supported to ensure they meet their rail safety management workplace responsibilities
3 Monitor rail safety management plans	3.1 Actual and potential problems relating to rail safety compliance within the workplace are identified and reported
	3.2 Identified problems are reported to appropriate personnel to ensure compliance with rail SMSs and organisational requirements
	3.3 Identified non-compliance is reported and recorded in accordance with legislative requirements and organisational policies and procedures
	3.4 Recommendations on improvements to rail safety management plans are submitted to appropriate personnel in accordance with organisational and/or regulatory

TLIF4103 Implement fitness for work procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement fitness for work policy and procedures in an organisation, in compliance with the relevant fitness for work regulations and requirements.

It includes identifying legal requirements, liabilities and responsibilities; establishing and/or improving implementation plans, and related policy and procedures; and acting appropriately on reports about the implementation of fitness for work policy and identified breaches of associated regulations.

It also includes ensuring that the operation's systems are compliant with rail safety national law, regulations and organisational procedures, and establishing, implementing, monitoring and communicating fitness for work programs.

Work is performed under some supervision generally within a team environment. It involves implementing and monitoring fitness for work policies and procedures as part of workplace activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

TLIF4104 Manage change in the rail safety environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage change in a rail safety environment and associated risks. Change may be required because of organisational restructuring or the introduction of new equipment, systems or practices.

It includes establishing the context for change, developing a risk management strategy, advertising workplace change, implementing a change management strategy and monitoring change process outcomes.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines and rail regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Establish the context for change	1.1 Requirement for change is confirmed through consideration of changes to legislation, business or organisational requirements
	1.2 Key stakeholders are identified and consulted on proposed change
	1.3 Benchmarking is conducted with other similar organisational/functional/best practice standards to confirm preferred methodology for managing change
	1.4 Specialists and experts are consulted as required to assist in identifying major change requirements or opportunities
	1.5 Overall life cycle and phases of change are identified
2 Develop risk management strategy	2.1 Risk assessment is conducted to identify risks and hazards related to change
	2.2 Identified risks are evaluated and controls are established so far as is reasonably practicable in accordance with organisational policy and procedures
	2.3 Responsibility for managing established controls is determined
3 Develop implementation plan	3.1 Complexity of change is identified and appropriate phases and transition plans are developed
	3.2 Communications strategy is developed in collaboration with key stakeholders
	3.3 Modifications to systems and infrastructure are identified
	3.4 Resources required to implement change are identified
	3.5 Affected personnel and required training/up skilling is identified
	3.6 Updating of risk registers and other safety documentation is identified
	3.7 Procedures for post implementation monitoring and review are established
	3.8 Changes are documented and approval by key stakeholders is obtained in accordance with regulatory and organisational requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Communicate workplace change	4.1 Anticipated change is advertised to appropriate organisational personnel who will be affected by change
	4.2 Range of strategies is used to foster a positive attitude to change, especially from individuals on whom organisational change will have the most effect
	4.3 Advice is provided to key stakeholders on strategies for effective change management and sensitivity is shown to people's individual responses to change
	4.4 Leadership and communications strategies are used to assist others to deal with ambiguity and to adapt to change
5 Implement workplace change	5.1 Policies, practices and procedures are altered and implemented as required to support change management strategy
	5.2 Modifications to systems and infrastructure are implemented
	5.3 Required training/up skilling of affected personnel is facilitated
	5.4 Risk registers and other safety documentation are updated to reflect implemented change
6 Monitor and review change process and outcomes	6.1 Organisational safety management system is reviewed and revised to reflect change
	6.2 Ongoing process are monitored following implementation of change to ensure it is meeting organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF4104 Manage change in the rail safety environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant legislation and regulations
- applying relevant legislation and workplace procedures
- communicating effectively with others, including using appropriate words and language structure to explain complex ideas
- conducting a review of an implemented change within an organisation
- conducting risk assessments
- consulting with stakeholders
- developing a plan to implement a specific change within an organisation
- identifying barriers to change within an organisation
- implementing a specific change within an organisation
- interpreting and explaining complex, formal documents and assisting others to apply these in the workplace
- monitoring change management strategies
- preparing written advice and reports
- working collaboratively with employees and management.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- change management strategies
- key factors in the internal and external operating environment
- negotiation processes
- organisational goals, policies and procedures
- organisational systems for risk management and risk mitigation

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant rail safety national law, regulations and requirements related to managing change
- safety management systems.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF4105 Manage rail safety compliance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage rail safety compliance requirements.

It includes planning, establishing, maintaining, monitoring and reviewing compliance, consultation and audit procedures, feedback procedures and auditing systems.

This unit is intended for rail safety workers involved in managing rail safety compliance functions within a rail organisation.

Typically these rail safety workers must be able to work independently and as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

essential outcomes.	demonstrate achievement of the element.
1 Plan and establish a rail safety compliance framework	1.1 Rail safety compliance documentation relevant to organisational activities is accessed, interpreted and applied
	1.2 Policies and objectives that express organisational commitment to rail safety compliance are developed in collaboration with relevant personnel
	1.3 Rail safety compliance system framework is established and implemented in accordance with organisational requirements/operations
	1.4 Scope of proposed rail safety compliance requirements and required resources are determined in consultation with relevant personnel
	1.5 Rail safety compliance is integrated into job descriptions and relevant organisational procedures
	1.6 Procedures are established to ensure information related to rail safety compliance is readily accessible to relevant stakeholders
	1.7 Approval for establishing rail safety compliance system is sought as required from relevant personnel
2 Establish consultation and audit procedures	2.1 Relevant stakeholders are identified and systems procedures for maximising opportunities to implement rail safety compliance are developed and documented
	2.2 Relevant stakeholders are consulted on rail safety compliance requirements and information is used to establish monitoring and auditing systems
	2.3 Resource allocation for implementing compliance requirements are identified and reported in accordance with organisational and relevant legislative requirements
	2.4 Measures are established in collaboration with relevant stakeholders to ensure compliance with organisational objectives through validating processes
3 Implement, maintain and review a rail safety compliance system	3.1 Rail safety management system (SMS) is implemented in accordance with organisational and regulatory requirements
	3.2 System effectiveness is assessed against organisational and

Assessment Requirements for TLIF4105 Manage rail safety compliance

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in relevant legislation and regulations
- applying relevant legislation and workplace procedures
- auditing a rail safety compliance system
- communicating effectively with others
- identifying or establishing rail safety compliance within an organisation
- monitoring activities and taking appropriate action to manage different contexts, risk situations and environments
- organising audits and reviews of an organisation's safety compliance system
- reading and interpreting relevant documentation, and applying acquired information/knowledge to management activities
- recognising non-conformance within rail safety requirements and taking appropriate action to rectify, in accordance with organisational policies and procedures
- working collaboratively with employees and management to implement an organisation's safety compliance system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- auditing principles and practice
- components of a rail safety compliance system
- options and resources for providing training and learning opportunities for employees about rail safety compliance
- organisational systems for risk management and risk mitigation
- procedures and tools for monitoring and reviewing organisation's rail safety compliance

© Commonwealth of Australia, 2025 Industry Skills Australia

system and related policy and procedures, and for reporting outcomes
- relevant legislation, regulations, permit and licence requirements relating to rail safety compliance
- responsibilities of organisation and employees for implementing a rail safety compliance system.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF4107 Respond to notifiable rail safety occurrences

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to respond to notifiable rail safety occurrences in accordance with legislation, regulatory requirements and organisational procedures.

It includes identifying notifiable occurrences, completing and submitting documentation, conducting internal investigations and assisting with external investigations, in accordance with organisational procedures and relevant safeworking requirements.

This unit applies to notifiable rail safety occurrences as they relate to rail safety national law and regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Identify legislative and regulatory requirements for reporting notifiable occurrences	1.1 Legislative and regulatory requirements for reporting notifiable rail safety occurrences are identified and accessed
	1.2 Individual state/territory requirements for reporting notifiable rail safety occurrence are accessed and interpreted
	1.3 Applicable state/territory documentation required for reporting notifiable rail safety occurrences is accessed and interpreted
	1.4 Legislative and state/territory requirements for reporting notifiable rail safety occurrences are communicated to relevant organisational personnel
2 Complete and submit notifiable occurrence documentation	2.1 Notifiable rail safety occurrence is checked against documentation to determine appropriate manner and timing for reporting occurrence
	2.2 Reporting documentation for notifiable rail safety occurrence is retrieved, completed and submitted in accordance with regulatory requirements
	2.3 Top event in the notifiable occurrence is identified and reported in accordance with regulatory requirements
3 Contribute to investigating a notifiable occurrence	3.1 Contribution is made to investigating a notifiable rail safety occurrence in accordance with organisational safety management system requirements
	3.2 Evidence is collected and managed in accordance with organisational procedures and regulatory requirements
	3.3 Organisational information is managed appropriately to ensure consistency between multiple agency investigations
	3.4 Confidentiality is maintained in accordance with organisational and regulatory requirements
	3.5 Occurrence reports including recommendations and/or lessons learnt are submitted to relevant personnel in accordance with regulatory requirements and organisational procedures

TLIF4108 Implement traffic management plan in the transport industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement traffic management plans in the transport and logistics industry.

It includes planning, implementing, monitoring, evaluating, auditing and packing up a traffic management plan, and undertaking housekeeping duties in a control room and on site.

Traffic management plans include those for public and private roads, parking areas and restricted access sites.

This unit is appropriate for those working in operational roles within tunnel and open road operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for traffic management plan implementation	1.1 Relevant documentation is accessed and interpreted in accordance with workplace procedures, regulatory requirements and codes of practice
	1.2 Safety requirements for allotted tasks are obtained, confirmed and applied in accordance with workplace policies, procedures and regulatory requirements
	1.3 Relevant signage and devices are identified, obtained and implemented in accordance with traffic management plan, workplace procedures and regulatory requirements
	1.4 Required tools and equipment are selected for traffic management plan
	1.5 Environmental protection requirements are identified and applied in accordance with workplace procedures and regulatory requirements
	1.6 Legislative/operational requirements for assigned traffic controller are checked and confirmed in accordance with workplace procedures and regulatory requirements
	1.7 Requirements for traffic flow are communicated appropriately in accordance with workplace procedures and regulatory requirements
	1.8 Work crew safety is appropriately considered in traffic management plan in accordance with workplace procedures and regulatory requirements
2 Implement traffic management plan	2.1 Site specific traffic management plan is selected in accordance with workplace procedures and regulatory requirements
	2.2 Traffic management plan requirements are determined, communicated and monitored in accordance with workplace procedures and regulatory requirements
	2.3 Signage and device positioning is checked in accordance with traffic management plan, workplace procedures and regulatory requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.4 Traffic management plan is appropriately adjusted on site in accordance with site specific conditions as appropriate to ensure work crew safety, in accordance with workplace procedures and regulatory requirements
3 Monitor traffic management plan	3.1 Traffic flow is monitored and effectiveness of traffic management plan is measured in accordance with workplace procedures and regulatory requirements
	3.2 Traffic management plan adjustments are implemented in accordance with workplace procedures and regulatory requirements
	3.3 Traffic controller performance is monitored in accordance with human resources and workplace policies and procedures
4 Evaluate and audit traffic management plan	4.1 Applied traffic management plan is checked to ensure it matches the approved plan in accordance with workplace procedures and regulatory requirements
	4.2 Applied traffic management plan is audited to ensure compliance with approved safety plans in accordance with workplace procedures and regulatory requirements
	4.3 Traffic management plan is checked to ensure suitability to actual traffic conditions in accordance with workplace procedures and regulatory requirements
5 Pack up traffic management plan	5.1 Traffic control devices are removed in a safe and sequential manner, in accordance with workplace policies and procedures, and regulatory requirements
	5.2 Traffic management plan information is accurately recorded in accordance with workplace procedures and regulatory requirements
	5.3 Workplace incidents are accurately reported in accordance with workplace procedures and regulatory requirements
6 Undertake housekeeping	6.1 Work area is cleared in accordance with project environmental management plan and workplace procedures
	6.2 Work tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and workplace policies
	6.3 Traffic management signs are returned to pre-work state in accordance with workplace procedures

Assessment Requirements for TLIF4108 Implement traffic management plan in the transport industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying legislative requirements, workplace procedures and policies
- communicating:
  - fault reporting
  - verbal instructions
- complying with state/territory regulations and codes of practice
- controlling traffic flow in accordance with traffic management plans
- implementing consistent and timely traffic management plans that safely, effectively and efficiently meet required outcomes
- implementing requirements, procedures and techniques for the safe, effective and efficient implementation of traffic management plans
- working collaboratively with others to undertake and complete traffic management plans that meet all required outcomes.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- job safety analysis (JSA) or a safe operating procedure
- potential hazards
- processes for calculating travel time
- radio and electronic communications
- relevant compliance documentation including:
  - Australian Standards (AS)
  - codes of practice

© Commonwealth of Australia, 2025 Industry Skills Australia

    - legislative, organisational and site requirements and procedures
- requirements, procedures and instructions for implementing traffic management plans
- requirements set down by relevant:
    - state/territory codes of practice
    - AS such as AS 1742.3 Manual of uniform traffic control devices (MUTCD) – Traffic control for works on roads
- safe work method statement (SWMS)
- safety requirements including:
    - emergency procedures
    - safe operating procedures, including recognising and preventing hazards associated with the working environment
    - site and equipment safety requirements
- signs and devices such as:
    - regulatory and traffic control devices
    - regulatory and traffic cones
    - temporary warning signs
- traffic management systems
- tunnel and open road terminology
- use of tools and equipment including:
    - arrow boards
    - barricades
    - barriers
    - bollards
    - cones
    - delineators
    - high visibility vests
    - notebooks
    - pens
    - radios
    - signage
    - signalling devices
    - stop-slow bats
    - warning lights and beacons.

TLIF4109 Communicate effectively to coordinate incident response procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to communicate effectively to coordinate incident response procedures in accordance with organisational procedures.

It includes responding to the incident, coordinating incident responses, communicating effectively and completing follow-up actions.

Work must be carried out in compliance with emergency management plans and workplace procedures about action to be taken in an emergency, incident, fire or accident.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Respond to reported incidents	1.1 Details of incidents are received, analysed, confirmed and prioritised
	1.2 Immediate coordination requirements are identified and actioned in accordance with organisational procedures
2 Coordinate incident response activities	2.1 Control and/or coordination of incident response activities is assumed and all relevant personnel and other authorities are informed of this action
	2.2 Assistance to be provided to clients and operators is arranged within duty of care limitations and organisational requirements
	2.3 Assistance is provided to relevant authorities in accordance with organisational policies and legislative requirements
	2.4 Information is collected and passed on to relevant personnel/stakeholders in accordance with workplace procedures
3 Convey complex information	3.1 Complex information is conveyed clearly and accurately
	3.2 Recipient understanding of information is monitored and mode of communication is adjusted appropriately
	3.3 Interaction is monitored to ensure it is consistent with the urgency of the situation, in accordance with organisational policies and procedures
4 Communicate with relevant personnel	4.1 Information is conveyed clearly and clarified when requested by other parties
	4.2 Requirements are communicated clearly and in a manner that reflects an appropriate level of authority
	4.3 Direction, advice and assistance is sought as required and is followed as appropriate to the situation
	4.4 Difficulties in communication are recognised and resolved using appropriate communication skills and techniques
	4.5 Roles and authority of relevant personnel involved in the situation are clarified and respected
5 Overcome barriers to communication	5.1 Barriers to effective communication are identified by continuous monitoring of the situation
	5.2 Situational needs are identified, clarified and confirmed using

© Commonwealth of Australia, 2025 Industry Skills Australia

	appropriate communication skills and techniques
	5.3 Conflict and potential for conflict are dealt with in a manner that prevents escalation
6 Communicate as a team	6.1 Handover/takeover is performed and full details are communicated to/received from other team members to ensure continuity of incident response
	6.2 Team member communications are acknowledged as received and understood
	6.3 Observations are verbalised to team members
	6.4 Inquiries are made of team members to clarify information required to provide continued incident response
7 Complete follow-up actions	7.1 Details of incident are collected, recorded and managed in accordance with organisational procedures
	7.2 Contribution is made to debrief process and recommendations are prepared and submitted as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF4109 Communicate effectively to coordinate incident response procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- collaborating with others when implementing and coordinating incident response procedures
- completing relevant documentation
- following organisational standards when recording and reporting incident responses
- identifying and following organisational incident response procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading, interpreting and following relevant instructions, procedures, information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency management plan and incident response workplace procedures
- hazards, risks and related precautions to control risk
- layout of network/area under control and potential obstacles for responding parties
- means to control and organise incidents and to provide practical assistance as required
- procedures and policies for responding to incidents
- procedures for contacting emergency personnel and other relevant stakeholders
- relevant safeworking system and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant work health and safety (WHS)/occupational health and safety (OHS) and other regulatory codes of practice, procedures and guidelines about responding to incidents
- types of incidents that can occur and the appropriate action to be taken in each case.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

TLIF4110 Respond to abnormal situations and emergencies when driving a train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to respond to abnormal situations and emergencies when driving a train, in accordance with organisational procedures.

It includes identifying and responding to abnormal situations and emergencies when driving a train, arranging follow-on support and assistance, and communicating with personnel and passengers in accordance with organisational procedures and relevant safeworking requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is generally performed without supervision and within a team environment.

It involves the application of organisational procedures and regulatory requirements when responding to abnormal situations and emergencies when driving a train, as part of work activities in a range of contexts across the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify abnormal situations and emergencies when driving a train	1.1 Abnormal situations and emergencies are identified, assessed and prioritised in accordance with workplace emergency response plans and safeworking requirements and procedures
	1.2 Implications of abnormal situations and emergencies are evaluated in accordance with workplace requirements, and safeworking requirements and procedures
	1.3 Hazards are identified, risks are assessed and risk control measures are implemented
	1.4 Options for reporting abnormal situations and emergencies and/or taking action are considered in accordance with organisational procedures and regulatory requirements
	1.5 Relevant personnel are alerted to abnormal situations and emergencies in accordance with workplace operating and emergency, procedures and plans
	1.6 Communications are maintained with relevant personnel to determine appropriate course of action
2 Respond to abnormal situations when driving a train	2.1 Abnormal situations are responded to in accordance with organisational procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan, as required
	2.2 Responsibilities are fulfilled in accordance with organisational procedures, and safeworking and/or regulatory requirements
	2.3 Assistance is provided to relevant personnel as required
	2.4 Information is provided to relevant personnel as requested in accordance with regulatory and organisational procedures
3 Respond to emergencies when driving a train	3.1 Emergency situations are responded to in accordance with organisational procedures, received instructions from relevant personnel, regulatory requirements and

© Commonwealth of Australia, 2025 Industry Skills Australia

	emergency response plan, as required
	3.2 Emergencies are handled appropriately in accordance with established response plan and within limits of rail safety worker duty of care responsibilities
	3.3 Responsibilities are fulfilled in accordance with organisational procedures, emergency response plan and safeworking and/or regulatory requirements
	3.4 Assistance is provided in controlling site prior to and following arrival of emergency services as required
	3.5 Assistance is provided to other staff and emergency services personnel conducting initial scene survey as requested
	3.6 Directions of controlling emergency services authority are followed and all possible assistance is provided in response to those directions
	3.7 Information is provided as requested to relevant emergency services personnel in accordance with regulatory and organisational procedures
4 Communicate with staff and/or passengers	4.1 Staff and/or passengers are provided with relevant, appropriate and timely advice about abnormal situation or emergency
	4.2 Instructions are provided to relevant personnel and/or passengers in accordance with organisational procedures, consistent with the nature of abnormal situation or emergency
	4.3 Evacuation procedures for personnel and/or passengers are explained and/or applied as required, in accordance with organisational procedures
	4.4 Customer service and safety needs arising from abnormal situations and emergencies are identified and acted on in accordance with regulatory and workplace requirements
5 Follow incident reporting procedures	5.1 Incident reports are completed accurately in accordance with regulatory requirements and organisational procedures
	5.2 Incident reports are processed in accordance with regulatory requirements and organisational procedures

Assessment Requirements for TLIF4110 Respond to abnormal situations and emergencies when driving a train

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others
- completing relevant documentation and reports
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- modifying activities depending on workplace contexts, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment in accordance with workplace protocols
- reading and interpreting relevant instructions, procedures and information
- selecting and using relevant communications and other equipment
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- abnormal situations and emergencies that may occur when driving a train
- emergency procedures and emergency response plan
- focus of operation of work systems, equipment, management and site operating systems when responding to abnormal situations and emergencies when driving a train
- hazards that may occur that can lead to emergencies, and related hazard control strategies
- organisational procedures and policies for identifying and responding to abnormal

© Commonwealth of Australia, 2025 Industry Skills Australia

situations and emergencies when driving a train
- possible responses to identified abnormal situations and emergencies when driving a train
- problems that may occur when responding to abnormal situations and emergencies when driving a train and action that can be taken to resolve these problems
- relevant documentation and reporting requirements
- relevant environmental protection legislation, procedures and guidelines
- relevant state/territory legislated rail safety requirements, codes of practice and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, procedures and guidelines.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF5017 Investigate rail safety incidents

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to investigate safety incidents in accordance with rail safety regulatory and workplace requirements as part of work activities in the transport and logistics industry.

It includes planning the investigation, collecting and analysing information, and preparing the safety incident report.

People achieving competence in this unit will need to comply with the relevant state/territory rail safety legislation, codes of practice, industry standard and/or guidelines.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan the	1.1 Clarification of the incident investigation objectives is

© Commonwealth of Australia, 2025 Industry Skills Australia

	investigation	established in conjunction with relevant personnel, in accordance with workplace and regulatory requirements
		1.2 Investigation timeframes and locations are established in conjunction with relevant personnel
		1.3 Required investigation resources are identified and obtained within workplace guidelines
2	**Collect and analyse information**	2.1 All relevant available incident information is obtained and collated to facilitate a detailed and accurate incident analysis
		2.2 Interviews are conducted with relevant personnel to establish their recollection of events associated with the incident
		2.3 Information is analysed in accordance with the established investigation objectives , based on approved conditions, applicable standards and operational guidelines
		2.4 Options for action that lead to recommendations that reduce future risk are generated, in accordance with workplace and/or statutory requirements
		2.5 Criteria are specified to enable objective evaluation of the options to be undertaken
3	**Prepare report**	3.1 Conclusions are drawn and recommendations are made that will enable a satisfactory resolution of the incident issues, and meet workplace and statutory requirements
		3.2 Opportunities to enhance operational efficiency and safety procedures are documented in accordance with standard reporting guidelines
		3.3 Documentation is filed and distributed to all relevant parties for consideration and subsequent action

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF5017A Investigate rail safety incidents.

