Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan the installation and maintenance of the relevant bonding systems** | 1.1 Works order including drawings, plans and material lists is received/accessed, analysed and confirmed, if necessary by site inspection  
1.2 Work is prioritised/scheduled including site and relevant electrical permits  
1.3 Resources including personnel, plant, equipment and tools are identified and scheduled  
1.4 Liaison and communication issues with other personnel, authorities, clients and landowners are resolved |
| **2 Prepare the worksite** | 2.1 Personnel participating in the task, including plant operators and contractors, are fully briefed  
2.2 Site preparation is completed in accordance with works order  
2.3 Where required, specialist testing and earth equipment is inspected and replaced if defective  
2.4 Where required, road signs, barriers and warning devices are positioned  
2.5 Safeworking practices are observed on or about the running track/line |
| **3 Install and maintain bonding system cables** | 3.1 Systems and circuits are isolated as required, proved safe to work on in accordance with work plan and, where required, electrical permits are issued/accepted/relinquished  
3.2 Cable and surrounds, including rail and other surfaces, are prepared to appropriate specifications  
3.3 Bonds are attached in accordance with specifications  
3.4 Joint and termination procedures are carried out in accordance with authorised work procedures  
3.5 Continuity testing procedures are carried out as required  
3.6 The system is commissioned following the conduct of a visual inspection, and the completion of other testing |
| **4 Conduct post-operational activities** | 4.1 Worksite is rehabilitated in accordance with workplace procedures  
4.2 Work is completed in an agreed time and with a minimum waste  
4.3 Notification, records and documentation for updating system data is completed |

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of rail bonding systems
- Problems that may occur during the installation and maintenance of rail bonding systems and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and maintenance of rail bonding systems and ways of controlling the risks involved
- Characteristics, capabilities and uses of various types of cables
- Cable testing and fault identification/location procedures
- Testing and commissioning procedures, including testing and earth/rail connecting conductors
- Traction earthing systems and bonding systems
- Basic circuits for signalling and communications systems
- Switching operation, isolation and access permit procedures
- Electrical principles including OHMs law, voltage and current transformation, voltage drop, cable
- Current capacities, inductance and capacitance, protection systems and devices
- The responsibilities and rights of other authorities, clients and landowners
- Regulatory and workplace traffic control requirements and guidance signals
- Relevant workplace documentation and records systems

Required skills:

- Communicate effectively with others when installing and maintaining rail bonding systems
- Read and interpret technical data, drawings, instructions and manuals relevant to the installation and maintenance of rail bonding systems
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the installation and maintenance of rail bonding systems
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and maintaining rail bonding systems
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining rail bonding systems in accordance with regulatory requirements and workplace procedures
Required skills:

- Implement contingency plans for unplanned events that may arise when installing and maintaining rail bonding systems
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Organise activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant equipment and tools
- Joint and terminate earthing and bonding cables
- Guide, using signals, operators of plant and equipment during the installation and maintenance of cables
- Work at heights and in confined spaces
- Perform basic and exothermic welding
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or
EVIDENCE GUIDE

other simulated practical and knowledge assessment, and/or

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Rail bonding systems to be installed and maintained may include all those in service in the Australian rail system, including:
- traction bonding (as required in all electrified rail systems)
- track circuit continuity bonds
- cross bonding
RANGE STATEMENT

Maintenance may include:
- the diagnosis of faults and recommissioning
- the repair and replacement of cables and associated hardware

Earthing and bonding systems may include:
- permanent systems
- temporary systems
- grading rings
- earth grids

Types of conductors may include:
- steel
- steel rail
- copper
- aluminium and steel
- bare and sheathed cables
- single core
- stranded
- flexible

Cables may include:
- surface mounted
- aerial
- buried
- enclosed

Permanent jointing and terminating materials may include:
- polymeric tape materials
- polymeric heat shrink and covering materials
- exothermic welds
- crimped connections
- bolted connections

Temporary terminating components may include:
- screwed earth/rail/conductor clamps
- clipped earth/rail/conductor clamps
- sticks
- testers

Communications equipment may include:
- two-way radios, and/or
- telephones

Depending on work context, safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
RANGE STATEMENT

- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders and specifications
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to install and service rail lubrication equipment in accordance with safeworking and regulatory requirements and workplace procedures. It includes installing the lubrication equipment, servicing and monitoring the lubrication equipment, removing lubrication equipment, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and service rail lubrication equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

| 1 Install lubricator | 1.1 Identify work location  
1.2 Rail is correctly prepared at lubrication site to enable correct fitting of lubricator  
1.3 Lubricator is installed and tested to ensure correct functionality in accordance with workplace procedures |
| 2 Service and monitor lubricator | 2.2 Lubricator is cleaned and correctly adjusted to ensure correct functionality  
2.3 Parts are replaced as required to ensure correct functionality  
2.4 Lubricator is filled with appropriate lubricant  
2.5 Lubricator is checked and adjusted to maintain correct functionality |
| 3 Remove lubricator | 3.2 Preparations for the removal of the lubricator are made in accordance with workplace procedures  
3.3 Lubricator is correctly removed and stowed in accordance with workplace procedures |
| 4 Complete documentation | 4.2 Required documentation is completed in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and service of rail lubrication equipment
- Problems that may occur during the installation and service of rail lubrication equipment, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and service of rail lubrication equipment, and ways of controlling the risks involved
- Basic mechanical knowledge relevant to the installation and service of rail lubrication equipment
- Principles of rail lubrication and lubrication equipment
- Relevant workplace technical manuals and instructions
- Characteristics of relevant equipment, materials, structures, hardware and components used in work activities
REQUIRED KNOWLEDGE AND SKILLS

- Hazardous situations and related personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing or servicing rail lubrication equipment
- Read and interpret technical data, drawings, instructions and manuals relevant to the installation and service of rail lubrication equipment
- Interpret and follow operational instructions and perform work in correct sequence
- Complete documentation related to the installation and service of rail lubrication equipment
- Operate electronic communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when installing or servicing rail lubrication equipment in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Check compliance between work and job specifications
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant equipment and tools
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Competency Field

Competency Field S - Construction and Installation
TLIS2013C Install minor structures

Modification History
New release. This unit replaces and is equivalent to TLIS2013B.

Unit Descriptor
This unit involves the skills and knowledge required to install minor non-track bearing structures and assemblies in rail industry contexts in accordance with safeworking and regulatory requirements, and workplace procedures.
It includes planning and preparing for the installation, installing the structure in accordance with workplace requirements, and cleaning up the site after installation.
Licensing or certification requirements may apply to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.
Work is performed under some supervision, generally in a team environment. It involves the application of routine operational principles and procedures to install minor structures as part of workplace activities across a variety of operational contexts within the Australian rail system.
Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
**Elements and Performance Criteria**

|   | **Plan and prepare for work** | 1.1 Type of structure to be installed is identified and appropriate methods are planned in accordance with workplace procedures and specifications |
|   |                                 | 1.2 Structure and/or materials for installation are identified, obtained and prepared in accordance with plans and specifications |
| 2 | **Assemble and install structural elements** | 2.1 Where required, excavation is conducted to standards in accordance with workplace procedures and regulatory requirements |
|   |                                 | 2.2 Where required, foundations are installed in accordance with workplace procedures and specifications |
|   |                                 | 2.3 Components are assembled and installed in accordance with specifications and/or plans using appropriate methods |
|   |                                 | 2.4 Level/position of structure is adjusted to required standard to maintain correct track geometry/clearances |
|   |                                 | 2.5 Fasteners are installed and tightened in position using correct fastening method to ensure structural integrity |
|   |                                 | 2.6 Installed structure is checked against specified requirements and/or plans, and required adjustments are made |
| 3 | **Maintain structures** | 3.1 Components requiring replacement are checked against standards and are measured for preparation of replacement components |
|   |                                 | 3.2 Materials required for job are identified and organised as required to enable appropriate replacement of components |
|   |                                 | 3.3 Replacement components are cut and shaped to required standard in accordance with workplace procedures |
|   |                                 | 3.4 Surfaces of components are treated using appropriate methods and materials as required |
| 4 | **Finalise work** | 4.1 Site is cleaned up to remove unnecessary materials and is restored to environmentally sound and safe condition |
|   |                                 | 4.2 Work as executed documentation is completed as required in accordance with organisational procedures |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Construction methods and techniques for basic structures
- Functions of different types of minor structures
- Hazards that may exist when installing minor structures, and ways of controlling the risks involved
- Information on the use of epoxy and grouts for mortar pads
- Problems that may occur when installing minor structures, and action that can be taken to report or resolve them
- Relevant recording and documentation procedures
- Relevant safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Workplace procedures for installing minor structures

Required skills:

- Adapt to differences in equipment in accordance with standard operating procedures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Check compliance between work and job specifications
- Check correct track geometry/clearances
- Communicate effectively with others when installing minor structures
- Complete documentation relating to installing minor structures
- Follow operational instructions and work sequences when installing minor structures
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Operate communication equipment to required protocol
- Read and interpret plans, specifications, instructions and manuals relating to installing minor structures
- Report and rectify within limits of own role problems, faults and malfunctions that may occur when installing minor structures in accordance with regulatory requirements and workplace procedures
- Select and use relevant equipment and tools
- Select and use required personal protective equipment (PPE)
- Work collaboratively with others when installing minor structures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Minor structures to be installed may include:
- pipes and culverts
- overhead wiring system (OHWS) - single mast
- retaining walls
- level crossings
- buffer stops
- ballast retention walls
- ballast logs
- intermediate rail support on ballast walls
- earthworks protection structures
- level crossings (non-rail items)

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movement of equipment, goods and vehicles

Equipment may include:
- cranes
- crane and lifting gear
- hand tools
- small power tools
- rollers and wacker packers for compaction
- welding, oxy and cutting equipment
- scaffolding
- ladders
- elevated work platforms (EWPs)

Materials may include:
- steel
- concrete and concrete products
- timber
- rubber products
- bolts and fasteners
- epoxy grouts
- cement grouts
- paint (protective treatment)

Liaison may include:
- internal or external personnel from other work areas, such as train controllers
- road authorities
- local councils
- landowners
Communication equipment and systems may include:
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and PPE may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures
- quality assurance plans, data and document control
- conditions of service, legislation and industrial agreements, including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards (AS) and related requirements, including AS 4292 Railway safety management
- relevant state/territory legislation relating to:
- environmental protection
- OH&S

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan installation | 1.1 Work requirements are determined to identify scope of work and resources required  
1.2 Type of overhead wiring structure required for job is identified and organised |
| 2 Prepare for installation | 2.1 Footings are prepared and excavated in compliance with standard, following workplace procedures  
2.2 Formwork is installed in compliance with standard, following workplace procedures  
2.3 Concrete reinforcing is installed in compliance with standard, following workplace procedures  
2.4 Concrete is mixed and placed in compliance with standard, following workplace procedures  
2.5 Hold down plates/bolts are placed into concrete to correct dimensions to enable fitting of overhead wiring structure |
| 3 Install components | 3.1 Components are assembled onto bridge section as required in preparation for installation  
3.2 Masts and other components are positioned and installed as required, following accepted workplace procedures  
3.3 Fastening systems are installed in compliance with standard to ensure the integrity of the overhead wiring structure |
| 4 Complete documentation | 4.1 Documentation is completed in line with company requirements and workplace practice |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation of overhead wiring structures
- Problems that may occur during the installation of overhead wiring structures and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation of overhead wiring structures and ways of controlling the risks involved
REQUIRED KNOWLEDGE AND SKILLS

- Relevant earthmoving equipment and methods
- Characteristics and relevant information on overhead wiring structures
- Information in relevant workplace technical manuals and instructions
- Characteristics of plant and equipment, materials, transport, structures, hardware and components used in work activities
- Rail operations and train movement
- Hazardous situations and related personal protection measures
- Emergency procedures manuals
- Local authority procedures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing overhead wiring structures
- Read and interpret technical data, drawings, instructions and manuals relevant to the installation of overhead wiring structures
- Interpret and follow operational instructions and prioritise work when installing overhead wiring structures
- Complete documentation related to the installation of overhead wiring structures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing overhead wiring structures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing overhead wiring structures in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Apply required surveying and measuring techniques
- Conduct compaction testing
- Use levelling equipment
- Check compliance between work and job specifications
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all possible weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Equipment may include:
- graders, front end loaders, back hoes, cranes
- manual tools
- small power tools
- angler borer and reinforcement cage and base bolts

Communications equipment may include:
- two-way radios, and/or
- telephones

Depending on work context, safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace
RANGE STATEMENT

- procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

TLIS2027A Install and maintain surface track drainage

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to install and maintain surface track drainage both manually and mechanically in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the job requirements, carrying out the maintenance of track drainage in accordance with work orders, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and maintain surface track drainage maintenance as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of surface track drainage
- Problems that may occur during the installation and maintenance of surface track drainage, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and maintenance of surface track drainage, and ways of controlling the risks involved
- Drainage requirements of various types of earthworks
- Causes of defects such as erosion and water scouring
- Functions and design principles of drainage
- Understanding the required standards of materials and the methods involved in the installation and maintenance of surface track drainage
- Characteristics of relevant plant and equipment, hardware and components used in work activities
- Impact on work activities of regulatory requirements
- Hazardous situations and related personal protection measures
- Required personal protective equipment
REQUIRED KNOWLEDGE AND SKILLS

- Relevant recording and documentation procedures
- Environmental protection requirements

Required skills:

- Communicate effectively with others when undertaking the installation and maintenance of surface track drainage
- Read and interpret plans relevant to the installation and maintenance of surface track drainage
- Follow operational instructions and work sequences when installing and maintaining surface track drainage
- Complete documentation related to the installation and maintenance of surface track drainage
- Operate communication systems to required protocol
- Work collaboratively with others during the installation and maintenance of surface track drainage
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining surface track drainage in accordance with regulatory requirements and workplace procedures
- Establish environment protection requirements as required
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

- relevant legislation and workplace procedures
- other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly determining job requirements
  - cleaning, repairing or installing drainage to relevant standard by manual and/or mechanical methods
  - completing all relevant documentation to workplace standards

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work
RANGE STATEMENT

environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Surface drainage may include:
- open cess drains
- top drains
- side drains

Equipment may include:
- front end loaders
- back hoes
- ditch digger
- hand tools and small plant
- other mechanical means

Materials may include:
- granular soil
- gravel
- ballast
- earthwork protection materials including fascines, gabion baskets, reno mattresses, revetment mattresses
- geotextiles
- baffle materials

Drainage may differ for:
- batters
- points and crossings
- location of track (steep grades)
- multiple tracks

Drainage cleaning, repair and construction methods may include:
- manual methods
- off-track plant
- revegetation
- lining

Communications systems may include:
- two way-radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
RANGE STATEMENT

- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

| 1 Prepare for work | 1.1 Worksite is identified  
1.2 Installation, replacement or repair method is selected to meet work requirements in accordance with workplace procedures  
1.3 Plant, equipment and other materials are prepared for work  
1.4 Transoms are prepared to requirements of job using correct methods, including dressing and protective coatings |
| 2 Install/replace transoms | 2.1 Where necessary unserviceable transoms are extracted using manual or mechanical methods in accordance with workplace procedures  
2.2 New transom is installed using manual or mechanical methods in accordance with workplace standards and procedures  
2.3 Transom is suitably supported by appropriate methods in accordance with workplace standards and procedures  
2.4 Transom bolts are replaced or tightened as required  
2.5 Work is completed to meet track geometry requirements in accordance with workplace standards and procedures  
2.6 Work is checked for compliance to acceptance standards for spacing, skew and geometry |
| 3 Complete documentation | 3.1 Required documentation is completed in accordance with workplace policies and procedures |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and replacement of transoms
- Problems that may occur during the installation and replacement of transoms, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and replacement of transoms, and ways of controlling the risks involved
- Types of tools and equipment that may be used in installing and replacing railway transoms, and their applications
- Contents of relevant workplace technical manuals and instructions
REQUIRED KNOWLEDGE AND SKILLS

- Timber protective treatments
- Basic track structure and geometry requirements
- Transom condition and placement acceptance standards
- Emergency procedures
- Local authority procedures, if applicable

Required skills:

- Communicate effectively with others when installing and replacing transoms
- Follow operational instructions and work sequences when installing and replacing transoms
- Read and interpret instructions, procedures, route information and signs relevant to the installation and replacement of transoms
- Interpret and follow operational instructions and follow scheduled work processes when installing and replacing transoms
- Complete documentation related to the installation and replacement of transoms
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and replacing transoms
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using tools and equipment while installing and replacing transoms in accordance with regulatory requirements and workplace procedures
- Implement prepared contingency plans for unexpected events when installing and replacing transoms
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify, select and use relevant tools and equipment

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing for work by selecting appropriate methods, materials and equipment for a variety of situations
  - installing or replacing a number of transoms
  - completing documentation to required workplace standards

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, materials and vehicles

Installation and replacement methods may include:
- constructing new bridges
- partial replacement in existing track
- full replacement in existing track

Repair methods may include:
- boring new holes in timber transoms
- replacing broken or damaged transoms

Transom types may include:
- timber
- synthetic
- composite

Tools and equipment may include:
- mechanical handling/lifting equipment
- bars, sleeper tongs
- adze
- planer
- square and string line
- jacks
- manual tools
- small power tools
- oxy cutting equipment
- scaffolding

Materials may include:
- bolts and fasteners
- zinc/polyester strip
- resilient pads
- paint/timber preservatives
RANGE STATEMENT

Transom spacing and dimensions may vary according to:
- bridge configuration
- traffic task

Removal and insertion may be:
- mechanical
- manual

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication systems may include:
- two-way radios
- radio headsets
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- works orders
- technical instructions, plans and specifications
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
RANGE STATEMENT

- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:
- legislated rail safety requirements including applicable acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the carrying out of track ballasting
- Problems that may occur when carrying out of track ballasting, and action that can be taken to report or resolve the problems
- Hazards that may exist when carrying out of track ballasting, and ways of controlling the risks involved
- Ballast profile standards
- Functions of ballast
- Basic understanding of materials and methods involved in the restoration of ballast profiles
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when carrying out track ballast activities
- Read and interpret instructions and manuals relevant to the carrying out of track ballasting
Required skills:

- Interpret and follow operational instructions including the correct work sequences when carrying out track ballasting
- Complete documentation related to the carrying out of track ballasting
- Use agreed communication methods
- Work collaboratively with others when carrying out track ballasting
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out track ballasting in accordance with regulatory requirements and workplace procedures
- Perform work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - removing and distributing existing ballast by manual and/or mechanical methods
  - distributing new ballast by manual and/or mechanical methods
  - ensuring completed work meets ballast profile
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- in all weather conditions

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:

- exposure to chemicals, and dangerous or hazardous substances
**RANGE STATEMENT**

**Equipment may include:**
- movements of equipment, goods and vehicles
- off-track plant (front end loaders, back hoes etc.)
- ballast hoppers
- hand tools and small plant
- ballast sled
- ballast undercutters
- ballast cleaners
- ballast forks
- ballast regulators
- other mechanical means

**Materials may include:**
- gravel ballast
- crushed rock ballast
- metal fines/road base

**Ballast profile may differ for:**
- different rail mass
- rail types (non-welded, welded and curve)
- traffic task
- sleeper type

**Methods may include:**
- unloading ballast hoppers
- spreading ballast dumped by truck or front end loader or similar equipment
- profiling using shovels, ballast forks or using a ballast regulator
- removing ballast using manual methods
- removing ballast using:
  - off-track plant
  - ballast cleaners
  - undercutters
  - ballast sled

**Liaison may include:**
- internal or external personnel from other work areas (e.g. train controllers)

**Communications systems may include:**
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

**Depending on work context, safety and personal protective equipment may include:**
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation of railway sleepers
- Problems that may occur during the installation of railway sleepers, and action that can be taken to report or resolve the problems
- Hazards that may exist when installing railway sleepers, and ways of controlling the risks involved
- Types of tools and equipment that may be used when installing railway sleepers, and their applications
REQUIRED KNOWLEDGE AND SKILLS

- Contents of relevant workplace technical manuals and instructions
- Sleeper condition and placement acceptance standards
- Defects that can occur in sleepering tools and equipment, and related action that should be taken
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing railway sleepers
- Interpret and follow operational instructions and follow scheduled work processes when installing railway sleepers
- Complete documentation related to the installation of railway sleepers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing railway sleepers
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing railway sleepers in accordance with regulatory requirements and workplace procedures
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Install railway sleepers in accordance with workplace requirements
- Restore track gauge in accordance with workplace requirements
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of
EVIDENCE GUIDE

unit

this unit and include demonstration of applying:
• the underpinning knowledge and skills
• relevant legislation and workplace procedures
• other relevant aspects of the range statement
• Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  • completing appropriate preparations for work
  • restoring track gauge correctly
  • inserting or replacing a number of sleepers including all types occurring in candidate's workplace
  • completing documentation correctly

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations are conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Installation and replacement methods may include:
- laying new track
- partial replacement in existing track
- full replacement in existing track
- changeover from one sleeper type to another in existing track
- partial changeover from one sleeper type to another in existing track

Repair methods may include:
- boring new holes in timber sleepers
- replacing sleeper plates
- replacing insulating material
- replacing broken or damaged sleepers

Sleeper includes:
- sleepers
- turnout bearers

Sleeper types may include:
- timber
- steel
- concrete
- any other approved types

Equipment may include:
- mechanical handling/lifting equipment
- bars, sleeper tongs, shovels, picks
- jacks
- sleeper borers
- multi spindle borers
- dog screw setters
- tie crane
- sleeper removers/inserters
- scarifiers
- sleeper spacing machines

Sleeper spacings may vary according to:
- track configuration
- joint type
RANGE STATEMENT

Insulation pads may:

- be required

Removal and insertion may be:

- mechanical
- manual

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, other work teams)

Communications systems may include:

- two-way radios
- radio headsets
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and...
RANGE STATEMENT

operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to install and repair temporary track supports in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, preparing and installing the temporary support, and completing documentation. Licensing or certification requirements may be applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to install and repair temporary track supports as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine job requirements | 1.1 Worksite is identified  
1.2 Plant, equipment and materials are organised to meet the scope of the job and installation type |
| 2 Prepare and install or repair temporary support | 2.1 Where required, foundation is prepared in accordance with site requirements and to specifications  
2.2 Component surfaces are treated with appropriate coating as required to prevent degradation of components  
2.3 Temporary support is installed in accordance with workplace standards and procedures  
2.4 Level and alignment is adjusted to the running surface to ensure the correct geometry and profile  
2.5 Where required, temporary support is adjusted/readjusted and secured to ensure full bearing is achieved for integrity and safety of structure |
| 3 Complete documentation | 3.1 Documentation is completed as required in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and repair of temporary track supports
- Problems that may occur during the installation and repair of temporary track supports, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and repair of temporary track supports, and ways of controlling the risks involved
- Emergency procedures
- Local authority procedures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing or repairing temporary track supports
Required skills:

- Read and interpret plans, specifications, instructions and manuals relevant to the installation or repair of temporary track supports
- Follow operational instructions and work sequences when installing or repairing temporary track supports
- Check compliance between work and job specifications
- Complete documentation related to the installation or repair of temporary track supports
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing or repairing temporary track supports in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning work requirements
  - organising plant, materials and equipment for a range of jobs
  - installing and/or repairing a range of temporary supports
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles
RANGE STATEMENT

Equipment may include:
- front end loaders, back hoes, cranes
- manual tools including bars, hammers and spanners
- small power tools
- chainsaw
- compression borer
- compaction equipment such as rollers and wacker packer
- oxy and cutting equipment
- scaffolding
- ladders
- elevated work platform (EWP)

Support structures may include:
- overpinning/track baulks
- underpinning
- pig sties
- temporary bridge support

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communications systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and repair of rail fastening systems
- Problems that may occur during the installation and repair of rail fastening systems, and action that can be taken to report or resolve the problems
- Hazards that may exist during the installation and repair of rail fastening systems, and ways of controlling the risks involved
- Relevant rail fastening and anchoring equipment and methods
- Characteristics and relevant information on rail fastening systems
- Information in relevant workplace technical manuals and instructions
- Characteristics of plant and equipment, hardware and components used in work activities
- Hazardous situations and related personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing and repairing rail fastening systems
- Read and interpret technical plans, specifications, instructions and manuals relevant to the installation and repair of rail fastening systems
Required skills:

- Interpret and follow operational instructions when installing and repairing rail fastening systems
- Complete documentation related to the installation and repair of rail fastening systems
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and repairing rail fastening systems
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and repairing rail fastening systems in accordance with regulatory requirements and workplace procedures
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night  
- in all weather conditions

Work may be conducted in:  
- restricted spaces  
- exposed conditions  
- controlled or open environments

Work may involve:  
- exposure to chemicals, and dangerous or hazardous substances  
- movements of equipment, goods and vehicles

Equipment may include:  
- hand tools  
- special safety equipment for handling chemicals  
- mixer  
- air compressor

Materials may include:  
- epoxy resins  
- dry clad and other similar products

Communications systems may include:  
- two-way radios  
- telephones/mobile phones  
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:  
- high visibility clothing  
- hearing protection  
- gloves  
- sunscreen  
- sunglasses  
- safety glasses  
- insect repellent  
- safety headwear  
- safety footwear  
- portable radios/mobile phone  
- hand lamps  
- flags  
- respirator  
- safety mask  
- gas detectors  
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures  
- enterprise procedures  
- organisational procedures  
- established procedures
RANGE STATEMENT

Information/documents may include:

- operational instructions, policies and workplace procedures
- work orders
- technical instructions
- material safety data sheets (MSDS)
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

TLIS2044A Carry out rail installation

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to install rail in accordance with safeworking and regulatory requirements and organisational policies and procedures. It includes identifying job requirements, preparing rail for installation, installing rail, joining rail ends, restoring track, and completing documentation.

Licensing or certification requirements are not applicable to this unit. Persons achieving competence in this unit will need to fulfil legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
Work is performed under supervision, generally in a team environment. It involves the application of routine operational principles and procedures to install rail as part of workplace activities across a variety of operational contexts within the Australian rail system.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

**ELEMENT PERFORMANCE CRITERIA**

<table>

<tbody>
<tr>
<td>1 Identify job requirements</td>
<td>1.1 Scope of work is determined and resources are arranged</td>
</tr>
<tr>
<td></td>
<td>1.2 Replacement rail is checked for compliance with acceptance standards in accordance with organisational policies and procedures</td>
</tr>
<tr>
<td>2 Prepare rail for installation</td>
<td>2.1 Rails are loaded and unloaded using approved methods to minimise risk to health and safety and damage to rail components</td>
</tr>
<tr>
<td></td>
<td>2.2 Rails are cut to required length using an appropriate method to minimise delays and wastage</td>
</tr>
<tr>
<td></td>
<td>2.3 If required, rails are bent to the correct curvature to ensure correct track geometry is maintained to standard</td>
</tr>
<tr>
<td>3 Position rail</td>
<td>3.1 Where required, existing rail is unfastened and removed using appropriate equipment or manual method</td>
</tr>
<tr>
<td></td>
<td>3.2 New rail is lifted into place using appropriate equipment or manual method maximising efficiency and minimising risk of injuries</td>
</tr>
<tr>
<td>4 Join rail ends</td>
<td>4.1 Rail joints are prepared for welding or are assembled and installed to specifications in accordance with organisational policies and procedures</td>
</tr>
<tr>
<td></td>
<td>4.2 Rail bonds or other track circuit connections are installed or restored as required in accordance with organisational policies and procedures</td>
</tr>
<tr>
<td>5 Restore track</td>
<td>5.1 Track fastenings are restored in accordance with organisational policies and procedures</td>
</tr>
<tr>
<td>6 Complete documentation</td>
<td>6.1 Required documentation is completed in accordance with organisational policies and procedures</td>
</tr>
</tbody>
</table>
**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations applicable to the job role
- Workplace procedures for installing and replacing rail
- Problems or hazards that may occur when loading and unloading rail and when installing and replacing rail, and action that can be taken to report or resolve them
- Acceptance standards for re-use of rails
- Rail installation acceptance standard
- Characteristics of plant and equipment, transport, structures, hardware and components used in work activities
- Relevant recording and documentation procedures

**Required skills:**

- Communicate effectively with others when installing and replacing rail
- Interpret and follow operational instructions and prioritise work when installing and replacing rail
- Complete documentation relating to the installation and replacement of rail
- Work collaboratively with others when installing and replacing rail
- Report and rectify within limits of own role problems, faults and malfunctions that may occur when installing and replacing rail in accordance with regulatory requirements and workplace procedures
- Modify activities depending on differing operational contingencies, risk situations and environments
- Measure rail weight and dimensions
- Check compliance between work and job specifications
- Select and use required personal protective equipment (PPE)
- Select and use relevant equipment and tools
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - loading and unloading rails correctly
  - removing existing rail and/or lifting new rail into place using appropriate equipment and methods
  - preparing rail joints and installing them correctly
  - restoring track fastenings according to workplace procedures
  - checking that replacement rails meet requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rail loading and unloading equipment may include:
- off-track or on-track plant
- manual methods
- rail trains
- mechanical handling and lifting equipment

Rail loading and unloading methods may vary according to:
- rail length
- on-site storage
- rail re-use intentions

Rail installation and replacement may include:
- laying new rail
- replacing worn or defective rail with new or second-hand rail
- replacing rail defects with new or second-hand closure rails
- installing bonded insulated joints
- transposing rails

Equipment may include:
- mechanical handling and lifting equipment
- hand tools, including impact wrench, grinder, tension wrench, friction rail saw, and velocity rail punch
- rail threaders
- fastening equipment
- cutting and boring equipment

Materials may include:
- new or second-hand rail
- fastenings
- plates
- anchors
- bolts
- nuts
- washer clips
- rail jewellery

Rail joint parts and surroundings to be checked may include:
- joint insulation
- fishbolts
- rail bonds
- rail geometry

Fastenings may include:
- bolts
Depending on work context, safety and PPE may include:

- rail fasteners
- coach screws
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- dust masks
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

| 1 Assemble components | 1.1 Correct components are identified and selected to comply with specifications  
1.2 Components are pre-assembled and positioned for installation and to identify any manufacturing fitting requirements  
1.3 Components/linkages are modified to allow for complete installation as per job specifications |
| 2 Install equipment and components | 2.1 Components are fabricated to ensure compliance with job specifications  
2.2 Equipment/component layouts are checked to ensure positioning job specifications  
2.3 All hole/fastening positions are marked and drilled to allow for installation  
2.4 Equipment/components are assembled and secured in the correct sequence  
2.5 All interlinking components are attached and secured  
2.6 Operational power source is connected by appropriate personnel if required to allow for operational testing |
| 3 Test and adjust equipment | 3.1 Required authorisation for testing is confirmed to ensure safe train operations may continue  
3.2 Correct test equipment/procedures are identified  
3.3 Appropriate tests are correctly carried out in conjunction with other personnel to ensure operational compliance  
3.4 All required adjustments are carried out in conjunction with other personnel when required to ensure correct operational compliance  
3.5 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning  
3.6 Equipment is locked and secured to ensure against unauthorised interference |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
REQUIRED KNOWLEDGE AND SKILLS

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace standards and procedures for the installation of mechanical infrastructure for signalling
- Problems that may occur during the installation of mechanical infrastructure for signalling, and action that can be taken to report or resolve the problems
- Hazards that may exist when installing mechanical infrastructure for signalling, and ways of controlling the risks involved
- Principles of signalling
- Mechanical infrastructure limitations and characteristics
- Fault diagnosis, fault rectification and problem solving
- Material safety data sheets (MSDS)
- Features, characteristics and applications of chemicals, paints and lubricants used on mechanical infrastructure
- Mechanical signal adjusting techniques
- Fault finding and testing procedures
- Track layout
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when installing mechanical infrastructure for signalling
- Read and interpret designs, instructions, procedures, information, technical data and drawings relevant to the installation of mechanical infrastructure for signalling
- Interpret and follow operational instructions and prioritise work
- Complete documentation and records related to the installation of mechanical infrastructure for signalling
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing mechanical infrastructure for signalling
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing mechanical infrastructure for signalling in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use hand, power tools, portable electric generators and air compressors etc.
- Use appropriate fabrication techniques
- Measure, align and assemble pre-made components
- Assemble inter-linking components
- Test and adjust mechanical equipment
- Check and confirm compliance to operational specifications
- Use mobile plant and lifting equipment
- Use and correctly dispose of a range of chemical cleaning agents, protective paints and lubricants
- Adapt to differences in equipment in accordance with standard operating procedures
- Determine compensation of points and signal lead designs
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - assembling components correctly
  - installing equipment and components correctly
  - adjusting and testing equipment for correct operation

Context of and specific resources

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Site preparation may include:
- levelling
- cleaning
- preparing trenches
RANGE STATEMENT

- control cable and linkage routes
- mechanical
- pneumatic/hydraulic
- electric

Equipment types may include:
- signs
- lamps
- brackets
- level crossing assembly
- backboards
- clamp locks
- hoods
- switch locks
- warning lights
- bells
- masts
- mechanical points and point machines
- train stop
- non-interlocked levers
- chain locks
- facing point locks
- rod lines
- derailers
- 'A' frames
- signals
- ground frames

Liaison may be required with:
- internal and external personnel

Activities may include:
- cutting
- bending
- shaping
- welding
- drilling
- bolting
- clamping with ferrous and non-ferrous bar, rod, tube, chain and wire rope

Resources may include:
- chemical cleaning agents
- protective paints
- lubricants

Fixing and fastening may include:
- chemical bonding and bolting
- riveting
RANGE STATEMENT

Tools may include:
- pining
- hand tools
- power tools
- air tools
- specialist tools as required by the organisation

Communication equipment may include:
- two-way radios
- computers
- telephones/mobile phones

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses and safety glasses
- insect repellant
- safety headwear and footwear
- portable radios
- hand lamps and flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company standards, rules and procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, policies and workplace procedures
- job specifications
- technical manuals
- equipment/operational management information
- technical and engineering instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**  
1 Assemble components  
**PERFORMANCE CRITERIA**  
1.1 Correct components are identified and selected to comply with job specifications  
1.2 Equipment and components are pre-assembled and positioned for installation in compliance with work orders and job specifications

2 Install equipment and components  
2.1 Equipment/component layout is prepared and checked to ensure position matches the job specifications  
2.2 All fastening positions are marked and drilled for installation  
2.3 Equipment and components are secured in the correct sequence and position, and are in compliance with the job specifications  
2.4 Additional requirements or alterations to existing components are identified and appropriate follow-up action is taken  
2.5 Manufacturing of additional components is carried out to allow for complete installation  
2.6 Alterations to existing components are carried out to provide for the installation of new equipment  
2.7 All interlinking components are correctly attached and secured ready for testing in compliance with work specifications

3 Test and adjust equipment  
3.1 Required authorisation for tests is confirmed to ensure safe train operations may continue  
3.2 Test procedures are coordinated and liaison with appropriate personnel is maintained to ensure overall safety  
3.3 Appropriate tests are carried out to ensure all operations are within specifications and appropriate adjustments are made to ensure smooth operation  
3.4 Testing is carried out to ensure functionality of all operations to the locking table  
3.5 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
REQUIRED KNOWLEDGE AND SKILLS

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation of mechanical signalling locking and interlocking devices
- Problems that may occur during the installation of mechanical signalling locking and interlocking devices, and action that can be taken to report or resolve the problems
- Hazards that may exist when the installing mechanical signalling locking and interlocking devices, and ways of controlling the risks involved
- Principles of signalling
- Material safety data sheets
- Mechanical fitting techniques
- Fault finding techniques
- Characteristics and applications of chemicals, paints and lubricants
- Pneumatic and hydraulic techniques
- Machining techniques
- Track layout
- Relevant mechanical theory and principles
- Relevant recording and documentation procedures
- Relevant sections of Australian Standards AS 4292 and AS 3000

Required skills:

- Communicate effectively with others when installing mechanical signalling locking and interlocking devices
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the installation of mechanical signalling locking and interlocking devices
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the installation of mechanical signalling locking and interlocking devices
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing mechanical signalling locking and interlocking devices
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing mechanical signalling locking and interlocking devices in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when installing mechanical
Required skills:

signalling locking and interlocking devices

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use and dispose of a range of chemical cleaning agents, protective paints and lubricants
- Use high level fitting skills to fit and finely adjust inter-linking mechanical components
- Use hand, portable, power and air tools
- Assemble inter-linking components
- Test and adjust close tolerance mechanically operating equipment
- Use portable electric generators and air compressors
- Check and confirm compliance with operational specifications
- Work in confined spaces
- Use appropriate painting techniques
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Unlocking and interlocking devices to be installed and maintained may:
- all those in service in the Australian rail system
RANGE STATEMENT

include:

Job specifications are:  
• as defined in relevant technical manuals/documents

Equipment may include:  
• ground frames  
• locking/interlocking machines (cabins)  
• Annett locks  
• key locks  
• staff locks  
• circuit controller  
• rod leads  
• point indicators  
• CCT controllers

Equipment technology may include:  
• mechanical  
• pneumatic  
• hydraulic  
• electric

Tools may include:  
• jigs  
• vices  
• cutting equipment  
• drills  
• spanners  
• files  
• bending devices  
• verniers  
• gauges  
• clamps

Installation and assembly may include:  
• application of chemical cleaning agents  
• protective paints and lubricants

Liaison may be required with:  
• internal personnel  
• external personnel

Layout includes:  
• the physical placement and planning of all equipment, components and connections

Fixing and fastening may include:  
• chemical bonding  
• bolting

Manufacturing and installing may include:  
• cutting  
• bending  
• shaping  
• welding  
• drilling
RANGE STATEMENT

- bolting
- clamping with ferrous and non-ferrous bar
- rod
- tube
- chain
- wire rope

Components may include:
- bolts
- shims
- pins
- rods
- bars
- points
- floor plates
- brackets
- levers

Communication equipment may include:
- two-way radios
- computers and/or telephones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
RANGE STATEMENT

- site and route plans
- schematic/wiring diagrams and sketches
- traction bonding plans
- equipment/operational management information
- technical and engineering instructions and specifications
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine test requirements | 1.1 Test site is identified and prepared using appropriate procedures and materials  
1.2 Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements |
| 2 Conduct testing using hand directed equipment | 2.1 The most appropriate ultrasonic test for the application is selected  
2.2 Testing equipment is selected and prepared in accordance with standards and/or procedures  
2.3 Ultrasonic test is carried out in accordance with relevant standards, specifications and OH&S requirements  
2.4 Ultrasonic testing equipment is checked for proper function, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions |
| 3 Conduct visual examination and measurement of rail and welds | 3.1 Rail or weld is visually assessed for obvious defects  
3.2 New welds are assessed for alignment and adjustment tolerance in accordance with standards and/or procedures  
3.3 Weld repairs are assessed for alignment tolerance in accordance with standards and/or procedures |
| 4 Identify and classify defects | 4.1 Indications are assessed and defects detected in accordance with standards and/or procedures  
4.2 Defects are classified in accordance with standards and/or procedures  
4.3 Defective welds and weld repairs are marked in accordance with standards and/or procedures |
| 5 Complete documentation | 5.1 Test results are reported in accordance with standards and/or procedures  
5.2 Required documentation is completed in accordance with workplace procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Principles of ultrasonic testing
REQUIRED KNOWLEDGE AND SKILLS

- Ultrasonic probes, beam, their characteristics and screen display
- Beam angles and probes required to locate various defect types
- Fundamentals of rail and rail defects
- Rail defects and rail defect classification
- Workplace procedures for the ultrasonic testing of rail and welds
- Problems that may occur during the ultrasonic testing of rail and welds, and action that can be taken to report or resolve the problems
- Hazards that may exist during the ultrasonic testing of rail and welds, and ways of controlling the risks involved
- Basic mechanical knowledge relevant to the ultrasonic testing of rail and welds
- Relevant communication systems and procedures
- Workplace protection
- Hazardous situations and related personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to the ultrasonic testing of rail and welds
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the ultrasonic testing of rail and welds
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when testing rail and welds using ultrasonic equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when testing rail and welds using ultrasonic equipment
- Identify hazards associated with ultrasonic testing
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant hand tools, power tools and equipment
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:

- Identify, clean and prepare inspection areas for testing using appropriate procedures and materials
- Visually assess inspection areas and identify and classify obvious discontinuities
- Identify types of rail defects
- Select probes to use to locate each type of defect
- Check and maintain ultrasonic testing equipment
- Set up probes for each type of test
- Test with appropriate probes for each type of defect
- Interpret screen indications
- Locate, measure and assess defect size for all defect types
- Use sizing definitions
- Carry out additional visual and geometry assessments for field welds
- Report test results

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - determining test requirements
  - conducting testing using hand directed equipment
  - conducting visual examination and measurement of rail and welds
  - classifying defects
EVIDENCE GUIDE

Context of and specific resources for assessment

- completing documentation
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- weather conditions specified in relevant standards

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:

- chemicals
- dangerous or hazardous substances
### RANGE STATEMENT

**Types of ultrasonic test and/or visual examination and measurement may vary according to:**
- movements of equipment, goods and vehicles
- location
- rail mass or type
- weld type
- test requirement

**Weld type may include:**
- new aluminothermic welds
- flashbutt welds
- head repair welds using wirefeed or 'stick' welding process

**Test requirements may include:**
- acceptance testing (ultrasonic, geometric alignment and visual) of new aluminothermic welds
- acceptance testing (ultrasonic, geometric alignment and visual) of new flashbutt welds
- acceptance testing (ultrasonic, geometric alignment and visual) of new head repair welds
- ultrasonic testing of plain rail and welds

**Equipment may include:**
- ultrasonic testing units
- ultrasonic probes
- alignment gauges
- tape measures

**Materials may include:**
- coupling medium
- marking pens/paint

**Liaison may include:**
- internal or external personnel from other work areas (e.g. train controllers, electricians)

**Communications equipment may include:**
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

**Depending on work context, safety and personal protective equipment may include:**
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- information provided by other workplace personnel
- rail inspections and reports
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to test switches, crossings and other special components in turnouts using ultrasonic and other nondestructive testing equipment in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining test requirements, conducting ultrasonic testing using hand directed equipment, conducting nondestructive testing, classifying defects, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to testing turnouts using nondestructive testing equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine test requirements | 1.1 Location and type of test is identified  
1.2 Test site is prepared using appropriate procedures and materials  
1.3 Preparation processes are carried out in accordance with the relevant procedures, statutory and OH&S requirements |
| 2 Conduct ultrasonic testing using hand directed equipment | 2.1 The most appropriate ultrasonic test for the application is selected  
2.2 Testing equipment is selected and prepared in accordance with standards and/or procedures  
2.3 Ultrasonic testing equipment is checked for proper function, maintained and stored in accordance with procedures, OH&S requirements and manufacturer instructions  
2.4 Ultrasonic test is carried out in accordance with relevant standards, specifications and OH&S requirements |
| 3 Conduct nondestructive testing | 3.1 Select the most appropriate test for the application  
3.2 Testing equipment is selected and prepared in accordance with standards and/or procedures  
3.3 Nondestructive test is carried out in accordance with relevant standards, specifications and OH&S requirements  
3.4 Nondestructive testing equipment is cleaned and stored in accordance with procedures, OH&S requirements and manufacturer instructions |
| 4 Conduct visual examination | 4.1 Crossings and switches are visually assessed for defects in accordance with standards and/or procedures |
| 5 Identify and classify defects | 5.1 Indications are assessed and defects detected in accordance with standards and/or procedures  
5.2 Defects are classified in accordance with standards and/or procedures  
5.3 Defective components are marked in accordance with standards and/or procedures |
| 6 Complete documentation | 6.1 Test results are reported in accordance with standards and/or procedures  
6.2 Documentation on work undertaken is completed in accordance with workplace requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Ultrasonic testing requirements for turnouts and special trackwork
- Special inspection requirements for alloy hardened crossings
- Application of dye penetrant testing and magnetic particle testing to rail
- Types of rail defects found in turnouts and rail defect classification
- Workplace procedures for the testing of turnouts and rail using nondestructive testing equipment
- Problems that may occur during the testing of turnouts and rail using nondestructive testing equipment, and action that can be taken to report or resolve the problems
- Hazards that may exist during the testing of turnouts and rail using nondestructive testing equipment, and ways of controlling the risks involved
- Relevant workplace technical manuals and instructions
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when testing turnouts and rail using nondestructive testing equipment
- Read and interpret technical data, drawings, instructions and manuals relevant to the testing of turnouts and rail using nondestructive testing equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing of turnouts and rail using nondestructive testing equipment
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when testing turnouts and rail using nondestructive testing equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when testing turnouts and rail using nondestructive testing equipment
- Identify hazards associated with ultrasonic, dye penetrant and magnetic particle testing
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use hand tools, power tools and equipment
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Check turnouts for observable faults
- Apply special inspection requirements for alloy hardened crossings
- Carry out dye penetrant testing of switch blades
- Apply special testing requirements for wire feed repair welds in crossings
- Identify types of rail defects in switches and crossings
- Select probes to use to locate each type of defect and calibrate screen to find each defect type
- Check and maintain nondestructive testing equipment
- Set up probes for each type of test
- Test with appropriate probes for each type of defect
- Locate, measure and assess defect size for all defect types
- Use sizing definitions
- Report test results

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying the location and appropriate type of test
EVIDENCE GUIDE

to be conducted
• conducting tests using hand directed equipment and/or nondestructive testing applications
• checking and maintaining testing equipment appropriately
• completing testing reports

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

</table>
| 1 Install foundations | 1.1 The worksite is inspected and appropriate arrangements made for safe access for heavy plant and equipment  
1.2 Foundations are poured/laid in the correct location, size and quality requirements as per the work orders and job specifications  
1.3 Required authorisation is confirmed to ensure safe train operations may continue |
| 2 Assemble components | 2.1 Components are correctly identified, prepared and laid out for assembly as per work orders/assembly specifications  
2.2 Components are pre-assembled in the correct sequence and checked to ensure safe and efficient installation can commence |
| 3 Install and mount structures and housings | 3.1 Structures are positioned on foundations and checked for compliance to job specifications in preparation for securing  
3.2 Structures are secured and checked for compliance with safety requirements and job specifications  
3.3 Housings and other equipment/components are correctly positioned, installed and secured to comply with work orders and job specification requirements  
3.4 Housings and other equipment/components are secured to ensure correct orientation to track and to prevent unauthorised access  
3.5 Structures and housings are positioned to ensure they are clear of all other structures, obstructions and interference, including minimum structure gauge  
3.6 All equipment is locked and secured to maintain site safety and security |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the erection and mounting of structures and housings for signalling
REQUIRED KNOWLEDGE AND SKILLS

- Problems that may occur during the erection and mounting of structures and housings for signalling equipment and action that can be taken to report or resolve the problems
- Hazards that may exist during the erection and mounting of structures and housings for signalling equipment and ways of controlling the risks involved
- Information in workplace technical manuals and instructions
- Characteristics of plant and equipment, transport, structures, hardware and components used in work activities
- Impact on work activities of regulatory requirements
- Workplace documentation and records system management related to the work concerned
- Material safety data sheets
- Chemicals, paints and lubricants
- Rail operations and train movement
- Materials procurement procedures
- Track layout
- Principles of signalling
- Hazardous materials and situations and related personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when erecting and mounting structures and housings for signalling equipment
- Read and interpret technical data, instructions and manuals relevant to the erection and mounting of structures and housings for signalling equipment
- Interpret and follow operational instructions and prioritise work when erecting and mounting structures and housings for signalling equipment
- Complete documentation related to the erection and mounting of structures and housings for signalling equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when erecting and mounting structures and housings for signalling equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when erecting and mounting structures and housings for signalling equipment in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
Required skills:

- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Measure and lay out plans
- Assemble and pre-assemble pre-made components
- Check compliance between work and job specifications
- Use and dispose of a range of chemicals, paints and lubricants
- Position, secure and check structures, housings and components
- Work at heights and in confined spaces
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment,
EVIDENCE GUIDE

and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all possible weather conditions

Site preparation may include:
- site clearance
- positioning
- levelling
- sub-foundation and ground preparation
- drainage and concrete form work (prefabricated or prepared on site using steel or timber)

Foundations may be:
- poured concrete (pre-mixed or mixed on site) or pre-cast concrete slabs
- flooring
- sub-stands
- blocks

Structures may include:
- signal posts
- level crossing protection
- gantries
- ground frames/bases
- A frames
- cranks
RANGE STATEMENT

- prefabricated structures, but do not include major structures covered by the Building Code

Housings:
- may include prefabricated structures, cupboards and location cases
- may be mounted on the ground, on structures, inside control cases or on external surfaces. Housings covered by the building code are not included

Preparation may include:
- ensuring compliance with drawings/specifications, functionality, minor adjustments
- locating/securing and painting or other protective measures

Job specifications may be defined in:
- relevant technical manuals

Installation and assembly may include the application of:
- protective coatings, paints or lubricants

Gauge structure is:
- as required by each organisation for clearance

Communications equipment may include:
- two-way radios, and/or
- telephones

Depending on work context, safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
RANGE STATEMENT

- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable procedures and codes may include:

Competency Field

Competency Field S - Construction and Installation
TLIS3025A Implement ballast unloading

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to implement ballast unloading in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining the job requirements, carrying out the unloading activity in accordance with work orders, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under limited supervision, generally within a team environment. It involves the application of routine operational principles and procedures to implement ballast unloading as part of workplace activities across a variety of operational context within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Determine job requirements | 1.1 Work requirements are determined for new ballast work and/or repair of existing ballast  
1.2 Obstacles in work area are identified and removal or protection are organised as necessary to ensure smooth workflow following workplace procedures  
1.3 Resources are organised to meet the scope of the job and work methods selected  
1.4 Ballast quantities are determined |
| **2** Undertake ballast unloading | 2.1 Appropriate site communications are established and agreed to ensure safe and efficient working conditions  
2.2 Ballast unloading operation is implemented to ensure appropriate flow rates and extent  
2.3 Ballast is distribution by manual and/or mechanical methods to allow safe operation of trains  
2.4 Ballast is removed from sensitive infrastructure to ensure safe operation of trains and safety of public |
| **3** Complete documentation | 3.1 Documentation is completed in line with workplace requirements |

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the implementation of ballast unloading activities
- Problems that may occur when implementing track ballast activities, and action that can be taken to report or resolve the problems
- Hazards that may exist when implementing track ballast activities, and ways of controlling the risks involved
- Functions of ballast
- Required standard of materials and methods involved in implementing ballast unloading activities
- Ballast flow rates
- Ballast hopper operation
REQUIRED KNOWLEDGE AND SKILLS

- Contents of workplace technical manuals relating to ballast unloading and profile
- Relevant recording and documentation procedures

Required skills:

- Agree on communication methods and communicate effectively with others including train drivers and equipment operators when implementing ballast unloading activities
- Read and interpret technical plans, specifications, instructions and manuals relevant to implementing ballast unloading activities
- Interpret and follow operational instructions and prioritise work when implementing ballast unloading activities
- Complete documentation related to implementing ballast unloading activities
- Operate communication equipment to required protocol
- Work collaboratively with others when implementing ballast unloading activities
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when implementing ballast unloading activities in accordance with regulatory requirements and workplace procedures
- Plan own and team work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

- relevant legislation and workplace procedures
- other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - determining job requirements and ensuring unloading operation is carried out correctly
  - ensuring ballast is distributed so as to meet requirements for safe operation
  - completing documentation according to workplace requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to implement track maintenance and construction activities in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes planning work, implementing construction or maintenance activities, dealing with maintenance and construction problems, and completing required documentation.