Assessment Requirements for TLIF5017 Investigate rail safety incidents

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist when investigating safety incidents
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing documentation related to investigating safety incidents
- conducting interviews and taking statements
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- negotiating and liaising effectively with others
- operating and adapting to differences in equipment in accordance with operating procedures
- preparing reports and recommendations
- reading and interpreting instructions, procedures and information relevant to investigating safety incidents
- working collaboratively with others when investigating safety incidents
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- data collection and analysis techniques required when investigating safety incidents
- documentation and reporting requirements for investigating safety incidents
- notifiable occurrences reporting requirements prescribed by regulations
- operational work systems, equipment, management and site operating systems for investigating safety incidents
- problems that may occur when investigating safety incidents and appropriate action that can be taken to resolve these problems
- relevant state/territory rail safety legislation, codes of practice, industry standards and/or guidelines
- workplace procedures and policies for the investigation of safety incidents.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, safety management system, regulations, codes of practice and operation manuals.
-

TLIF5020 Manage emergencies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage emergencies as part of work activities undertaken in the transport and logistics industry, in accordance with regulatory requirements, relevant codes of practice and workplace procedures.

It includes identifying and responding to emergency situations, taking required action during an emergency, arranging follow-on support and assistance, and communicating with staff.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and respond to emergency	1.1 Emergency and potential emergency situations are promptly identified and assessed, and needs are prioritised in accordance with workplace emergency response

© Commonwealth of Australia, 2025 Industry Skills Australia

situations		plan/procedures
	1.2	Emergency situations are handled appropriately
	1.3	Incident reports are completed accurately in accordance with regulatory and workplace procedures
2 Take required action during an emergency	2.1	Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements
	2.2	Assistance is provided to other staff in conducting an initial assessment of the emergency scene
	2.3	Assistance is provided in controlling the site prior to and following, the arrival of emergency services
	2.4	Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions
3 Arrange follow-on support and assistance	3.1	Medical assistance and support is arranged as required in accordance with workplace procedures
	3.2	First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures
4 Communicate with staff	4.1	Staff and customers are provided with relevant, appropriate and timely advice on emergency situations and instructions to be followed, on an ongoing basis
	4.2	Evacuation procedures for staff/customers are outlined in accordance with workplace procedures
	4.3	Customer service and safety needs arising from emergency situations are identified and acted upon in accordance with regulatory and workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIF5020 Manage emergencies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during emergency situations
- applying relevant legislation and workplace procedures
- communicating effectively with others when managing emergency situations
- completing documentation related to managing emergency situations
- conducting interviews and taking statements
- following emergency response plan and procedures
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- preparing reports and recommendations
- reading and interpreting instructions, procedures, information and signs relevant to managing emergency situations
- selecting and using relevant computer/communication/office equipment required for managing emergency situations
- working collaboratively with others when managing emergency situations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes of practice, regulations and safeworking systems relevant to managing emergencies, including the Australian Dangerous Goods (ADG) Code
- data collection and analysis techniques required when managing emergency situations
- documentation and reporting requirements for managing emergency situations
- operational work systems, equipment, management and site operating systems for managing emergency situations
- hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies, including:
- handling hot food and equipment
- sudden and unexpected movement
- infectious and contagious diseases
- self-closing doors
- sharp objects
- syringes and drugs
- contact with human and biological waste
- fire and explosion
- collision
- derailment of trains
- handling, storage and carriage of dangerous goods and other hazardous substances
- handling, storage and carriage of explosives
- problems that may occur when managing emergencies and appropriate action that can be taken to resolve these problems
- relevant state/territory rail safety legislation, from each applicable state/territory together with any codes of practice, rail industry standards and/or guidelines
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- workplace procedures and policies for managing emergency situations, including the elements of an emergency response plan and first aid procedures where applicable.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

© Commonwealth of Australia, 2025 Industry Skills Australia

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF5021 Apply rail safeworking rules and procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply rail safeworking rules and procedures.

It includes establishing the purpose and function of safeworking systems, implementing the principles of rail safeworking systems and implementing the principles of track protection systems.

This unit covers applying rail safeworking systems, which are integrated systems of operating procedures and engineered systems used in the rail network for safe operation of rail traffic, and protection of people and property. It can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

In applying this unit, the following rail safety operating principles may be involved:

- ensuring emergencies and incidents are properly managed
- ensuring interfaces between different organisations are properly defined and managed
- identifying and managing risk
- protecting people from injury
- protecting property from damage
- track access
- train separation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Establish purpose and function of rail safeworking systems	1.1 Relevant information is accessed and analysed
	1.2 Purpose of rail safeworking rules and procedures are identified and explained
	1.3 Methods for developing safeworking rules and procedures are identified and outlined
	1.4 Types of safeworking systems, their functions and where they are used are explained
2 Implement principles of rail safeworking systems	2.1 Relevant information is accessed and analysed
	2.2 Principles behind rail safeworking systems are identified and explained
	2.3 Main elements of rail safeworking systems are identified and explained
	2.4 Methods by which operations can continue in degraded situations are identified and outlined
	2.5 Appropriate procedures are prepared to enable operations to continue in various degraded situations
3 Implement principles of track protection systems	3.1 Relevant information is accessed and analysed
	3.2 Risks involved in working on or beside the track are identified, explained and managed
	3.3 Purpose of track protection is identified and explained
	3.4 Different methods of track protection are identified and outlined
	3.5 Work is planned so that relevant track protection methods can be applied

Assessment Requirements for TLIF5021 Apply rail safeworking rules and procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail safety industry standards, rules, codes of practice and operational procedures
- applying relevant safeworking systems and workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- researching and reviewing relevant rail industry and rail safety regulation information.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- duty holders and their duties under rail safety and work health and safety (WHS)/occupational health and safety (OHS) legislation
- key concepts and definitions relating to rail safeworking
- key principles and practices associated with railway operations
- key regulatory requirements and rail industry standards for rail industry participants
- rail safety management systems (SMSs) and process
- rail safety operating principles
- rail safety regulatory framework
- relevant rail safety, WHS/OHS and environmental legislation related to safeworking and track protection.

TLIF5022 Develop and manage fitness for work policy and procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop and manage fitness for work policy and procedures in an organisation.

It includes identifying legal requirements, liabilities and responsibilities; establishing and/or improving implementation plans, related policy and procedures; and acting appropriately to reports on the implementation of fitness for work policy and any identified breaches of associated regulations. It also includes ensuring that the operation's systems are compliant with regulations and organisational policy; and establishing, implementing, monitoring and communicating fitness for work programs.

This unit applies to people with the responsibility for rail operations management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify or confirm regulatory requirements and organisational responsibilities	1.1 Current regulatory requirements, obligations and responsibilities for fitness for work within the organisation are identified and interpreted
	1.2 National health assessment standards for rail safety workers and/or other applicable standards are accessed and interpreted
	1.3 Current regulatory requirements, obligations and responsibilities regarding the use of drugs and alcohol by rail safety workers are identified and interpreted
	1.4 Current regulatory requirements, obligations and responsibilities regarding fatigue management of rail safety workers are identified and interpreted
	1.5 Risk-based approach is taken to developing programs that meet regulatory requirements
2 Establish and implement a fitness for work policy and procedures	2.1 Organisational fitness for work implementation plan is developed and/or reviewed and implemented in conjunction with relevant personnel
	2.2 Organisational fatigue management policy and procedures are developed and/or reviewed and implemented
	2.3 Policy and procedures related to drug and alcohol testing are developed and/or reviewed and implemented
	2.4 Fitness for work policy and procedures are aligned to organisational return-to-work policy and procedures
	2.5 Risk management approach is taken to identifying medical requirements for categories of rail safety workers
	2.6 Fitness for work risk management system implementation plan and related policy and procedures are distributed and presented to relevant organisational personnel for implementation
3 Monitor implementation of fitness for work policy and	3.1 Reports from designated personnel on the implementation of the organisation’s fitness for work risk management system implementation plan and

© Commonwealth of Australia, 2025 Industry Skills Australia

procedures	related policies and procedures are received and interpreted
	3.2 Reports on accidents and safety incidents are reviewed to identify the extent to which a breach of the fitness for work procedures might have been a contributing factor
	3.3 Organisational activities are monitored and changes to organisation's fitness for work risk management system and procedures are identified, and appropriate action is taken to make the necessary adjustments
4 Act upon identified breaches of fitness for work policy	4.1 Identified or reported breaches of fitness for work policy are investigated in accordance with organisational procedures and regulatory requirements
	4.2 Action is taken to ensure internal and/or external personnel who may have contributed to any breach of fitness for work policy are provided with appropriate feedback and information to avoid any recurrence of the breakdown in planned processes
	4.3 Where organisational procedures or culture are found to have contributed to a breach in fitness for work policy, appropriate action is taken to improve procedures or to address the culture in ways that aim to avoid any recurrence of the breakdown
	4.4 Reports on breaches of fitness for work policy are prepared and submitted to designated personnel in accordance with organisational procedures and/or regulatory requirements
5 Ensure operations systems are compliant with fitness for work policy and regulations	5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisation's fitness for work policy and regulations
	5.2 Changes are made to operations systems and standard operating procedures to ensure they are compliant as required
	5.3 Supplier and/or subcontractor operations systems and standard operating procedures are reviewed to ensure they are compliant with fitness for work policy and regulations, in accordance with legislated requirements
6 Identify required resources	6.1 Resources to support the implementation of the organisation's fitness for work risk management system

© Commonwealth of Australia, 2025 Industry Skills Australia

and operational systems	are identified and submitted to appropriate authority
	6.2 Organisation's fitness for work risk management systems resources are periodically reviewed and appropriate changes are made or requested
7 Communicate fitness for work policy and procedures	7.1 Appropriate personnel affected by organisational fitness for work policy and procedures are identified
	7.2 Organisational fitness for work policy and procedures are communicated to appropriate personnel using effective strategies
	7.3 Team leaders, supervisory and training staff are provided with adequate resources to deliver organisational fitness for work communications strategies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIF5022 Develop and manage fitness for work policy and procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to changes in legislation and regulations as they relate to fitness for work
- communicating effectively with others when implementing the organisation's fitness for work management system
- developing a fitness for work system for an organisation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying fitness for work requirements within an organisation
- organising audits and reviews of an organisation's fitness for work management system
- reading and interpreting documentation on fitness for work management legislation
- recognising breaches of fitness for work management strategies and regulations, and taking appropriate action in accordance with the organisation's fitness for work management system
- reviewing current fitness for work procedures
- working collaboratively with rail safety workers and management to implement the organisation's fitness for work management system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- components of a fitness for work risk management system
- procedures for auditing and reviewing an organisation's fitness for work management system, and related policy and procedures, and for reporting audit outcomes
- relevant sections of applicable state/territory legislated rail safety requirements and regulations related to:

  fatigue management, drug and alcohol use, and medical requirements in the rail industry

  work health and safety (WHS)/occupational health and safety (OHS)
- relevant documentation to develop and manage fitness for work policy and procedures
- responsibilities of an organisation and individual employees for implementing fitness for work policy and regulations
- risk-based approaches to developing fitness for work programs
- strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fitness for work is a contributing factor
- systems for auditing the effectiveness of an organisation's fitness for work management strategies, policies and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIF5023 Undertake a derailment investigation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake a derailment investigation in accordance with legislative and regulatory requirements.

It includes preparing for a derailment investigation, determining potential contributory factors, planning for derailment investigation report requirements, and investigating a derailment.

This unit applies to people with the responsibility for rail operations management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for derailment	1.1 Derailment investigation definitions are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

investigation	and explained
	1.2 Principles of systematic investigation to be employed in derailment investigation are identified and followed
	1.3 Purpose and objectives of derailment investigation are identified and documented in accordance with organisational and regulatory requirements
	1.4 Types of data to be collected to conduct derailment investigation are identified and documented
	1.5 Types of evidence to be collected during derailment investigation are identified and documented
2 Determine potential contributory components of the rail system to the derailment	2.1 Track structure and track components that may have contributed to derailment are identified in accordance with organisational and regulatory requirements
	2.2 Rolling stock involved in derailment is identified in accordance with organisational and regulatory requirements
	2.3 Normal operation of rolling stock at derailment site is outlined in accordance with organisational and regulatory requirements
	2.4 Safeworking systems in operation at derailment site are explained
3 Plan for derailment investigation report requirements	3.1 Methods by which evidence will be gathered are outlined
	3.2 Appropriate report structure is determined
	3.3 Timelines for conducting investigation and producing report are established
	3.4 Equipment required to conduct derailment investigation is identified and accessed
4 Investigate derailment	4.1 Resources required to undertaken rail derailment investigation are acquired
	4.2 Hazards are identified, risks are assessed and control measures are implemented
	4.3 Evidence is gathered in accordance with identified

© Commonwealth of Australia, 2025 Industry Skills Australia

methods and required timelines

4.4 Rail derailment investigation report is drafted, reviewed and finalised in accordance with organisational and regulatory requirements

4.5 Rail derailment investigation report is completed and submitted in accordance with organisational and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIF5023A Undertake a derailment investigation.

Assessment Requirements for TLIF5023 Undertake a derailment investigation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- planning a derailment investigation in accordance with organisational and regulatory requirements
- producing a derailment investigation report
- reading and interpreting documentation and the organisation's rail safety compliance system, and applying these to a derailment investigation
- recognising non-conformance with rail safety requirements and taking appropriate action in accordance with organisational policies and procedures
- recording and preserving evidence when undertaking a derailment investigation in accordance with workplace procedures
- working collaboratively with employees and other management staff when undertaking a derailment investigation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- evidence collection and analysis techniques
- evidence preservation techniques
- notifiable occurrence reporting requirements in accordance with operational procedures
- rail safeworking systems
- relevant investigating and reporting legislation and regulations
- rolling stock operations including traction systems, braking systems, inspection regimes

© Commonwealth of Australia, 2025 Industry Skills Australia

- signalling systems
- terminology as defined by the applicable Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice
- track components and dynamics
- wheel-track interface management.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIF5024 Develop plans for emergency response and recovery of rail networks

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop emergency management plans for response and recovery of rail networks.

It includes identifying factors that contribute to degraded rail operations, and developing, implementing, monitoring and evaluating emergency response and recovery strategies, in accordance with regulatory and organisational requirements.

This unit can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

F – Safety Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Identify factors that contribute to degraded rail operations	1.1 Types of rolling stock and typical failures are identified
	1.2 Track and trackside equipment failures are identified and explained
	1.3 Operational factors that contribute to degraded rail operations are identified
	1.4 Control or safety critical system failures that contribute to degraded rail operations are identified
	1.5 External occurrences that contribute to degraded rail operations are identified
	1.6 Power supply systems and problems that contribute to degraded rail operations are identified
2 Develop emergency response and recovery strategies	2.1 Risk assessments are included in developing emergency response and recovery strategies
	2.2 Policy and procedures are developed to implement emergency response and recovery strategies in accordance with organisational and regulatory requirements
	2.3 Emergency response and recovery strategies are planned with internal and external stakeholders to ensure compliance with organisational and regulatory standards and requirements
	2.4 Emergency response and recovery plans are disseminated to appropriate managers and to regulators as required, for approval
	2.5 Emergency response and recovery plans are amended in response to comments received from managers and regulators, as required
	2.6 Emergency response and recovery procedures are documented and communicated to appropriate personnel in accordance with organisational requirements
3 Implement emergency response and recovery strategies	3.1 Emergency response and recovery strategies are implemented in accordance with organisational and regulatory requirements
	3.2 Effective induction and supervision are provided to support individuals in meeting their organisational and regulatory responsibilities

© Commonwealth of Australia, 2025 Industry Skills Australia

4 Monitor, adjust and report emergency response and recovery strategies	4.1 Emergency response and recovery strategies are monitored and deficiencies are identified
	4.2 Identified deficiencies are assessed against organisational standards and prioritised for action
	4.3 Recommendations for improvements to meet organisational and regulatory standards are developed and submitted to designated persons/groups
	4.4 Agreed improvements and alterations to emergency response and recovery strategies, policies and procedures are implemented in accordance with organisational and regulatory requirements
	4.5 Individuals/groups are informed of improvements and alterations to emergency response and recovery strategies
	4.6 Systems, records and reporting procedures are maintained in accordance with organisational and regulatory requirements
5 Evaluate emergency response and recovery strategies	5.1 Effectiveness of emergency response and recovery strategies and related policies, procedures and programs is assessed in accordance with organisational and regulatory requirements
	5.2 Improvements are identified, developed and implemented to ensure more effective achievement of emergency response and recovery strategies

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Industry Skills Australia

Unit Mapping Information

This unit replaces and is equivalent to TLIF5024A Develop plans for emergency response and recovery of rail networks.

Assessment Requirements for TLIF5024 Develop plans for emergency response and recovery of rail networks

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail industry standards, rules, codes of practice and guidelines
- applying relevant legislation and workplace procedures when developing plans for emergency response and recovery
- communicating effectively with others, particularly in relation to emergency response procedures and recovery planning
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying appropriate emergency response procedures for rail operational
- producing well researched, documented and supported emergency response and recovery policies, procedures and plans
- researching relevant rail network, emergency response procedures and recovery planning information
- reviewing changing regulatory information
- reviewing current emergency response procedures and making recommendations for improvement.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- changes in rail industry operations and technology with implications for degraded operations
- emergency management plan and workplace procedures
- key principles and practices associated with railway operations
- rail industry
- rail industry terminology, including terminology used in rail industry standards
- relevant rail safety, emergency management plan, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to rail operations
- safety management system.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rail industry standards, regulations, codes of practice, safety management system and operation manuals.

TLIG1001 Work effectively with others

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the basic skills and knowledge required to work effectively with others using established procedures and appropriate interpersonal skills to assist others to complete work tasks, in accordance with workplace procedures and relevant regulatory requirements.

It includes contributing to determining appropriate work roles, planning activities and working with others to complete activities.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Contribute to determining appropriate work roles	1.1 Work roles of each team member are identified, based on information and instructions about objectives, performance requirements and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Contributions are made to determining appropriate roles and responsibilities for the successful completion of the activity
2 Contribute to planning the activity	2.1 Suggestions and information are provided as appropriate to contribute to planning the activity in accordance with the associated procedures
	2.2 Support needed to complete activities is identified
3 Work with others	3.1 Forms of communication appropriate to the activity are used
	3.2 Assistance to complete the activities is requested as required
	3.3 Contributions to the achievement of a required outcome are made
	3.4 Work is undertaken in accordance with specified procedures on an individual and shared basis as required
	3.5 Problems are discussed and resolved where possible, through agreed and accepted processes
	3.6 Suggestions for improvements to processes are made and discussed within the team

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIG1001 Work effectively with others

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when completing work activities
- interpreting and following operational instructions and prioritising work within the team
- modifying team activities depending on operational contingencies, risk situations and environments
- monitoring team activities in terms of planned schedule
- reading and interpreting instructions, procedures, information and signs relevant to working with others as a team
- reporting and/or rectifying identified misunderstandings and problems promptly using appropriate strategies , in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic principles of teamwork
- focus of operation of work systems, equipment or management, site and organisational operating procedures
- relevant workplace standards and procedures, and duty of care requirements
- typical misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them
- workplace structures and the roles and responsibilities of team members.

TLIG2007 Work in a socially diverse environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply cultural awareness, communication principles and problem-solving techniques to facilitate working in a socially diverse environment. This is done in accordance with workplace procedures, relevant anti-discrimination and equal employment opportunity regulations.

It includes communicating with customers and colleagues from diverse backgrounds and dealing with cross-cultural misunderstandings.

Work is performed with limited or minimum supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Communicate with customers	1.1 Customers and colleagues from all cultural groups

© Commonwealth of Australia, 2025 Industry Skills Australia

and colleagues from diverse backgrounds	are valued and treated with respect and sensitivity 1.2 Cultural differences are accommodated in verbal and non-verbal communication 1.3 Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other person's language 1.4 Assistance from colleagues, reference books or outside organisations is obtained as required
2 Deal with cross-cultural misunderstandings	2.1 Issues that may cause conflict or misunderstanding in the workplace are identified 2.2 Difficulties are addressed with the appropriate people and assistance is sought from team leader/supervisor as required 2.3 When difficulties or misunderstandings occur, possible cultural differences are considered 2.4 Efforts are made to resolve misunderstandings, taking account of cultural considerations 2.5 Issues and problems are referred to the appropriate team leader/supervisor for follow-up

Foundation Skills

Assessment Requirements for TLIG2007 Work in a socially diverse environment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- communicating and working effectively with others when working in a socially diverse environment
- completing documentation related to working in a socially diverse environment
- reading, interpreting and applying instructions, legislation, procedures, information and signs relevant to working in a socially diverse environment
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic awareness of the culture of Australia's indigenous and non-indigenous peoples
- cultural awareness
- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees
- principles that underpin cultural awareness
- recognition of the different cultural groups in Australian society
- recognition of various international customer groups (appropriate to the sector and individual workplace)
- typical cross-cultural misunderstandings and problems that can occur in the workplace, and appropriate ways of dealing with them.

TLIG3003 Apply positive behaviours in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply standards of conduct and positive behaviours in the workplace.

This unit applies to team members who are making the transition to a leading role that can influence the performance of others.

Such people have a strong influence on the work culture, values and ethics of the people with whom they work.

It includes modelling good practice, professionalism and confidently representing the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

TLIG4005 Organise transport workload

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply basic principles and routine procedures to organise transport workload as part of courier/delivery operations.

It includes organising and accepting responsibility for own workload, identifying and meeting own learning needs as well as planning and organising a personal daily routine.