Licensing or certification requirements are not applicable to this unit. Persons achieving competence in this unit will need to fulfil legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
Work is performed generally in a team environment. It involves the application of routine operational principles and procedures to the implementation of track maintenance and/or construction as part of workplace activities across a variety of operational contexts within the Australian rail system.

Licensing/Regulatory Information
Refer to Unit Descriptor

| 1 Plan work | 1.1 Scope of work is confirmed  
1.2 Operational constraints are identified  
1.3 Information requirements are identified and accessed  
1.4 Method of work is selected and general operating sequence is determined  
1.5 Resources required for the work are arranged as required |
| 2 Implement construction or maintenance activities | 2.1 Competent personnel are allocated tasks in accordance with the work sequence  
2.2 Tasks are assessed as being in accordance with the predetermined sequence and appropriate for the work  
2.3 Work procedures are monitored and evaluated as being appropriate and in accordance with standards and procedures  
2.4 Human and other resources are assessed as being adequate for the work |
| 3 Deal with maintenance and construction problems | 3.1 Causes and effects of system faults and failures within the worksite are diagnosed  
3.2 Impact of work on track system integrity is assessed  
3.3 Appropriate action is taken to ensure track system integrity  
3.4 Scope of work is modified to include related tasks and/or interfaces  
3.5 Related faults and/or failures beyond the authorised scope of work are reported |
| 4 Complete documentation | 4.1 Documentation on work undertaken is completed in accordance with workplace requirements |
Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Fundamentals of all rail infrastructure
- Track infrastructure and the interaction of all interfaces
- Track defects
- Range of track maintenance and/or construction techniques and work processes
- Range of competencies required to carry out track maintenance and/or construction
- Relevant engineering standards, specifications and codes of practice
- Problems that may occur when maintaining and/or constructing track, and action that can be taken to report or resolve them
- Hazards that may exist when maintaining and/or constructing track, and ways of controlling the risks involved
- Relevant communication systems and procedures
- Authorisation and/or approval processes and procedures
- Documentation and record-keeping requirements

Required skills:

- Communicate effectively with others when implementing track maintenance and construction
- Read and interpret technical data, drawings, instructions and manuals relating to maintaining and/or constructing track
- Interpret and follow operational instructions and prioritise work
- Select appropriate equipment
- Select appropriate work techniques
- Monitor, sequence and implement work activities in terms of planned schedule and appropriateness, in conformance with standards and procedures
- Complete documentation
- Operate communication equipment to required protocol
- Work collaboratively with others when implementing track maintenance and construction
- Diagnose causes and effects of system faults and failures resulting from the work activities
- Assess impact of work on track system integrity
- Report and rectify within limits of own role problems, faults and malfunctions that may occur when implementing track maintenance and construction in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when implementing track maintenance and construction
• Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment (PPE)

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  • the underpinning knowledge and skills
  • relevant legislation and workplace procedures
  • other relevant aspects of the range statement
• Assessment for all types of work must include exercises that demonstrate competent performance of the following in a range of situations:
  • planning work
  • supervising maintenance activities
  • dealing with maintenance and construction problems
  • completing documentation
• Assessment must also include exercises which demonstrate competent performance in supervising the specified activity plus any four from the designated activities listed. The designated activities should be selected so as to provide evidence of supervision of related activities such as track construction, track maintenance or track surfacing.
  • specified activity:
TLIS3026B Implement track maintenance and construction

- maintaining track geometry
  - designated activities (any 4):
- rail adjustment
- guard and check rails installation
- points and crossings maintenance
- flashbutt welding of rail
- aluminothermic welding of rail
- ballasting
- sleeper installation or replacement
- rail replacement
- rail earthworks
- track drainage installation
- constructing and/or installing points and crossings
- on-track machine operation
- installing rail joints
- maintaining rail joints
- maintaining points and crossings
- grinding rails and/or switches and crossings
- installing and maintaining rail fastening and anchoring systems
- maintaining track drainage
- track examination
- measuring and recording track geometry

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Scope of work may include:
- identifying deficiencies
- identifying preparatory or ancillary work required

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movement of equipment, goods and vehicles

Track maintenance and construction activities may include:
- removing track components
- installing track components
- correcting track geometry
- adjusting track components
- repairing track components

Track components may include:
- rail, rail joints and welds
- points and crossings
- sleepers, sleeper plates and sleeper fastenings
- bearers, turnout plates and fastenings
- lubricators
- signs
- ballast
- track formation

Work methods may vary according to:
- location (geography and geometry)
- rail type and length
- sleeper and fastening type
- ballast type and condition
- climatic conditions
- track availability

Extent of activity may vary according to:
- complexity of task
- track availability
- scope of work, including:
  - length of track being worked on
  - type of maintenance and construction activities being undertaken
    - types of track components

Track availability may include working:
- during breaks in traffic
- on limited track possession
- during extended track possession
- on non-operational track or track under construction
Equipment may include:

- mechanical handling and lifting equipment
- track machines
- hand tools, including impact wrenches, grinders, tension wrenches, friction rail saws, rail borers, tie tampers, gauges, track jacks, spiking hammers and bars
- rail tensors
- cutting and boring equipment
- fastening equipment
- on-track equipment, including sleeper spacers
- rail heaters
- welding equipment

Communication systems may include:

- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and PPE may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- track inspections and reports
- work orders
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
• two-way radio or mobile telephone operation procedures
• quality assurance (QA) plans, data and document control
• conditions of service, legislation and industrial agreements, including workplace agreements and awards

**Applicable procedures and codes may include:**

• legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
• relevant Australian standards (AS) and related requirements, including AS 4292
• relevant state and territory legislation relating to:
  • environmental protection
  • OH&S

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Fundamentals of all rail infrastructure
- Structure infrastructure and the interaction of all interfaces
- Structure defects
- Range of structure maintenance and construction techniques and work processes
- Range of competencies required to carry out structure maintenance and construction
- Relevant engineering standards, specifications and codes of practice
- Problems that may occur during structure maintenance and minor construction, and action that can be taken to report or resolve them
- Hazards that may exist when undertaking structure maintenance and minor construction, and ways of controlling the risks involved
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record-keeping requirements

Required skills:

- Communicate effectively with others when maintaining structures and installing minor structures
- Read and interpret instructions, procedures, information, technical data, standards and drawings relating to implementing structures maintenance and the installation of minor structures
- Interpret and follow operational instructions and prioritise work
- Select appropriate equipment
- Select appropriate work techniques
- Monitor, sequence and implement work activities in terms of planned schedule and appropriateness, in conformance with standards and procedures
- Complete documentation
- Operate electronic communication equipment to required protocols
- Work collaboratively with others when maintaining structures and installing minor structures
- Diagnose causes and effects of system faults and failures resulting from the work activities
- Assess impact of work on structure integrity and on track system integrity
- Report and rectify within limits of own role problems, faults and malfunctions that may occur when maintaining structures and installing minor structures, in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when maintaining structures and installing minor structures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment (PPE)

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - planning work, including selecting appropriate methods, sequencing work and arranging resources
  - implementing, monitoring and evaluating maintenance activities
  - dealing appropriately with a number of maintenance and construction problems
  - completing documentation according to workplace requirements
- Assessment must include exercises that demonstrate
competent performance in implementing five of the listed activities below. These must be a combination of the 2 designated activities, plus 1 of the specified activities, plus 2 of the remaining activities:

- designated activities (2):
- installing transoms
- installing minor structures
  - specified activities (any 1):
  - repairing concrete/masonry structures
  - repairing timber structures
  - repairing steel structures
    - remaining activities (any 2):
    - maintaining bridge bearings
    - carrying out routine maintenance of structures
    - installing temporary track support
    - mixing and placing chemical repair products

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Scope of work may include:
- identifying deficiencies
- identifying preparatory or ancillary work required

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Structures maintenance and construction activities may include:
- maintaining structures
- repairing structures
- removing structure components
- installing structure components
- installing transoms

Structures may include:
- bridges
- pipes and culverts
- tunnels
- platforms
- retaining walls
- overhead wiring structures
- level crossings
- buffer stops

Work methods may vary according to:
- location
- type of structure
- structure material type
- climatic conditions
- track availability

Extent of activity may vary according to:
- complexity of task
- track availability
- scope of work including:
  - type of structure being worked on
  - type of maintenance and construction activities being undertaken

Track availability may include working:
- during breaks in traffic
- on limited track possession
- during extended track possession
- on non-operational track or track under construction

Equipment may include:
- mechanical handling/lifting equipment
- hand tools
- small power tools
RANGE STATEMENT

- oxy cutting equipment
- scaffolding
- ladders
- elevated work platform (EWP)
- cranes

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, electricians)

Communications systems may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on work context, safety and personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- track inspections and reports
- work orders
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures
- quality assurance (QA) plans, data and document control
RANGE STATEMENT

- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- relevant Australian standards (AS) and related requirements, including AS 4292
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S

Competency Field

Competency Field S - Construction and Installation
TLIS3037B Install and repair rail earthworks

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to install and repair rail earthworks in accordance with safeworking and regulatory requirements and organisational procedures. It includes determining job requirements, undertaking trenching, establishing track formation and minor trackside earthworks, and completing documentation in accordance with specifications.

Licensing or certification requirements may apply to this unit. Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and guidelines.

Application of the Unit
Work is performed under some supervision, generally in a team environment. It involves the application of routine operational principles and procedures to install and repair rail earthworks as part of organisational activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

1.4 Resources are organised to meet the scope of the job and selected work methods |
| 2 Undertake trenching | 2.1 Worksite is prepared for trenching  
2.2 Excavation is undertaken along or across track to accommodate services in accordance with design and organisational procedures  
2.3 Suitable materials and methods are used to backfill trench in accordance with design and organisational procedures |
| 3 Establish track formation | 3.1 Excavation is undertaken to establish base for formation in accordance with design  
3.2 Excavated material is removed from worksite  
3.3 Suitable materials and methods are used to construct new track formation in accordance with design and organisational procedures |
| 4 Establish and maintain minor trackside earthworks | 4.1 Trackside earthworks are constructed or repaired using appropriate equipment and following workplace procedures  
4.2 Grading and/or compaction are carried out using appropriate equipment, with care taken to maintain correct drainage and to protect the environment, trackside installations, fences and underground cabling |
| 5 Complete documentation | 5.1 Documentation is completed in line with organisational requirements |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for installing and repairing rail earthworks
- Problems that may occur during the installation and repair of rail earthworks, and action that can be taken to report or resolve them
- Hazards that may exist during the installation and repair of rail earthworks, and ways of controlling the risks involved
- Causes of defects, such as erosion and water scouring
- Information in relevant workplace technical manuals and instructions
- Functions and design principles of track formation and earthworks
- Required standards of materials and the methods involved in the installation and repair of rail earthworks
- Characteristics of relevant plant and equipment, hardware and components used in work activities
- Hazardous situations and related personal protection measures
- Required personal protective equipment (PPE)
- Relevant recording and documentation procedures
- Environmental protection requirements relating to installing and repairing rail earthworks

Required skills:

- Communicate effectively when installing and repairing rail earthworks
- Read and interpret plans relevant to the installation and repair of rail earthworks
- Interpret and follow operational instructions and prioritise work when installing and repairing rail earthworks
- Complete documentation related to the installation and repair of rail earthworks
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when installing and repairing rail earthworks
- Report and rectify within limits of own role problems, faults and malfunctions identified when installing and repairing rail earthworks in accordance with regulatory requirements and workplace procedures
- Determine environmental protection requirements as required
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required PPE
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - selecting appropriate work methods
  - establishing track formations in accordance with designs
  - repairing minor trackside earthworks including grading and compaction
  - completing documentation correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rail earthworks may include:
- reconstructing track formation and capping
- shaping shoulders (cesses)
- accessing roads
- rehabilitating waterways, including shaping channels and/or scour protection
- trackside or across track trenching (less than 1.5m depth)
- sub-surface drainage

Services may include:
- water sewage and drainage pipe
- electrical cables
- signalling cables

Equipment may include:
- measuring tapes
- levels

Plant may include:
- front end loaders
- back hoes
- graders
- skidsteer loaders
- grab buckets
- trench diggers
- road trucks
- hand tools and small plant

Support plant and equipment may include:
- cranes and buckets
- compressors, fittings, hoses and pumps
- pneumatic picks and jack hammers
- winches

**Materials may include:**
- soils and gravel
- geo-textile materials
- earthwork protection materials, including fascines, gabion baskets, reno mattresses and revetment mattresses
- concrete pipes, PVC pipes and FRC pipes

**Liaison may include:**
- internal or external personnel from other work areas (e.g. other work teams)

**Communication systems may include:**
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

**Depending on work context, safety and PPE may include:**
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

**Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:**
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

**Information and documents may include:**
- operational instructions, policies and workplace procedures
- relevant logs or record books
- work orders
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures
- quality assurance (QA) plans, data and document control
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
Applicable procedures and codes may include:

- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and guidelines
- relevant Australian standards and related requirements, including AS 4292
- relevant state or territory legislation relating to:
  - OH&S legislation
  - environmental protection legislation

Unit Sector(s)

Competency Field
Competency Field S - Construction and Installation
TLIS3039A Measure and mark track for resurfacing

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to undertake measurement and marking of track for resurfacing operations in accordance with safe working and regulatory requirements and workplace procedures. It includes identifying and marking track obstructions, using appropriate measurement tools to measure the range of geometry elements, calculating recording and marking data for resurfacing operations, and recording and reporting of results. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines. Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to measure and mark track for resurfacing across a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan for resurfacing | 1.1 Scope of resurfacing work, including ramp-in and ramp-out points, mode of machine application and requirements for measurements are determined  
  1.2 Appropriate survey documentation is selected  
  1.3 Survey plaques and monuments are located and accurately interpreted as required |
| 2 Mark/protect obstructions | 2.1 Track obstructions are identified  
  2.2 Track obstructions are marked or protected as required in accordance with workplace procedures |
| 3 Measure geometry and record results | 3.1 Equipment appropriate to task is selected and checked for correct operation in accordance with manufacturers instructions and workplace procedures  
  3.2 Equipment is operated in accordance with manufacturer's or work instructions to provide appropriate data for analysis  
  3.3 Track geometry is measured in accordance with workplace procedures  
  3.4 Measurements are recorded in accordance with workplace procedures |
| 4 Mark track | 4.1 Required offsets and machine adjustment values are calculated and recorded in accordance with workplace procedures  
  4.2 Track data is marked on track where required in accordance with workplace procedures |
| 5 Use/report data | 5.1 Data is compared to maintenance/construction tolerances in accordance with workplace procedures  
  5.2 Results are reported in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Track geometry parameters e.g. alignment, top, line, twist, superelevation associated with maintenance and/or construction
- Workplace procedures for the recording and analysis of track parameters
REQUIRED KNOWLEDGE AND SKILLS

- Obstructions to resurfacing operations, including operation of tampers, ballast regulators and stabilisers
- Methods of marking and protecting obstructions
- Track data requirements for resurfacing
- Problems that may occur during the measurement and marking of track for resurfacing operations, and action that can be taken to report or resolve the problems
- Hazards that may exist when measuring and marking track for resurfacing, and ways of controlling the risks involved
- Relevant records procedures
- Details of local authority procedures

Required skills:

- Communicate effectively with others when measuring and marking track for resurfacing
- Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to the measurement and marking of track for resurfacing operations
- Read recorded track geometry data
- Interpret and follow operational instructions
- Complete documentation related to the measurement and marking of track for resurfacing operations
- Work collaboratively with others
- Promptly report and/or rectify any identified problems when measuring and marking track for resurfacing in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment in accordance with workplace procedures
- Identify, select and use tools and equipment
- Select and use required personal protective equipment conforming to industry and OH&S standard

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying and marking track obstructions
  - using appropriate measurement tools to measure the range of geometry elements
  - calculating recording and marking data for resurfacing operations from information sources such as survey sheets, survey marks and curve compensation charts
  - recording and reporting of results

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- in all weather conditions

Resurfacing work may be related to:

- maintenance surfacing
- track restoration (associated with ballast cleaning, track reconditioning or reconstruction)
- track construction

On-track machines may include:

- production tampers/liners
- turnout tampers/liners
- ballast regulators
- ballast stabilisers

Track measurement may include:

- location of tangent and transition points
- superelevation increments
- track alignment and machine adjustment values
- machine offsets for lining transitions
- rail levels and machine adjustment values
- track lateral and vertical clearances
- superelevation and rates of change
- rail level
- track alignment
- ballast profile
- gauge

Equipment used for measuring and calculating track data may include:

- combination boards
- tapes and plumb bobs
- curve compensation charts
- laser guidance control systems
- computerised systems for inputting field data and calculating resurfacing ramps and offsets
- GPS guidance control systems

TLIS3040A Construct concrete or steel points and crossings

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to coordinate the construction of points and crossings with concrete or steel bearers in accordance with approved standards, safeworking and regulatory requirements, and workplace procedures. It includes carrying out relevant construction work, preparing points and crossings for transport, and completing required documentation.

Licensing or certification requirements are not currently applicable to this unit. Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
The unit involves the application of routine operational principles and procedures to the construction of points and crossings on concrete or steel bearers as part of workplace activities across a variety of operational contexts within the Australian rail system.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites

1.4 Delivered materials are checked for compliance with design  
1.5 Points and crossings are assembled in accordance with the specified design, manufacturer’s instructions and workplace procedures  
1.6 Dimensions, geometry and condition are checked for compliance with design |
| 2 Prepare points and crossings for transport | 2.1 Points and crossings are prepared for transport to site in accordance with manufacturer’s instructions and workplace procedures |
| 3 Complete documentation | 3.1 Required documentation is completed in accordance with workplace procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the construction of points and crossings
- Problems that may occur when constructing points and crossings, and action that can be taken to report or resolve them
- Hazards that may exist when constructing points and crossings, and ways of controlling the risks involved
- Features and principles of operation of points and crossings
- Measurement techniques
- Clearances and tolerances
- Rail bending techniques applied to point and crossing components
- Point and crossing acceptance standards
- Techniques for the construction of points and crossings
- Documentation and record-keeping requirements
- Appropriate hand tools, power tools and equipment required to complete activities

Required skills:

- Communicate effectively with others when constructing points and crossings
- Read and interpret technical data, standards and drawings relating to constructing points and crossings
- Interpret and follow operational instructions and prioritise work when constructing points and crossings
- Use geometric and dimension basic principles to ensure compliance with design
- Complete documentation relating to the construction of points and crossings
- Work collaboratively with others when constructing points and crossings
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Assemble track layouts to plans and specifications
- Use appropriate equipment to make accurate measurements of points and crossings
- Select and use required personal protective equipment (PPE)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - coordinating the construction of concrete or steel points and crossings on at least two separate occasions

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may involve:

- exposure to chemicals, and dangerous or hazardous substances
- movement of equipment, materials and vehicles

Points and crossing may include:

- turnouts
- diamond crossings
- slips
- catchpoints
- expansion switches

Equipment may include:

- off-track plant
- cranes
- mechanical lifting and handling devices
- rail-mounted transporter vehicles
- hand tools and small plant
- rail saws and rail drills

Measurement equipment may include:

- measuring tapes
- stringline
- rail gauges (switch and/or crossing)
- gauge boards

Materials may include:

- rail
- rail jewellery
- sleepers and/or ties
- bearers

Liaison may include:

- internal or external personnel from other work areas, such as signalling staff

Communication systems may include:

- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Safety and PPE may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
• safety footwear
• portable radios and mobile phones
• hand lamps

Competency Field

S – Construction and Installation
TLIS4007A Decommission mechanical signalling infrastructure and interlocking equipment from service

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to decommission mechanical signalling infrastructure equipment and interlocking equipment from service in accordance with safeworking and regulatory requirements and workplace procedures. It includes disconnecting the mechanical/electromechanical equipment and components; modifying, testing and adjusting remaining equipment; and certifying and securing the operational mechanical equipment in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service as part of workplace activities across a variety of operational contexts within the Australian rail system.

| 1 Disconnect mechanical/interlocking equipment and components | 1.1 Required authorisation is confirmed to ensure safe train operations may continue after mechanical/interlocking equipment components are disconnected  
1.2 Mechanical/interlocking equipment and components are prepared to enable ready removal  
1.3 Mechanical/interlocking equipment components are removed from operational area, and the area is made safe |
| 2 Modify, test and adjust remaining equipment | 2.1 Remaining equipment is modified as necessary to ensure compliance with job specification  
2.2 Correct test equipment and procedures are identified  
2.3 Appropriate tests are correctly carried out in conjunction with other personnel to ensure operational compliance |
| 3 Certify and secure the operational equipment | 3.1 Operational readiness is confirmed and required documentation/certification is correctly completed to allow for commissioning  
3.2 Equipment is locked and secured to ensure against unauthorised interference |

# Required Skills and Knowledge

## REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service
- Problems that may occur during the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service, and action that can be taken to report or resolve the problems
- Hazards that may exist when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service, and ways of controlling the risks involved
- Principles of signalling
- Limitations and characteristics of mechanically operated signalling equipment
- Fault diagnosis, fault rectification and problem solving
REQUIRED KNOWLEDGE AND SKILLS

- Repair techniques
- Testing and measuring procedures
- Organisational requirements
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the decommissioning of mechanical signalling infrastructure equipment and interlocking equipment from service
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may arise when decommissioning mechanical signalling infrastructure equipment and interlocking equipment from service
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use hand and power tools
- Use test equipment and testing techniques
- Apply repair and testing practices and procedures
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly disconnecting mechanical/interlocking equipment
  - correctly modifying, adjusting and testing remaining equipment
  - securing and certifying operational equipment to organisational standards

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

- environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
  - in all weather conditions

Work may be conducted in:
  - restricted spaces
  - exposed conditions
  - controlled or open environments

Work may involve exposure to:
  - chemicals
  - dangerous or hazardous substances
  - movements of equipment, materials and vehicles

Preparation may include:
  - loosening connections
  - clearing around work area
  - identifying replacement components/linkages

Work may include:
  - cutting
  - bending
  - shaping
  - welding
  - grinding
  - drilling
  - bolting
  - clamping with ferrous and non-ferrous bar, rod, tube, chain and wire rope

Liaison may be required with:
  - internal and external personnel

Equipment may be:
  - mechanical
  - pneumatic
  - hydraulic
  - electrical
  - signage
  - lamps
  - brackets
  - clamplocks
RANGE STATEMENT

- hoods
- switchlocks
- warning lights
- points and points machines
- signal
- masts
- derailleurs
- trainstop
- facing point locks
- chainlocks
- interlocked levers
- non-interlocked levers
- interlocking machine/s
- operating and interlocking cams/locks
- rod leads
- bells
- 'A' frames
- ground frames
- Annett locks
- key locks
- staff locks
- circuit controllers
- point indicators
- foundations

Components may include:

- bolts
- shims
- pins
- rods
- bars
- joints
- floor plates
- brackets
- levers

Tools may include:

- hand tools
- power tools
- air tools
- specialist tools as required by the organisation

Communication equipment may include:

- two-way radios
- computers
- telephones/mobile phones
RANGE STATEMENT

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps and flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, policies and workplace procedures
- relevant technical manuals
- drawings/sketches
- site plans/layouts
- equipment/operational management information
- technical and engineering instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations, legislation and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to monitor plant and equipment in an environmentally sustainable manner. It includes minimising the effects of pollution during operations and monitoring of plant and equipment; and transporting and handling environmentally hazardous materials safely and in accordance with environmental protection regulations and guidelines. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with relevant state/territory environmental protection regulations and workplace procedures.

Work is performed under some supervision generally within a team environment. It involves the application of the basic environmental protection principles and regulations to the monitoring of plant and equipment in an environmentally sustainable manner.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Minimise the effects of pollution during operations | 1.1 Precautions are taken to ensure spilt fuel, lubricants and chemicals do not pollute the environment  
1.2 Plant and equipment are operated efficiently to minimise pollution of the air environment through excessive exhaust emissions  
1.3 Running of plant and equipment is minimised to avoid unnecessary noise and air pollution  
1.4 Worksites are kept clean and tidy during work operations and the disposal of waste is in accordance with environmental regulations and workplace procedures |
| **2** Minimise the effects of pollution during monitoring of plant and equipment | 2.1 Routine checks are conducted or organised to ensure plant and equipment are operating correctly including emission controls if fitted  
2.2 Suitable precautions are taken during the cleaning of plant and equipment not to pollute the environment  
2.3 Care is taken during services and maintenance operations to implement housekeeping procedures and environmental protection precautions and procedures  
2.4 Rubbish is deposited in designated rubbish disposal bins |
| **3** Transport/handle environmentally hazardous materials safely | 3.1 Relevant documentation is completed in accordance with government regulations and workplace requirements  
3.2 Waste and effluent is disposed of in accordance with government regulations and workplace procedures  
3.3 Environmentally hazardous materials are handled and moved in accordance with relevant regulations, workplace procedures and guidelines aimed at minimising the risk of environmental pollution  
3.4 Where required routes for plant and equipment carrying hazardous and noxious loads are planned to minimise the risk to the environment in the event of accident or spillage |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant environmental protection regulations
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures and guidelines monitoring plant and equipment in an environmentally sustainable manner during workplace operations
- Environmental risks when carrying out workplace operations, and related precautions to control the risk
- Environmental protection standards required in the workplace
- Site layout including location of rubbish disposal bins
- Application of relevant environmental protection regulations and requirements
- Service and maintenance procedures and checklists for equipment and vehicles
- Procedures and processes for waste and effluent regulation where applicable
- Environmental hazards and toxicity of materials typically carried in loads
- Emission control checking requirements for plant and equipment
- Typical problems that can occur when caring for the environment, and appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when monitoring plant and equipment in an environmentally sustainable manner
- Read and interpret instructions, procedures and information relevant to the monitoring of plant and equipment in an environmentally sustainable manner
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to monitoring plant and equipment in an environmentally sustainable manner
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when monitoring plant and equipment in an environmentally sustainable manner
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when monitoring plant and equipment in an environmentally sustainable manner in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when monitoring plant and equipment in an environmentally sustainable manner
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Recognise potential pollution risks and ways of minimising them
Required skills:

- Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
- Follow routine service and maintenance procedures for equipment and vehicles
- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - identifying suitable precautions to prevent plant and equipment from polluting the environment
  - identifying suitable disposal and transport methods of hazardous or noxious materials
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintaining operating equipment in an environmentally sustainable environment may be conducted:

- in a range of work environments by day or night

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites in the transport/logistics industries

Pollutants may include:

- exhaust fumes
- oils and lubricants
- gas
- smoke
- chemicals and detergents
- rubbish
- noise
- wastes
- noxious material
- hazardous substances

Plant and equipment may include:

- motor vehicles, trucks and motorcycles
- fixed equipment emitting exhaust fumes/gases
- rail locomotives and motive power units
- marine vessels
- forklifts, cranes and load shifting equipment
- tow motors
RANGE STATEMENT

- aircraft
- portable equipment emitting exhaust fumes/gases
- spill response equipment

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on workplace context, personal protective equipment may include:

- gloves
- safety headwear and footwear
- eye/ear protection
- two-way radios
- high visibility clothing
- mask
- bio hazard suits
- protective clothing
- carbon monoxide (CO) detector

Information/documents may include:

- OH&S and environmental protection regulations
- workplace housekeeping procedures and policies
- codes of practice for environmental protection
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
RANGE STATEMENT

Applicable regulations and legislation may include:

- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
- marine orders
- workplace relations regulations
- current ADG Code

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**  
1 Identify industry environmentally sustainable information  
1.1 Workplace environmental and resource efficiency issues are identified  
1.2 Range of issues relevant to employment in transport and logistics, including the application of legislation and national standards, industry procedures and OH&S requirements, are assessed from an environmental sustainability point of view  
2 Identify environmentally sustainable work practices for the transport and logistics industry  
2.1 Reasons for environmental sustainability action are identified  
2.2 Appropriate transport and logistics environmentally sustainable work practices are listed

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Environmental issues relating to:
  - life cycle of products: re-new, re-use and recycle  
  - workplace/site  
- Occupational health and safety (OH&S) requirements relating to:
  - OH&S hierarchy of control  
- Service requirements for transport and logistics, including:
  - company requirements and structure  
  - legislation, regulations and codes of practice applicable to specific transport and logistics functions  
  - cleaning and maintenance of equipment  
  - selection of equipment  
  - operation of equipment  
  - resource efficiency processes  
  - transport and logistics environmental options and best practices  
  - supply chain procedures
REQUIRED KNOWLEDGE AND SKILLS

- other relevant enterprise policies, procedures and protocols
- duty of care
- Principles, practices and available tools and techniques of sustainability management relevant to the transport and logistics context, such as:
  - the correct use of equipment according to environmental protection regulations and guidelines
  - techniques for minimising fuel/materials consumption

Required skills:

- Interpersonal skills to:
  - work in a team environment
- Oral communication skills, including:
  - questioning
  - listening
  - liaison
- Reading skills to interpret:
  - work requirements or material safety data sheets (MSDSs)
- Self-management skills to:
  - identify hazard and risks
  - prioritise learning and duties
- Written communication skills for:
  - recording information
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of
EVIDENCE GUIDE
demonstrate competency in this unit

this unit and include demonstration of:
• developing professional relationships with stakeholders
• identifying reasons for environmentally sustainable work practices
• identifying transport and logistics environmentally sustainable work practices
• complying with OH&S standards

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:
• a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
• access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
• relevant and appropriate materials and equipment, and
• applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:
• through activities in an appropriately simulated environment, and/or
• in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Environmental and resource efficiency issues may include:
• minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and
RANGE STATEMENT

consumption of natural resources, for example by:
- minimisation of pollution, through sound equipment
  operating techniques
- minimisation of waste through effective storage and
  recycling
- efficient energy use, seeking alternative sources of
  energy

Legislation and national standards may include:
- Australian standards
- award and enterprise agreements
- licensing arrangements
- relevant codes of practice
- relevant commonwealth, state and territory legislation
  which affects organisational operation:
  - environmental issues
  - industrial relations
  - OH&S

Industry procedures may include:
- carbon training emissions policy
- environmental management strategy
- lean management techniques
- resource recovery

OH&S requirements may include:
- understanding of company OH&S guidelines such as:
  - appropriate personal protective equipment and clothing

Reasons for environmental sustainability action may include:
- biodiversity and environmental impacts
- greenhouse gas emissions
- resource scarcity
- non-renewable resource use
- pollution:
  - air
  - land
  - hazardous materials
  - waste
  - water

Appropriate transport and logistics or warehousing environmentally sustainable work practices may include:
- preventing and minimising risks and maximising
  opportunities such as:
  - minimise usage of fuel or use alternative forms of
    energy where appropriate
  - reducing emissions of greenhouse gases
  - reducing use of non-renewable resources
  - improving energy efficiency
RANGE STATEMENT

- increasing use of renewable, recyclable, reusable and recoverable resources

5.2 Documentation is completed in accordance with relevant regulations and workplace procedures |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OHS and environmental protection regulations
- Workplace procedures and guidelines for the care of the environment during rail infrastructure maintenance and construction
- Environmental risks when undertaking rail infrastructure maintenance and construction and related precautions to control the risk
- Environmental protection standards required during rail infrastructure maintenance and construction activities
- Site layout including location of rubbish disposal bins and run-off protection measures
- Application of relevant environmental protection regulations and requirements including site specific licence and trade waste requirements
- Service and maintenance procedures
- Procedures and processes for waste and effluent regulation where applicable
- Environmental hazards and toxicity of materials typically carried in loads
- Emission control checking requirements for vehicles and relevant equipment where fitted
- Typical problems that can occur when caring for the environment, and appropriate action that can be taken to prevent or solve them

Required skills:

- Read and interpret instructions, procedures and information relevant to the care of the environment during rail infrastructure maintenance and construction activities
- Interpret and follow operational instructions and perform work tasks in required sequence
- Complete documentation related to the care of the environment during rail infrastructure maintenance and construction activities
- Promptly report and/or rectify any identified problems that may arise when caring for the environment during rail infrastructure maintenance and construction activities in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when caring for the environment during rail infrastructure maintenance and construction activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Recognise potential pollution risks and ways of minimising them
- Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
- Follow routine service and maintenance procedures for equipment and vehicles
- Adapt to differences in equipment and operating environment in accordance with standard
Required skills:
operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying the following:
  • the underpinning knowledge and skills
  • relevant legislation and workplace procedures
  • an understanding of the precautions to be undertaken to prevent pollution to the environment within workplace and job role
  • an understanding of the requirements within the workplace procedures and regulatory requirements for the handling and moving of pollutants
  • an understanding of the requirements for the disposal of waste and effluent in accordance with regulations and workplace procedures
  • identification of the pollution likely to affect the workplace and the effect on the job role

• Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  • minimising the effects of a number of different pollutants during work in a variety of situations
  • identifying sensitive sites
  • disposing of contaminants in accordance with relevant regulations, workplace procedures and guidelines
  • completing documentation in accordance with workplace procedures
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Workplaces may comprise:
- large, medium or small worksites in the maintenance and construction of rail infrastructure

Environment may include:
- indoor
- outdoor
- marine or other waterways
- atmospheric
RANGE STATEMENT

Sensitive sites may include:
- culturally sensitive sites
- bio sites
- environmentally sensitive sites

Pollutants may include:
- exhaust fumes
- oils and lubricants
- gas
- smoke
- chemicals and detergents
- noxious weeds
- contaminated soils
- rubbish
- noise
- wastes

Equipment/vehicles may include:
- motor vehicles or trucks
- fixed equipment emitting exhaust fumes/gases
- on-track vehicles
- off-track plant
- small machinery

Cleanup equipment may include:
- spill kits
- bio-degradable detergents
- hay bales
- silt traps

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers)
- local authorities

Communication systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Depending on workplace context, personal protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Information/documents may include:

- OH&S and environmental protection regulations
- regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
- local authority regulations and procedures
- workplace housekeeping procedures and policies
- codes of practice for environmental protection
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures manuals
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- licence conditions

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements,
RANGE STATEMENT

- including AS 4292
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation
- workplace relations regulations

3.2 Suggestions are made for improvements to workplace practices in own work area |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Environmental issues relating to:
  - life cycle of products: re-new, re-use and recycle
  - workplace/site
- Features required for an environmental management strategy:
  - contract requirements
  - energy efficiency systems and procedures
  - procedures and processes
  - targets, such as:
  - carbon emissions reduction
  - cleaner production
  - lean management
- Occupational health and safety (OH&S) requirements relating to:
  - dangerous goods and hazardous substances
REQUIRED KNOWLEDGE AND SKILLS

- OH&S hierarchy of control
- Service requirements for transport and logistics, including:
  - company requirements and structure
  - legislation, regulations and codes of practice applicable to specific transport and logistics functions
  - cleaning and maintenance of equipment
  - selection of equipment
  - operation of equipment
  - resource efficiency processes
  - transport and logistics environmental options and best practices
  - supply chain procedures
  - other relevant enterprise policies, procedures and protocols
  - stakeholder identification
  - relevant competency
  - duty of care
- Principles, practices and available tools and techniques of sustainability management relevant to the transport and logistics industry context, such as:
  - the correct use of equipment and vehicles according to environmental protection regulations and guidelines
  - techniques for minimising fuel/materials consumption

Required skills:

- Interpersonal skills to:
  - work in a team environment
- Oral communication skills, including:
  - questioning
  - listening
  - liaison
  - imparting information
- Reading skills to interpret:
  - job sheet
  - work requirements or material safety data sheets (MSDSs)
- Self-management skills to:
Required skills:

- conduct work practices safely and efficiently
- conduct problem solving
- identify and minimise hazard and risks
- organise work methodically
- prioritise duties
- Written communication skills for:
  - report writing
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and measuring current resource use
  - complying with environmental regulations
  - assisting with enterprise plans to improve resource efficiency

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

procedures, regulations, codes of practice and operation manuals

Method of assessment

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Environmental and resource efficiency issues may include:

• minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by:
  • minimisation of pollution, through sound driving techniques
  • minimisation of waste through effective storage and recycling
  • efficient energy use, seeking alternative sources of energy

Appropriate techniques may include:

• examination of invoices from suppliers
• measurements made under different conditions
• examination of relevant information and data

Organisational plans may include:

• documented policies and procedures
• work plans to minimise waste, increase efficiency of water use etc.
• environmental protection regulations and guidelines on correct use of equipment and vehicles

Suggestions may include ideas that help to:

• prevent and minimise risks and maximise opportunities such as:
  • minimise usage of fuel or use alternative forms of energy where appropriate
  • reduce emissions of greenhouse gases
  • reduce use of non-renewable resources
RANGE STATEMENT

- improve energy efficiency
- increase use of renewable, recyclable, reusable and recoverable resources

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices and to implement improvements and monitor their effectiveness. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
Application of the Unit
This unit applies to individuals who address the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools. It applies to those who have responsibility for a specific area of work or who lead a work group or team.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Investigate current practices in relation to resource usage** | 1.1 Environmental regulations applying to the organisation are identified  
1.2 Procedures for assessing compliance with environmental regulations are assessed  
1.3 Information on environmental and resource efficiency systems and procedures is collected and, where appropriate, provided to the work group  
1.4 Current usage of resources is measured and documented by members of the work group  
1.5 Current purchasing strategies are analysed and documented  
1.6 Current work processes are analysed to access information and data and assist in identifying areas for improvement |
| **2 Set target improvements** | 2.1 Input is sought from stakeholders, key personnel and specialists  
2.2 External sources of information and data are accessed as required |
| **3 Implement performance improvement strategies** | 3.1 Techniques/tools are sourced to assist in achieving targets  
3.2 Continuous improvement strategies are applied to own work area of responsibility, and ideas and possible solutions are communicated to the work group and management  
3.3 Environmental and resource efficiency improvement plans for own work group are integrated with other operational activities and implemented  
3.4 Where appropriate, staff members are trained in new procedures to facilitate environmental and resource efficiency improvements  
3.5 Suggestions and ideas about environmental and resource efficiency management are sought from stakeholders and acted upon where appropriate  
3.6 Costing strategies are implemented to fully value environmental assets |
| **4 Monitor performance** | 4.1 Outcomes are documented and feedback is provided to key personnel and stakeholders  
4.2 Strategies are evaluated  
4.3 New targets are set, and new tools and strategies are investigated and applied  
4.4 Successful strategies are promoted and, where possible, participants are rewarded |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Environmental issues relating to:
  - life cycle of products: re-new, re-use and recycle
  - relevant environmental regulations
  - renewable energy
  - workplace/site
- Features required for an environmental management strategy:
  - contract requirements
  - energy efficiency systems and procedures
  - training outline
  - waste minimisation
  - waste prevention
  - work procedures
  - environmental education
  - past and future reviews and audits relating to environmental management
  - recycling requirements
  - internal and external audit
  - monitoring personnel performance following training
  - quality control checks relating to environmental management
  - review of effectiveness of new procedures and processes
  - targets, such as:
    - carbon emissions reduction
    - cleaner production
    - lean management
  - Occupational health and safety (OH&S) requirements relating to:
    - dangerous goods and hazardous substances
    - OH&S hierarchy of control
  - Service requirements for transport and logistics, including:
    - company requirements and structure, including workplace communication channels and procedures
REQUIRED KNOWLEDGE AND SKILLS

- training of staff
- legislation, regulations and codes of practice applicable to specific transport and logistics management functions
- quality assurance systems relevant to transport
- transport and logistics options and best practices
- supply chain procedures
- other relevant enterprise policies, procedures and protocols
- material recovery opportunities and market availability
- market principles
- stakeholder identification
- planning and related approval processes
- resource recovery infrastructure needs
- relevant competency
- duty of care

- Principles, practices and available tools and techniques of sustainability management relevant to the transport and logistics industry context, such as:
  - the correct use of equipment and vehicles according to environmental protection regulations and guidelines
  - minimising fuel consumption
  - maintenance and servicing

Required skills:

- Analytical skills to:
  - plan and evaluate
  - develop strategies for eco-driving, and efficiency
  - reflect on approaches taken

- Critical thinking skills to develop performance measurements in all aspects of transport and logistics including:
  - the correct use of equipment and vehicles according to environmental protection regulations and guidelines
  - fuel consumption
  - maintenance and servicing
  - specifications
  - technical plans
Required skills:

- material safety data sheet (MSDSs)
- strategies

Interpersonal skills to:
- work in a team to consult on and validate policy
- respond to diversity, including gender and disability

Oral communication skills, including:
- facilitate effective communication
- persuasion - dealing with different points of view and dissenting stakeholders
- listening
- liaison - adjusting communication to suit different audiences

Management skills to:
- apply change management techniques
- conduct complex problem solving
- implement work practices
- identify and minimise hazard and risks
- organise work methodically
- apply quality assurance practices
- use information technology to complete tasks

Use of emergency and personal protective equipment management skills to:
- use emergency and personal protective equipment
- organise work practices safely and efficiently
- identify hazards and risks
- use communications equipment (two-way radio and mobile phone)

Reading skills to interpret:
- organisational policy
- environmental and energy efficiency requirements

Technical skills, including ability to use:
- computers
- software used for:
- documents
- spreadsheets

Written communication skills for:
- policy writing
Required skills:

- report writing requiring precision of expression and language and structures suited to the intended audience
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and measuring current resource use
  - setting targets for improvement
  - implementing and monitoring company strategies to improve company environmental practices and resource efficiency improvements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Compliance includes:
- meeting relevant federal, state and local government laws, by-laws and regulations

Purchasing strategies may include:
- influencing suppliers to take up environmental sustainability

Stakeholders, key personnel and specialists may include:
- individuals and groups both inside and outside the organisation that have some direct interest in the enterprise's conduct, actions, products and services, including:
  - employees at all levels of the organisation
  - customers
  - suppliers
  - other organisations
- key personnel within the organisation, and specialists outside it who may have particular technical expertise

Environmental and resource efficiency plans may include:
- addressing sustainability initiatives with reference to standards, guidelines and approaches such as:
  - ISO 14001 Environmental Management Systems
  - Life Cycle Analyses
  - Global Reporting Initiative
  - Ecological Footprint Assessment
  - Triple Bottom Line reporting
  - Product Stewardship
- initiating and/or maintaining appropriate enterprise procedures for operational energy consumption, including stationary energy and non stationary (transport)

Suggestions may include ideas that help to:
- prevent and minimise risks and maximise opportunities such as:
  - minimise usage of fuel or use alternative forms of
RANGE STATEMENT

energy where appropriate
- reduce emissions of greenhouse gases
- reduce use of non-renewable resources
- make more efficient use of energy
- maximise opportunities to re-use and recycle materials
- identify strategies to offset or mitigate environmental impacts, e.g. purchasing of carbon credits
- express purchasing power through the selection of suppliers with improved environmental performance e.g. purchasing renewable energy
- eliminate the use of hazardous and toxic materials

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to effectively operate a vehicle in an environmentally sustainable manner. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Operation of a vehicle in an environmental sustainable manner is performed with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

**Employability Skills**
This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**  
1 Operate a vehicle in an environmentally sustainable manner

**PERFORMANCE CRITERIA**

1.1 Environmental regulations as they relate to operating vehicles in a sustainable environment are complied with

1.2 Work place environmentally sustainable practices are identified for operating vehicles

1.3 Vehicle is operated in consideration of environmental factors

1.4 Maintenance efficiencies are identified to ensure vehicle is operating at optimum levels

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills required at the completion of this unit

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations relating to operating a vehicle in an environmentally sustainable manner
- Workplace driving and operational instructions
- Efficient driving techniques and environmental driving considerations, including factors that can affect the environment if not operating a vehicle in an environmentally sustainable manner
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Consideration of trip preparation when operating a vehicle in an environmentally sustainable manner
- Work place documentation

**Required skills:**

- Communicate effectively with others
- Read and interpret instructions, procedures, information and signs relevant to the operation of a vehicle in an environmentally sustainable manner
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a vehicle in an environmentally sustainable manner
- Work collaboratively with others when operating a vehicle in an environmentally sustainable manner
Required skills:

- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interactions with others
- Implement contingency plans for unexpected events when operating a vehicle in an environmentally sustainable manner
- Apply precautions and required action to minimise, control or eliminate hazards that may exist
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of a vehicle, its trailers and its equipment and take appropriate action where required

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying techniques for operating a vehicle in an environmentally sustainable manner
  - demonstrating an understanding of relevant legislation and workplace procedures for operating vehicle in an environmentally sustainable manner
  - demonstrating an understanding of the factors that can affect the environment if not operating a vehicle in an environmentally sustainable manner

Context of and specific resources

- Access is required to:
EVIDENCE GUIDE

for assessment

- relevant and appropriate materials and equipment to meet the performance criteria, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Practical assessment must occur:
  - in three different aspects of the job function as it would apply in the workplace
  - A simulator is not suitable for final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Environmentally sustainable driving may include:

- observance of speed limits
- transmission control
- use of auxiliary braking systems
- tyre pressures
- vehicle maintenance
- following distance from the vehicle in front

Vehicles include:

- the full range of heavy vehicles
- commercial vehicles

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory heavy vehicle driving licence/permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- vehicle work diaries or record book

Applicable procedures and codes

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements relevant
RANGE STATEMENT
may include:

- state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to identify a range of wastes and potential hazards that may be present in the work environment, to assess risks associated with identified hazards and to mitigate those risks effectively.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit of competency supports individuals with responsibility for identifying wastes and potential hazards, and assessing risks in a waste operational environment. It includes following directions, implementing systems and plans for control measures, as well as recognising the need for expert advice and/or implementing emergency procedures.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

1. **Identify waste**
   - 1.1 Waste characteristics are identified
   - 1.2 Types of wastes are differentiated by waste stream or waste categories in accordance with state/territory regulatory requirements
   - 1.3 Hazardous and dangerous waste and non-conforming waste are detailed
   - 1.4 Contaminants present in waste are noted
   - 1.5 Further information on waste is obtained by questioning appropriate personnel to ensure correct identification in accordance with state/territory regulatory requirements

2. **Identify hazards and assess risk**
   - 2.1 Potential hazards present in work environment identified and recorded in accordance with workplace policies and state/territory regulatory requirements
   - 2.2 Based on hazards identified, risks are assessed and reported in accordance with workplace policies and state/territory regulatory requirements
   - 2.3 Supervisor and team members are accurately informed of job requirements, identified hazards and risk assessment
   - 2.4 Safe work practices that prevent risk behaviour are outlined to supervisor in accordance with workplace policies and procedures

3. **Implement and evaluate risk controls**
   - 3.1 Appropriate risk controls are discussed with supervisor and team members
   - 3.2 Appropriate risk controls are implemented in accordance with workplace policies and procedures
   - 3.3 Risk controls implemented are evaluated for effectiveness and modified as required in accordance with workplace policies and procedures

4. **Implement emergency procedures**
   - 4.1 Emergency procedures are identified and confirmed with supervisor
   - 4.2 Emergency procedures are practiced with team members and implemented as required in accordance with workplace policies and procedures, and state/territory regulatory requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Identification of waste:
  - contaminants
  - disposal and recovery routes
  - management options
  - monitoring procedures
  - non-conformances
  - non-conformance handling procedures
  - storage requirements
  - types

- Procedures for containing segregated waste types, including containment and isolation of hazardous waste

- Emergency response procedures relating to:
  - coding systems
  - confined space procedures
  - duty of care
  - environmental agencies
  - identification of work areas, including location of:
    - alarms
    - emergency equipment
    - communications equipment
      - reporting requirements
      - signalling techniques
      - state/territory environmental regulations
      - waste containment methods and isolation of emergencies
      - waste management hierarchy

- Work health and safety (WHS)/occupational health and safety (OHS) requirements relating to:
  - chemical storage and decanting
  - dangerous goods and hazardous substances
  - first aid appropriate to likely hazards and risks in work environment
  - hierarchy of control

- Potential hazards and risks relating to:
  - dangerous goods
  - potential incidents
Required skills:

- Apply signaling techniques
- Communicate effectively verbally and in writing
- Conduct work practices safely and efficiently
- Document and keep records
- Follow instructions and ask questions
- Identify hazards and assess risks
- Identify waste types and waste non-conformances
- List potential hazards and risks
- Prioritise duties
- Provide information
- Read and interpret:
  - emergency requirements
  - hazard advice
  - job sheets
  - work requirements and safety data sheets (SDS)/material safety data sheets (MSDS)
- Segregate valuable resources in composite materials
- Segregate waste types, including potentially hazardous waste
- Use emergency and personal protective equipment (PPE)
- Work as part of a team
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- identify a range of waste streams, hazardous wastes and waste contaminants
- identify a range of potential hazards present in the workplace and assess risk
- observe WHS/OHS requirements.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Assessment of essential required knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian Standards requirements.