Work must be carried out in compliance with relevant regulations for the transport of articles for courier delivery.

Work is generally performed under indirect supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

TLIG4006 Facilitate work teams

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to lead and facilitate work teams. Work involves facilitating and encouraging the work of work teams/groups, and providing leadership to others in establishing and achieving team objectives.

It includes participating and providing leadership in team planning, developing team commitment and cooperation, and managing and developing team performance.

Work is performed under minimum supervision with general guidance on progress and outcomes. It involves discretion and judgement for self and others in facilitating work teams or groups.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Participate in team	1.1 Clearly defined team goals, purpose, roles, responsibilities and accountabilities are established in consultation with team, in

© Commonwealth of Australia, 2025 Industry Skills Australia

planning	accordance with organisational goals and objectives
	1.2 Team performance plan is developed in consultation with team, in accordance with organisational business plan, policies and practices
	1.3 Processes to monitor and adjust team performance are developed and agreed to in consultation with team, in accordance with continuous improvement policies
	1.4 Benefits of team diversity membership are articulated by team and included in team plans
2 Develop team commitment and cooperation	2.1 Open communication processes are used by team to obtain and share information
	2.2 Team is encouraged to show and exploit innovation and initiative
	2.3 Support is provided to team to develop mutual concern and camaraderie
3 Manage and develop team performance	3.1 Team is supported in making decisions within agreed roles and responsibilities
	3.2 Results achieved by team contribute positively to the organisation business plans
	3.3 Team and individual competencies are monitored regularly to confirm that team is able to achieve goals
	3.4 Mentoring and coaching opportunities are provided to team members to enhance personal and collective knowledge and skills
	3.5 Delegates performance is monitored to confirm they have completed the relevant delegation/assignment
4 Encourage and facilitate the work of teams	4.1 Team effectiveness is encouraged and enhanced through active participation in team activities and communication processes
	4.2 Individuals and teams are actively encouraged to take individual and joint responsibility for actions
	4.3 Team is supported to identify and resolve problems that impede performance

Assessment Requirements for TLIG4006 Facilitate work teams

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when facilitating the operation of work teams
- completing relevant documentation
- identifying improvements to services, resource allocation and use
- leading and encouraging others
- monitoring and prioritising work activities in terms of planned schedule
- negotiating and working effectively with others
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coaching and mentoring approaches to support team members to share knowledge and skills
- mechanisms to encourage team decision making, and to reward and support team achievement
- principles, duty of care and obligations within the chain of responsibility in the transport industry
- relevant regulatory and code requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

- strategies to implement continuous improvement processes
- typical problems that can occur when facilitating work teams, and related appropriate action that can be taken
- workplace policies and plans including procedures for training and assessment
- workplace protocols and procedures for facilitating work teams.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIH2001 Interpret road maps and navigate pre-determined routes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to interpret road maps and to navigate routes as part of transport operations.

It includes identifying and determining the most appropriate route, and completing required route documentation in accordance with operational requirements.

Work is performed under general or limited supervision. It involves the application of map reading principles and procedures when interpreting street directories and road maps, and following pre-determined routes.

Work must be carried out in accordance with relevant state/territory roads and traffic authority regulations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and determine pre-planned route	1.1 Pre-determined route documentation is accessed and interpreted
	1.2 Relevant street directory, global positioning system (GPS) and road maps are identified and accessed
	1.3 Street directory, GPS and road map symbols are recognised and interpreted
	1.4 Points of departure and destination are identified in a directory index and information is used to locate designated places on appropriate map
	1.5 Pre-determined route directions are interpreted and route is traced using a street directory, GPS and road map
	1.6 Key intersections and other landmarks along route are identified for use in following planned route
	1.7 Alternative contingency routes are identified for emergencies or traffic delays
	1.8 Pre-determined route is correctly followed
2 Complete necessary documentation	2.1 Required route documentation is completed in accordance with purpose of transportation and workplace requirements
	2.2 Required route documentation is filed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIH2001 Interpret road maps and navigate pre-determined routes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- completing documentation related to route navigation
- estimating route distances using map information
- interpreting and following operational instructions and prioritising work
- navigating a pre-determined route
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment in accordance with workplace protocols
- planning alternative contingency routes for road works, emergencies or delays
- planning own work, predicting consequences and identifying improvements
- plotting a route from one destination to another relevant to job role
- reading and interpreting relevant instructions, procedures, information and signs
- using global positioning system (GPS) devices to navigate pre-determined routes as required
- using maps and other route documentation to correctly identify and interpret:
  - map symbols
  - roads and intersections
  - town and suburb locations
- working collaboratively with others as required (such as fleet managers, sales team)
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- current information about accidents or emergencies that might close or restrict traffic on a particular route
- height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- location of service stations/rest stops as required
- operational procedures for interpreting road maps, using GPS devices and navigating routes
- relevant state/territory permit and licence regulations and requirements
- road conditions for various routes, including sections undergoing road works
- security hazards and issues
- traffic conditions at various times of the day/night along specific routes
- typical problems that may arise concerning interpreting road maps, using GPS devices and navigating pre-determined routes, and appropriate action that should be taken
- workplace requirements for recording and documenting route information.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIH2003 Prioritise courier/delivery operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prioritise courier or delivery operations in compliance with relevant regulations, as part of work undertaken within the transport and logistics industry.

It includes identifying, planning and preparing work requirements; undertaking work; adjusting to changing priorities; and completing work activities to operational requirements.

Work is generally performed under indirect supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify work requirements	1.1 Work requirements and specific customer requirements interpreted and clarified as required
	1.2 Pick-up and delivery points are located

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.3 Size, weight and configuration of materials to be couriered are identified
	1.4 Equipment required to facilitate pick-up and delivery is identified
2 Plan and prepare for work	2.1 Work is planned based on an analysis of distance, travel times, customer requirements, resource implications and known priorities
	2.2 Planned steps and outcomes are checked to ensure conformity with instructions and work requirements
	2.3 Work sequence is identified and relayed to base as required
	2.4 Required resources are selected
3 Undertake work operations	3.1 Work operations are undertaken in accordance with plan and quality requirements, and within operator and equipment operating capacity
	3.2 Difficulties or uncertainties occurring during operations are identified and alternative strategies are determined
	3.3 Pick-up and delivery of materials is undertaken in accordance with workplace quality procedures
4 Adjust to changing work priorities	4.1 Work plan or route is adjusted or modified to meet changing priorities and circumstances
	4.2 Changes to work plan are relayed to base
5 Complete work operations	5.1 Work operations are reviewed to ensure outcomes have met customer requirements and workplace quality outcomes
	5.2 Workplace documentation is completed
	5.3 Operational capacity of equipment is checked and returned to storage area as required
	5.4 Security of goods is maintained in accordance with enterprise procedures

Assessment Requirements for TLIH2003 Prioritise courier/delivery operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when prioritising courier or delivery operations
- completing documentation related to prioritising courier or delivery operations
- estimating the size, shape and special delivery requirements of articles
- identifying and correctly using equipment required when coordinating courier or delivery operations
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading and interpreting instructions, procedures, information and labels relevant to courier or delivery operations
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and procedures
- methods and strategies for prioritising courier or delivery operations
- National Transport Commission Load Restraint Guide
- relevant state/territory mass and loading regulations
- requirements of courier or delivery work systems and operations, and relevant equipment

© Commonwealth of Australia, 2025 Industry Skills Australia

- risks in courier or delivery operations and related precautions to control these risks
- security policies and procedures
- typical problems that may arise when prioritising courier or delivery operations and appropriate action to be taken
- workplace procedures and policies for coordinating and prioritising courier or delivery operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIH3002 Plan and navigate routes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and navigate routes as part of transport operations, in accordance with relevant state/territory roads and traffic authority regulations.

It includes interpreting information from a road map, street directory or global positioning system (GPS) device; planning the most appropriate route taking into account pertinent factors; and completing required trip documentation in accordance with operational requirements.

This unit relates to the work of transport and distribution personnel involved in passenger services and/or the delivery of a range of possible goods and materials including valuables, secured products documents and materials.

Work is performed under general or limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Interpret street maps	1.1 Symbols in a street directory/road map/GPS are recognised and interpreted
	1.2 Places are identified in a directory index and information is used to locate places on appropriate map
2 Plan routes	2.1 Given a location and a destination, the most direct and alternative routes between two points are identified using a street directory/road map/GPS
	2.2 Hazards are identified, risks are assessed and control measures are implemented
	2.3 Information on height, width and load limits of road infrastructure and other restrictions on thoroughfares is accessed, interpreted and taken into account when planning a route for a journey, as required
	2.4 Suitable route is selected to ensure the most efficient, safe, secure and legal transport operation, taking into account relevant criteria for transport operation concerned
3 Follow planned route	3.1 Planned route is correctly followed with aid of a street directory, road map and/or GPS system
	3.2 Geographic regions, tourism features and other places of interest are identified, as required
	3.3 Route documentation is completed in accordance with purpose of transportation and workplace requirements
	3.4 Parking procedures are observed in accordance with enterprise procedures and relevant legislative requirements

Foundation Skills

Assessment Requirements for TLIH3002 Plan and navigate routes

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and interpreting required information and developing contingency routes (including road restrictions, traffic conditions, service stations/rest stops)
- adapting to changes and difference in vehicle navigation technology, maps and street directories as they relate to route planning
- adapting to changes in vehicle navigation technology, maps and street directories as they relate to route planning
- applying fatigue management techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- completing relevant documentation
- implementing contingency arrangements
- interpreting and following operational instructions and prioritising work
- interpreting information to allow effective route planning
- modifying route planning activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in vehicles, loads and equipment in accordance with standard operating procedures
- planning alternative routes for contingencies such as road works, emergencies or delays
- planning and navigating a route effectively
- planning for transport routes to meet workplace requirements
- planning routes in accordance with workplace guidelines
- reading and interpreting relevant instructions, procedures, information and signs:
  - estimating route distances using map information
  - identifying roads and intersections
  - identifying town and suburb locations
  - reading and interpretation of map symbols
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- selecting and using relevant route planning and navigation technology including GPS devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic GPS operation
- current information about accidents or emergencies that might close or restrict traffic on particular routes
- features and contents of maps and street directories, and techniques for their use in transport navigation
- known traffic conditions at various times of the day along specific routes
- location of service stations and rest stops
- operational procedures for planning and navigating transport routes
- physical hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- relevant state/territory permit and licence regulations and requirements
- road conditions for various routes, including sections undergoing road works
- security hazards on long routes
- workplace requirements for recording and documenting route information.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIH3004 Identify major roads, services and attractions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required by taxi drivers, bus/coach drivers and other transport drivers to identify and describe major roads, services and attractions, on a map and as required, physically pointing them out. Work must be carried out in accordance with relevant transport regulations and workplace procedures.

It includes knowing about local geographical details and features of major roads, highways and suburbs in the area of operation.

It also includes identifying transport interchanges, jetties, ports, stations, terminals, suburbs, landmarks, public services, facilities, tourist attractions and central business districts.

Work is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining specialist driver accreditations. As requirements may vary between states and territories, people seeking specialist driver accreditation should contact their state/territory licensing regulator.

Pre-requisite Unit

Not applicable.

Competency Field

H – Route Planning and Navigation

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Locate all major roads, highways and suburbs in area of operation	1.1 Major roads are identified and located on a map and/or physically
	1.2 Suburbs along, and at the end of, major roads are identified and located on a map and/or physically
	1.3 Suburbs accessed by on- and off-freeway ramps are identified and located on a map and/or physically
	1.4 Main suburbs, with relation to geographical sectors (east, west, north and south) are identified in order of closest proximity to central business district
	1.5 Bus/taxi lanes into and out of central business district are located on a map and/or physically
2 Locate transport interchanges, jetties, ports, stations and terminals	2.1 Major transport interchanges, jetties, ports, terminals and stations are located on a map and/or physically
	2.2 Major connecting roads entering and exiting main transport interchanges, terminals, jetties, ports and rail stations are identified and located on a map and/or physically
	2.3 Established taxi ranks at main transport interchanges, jetties, ports, airports, terminals and stations are located on a map and/or physically
	2.4 Special transport, safety, taxi and/or financial requirements for entering and exiting main transport interchanges, jetties, ports, terminals and stations are observed
3 Identify main public services and facilities	3.1 Maps and other geographical and tourist information are identified and accessed in accordance with workplace procedures
	3.2 Key tourist locations are located on a map and/or physically, and their features are described
	3.3 Key public services are located on a map and/or physically and explained
	3.4 Main scenic routes, places and landmarks of interest to tourists are determined and features are outlined in an

© Commonwealth of Australia, 2025 Industry Skills Australia

			appropriate manner
4	**Locate key features in a central business district**	4.1	Streets, major buildings and traffic flow directions of central business district and city centre are identified and located on a map and/or physically
		4.2	City hotels are identified and located on a map and/or physically
		4.3	Exit and entry points to city are determined in relation to a final destination
		4.4	Transport interchanges and main taxi ranks in city centre and central business district are identified and located on a map and/or physically

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLIH3004 Identify major roads, services and attractions

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when identifying and locating major roads, services and attractions
- identifying and correctly using maps and other information about the location and features of roads, services and attractions
- interpreting and following operational instructions and prioritising work
- locating identified roads, services and attractions on a map and/or physically (i.e. driving to location)
- operating electronic communications equipment to required protocol
- operating technology when locating roads, services and attractions
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- information and technology for locating roads, services and attractions including:
  - bus and emergency lane usage
  - entry and access points to major road systems
  - location of city centre streets and major buildings and traffic flows
  - location of main hotels, motels and tourist attractions in a specified area
  - location of metropolitan suburbs
  - main arterial roads
  - most appropriate routes for entering and exiting a city centre

© Commonwealth of Australia, 2025 Industry Skills Australia

  - restrictions to traffic movement at major intersections
  - roads and suburbs connecting with freeways and transport interchanges, terminals, jetties, ports and stations
  - road signs and route markers
  - traffic patterns and densities
- relevant state/territory regulations and road laws
- typical problems that may arise when identifying and locating roads, services and attractions and appropriate action that should be taken
- workplace procedures for identifying and locating roads, services and attractions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment Requirements for TLII0001 Market international freight forwarding services

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating effectively with others when marketing services to customers
- completing relevant documentation
- identifying and recording potential improvements to services
- negotiating effectively with customers and others
- operating electronic communications equipment to required protocol
- promptly reporting and/or rectifying identified problems
- reading and interpreting relevant instructions, procedures and information
- responding appropriately to cultural differences in the workplace
- selecting and appropriately applying technology, information systems and procedures to market services to customers
- working collaboratively with others in the workplace to market enterprise services.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of marketing systems and resources
- functions of other workplace departments and personnel
- relevant regulatory requirements
- relevant workplace business marketing policies and practices, including requirements to maintain security and privacy
- strategies to implement continuous improvement processes
- types of problems that can occur and appropriate actions that can be taken
- workplace protocols and procedures for marketing services to customers.

TLII2019 Provide taxi customer service

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply routine customer service procedures to passengers in taxis, in accordance with taxi industry regulations and relevant legislative requirements.

It includes establishing effective communication, identifying and assessing the needs and expectations of different customers, meeting identified customer requirements and dealing with difficult customer situations at all points of customer contact before, during and after a journey.

Work is performed with limited or no supervision, and with full accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining taxi driver accreditation. As requirements may vary between states and territories, people seeking taxi accreditation should contact their state/territory taxi regulator.

Pre-requisite Unit

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant workplace procedures
- communicating effectively with others when transporting customers with specific needs
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying delays that may occur when assisting customers with specific needs and the correct procedures for dealing with them
- identifying different categories of specific need
- interacting positively with customers with specific needs
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- using ancillary equipment to assist customers with specific needs in accordance with workplace procedures
- working collaboratively with others when transporting customers with specific needs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- ancillary equipment operating procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

- manufacturer instructions, specifications and recommended operating procedures for ancillary equipment, including pre-operational checks
- organisational policies and procedures
- regulations and codes of practice
- service timetables and network information
- workplace instructions and procedures for transporting customers with specific needs.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLII3003 Provide customer service in transport vehicles/vessels

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to provide customer service for local and overseas passengers in transport vehicles/vessels, in accordance with tourism and transport industry codes of practice and/or workplace procedures.

It includes monitoring and addressing passenger needs, preparing and delivering commentaries, resolving problems and conflicts involving customers, and liaising with suppliers of tourism products to ensure appropriate materials and services are obtained and made available to service customer needs.

Work will be undertaken with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Monitor and address passenger needs**	1.1 Circumstances affecting passenger needs and comfort are monitored and action is taken in accordance with workplace procedures
		1.2 Needs of all types of passengers are acknowledged and appropriate assistance is provided
		1.3 Passengers are advised about the operation of internal vehicle/vessel facilities and the benefits of wearing seat belts, as required
		1.4 Hazards and risks to passenger safety are identified and appropriate action is initiated to minimise the risk
		1.5 Passengers are suitably advised about any safety risk and action being taken
		1.6 Tact, courtesy, friendliness and patience are used at all times when dealing with passengers
		1.7 Passenger inquiries and requests are received and resolved with minimal delays
		1.8 Passenger inquires and associated action are recorded and reported in accordance with workplace procedures
2	**Prepare and deliver commentaries**	2.1 Comprehensive briefings are delivered clearly and precisely
		2.2 Commentary presentations are well-researched and delivered clearly and at precise timings
		2.3 Additional information is provided in response to questions
		2.4 Audio visual equipment is correctly and safely operated, as required
3	**Implement conflict resolution strategies**	3.1 Conflict and difficult situations are recognised and fair solutions are negotiated equitably
		3.2 Conflicts unable to be resolved are referred to a higher authority
		3.3 Opportunities to enhance service quality are taken, particularly in conflict situations
4	**Communicate with**	4.1 Liaison is maintained with suppliers of tourism products and/or information to obtain accurate and comprehensive

© Commonwealth of Australia, 2025 Industry Skills Australia

suppliers		information about products available to meet customer needs
	4.2	Needs for tourism products and/or information are appropriately communicated to relevant workplace personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLII3003A Provide customer service in transport vehicles/vessels.

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting presentations to tourist passengers
- interacting effectively with passengers
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- responding appropriately to cultural differences
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- customer service policies and workplace procedures
- procedures for handling customer questions, complaints and conflicts

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures for using audiovisual equipment
- procedures for using communications equipment
- relevant state/territory regulations and industry codes of practice for tourism and transport operations as they relate to customer service and safety in tourism vehicles/vessels
- relevant tourism products, services and/or operations
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- route information
- specific needs of different community sectors/cultures
- specific needs of persons with disabilities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment Requirements for TLII3022 Provide customer service in rail operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- communicating effectively with others
- delivering service to customers at train station platforms and/or on a train
- establishing contact with customers
- identifying customer needs
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- interpreting and following operational instructions and prioritising duties in accordance with customer needs
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- availability and types of alternative service for customers during planned and unplanned events that may affect regular services
- emergency procedures and emergency response plans
- relevant documentation/records
- relevant environmental protection legislation
- relevant privacy, anti-discrimination and confidentiality operational procedures
- relevant state/territory legislation, regulations and organisational policies, procedures and codes of practice

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant work health and safety (WHS)/occupational health and safety (OHS) legislation
- service timetables and network information commonly requested by customers
- types of inquiries that are likely to be made and appropriate responses, in accordance with workplace procedures
- workplace instructions and procedures for transporting customers with specific needs.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLII4005 Market services and products to clients

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to market services and products to clients.

It includes recognising and acting on opportunities to promote products and services, establishing and maintaining contact with clients as well as negotiating and closing sales, in accordance with statutory retail practice and workplace procedures.

Work involves discretion and judgement for self and others. It is performed under minimum supervision with general guidance on progress and outcomes.

Work involves responsibility for marketing services and products to clients and for leading individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

I – Customer Service

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Recognise opportunities to promote products and services	1.1 Products and services available for on-selling from the enterprise are identified
	1.2 Technical specifications and application/s of products and services are identified
	1.3 Applicability of products and/or services are matched to particular clients or client groups
	1.4 Features of products and services (including technical specifications) are explained in relation to customer requirements or potential requirements
	1.5 Clients are referred to expert personnel or services as required
2 Establish and maintain contact with clients	2.1 Communication with clients is established and maintained to develop a professional relationship
	2.2 Clients are informed of the full range of business products
	2.3 Follow-up contacts with clients are made on client request and in accordance with enterprise policy
3 Negotiate sales	3.1 Potential sales opportunities are recognised and acted on
	3.2 Enterprise professional standards and client satisfaction are maintained in negotiations with clients
4 Close sales	4.1 Agreement documentation is completed in accordance with enterprise policy, incorporating any special requirements
	4.2 Contact with customers is maintained until sale is completed
	4.3 After-sales service is provided in accordance with enterprise procedures and statutory requirements

Assessment Requirements for TLIJ2003 Apply grain protection measures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- carrying out work in accordance with required work health and safety (WHS)/occupational health and safety (OHS) procedures and hazard control strategies, including using:
  - personal protective equipment
  - manufacturer instructions
  - fumigant and pest control chemical labels
- communicating and working effectively with others
- completing relevant documentation
- identifying pests that infest grain in grain storage facilities
- identifying, selecting and using required equipment efficiently and effectively
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures information and labels
- setting up and maintaining grain protection equipment
- using pest control agents in accordance with relevant Commonwealth, state/territory legislation.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics of commodity types, varieties and grades, and their identification
- emergency response procedures
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- problems that may occur and appropriate action that can be taken to resolve these problems
- procedures for environmental control and disposal activities
- regulations relevant for applying grain protection measures in grain storage facilities
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- storage and safe handling procedures for fumigants, chemicals and other grain protection materials
- workplace procedures and policies for applying grain protection measures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIJ2004 Implement grain monitoring measures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement grain monitoring measures within grain storage facilities in accordance with workplace procedures, regulations and requirements, as part of grain storage operations in the transport and logistics industry.

It includes installing and checking grain quality control equipment, and monitoring the quality of stored commodities in accordance with workplace requirements.

Work is performed under some supervision, generally within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Install grain quality	1.1 Procedures for maintaining the quality of stored grain are identified from work plans and from considering climatic

control equipment	conditions, types of storage and general environment
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Aeration equipment is installed in accordance with workplace and site requirements to maintain appropriate grain temperature and moisture content as required
	1.4 Inspection/sampling equipment and procedures are confirmed and implemented in accordance with workplace procedures
	1.5 Equipment is checked to ensure correct set up and operation
	1.6 Equipment is maintained in accordance with workplace requirements and manufacturer instructions
	1.7 Rectification of faults in equipment is undertaken in accordance with workplace procedures
2 Monitor the quality of stored commodities	2.1 Stored commodities and associated facilities are inspected for sign of damage or potential for damage
	2.2 Required repairs to facilities are reported to appropriate personnel for action
	2.3 Monitoring for pest infestations and climatic contamination/damage to grain is regularly completed in accordance with workplace sampling/inspection procedures
	2.4 Results of sampling/inspections are recorded and reported in accordance with workplace procedures
	2.5 Follow-up action to protect grain quality is undertaken in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Industry Skills Australia

TLIJ3002 Apply quality systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply quality systems in workplace operations in accordance with relevant regulations and workplace quality standards within the transport and logistics industry.

It includes working within a quality improvement system and using quality improvement systems, tools and techniques in accordance with enterprise procedures.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Assessment Requirements for TLIJ3002 Apply quality systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when applying and implementing quality systems
- completing relevant documentation
- identifying and using equipment, processes and procedures required within the context of the job concerned
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in relation to quality system standards and processes
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- selecting and using quality improvement tools and methods
- working collaboratively with others when applying and implementing quality systems
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- operational work systems, equipment or management, site and organisational operating procedures
- housekeeping standards and procedures
- impact of job on enterprise and individual performance
- quality improvement tools and methods
- typical quality-related problems that may arise in work operations and products, and related options for action and solutions
- workplace or site layout
- workplace quality assurance and improvement principles and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIJ3005 Sample, inspect and test products to specifications

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to sample, inspect and test products to specifications in accordance with relevant regulations, codes of practice, Australian Standards and workplace quality standards within the transport and logistics industry.

It includes establishing specifications and testing procedures, selecting evidence, conducting and interpreting tests, and reporting findings as part of operations.

Work is performed under limited supervision, generally within a team environment. Discretion and judgement are exercised in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

essential outcomes.	demonstrate achievement of the element.
1 Establish specifications and test procedures	1.1 Product quality specifications and required outcomes are read, drawings are interpreted and test parameters are identified
	1.2 Test methods for each required test parameter are identified and most efficient test method is noted
	1.3 Requirements for testing by personnel external to work area are identified and appropriate permission is obtained
	1.4 Sampling, inspection and testing are conducted in accordance with hazardous substances regulations
2 Select evidence	2.1 Appropriate conforming and/or non-conforming products, materials and/or waste are selected for testing
	2.2 Observations of operators and copies of procedures are collected
3 Conduct and interpret tests	3.1 Tests are conducted in accordance with workplace procedures, including quality assurance procedures, and results are documented as required
	3.2 Emergency procedures are identified and implemented in an incident
	3.3 Comparisons of all data collected are made
	3.4 Recommendations are noted and considered for feasibility
	3.5 Equipment is maintained in accordance with workplace and manufacturer requirements
4 Report findings	4.1 Findings of tests are documented in accordance with workplace procedures
	4.2 Potential or existing problems and appropriate recommendations are proposed and reported verbally and/or in writing

TLIJ3006 Implement grain protection procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement grain protection procedures within grain storage facilities in accordance with regulations and workplace procedures, as part of operations in the transport and logistics industry.

It includes identifying required pest control measures, preparing the application and monitoring of pest control measures, ventilating fumigated storages and maintaining records in accordance with workplace requirements.

Work is performed under some supervision, generally within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify required	1.1 Stored grain is checked for live and/or dead pests in accordance

© Commonwealth of Australia, 2025 Industry Skills Australia

pest control measures		with workplace procedures
	1.2	Pest infestation information, including prevalence, type and location, is gathered from observation
	1.3	Actual and potential damage to stored grain is assessed and documented
	1.4	Pests causing or likely to cause damage are identified
	1.5	Hazards are identified, risks are assessed and control measures are implemented
	1.6	Appropriate form of protection and/or pest control is determined in accordance with workplace procedures
	1.7	Pest control measures are arranged and/or implemented in accordance with workplace requirements
2 Plan and prepare to apply pest control measures	2.1	Spray application and inert atmosphere/fumigation requirements and application procedures are confirmed in accordance with legislative, workplace and customer requirements
	2.2	Quantity and form of gas/liquid required and exposure period is determined from silo and grain storage information and matched to manufacturer instructions
	2.3	Method of application is determined based on type of pest to be controlled and site arrangements
	2.4	Exposure period is determined from pest/s to be controlled and storage specifications
	2.5	Written records of site are confirmed by site measurements and observations
	2.6	Access and site specific safety requirements, including appropriate signage, are coordinated to meet legislation and workplace procedures
	2.7	Equipment and personnel appropriate to task are organised
	2.8	Storage is sealed in accordance with manufacturer and workplace instructions, and is appropriately tested as required
3 Monitor application of pest control measures	3.1	Application is undertaken in accordance with manufacturer instructions, workplace procedures and regulatory framework
	3.2	Suitable emergency equipment and personnel are coordinated

© Commonwealth of Australia, 2025 Industry Skills Australia

	on site during fumigation in accordance with workplace instructions
	3.3 Selected process is monitored for effectiveness in accordance with manufacturer and workplace instructions
	3.4 Tests are made to determine leakage of gas, and corrective action is taken where this exceeds workplace limits
4 Ventilate fumigated storages	4.1 Pressure equipment and/or generation equipment are shut down when requested in accordance with workplace procedures
	4.2 Ventilation procedures appropriate for storage type are implemented in accordance with workplace procedures
	4.3 Tests to legislative and workplace instructions are made to ensure gas has been dispersed before personnel are allowed to enter storage facility/area
	4.4 Warning signs and emergency equipment are removed when gas has dispersed to safe levels
	4.5 Stored grain is checked for evidence of live and/or dead pests in accordance with workplace requirements
	4.6 Empty gas/fumigant containers are returned to manufacturer/retailer or are disposed of in accordance with legislative and workplace requirements
5 Maintain records	5.1 Records of pest control activities are made and stored in accordance with legislative and workplace requirements
	5.2 Pest control operations and results are reported in accordance with workplace requirements

TLIJ4008 Implement and monitor inbound quality assurance systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor inbound quality assurance (QA) systems in various contexts in the transport and logistics industry.

It includes planning for inbound QA as well as performing and evaluating inbound QA procedures.

The unit generally applies to those who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for inbound quality	1.1 Inbound product/s for quality audit and resources required to perform the quality audit efficiently and effectively are

assurance	identified
	1.2 Quality audit objectives are determined and discussed with those responsible for carrying them out
	1.3 Proposed methods and techniques to be applied are outlined and implemented
2 Perform inbound quality assurance procedures	2.1 Resources required to perform QA efficiently and effectively are accessed
	2.2 Product quality is checked as prescribed in work instructions
	2.3 Problems that affect or could potentially affect quality are reported to relevant person
	2.4 Records are kept according to enterprise QA policy
3 Evaluate inbound quality assurance procedures	3.1 Outcomes of implementing QA procedures are assessed against quality assurance target levels
	3.2 Suggestions for improvements of QA procedures are made according to organisational policy and procedures
	3.3 QA outcomes are discussed with client and relevant parties

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIJ4008 Implement and monitor inbound quality assurance systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments without compromising quality
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- code of practice for working collaboratively with others
- emergency procedures
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation such as checklists, schedules and internal audit reports
- steps involved in planning work activities
- typical defects that can occur and related action that should be taken
- various approaches to quality assurance, such as Total Quality Management, and the strengths and limitations of each when applied in this context.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIJ4009 Implement and monitor quality assurance systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor quality assurance systems.

It includes planning for quality assurance activities, and carrying out and evaluating quality assurance procedures.

This unit applies to ensuring the quality of materials, resources and outputs, including final products, meet organisational specifications and standards.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Plan for quality assurance activities	1.1 Products and services to be quality assured and required resources, are identified
	1.2 Objectives of the quality assurance activities are determined and discussed with those responsible for carrying them out
	1.3 Proposed methods and techniques to be applied are confirmed and implemented
2 Implement quality assurance procedures	2.1 Resources required to carry out the quality assurance plan efficiently and effectively are accessed
	2.2 Quality assurance activities are supported as required
	2.3 Quality of operations, services or products is monitored and adjusted as required to meet organisational specifications and standards
	2.4 Variations in the quality of operations, services or products from required standards are detected and reported in accordance with organisational procedures
	2.5 Problems that affect or could potentially affect quality are identified and solutions are posed and reported to relevant person
	2.6 Records are kept according to organisational quality assurance policy and procedures
3 Evaluate quality assurance procedures	3.1 Outcomes of implementing quality assurance procedures are evaluated against organisational specifications and standards
	3.2 Suggestions for improving quality assurance procedures are made in accordance with organisational policy and procedures
	3.3 Outcomes of the quality assurance activities are discussed with relevant parties and recommendations are made to ensure quality is maintained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIJ4009A Implement and monitor quality assurance systems.

Assessment Requirements for TLIJ4009 Implement and monitor quality assurance systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and evaluating quality assurance processes, procedures and outcomes
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments without compromising quality
- producing a quality assurance plan
- supporting others to maintain quality standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- data analysis and evaluation methods
- organisational quality assurance system
- organisational services, products and resource requirements
- relevant organisational specifications and standards that require quality assured outcomes
- requirements for completing relevant documentation, such as checklists, schedules and internal audit reports
- typical defects that can occur and related action that can be taken
- various approaches to quality assurance and their strengths and limitations.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIJ4010 Implement quality systems and procedures in a dangerous goods workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement quality systems and procedures to meet customer needs in a dangerous goods (DG) workplace, in accordance with all relevant regulatory requirements, standards and workplace procedures including the current Australian Dangerous Goods (ADG) Code.

It includes delivering a quality service to customers (by maintaining services and operations, and dealing with customer complaints), presenting a professional image and presenting a positive company image, in accordance with organisational procedures and requirements.

This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Deliver service to customers	1.1 Customer service is provided promptly to meet customer needs, in accordance with organisational procedures
	1.2 Suggestions and complaints are treated positively and politely
	1.3 Opportunities to enhance service quality are identified and used
2 Provide effective customer service on customer site	2.1 Site procedures are carried out in a timely and professional manner in accordance with organisational requirements
	2.2 Alternative arrangements are negotiated with customers where previously arranged commitments cannot be met, in accordance with organisational requirements
	2.3 Operations and services are provided to satisfy customer delivery, quantity and cost requirements
3 Maintain services and operations	3.1 Accurate information and advice is given in accordance with organisational procedures
	3.2 Information that impacts on customers and efficiency of operations and services, is passed to appropriate people
	3.3 Factors that may disrupt operations and services are noted and appropriate measures are taken to minimise their effect
	3.4 Systems to monitor quantity, quality, cost and time specification for service product delivery are correctly implemented and maintained
	3.5 Information relating to work activities is confirmed or clarified with appropriate people as required
4 Deal with difficult customer situations	4.1 Customer complaints are handled courteously in accordance with organisational procedures
	4.2 Nature and details of customer complaint are established and agreed on
	4.3 Action to resolve customer complaint is undertaken in accordance with organisational procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.4	Unresolved customer complaints are referred to a higher authority
	4.5	Documentation is completed in accordance with organisational procedures
5 Maintain personal presentation standards and present a professional image	5.1	Company uniform is maintained to present an appropriate image in accordance with organisational requirements
	5.2	Specific presentation requirements are maintained in accordance with organisational requirements
	5.3	Truck and equipment are kept clean, tidy and uncluttered in accordance with organisational requirements
6 Present a positive company image using effective communication techniques	6.1	Professional ethics are maintained to enhance customer commitment
	6.2	Image and good standing are maintained by taking timely actions with customers in accordance with organisational requirements
	6.3	Effective service environment is created through appropriate communication techniques
	6.4	Communications equipment is used effectively and efficiently in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIJ4010 Implement quality systems and procedures in a dangerous goods workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant agreements, codes of practice and other legislative requirements
- identifying and correctly using equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions as they apply to the dangerous goods (DG) industry
- rectifying a complaint using workplace policy and procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- current Australian Dangerous Goods (ADG) Code
- enhancements available to customers in relation to DG quality service
- relevant DG information for relevant workplace
- relevant national, state/territory standards, regulations and codes of practice
- required level of quality and safety for relevant workplace requirements
- requirements of workplace systems and operations, and relevant equipment
- role of customer service in company profitability
- work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines relevant to workplace operations
- workplace driving and operational instructions.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIJ5007 Conduct internal quality audits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct internal quality audits in accordance with relevant regulatory requirements, standards and codes of practice, including the Australian Dangerous Goods (ADG) Code and workplace procedures.

It includes preparing and scheduling for an internal audit, conducting an audit, documenting findings and reporting audit results, in accordance with workplace requirements.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

essential outcomes.	demonstrate achievement of the element.
1 Prepare for internal audit	1.1 Benchmarks for the quality audit are established/identified
	1.2 Procedures required to be audited are identified and implications of non-conformance are estimated
	1.3 Technical and/or calibration requirements for audits are noted as required and appropriate support personnel are identified
	1.4 Production schedules are examined to identify appropriate audit schedule
2 Schedule internal audit	2.1 Audit timings are planned to ensure relevant procedures are conducted within workplace agreed time intervals and timeframes
	2.2 Audit frequency is adjusted based on importance of activities to the business unit, process or workplace changes or customer feedback
	2.3 Contact is made with appropriate personnel and relevant audit appointments are made
3 Conduct audit and document findings	3.1 Methods for conducting the audit are established and confirmed
	3.2 Observations and interviews are conducted with required approved third party as required
	3.3 Documentation of observations and interview responses is completed
4 Report audit results	4.1 Audit results are discussed with personnel associated with the procedures or standards audit
	4.2 Compliances noted are indicated in audit reports
	4.3 Location, relevant standard or procedure, and supporting evidence are indicated in non-compliance reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIJ5007 Conduct internal quality audits

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- conducting an internal audit in the workplace
- interpreting and following operational instructions and prioritising work
- leading others
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- planning and organising activities
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and applying appropriate technology, information systems and procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include:

© Commonwealth of Australia, 2025 Industry Skills Australia

- application of current competencies within functional activity
- application of relevant Australian Standards and certification requirements
- coaching and mentoring approaches to support team members to share knowledge and skills
- enterprise business policies and plans including procedures for identifying non-compliance and best practice
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- operational work systems, resources, management and workplace operating systems
- problems that may occur and action that can be taken to resolve or report these problems
- quality procedures and implementation strategies
- relevant regulations, codes of practice and legislative requirements including the Australian Dangerous Goods (ADG) Code
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team/group
- workplace procedures for conducting internal quality audits.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIK2003 Apply keyboard skills

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to enter data into an infotechnology device using a keyboard. Work involves applying routine procedures when using computers for information management within the transport and logistics industry.

It includes applying work health and safety (WHS)/occupational health and safety (OHS) principles to keyboard operations and accurately entering data.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

TLIK2010 Use infotechnology devices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use infotechnology devices in the workplace in accordance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures, within the transport and logistics industry.

It includes identifying infotechnology equipment and systems; setting up, using and shutting down computer based equipment and systems; and inputting, storing and presenting files/data. It also involves implementing workplace procedures for managing and securing data.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for TLIK2010 Use infotechnology devices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and/or completing electronic documentation through the use of infotechnology devices in the workplace
- adapting to differences in software and equipment in accordance with standard operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist when using infotechnology devices in the workplace
- applying relevant legislation and workplace procedures
- identifying and using computer equipment, software, processes and procedures required within the job context
- identifying fault-finding procedures
- implementing contingency plans when using infotechnology devices in the workplace including using security and backup software and procedures
- modifying activities depending on operational contingencies, risk situations and environments
- operating infotechnology devices used within the workplace in accordance with operational requirements
- reading and interpreting instructions, procedures, information, operational instructions and manuals relevant to using infotechnology devices in the workplace
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- work health and safety (WHS)/occupational health and safety (OHS) risks and hazards when using computer equipment for work tasks, and ways of controlling these risks/hazards
- relevant WHS/OHS procedures and guidelines for using computer equipment in the workplace
- typical problems that can occur when using infotechnology devices, and computer applications in the workplace and related appropriate action that can be taken to prevent or solve these problems
- workplace procedures for using computer equipment and application software appropriate for work role.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIK5006 Evaluate software requirements and hardware enhancements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to evaluate software requirements and hardware enhancements in accordance with relevant regulations, standards and codes of practice and workplace procedures.

It includes analysing requirements for improved computer applications, evaluating relevant software, investigating appropriate hardware enhancements, implementing system improvements and measuring systemic improvement.

Work is under general guidance on progress and outcomes. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes.

The unit generally applies to those with responsibility for resource coordination and allocation, and who lead individuals or teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

K – Technology

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Analyse requirements for improved computer applications	1.1 Current aspects of business operations requiring improved computer technology are identified
	1.2 Purpose and requirements of improved computer management systems are identified
	1.3 Personnel are consulted for expert advice for potential matches of computer applications to required site operation improvements
2 Evaluate software	2.1 Potential software programs are evaluated to meet workplace requirements
	2.2 Software applications are investigated for effectiveness to own operation including degree of flexibility, customisation and integration potential
	2.3 Selected option is circulated to appropriate personnel for verification
	2.4 Level of technical support is assessed
	2.5 Software application selection is made
3 Investigate hardware enhancements	3.1 Hardware systems are evaluated for compatibility with selected software and workplace operations
	3.2 Potential immediate and long-term risks/problems with hardware are identified and assessed
	3.3 Recommendations are drafted and circulated for comment
	3.4 Final recommendations on suitable hardware are made
4 Implement system improvement	4.1 Selected hardware and software enhancements are implemented
	4.2 Training is provided to potential users of the technology
	4.3 Implementation of hardware and software is monitored
5 Measure systemic improvement	5.1 Methods of measuring system performance are identified
	5.2 Software and hardware performance is evaluated

© Commonwealth of Australia, 2025 Industry Skills Australia

5.3 System refinements or improvements are determined and implemented

5.4 System performance is documented and reported to appropriate personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIK5006A Evaluate software requirements and hardware enhancements.

Assessment Requirements for TLIK5006 Evaluate software requirements and hardware enhancements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when evaluating software requirements and hardware enhancements
- completing documentation related to evaluating software requirements and hardware enhancements
- interpreting and following operational instructions and prioritising work
- measuring operational performance improvements resulting from changes to computer technology
- modifying activities to cater for variations in workplace contexts and environment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- planning and organising activities
- providing leadership and working collaboratively with others when evaluating software requirements and hardware enhancements
- reading and interpreting instructions, procedures, specifications, technical data and manuals relevant to evaluating software requirements and hardware enhancements
- selecting and applying appropriate software, technology, information systems and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant Australian standards
- application of current competencies within functional activity
- computer equipment and software applications, capacities and configurations
- focus of operation of computing systems, software and hardware resources, management and workplace operating systems
- problems that may occur when evaluating software requirements and hardware enhancements and action that can be taken to resolve or report these problems
- relevant regulations, codes of practice and legislative requirements for evaluating software requirements and hardware enhancements
- relevant workplace documentation procedures
- resource availability including the competencies of individuals in the team or group
- risks and hazards related to evaluating software requirements and hardware enhancements, and ways of controlling the risks involved
- workplace procedures for evaluating software requirements and hardware enhancements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIL1001 Complete workplace orientation/induction procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete workplace orientation and induction procedures when commencing a new work role, in accordance with regulatory requirements and workplace operational policies and procedures.

It includes identifying major workplace areas in terms of functions, organisational structures and occupations, and organising and accepting responsibility for own workload.

It also includes applying ethical practices, receiving and acting constructively on personal feedback, participating in identifying and meeting own learning needs, and planning and organising a personal daily routine.

Workplace orientation and induction is completed to enable a worker to enter a workplace and to participate safely and effectively in workplace activities.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and act on major workplace areas in terms of functions, organisational structures and occupations	1.1 Workplace layout, flow of materials and goods, and work activities conducted in each work area are identified
	1.2 Workplace organisational structure and the relationship of each occupation and classification grouping to this structure are outlined
	1.3 Types of workplace facilities, their purpose and potential risk factors are identified
	1.4 Equipment and technology used in the workplace are outlined in terms of function and physical characteristics
	1.5 Individual responsibilities under industrial agreements are identified and acted on in the conduct of assigned duties
	1.6 Key internal and external customers and the workplace areas that serve them are identified
	1.7 Workplace hazards are identified and related hazard minimisation procedures are followed
	1.8 Relevant personal protective equipment (PPE) is identified and correctly used in accordance with regulations and workplace requirements
	1.9 Workplace emergency procedures are identified and followed in real and simulated emergency situations
2 Organise and accept responsibility for own workload	2.1 Priorities and deadlines are established in consultation with others (as appropriate) and recorded
	2.2 Work activities are planned and progress of work is communicated to others whose personal work plans and timelines may be affected
	2.3 Work is completed to the standard expected in the workplace and in accordance with any guidelines, directions or instructions

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.4 Variations and difficulties affecting work requirements are identified through regular reviews and action is taken to report these issues to supervisory staff
	2.5 Additional support to improve work is communicated clearly to appropriate personnel
3 Apply ethical practices	3.1 Workplace procedures, regulations and legislation appropriate to the position are identified and followed
	3.2 Commitments and undertakings to clients, colleagues and supervisors are met
	3.3 Required confidentiality is maintained
	3.4 Appropriate codes of acceptable and ethical work practices are applied
	3.5 Workplace security policies are identified, including their relationship to personal job role
4 Receive and act constructively on personal feedback	4.1 Suggestions on ways to improve work are sought regularly from appropriate personnel
	4.2 Feedback is acted upon as required to improve work performance
5 Participate in identifying and meeting own learning needs	5.1 Workplace operations and equipment, and focus of the activity are identified
	5.2 Organisational structure, career paths and training opportunities appropriate to the enterprise are identified
	5.3 Steps are taken, in consultation with appropriate personnel, to identify own learning needs by assessing and planning future work requirements
	5.4 Appropriate opportunities to learn and develop required competencies are undertaken including establishing networks and working relationships with others
6 Plan and organise a personal daily routine	6.1 Daily routine is planned to take into account rosters, industrial agreements and workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

6.2 Clarification of task requirements is sought as appropriate

6.3 Achievable time and other performance measures are agreed

6.4 Tasks are completed and variations to plan are identified and reported

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL1001 Complete workplace orientation/induction procedures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating effectively with others when completing workplace orientation and induction procedures
- completing documentation related to work activities
- demonstrating an understanding of the immediate management structure relating to the job role
- demonstrating an understanding of workplace structure and how it applies to the job role
- identifying and correctly using equipment, processes and procedures
- identifying workplace products and services and their features
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting instructions, procedures, information and signs relevant to work activities
- selecting and using required personal protective equipment conforming to industry, and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when completing workplace orientation and induction procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic workplace documentation and record keeping procedures and requirements
- conditions of service including: employer and employee obligations under awards, employment contracts, WHS/OHS and other regulations in relation to engagement, working times and conditions, and dismissal and discipline arrangements
- customer service standards and procedures
- emergency procedures
- personal protective equipment and instructions for its use
- site or workplace layout
- workplace hazards and related hazard minimisation procedures
- workplace procedures, standards and duty of care requirements including WHS/OHS and environmental protection responsibilities
- workplace structures and the roles and responsibilities of team/group members.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIL2008 Complete routine administrative tasks

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete routine administrative activities within the transport and logistics industry, in accordance with relevant regulations and workplace procedures.