Resource implications for assessment include:

- work plans and approved specifications
- forms and procedures manuals.

Method of assessment

The process of identifying waste and hazards must meet waste industry expectations. If the environment is narrowly defined or is not representative of industry needs, it may be necessary to refer to portfolio case studies to assess competency in the identification of waste and hazards.

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the TLI10 Transport and Logistics Training Package, include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the required knowledge for practical application
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Waste characteristics may include:
- density
- level of contamination
- quality
- quantity
- shape
- size
- volume
- weight

Waste stream may include:
- construction and demolition
- dangerous goods
- green waste
- hazardous substances
- municipal waste

Waste categories may include:
- asbestos
- clinical/cytotoxic waste – medical waste, dressings, sharps, pharmaceutical products, anatomical waste
- commercial and industrial waste
- construction and demolition waste – broken bricks, concrete, plasterboard, glass, metals, soils, tiles, timbers
- general household waste/hard rubbish
- hazardous waste – acid, caustic, greasy trap waste, oily rags, filters, coolants, oily sludges, septic waste, solvents, trade waste (i.e. paints), used cooking oils, batteries
- manufactured products – clothing and footwear
- organic and green waste – fruit, vegetables, fish, all green waste
- processed food and beverage waste – food, beverages, tobacco and liquor, used cooking oil
- quarantine waste – airport and seaport amnesty bin waste, wash water waste from international vessels and from cleaning of heavy vehicles
- recyclable materials – cardboard, plastic wrap, polystyrene, newspapers, magazines, phone books, boxes, cartons and packaging
- sanitary waste

Hazardous and dangerous waste may include:
- all waste depending on the condition, environment and extent of personal exposure
- asbestos
- biological products
• blood products
• chemicals
• electrical wiring
• glass
• hospital waste
• leaking containers
• medical waste
• needles and syringes
• oil and petrol

Non conforming waste may include:
• contamination
• hazardous or dangerous waste
• inferior quality and unacceptable waste streams

Contaminants may include:
• infestation
• mixing waste types
• rot or mould
• sunlight
• waterlogging

Other potential hazards and risks are those that may lead to:
• damage to plant, vehicle or property
• harm to the environment, including soil and streams
• illness or injury to employees, contractors or the general public
• injuries resulting from manual handling and repetitive work

Hazards and risks may include:
• broken glass
• burns
• clinical/cytotoxic waste (e.g. dressings and sharps)
• compaction equipment
• contamination
• corrosion
• dust
• fire
• fumes
• narrow driveways
• other vehicles and equipment
• overhanging signs
• projectiles
• spark-producing equipment
• weather
Unit Sector(s)

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to implement and monitor environmental protection policies and procedures. It includes accessing relevant information concerning environmental protection regulations and procedures, and implementing and monitoring procedures concerning environmental hazards, related control procedures, environmental training arrangements, and required records and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Persons achieving competence in this unit will need to fulfil the relevant legislated requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed generally within a team environment. It involves the application of the environmental protection principles and regulations to implement and monitor environmental protection policies and procedures during the course of workplace operations.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Access information concerning environmental protection regulations and procedures | 1.1 Relevant provisions of environmental legislation and codes of practice are accurately followed  
1.2 Information on workplace environmental policies, procedures and programs is stored in a readily accessible location and manner  
1.3 Information is accurately and clearly explained to the work team and updated according to change in workplace policy  
1.4 Information about the outcomes of environmental risk identification and control procedures is provided to the appropriate personnel |
| 2 Implement and monitor procedures concerning environmental hazards | 2.1 Existing and potential environmental hazards in the workplace are identified and reported  
2.2 Identified hazards are assessed in relation to relevant environmental protection policies  
2.3 Workplace procedures for dealing with hazardous events are implemented wherever necessary to ensure that prompt control action is taken  
2.4 Hazardous events are investigated to identify causes, and control measures are implemented to prevent recurrence and minimise risks of such events |
| 3 Implement and monitor environmental control procedures | 3.1 Existing environmental protection measures are implemented, monitored and reviewed  
3.2 Work procedures to protect environment are implemented and adherence to them by the work group is monitored  
3.3 Required improvements to existing control measures are identified, including required resources for implementation, and reported to appropriate personnel |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant legislated requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.
- Workplace procedures and guidelines for implementing and monitoring environmental protection
REQUIRED KNOWLEDGE AND SKILLS

- Environmental risks associated with workplace operations and related precautions to control the risk
- Environmental protection standards required in the workplace
- Workplace environmental hazards and related hazard control measures
- Workplace reporting and recording processes and procedures
- Hierarchy of control principles for environmental risks (including preferred models for risk elimination, engineering controls, administrative controls and specific environmental protection techniques)
- Equipment and resources required when implementing and monitoring environmental protection, and instructions for their use
- Problems that can occur when implementing and monitoring environmental protection procedures
- Significance of EEO principles and practice for environmental management
- Literacy levels and communication skills of those supervised
- Relevant management systems and procedures for environmental management
- Organisational structure and site layout

Required skills:

- Communicate effectively with others both orally and in writing when implementing and monitoring environmental protection procedures
- Counsel, advise and inform others on environmental protection matters
- Read and interpret instructions, procedures, information and signs relevant to the implementation and monitoring of environmental protection procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation and monitoring of environmental protection procedures
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when implementing and monitoring environmental protection procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Recognise potential environmental risks and ways of minimising them
- Promptly report and/or rectify any identified problems that may occur when implementing and monitoring environmental protection procedures in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Carry out training needs analysis relevant to workplace requirements
- Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Implementation and monitoring of environmental protection policies and procedures may occur:

- in a range of work environments by day or night

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites in the transport, warehousing, distribution and/or storage industries

Workplace procedures for dealing with hazardous events may include:

- inspection and housekeeping
- training and assessment
- maintenance including plant and equipment
- purchasing
- evacuation
- hazardous substance containment
- operational instruction
- environmental information including incident and management practices
- consultation
- specific hazardous materials policies and procedures
- counselling and disciplinary processes
- risk assessment and control
- first aid
- internal and external auditing

Environment may include:

- indoor
- outdoor
RANGE STATEMENT

Environmental protection requirements may be obtained from:
- marine
- atmospheric
- environmental hazard reports
- risk control procedures
- workplace personnel and management
- relevant legislation

Environmental hazards may include:
- exhaust fumes
- oils and lubricants
- gas
- smoke
- chemicals and detergents
- rubbish
- noise
- wastes

Servicing requirements may be obtained from:
- customer requests
- works orders
- freight requirements
- workplace personnel

Depending on workplace context, personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Personnel in the work area may include:
- workplace personnel including supervisors and management
- site visitors
- contractors
- official representatives

Support services can include:
- loading/unloading requirements
- load security/protection
- receipt personnel
- special vehicle access/parking

Promotional activities may include:
- public relations activities
- press releases
- open days
- in-house newsletters
- publications
- advertising programs
- seminars
- promotional briefings
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- OH&S and environmental protection regulations
- workplace housekeeping procedures and policies
- codes of practice for environmental protection
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- applicable legislated safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- ADG Code
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Develop workplace sustainability policy | 1.1 Scope of sustainability policy is defined  
1.2 Stakeholders are identified and consulted as a key component of the policy development process  
1.3 Strategies for minimising resource use, reducing toxic material and hazardous chemical use, and employing life cycle management approaches at all stages of work are included in sustainability policy  
1.4 Recommendations are made for policy options based on likely effectiveness, timeframes and cost  
1.5 Policy developed reflects the organisation's commitment to sustainability as an integral part of business planning and as a business opportunity  
1.6 Appropriate methods of implementation are agreed |
| 2 Communicate the policy | 2.1 The policy, including its expected outcome, is promoted to key stakeholders  
2.2 Those involved in implementing the policy are informed of outcomes expected and activities to be undertaken, and responsibilities are assigned |
| 3 Implement the policy | 3.1 Procedures to help implement the policy are developed and communicated  
3.2 Strategies for continuous improvement in resource efficiency for the transport industry are implemented  
3.3 Provision for staff training to incorporate resource efficiency procedures is made  
3.4 Record systems for tracking continuous improvements in sustainability approaches are established and responsibilities are assigned |
| 4 Review policy implementation | 4.1 Outcomes are documented and feedback is provided to key personnel and stakeholders  
4.2 Success or otherwise of policy is investigated  
4.3 Records are monitored to identify trends that may require remedial action, and are used to promote continuous improvement of performance  
4.4 Policy and or procedures are modified as required to ensure improvements are made |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Environmental issues relating to:
  - life cycle of products: re-new, re-use and recycle
  - relevant environmental regulations
  - renewable energy
- Features required for an environmental management strategy:
  - contract requirements
  - energy efficiency systems and procedures
  - training outline
  - waste minimisation
  - waste prevention
  - work procedures
  - environmental education
  - past and future reviews and audits relating to environmental management
  - recycling requirements
  - internal and external audit
  - monitoring personnel performance following training
  - quality control checks relating to environmental management
  - review of effectiveness of new procedures and processes
  - targets, such as:
    - carbon emissions reduction
    - cleaner production
    - lean management
- Occupational health and safety (OH&S) requirements relating to:
  - dangerous goods and hazardous substances
  - OH&S hierarchy of control
- Service requirements for transport and logistics, including:
  - company requirements and structure, including workplace communication channels and procedures
  - provision for staff training
  - legislation, regulations and codes of practice applicable to specific transport and logistics management functions
REQUIRED KNOWLEDGE AND SKILLS

- quality assurance systems relevant to transport and logistics
- transport and logistics options and best practices
- supply chain procedures
- knowledge of environmental and resource hazards/risks and inefficiencies associated with enterprise
- other relevant enterprise policies, procedures and protocols
- material recovery opportunities and market availability
- market principles
- stakeholder identification
- planning and related approval processes
- resource recovery infrastructure needs
- relevant competency
- duty of care
- Policy development processes and practices
- Principles, practices and available tools and techniques of sustainability management relevant to the transport and logistics industry context, such as:
  - the correct use of equipment and vehicles according to environmental protection regulations and guidelines
  - minimising fuel consumption
  - maintenance and servicing
  - equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy/s being developed

Required skills:

- Analytical skills to:
  - develop diagnostic techniques
  - conduct feasibility analysis
  - research, plan and evaluate
  - list options through procedures, such as brainstorming
  - develop strategies for eco-driving, and efficiency
  - devise solutions
  - reflect on approaches taken
- Critical thinking skills to develop performance measurements in all aspects of transport and logistics including:
Required skills:

- the correct use of equipment and vehicles according to environmental protection regulations and guidelines
- minimising fuel consumption
- maintenance and servicing
- specifications
- technical plans
- material safety data sheet (MSDSs)
- strategies
- Interpersonal skills to:
  - work in a team to consult on and validate policy
  - respond to diversity, including gender and disability

- Oral communication skills, including:
  - facilitate effective communication
  - persuasion - dealing with different points of view and dissenting stakeholders
  - listening
  - liaison - adjusting communication to suit different audiences

- Management skills to:
  - apply diagnostic techniques
  - apply change management techniques
  - conduct strategic problem solving
  - conduct complex problem solving
  - plan work practices
  - identify and minimise hazard and risks
  - organise work methodically
  - apply quality assurance practices
  - use information technology to complete tasks

- Use of emergency and personal protective equipment management skills to:
  - use emergency and personal protective equipment
  - organise work practices safely and efficiently
  - identify hazards and risks

- Reading skills to interpret:
  - complex and formal documents such as policy and legislation
  - organisational policy
Required skills:

- environmental and energy efficiency requirements
- Technical skills, including ability to use:
  - computers
  - software used for:
  - documents
  - spreadsheets
- Written communication skills for:
  - policy writing
  - report writing requiring precision of expression and language and structures suited to the intended audience
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - developing organisational sustainability policy
  - communicating organisational sustainability policy
  - implementing and monitoring organisational sustainability policy

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Scope of sustainability policy may include:
- an integrated approach to sustainability which includes environmental, economic and social aspects, or a narrower one to focus on each aspect individually
- the parts of the enterprise to which it is to apply, including whether it is for the whole enterprise, one site, one work area or combinations of these
- addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
  - ISO 14001 Environmental Management Systems
  - Life Cycle Analyses
  - Global Reporting Initiative
  - Ecological Footprint Assessment
  - Triple Bottom Line reporting
  - Product Stewardship

Stakeholders may include:
- individuals and groups both inside and outside the organisation that have some direct interest in the following aspects of the enterprise:
  - conduct
  - actions
  - products
RANGE STATEMENT

- services
- individuals and groups both inside and outside the organisation that have some direct interest in the following aspects of the enterprise:
  - employees at all levels of the organisation
  - customers
  - suppliers
  - regulators
  - other organisations

Strategies may include:
- awareness raising among stakeholders
- training of staff in principles and techniques of sustainability

Sustainability policy may include:
- air pollution
- carbon emission

Business planning may include:
- objectives pertaining to:
  - changes to processes and procedures
  - environmental issues
  - education and training
  - past and future reviews and audits
- review strategies, including:
  - internal and external audits
  - monitoring statistics
  - monitoring personnel performance following training
  - undertaking quality control checks
  - reviewing effectiveness of new procedures and processes
  - formalising review strategies via re-planning
- targets, such as:
  - carbon emissions reduction
  - cleaner production
  - lean management
  - waste minimisation

Resource efficiency for the transport industry may include:
- the correct use of equipment and vehicles according to environmental protection regulations and guidelines
- fuel consumption
- maintenance and servicing, such as importance of correct tyre pressure
Unit Sector(s)

Competency Field
Competency Field U - Environment
TLIU4011A Apply environmental procedures to rail operations

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to care for the environment during rail operations in accordance with approved standards, safeworking and regulatory requirements and organisational procedures.

It includes minimising the effects of pollution during work, reporting any environmental breaches and completing documentation in accordance with environmental protection regulations and guidelines.

Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Work must be carried out in accordance with relevant state/territory environmental protection regulations and organisational procedures.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Minimise the effects of pollution during work
   1.1 Precautions are taken to ensure spilt fuel, lubricants, chemicals and noxious plants do not pollute the environment
   1.2 Equipment and vehicles are operated efficiently to minimise air pollution through excessive exhaust emissions
   1.3 Unnecessary running of engines/equipment is avoided to minimise air pollution
   1.4 Workplaces are kept clean and tidy during work operations and waste is disposed of in accordance with environmental regulations and organisational procedures
   1.5 Noise pollution from work is minimised

2 Respond to environmental incidents
   2.1 Hazard is identified and extent of potential impact is determined
   2.2 Appropriate personal protective equipment is identified, selected and worn/used as required
   2.3 Hazard is managed or isolated as required or instructed
   2.4 Actions are taken to minimise environmental impact
   2.5 Incident is reported to relevant personnel in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Environmental hazards and toxicity of materials typically carried in loads
- Environmental protection standards required during rail operation activities
- Environmental risks when undertaking rail operations and related precautions to control the risk
- Geographical location of waterways and environmentally sensitive areas such as:
  - bio sites
  - culturally sensitive sites
- How to use the correct containment tools
- Information/documents such as:
  - award, enterprise bargaining agreement, other industrial arrangements
  - codes of practice for environmental protection
  - emergency procedures manuals
  - goods identification numbers and codes
  - licence conditions
  - manifests, bar codes, goods and container identification
  - manufacturer instructions concerning the use and servicing of equipment
  - quality assurance procedures
  - regulations and policies concerning noise, waste disposal/reprocessing, handling of dangerous goods/hazardous substances and other environmental protection issues
  - standards and certification requirements
  - workplace housekeeping procedures and policies
- Relevant Australian Standards
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection regulations
- Service and maintenance procedures
- Site layouts including location of waste disposal bins
- Typical problems that can occur when caring for the environment, and appropriate action that can be taken to prevent or solve them

Required skills:

- Adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Complete documentation/communication related to the care of the environment during rail
operation activities

- Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
- Modify activities depending on operational contingencies, risk situations and environments
- Promptly report and/or rectify any identified problems that may arise when caring for the environment during rail operations activities in accordance with regulatory requirements and organisational procedures
- Read and interpret instructions, procedures and information relevant to the care of the environment during rail operation activities
- Recognise potential pollution risks and ways of minimising them
- Select and use required personal protective equipment conforming to industry, WHS/OHS and environmental standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying the following:

- required knowledge and skills
- relevant legislation and organisational procedures.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Competency Field
U – Environment
TLIU5006A Conduct environmental audits

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to conduct an environmental audit in accordance with relevant environmental protection regulatory requirements and workplace procedures. This includes preparing for an environmental audit, scheduling an internal audit, conducting an environmental audit, documenting the findings, and reporting on the environmental audit results. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Licensing/Regulatory Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for environmental audit** | 1.1 Relevant legislation, authority and enterprise requirements pertinent to the operations of the workplace are identified and followed  
1.2 Practices and facilities required to be audited are identified and implications of non-conformance established  
1.3 Technical and/or calibration requirements for audits are noted and, where necessary, appropriate support personnel are identified  
1.4 Work schedules are investigated to identify appropriate schedule for audit |
| **2 Schedule internal audit** | 2.1 Audit timings are planned to ensure that relevant procedures are conducted within workplace agreed time intervals and timeframes  
2.2 Audit frequency is adjusted to ensure minimal disruption to the workplace  
2.3 Contact is made with appropriate personnel and appointments for the audit are made |
| **3 Conduct environmental audit and document findings** | 3.1 Operational procedures and assessment methods for the environmental audit are confirmed with affected personnel  
3.2 Observations and interviews are conducted with (any) required approved third party  
3.3 Documentation of observations and interview responses is completed |
| **4 Report environmental audit results** | 4.1 Outcomes of the audit process are compared to workplace procedures  
4.2 Audit results are discussed with relevant personnel  
4.3 Reports of non-compliance are documented including options for environmental system improvements  
4.4 Reports are forwarded to appropriate personnel for action |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Relevant OH&S and environmental protection procedures and regulations, including the ADG
REQUIRED KNOWLEDGE AND SKILLS

Code where applicable

- Workplace processes for the conduct of an environmental audit
- Problems that may occur during the conduct of an environmental audit and action that can be taken to report or resolve the problems
- Hazards that may exist in the conduct of an environmental audit and ways of controlling the risks involved
- Focus of operation of workplace in relation to potential environmental risks and control/prevention measures
- Environmental risk management and control procedures
- Audit procedures and compliance implementation strategies
- Regulatory and guidance material on environmental safety
- Workplace business policies and plans including procedures for identification of non-compliance and best practice
- Equipment applications, capacities, configurations, safety hazards and control
- Application of relevant Australian Standards and associated certification requirements
- Resource availability including the competencies of individuals in the team or group
- Relevant workplace documentation procedures

Required skills:

- Communicate effectively with others when conducting an environmental audit
- Read and interpret instructions, technical data, regulatory requirements and workplace policies and procedures relevant to the conduct of an environmental audit
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of an environmental audit
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when conducting an environmental audit
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems identified when conducting an environmental audit in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan and organise environmental audit activities
- Monitor work activities in terms of planned schedule
- Modify activities to cater for variations in workplace contexts and environment
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Required skills:

- Select and apply appropriate technology, information systems and procedures
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:
- in various work environments in the warehousing, storage, transport and distribution industries

Customers may be:
- internal or external

Operations may be conducted:
- by day or night in all weather conditions

The workplace environment may involve:
- twenty-four hour operation
- single and multi-site location
- large, medium and small workplaces
- in different sectors of the warehousing, storage, transport and distribution industries

Services, products, risks, work systems and requirements potentially vary:
- as part of enterprise or site specific procedures

Environmental audits may be conducted:
- alone or in conjunction with other staff from the enterprise or external contractors

Audits may involve:
- movement of processed materials, dangerous goods, hazardous substances, waste disposal, run-offs, etc.

Consultative processes may involve:
- employees, supervisors and managers
- customers and suppliers
- relevant environmental authorities and local government departments
- representatives of other enterprises and organisations related to the international transfer of freight
- industrial relations and OH&S specialists
- other professional, maintenance or technical staff

Communications systems may:
- fixed or mobile telephone
RANGE STATEMENT

involve:

- radio
- fax
- email
- electronic data transfer of information
- mail, forms and internal memos

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- environmental codes of practice and regulations relevant to workplace activities
- regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG Code where applicable
- workplace operating procedures, instructions and policies relevant to environmental protection
- operations manuals, job specifications and procedures and induction documentation
- local government environmental protection policies and guidelines
- supplier and/or client instructions
- relevant Australian Standards, criteria and certification requirements
- manufacturers specifications and/or suppliers handling and storage advice
- material safety data sheets
- communications technology equipment and oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- relevant state/territory and local government environmental protection legislation and regulations
- Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant licence or permit requirements and associated regulations
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

Unit Sector(s)

Competency Field
Competency Field  U - Environment
TLIW0036A Apply electric welding process to rail

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to weld rails, crossings and switches using an electric welding process in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes using non-destructive testing to locate defects; preparing rails, crossings or switches for welding; gouging or grinding; setting up welding equipment; performing the welding operation; checking weld conformance; and completing required documentation. These processes are used to repair rail surface defects and restore rail profile to plain rail, crossings and switches.