It includes receiving and distributing incoming mail, receiving and despatching outgoing mail, filing documents, and receiving and relaying written and oral messages.

Work is performed under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Receive and distribute incoming mail	1.1 Incoming mail is checked and registered to ensure accuracy of records

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Urgent and confidential mail is identified and distributed promptly to addressee
	1.3 Mail is sorted and despatched to nominated person/location
	1.4 Damaged, suspicious or missing items are recorded and reported as required, in accordance with workplace procedures
2 Receive and despatch outgoing mail	2.1 Outgoing mail is collected from organisational sections, checked and sorted to ensure all items are correctly prepared for despatch
	2.2 Mail items are collated, recorded in the register as required and correctly despatched to meet designated timelines
3 File documents	3.1 Documents are classified, sorted and filed in accordance with workplace procedures
	3.2 Classification uncertainties are referred to other personnel in accordance with workplace procedures
	3.3 Documents are identified and retrieved
	3.4 Specified files/records are located within designated timelines
	3.5 Located files are extracted from system and despatched to nominated person
	3.6 Security and confidentiality procedures are followed
4 Receive and relay written and oral messages	4.1 Messages are received and accurately recorded
	4.2 Areas of uncertainty are clarified with message conveyor where feasible
	4.3 Messages are relayed to nominated person within designated timelines

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

TLIL2031 Monitor and process attendance records

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to monitor and process attendance records in accordance with regulatory and workplace requirements as part of work activities undertaken in the transport and logistics industry.

It includes monitoring attendance records as well as checking and processing attendance information.

Work is performed individually but the ability to work within a team environment may also be required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor attendance records	1.1 Hours worked, as recorded for each employee, are accessed, checked and documented on a prescribed time basis

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Employee record cards or other daily time records showing hours absent are followed up to ensure authorised absences are accurately recorded
	1.3 Employee daily time records showing additional hours worked are followed up to determine whether additional payments are authorised
	1.4 Unauthorised absences are notified to appropriate personnel in a timely way to ensure follow-up action is initiated
	1.5 Employee attendance sheets are received, checked and processed to ensure accurate employee records are maintained
2 Process attendance records	2.1 Unexplained absences are identified, confirmed and appropriate personnel are notified for follow-up action
	2.2 Timesheets, or equivalent, are checked and forwarded to payroll department for costing purposes
	2.3 Employee record cards or other identification system requirements are checked and redistributed in a timely way

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL2031 Monitor and process attendance records

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying conditions of employment and industrial agreements and awards
- applying relevant legislation and workplace procedures
- checking, monitoring and processing attendance records as per workplace procedures
- communicating and working effectively with others when monitoring and processing attendance records
- completing documentation related to work activities
- conducting simple calculations when monitoring and processing attendance records
- modifying activities depending on operational contingencies and environments
- operating electronic communication equipment to required protocol
- reading and interpreting instructions, procedures and information relevant to work activities
- reporting identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant computer, communications and office equipment required to monitor and process attendance records
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and reporting requirements for monitoring and processing attendance records including computer-based personnel recording systems
- elements of human resources systems relevant to monitoring and processing attendance records including: workplace timekeeping practices, conditions of employment, labour/costing practices, industrial agreements and awards, auditing requirements, payroll practices and procedures, personnel records requirements, and computer-based personnel recording systems
- focus of operation of work systems, equipment, management and site operating systems for monitoring and processing attendance records
- problems that may occur when monitoring and processing attendance records and appropriate action that can be taken to resolve these problems
- regulations and codes of practice relevant to monitoring and processing attendance records
- workplace procedures and policies for monitoring and processing attendance records.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIL2041 Monitor and record rolling stock locations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to monitor and record rolling stock locations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying rolling stock, identifying planned movements, and verifying and recording movements in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when monitoring and recording rolling stock locations, as part or workplace activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify rolling stock	1.1 Current location and operational status of rolling stock are identified
	1.2 Capacity, type and operational specification of rolling stock are identified
	1.3 Current train consist information is obtained and interpreted
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Operational management system is reviewed against observed status in accordance with workplace procedures
2 Identify planned movements	2.1 Proposed rolling stock movements are identified
	2.2 Status of current train movement plan is confirmed
	2.3 Changes to planned train movements are checked and confirmed in accordance with workplace procedures
3 Verify and record movement	3.1 Location and operational status of rolling stock are confirmed
	3.2 Information on location of rolling stock is provided where appropriate
	3.3 Operational management system is updated with information on location of rolling stock in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL2041 Monitor and record rolling stock locations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace procedures
- completing relevant documentation
- documenting and recording rolling stock locations
- gathering information on train movements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating rolling stock management system and/or computer programs to track rolling stock movements
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying problems, faults or malfunctions, in accordance with workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- emergency procedures
- management systems and/or computer programs for rolling stock tracking
- problems that may occur when monitoring and recording rolling stock locations and related action that should be taken
- relevant documentation requirements
- relevant rail danger zones
- relevant workplace procedures for monitoring and recording rolling stock locations
- safeworking systems and requirements
- type, specifications, capacity, characteristics and features of rolling stock
- workplace hazards that may exist when monitoring and recording rolling stock locations and ways in which the risks involved may be eliminated or controlled.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIL2046 Handle customer luggage/property

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to handle customer luggage and property in accordance with regulatory and workplace requirements, as part of workplace activities in the transport and logistics industry.

It includes handling customer enquiries, identifying and labelling luggage/property and processing lost luggage/property.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1	**Handle customer luggage/property**	1.1 Customer enquiries are handled in a courteous manner and accurate advice and information is provided
		1.2 Customer luggage/property is identified and labelled for correct destination and a receipt is issued in accordance with workplace procedures
		1.3 Luggage/property conveyance is arranged and correct handling procedures for different categories of luggage are taken into account
		1.4 Hazards are identified, risks are assessed and control measures are implemented
		1.5 Luggage is issued on presentation of customer receipt or in accordance with workplace procedures
		1.6 Appropriate action is taken to ensure transfer of luggage to other transport networks, in accordance with workplace procedures
2	**Process lost luggage/property**	2.1 Lost luggage/property status is substantiated using appropriate enquiries
		2.2 Lost luggage/property is investigated and traced in accordance with workplace procedures
		2.3 Lost luggage/property records are maintained in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL2046 Handle customer luggage/property

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with workplace procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- handling heavy items correctly
- interpreting and following workplace procedures and prioritising work
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- securing stored items
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- communication and negotiation requirements for handling customer luggage and/or property
- documentation and record requirements for handling customer luggage and/or property
- equipment and materials used for handling customer luggage and/or property, and precautions and procedures that should be followed in their use
- labelling and coding systems
- luggage forwarding procedures
- problems that may occur when handling customer luggage and/or property and appropriate action that can be taken to resolve these problems
- procedures for dealing with dangerous goods
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- transport system timetables
- workplace customer service policies and procedures
- workplace procedures and policies for handling customer luggage and/or property.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL2048 Prepare for train departure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to prepare for train departure in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes checking rolling stock, equipment and related documentation; checking for planned variations from normal routines; and completing documentation as required. Activities are undertaken for both freight and passenger trains.

For passenger trains, it also includes checking passenger facilities and assessing stock levels as required in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures when preparing train for departure, as part of work activities across a variety of operational contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check rolling stock and train equipment	1.1 Rolling stock is checked to ensure it is fit for operation in accordance with regulatory requirements and workplace procedures
	1.2 Hazards are identified, risks are assessed and risk control measures are implemented
	1.3 Train equipment is checked for effective operation in accordance with regulatory requirements and workplace procedures
	1.4 Rolling stock or equipment faults, defects or problem areas are identified and remedial action is organised in accordance with regulatory requirements and workplace procedures
2 Check for planned variations from normal routines	2.1 Documentation related to operational variations and special instructions are identified and accessed
	2.2 Planned variations and special instructions for train are noted and actioned in accordance with workplace procedures
3 Check passenger facilities	3.1 Passenger facilities are checked to ensure they are clean and operating as required
	3.2 Passenger convenience items are checked as required to ensure they meet the recommended levels
	3.3 Variations from established standards are reported or rectified, in accordance with workplace procedures and manufacturer specifications
	3.4 Major faults are reported to appropriate person in accordance with workplace procedures
4 Check stock levels	4.1 Stock levels are checked to ensure required amounts are present
	4.2 Adjustments to stock levels are made as required, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

5 Complete documentation	5.1 Documentation is completed as required after rolling stock and train equipment are checked, in accordance with workplace procedures
	5.2 Documentation related to checking passenger facilities and stock levels is completed as required, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIL2048 Prepare for train departure

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- assessing stock levels and completing documentation
- checking equipment and related documentation
- checking for planned variations from normal routines
- checking passenger facilities
- checking rolling stock
- communicating effectively with others
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, selecting and using relevant equipment and materials
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- essential equipment, supplies and materials required for trip
- how to identify possible fault or defects that may occur with rolling stock and equipment
- normal level of use of consumable items such as food and beverages on passenger trains
- passenger train customer service and cleanliness standards
- position and number of fire extinguishers on passenger trains
- problems that may occur when preparing a train for departure, and action that should be taken to resolve these problems
- relevant documentation requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations including codes of practice and/or guidelines
- rolling stock and car sequence, and relevant labelling requirements
- rolling stock and equipment checks
- structure of the train consist
- types of rolling stock and/or passenger cars and their features
- workplace procedures for preparing a train for departure, including for passenger train operation
- workplace procedures for reporting identified rolling stock and equipment defects.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL2060 Complete induction to the transport industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete workplace induction procedures when commencing work in the transport and logistics industry, in accordance with regulatory requirements, and operational policies and procedures.

The unit enables a driver to enter and participate in typical workplace activities. It includes identifying major areas of the industry in terms of functions, organisational structures and occupations; applying legislation, regulations and codes of practice; and identifying key industrial relations elements.

This unit applies to all employees wishing to enter the transport and logistics industry; however it is predominantly aimed at taxi to multi-combination drivers. It can also be used within the warehousing and logistics sectors of the industry.

Work is performed with limited or no supervision, and with full accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit meets part of the certification requirements for obtaining taxi driver accreditation. As requirements may vary between states and territories, people seeking taxi accreditation should contact their state/territory taxi regulator.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify major organisational areas of the transport industry	1.1 Organisational structure of the industry and the structural relationship between occupations, functions and classification grouping is outlined
	1.2 Equipment and technology used in the workplace, and their features and functions are identified
2 Apply legislation, regulations and codes of practice governing the transport industry	2.1 Individual driver responsibilities under current legislation are identified and acted on in the conduct of duties
	2.2 Individual responsibilities under workplace policies and procedures are identified and acted on in the conduct of duties
	2.3 Individual responsibilities under licence conditions applicable to the operation of vehicles, and conditions attached to vehicle drivers, are identified and acted on in the conduct of duties
3 Identify key elements of industrial relations environment in which the driver works	3.1 Key elements of industrial relations environment in which the driver works are identified
	3.2 Rights and responsibilities of drivers under contracts are identified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL2060 Complete induction to the transport industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant guidelines for using equipment as it applies to the driver job role
- applying relevant legislation as it applies to driver job role
- explaining contract arrangements for different job roles
- explaining workplace policies and procedures, regulations, products and services relating to the driver job role
- identifying and correctly using equipment, processes and procedures
- reading and interpreting instructions, procedures, information and signs relevant to the driver job role.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- customer service standards and procedures
- depot/company locations
- emergency procedures
- key elements of industrial relations relevant to the transport industry
- personal protective equipment and instructions for its use
- relevant legislation for driving role
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- requirements of customers with specific needs
- routine workplace documentation and record keeping procedures and requirements
- sources of information and documentation for the transport industry

© Commonwealth of Australia, 2025 Industry Skills Australia

- workplace hazards and related hazard minimisation procedures
- workplace procedures, codes of practice, standards and duty of care requirements as they apply to the transport industry
- workplace products and services, and their features
- workplace structures including roles and responsibilities.
- workplace structures, roles and responsibilities of authority system and contacts

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL3003 Conduct induction process

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct an induction process for new workers and trainees commencing employment in the workplace, in accordance with relevant regulatory requirements, operational policies and procedures for the workplace concerned.

It includes outlining the relationship between the employee and the company, establishing and explaining the requirements of the position, and completing relevant workplace documentation.

Work involves planning, coordinating and conducting an induction program to prepare workers to enter and participate in the work activities of a workplace.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Outline the relationship between employee and the company	1.1 Employee is greeted and introduced to key personnel and areas in the workplace
	1.2 Workplace objectives, operating systems and workplace structures are explained
	1.3 Relationship between employee's position, and the workplace structure and objectives is identified
	1.4 Required work health and safety (WHS)/occupational health and safety (OHS), workplace procedures and employment conditions are explained
	1.5 Sources of information and assistance for employee are identified
	1.6 Emergency procedures are explained
2 Establish requirements of position	2.1 Job role, responsibilities and reporting relationships are explained
	2.2 Immediate work colleagues are introduced
	2.3 Workplace facilities and layout are shown to employee and flow of work/materials/goods and functions carried out in the area/s are explained
	2.4 Initial training in relevant WHS/OHS, equipment and work systems is provided in accordance with workplace procedures
	2.5 Employee rights and responsibilities in terms of equal employment opportunity, sexual harassment and anti-discrimination are explained
	2.6 Training opportunities are organised to develop individual job roles
	2.7 Workplace expectations of work functions and outputs are clarified
	2.8 Opportunities for employee to clarify concerns and ask questions are provided
3 Complete relevant workplace documentation	3.1 Workplace personnel records are completed in accordance with workplace requirements
	3.2 Tax declaration and other relevant documentation are checked for compliance with requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

3.3 Employee is requested to provide any additional information needed and notes are taken of any additional actions required

3.4 Workplace-specific documentation is submitted to appropriate personnel as required, in accordance with workplace requirements

3.5 Requirements of commonwealth and state/territory legislation on equal employment opportunity, sexual harassment and anti-discrimination are fulfilled

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

TLIL3035 Allocate motive power

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to allocate motive power in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying train operating requirements, establishing motive power requirements and availability, allocating individual motive power units, and adjusting motive power allocation in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

While work is performed individually, it will generally be undertaken within a team environment.

It involves the application of routine operational principles and procedures to allocate motive power across a variety of operational contexts in the Australian rail systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify train operating requirements	1.1 Train timetables, shunting requirements and track conditions for each line or service are identified and records are kept up-to-date
	1.2 Tonnage of individual trains is identified to enable planning of suitable motive power
	1.3 Routine usage of motive power units is established to provide an initial allocation framework
	1.4 Contingency plans covering operational problems are developed and their impact on motive power requirements are taken into account
2 Establish motive power requirements and availability	2.1 Availability of all motive power units is determined including location, operational status, special and routine maintenance requirements
	2.2 Motive power required to haul tonnage is determined for each train/service and support activity consistent with track geography, gauge, train weight and conditions is identified
3 Allocate individual motive power units	3.1 Motive power units, including railcar and locomotive types, are allocated to ensure train and support activities are serviced
	3.2 Allocations are documented and communicated to operations personnel and feedback is sought to ensure suitability of units planned
	3.3 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are identified and included in allocation considerations
	3.4 Documentation authorising the use of allocated motive power for the train service is completed and processed
4 Monitor and adjust motive power allocation	4.1 Use and requirements for motive power are monitored and possible allocation changes are determined to maintain efficient use of resources
	4.2 Contingency plans for unexpected non-availability of specific motive power units or operational non-performance are implemented

© Commonwealth of Australia, 2025 Industry Skills Australia

4.3 Changes to allocation are negotiated with operational personnel and motive power maintenance personnel, to achieve suitable outcomes

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3035A Allocate motive power.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIL3035 Allocate motive power

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adjusting motive power allocation
- applying relevant safeworking system and workplace procedures
- communicating and negotiating effectively with others
- completing relevant documentation
- establishing motive power requirements and availability, allocating individual motive power units
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying train operating requirements
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- reading and interpreting train graphs and diagrams
- reporting and/or rectifying problems, faults or malfunctions, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant computing and communications equipment and materials when allocating motive power
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others when allocating motive power
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- allocation and maintenance schedules for motive power units
- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- communication and negotiation requirements when allocating motive power
- crew requirements and working patterns
- documentation and record requirements
- emergency management procedures
- equipment and materials used when allocating motive power, and procedures that should be followed in their use
- gauges, distance, gradients and tonnages for relevant track area
- motive power units and specifications, capabilities and capacity
- problems that may occur when allocating motive power and appropriate action that can be taken to resolve these problems
- relevant WHS/OHS and environmental procedures and regulations including codes of practice
- timetables and train details
- track specifications and limitations
- workplace procedures and policies for allocating motive power.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisation*s current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment

TLIL3039 Assist with train operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assist with train operations as a driver assistant or second-person, in accordance with workplace procedures and the requirements of the relevant safeworking system and codes of practice.

It includes assisting with preparations for train operation, assisting with the operation of the train, assisting with loading and unloading operations and handing over or stabling the train in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed in conjunction with a train driver. It involves the application of routine operational principles and procedures when assisting with train operations across a variety of operational workplace contexts within the Australian rail system.

Visual inspections include:

- wheels and braking equipment for signs of wear or damage
- flexible connections and fittings for signs of wear or damage
- couplings for signs of wear or damage
- fuel, oil and water
- air leakage
- motive power unit equipment and, if applicable, end of train monitoring device
- rolling stock for defects.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Assist with preparing for train operation	1.1 Planning documentation is accessed and interpreted to determine journey purpose, constraints, loading information and characteristics, and is confirmed with driver
	1.2 Visual inspections of equipment are carried out and identified faults or defects are appropriately reported in accordance with workplace procedures and manufacturer specifications
	1.3 Hazards are identified, risks are assessed and control measures are implemented
	1.4 Assistance is provided with pre-operational checking and testing of equipment in accordance with workplace policies and procedures
2 Assist with train operation	2.1 Motive power unit is monitored in conjunction with driver, in accordance with workplace procedures
	2.2 Guidance is provided to driver while stopping and starting to ensure safety of personnel and equipment
	2.3 Train running schedules are monitored and recorded to assist with on-time running
	2.4 Performance of equipment and rolling stock is monitored en route to identify faults or defects and appropriate action is taken as required in accordance with workplace procedures
	2.5 Security of loading and all other aspects of the train are monitored en route and abnormalities are dealt with in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	2.6 Signals and track/road are monitored en route in accordance with workplace procedures
3 Stable or handover train	3.1 Appropriate assistance is provided when train is stabled in accordance with safeworking system requirements, operational instructions and workplace procedures
	3.2 Safety devices are activated or put in position in accordance with operational instructions and workplace procedures to ensure the safety of personnel and equipment
	3.3 Prior to handover, documentation relevant to the train and activities undertaken en route is updated, provided to relief crew and/or forwarded to appropriate personnel in accordance with workplace policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3039A Assist with train operations.

Assessment Requirements for TLIL3039 Assist with train operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying relevant rail safety and workplace procedures
- assisting driver in monitoring train performance and as required, security of load
- assisting in stabling and securing train
- assisting with preparing trains prior to operation
- communicating effectively with others when assisting with train operations
- conducting handover and stabling activities correctly
- documenting train journey and incidents
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying possible faults and defects that could occur and appropriate responses
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and anticipating operational hazards and taking appropriate action
- monitoring journey schedule
- monitoring the operation of different train types in normal operation in accordance with workplace procedures
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying problems, faults or malfunctions, in accordance workplace procedures
- selecting and using relevant equipment and materials when assisting with train operations
- working collaboratively with others when assisting with train operations
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, codes of practice and/or guidelines
- documentation required during and after train operations
- electronic communications equipment protocols
- emergency procedures
- motive power unit and rolling stock systems
- problems that can occur when assisting with train operations and action that should be taken
- procedures for assisting a driver in monitoring train operations and performance
- procedures for completing required documentation
- procedures for coupling/uncoupling motive power units and rolling stock
- procedures for fixed and hand signalling and voice communication
- procedures for identifying equipment defects and assessing for appropriate action
- relevant rail danger zones
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures
- relevant safeworking systems and requirements
- relevant train operations, procedures and operating requirements
- track or road characteristics
- train characteristics.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIL3052 Plan urban passenger train consists

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan urban passenger train consists in accordance with regulatory and workplace requirements

It includes identifying passenger requirements and resources, planning connections with other passenger services, and planning consists for urban passenger trains.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under general supervision. It involves applying basic principles, routine procedures and regulatory requirements to plan urban passenger train consists.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Identify urban passenger requirements and resources	1.1 Passenger usage patterns, specific bookings and external events likely to influence passenger numbers are monitored and applied to urban passenger train consist planning
	1.2 Requirements for carriages and motive power units for urban passenger trains are adjusted in light of passenger demand
	1.3 Train crewing needs and/or constraints are identified to ensure consists are compatible with available resources
	1.4 Passenger usage patterns are monitored and train configurations are adjusted in accordance with workplace procedures
	1.5 Shunting and marshalling requirements are identified for planned consists in accordance with timetable requirements
	1.6 Hazards are identified, risks are assessed and control measures are implemented
2 Plan connections with other passenger services	2.1 Train timetables are compared with timetables from other passenger services for coordination purposes
	2.2 Passenger flow patterns for related services are checked to ensure smooth flow patterns
	2.3 Modifications to existing timetables are made to ensure mutually supporting passenger services are achieved where possible
	2.4 Suitable passenger transit holding areas between services are identified and included in plan
	2.5 Timetable reviews and passenger flow issues are discussed with appropriate external passenger service providers
3 Plan consists for urban passenger trains	3.1 Consists are planned, taking into account the need to move passengers efficiently within constraints of carriage availability, motive power availability, personnel availability, track layout, track condition, gauge and weight
	3.2 Details of urban train consists are forwarded to yard and terminal operations for planning purposes

Assessment Requirements for TLIL3052 Plan urban passenger train consists

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment in accordance with operating procedures
- applying relevant safeworking system and workplace procedures
- completing relevant documentation
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting timetables, time graphs and diagrams
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- planning passenger support services including transit arrangements
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- selecting the most cost effective motive power units and carriages to provide required urban passenger train services
- working collaboratively with others when planning urban passenger train consists
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- appropriate urban passenger train consists and types of passenger trains
- documentation and reporting requirements for planning urban passenger train consists
- factors affecting passenger load capacity for all relevant urban train services provided
- focus of operation of work systems, equipment, management and site operating systems for planning urban passenger train consists
- maximum urban passenger train lengths
- platform and station details
- problems that may occur when planning urban passenger train consists and appropriate action that can be taken to resolve these problems
- relevant passenger flow patterns for related services
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- running times of urban trains
- shunting and marshalling requirements
- signalling equipment used at the stations or platforms
- workplace procedures and policies for planning urban passenger train consists.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIL3065 Implement a track occupancy authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement a Track Occupancy Authority (TOA), in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

It includes preparing for a TOA, cancelling or fulfilling a TOA and managing unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for track occupancy authority	1.1 Site safety plan is sourced and TOA terms are read and clarified as required
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Network Control Officer is notified of intention to use a TOA
	1.4 Work group supervisor is advised of network control officer's decision
2 Issue a track occupancy authority	2.1 Permission for a TOA is requested from Network Control Officer
	2.2 Permission for a TOA is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
	2.3 Work group supervisor is advised that occupancy has been issued
	2.4 Alterations to the TOA are negotiated with Network Control Officer as required
	2.5 Multiple worksites are protected in accordance with rules and procedures and/or organisational requirements
	2.6 Work group supervisor is advised that the TOA has been issued
3 Cancel or fulfil the track occupancy authority	3.1 Communication is maintained with work group supervisor to confirm completion of work activity and that track is safe for rail traffic
	3.2 Network Control Officer is informed that TOA has been cancelled or fulfilled
	3.3 Fulfilment of the TOA is documented in accordance with Rail Infrastructure Manager requirements
4 Manage unsafe situations or	4.1 Unsafe situations and/or emergencies are identified
	4.2 Work group is instructed to move to a safe place

© Commonwealth of Australia, 2025 Industry Skills Australia

emergencies	4.3 Appropriate action is taken to minimise risk and/or injury in accordance with workplace procedures 4.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3065B Implement a track occupancy authority.

Assessment Requirements for TLIL3065 Implement a track occupancy authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant workplace safeworking system rules and procedures
- communicating effectively with individuals and work groups
- completing Track Occupancy Authority (TOA) documentation
- complying with the application requirements for a TOA
- following workplace policies, procedures and protocols
- identifying job hazards, unsafe situations and emergencies and taking required action to minimise, control or eliminate identified hazards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies
- Rail Infrastructure Manager safeworking system rules and procedures
- rail terminology as defined by the relevant Rail Infrastructure Manager
- types of track protection and track occupancy safeworking systems
- worksite protection plan.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of

© Commonwealth of Australia, 2025 Industry Skills Australia

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL3071 Control and coordinate local rail traffic movement

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control local rail traffic movement in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes monitoring the status of the current train area plan, implementing the daily working timetable, controlling rail traffic movement, implementing contingency plans and updating traffic movement documentation in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements, and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of operational principles, regulations, and safeworking codes, protocols and procedures when controlling rail traffic movement, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor status of local conditions and timetable	1.1 Rail traffic movements and associated activities are analysed to establish current situation
	1.2 Proposed rail traffic movements and associated activities are identified to establish status of local conditions and timetable in accordance with organisational procedures and policies
	1.3 Train notices are checked for conflicts and adjustments are made to local timetable as required
	1.4 Identified anomalies are reported in accordance with organisational procedures and policies
2 Control local rail traffic movement	2.1 Rail traffic movements are coordinated with relevant personnel in accordance with organisational policies and procedures
	2.2 Signalling systems are operated and monitored to ensure safe movement of rail traffic
	2.3 Irregularities that may affect the timetable are reported and recorded in accordance with organisational procedures and policies
3 Communicate with relevant personnel	3.1 Communication with relevant rail safety workers is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures
	3.2 Communication with other relevant personnel is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures
4 Implement contingency plans as instructed	4.1 Contingency plan to suit disruption, system failure or fault is actioned as instructed, in accordance with organisational policies and procedures
	4.2 Resources to respond to the contingency are arranged as required, in accordance with relevant organisational policies and procedures
	4.3 Rail traffic movements are adjusted in accordance with organisational and local operational requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.4 Communications with network control officer and other relevant personnel are established and maintained as required
5 Update local rail traffic movement documentation	5.1 Rail traffic movement documentation is amended, compiled and recorded in accordance with organisational policies and procedures
	5.2 Rail traffic movement information and documentation are handed over when relieved, and/or at shift completion in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3071A Control and coordinate local rail traffic movement.

Assessment Requirements for TLIL3071 Control and coordinate local rail traffic movement

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- controlling rail traffic movements by using appropriate signalling and safeworking systems
- communicating effectively with others
- completing relevant documentation and entering data
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule and local conditions
- operating communications systems in accordance with workplace procedures
- reading, interpreting and following relevant instructions, procedures and information
- reporting problems, faults and malfunctions promptly , in accordance with organisational procedures
- using appropriate numeric functions when implementing contingency plans.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- area communications systems and workplace procedures
- applicable state/territory legislated rail safety and safeworking requirements, relevant codes of practice and/or guidelines
- organisational procedures for controlling and coordinating rail traffic operations
- problems that may occur when controlling local rail traffic and related action that should be taken
- relevant documentation requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

- signalling, hand signals and control systems and operations
- specific local conditions and restrictions
- train notices, including special train notices.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

TLIL3072 Operate signal panel or equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a signal panel and/or equipment in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes preparing for operation, controlling rail traffic movement, implementing contingency plans, updating traffic movement documentation and handing over or relieving the signaller in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety and safeworking requirements, and to comply with relevant codes of practice and/or guidelines.

The unit involves the application of operational principles, regulations, safeworking codes, protocols and procedures when operating a signal panel and/or equipment, as part of workplace activities across a variety of operational contexts within the Australian rail industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to operate signal control location	1.1 Reporting for duty is undertaken in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and organisational policies and procedures
	1.2 Appropriate network control officer is contacted as required in accordance with organisational policies and procedures
	1.3 Documentation is checked for local activities and/or rail traffic movements that may affect rail traffic operations in accordance with organisational procedures and policies
	1.4 Signalling equipment is switched in for use as required
	1.5 Operation of equipment is tested in accordance with organisational policies and procedures
2 Control local rail traffic movements	2.1 Local rail traffic movements are coordinated with relevant personnel in accordance with organisational policies and procedures
	2.2 Signalling systems are operated and monitored to ensure safe movement of rail traffic
	2.3 Activities that may affect operations are reported and recorded in accordance with organisational policies and procedures
3 Communicate with relevant personnel	3.1 Communication with relevant rail safety workers is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures
	3.2 Communication with other relevant personnel is undertaken to ensure they are informed of local rail traffic movements, in accordance with organisational policies and procedures
4 Monitor and respond to system alarms	4.1 System alarms are monitored as required by organisational policies and procedures
	4.2 Activated alarms are responded to appropriately and reported to appropriate personnel in accordance with organisational policies and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.3 Identified faults are reported to appropriate personnel in accordance with organisational policies and procedures
5 Implement contingency plans as instructed	5.1 Contingency plan to suit disruption, system failure or fault is actioned as instructed, in accordance with organisational policies and procedures
	5.2 Local rail traffic movements are adjusted in accordance with organisational and/or local operational requirements
	5.3 Communications with network control officer and other relevant personnel are established and maintained as required
6 Update local rail traffic movement documentation	6.1 Local rail traffic movement documentation is amended, compiled and recorded in accordance with organisational policies and procedures
	6.2 Local rail traffic movement information and documentation are handed over when relieved and/or at the completion of shift, in accordance with organisational policies and procedures
7 Handover control to relieving signaller	7.1 Relieving signaller is informed of operational status and ongoing issues in accordance with organisational policies and procedures
	7.2 Documentation is checked to ensure it is up-to-date and is then endorsed in accordance with organisational policies and procedures
8 Take over control from signaller	8.1 Information on operational status and ongoing issues is received from signaller in accordance with organisational policies and procedures
	8.2 Documentation is checked to ensure it corresponds to operational status and is then endorsed in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3072A Operate signal panel or equipment.

Links

Assessment Requirements for TLIL3072 Operate signal panel or equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system rules and workplace procedures
- communicating effectively with others
- completing relevant documentation and entering data accurately
- controlling rail traffic movement
- handing over or relieving the signaller
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating a signal panel or equipment
- operating communications systems in accordance with workplace protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and rectifying identified problems, faults and malfunctions within limits of own role, in accordance with organisational procedures
- updating traffic movement documentation
- using appropriate numeric functions when controlling rail traffic movement.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- organisational procedures for controlling and coordinating local rail traffic operations
- problems that may occur when operating signal panel or equipment, and action that should be taken to resolve these problems
- relevant documentation requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

- relevant sections of applicable state/territory legislated rail safety and safeworking requirements, relevant codes of practice and/or guidelines
- signalling and control systems and operations
- specific local conditions and restrictions
- types of communications systems available
- types of surveillance and alarm systems in use.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation with terminology as defined by the applicable Rail Infrastructure Manager safeworking system including workplace procedures, regulations, rules and codes of practice.

TLIL3082 Implement absolute signal blocking

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply absolute signal blocking (ASB) protection for the infrastructure and work group on a rail network during rail work activities by utilising a signal system managed by a Network Control Officer, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Prepare for absolute signal blocking protection	1.1 Worksite protection plan is sourced and read for the terms of ASB protection
	1.2 Network Control Officer is notified of intention to use ASB protection
	1.3 Protection officer is advised of Network Control Officer's decision
2 Apply absolute signal blocking protection	2.1 Permission to apply ASB is requested from Network Control Officer
	2.2 Permission to apply ASB is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
	2.3 Protection officer is advised ASB has been applied
3 End absolute signal blocking protection	3.1 Communication is maintained with Network Control Officer to confirm completion of work activity and track is safe for rail traffic
	3.2 Permission to remove ASB protection is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
	3.3 Network Control Officer is informed of completion of work
4 Manage unsafe situations or emergencies	4.1 Unsafe situations and/or emergencies are identified
	4.2 Work group is instructed to move to a safe place
	4.3 Appropriate action is taken to minimise risk and/or injury in accordance with workplace procedures
	4.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL3082 Implement absolute signal blocking

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking system workplace rules and procedures
- communicating effectively with individuals and work groups
- completing absolute signal blocking (ASB) documentation
- explaining and implementing site safety plan
- explaining how to end the use of ASB protection
- following Rail Infrastructure Manager workplace policies, rules, procedures and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- recognising the difference between permissive and absolute signals
- requesting ASB protection from Network Control Officer.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocol and systems
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Rail Infrastructure Manager rules and system of safeworking procedures to implement ASB
- rail terminology as defined by the applicable Rail Infrastructure Manager
- relevant rail danger zones
- site safety plan
- worksite protection plan.

TLIL3083 Implement a track work authority and manage rail traffic through worksites

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit describes the skills and knowledge required to implement a track work authority (TWA) and manage rail traffic through worksites, in accordance with Rail Infrastructure Manager rules, procedures and protocols for rail safety.

It includes preparing fora TWA, managing rail traffic, fulfilling a TWA and managing unsafe situations or emergencies.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for track work authority	1.1 Worksite protection plan is sourced and TWA terms are read and clarified as required
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Network Control Officer is notified of the intention to use a TWA
	1.4 Protection officer worksite protection responsibilities are identified from worksite protection plan
2 Issue a track work authority	2.1 Permission to issue a TWA is requested from Network Control Officer
	2.2 Permission to use a TWA is documented in accordance with Rail Infrastructure Manager requirements
	2.3 Equipment required for TWA protection is identified and checked for functional condition
	2.4 Protection is placed in accordance with worksite protection plan
	2.5 Work group supervisor is advised that protection is in place
3 Manage rail traffic	3.1 Vigilance is maintained and protection officer is alerted to approaching rail traffic in accordance with workplace rules and procedures
	3.2 Arrangements are made for equipment to be removed from the danger zone
	3.3 Work group is instructed to move to a safe place prior to passage of rail traffic
	3.4 Safety of track for passage of rail traffic is confirmed with work group supervisor
	3.5 Instructions are issued to rail traffic in accordance with workplace procedures
	3.6 Worksite protection is implemented prior to work groups entering the track worksite in accordance with workplace rules and procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

	3.7 Protection, placement and equipment is continually monitored for effectiveness in accordance with safety assessment
4 Fulfil a track work authority	4.1 Communication is conducted with work group supervisor to confirm that work activity is complete and track is safe
	4.2 Network Control Officer is advised that the TWA has been fulfilled
	4.3 Fulfilment of TWA is documented in accordance with Rail Infrastructure Manager and/or organisational requirements
5 Manage unsafe situations or emergencies	5.1 Unsafe situations and/or emergencies are identified
	5.2 Work group is instructed to move to a safe place
	5.3 Appropriate action is taken to minimise risk and/or injury in accordance with workplace procedures
	5.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL3083 Implement a track work authority and manage rail traffic through worksites

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures for a track work authority (TWA) and managing rail traffic through worksites
- communicating effectively with individuals and work groups
- conducting a pre-start briefing for work group supervisor
- coordinating protection as rail traffic through worksites
- determining and setting out protection
- explaining how to manage unsafe situations and emergencies
- following workplace policies, rules, procedures and protocols
- identifying appropriate resources for worksite protection
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying, responding to and/or reporting unsafe situations and emergencies
- operating electronic communications equipment to required protocol
- placing worksite protection
- reading and interpreting responsibilities for worksite protection from the worksite safety plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- equipment available for worksite protection
- hand, light and flag signals and signs used by day or night
- operational communications protocols and systems
- positioning requirements for hand signallers
- Rail Infrastructure Manager policies, procedures, rules and protocols for identified unsafe situations or emergencies within workplace role
- Rail Infrastructure Manager rules and procedures
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- relevant rail danger zones
- relevant workplace safeworking systems , rules and procedures
- TWA as defined by the relevant Rail Infrastructure Manager safeworking system
- worksite protection plans.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL3084 Implement a local possession authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply local possession authority (LPA) protection for the infrastructure and/or work groups on a rail network during rail work activities using an electronic or manual documentation system, in accordance with Rail Infrastructure Manager, legislative and regulatory requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Plan for local possession authority	1.1 Worksite protection plan is developed to determine LPA worksite protection arrangements
	1.2 Work group supervisor is advised of advertised approval
	1.3 Resources are organised to provide adequate protection for infrastructure and work group during rail work activity
2 Implement local possession authority	2.1 Permission to implement LPA is requested from Network Control Officer
	2.2 Resources to provide protection for LPA are deployed in accordance with worksite protection plan
	2.3 Work group supervisor is advised that LPA has been issued
	2.4 Adjustments to LPA are negotiated with Network Control Officer, as required
	2.5 Each worksite within the LPA is provided with a protection officer while work is being performed
	2.6 Multiple worksites are protected in accordance with worksite protection plan
	2.7 Rail traffic movements between worksites and within LPA limits are coordinated
	2.8 Authorisation is given to rail traffic entering the LPA
3 Fulfil local possession authority	3.1 Confirmation is obtained from work group supervisor that work activity is completed and track is safe for rail traffic
	3.2 Resources used to provide protection are removed in accordance with advertised approval
	3.3 LPA is fulfilled for entire portion of track included within the LPA or is fulfilled progressively for one or more portions of track included in the LPA
	3.4 Arrangements are made for work to continue under another work on track authority, as required
4 Manage unsafe situations or emergencies	4.1 Unsafe situations and/or emergencies are identified
	4.2 Work group is instructed to move to a safe place
	4.3 Appropriate action is taken to minimise risk and/or injury in

© Commonwealth of Australia, 2025 Industry Skills Australia

accordance with workplace procedures

4.4 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3084A Implement a local possession authority.

Assessment Requirements for TLIL3084 Implement a local possession authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant system of safeworking and workplace procedures
- communicating effectively with individuals and work group supervisor
- completing local possession authority (LPA) using an electronic or manual documentation system
- deploying resources to provide protection for the LPA in accordance with worksite protection plan
- explaining how to fulfil an LPA
- following Rail Infrastructure Manager workplace policies, rules, procedures and protocols
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- implementing worksite protection plans
- issuing LPAs in accordance with worksite protection plan to ensure multiple worksites are protected
- managing worksite protection plans.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- LPA electronic or manual documentation system
- operational communications protocol and systems
- Rail Infrastructure Manager LPA system of safeworking rules and, procedures
- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies within workplace role

© Commonwealth of Australia, 2025 Industry Skills Australia

- rail terminology as defined by the applicable Rail Infrastructure Manager
- relevant rail danger zones
- types of track protection
- worksite protection plan.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIL4005 Apply conflict/grievance resolution strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply conflict or grievance resolution strategies to resolve issues that may occur in the course of work.

It includes identifying potential conflict situations, implementing appropriate conflict resolution strategies and using effective interpersonal skills.

Work is performed under minimum supervision with general guidance on progress and outcomes. Work involves discretion and judgement for self and others when managing and resolving conflict or grievances internal and external to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify potential conflict situations	1.1 Signs and stages of conflict or grievance are recognised
	1.2 Possible causes of conflict or grievance are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

2 Implement conflict resolution strategies	2.1 Factors and issues relevant to conflict or grievance are clarified
	2.2 Strategies for dealing with conflict or grievance are developed
	2.3 Options for resolving the conflict or grievance are presented that enable constructive responses to be negotiated and established relationships to continue
	2.4 Strategies are implemented to resolve the source of conflict
	2.5 Outcomes of the process are monitored to ensure objectives continue to be met
3 Use effective interpersonal skills	3.1 Effective verbal and non-verbal communication is used during negotiations, including body language, questioning, language style, active listening and reflection
	3.2 Feedback is given assertively and received non-defensively during negotiations
	3.3 Shared understanding is created through written communications

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL4005 Apply conflict/grievance resolution strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying interpersonal skills
- applying relevant legislation and workplace procedures
- communicating effectively with others when applying conflict and grievance resolution strategies
- completing relevant documentation
- gathering, recording and conveying simple and routine work-related information
- identifying existing and potential conflict or grievances
- interpreting and following operational instructions and prioritising work
- negotiating effectively with others when applying conflict and grievance resolution strategies
- participating in small informal work groups
- reading and interpreting relevant instructions, procedures, information and signs
- responding appropriately to cultural preferences in the workplace, including modes of behaviour and interactions with others
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- working collaboratively with others when applying conflict and grievance resolution strategies
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- options for constructive responses to typical conflict/grievance situations
- relevant regulation and code requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) policies and procedures
- relevant workplace business marketing policies and practices, including requirements for maintaining security and confidentiality
- signs, stages and possible causes of conflict in the workplace
- typical problems that can occur when applying conflict or grievance resolution strategies and related appropriate action that can be taken
- workplace protocols and procedures for identifying and resolving conflict or grievances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

TLIL4009 Manage personal work priorities and professional development

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to manage personal work priorities and personal professional development.

It includes managing personal performance, setting and meeting personal work priorities, and developing and maintaining personal professional competence.

Work is performed under minimum supervision with general guidance on progress and outcomes. It involves discretion and judgement in managing personal work priorities and professional development.

Work generally involves responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Manage self	1.1 Action is taken to ensure personal qualities and performance serve as a role model in the workplace
	1.2 Organisational plans and personal roles, responsibilities and accountabilities are reflected in personal goals and plans
	1.3 Action is taken to achieve and extend personal goals beyond those planned
	1.4 Consistent personal performance is maintained in varying work conditions and work contexts
2 Set and meet own work priorities	2.1 Competing demands are prioritised to achieve personal, team and organisational goals and objectives
	2.2 Technology is used efficiently and effectively to manage work priorities and commitments
3 Develop and maintain professional competence	3.1 Personal knowledge and skills are assessed against competency standards to determine development needs and priorities
	3.2 Feedback from clients and colleagues is used to identify and develop ways to maintain and build on current competence
	3.3 Management development opportunities suitable to personal learning style/s are selected and used to develop competence
	3.4 Professional networks and associations are participated in to enhance personal knowledge, skills and relationships
	3.5 New skills are identified and developed to achieve and maintain a competitive edge

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

knowledge and skills
- competencies required to increase participation in organisational planning and development
- relevant regulatory and code requirements
- resource availability including the competencies of individuals in the team/group
- typical problems that can occur when managing personal work priorities, and professional development and related action that can be taken
- workplace business policies and plans including procedures for undertaking professional development
- workplace protocols and procedures for managing personal work priorities and professional development.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIL4010 Assess and confirm customer transport requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to assess and confirm customer freight transport requirements within the transport and logistics industry.