Licensing or certification requirements are not applicable to this unit. Persons achieving competence in this unit will need to fulfil legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
Work is performed under some supervision, generally in a team environment. It involves the application of routine operational principles and procedures to the welding of rail using an electric welding process as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

1 Prepare rails, crossings or switches for welding
   1.1 Weld repair area is identified and assessed in accordance with standards and procedures
   1.2 Welding equipment and consumables are prepared and checked for serviceability
   1.3 Weld repair area is prepared for welding in accordance with workplace standards and procedures
   1.4 Track components are assembled or aligned to specification where required

2 Use non-destructive testing
   2.1 Appropriate non-destructive testing method is selected and used to identify and locate defects in accordance with organisational standards and procedures

3 Assemble and set up welding equipment
   3.1 Welding equipment is set up and adjusted to meet welding process requirements
   3.2 Accessories and consumables are selected for use

4 Assemble and set up gouging and grinding equipment
   4.1 Gouging and grinding equipment is assembled and set up
   4.2 Equipment settings are adjusted to meet process requirements
   4.3 Accessories and consumables are selected for use

5 Remove defects
   5.1 Appropriate method to be used to remove defect is identified in accordance with organisational standards and procedures
   5.2 Defect is removed using identified method in accordance with organisational standards and procedures

6 Perform welding operation
   6.1 Weld metal is applied to repair area to meet specification in accordance with standards and procedures
   6.2 Welded area is cleaned in preparation for grinding
   6.3 Welded area is ground in accordance with organisational standards and procedures

7 Check weld conformance
   7.1 Finished ground weld area is visually inspected for surface finish and defects
   7.2 Finished ground weld area is checked for conformance to rail, crossing or switch profile acceptance standards
8 Complete post-operative checks and documentation

8.1 Equipment is checked for serviceability

8.2 Defective equipment is replaced and reported for servicing or repair in accordance with organisational policies and procedures

8.3 Documentation on work undertaken is completed in accordance with organisational requirements
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the non-destructive (liquid penetrant or magnetic particle) testing of rail
- Workplace procedures for the removal of defects by gouging, grinding and welding of rail using an electric welding process
- Problems that may occur when welding rail using an electric welding process, and action that can be taken to report or resolve them
- Hazards that may exist when welding rail using an electric welding process, and ways of controlling the risks involved
- Fundamentals of track and components
- Track standards for rail, crossing and switch condition and surface profile
- Acceptance standards for weld repairs on rail
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record-keeping requirements

Required skills:

- Communicate effectively with others when welding rail using an electric welding process
- Correct use of non-destructive (liquid penetrant or magnetic particle) testing equipment, gouging equipment and hand grinding equipment
- Read and interpret technical data, drawings, instructions and manuals relating to welding rail using an electric welding process
- Interpret and follow operational instructions and prioritise work when welding rail using an electric welding process
- Complete documentation relating to welding rail using an electric welding process
- Operate communication equipment to required protocol
- Work collaboratively with others when welding rail using an electric welding process
- Report and rectify within limits of own role problems, faults and malfunctions that may occur when welding rail using an electric welding process in accordance with regulatory requirements and organisational procedures
- Implement contingency plans for unexpected events when welding rail using an electric welding process
- Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment (PPE)
• Select and use hand tools, power tools and equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competency in the following in a range of situations:
  - preparing items for welding according to workplace requirements
  - assembling and setting up welding, gouging and grinding equipment and preparing consumables
  - performing welding, grinding, gouging and testing operations on rails, crossings and switches
  - ensuring weld conformance to organisational requirements
  - completing documentation in accordance with organisational requirements

Context of and specific resources for assessment

- Performance must be demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace or
  - simulated environment using actual components, tools and equipment
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment, and/or
  • in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movement of equipment, goods and vehicles

Types of weld repairs may vary according to:
- welding process location
- rail mass or type
- crossing and switch type
- rail, switch and crossing material

Welding process may include:
- flux core arc welding
- manual metal arc welding

Welding equipment may include:
- electric welders
- generators
- wirefeed welding unit
- electrode holder
- robotic welders

Equipment may include:
- mechanical handling and lifting equipment
- hand tools, including impact wrenches, tie tampers, gauges, track jacks, spiking hammers and bars
- oxy-LPG gouging equipment
- manual or mechanical grinder
- magnetic particle testing kit
- liquid penetrant testing kit
- wire brushes
- rail thermometers
- ‘thermomelt’ crayons
- cutting and boring equipment
- fastening equipment
- fume extraction equipment
- on-line respirator

Materials may include:
- flux core wire
- welding electrodes
- grinding discs

Liaison may include:
- internal or external personnel from other work areas, such as train controllers and signal technicians

Depending on the type of
Applicable procedures and codes may include:

- Organisation concerned and the local terminology used,
- Organisational procedures used,
- Workplace procedures established procedures,
- Enterprise procedures known as:
  - Enterprise procedures
  - Organisational procedures

Information and documents may include:

- Communication equipment may include:
  - Two-way radios,
  - Telephones, including mobile phones,
  - Agreed audible or hand signals,

Depending on the work context, safety and PPE may include:

- Ventilation clothing,
- Long pants and shirts,
- Hearing protection,
- Long gloves,
- Sunscreen,
- Sunglasses,
- Welding helmet,
- Special safety glasses,
- Insect repellent,
- Safety headwear,
- Safety footwear,
- Portable radios and mobile phones,
- Hand lamps,
- Flags,
- Safety devices,
- Special PPE,

Conditions of service, legislation and industrial agreements, including workplace agreements and awards, together with any nationally approved compliance codes and guidelines, organisational policies and procedures.
- local authority regulations and procedures relevant
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S

**Competency Field**

W – Equipment and Systems Operations
TLIW0044A Weld rail on tram/light rail systems using submerged arc welding process

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to weld rail on tram/light rail systems using a submerged arc welding process. It covers preparing materials, selecting and setting up welding equipment, carrying out submerged arc welding, inspecting for and correcting defects, and maintaining weld records. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Welds would mainly involve building up or pad welding on longer lengths of rail on tram/light rail systems. It covers welding both the rail head and the check rail. The weld quality is not measured against any Australian Standards.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Prepare materials for welding | 1.1 Weld requirements are identified from specifications and/or technical drawings  
1.2 Material is correctly prepared using tools and techniques appropriate to the material and process  
1.3 Materials are assembled/aligned to specifications, where required  
1.4 Track is measured prior to commencement of welding |
| 2 Select welding machine settings and consumables | 2.1 Welding machine settings and consumables are identified from job requirements, welding procedures, specifications and/or technical drawings |
| 3 Assemble and set up welding equipment | 3.1 Welding equipment is assembled and set up safely and correctly to standard operating procedures  
3.2 Any defective equipment is tagged and replaced in accordance with organisational and/or manufacturer specifications |
| 4 Weld rail using submerged arc process | 4.1 Pad, butt and fillet welds are deposited correctly in flat, and fillet welds in horizontal position, to specification  
4.2 Joints are cleaned to specifications using techniques and tools appropriate to the defect, material and process |
| 5 Inspect welds and correct faults | 5.1 Weld joints are visually inspected against specifications  
5.2 Track is measured to ensure welded track is within accepted tolerances  
5.3 Weld defects are identified and remedial action is taken, where required  
5.4 Defects are removed with minimum loss of sound metal using techniques and tools appropriate to the defect, material and process |
| 6 Maintain weld records as required | 6.1 Weld records are maintained in accordance with organisational procedures |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Acceptance standards for weld repairs on tram/light rail track
- Authorisation/approval processes and procedures
- Documentation and recordkeeping requirements
- Hazards that may exist when welding rail using submerged welding process, and ways of controlling the risks involved
- Problems that may occur when welding rail using submerged welding process, and action that can be taken to report or resolve problems
- Relevant communication systems and procedures
- Relevant safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Track standards for rail condition and surface profile

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities including traffic management
- Communicate effectively with others
- Interpret and follow operational instructions
- Modify activities depending on operational contingencies, risk situations and environments
- Select and use required personal protective equipment (PPE) conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing and setting up traffic management plan
  - preparing items for welding according to workplace requirements
  - assembling and setting up welding equipment and preparing consumables
  - ensuring weld conforms to organisational requirements
  - completing documentation in accordance with organisational requirements

Context of and specific resources for assessment

- Performance is demonstrated in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may involve exposure to:
- movement of equipment, materials and vehicles

Basic track measurements may include:
- length, depth, width, diameter
- track gauge
- length of weld

Measuring equipment may include:
- tape measures
- track gauge

Materials may include:
- flux core wire
- welding electrodes
- grinding discs

Track layout may include:
- plain track
- turnouts
- special trackwork including catchpoints, expansion switches, diamond crossings and slips

Communication equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- long pants and shirts
- hearing protection
- long gloves
- spats
- sunscreen
- sunglasses
- welding helmet
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- special PPE

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
Applicable regulations and legislation may include:

- information provided by other workplace personnel
- rail inspections and timekeeping records
- trackworker standard manual
- technical instructions
- manufacturer or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- legislated rail safety requirements including state acts and regulations together with any nationally approved compliance codes and/or guidelines
- local authority regulations
- relevant state/territory OH&S and environmental protection legislation

**Unit Sector(s)**

Not applicable.

**Competency Field**

W – Equipment and Systems Operations
TLIW2001A Operate under track protection rules

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to operate under local track protection rules in accordance with safeworking and regulatory requirements and workplace procedures, including accessing and interpreting information about track protection requirements, carrying out assigned protection and/or work activities, and responding appropriately to safety incidents and abnormal situations within the limits of personal responsibility. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of the relevant track protection rules and requirements to assigned track work activities across a variety of operational contexts within the Australian rail system.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- A general understanding of systems and track protection rules and requirements
- An overview of railway safeworking system requirements
- An understanding of railway safeworking system types
- An awareness of railway safeworking system limitations
- Communication protocols as they relate to the functions of the occupation concerned
- Safeworking rules and protocols as they relate to the work activities concerned
- Rail terminology as defined in the applicable state/territory safeworking system

Required skills:

- Communicate effectively with others when operating under track protection rules
- Read and interpret relevant rules, regulations and instructions when operating under track protection rules
- Interpret and follow operational instructions and prioritise work when operating under track protection rules
- Complete documentation applicable when operating under track protection rules
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating under track protection rules
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating under track protection rules in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Select and use relevant equipment and tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the...
EVIDENCE GUIDE

performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work
RANGE STATEMENT

Environments and situations that may affect performance.

Work may include:
- track work carried out in the state/territory concerned and covered by the safeworking system applicable in that state or territory. Work carried out on the Defined Interstate Rail Network is covered by separate competency units and relates to the Code of Practice for the Defined Interstate Rail Network.

Operations may be conducted:
- by day or night
- in both normal and emergency situations
- under all possible weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Terminology and related meanings will be:
- as defined within the relevant state/territory safeworking system

Track protection rules will be:
- as defined within relevant the state/territory safeworking system

Where applicable, work site safety plans will be:
- as defined within the relevant state/territory safeworking system

Equipment may include:
- flags
- detonators
- stands
- stop signs
- speed boards
- whistles
- lamps

Communications equipment may include but is not limited to:
- hand-held or portable equipment
- fixed equipment
- portable equipment belt and harness
- specialised testing facilities

Radio, hand, light and flag commands will be:
- as defined within the relevant state/territory safeworking system

Safety clothing and equipment may include but is not limited to:
- high visibility clothing
- sunscreen and sunglasses
- insect repellent
RANGE STATEMENT

- safety glasses, headwear, mask, footwear and gloves
- hearing protection
- safety devices
- lighting including strobe lighting
- hand tools
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Depending on the workplace context concerned, documentation/records may include but are not limited to:

- the relevant rules and regulations of the applicable state/territory safeworking system
- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- work orders
- technical instructions
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- local instructions
- safeworking forms
- manufacturers or workplace equipment instructions and operation manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS4292
- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national and state/territory dangerous goods legislation

Applicable regulations and legislation may include:

Competency Field
Competency Field   W - Equipment and Systems Operations
TLIW2012A Grind rails

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to grind rail and welds in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, grinding weld and/or weld repair, grinding rail to repair surface defects, and completing all required documentation. This competency relates to the grinding of new welds and weld repairs, wheel burns, rail batter and overflow in plain track. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the grinding of rail and welds as part of workplace activities across a variety of operational contexts within the Australian rail system.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
---|---
1 Determine job requirements | 1.1 New welds and weld repairs are located
| 1.2 Defects relating to wheel burns, rail battering and rail overflow are identified
| 1.3 Appropriate equipment is selected
| 1.4 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
| 1.5 Site is cleared of obstructions and combustible material
2 Grind weld and/or weld repair | 2.1 Rail is ground to profile using approved equipment in accordance with workplace procedures
| 2.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
| 2.3 Rail gauge face is ground to match adjacent rail in curves, in accordance with standards and procedures
| 2.4 Rail profile and vertical and horizontal alignment are measured to ensure compliance with acceptance standards
| 2.5 Rail surface condition is assessed for compliance with acceptance standards
3 Grind rail to repair surface defects | 3.1 Rail is ground using approved equipment in accordance with workplace procedures
| 3.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
| 3.3 Finished surface is checked to ensure compliance with specification
4 Complete documentation | 4.1 Documentation on work undertaken is completed in accordance with workplace requirements

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the grinding of rail and welds
- Problems that may occur during the grinding of rail and welds, and action that can be taken to report or resolve the problems
**REQUIRED KNOWLEDGE AND SKILLS**

- Hazards that may exist during the grinding of rail and welds, and ways of controlling the risks involved
- Acceptance standards for rail profile and surface condition
- Grinding methods and results
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

**Required skills:**

- Communicate effectively with others when grinding rail and welds
- Read and interpret technical data, drawings, instructions and manuals relevant to the grinding of rail and welds
- Interpret and follow operational instructions and prioritise work when grinding rail and welds
- Complete documentation related to the grinding of rail and welds
- Operate communication equipment to required protocol
- Work collaboratively with others when grinding rail and welds
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when grinding rail and welds in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when grinding rail and welds
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Select and use hand tools, power tools and equipment
- Apply grinding techniques to achieve rail profile and surface condition to meet requirements of standards and procedures

**Evidence Guide**
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying job requirements
  - operating the grinding equipment safely
  - grinding welds and weld repairs using appropriate grinding wheel speed and rate of metal removal
  - grinding rail to repair surface defects
  - completing documentation correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation,

TLIW2017A Cut and join materials

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to cut and join materials for pallet manufacture in accordance with workplace requirements including planning, undertaking and completing the cutting/joining process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the cutting and joining of materials as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Plan the cutting/joining process | 1.1 The process and materials to be used are identified
2 | 1.2 Manufacturers instructions and workplace procedures for the cutting/joining task are read and followed in the planning process
3 | 1.3 Safety precautions for self, equipment and work areas appropriate for the tasks are identified
4 | 1.4 Work sequence is planned, noting appropriate curing/cooling times, efficient work sequence and quality specification requirements
5 | 1.5 Allowances for wastage and/or joining overlaps are checked in workplace documentation and manufacturers instructions

2 Undertake the cutting/joining process | 2.1 Equipment and consumables are assembled
2 | 2.2 Equipment and site are checked for safety
3 | 2.3 Adjustments and settings are made to suit materials, manufacturers instructions and workplace procedures
4 | 2.4 Materials to be cut or joined are positioned and secured
5 | 2.5 Cutting/joining process is undertaken in accordance with selected method of operation
6 | 2.6 Finished materials are checked for conformity to quality/workplace standards
7 | 2.7 Faults/problems with materials or componentry are identified and action is undertaken in accordance with workplace procedures

3 Complete the cutting/joining process | 3.1 Finished materials are directed to storage area or next production stage
2 | 3.2 Waste materials are directed for disposal or recovery
3 | 3.3 Equipment is maintained and stored in designated area
4 | 3.4 Workplace documentation and records are completed as required

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations relevant to the cutting and joining of materials as part of pallet production
REQUIRED KNOWLEDGE AND SKILLS

including requirements of Australian Standards AS 2858 and AS 2082

- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the cutting and joining of materials as part of pallet production
- Focus of operation of work systems, equipment, management and site operating systems for the cutting and joining of materials as part of pallet production
- Problems that may occur when cutting and joining materials as part of pallet production and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the cutting and joining of materials as part of pallet production and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when cutting and joining materials as part of pallet production
- Read and interpret instructions, procedures, information and labels relevant to the cutting and joining of materials as part of pallet production
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the cutting and joining of materials as part of pallet production
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cutting and joining materials as part of pallet production
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when cutting and joining materials as part of pallet production in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and efficiently and effectively use relevant materials and equipment when
Required skills:

- Cutting and joining materials as part of pallet production
- Adapt to differences in materials and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
EVIDENCE GUIDE

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include:
- movement of equipment, goods, products, materials and vehicular traffic

The cutting/joining process is conducted:
- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be:
- hardwood or softwood

Cutting/joining equipment covers:
- a range of docking and trimming saws to which boards are mechanically fed

Equipment may include:
- single or multiple saw positions

Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:
- timber types and species
- timber characteristics
- end condition of the timber

OH&S requirements include:
- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Personal protective equipment may include:
RANGE STATEMENT

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to operate hand held air/power equipment for pallet production processes in accordance with workplace requirements. It includes identifying equipment and power requirements, setting up equipment and completing pre-use checks, operating hand held air and/or power equipment, and storing equipment appropriately after use. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes. Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the operation of hand held air and power equipment as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Licensing/Regulatory Information
Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify equipment and power requirements | 1.1 Equipment for drilling, cutting and grinding is identified and matched to work applications  
1.2 Power and air supplies are identified for voltage, amperage, air pressure, lubrication and water separation  
1.3 Emergency shut-down procedures are identified and followed when necessary  
1.4 Appropriate workplace procedures and personal protective equipment are identified and used  
| 2 Set up equipment and complete pre-use checks | 2.1 Equipment settings, accessories and consumables are checked for appropriate condition  
2.2 Manufacturers or workplace instructions for equipment are read and used to inform work practices  
2.3 Equipment is set up for the required production process  
2.4 Equipment is checked through the full operating range required for the task  
| 3 Operate hand held air/power equipment | 3.1 Equipment is operated in accordance with manufacturers and/or workplace instructions  
3.2 Appropriate consumables including cooling and lubricating fluids are used where required  
3.3 Provision is made to deal with waste, off-cuts and other by-products  
3.4 Production techniques appropriate to the task are followed to meet required outcome  
3.5 Finished materials are checked for conformity to quality/workplace standards  
3.6 Faults/problems with materials or equipment are identified and action is undertaken in accordance with workplace procedures  
| 4 Store equipment appropriately | 4.1 Finished materials are directed to storage area or next production stage  
4.2 Equipment is cleaned prior to storage  
4.3 Equipment which is damaged, unserviceable or requiring service is tagged and appropriate steps are taken to arrange repair  
4.4 Storage areas are maintained appropriately  
4.5 Workplace documentation and records are completed as required  

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the operation of hand held air and power equipment as part of pallet manufacturing processes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of hand held air and power equipment as part of pallet manufacturing processes
- Focus of operation of work systems, equipment, management and site operating systems for the operation of hand held air and power equipment as part of pallet manufacturing processes
- Problems that may occur when operating hand held air and power equipment as part of pallet manufacturing processes and appropriate action that can be taken to resolve the problems
- Production workflow during pallet production
- Types of hand held air and power equipment used in pallet manufacturing processes and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when operating hand held air and power equipment as part of pallet manufacturing processes
- Read and interpret instructions, procedures and information relevant to the operation of hand held air and power equipment as part of pallet manufacturing processes
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of hand held air and power equipment as part of pallet manufacturing processes
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating hand held air and power equipment as part of pallet manufacturing processes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating hand held air and power equipment as part of pallet manufacturing processes in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
Required skills:

- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain air and power equipment
- Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
- Identify, select and efficiently and effectively use air and power equipment within pallet manufacturing processes
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
EVIDENCE GUIDE

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night

Customers may be: • internal or external

Workplaces may: • large, medium or small worksites

Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic

The docking process is conducted: • as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be: • hardwood or softwood

Air/power equipment may include: • chisels
• nail guns
• saws
• grinders/sanders
• drills
• spray guns
• socket drivers
• compressors
RANGE STATEMENT

- glue guns
- hot air guns
- planes

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

OH&S requirements include:
- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Communication in the work area may include:
- phone
- fax
- email/internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
RANGE STATEMENT

- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to use a spray gun to apply surface coatings in accordance with workplace requirements, including planning surface coating process, undertaking surface preparation, applying surface coating, and completing workplace operations in accordance with requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the application of surface coatings using a spray gun as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan surface coating process | 1.1 Equipment, accessories and consumables are assembled and checked for applicability to the surface coating task(s)  
1.2 Material safety data sheets and/or product application and safety information are read and used to inform work practices  
1.3 Particular process techniques, time and safety requirements are noted and used to inform work planning  
1.4 Personal protective equipment is used/worn as required. |
| 2 Undertake surface preparation | 2.1 Characteristics of uncoated/raw material and the required surface coating materials are identified and appropriate action is taken to rectify the problem  
2.2 Workplace instructions on surface preparation of materials are followed  
2.3 Surface preparation is checked for conformity with required workplace standards |
| 3 Apply surface coating | 3.1 Sequence of work is identified maximising potential of the applied finish for the production operation  
3.2 Equipment and accessories are used within manufacturers and workplace instructions  
3.3 Trial applications of surface materials are made to check spray patterns, equipment operations, materials consistency and specified surface finish  
3.4 Surface coating depth and coverage is checked for conformity with specifications  
3.5 Surfaces are kept free of contamination  
3.6 Faults/problems are identified and action is undertaken in accordance with workplace procedures |
| 4 Complete workplace operations | 4.1 Products are located to storage area or next production stage as required  
4.2 Equipment is cleaned prior to storage  
4.3 Equipment which is damaged, unserviceable or requiring service is tagged and appropriate steps are taken to arrange repair  
4.4 Workplace documentation and records are completed as required |

### Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations relevant to the application of surface coatings using spray gun equipment
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the application of surface coatings using spray gun equipment as part of pallet production
- Focus of operation of work systems, equipment, management and site operating systems for the application of surface coatings using a spray gun as part of pallet production
- Effects of the fumes, heat and other radiations
- Characteristics of the materials in terms of toxicity, reactivity, flammability, required viscosity and re-coatability
- Methods for preventing contamination of surfaces during and after surface coating
- Application of relevant hydraulic, mechanical and pneumatic principles to the spray process
- Problems that may occur when applying surface coatings using a spray gun and appropriate action that can be taken to resolve the problems
- Features and hazards of spray gun equipment used during pallet production and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

**Required skills:**

- Communicate effectively with others when applying surface coatings using a spray gun
- Read and interpret instructions, procedures, information and labels relevant to the application of surface coatings using a spray gun
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the application of surface coatings using a spray gun
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying surface coatings using a spray gun
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when applying surface coatings using a spray gun in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
Required skills:

- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain spray gun equipment to manufacturers specifications
- Identify, select and efficiently and effectively use relevant materials and equipment when applying surface coatings using a spray gun
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: in a range of work environments by day or night

Customers may be: internal or external

Workplaces may comprise: large, medium or small worksites

Workplace environment may include:

- movement of equipment, goods, products, materials and vehicular traffic

The surface coating process is conducted:

- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Spray guns may be: air or electrically powered

Coatings may be: water or chemically soluble

Spray guns may be: hand held or automated

OH&S requirements include:

- manual handling, personal protective equipment, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to:

- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
RANGE STATEMENT

- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- respirators
- protective clothing

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
RANGE STATEMENT

Applicable regulations and legislation may include:

- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Inspect and assess pallet condition | 1.1 Pallet inspection method(s) is determined in compliance with occupational health and safety requirements and workplace procedures  
1.2 Appropriate equipment is selected and used to inspect pallet  
1.3 Visual and manual check of pallet condition is carried out in accordance with workplace standard operating procedure  
1.4 Level of pallet damage is identified and repair method is determined and recorded in accordance with workplace procedures |
| 2 Repair non-conforming pallets | 2.1 Lifting devices and equipment are selected and checked for safe working operation  
2.2 Pallet is positioned and secured  
2.3 Repair to decks and bearers is undertaken in accordance with selected repair method and occupational health and safety and workplace safe operating requirements  
2.4 Pallet is inspected for conformity to workplace specifications |
| 3 Complete operations | 3.1 Pallet is relocated to holding area without damage to pallet, personnel or equipment  
3.2 Lifting devices and equipment are checked and returned to storage area  
3.3 Documentation is completed in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the repair of pallets including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the repair of pallets
- Focus of operation of work systems, equipment, management and site operating systems for the repair of pallets
- Problems that may occur when repairing pallets and appropriate action that can be taken to resolve the problems
REQUIRED KNOWLEDGE AND SKILLS

- Documentation and record requirements
- Equipment used during the repair of pallets and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when repairing pallets
- Read and interpret instructions, procedures, information and labels relevant to the repair of pallets
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the repair of pallets
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when repairing pallets
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing pallets in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain tools and machinery required in pallet repair
- Carry out inspection of the serviceability and condition of pallets
- Identify, select and efficiently and effectively use relevant materials and equipment when repairing pallets
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments by day or night

Customers may be:

Competency Field W - Equipment and Systems Operations
TLIW2021A Clean and inspect pallets

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to clean and inspect pallets in accordance with workplace requirements including identifying workplace procedures, resources and job specifications for cleaning pallets; inspecting and cleaning pallets; and monitoring and maintaining cleanliness and tidiness of pallet cleaning and storage areas. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the cleaning and inspection of pallets as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Identify workplace procedures, resources and requirements for cleaning pallets | 1.1 Workplace operating procedures, including occupational health and safety requirements for pallet cleaning, are identified and read  
1.2 Equipment (including appropriate engineering controls and personal protective equipment) and consumables are selected in accordance with work area requirements  
1.3 Specific requirements for pallet inspection and cleaning are identified and used in the planning of work activities  
1.4 Requirements for the organisation of pallet storage before and after cleaning are identified to meet workplace requirements |
| **2** Inspect and clean pallets | 2.1 Information on serviceability requirements of pallets for required purposes is accessed and read  
2.2 Pallet design features are noted and pallet types are identified for particular purposes  
2.3 Pallets are inspected prior to, and during, cleaning to ensure that condition is appropriate for required use  
2.4 Damaged pallets are tagged for repair or recycling  
2.5 Pallets are cleaned following workplace procedures  
2.6 Pallets are sorted and stacked in appropriate storage areas  
2.7 Work is carried out following workplace practices and safe work procedures |
| **3** Monitor and maintain cleanliness and tidiness of pallet cleaning and storage areas | 3.1 Initiative is used to continuously monitor the cleanliness, safety and tidiness of the pallet cleaning and storage area  
3.2 Housekeeping issues are raised with designated personnel in accordance with workplace procedures  
3.3 Cleaning equipment and supplies are maintained and stored |
| **4** Complete assigned pallet cleaning and inspection duties | 4.1 Assigned pallet cleaning and inspection duties are conducted in accordance with workplace requirements  
4.2 Documentation concerning cleaning operations is completed in accordance with workplace procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
REQUIRED KNOWLEDGE AND SKILLS

- Regulations relevant to the cleaning and inspection of pallets
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the cleaning and inspection of pallets including test methods for pallet strength and integrity
- Focus of operation of work systems, equipment, management and site operating systems for the cleaning and inspection of pallets
- Problems that may occur when cleaning and inspecting pallets and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the cleaning and inspection of pallets and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when cleaning and inspecting pallets
- Read and interpret instructions, procedures, information and labels relevant to the cleaning and inspection of pallets
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the cleaning and inspection of pallets
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cleaning and inspecting pallets
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when cleaning and inspecting pallets in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Identify, select and efficiently and effectively use relevant materials and equipment when cleaning and inspecting pallets
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain cleaning tools and equipment
- Carry out inspection of pallets to workplace standards
Required skills:

- Identify, select and efficiently and effectively use relevant materials and equipment when cleaning and inspecting pallets
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
EVIDENCE GUIDE

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in a range of work environments by day or night

- in a range of work environments by day or night

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Workplace environment may include:

- movement of equipment, goods, products, materials and vehicular traffic

The docking process is conducted:

- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Cleaning operations may be conducted:

- by hand or machine involving detergents or solvents

Inspection may be:

- by eye or using testing equipment

Workplace requirements for completing cleaning activities may include:

- containing used cleaning agents and waste water in an appropriate manner
- sorting and appropriately storing recyclable materials for collection
- identifying maintenance requirements of any damaged equipment
- tagging faulty equipment and notifying appropriate personnel of maintenance requirements of damaged or non-functioning equipment
- checking work areas to ensure they meet required workplace standards
RANGE STATEMENT

OH&S requirements include:
- completing and maintaining schedules and records
- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
RANGE STATEMENT

- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

Competency Field W - Equipment and Systems Operations
TLIW2022A Manufacture pallets using automated methods

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to manufacture pallets using automated methods including planning the production of pallets, setting up pallet production equipment, operating the automated pallet manufacturing plant, and completing operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes.

Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures when manufacturing pallets using automated methods as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

| 1 Plan production of pallets | 1.1 Job requirements are identified from order form, workplace instructions and/or job specifications  
1.2 Appropriate safety and shut-down procedures are followed  
1.3 Automated equipment is organised to produce the required pallets as per job specifications  
1.4 Communication with supervisor and other workers is maintained to ensure efficient work flow |
| 2 Set up pallet production | 2.1 Start-up checks are completed according to workplace and manufacturers guidelines  
2.2 Appropriate workplace occupational health and safety and other regulatory procedures are followed  
2.3 Bearers and boards are inspected for compliance with workplace quality standards |
| 3 Operate automated pallet manufacturing equipment | 3.1 Bearers and boards are loaded into stack trays according to correct quantity/sequence  
3.2 Feed systems are maintained and monitored for correct work flow  
3.3 Machine componentry is monitored to ensure appropriate speed and operation  
3.4 Faults/problems with materials or componentry are identified and appropriate action is undertaken in accordance with workplace procedures  
3.5 Pallet quality is checked prior to removal from stacker |
| 4 Complete operations | 4.1 Machine shut-down is conducted according to workplace and manufacturers guidelines  
4.2 Waste materials are directed for disposal or recovery  
4.3 Production records are completed in accordance with workplace procedures  
4.4 Maintenance program (where applicable) is completed and recorded |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
REQUIRED KNOWLEDGE AND SKILLS

- Regulations relevant to the manufacture of pallets using automated methods
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the manufacture of pallets using automated methods
- Focus of operation of work systems, equipment, management and site operating systems for the manufacture of pallets using automated methods
- Problems that may occur when manufacturing pallets using automated methods and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the manufacture of pallets using automated methods and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when manufacturing pallets using automated methods
- Read and interpret instructions, procedures, information and labels relevant to the manufacture of pallets using automated methods
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the manufacture of pallets using automated methods
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when manufacturing pallets using automated methods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when manufacturing pallets using automated methods in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain automated pallet manufacturing machinery
- Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
- Identify, select and efficiently and effectively use relevant materials and equipment when manufacturing pallets using automated methods
**Required skills:**

- Adapt to differences in materials and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include: • movement of equipment, goods, products, materials and vehicular traffic

The automated production process is conducted: • as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be: • hardwood or softwood

Major components of pallet machine may include:
- control panel
- boards
- stackers
- hoppers
- conveyors
- nail bowls
- nail chucks
- cams
- control switches

Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:
- timber types and species
- timber characteristics
- end condition of the timber

OH&S requirements include:
- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding
RANGE STATEMENT

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for
RANGE STATEMENT

- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations

| 1 Plan production of pallets | 1.1 Pallet design is identified from order in accordance with workplace procedures  
1.2 Components are identified from drawings or instructions  
1.3 Number of components and quantity of timber necessary to complete order are calculated  
1.4 Arrangements are made for supply and cutting of boards and components  
1.5 Pallet assembly jig is selected to suit pallet design  
1.6 Brand requirements are identified from drawings or instructions and suitable stencils are selected  
1.7 Communication with supervisor and other workers is maintained to ensure efficient work flow |
| 2 Set up pallet production | 2.1 Appropriate workplace occupational health and safety and other regulatory procedures are followed  
2.2 Personal protective equipment is selected and worn  
2.3 Equipment and components are brought to assembly area  
2.4 Components are inspected for compliance with workplace quality standards  
2.5 Paint and painting equipment is prepared and tested |
| 3 Undertake manual production of pallets | 3.1 Components are checked for fit to assembly jig and a trial pallet is constructed to specifications in accordance with workplace procedures  
3.2 Trial pallet is checked for conformity in accordance with workplace quality standards  
3.3 Required number of pallets is constructed in accordance with workplace procedures  
3.4 Faults/problems with equipment or components are identified and appropriate action is undertaken  
3.5 Pallets are painted and stencilled to order in accordance with work specifications |
| 4 Complete operations | 4.1 Pallets are inspected and located to holding area without damage to pallet, personnel or equipment  
4.2 Off-cuts, rejected boards and waste materials are directed for waste or recovery in accordance with workplace policy and procedures  
4.3 Equipment is maintained and stored in designated areas  
4.4 Documentation is completed in accordance with workplace procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the manufacture of pallets using manual methods
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the manufacture of pallets using manual methods
- Focus of operation of work systems, equipment, management and site operating systems for the manufacture of pallets using manual methods
- Problems that may occur when manufacturing pallets using manual methods and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Tools and equipment used during the manufacture of pallets using manual methods and the precautions and procedures that should be followed in their use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when manufacturing pallets using manual methods
- Read and interpret instructions, procedures, information and labels relevant to the manufacture of pallets using manual methods
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when manufacturing pallets using manual methods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when manufacturing pallets using manual methods in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

environments

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain tools and equipment used in the manufacture of pallets using manual methods
- Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
- Identify, select and efficiently and effectively use relevant materials and equipment when manufacturing pallets using manual methods
- Adapt to differences in materials and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments by day or night and may cover the full range of standard wooden designs manufactured in the workplace concerned

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Workplace environment may include:

- movement of equipment, goods, products, materials and vehicular traffic

The manual pallet production process is conducted:

- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Equipment used may include:

- assembly jig
- nail gun
- compressor or compressed air supply
- paint spray gun

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
RANGE STATEMENT

- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty tools and equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- respirators
- protective clothing

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial
RANGE STATEMENT

Applicable regulations and legislation may include:

- arrangements
- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare computer programmed machinery to dock boards** | 1.1 Appropriate workplace occupational health and safety and other regulatory procedures are followed  
1.2 Job requirements regarding sizes and lengths are obtained from standards  
1.3 Start-up checks are completed according to workplace standard procedures  
1.4 General cross-section, length and condition of boards on conveyor are visually assessed in accordance with workplace quality standards  
1.5 Program to cut requirements is selected from a range of available programs  
1.6 Program is loaded and machine cycle checked  
1.7 Need for new programs is identified and reported to supervisor  
1.8 Communication with supervisor and other workers is maintained to ensure efficient work flow |
| **2 Operate programmed machinery to dock boards** | 2.1 Trial boards are cut to check process and output  
2.2 Machinery is operated to dock timber to specification  
2.3 Reject boards are identified and directed for waste or recovery  
2.4 Faults/problems with materials or componentry are identified and appropriate action is undertaken in accordance with workplace procedures |
| **3 Monitor and rectify the processing operations where necessary** | 3.1 Dimensions and finish of cut boards are regularly checked in accordance with workplace standard procedures  
3.2 Sawing process is adjusted to maintain accurate sizing  
3.3 Feed systems are regularly monitored for material flow problems  
3.4 Minor feed problems are cleared in accordance with equipment manufacturers instructions  
3.5 Characteristics of blunt and damaged saws are recognised and appropriate action is taken to rectify the identified problem in accordance with workplace procedures  
3.6 Saw blades are removed and replaced in accordance with workplace procedures  
3.7 Work area is regularly cleaned in accordance with workplace procedures |
| **4 Complete operations** | 4.1 Machine shut-down is conducted according to workplace and manufacturers guidelines  
4.2 Boards are relocated to holding area without damage to boards, personnel or equipment  
4.3 Waste materials are directed for disposal or recovery |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the docking of boards using computer programmed machinery including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the docking of boards using computer programmed machinery
- Focus of operation of work systems, equipment, management and site operating systems for the docking of boards using computer programmed machinery
- Problems that may occur when docking boards using computer programmed machinery and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the docking of boards using computer programmed machinery and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when docking boards using computer programmed machinery
- Read and interpret instructions, procedures, information and signs relevant to the docking of boards using computer programmed machinery
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the docking of boards using computer programmed machinery
- Work collaboratively with others when docking boards using computer programmed machinery
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and
Required skills:

- Interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when docking boards using computer programmed machinery in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: in a range of work environments by day or night

Customers may be: internal or external

Workplaces may comprise: large, medium or small worksites

Workplace environment may include: movement of equipment, goods, products, materials and vehicular traffic

The docking process is conducted: as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be: hardwood or softwood

Docking equipment covers: computer controlled docking and trimming saws to which boards are mechanically fed

Equipment may include: single or multiple saw positions

Visual assessment may cover the requirements of Australian
- timber types and species
- timber characteristics
RANGE STATEMENT

Standards AS 2858 or AS 2082 and specifically includes:
- end condition of the timber

OH&S requirements include:
- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- job specifications and workplace operating procedures
- relevant Australian or international standards
RANGE STATEMENT

- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

Competency Field

Competency Field W - Equipment and Systems Operations
TLIW2025A Dock boards on mechanical feeds

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to dock boards using mechanical feed systems in accordance with workplace procedures including preparing for docking with mechanical feed, cutting boards on mechanical feed, monitoring and rectifying processing operations, and completing operations in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to pallet manufacturing processes. Work is generally performed under some supervision, within a team/group environment. It involves the application of regulatory requirements and workplace procedures to the docking of boards using mechanical feed processes as part of pallet manufacturing processes in the transport, warehousing, distribution and/or storage industries.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare for docking with mechanical feed | 1.1 Appropriate workplace occupational health and safety and other regulatory procedures are followed  
1.2 Job requirements regarding sizes and lengths acceptable for further processing are identified from order forms/workplace standards  
1.3 Start-up checks are completed according to workplace procedures  
1.4 General cross-section, length and condition of boards on conveyor is visually assessed in accordance with workplace quality standards  
1.5 Typical docking/cutting patterns are identified  
1.6 Communication with supervisor and other workers is maintained to ensure efficient work flow |
| 2 Cut boards on mechanical feed | 2.1 Individual boards are assessed and the optimal docking/cutting pattern is identified  
2.2 Boards are positioned and saw(s) operated to produce selected cutting pattern  
2.3 Swollen ends of boards are removed  
2.4 Cuts are made to required lengths  
2.5 Cuts are made to required grade  
2.6 Faults/problems with materials or componentry are identified and appropriate action is undertaken in accordance with workplace procedures  
2.7 Reject boards are identified and marked or removed |
| 3 Monitor and correct processing | 3.1 Feed systems are regularly monitored for material flow problems  
3.2 Dimensions and finish of cut boards are regularly checked in accordance with workplace standards  
3.3 Characteristics of blunt and damaged saws are recognised  
3.4 Saw blades are removed and replaced in accordance with workplace standard procedures  
3.5 Area around saw is regularly cleaned in accordance with workplace standard procedure |
| 4 Complete operations | 4.1 Machine shut-down is conducted according to workplace and manufacturers guidelines  
4.2 Boards are relocated to holding area without damage to boards, personnel or equipment  
4.3 Waste materials are directed for disposal or recovery  
4.4 Production records are completed in accordance with workplace procedures |
ELEMENT PERFORMANCE CRITERIA

4.5 Maintenance program (where applicable) is completed and recorded

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the docking of boards using mechanical feed processes including requirements of Australian Standards AS 2858 and AS 2082
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the docking of boards using mechanical feed processes
- Focus of operation of work systems, equipment, management and site operating systems for the docking of boards using mechanical feed processes
- Problems that may occur when docking boards using mechanical feed processes and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Equipment used during the docking of boards using mechanical feed processes and the precautions and procedures that should be followed in its use
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when docking boards using mechanical feed processes
- Read and interpret instructions, procedures, information and labels relevant to the docking of boards using mechanical feed processes
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the docking of boards using mechanical feed processes
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when docking boards using mechanical feed processes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when docking boards using mechanical feed processes in accordance with regulatory requirements and workplace procedures
Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain machinery including saw blade quality and sharpness
- Carry out visual inspection of board quality to Australian Standards AS 2858 and AS 2082
- Identify, select and efficiently and effectively use relevant materials and equipment when docking boards using mechanical feed processes
- Adapt to differences in materials and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include:
- movement of equipment, goods, products, materials and vehicular traffic

The docking process is conducted:
- as part of manufacture/repair activities with the operator using discretion and judgement within established specifications

Timber may be:
- hardwood or softwood

Docking equipment covers:
- manually controlled docking and trimming saws to which boards are mechanically fed

Equipment may include:
- single or multiple saw positions
RANGE STATEMENT

Visual assessment may cover the requirements of Australian Standards AS 2858 or AS 2082 and specifically includes:

- timber types and species
- timber characteristics
- end condition of the timber

OH&S requirements include:

- manual handling, protective clothing, elimination/control of hazards, machine isolation and machine guarding

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- respirators
- protective clothing

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty racking
- poorly stacked materials or finished pallets
- faulty equipment

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- customers/clients
- suppliers
- contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- fax
- email
- internet
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures
RANGE STATEMENT

Information/documents may include:

- job specifications and workplace operating procedures
- relevant Australian or international standards
- manufacturers specifications for equipment/tools
- supplier and/or client instructions
- quality assurance standards for pallet manufacture
- material safety data sheets (where applicable)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- emergency procedures
- relevant codes and regulations pertaining to pallet manufacture
- Australian Standards AS 2858 and AS 2082
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- ADG Code and regulations
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for using a ballast cleaning machine
- Problems that may occur when cleaning ballast, and action that can be taken to resolve and report them
- Hazards that may exist when cleaning ballast, and ways of controlling the risks involved
- Ballast profile standards
- Functions of ballast

Required skills:

- Use agreed communication methods
- Work collaboratively with others when using a ballast cleaner
- Use appropriate numeric functions when using a ballast cleaner
- Report problems, faults and malfunctions that may occur when using a ballast cleaning machine in accordance with organisational procedures
- Work systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures
- Select and use required personal protective equipment (PPE)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components may include:
- rail sweeps
- ballast hoppers
- auxiliary wagons
- hand tools and small plant
- ballast ploughs
- side/wing ploughs
- ballast brooms
- ballast conveyor
- ballast screens
- cutter bar and chain
- centre jacks/lift lining frame
- emergency stop devices

Work stations may include:
- drive station
- main operator station
- boom operator station
- screen operator station
- internal work station
- external work station

Environmental hazards may include:
- dust
- noise
- oil and/or fuel spills
- environmentally sensitive sites
- hazardous substances
- flying debris

Risks to rail infrastructure may include:
- fouling ballast
- sleeper damage
- fastener damage
- drainage
- structures
- formation
- signage/track survey monuments
- signalling equipment
- in-track and trackside equipment
- damage to adjacent line
- damage/fouling points and crossings
- level crossings
Communication systems may include:

- damage to external assets
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and PPE may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may include:

- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures

Applicable procedures and codes may include:

- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
  - rail safety

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the use of dynamic track stabilisers
- Problems that may occur when using a dynamic track stabiliser, and action that can be taken to resolve and report them
- Hazards that may exist when using a dynamic track stabiliser, and ways of controlling the risks involved
- Ballast profile standards
- Basic track geometry and terminology

Required skills:

- Use agreed communication methods
- Work collaboratively with others when using a dynamic track stabiliser
- Use appropriate numeric functions when using a dynamic track stabiliser
- Report problems, faults and malfunctions that may occur when using a dynamic track stabiliser in accordance with regulatory requirements and workplace procedures
- Work systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures
- Select and use required personal protective equipment (PPE)
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components may include:
- stabiliser unit
- trolleys
- clamps
- lifting and lining systems
- ploughs
- chart recorders

Work stations may include:
- drive station
- main operator station
- external work station
- data input

Environmental hazards may include:
- dust
- noise
- vibration
- oil or fuel spills
- environmentally sensitive sites
- hazardous substances

Risks to rail infrastructure may include:
- degrading ballast
- sleeper damage or movement
- rail damage
- track geometry
- fastener damage
- drainage
- structures
- formation
- signage/track survey monuments
- signalling equipment
- in-track and trackside equipment
- damage to adjacent line
- damage/fouling points and crossings
- level crossings
- damage to external assets

Communication systems may include:
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and PPE
- high visibility clothing
- hearing protection
may include:

- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may include:

- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures

Applicable procedures and codes may include:

- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
  - rail safety

W – Equipment and Systems Operations
TLIW2031A Identify the principles of self-propelled rail grinder operations

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to identify the principles of self-propelled rail grinder operations.
The unit provides an introduction to self-propelled rail grinders and is not to be used for their operation, which must be covered by individual certification for the particular machine.
Licensing, legislative, regulatory or certification requirements may apply to this unit.

Application of the Unit
Operators of self-propelled rail grinders must have undertaken training and hold the relevant licence, permit or certificate and be recognised as competent for each type of machinery being used.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the use of self-propelled rail grinders
- Problems that may occur when using a self-propelled rail grinder, and action that can be taken to resolve and report them
- Hazards that may exist when using a self-propelled rail grinder, and ways of controlling the risks involved
- Basic interface between the rail and wheels
- Basic track terminology

Required skills:

- Use agreed communication methods
- Work collaboratively with others when using a self-propelled rail grinder
- Use appropriate numeric functions when using a self-propelled rail grinder
- Report problems, faults and malfunctions that may occur when using a self-propelled rail grinder in accordance with regulatory requirements and workplace procedures
- Work systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures
- Select and use required personal protective equipment (PPE)
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components may include:
- grinding units
- grinding stones
- trolleys
- lasers
- fire fighting equipment
- recorders
- waste extraction systems
- GPS
- computer systems

Work stations may include:
- drive station
- main operator station
- external work station
- data input

Environmental hazards may include:
- dust
- metal particles
- fire
- slag
- noise
- vibration
- oil or fuel spills
- environmentally sensitive sites
- hazardous substances

Risks to rail infrastructure may include:
- contaminated ballast
- sleeper damage
- rail damage
- fastener damage
- structures
- signage/track survey monuments
- signalling equipment
- in-track and trackside equipment
- damage to adjacent line
- damage/fouling points and crossings
- level crossings
- damage to external assets

Communication systems may include:
- two-way radios
- telephones, including mobile phones
Depending on work context, safety and PPE may include:

- agreed audible or hand signals
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may include:

- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures

Applicable procedures and codes may include:

- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
  - rail safety

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the use of tamping machines
- Problems that may occur when using a tamping machine, and action that can be taken to resolve and report them
- Hazards that may exist when using a tamping machine, and ways of controlling the risks involved
- Ballast profile standards
- Basic track geometry and terminology

Required skills:

- Use agreed communication methods
- Work collaboratively with others when using a tamping machine
- Use appropriate numeric functions when using a tamping machine
- Report problems, faults and malfunctions that may occur when using a tamping machine in accordance with regulatory requirements and workplace procedures
- Work systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures
- Select and use required personal protective equipment (PPE)
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components may include:
- rail sweeps
- tamping tools and work heads
- trolleys
- lasers
- satellites
- lifting units, including third arm
- clamps
- lifting and lining systems
- ploughs

Work stations may include:
- drive station
- front tower
- main operator station
- laser operation station
- external work station and ground person
- data input

Environmental hazards may include:
- dust
- noise
- oil or fuel spills
- environmentally sensitive sites
- hazardous substances

Risks to rail infrastructure may include:
- degrading ballast
- sleeper damage or movement
- rail damage
- track geometry
- fastener damage
- drainage
- structures
- formation
- signage/track survey monuments
- signalling equipment
- in-track and trackside equipment
- damage to adjacent line
- damage/fouling points and crossings
- level crossings
- damage to external assets
Communication systems may include:
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and PPE may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may include:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures

Applicable procedures and codes may include:
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
  - rail safety

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for using a mechanised track laying machine
- Problems that may occur when track laying, and action that can be taken to resolve and report them
- Hazards that may exist when track laying, and ways of controlling the risks involved

Required skills:

- Use agreed communication methods
- Work collaboratively with others when track laying
- Use appropriate numeric functions when track laying
- Report problems, faults and malfunctions that may occur when using a mechanised track laying machine in accordance with organisational procedures
- Work systematically with required attention to detail without injury to self or others, or damage to equipment in accordance with organisational procedures
- Select and use required personal protective equipment (PPE)
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components may include:
- sleeper table
- front liner
- steering
- rear liner
- laying frame
- plough
- old sleeper pick-up
- ballast conveyor
- cutter bar and chain
- gantry crane
- control panels
- rail feeders
- rail clamps
- new sleeper laying base

Work stations may include:
- drive station
- main operator station
- pad layer station
- chain operator station
- deflection operator station
- rail feeder station
- gantry crane operator station
- jewellery wagon

Environmental hazards may include:
- dust
- noise
- oil or fuel spills
- environmentally sensitive sites
- hazardous substances
- flying debris

Risks to rail infrastructure may include:
- sleeper damage
- fastener damage
- drainage
- structures
- formation
- signage/track survey monuments
- signalling equipment
- in-track and trackside equipment
- damage to adjacent line
- damage/fouling points and crossings
- damage to external assets
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals
- high visibility clothing
- hearing protection

W – Equipment and Systems Operations
TLIW2037B Clip and secure points

Modification History
New release. This unit replaces and is equivalent to TLIW2037A.

Unit Descriptor
This unit involves the skills and knowledge required to clip and unclip points in accordance with legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit involves the application of network owner policies, procedures and protocols for clipping points within the rail network in order to protect a worksite or confirm a route prior to moving a rail vehicle over the points. It also covers the unclipping of points after activities are completed.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Organisational and/or network owner procedures for placing and removing points clips and lock/tag

Required skills:

- Communicate effectively with individuals and/or groups
- Read and interpret organisational and/or network owner procedures for placing and removing points, clips and safety devices
- Recognise hazards that may arise and take appropriate action
- Use personal protective equipment conforming to required standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
  - the timeframes typically expected for the work function and industrial environment
- Compliance with OH&S regulations and other regulatory requirements
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying position of points and adjusting them accordingly
  - placing points clip correctly
  - removing points clip correctly
  - resetting points to normal position
  - communicating effectively with relevant personnel when responding to an emergency or abnormal situation

Context of and specific resources for assessment

- Performance is demonstrated in a suitable context
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessments, and/or
  - access to an appropriate location in the workplace
- In both real and simulated environments, access is required to:
  - applicable documentation including procedures, regulations and codes of practice

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
- point clips
- locks
- digging equipment
- spanner
- pinch bar
- hammer
- points winding equipment

Points may include:
- swing nose
- catch points

Personal protective equipment may include:
- high visibility clothing
- protective footwear
- hearing protection
- eye protection
- gloves
- head protection

  - compliance with OH&S regulations and other regulatory requirements

Context of and specific resources for assessment

- Performance is demonstrated in a suitable context
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessments, and/or
  - access to an appropriate relevant location in the rail corridor
- In both real and simulated environments, access is required to:
  - applicable documentation, including procedures, regulations and codes of practice

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in a rail corridor
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Permanent way stop equipment may be:
- boards
- stands
- flags
- lamps
- electronic warning devices
- transponders
- audible track warning devices

PPE may include:
- high visibility clothing
- protective footwear
- hearing protection
- eye protection
- gloves
- head protection

Unit Sector(s)

Not applicable.