It includes assessing the goods/stock to be transported, determining the transit requirements and completing all required documentation.

Work involves discretion and judgement for self and others in assessing and confirming customer freight transport requirements and leadership of others individually or in teams. It is performed under minimum supervision with general guidance on progress and outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Assess goods/stock to be transported	1.1 Customer service parameters are followed in accordance with workplace procedures
	1.2 In consultation with customer, key characteristics of goods/stock to be transported are determined
	1.3 Regulatory and/or specific requirements for load shipment are identified
	1.4 Specific load handling characteristics/requirements are identified
	1.5 Task requirements are matched to workplace capability and operational focus
2 Determine transit requirements	2.1 Applicable transportation modes are matched to customer geographic location, load packaging characteristics, quantity of goods to be transported and specific requirements for goods
	2.2 Required pick-up and destination point/s are identified and assessed for safe access and operation
	2.3 Specified transit times and routes are identified and agreed with customer
	2.4 Transportation mode/s are determined with customer about load characteristics, transit requirements and cost effectiveness
	2.5 Risk assessment of transport service is undertaken in accordance with workplace policy and procedures
3 Complete documentation	3.1 Decisions for proceeding with task are undertaken or referred in accordance with workplace procedures and scope of authority
	3.2 Parameters of service requirements for the workplace and customer are documented
	3.3 Quotations for services/specifications are itemised and documented and processed in accordance with workplace procedures
	3.4 Legislative, insurance or specific conditions for load transport are recorded and filed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL4010A Assess and confirm customer transport requirements.

Assessment Requirements for TLIL4010 Assess and confirm customer transport requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating effectively with others when assessing and confirming customer transport requirements
- completing all workplace processes related to transporting goods/stock
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule
- negotiating with others when assessing and confirming customer transport requirements
- operating and adapting to differences in equipment in accordance with standard operating procedures
- planning work activities, including predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, information and signs
- selecting and appropriately applying technology, information systems and procedures to complete workplace tasks
- working collaboratively with others when assessing and confirming customer transport requirements
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- customer service and quotation/specification systems and resources
- relevant regulatory and code requirements including mass and load regulations
- relevant work health safety (WHS)/occupational health and safety (OHS) and environmental protection policies and procedures
- strategies to implement continuous improvement processes
- typical problems that can occur when assessing and confirming customer transport requirements, and related appropriate action that can be taken
- workplace protocols and procedures for assessing and confirming customer transport requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4021 Coordinate the erection and dismantling of temporary storage facilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to coordinate the erection and dismantling of temporary storage facilities in accordance with regulatory requirements and workplace procedures in the transport and logistics industry.

It includes planning the erection of temporary storage facilities, erecting temporary storage facilities as planned and dismantling temporary storage facilities after out loading.

Work is performed under some supervision, generally within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan erection of temporary storage	1.1 Plans, storage specifications, assembly details and erection sequence are obtained and examined for accuracy to meet

© Commonwealth of Australia, 2025 Industry Skills Australia

facility	intended storage requirements
	1.2 Engineering drawings, computations and instructions are obtained from qualified persons as required
	1.3 Local and state/territory authority approvals for storage facility construction are obtained
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Labour and equipment requirements for storage facility construction are organised and scheduled in accordance with erection sequence
2 Erect temporary storage facility	2.1 Foundations and earthworks for temporary storage are prepared in accordance with workplace instructions and specifications
	2.2 Structural and storage components are assembled and placed in accordance with workplace instructions and specifications
	2.3 Protective sheeting (floor and wall) is placed and sealed/sewn in accordance with workplace specifications
	2.4 Material is placed into temporary storage facility in accordance with specifications and site procedures
	2.5 Grain protection measures are implemented in accordance with workplace requirements
	2.6 Labour and equipment are coordinated for timely and efficient completion of work
3 Dismantle temporary storage facility after out loading	3.1 Procedures for dismantling temporary storage facility, including sequencing of processes, are confirmed with qualified personnel
	3.2 Labour and equipment requirements for dismantling temporary storage facility are organised and scheduled
	3.3 Material is removed from storage in accordance with workplace procedures
	3.4 Protective sheeting (floor and wall) is dismantled and folded for future use or disposed of, in accordance with workplace procedures
	3.5 Structural components are disassembled, transported and

© Commonwealth of Australia, 2025 Industry Skills Australia

stacked in accordance with workplace instructions

3.6 Labour and equipment are coordinated for timely and efficient completion of work

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL4021 Coordinate the erection and dismantling of temporary storage facilities

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- identifying, selecting and using relevant equipment
- implementing contingency plans
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- planning own work, predicting consequences and identifying improvements
- reading, interpreting and following relevant instructions, procedures and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- emergency response procedures
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- grain protection measures
- how to identify characteristics of commodity types, varieties and grades
- problems that may occur and appropriate action that can be taken to resolve these problems
- procedures for environmental control and disposal activities
- range of construction methods used in erecting temporary storage facilities
- regulations relevant to erecting and dismantling temporary grain storage facilities
- site layout and obstacles
- storage and safe handling procedures
- workplace procedures and policies for coordinating the erection and dismantling of temporary grain storage facilities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4030 Control a furniture warehouse

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control a furniture warehouse in accordance with relevant regulations and workplace requirements.

It includes determining site functions and operations, receiving and despatching furniture, maintaining inventory and warehouse security, monitoring storage operations, and completing required records and documentation.

Work is performed under limited supervision. It involves the application of discretion and judgement and knowledge of relevant regulatory requirements and workplace procedures to control a furniture warehouse.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Determine site functions and operations	1.1 Layout of furniture storage facilities, work flow and activities undertaken in each zone are identified
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Type of storage facilities, their purpose and associated risk factors are identified
	1.4 Inventory lists are accessed through record management system
	1.5 Storage separations and co-storage applications are identified
2 Receive and despatch furniture	2.1 Furniture for storage is received and transferred to allocated storage space in accordance with workplace procedures
	2.2 Furniture and effects are transferred from storage area to loading dock and are despatched in accordance with workplace procedures and customer requirements
	2.3 Records of received and despatched furniture and effects are completed in accordance with workplace procedures
3 Maintain inventory	3.1 Inventory is updated through data entry about furniture movements into, out of, and within storage areas
	3.2 Inventory data is confirmed to match furniture and effects for available storage and applicable storage requirements
	3.3 Audits and stocktakes of storage areas are used to verify inventory records
4 Maintain warehouse security	4.1 Security of warehouse and storage areas is maintained in accordance with workplace procedures in conjunction with security personnel and with the aid of appropriate security technology
	4.2 Appropriate action/s is taken in response to breaches of operational and security procedures or to an emergency/incident
	4.3 Operational actions and investigative outcomes are documented in accordance with workplace procedures
5 Monitor storage operations	5.1 Storage areas are supervised to ensure movement of personnel and furniture items is in accordance with workplace procedures
	5.2 Storage facilities are checked to ensure appropriate operational capacity

© Commonwealth of Australia, 2025 Industry Skills Australia

	5.3 Integrity of furniture and effects is monitored to ensure appropriate condition is maintained
	5.4 Deterioration in condition of furniture and effects is recorded, investigated and reported for appropriate action
	5.5 Discrepancies/changes to storage requirements and/or inventory lists are noted and appropriate action is initiated in accordance with workplace procedures
6 Complete records	6.1 Records of warehouse operations are confirmed
	6.2 Records of warehouse operations are completed legibly and proofread
	6.3 Records of warehouse operations are processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL4030 Control a furniture warehouse

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- interpreting and following operational instructions and prioritising work
- modifying activities dependant on workplace contexts, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- operating electronic communications equipment to required protocol
- planning own work, predicting consequences and identifying improvements
- providing leadership and working collaboratively with others
- reading, interpreting and following relevant instructions, procedures, information and signs
- selecting and using relevant communications, computing and office equipment
- using inventory information to determine, plan and organise the control of a furniture warehouse
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- Australian codes and regulations/permit/licence requirements relevant to workplace activities
- documentation requirements, including reports and records related to damaged furniture and effects, emergencies and security breaches
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- information on various categories or groups of furniture and effects including their key characteristics and hazards, and the special handling, stacking and storage requirements for each
- operational work systems, equipment, management and site operating systems
- problems that may occur and appropriate action that can be taken
- site layout
- types of storage areas and related equipment appropriate for different types of furniture and effects
- workplace procedures and policies relevant for controlling a furniture warehouse.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4032 Implement equal employment equity strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement equal employment opportunity (EEO) strategies in accordance with regulatory and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying and communicating agreed EEO direction, responding to EEO enquiries, implementing EEO strategies, contributing to policy development, and evaluating and reporting on the implementation of EEO strategies in the workplace.

While work is performed individually the ability to work within a team environment may be required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify and communicate	1.1 EEO information and policy requirements are identified

© Commonwealth of Australia, 2025 Industry Skills Australia

agreed employment direction	for the workplace
	1.2 EEO information is disseminated to ensure relevant requirements are considered in decisions made within the workplace
	1.3 Advice is provided to assist with consistent interpretation of EEO information
	1.4 Negotiations are undertaken with management to ensure equity principles are incorporated throughout the workplace
	1.5 Interpretation and advice are provided on legislative requirements, workplace objectives and constraints, and human resource management practices
2 Respond to equal employment opportunity enquiries	2.1 Arrangements are made to ensure EEO advice can be provided to personnel within necessary timeframes
	2.2 Enquiries are analysed to identify necessary information required to respond sufficiently
	2.3 Sources of information are identified and accessed to formulate response
	2.4 Responses are communicated clearly and appropriately and understanding of the response is checked
3 Implement strategies	3.1 Strategies are developed to implement policies and objectives
	3.2 Measures are identified that reflect the success of strategies developed and suitable data collected
4 Contribute to policy development	4.1 Consultation is regularly undertaken with stakeholders on policy development
	4.2 Advice is provided concerning the implications of EEO policy
5 Evaluate and report on policy implementation	5.1 Data used to measure EEO policy performance is collected and statistically analysed
	5.2 Annual and other reports are produced on EEO policy performance
	5.3 Results of EEO strategies and performance are conveyed in a timely and appropriate way to relevant individuals and groups

Assessment Requirements for TLIL4032 Implement equal employment equity strategies

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others when implementing equal employment opportunity (EEO) strategies
- completing relevant documentation
- counselling and negotiating with employees on EEO matters
- modifying activities depending on operational contingencies and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- reporting and/or rectifying identified problems, in accordance with regulatory requirements and workplace procedures
- reading, interpreting and following relevant instructions, procedures, policies, conditions of employment, industrial agreements and awards
- applying relevant legislation and workplace procedures
- selecting and using relevant computer, communication and office equipment and programs
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and reporting requirements for implementing EEO strategies
- elements of workplace operations relevant to implementing EEO strategies, including
  - training and social justice policies and procedures
  - workplace organisational structure
  - workplace human resource policies and practices
  - job description and specifications
  - referral processes
  - workplace standards and delegations
  - quality management
  - work area business plans
  - industrial awards and enterprise agreements
- operational work systems, equipment, management and site operating systems for implementing EEO strategies
- problems that may occur when implementing EEO strategies and appropriate action that can be taken to resolve these problems
- relevant EEO regulations
- workplace procedures and policies for implementing EEO strategies.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Contribute positively to the work team environment	1.1 Workplace objectives are identified, interpreted and positively promoted to associated personnel and/or work team members
	1.2 Communication with associated personnel and/or work team members is effectively established
	1.3 Disputes are resolved through effective negotiation with relevant individuals or groups
	1.4 Quality assurance measures are maintained, systems improvement suggestions are encouraged, and proposals are submitted to relevant authorities
2 Observe and promote work safety procedures	2.1 Relevant statutory and workplace requirements for work health safety (WHS)/occupational health and safety (OHS) are communicated to all personnel and implemented at all worksites
	2.2 Accidents and injuries are reported and investigated in accordance with workplace policy
	2.3 Potential hazards and safety risks are identified, investigated and recommendations for preventative action are referred to appropriate authorities
	2.4 Training in WHS/OHS and First Aid are implemented
3 Maintain and promote team wellbeing	3.1 Prescribed medical and physical fitness criteria are promoted and maintained within the work environment
	3.2 Situations threatening safety arising from physical/psychological incompatibility with the work environment are identified and resolved
4 Participate in competency development	4.1 Competencies required by work team members are identified
	4.2 Suitable formal and informal competency development programs and approaches are identified
	4.3 Work team member skill gaps are determined and appropriate competency development programs and approaches are initiated to address these gaps
	4.4 Workplace trainer and assessor requirements are identified and team members are supported to take on these roles

Assessment Requirements for TLIL4033 Promote effective workplace practice

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying fatigue management knowledge and techniques
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying principles of time management
- applying relevant legislation and workplace procedures
- communicating effectively with customers, associated personnel and all work team members when completing work activities
- completing relevant documentation
- coordinating the promotion of safe work practices, competency enhancement and work practice improvements throughout work groups
- counselling personnel on work related issues
- ensuring team members maintain the required level of physical fitness
- implementing contingency plans
- interpreting statistics related to workloads and quality assurance measures
- leading and coordinating the activities of multi-disciplinary work teams or specialist work groups
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and workplace publications
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- settling disputes through face-to-face and group-based negotiation
- working systematically with required attention to detail without injury to self or others, or

© Commonwealth of Australia, 2025 Industry Skills Australia

damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- documentation and reporting workplace requirements
- elements of workplace operations relevant to effective work practice, including
  - workplace corporate plans, goals and objectives and industrial relations
  - communication and negotiation techniques and the benefits, advantages and disadvantages associated with them
  - group work practices and group dynamics; corporate customer service objectives
  - workplace procedures related to recording customer enquiries and actions
  - dispute settlement processes
  - workplace WHS/OHS and physical fitness requirements and related first-aid policies
  - competencies and skills required for workplace career path levels
- operational work systems, equipment, management and site operating systems
- problems that may occur during work activities and appropriate action that can be taken to resolve these problems
- relevant regulations and codes of practice
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies for promoting effective work practices.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

TLIL4034 Arrange alternative passenger transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to arrange alternative passenger transport in accordance with workplace requirements.

It includes identifying and confirming transport requirements, arranging alternative transport, and monitoring and updating transport arrangements.

Work involves the application of regulatory requirements, codes of practice and workplace procedures when arranging alternative passenger transport, as part of workplace activities in the transport and logistics industries.

While work is performed individually, it will generally be undertaken within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Industry Skills Australia

essential outcomes.	demonstrate achievement of the element.
1 Identify and confirm transport requirements	1.1 Need for alternative passenger transport is identified with minimal actual disruption to services
	1.2 Period for which alternative transport is required is determined from situation and services
	1.3 Timetables, passenger loadings and luggage quantities are determined from workplace information systems
	1.4 Requirements to cater for disabled passengers or others with specific needs are determined
	1.5 Hazards are identified, risks are assessed and control measures are implemented
2 Arrange alternative transport	2.1 Type and number of transport units required are determined to provide cost effective movement within workplace guidelines for minimal disruption
	2.2 Alternative transport is arranged within workplace policies and procedures to meet anticipated need
	2.3 Arrangements are made to provide assistance for passengers with specific needs
	2.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are identified and included in transport planning considerations
3 Monitor and update transport arrangements	3.1 Passengers are informed of alterations to services as quickly as possible
	3.2 Relevant details of incidents are collected and recorded in accordance with workplace policies and procedures for future reference, analysis and investigation purposes
	3.3 Irregularities outside own area of responsibility are referred to nominated person or section
	3.4 Alternative transport arrangements and related financial transactions are documented to meet operational requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL4034A Arrange alternative passenger transport.

Assessment Requirements for TLIL4034 Arrange alternative passenger transport

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in transport situations in accordance with operating procedures
- analysing contingency situations for their impact on services
- applying relevant legislation and workplace procedures
- arranging alternative transport
- communicating and negotiating effectively with others
- completing relevant documentation
- identifying and confirming transport requirements
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and updating transport arrangements
- reporting and/or rectifying identified problems promptly, in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures, information and signs
- scheduling and monitoring work activities
- working collaboratively with others when arranging alternative passenger transport
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and include knowledge of:

- alternative transport options to meet anticipated operational needs
- communication and negotiation requirements when arranging alternative passenger transport
- contact arrangements for other transport organisations available to provide alternative transportation
- documentation and record requirements
- problems that may occur when arranging alternative passenger transport and appropriate action that can be taken to resolve these problems
- protocols for contacting other transport organisations
- relevant services affected by contingency situations to be considered in transport planning arrangements to minimise actual disruption to services
- relevant work health and safety (WHS)/occupational healt5h and safety (OHS) procedures and guidelines
- road transport service planning processes
- train timetables
- workplace procedures and policies for arranging alternative passenger transport.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate transport workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIL4036 Develop rosters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to develop rosters in accordance with regulatory and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying operating requirements, tasks, responsibilities and work requirements along with establishing and finalising work rosters.

Work is under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify operating requirements	1.1 Transport timetables and running times for each line or service are identified and kept updated within roster operations

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Transport running times are identified for each line or service to ensure all crewing requirements are planned
	1.3 Set working or work tasks to be performed are identified for each transport service
	1.4 Contingency plans covering operational problems are identified and impact on crewing needs analysed
2 Identify tasks, responsibilities and work requirements	2.1 Support activities required to facilitate transport arrival and activities are identified to ensure all crewing requirements are planned
	2.2 Support activity set workings or required work tasks are identified
3 Establish work rosters	3.1 Rosters are developed to cover all work requirements with regard to relevant industrial/workplace conditions, absenteeism levels and planned leave
	3.2 Rosters are arranged to allow sufficient flexibility to allow contingency plans to be implemented
	3.3 Rosters are circulated in accordance with workplace policies and procedures for review by affected personnel
	3.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are identified and addressed in rosters developed
	3.5 Relevant safeworking systems and requirements are identified and addressed in rosters developed
4 Finalise work rosters	4.1 Feedback from personnel associated with rosters is addressed and acceptable modifications are agreed
	4.2 Final rosters are documented and distributed to ensure work requirements are accurately communicated

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Industry Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL4036A Develop rosters.

Assessment Requirements for TLIL4036 Develop rosters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating suitably qualified personnel to tasks
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- interpreting conditions of employment, and industrial agreements and awards
- interpreting set workings and combined set workings
- interpreting transport timetables and service details
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- preparing roster documentation in accordance with workplace format
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with workplace procedures
- selecting and using relevant computer/communications/office equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Industry Skills Australia

- documentation and reporting requirements for developing rosters, including computer-based systems
- elements of operations relevant to developing rosters, including embarkation and disembarkation requirements; equipment capacities and limitations; passenger service needs; personnel capabilities; requirements for absentee coverage; safeworking systems and requirements; station, interchange and terminal operations; support services; and transport services offered by the organisation
- operational work systems, equipment, management and site operating systems for developing rosters
- problems that may occur and appropriate action that can be taken to resolve these problems
- regulations, safeworking systems and codes of practice relevant for developing rosters
- relevant WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies for developing rosters.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIL4037 Apply and amend rosters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply and amend rosters in accordance with regulatory and workplace requirements, as part of work activities in the transport and logistics industry.

It includes identifying changes to timetables, planned activities and support activities; confirming changes to planned activities and personnel availability; and re-allocating personnel and amending rosters.

Work is under minimal supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify changes to timetables, planned	1.1 Changes to transport timetables are identified and their effect on operation and support areas is assessed

© Commonwealth of Australia, 2025 Industry Skills Australia

	activities and support activities	1.2	New work requirements or revised set workings are identified and communicated to appropriate personnel
		1.3	Difficulties relating to new work requirements are resolved with central roster operations and appropriate work areas
		1.4	Difficulties in achieving changes to work outcomes are resolved with those initiating change, in accordance with workplace policies and procedures
2	**Confirm changes to planned activities**	2.1	Changes to planned services are identified and confirmed, and impact on support activities is assessed
		2.2	Support activities required to achieve amended service are assessed and necessary resources are identified and allocated
		2.3	Revised work outcomes or set workings are conveyed to relevant support work area/s for implementation
3	**Confirm personnel availability**	3.1	Amended rosters and work requirements are confirmed and distributed to appropriate work areas
		3.2	Personnel on amended rosters required to achieve new work outcomes are notified of changes
		3.3	Difficulties associated with compliance with amended roster/s or work outcomes are resolved within work area to the satisfaction of all involved, in accordance with workplace policies and procedures
		3.4	Agreed work area changes to rostered work or amended work outcomes are communicated to central roster operations and appropriate personnel records area
4	**Re-allocate personnel and amend rosters**	4.1	Agreed changes to rosters are confirmed with appropriate personnel
		4.2	Appropriate arrangements are made to implement amended rosters
		4.3	Personnel are re-allocated to achieve agreed work outcomes or amended set workings
		4.4	Final amendments to rosters are made to achieve agreed work outcomes or set workings
		4.5	Appropriate documents are updated to reflect changes made and ensure their recognition

Assessment Requirements for TLIL4037 Apply and amend rosters

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in roster requirements in accordance with standard operating procedures
- allocating suitably qualified personnel to tasks
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when applying and amending rosters
- completing relevant documentation
- identifying and confirming changes to activities
- implementing contingency plans
- interpreting conditions of employment and industrial agreements and awards
- interpreting set workings and combined set workings
- interpreting transport timetables and service details
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures and information and signs
- reporting and/or rectifying identified problems that may occur, in accordance with workplace procedures
- selecting and using relevant computer/communication/office equipment required when applying and amending rosters
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation and reporting requirements for amending rosters, including computer-based systems
- embarkation and disembarkation requirements
- equipment capacities and limitations
- operational work systems, equipment, management and site operating systems for applying and amending rosters
- passenger service needs
- personnel capabilities
- problems that may occur when amending rosters and appropriate action that can be taken to resolve these problems
- relevant organisational operations
- relevant regulations, safeworking systems and requirements, and codes of practice
- relevant WHS/OHS and environmental protection procedures and guidelines
- requirements for absentee coverage
- support activities
- transport services offered by the organisation
- workplace procedures and policies for applying and amending rosters.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4038 Organise marshalling and shunting operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise marshalling and shunting operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying marshalling and shunting requirements, identifying required rolling stock movements, and planning rolling stock movements in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures when marshalling and shunting operations across a variety of operational workplace contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify marshalling and shunting requirements	1.1 Track and siding requirements are established, based on customer needs and safe work practices
	1.2 Dangerous goods or other special transportation requirements are established
	1.3 Destinations, arrival times and departure times are established that are consistent with timetable requirements
	1.4 Relevant safe working systems are identified
	1.5 Hazards are identified, risks are assessed and control measures are implemented
2 Identify required rolling stock movements	2.1 Rolling stock types required are determined from available documentation
	2.2 Rolling stock locations are identified, and track and siding availabilities are established to facilitate the marshalling and shunting operation
	2.3 Rolling stock priorities and sequences are sorted in accordance with workplace procedures
3 Plan rolling stock movements	3.1 Marshalling strategy is identified to achieve safe and efficient loading and unloading
	3.2 Resources required to carry out marshalling strategy are identified
	3.3 Appropriate motive power is determined to enable completion of shunting operations
	3.4 Track and siding access and options for wagon movements are identified from marshalling strategy
	3.5 Contingency strategy is identified or prepared
	3.6 Shunting and marshalling plan and train consist is documented, filed and distributed in accordance with operational requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLIL4038 Organise marshalling and shunting operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in rolling stock and equipment in accordance with operating procedures
- applying relevant safeworking system and workplace procedures
- communicating effectively with others
- completing relevant documentation including:
  - shunting and marshalling plan
  - train consist
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying marshalling and shunting requirements
- identifying required rolling stock movements
- implementing contingency plans
- interpreting and follow operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- planning rolling stock movements
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics and features of wagons and other rolling stock
- draw gear capacities and related operating procedures
- loading and unloading facilities
- local track and signal layouts
- location of signals and points
- marshalling plan and instructions
- principles of operation of protective devices, air brakes, handbrakes and derailers
- procedures for:
  - coupling and uncoupling rolling stock
  - getting on and off rolling stock in an appropriate manner
  - loading and unloading rolling stock
  - managing hazardous situations
  - operating points and signals
- relevant Australian Dangerous Goods (ADG) Code and workplace procedures
- relevant documentation requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations and codes of practice
- safeworking systems and workplace procedure requirements
- timetables and destination information required when organising marshalling and shunting operations
- yard features and operation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and

TLIL4050 Allocate rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to allocate rolling stock in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes identifying train consists and passenger and/or freight requirements, establishing available rolling stock, allocating rolling stock to trains, and monitoring and amending rolling stock allocation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work is performed individually and skills are required to work within a team environment. It involves the application of regulatory requirements and operational principles and procedures when allocating rolling stock as part of work activities across a variety of operational workplace contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify train consists and passenger and/or freight requirements	1.1 Details of train consist and passenger numbers acquired from train planning are evaluated against available resources in accordance with workplace procedures
	1.2 Train running times and train details are identified to confirm timings in accordance with workplace procedures
	1.3 Initial estimate of required rolling stock by numbers and types for each rail service is made
2 Establish available rolling stock	2.1 Passenger numbers and class of travel to be catered for with a passenger train are identified to ensure suitable carriages are provided
	2.2 Types of freight train rolling stock required for the established freight loads and track dimensions are identified in accordance with workplace procedures
	2.3 Passenger or freight train rolling stock locations are established using available tracking systems and procedures
	2.4 Serviceability of the required rolling stock is confirmed using appropriate workplace procedures
	2.5 Support rolling stock for passenger trains is located and assigned for each rail service
	2.6 Rolling stock committed for rail service is recorded as being required for use prior to positioning for service/loading operations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL4050 Allocate rolling stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating rolling stock to trains
- applying relevant safeworking system and workplace procedures
- calculating load requirements in accordance with workplace procedures
- communicating effectively with others
- completing relevant documentation and entering data
- establishing available rolling stock
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying train consists and passenger and/or freight requirements
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- interpreting train movement graphs and diagrams
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and amending rolling stock allocation
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with operating procedures
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working collaboratively with others when allocating rolling stock
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- allocation and maintenance schedules of rolling stock
- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- documentation and record requirements
- equipment and materials used when allocating rolling stock, and procedures that should be followed in their use
- load calculation and allocation requirements
- problems that may occur when allocating rolling stock and appropriate action that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and regulations including codes of practice
- rolling stock and specifications, capabilities and capacity
- support rolling stock for passenger trains such as dining cars
- workplace procedures and policies for allocating rolling stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4058 Plan a career in logistics

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to undertake planning related to one's own career in various contexts in the transport and logistics industry.

It includes self-assessing skills and abilities, investigating possible career opportunities, developing and implementing a career plan and monitoring progress against the plan.

The unit generally applies to individuals who wish to develop their own career paths, at whatever level, within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Conduct self-assessment	1.1 Life and work experiences, current and potential abilities are identified and ranked in order of importance

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Personal values and preferences relating to future careers are explored
	1.3 Personal profile is prepared that identifies career related characteristics
2 Identify possible career opportunities	2.1 Careers are researched to identify those with potential for longevity, and their requirements are identified
	2.2 Information sources are identified and explored for indicators, trends and information on potential career opportunities
	2.3 Existing and emerging careers are assessed and their skill, knowledge and/or qualification requirements are identified
	2.4 Existing career pathways and experience required are identified
	2.5 Nature of the workforce, future trends and opportunities are analysed, and associated skill needs are identified
3 Develop and implement career plan	3.1 Preferred future career and associated skill requirements are identified and compared with current strengths
	3.2 Gap analysis is undertaken to identify skills common to both preferred future career and organisational requirements
	3.3 Career goals are established and career plan is developed that identifies immediate priorities as well as a longer-term strategy for gaining experience and developing skills
	3.4 Career development activities are initiated in accordance with career plan and organisational legislation, policy and procedures
4 Monitor progress	4.1 Acquisition of skills and experience is monitored and feedback is obtained on achievement of performance requirements
	4.2 Feedback is considered and integrated as necessary into career plan
	4.3 Organisational requirements are monitored and career plan is adjusted to take account of new information, environment/culture
	4.4 Preferred career requirements and progress towards career goals are monitored and adjusted as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL4058A Plan a career in logistics.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851

Assessment Requirements for TLIL4058 Plan a career in logistics

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing strengths, weaknesses, opportunities, threats (SWOT)
- applying relevant legislation and workplace procedures
- completing relevant documentation
- developing strategies for managing one's own career
- managing personal change and planning
- reflecting on own competencies and performance
- undertaking appropriate research and questioning related to career planning.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- career development options
- changing demographics and workforce skill needs and trends
- legislation, policies and procedures relating to career development including work health and safety (WHS)/occupational health and safety (OHS) and environment
- methods of self-assessment used to identify values, preferences, skills, knowledge
- organisational planning for human resources at a strategic level
- performance management principles and strategies
- strategic approach to career planning
- succession planning principles, approaches and strategies.

© Commonwealth of Australia, 2025 Industry Skills Australia

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIL4059 Implement asset management systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to implement asset management systems in various contexts within the transport and logistics industry.

It includes determining management control processes; implementing existing practices, procedures and systems; and reviewing service levels.

The unit generally applies to those who lead individuals or teams and have responsibility for implementing and monitoring asset management systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Determine management control process	1.1 Roles and responsibilities of business units or departments are clarified to ensure effective management of assets in accordance with organisational policy and procedures
	1.2 Specific organisation reporting and monitoring standards are clarified as required and complied with
	1.3 Information systems that provide the information necessary for effective and efficient asset management for all levels within the organisation are maintained
	1.4 Regular audits are arranged, as required, to establish a continuous improvement cycle
2 Implement existing practices, procedures and systems	2.1 Assessments of current status of asset management activities within business units or departments are conducted regularly in accordance with asset management plan
	2.2 Work group/s are supported to adhere to milestones and targets
	2.3 Areas of difficulty are identified and strategies are followed to overcome identified difficulties
3 Review service levels	3.1 Current levels of service provided by asset stock are critically examined
	3.2 Areas of possible improvement in the effectiveness and efficiencies of owning and operating assets are identified in consultation with relevant personnel
	3.3 Appropriate benchmarking is undertaken to enable continuous improvement in asset management strategies and practices

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL4059 Implement asset management systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- consulting and liaising, as required, when working with a team
- implementing, monitoring and reviewing management systems
- interpreting and following operational instructions and prioritising work
- managing a team and encouraging team participation
- operating electronic communications equipment to required protocol
- using critical analysis to determine the best approach to asset management for the organisation
- using lateral thinking to solve problems as they arise or to generate ideas.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- benchmarking practices
- characteristics of different types of information systems used to provide and assist in asset management
- code of practice for working collaboratively with others particularly with those involved in inputting data into asset management systems
- detail of different approaches to asset management, including theoretical knowledge
- organisational and industry functions
- procedures for identifying equipment defects and assessing for appropriate action

© Commonwealth of Australia, 2025 Industry Skills Australia

- procedures for operating electronic communications equipment
- quality management principles and procedures
- relevant sections of national and state/territory regulatory requirements and codes of practice
- requirements for completing relevant documentation including asset management reports.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4069 Plan and coordinate protection for multiple worksites within limits of a work on track authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan and coordinate worksite protection for multiple worksites within the limits of a Work On Track Authority.

It includes identifying protection requirements for multiple worksites, establishing protection of multiple worksites and removing protection arrangement for multiple work groups.

The track protection requirements may involve long-term planning and consultation with a number of stakeholders.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

The unit includes the application of Rail Infrastructure Manager rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify protection requirements for multiple worksites	1.1 Nature and complexity of work to be performed within multiple worksites are identified
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Worksite safety plan is developed in accordance with rules and procedures
	1.4 Personnel and other resources required to undertake protection activities are identified in accordance with worksite protection plan
2 Establish protection of multiple worksites	2.1 Detailed information on protection arrangements is provided to appropriate personnel and issues raised are clarified and/or confirmed
	2.2 Worksite protection plan is maintained to ensure protection is implemented correctly
	2.3 Communication links with appropriate personnel are maintained
	2.4 Rail movements through multiple work areas are coordinated
	2.5 Establishment and removal of worksites is coordinated within Work on Track Authority limits
	2.6 Worksite protection is deployed and removed in accordance with rules and procedures
	2.7 Documentation is completed and maintained for worksite protection for the duration of the Work on Track Authority
3 Remove protection arrangements for multiple work groups	3.1 Notification of completed works and assurance that track is safe for passage of rail traffic is received from all protection officers in accordance with workplace procedures
	3.2 Protection arrangements are removed from each worksite in accordance with workplace procedures
	3.3 Actions are documented in accordance with workplace

Assessment Requirements for TLIL4069 Plan and coordinate protection for multiple worksites within limits of a work on track authority

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing nature and complexity of a work program
- analysing track work activities for complexity
- applying relevant safeworking system and workplace procedures
- communicating effectively with individuals and work groups
- completing Work On Track Authority documentation
- developing a worksite protection plan for multiple worksites within limits of a work on track authority
- explaining plan to relevant stakeholders and appropriate personnel
- explaining variations to plan that may need to be negotiated
- following rail infrastructure manager workplace policies, procedures, rules and protocols
- fulfilling worksite permits
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying unsafe situations and emergencies
- managing a worksite protection plan with multiple worksites within limits of a work on track authority
- using appropriate personal protective equipment in accordance with Rail Infrastructure Manager requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operational communications protocols and systems

© Commonwealth of Australia, 2025 Industry Skills Australia

- Rail Infrastructure Manager policies, procedures and protocols for identified unsafe situations or emergencies
- Rail Infrastructure Manager rules and procedures
- Rail Infrastructure Manager rules and procedures for multiple worksites within limits of a work on track authority
- rail terminology as defined by the relevant Rail Infrastructure Manager system
- relevant rail danger zones
- track possession documentation
- track work authority
- types of track protection and safeworking systems
- worksite protection plans.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLIL4070 Work effectively in the transport and logistics industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to work effectively in the transport and logistics industry in accordance with relevant organisational policy and procedures.

This unit includes identifying current industry practices and emerging issues that underpin the identification and performance of work in the industry.

Individuals work independently or as part of a team under direct and/or indirect supervision, use discretion and judgment and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine transport mode requirements for freight	1.1 Transport modes and their features are investigated
	1.2 Infrastructure required to support transport modes is

© Commonwealth of Australia, 2025 Industry Skills Australia

	determined
	1.3 Impact of current and emerging technologies relevant to transport modes is evaluated
	1.4 Regulatory requirements that may impact on transport services operations are identified
2 Determine operational environment of the business	2.1 Major forms and purposes of warehousing and distribution systems are identified
	2.2 Links and relationships between transportation systems, and distribution and warehousing systems are evaluated
	2.3 Regulatory requirements that may impact on warehouse operations are identified
	2.4 Factors that impact on growth areas for the sector are identified
	2.5 Future challenges and projections for the business are researched
3 Determine external services required by the business	3.1 Range of services offered by service providers connected to the business is confirmed
	3.2 Relevant regulatory requirements that may impact on service providers operations are identified
	3.3 Importance of service providers and their impact on the supplier, operation of the business and its customers is evaluated
4 Review role and responsibilities	4.1 Organisational structure and own role in the organisation are identified
	4.2 Area of responsibility is confirmed in accordance with own job role and operating procedures
	4.3 Own performance standards are determined in accordance with job role and operating procedures
	4.4 Work processes are adapted to meet unplanned occurrences in accordance with operating procedures

Assessment Requirements for TLIL4070 Work effectively in the transport and logistics industry

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- completing relevant documentation
- developing competence in response to changes in activities, and legislative and organisational requirements
- identifying and anticipating operational problems, hazards and risks, and taking appropriate action
- identifying and correctly using relevant equipment
- interpreting and applying relevant regulations and instructions
- modifying activities dependent on workplace contingencies, situations and environments
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant work requirements, policies and procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- current and emerging issues impacting on the transport and logistics industry, including infrastructure needs, technological changes and future challenges
- local and national trends in the transport and logistics industry, including emerging industry practices and needs
- organisational policies and procedures, including those relating to own area of responsibility and performance standards
- relevant sections of national and state/territory legislation, regulatory requirements, and codes of practice/or guidelines as they relate to the level and type of transport and logistics industry operations within own area of responsibility
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and guidelines.

TLIL4073 Apply asset management system

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply asset management systems.

It includes identifying and classifying assets, recording assets and their condition, and maintaining an asset management system.

Work may be undertaken in various contexts within the transport and logistics industry. The unit generally applies to those who provide leadership of others individually or in teams.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify designated area of responsibility	1.1 Designated area of responsibility is identified in accordance with organisational requirements

© Commonwealth of Australia, 2025 Industry Skills Australia

	1.2 Contribution is made to maintaining asset register on the basis of current and ongoing needs, in accordance with organisational requirements
	1.3 Assets to be recorded in asset register are identified in accordance with organisational requirements
2 Record assets and their condition	2.1 Specified details of material assets are identified and recorded in accordance with asset management policies and procedures
	2.2 Condition of each asset is determined and corrective maintenance tasks are recorded in accordance with manufacturer specifications, relevant Australian standards and organisational requirements
	2.3 Useful/residual life of each asset is determined as required, in accordance with manufacturer specifications and organisational requirements
3 Maintain asset management system records	3.1 Records of asset management activities are updated in accordance with organisational requirements
	3.2 Periodic audits are conducted to ensure accuracy of asset register in accordance with organisational requirements
	3.3 Contribution is made to asset management system review to ensure it is supporting business needs, in accordance with organisational requirements
	3.4 Guidance is provided to support effective management and maintenance of asset register, in accordance with organisational requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

TLIL4074 Control and coordinate rail traffic movement

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control rail traffic movement in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes monitoring the status of the current train area plan, implementing the daily working timetable, controlling rail traffic movement, implementing contingency plans for planned events and system faults and failures, and updating traffic movement documentation in accordance with workplace requirements.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Industry Skills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Monitor status of current train plan	1.1 Train movements and associated activities are analysed to establish current situation
	1.2 Proposed train movements and associated activities are identified to establish status of train plan, in accordance with organisational procedures and policies
	1.3 Train notices are checked for accuracy and adjustments are made as required
	1.4 Operational management system information is reviewed against observed status and inconsistencies are corrected
2 Implement daily working timetable	2.1 Train movements are prioritised and coordinated in accordance with organisational policies and procedures to ensure optimum and consistent running to schedules
	2.2 Relevant information is communicated to internal and external customers
	2.3 Planned and where applicable unplanned train movements and train notices are implemented in accordance with organisational policies and procedures
3 Control rail traffic movement	3.1 Train movements are coordinated with other relevant personnel in accordance with organisational policies and procedures
	3.2 Surveillance and alarm systems are monitored to identify emergency situations as required
	3.3 Signalling systems are operated and monitored to ensure safe movement of rail traffic
4 Communicate with rail safety workers, stakeholders and customers	4.1 Communication with relevant rail safety workers is undertaken to ensure they are informed of train movements, in accordance with organisational policies and procedures
	4.2 Alternative methods of communication are identified and used in the case of normal communications system malfunction

© Commonwealth of Australia, 2025 Industry Skills Australia

	4.3 Communication with relevant stakeholders and customers is undertaken to ensure they are informed of train movements, in accordance with organisational policies and procedures
5 Implement contingency plans	5.1 Contingency plan to suit unplanned track works, disruption, system failure or fault is identified and implemented in accordance with organisational policies and procedures
	5.2 Resources to respond to the contingency are arranged in accordance with relevant organisational policies and procedures
	5.3 Required communications are established
	5.4 Train plan or schedule is reviewed and adjusted in accordance with organisational requirements
	5.5 Communication with internal and external customers is established and maintained as required
	5.6 Operational management systems are updated to reflect changes resulting from the contingency
6 Update rail traffic movement documentation	6.1 Rail traffic movement documentation is compiled and recorded in accordance with organisational policies and procedures
	6.2 Rail traffic movement documentation is handed over when relieved and/or at the completion of shift in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIL4074 Control and coordinate rail traffic movement

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- communicating effectively with others
- completing relevant documentation and entering data
- controlling rail traffic movement
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans for planned events and system faults and failures
- implementing the daily working timetable
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring the status of the current train area plan
- monitoring work activities in terms of planned schedule
- operating communications systems to required protocol
- reading, interpreting and following relevant instructions, procedures and information
- reporting and rectifying, within limits of own role, identified problems, faults and malfunctions, in accordance with organisational procedures
- updating traffic movement documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems
- emergency management procedures
- local area knowledge to coordinate rail traffic movement

© Commonwealth of Australia, 2025 Industry Skills Australia

- organisational procedures for controlling and coordinating train operations
- problems that may occur when controlling and coordinating rail traffic and related action that should be taken
- relevant documentation requirements
- relevant sections of applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- restrictions relating to loads and conditions
- safeworking systems and occupancy authorities
- signalling and control systems and operations
- surveillance and alarm systems.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIL4075 Implement and amend daily train plan

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to control daily train operations in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice.

It includes implementing daily train movements, monitoring and making amendments to the daily train plan as required, and maintaining required documentation.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice and/or guidelines.

Work involves the application of routine operational principles and procedures when planning and implementing daily train operations across a variety of operational workplace contexts within the Australian rail system.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Implement daily train plan	1.1 Rail traffic movements are checked to ensure they are achievable in accordance with daily train plan and organisational procedures
	1.2 Hazards are identified, risks are assessed and control measures are implemented
	1.3 Resources are confirmed in accordance with daily train plan and workplace procedures as required
	1.4 Required train notices and instructions are prepared and issued in accordance with daily train plan and organisational procedures
2 Amend daily train plan	2.1 Status of daily train plan is determined based on proposed rail traffic movements and track possessions/works
	2.2 Daily train plan is amended as required, to accommodate other rail traffic movement priorities
	2.3 Contingency plans are developed in accordance with organisational procedures
	2.4 Information relating to rail traffic movement within the area of control is obtained and analysed
	2.5 Amendments to daily train plans received by facsimile, email and train notices are validated and applied in accordance with organisational procedures
	2.6 Resources to implement planned rail traffic movements and contingency plans are identified and resources are allocated in accordance with organisational requirements as required
	2.7 Documentation is amended, compiled and recorded in accordance with organisational policies and procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLIL4075 Implement and amend daily train plan

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant safeworking systems and workplace procedures
- communicating with others when developing and implementing daily train plans
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing daily train movements
- maintaining required documentation
- monitoring and making amendments to the daily train plan
- reading and interpreting relevant instructions, procedures, and information
- using appropriate numeric functions when amending daily train plan
- working collaboratively with others when implementing and amending daily train plans
- working systematically with required attention to detail.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- familiarity with yards, depots and, where applicable, station workings
- organisational procedures for planning and controlling train operations
- restrictions relating to loads and conditions
- safeworking and signalling system requirements, where applicable
- system geography and limitations
- timetabling and train planning protocols
- train control diagrams and graphing.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

TLIL4076 Coordinate resources

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to determine, acquire and allocate resources and deal with contingencies, in accordance with organisational requirements.

It includes establishing resource requirements, acquiring and allocating resources, dealing with contingencies, measuring effectiveness of resource coordination and document control.

This unit applies to individuals who require a broad knowledge of business resources to ensure adequate resources are available to perform the work of the organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Industry Skills Australia

1 Establish resource requirements	1.1 Resource requirements are determined in accordance with business and operational plans, and organisational requirements
	1.2 Opportunities are provided to individuals and work groups to contribute to identifying resource requirements
	1.3 Processes are followed that ensure resource expenditure is realistic and makes efficient use of available resources in accordance with organisational procedures
	1.4 Recommendations for resource requirements are presented to appropriate personnel in accordance with organisational procedures
2 Acquire and allocate resources	2.1 Resources are acquired in accordance with organisational requirements
	2.2 Resources are checked to ensure quality and quantity in accordance with organisational requirements
	2.3 Resources are allocated to enable achievement of work group objectives