Competency Field

W – Equipment and Systems Operations
TLIW2041A Clip points and apply rail safety equipment

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to clip points and apply rail safety equipment in accordance with legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit involves the application of network owner policies and procedures for clipping points and applying rail safety equipment within the rail network. All activities are performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of responsibility of the person concerned.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Clip and secure points

- **Advice is confirmed as to the location and identification of points to be clipped and secured**
- **Position that points are to be clipped in is confirmed**
- **Relevant yard personnel are contacted and informed as required in accordance with network owner policies and procedures**
- **Equipment is checked for availability and suitability to perform job in accordance with network owner policies and procedures**
- **Where required, points are placed in correct position in accordance with network owner policies and procedures**
- **Point clips are fitted in correct position and, where required, locked in accordance with network owner policies and procedures**
- **Relevant yard personnel are notified that points are clipped and secured**

### 2 Remove points clip

- **Advice is confirmed as to the location and identification of points to be unclipped**
- **Relevant yard personnel are contacted and informed as required in accordance with network owner policies and procedures**
- **Equipment is removed from track, secured and stowed appropriately**
- **Where required, points are restored to correct position in accordance with network owner policies and procedures**
- **Relevant yard personnel are notified that clip and, where used, lock has been removed**

### 3 Apply safety devices

- **Advice is confirmed as to the location and identification of safety device/s to be applied**
- **Position that safety device/s are to be placed in is confirmed**
- **Equipment is checked for integrity in accordance with network owner policies and procedures**
- **Safety device/s are placed in correct position and, where required, locked in accordance with network owner policies and procedures**
- **Relevant yard personnel are notified that safety device/s are applied and secured**

### 4 Remove safety devices

- **Advice is confirmed as to the location and identification of safety device/s to be removed**
- **Safety device/s are removed from track, secured and stowed appropriately**
4.3 Relevant yard personnel are notified that safety device/s and, where used, lock have been removed

**Required Skills and Knowledge**

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Organisational and/or network owner policies and procedures for placing and removing points, clips and safety devices
- Relevant legislative and regulatory requirements
- Relevant occupational health and safety (OH&S) requirements and work practices

**Required skills:**

- Communicate effectively with individuals and/or groups
- Measure distances
- Read and interpret organisational and/or network owner procedures for placing and removing points, clips and safety devices
- Recognise hazards that may arise and take appropriate action
- Use personal protective equipment conforming to required standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
  - the timeframes typically expected for the work function and industrial environment

- Compliance with OH&S regulations and other regulatory requirements

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correct procedure for determining the location of points to be clipped
  - clipping and unclipping points correctly
  - applying and removing safety devices

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Performance is demonstrated in a suitable context

- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessments, and/or
  - access to an appropriate relevant location in the rail yard

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including procedures, regulations and codes of practice

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace such as a rail yard
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
- point clips
- locks
- digging equipment
- spanner
- pinch bar
- hammer
- points winding equipment

Points may include:
- swing nose
- electro
- pneumatic
- manual
- ground frames
- trailable

Personal protective equipment may include:
- high visibility clothing
- protective footwear
- hearing protection
- eye protection
- gloves
- head protection

Relevant yard personnel may include:
- yard coordinator
- foreman shunter/shunting supervisor
- senior driver

Unit Sector(s)

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge to operate computerised mail and parcels sorting equipment in accordance with workplace requirements including setting up mail and parcels sorting equipment for operation, operating the equipment in accordance with workplace procedures, and completing the sorting process for mail and parcels as required. The process includes containerising processed mail and parcels for transfer to the next processing or distribution point. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the regulations and workplace requirements pertaining to the processing of mail and parcels.

Work is normally performed under general supervision, usually in a team or out-station environment.

Work involves the application of workplace procedures and regulatory requirements to the operation of computerised mail and parcels sorting equipment as part of work activities in the postal and allied industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Set up mail and parcels sorting equipment for operation | 1.1 Individual and work team priorities and responsibilities are identified and confirmed  
1.2 All OH&S and environment protection procedures and requirements for the relevant mail and parcels sorting equipment are identified, accessed and applied  
1.3 The availability of mail and parcels to be sorted is identified and confirmed  
1.4 The appropriate equipment configuration and sort plan is identified, accessed and applied  
1.5 Mail and parcels to be sorted are transferred to sorting point  
1.6 Labels for identifying the destination of mail are created and affixed to trays |
| 2 Operate mail and parcels sorting equipment | 2.1 Internal operating procedures and equipment operating procedures are applied  
2.2 Mail and parcels are sorted accurately and correctly in compliance with priority for sorting  
2.3 Mail and parcels are handled safely to minimise risk of injury to people and damage to mail and parcels and processing equipment  
2.4 Mail and parcels that are incorrectly classified and non-conforming items are identified, separated and re-processed  
2.5 Mail and parcels that have been sorted to their correct destination are placed in appropriate mail container for distribution |
| 3 Complete sorting process for mail and parcels | 3.1 Mail and parcels stackers/containers/bags are cleared down, sealed and labelled in accordance with workplace procedures  
3.2 Mail and parcels are transferred to next sorting point using appropriate shifting equipment, and labels are scanned as required  
3.3 Information required to complete records of mail and parcels processed is provided and recorded  
3.4 Excess equipment is removed and work area is prepared for next activity/shift |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of computerised mail and parcels sorting equipment
- Focus of operation of work systems, equipment, management and site operating systems for the operation of computerised mail and parcels sorting equipment
- Problems that may occur when operating computerised mail and parcels sorting equipment and appropriate action that can be taken to resolve/avoid the problems
- Requirements of automated mail processing systems, operations and relevant equipment
- Hazards that may occur during the operation of computerised mail and parcels sorting equipment and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:

- Communicate effectively with others when operating computerised mail and parcels sorting equipment
- Read and interpret instructions, procedures, information and labels relevant to the operation of computerised mail and parcels sorting equipment
- Interpret and follow operational instructions and prioritise work when operating computerised mail and parcels sorting equipment
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Complete documentation related to the operation of computerised mail and parcels sorting equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating computerised mail and parcels sorting equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur operating computerised mail and parcels sorting equipment in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Identify, select and use relevant equipment, processes and procedures when operating computerised mail and parcels sorting equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
EVIDENCE GUIDE

conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments
- by day or night

Workplaces may comprise:

- large, medium or small worksites

Operations may include:

- shiftwork

Customers may be:

- internal or external

Hazards may include:

- vehicular traffic and pedestrians
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature
- lighting conditions
- machinery/equipment moving parts
- noise

Weighing devices may be:

- mechanical
- automated
- weighbridge

Work priorities may be communicated through:

- briefings
- noticeboards
- announcements

Equipment may include:

- mail trays, tubs and bags
- multi-line OCR
- AEG OCR
- bar code sorter
- flat sorting machine
RANGE STATEMENT

- large parcels sorting machine
- small parcels sorting machine
- large letters sorting machine
- flat mail OCR
- scanners
- tipping belt
- pallet jack/maverick
- powered lifters
- kingfishers
- scales
- Unit Load Devices (ULDs) and Wheeled Unit Load Devices (WULDs)
- Vertical Sorting Frame (VSF) and Vertical Sorting Divisions (VSDs)
- ULD tipper
- conveyor belts
- strapping machine

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace policies, operating procedures and practices
- Management Operating System (MOS)
- Management Information System (MIS)
- sorting system information including:
  - postcode book, national sort plan and state sort plan
  - postal guide
RANGE STATEMENT

- international postcode directory
- label charts
- mail identification numbers, codes and labels
- manifests, consignment notes, bar codes, mail and container identification
- quality assurance procedures
- induction documentation
- competency standards and training materials
- job specifications and procedures
- award, enterprise bargaining agreement or other industrial arrangements
- manufacturers specifications
- codes of practice, including national standards for manual handling and the industry safety code
- supplier and or/client instructions
- HAZCHEM chart/MSDS
- safety observation feedback program
- emergency procedures
- relevant codes and regulations pertaining to mail operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances,
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity, equal employment opportunity and affirmative action legislation

Applicable regulations and legislation may include:

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare to video-code mail | 1.1 Individual work priorities and responsibilities are identified and confirmed  
1.2 All OH&S and environment protection procedures and requirements for the workplace are identified, accessed and applied  
1.3 Work station equipment is located, accessed and adjusted to meet ergonomic requirements  
1.4 Access to video-coding system is obtained and 'online' status is achieved |
| 2 Video-code mail | 2.1 Access and ensure mail images are being received from MLOCR  
2.2 Liaise with MLOCR operators to ensure the correct mail mix is being provided by MLOCR  
2.3 Using keyboard, process or direct the processing of mail images from MLOCR using data provided in specific coding modes  
2.4 Performance is monitored and issues or requirements are addressed |
| 3 Resolve problems with video-coding process | 3.1 Problems with MLOCR inputs and/or software are identified, assessed and resolved  
3.2 Advice is provided to appropriate personnel regarding MLOCR malfunctions |
| 4 Complete video-coding process | 4.1 Access to the video-coding system is terminated and log-off procedures completed  
4.2 Extended term shut-down procedures are applied |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Australian and international codes and regulations relevant to mail operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of video-coding and the coordination of video-coding operations
- Focus of operation of work systems, equipment, management and site operating systems for video-coding and the coordination of video-coding operations
REQUIRED KNOWLEDGE AND SKILLS

- Problems that may occur during video-coding operations and appropriate action that can be taken to resolve/avoid the problems
- Requirements of automated mail processing systems, operations and relevant equipment
- Hazards that may occur during video-coding operations and ways of controlling the risks involved
- Site layout
- Relevant personal protective equipment and procedures for its use

Required skills:

- Communicate effectively with others when conducting video-coding and coordinating video-coding operations
- Read and interpret instructions, procedures, information and labels relevant to video-coding operations
- Interpret and apply relevant agreements, codes of practice or other legislative requirements
- Interpret and follow operational instructions and prioritise work when conducting video-coding and coordinating video-coding operations
- Complete documentation related to the conduct of video-coding and the coordination of video-coding operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting video-coding and coordinating video-coding operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting video-coding and coordinating video-coding operations in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment
- Identify, select and use relevant equipment, processes and procedures for video-coding operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  • in a range of work environments  • by day or night

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to grind switches and crossings in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, grinding weld and/or weld repair, grinding switches and crossings to repair surface defects, and completing all required documentation. This competency relates to the grinding of weld repairs to switches and crossings, and repairing of surface profile of switches and crossings in service. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the grinding of switches and crossings as part of workplace activities across a variety of operational contexts within the Australian rail system.

Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 **Determine job requirements** | 1.1 Weld repairs are located
1.2 Defects relating to rail surface profile and condition in switches and crossings are identified
1.3 Appropriate equipment is selected
1.4 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
1.5 Site is cleared of obstructions and combustible material
2 **Grind weld repair** | 2.1 Switch or crossing is ground to nominated profile after installation or welded repair using approved equipment in accordance with workplace procedures
2.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
2.3 Switch or crossing profile and alignment are measured to ensure compliance with acceptance standards
2.4 Rail surface condition is assessed for compliance with acceptance standards
3 **Grind switch or crossing to repair surface defects** | 3.1 Switch or crossing is ground using approved equipment in accordance with workplace procedures
3.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
3.3 Finished surface is checked to ensure compliance with acceptance standards
4 **Complete documentation** | 4.1 Documentation on work undertaken is completed in accordance with workplace requirements

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the grinding of switches and crossings
- Problems that may occur during the grinding of switches and crossings, and action that can be taken to report or resolve the problems
- Hazards that may exist when grinding switches and crossings, and ways of controlling the risks
REQUIRED KNOWLEDGE AND SKILLS
involved
- Acceptance standards for switch and crossing profile and surface condition
- Grinding methods and results
- Relevant communication systems and procedures
- Authorisation/Approval processes and procedures
- Relevant recording and documentation procedures

Required skills:
- Communicate effectively with others when grinding switches and crossings
- Read and interpret technical data, drawings, instructions and manuals relevant to the grinding of switches and crossings
- Interpret and follow operational instructions and prioritise work when grinding switches and crossings
- Complete documentation related to the grinding of switches and crossings
- Operate communication equipment to required protocol
- Work collaboratively with others when grinding switches and crossings
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when grinding switches and crossings in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when grinding switches and crossings
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Select and use hand tools, power tools and equipment
- Apply grinding techniques to achieve switch and crossing profile and surface condition to meet required standards and procedures

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - determining job requirements
  - safely operating grinding equipment
  - grinding weld repairs using appropriate grinding wheel speed and rate of metal removal
  - grinding switches and crossings to repair surface defects
  - completing documentation correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

environment at the registered training organisation, and/or

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- in all weather conditions

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Type and rate of grinding may vary according to:

- location
- rail mass or type
- switch type
- crossing type
- crossing material
- purpose of grinding

Equipment may include:

- hand held grinders
- rail profile grinders
- hand tools including gauges, track jacks, spiking hammers and bars
- fume extraction equipment for grinding manganese crossings

Measuring equipment may include:

- straight edge
- electronic straight edge
- profile gauge

Materials may include:

- grinding wheels

Liaison may include:

- internal or external personnel from other work areas (e.g. train controllers, electricians)

Depending on the type of

- company procedures
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may include:

- enterprise procedures
- organisational procedures
- established procedures

Communications equipment may include:

- two-way radios
- telephones/mobile phones
- agreed audible or hand signal
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- fire retardant clothing and overgear (aprons, spats etc)
- face shields
- portable radios/mobile phones
- hand lamps
- flags
- protective equipment for grinding manganese crossings
- fire fighting equipment
- safety devices

Depending on work context and crossing material, safety and personal protective equipment may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- rail inspections and reports
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines

Information/documents may include:

- fire fighting equipment
- safety devices

Applicable procedures and codes may include:
RANGE STATEMENT

- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to weld rail using the aluminothermic welding process in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing and planning the welding method, preparing the rail for aluminothermic welding, carrying out the welding process in accordance with workplace requirements, checking weld conformance, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to weld rail using the aluminothermic welding technique as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare and plan welding method** | 1.1 Work requirements are determined to identify scope of work and resources required  
1.2 Welding equipment and consumables are prepared and checked for serviceability  
1.3 Site is cleared of obstructions and combustible material to minimise risk of accidents and fire  
1.4 Fire fighting and other safety equipment is organised, checked and located in accordance with required regulations  
1.5 Personnel are briefed about safety precautions specific to aluminothermic welding as required to minimise risk of injury |
| **2 Prepare rail for welding** | 2.1 Location of weld is identified and assessed in accordance with standards and procedures  
2.2 Track is prepared for welding in accordance with workplace standards and procedures  
2.3 Rail is prepared for welding in accordance with workplace standards and procedures |
| **3 Carry out welding process** | 3.1 Moulds are fitted and luted to standard to prevent leakage of the molten reaction  
3.2 Rails are pre-heated to standard to prevent heat loss  
3.3 Rails are welded using aluminothermic method in accordance with approved procedures  
3.4 Welding equipment is removed according to approved procedures  
3.5 Excess material is removed from weld in accordance with workplace procedures  
3.6 Rail profile is restored to standard using rail profile grinder in accordance with workplace procedures  
3.7 Arrangements are made for track to be restored |
| **4 Check weld conformance** | 4.1 Finish ground weld area is visually inspected for surface finish and defects  
4.2 Finish ground weld area is checked for conformance to rail profile and geometry acceptance standards |
| **5 Complete documentation** | 5.1 Required documentation and/or records are completed in accordance with workplace requirements |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the welding of rail using the aluminothermic technique
- Problems that may occur during the welding of rail using the aluminothermic technique, and action that can be taken to report or resolve the problems
- Hazards that may exist during the welding of rail using the aluminothermic technique, and ways of controlling the risks involved
- Contents of relevant workplace technical manuals and instructions
- Characteristics of plant and equipment, hardware and components used in welding activities
- Impact on work activities of regulatory requirements
- Impact of other work activities on welding integrity
- Workplace documentation requirements
- Site inspection techniques

Required skills:

- Communicate effectively with others when welding rail using the aluminothermic process
- Read and interpret technical data, drawings, instructions and manuals relevant to the welding of rail using the aluminothermic process
- Interpret and follow operational instructions and prioritise work when welding rail using the aluminothermic process
- Complete documentation related to the welding of rail using the aluminothermic process
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when welding rail using the aluminothermic process
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when welding rail using the aluminothermic process in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Carry out required welding operations
Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Check compliance between work and job specifications
- Implement fire control procedures
- Select and use required personal protective equipment
- Identify, select and use hand and portable power tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning and preparing for welding method
  - preparing rail for welding
  - using appropriate type or types of welding processes
  - checking weld for conformance
  - completing documentation correctly
  - successfully performing a minimum of 10 welds

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- hazards to eyes
- heat hazards
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Resources may include:
- rail tensor
- hand tools (hot axe, hammer)
- wedges
- straight edge
- rail shears
- rail friction saw
- rail profile grinder, angle grinder
- welding equipment
- electric generator
RANGE STATEMENT

Welding processes may include:
- Thermit Australia welding processes (i.e. SkV-Elite, SKVF, SMWF, SKVL)
- Railtech welding processes (i.e. PLK CJ, WG68 X CJ)
- other approved welding processes

Weld types may include:
- standard gap (short preheat)
- standard gap (long preheat)
- wide gap
- junction

Consumables may include:
- welding materials as required
- rail jewellery (plates, dogs, etc.)
- gases (oxy, acetylene, propane)
- closure rails

Safety hazards may include:
- fire risk
- poor weather
- eye damage
- burns
- rail tensor failure (broken pins etc.)
- welding rail in electrified territory

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, other track gangs)

Communications systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the work context, safety and personal protective equipment may include:
- high visibility clothing
- fire retardant overalls or long sleeved shirts and long pants
- hearing protection
- gauntlet type gloves
- sunscreen
- sunglasses
- welding goggles
- safety glasses
- insect repellent
- safety headwear
- safety footwear
RANGE STATEMENT

Information may be provided:
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- welding records
- track inspection reports
- timekeeping records
- incident reporting data
- maintenance specifications
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- electrified territory regulations
- relevant fire regulations

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Perform pre-operational equipment checks | 1.1 Detailed pre-operational equipment checks are conducted as per manufacturers specifications and/or local maintenance schedules  
1.2 Deficiencies with equipment are identified and rectified in accordance with workplace procedures  
1.3 Relevant persons are notified of problems and documentation is completed |
| 2 Prepare rail for welding | 2.1 Weld location is checked to confirm suitability for welding in accordance with workplace standards  
2.2 Track preparation for welding is arranged (if required) in accordance with workplace procedures and standards  
2.3 Rail ends are prepared for welding in accordance with workplace procedures and standards |
| 3 Carry out flashbutt welding | 3.1 Flashbutt welding equipment is prepared for use  
3.2 Flashbutt welding unit is clamped to rail ensuring accurate alignment  
3.3 Equipment is operated in accordance with machine operation instructions and workplace procedures to achieve appropriate quality standard  
3.4 Warning systems are monitored and responded to appropriately during operation to maintain correct functionality of equipment  
3.5 Track restoration is arranged (where required) in accordance with workplace procedures and standards  
3.6 Weld is profile-ground to ensure smooth running surface in accordance with workplace procedures and standards |
| 4 Check weld conformance | 4.1 Finished ground weld area is visually inspected for surface finish and defects  
4.2 Finished ground weld area is checked for conformance to rail profile and geometry acceptance standards |
| 5 Perform post-operational equipment checks | 5.1 Post-operational equipment checks are conducted in accordance with manufacturers specifications or local maintenance schedules to identify defects and maintenance requirements  
5.2 Deficiencies with equipment are identified and rectified in an appropriate manner to maintain correct functionality of equipment  
5.3 Relevant persons are notified of problems and/or documentation is completed in accordance with instructions and the relevant codes of practice |
| 6 Complete documentation | 6.1 Required documentation and/or recording is completed in accordance with workplace procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the operation of flashbutt welding equipment
- Workplace procedures for the welding of rail using the flashbutt welding process
- Problems that may occur during use of the flashbutt welding process and equipment, and action that can be taken to report or resolve the problems
- Hazards that may exist during welding of rail using the flashbutt welding process, and ways of controlling the risks involved
- Basic technical knowledge relevant to flashbutt welding
- Rail welding standards
- Emergency procedures
- Characteristics of relevant plant and equipment, transport, structures, hardware and components used in work activities
- Materials identification, handling and storage
- Hazardous situations and related personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when welding rail using the flashbutt welding process
- Read and interpret instructions, procedures, route information and signs relevant to welding of rail using the flashbutt welding process and equipment
- Interpret and follow operational instructions and follow scheduled work process when welding rail using the flashbutt welding process
- Complete documentation related to work activities
- Operate communication equipment to required protocol
- Work collaboratively with others when welding rail using the flashbutt welding process
- Promptly report and/or rectify any identified problems, faults or malfunctions when welding rail using the flashbutt welding process in accordance with regulatory requirements and workplace procedures
- Plan the scheduled work including predicting consequences and identifying improvements
- Implement contingency plans for unexpected events when using the flashbutt welding process
Required skills:

- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Carry out required welding operations
- Select and use relevant hand and portable power tools
- Handle rail safely
- Check compliance between work and job specifications
- Implement required fire control procedures
- Select and use required personal protective equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Operate flashbutt welding equipment (for which certificated and licensed)

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - ensuring equipment is operating correctly
  - preparing equipment for operation
  - operating equipment correctly
  - checking finished welds for conformance
  - completing documentation/records correctly
EVIDENCE GUIDE

Context of and specific resources for assessment

- successfully performing a minimum of 25 welds
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment,
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all possible weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
RANGE STATEMENT

Flashbutt welding equipment may include:
- rail mounted flashbutt welders
- stationary flashbutt welders used in field

Equipment may include:
- rail tensor
- welding records
- rail shears
- timekeeping records
- rail profile grinder, angle grinder
- incident reporting data
- electric generator
- track inspection reports
- gas heating/cutting equipment
- welding equipment
- rail friction saw
- hand tools

Safety hazards may include:
- fire risk
- poor weather
- rail tensor failure (broken pins etc.)
- flash damage to eyes
- burns

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communications equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the work context, safety and personal protective equipment may include:
- high visibility clothing
- fire retardant overalls or long sleeved shirt and long pants
- hearing protection
- gauntlet type gloves
- sunscreen
- welding goggles
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
RANGE STATEMENT

Information/documents may include:
- hand lamps
- flags
- safety devices
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements
- relevant fire regulations

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers)

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

Unit Sector(s)
Not Applicable
Competency Field

W - Equipment and Systems Operations
TLIW3026B Operate stand alone signalling/points control equipment

Modification History
New release. This unit replaces and is equivalent to TLIW3036A.

Unit Descriptor
This unit involves the skills and knowledge required to operate stand alone signalling/point control equipment on a rail network in accordance with Access Provider legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines. The unit includes the application of Access Provider rules, procedures and protocols for rail safety but does not include the implementation of worksite protection. All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Use stand alone signalling control equipment

1.1 Signalling/point control equipment is identified and confirmed with network control officer, if applicable

1.2 Authority to operate signalling/point control equipment is obtained from network control officer

1.3 Appropriate personal protective equipment (PPE) is worn in accordance with Access Provider and organisational requirements

1.4 Track environment is accessed safely in accordance with workplace procedures

1.5 Changed local conditions are identified

1.6 Stand alone signalling control equipment is operated safely in accordance with any local instructions

1.7 Route is set and confirmed as correct to facilitate safe rail vehicle movement

1.8 Communication with network control officer is maintained using appropriate communication protocols and systems in accordance with workplace procedures

1.9 Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures

### 2 Restore stand alone signalling control equipment

2.1 Network control officer is informed when rail vehicle/s are clear of fouling points

2.2 Stand alone signalling/point control equipment is restored to correct position

2.3 Restoration is confirmed with network control officer

2.4 Where required, signalling/point control equipment is locked and secured in accordance with workplace procedures

2.5 Any identified equipment faults are reported in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures
- Access Provider rules and procedures for working around electrical infrastructure
- Operational communication protocols and systems
- Rail terminology as defined by the applicable Access Provider
- Recognition of points, signals and location features

**Required skills:**

- Communicate effectively with individuals and work groups
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Operate points and signal controls
- Use appropriate PPE conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - explaining procedures to maintain communication with network control officer
  - selecting and wearing appropriate PPE
  - correctly operating stand alone signalling and point control equipment
  - correctly restoring stand alone signalling and point control equipment
  - demonstrating locking and, where required, securing stand alone signalling control equipment in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated in a suitable context
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work locations may include:
- rail corridor
- danger zone:
  - running line
  - sidings/yards
  - platforms/buildings

Terminology will be:
- as defined by the Access Provider

Work may occur:
- by day or night
- under varied weather conditions and situations

Safety assessment will be:
- as defined within workplace procedures
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching trains
  - speed of approaching trains
  - position of safety
  - changed local conditions

Network control officer may be:
- network controller
- train controller
- area controller
- signaller

Communication may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communication protocols and systems may include:
- general safety
- transmitting and receiving messages:
  - identification
  - standard radio terms
  - phonetic alphabet
  - testing communications equipment
  - emergency messages

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Rail vehicles may include:
- trains
- road/rail vehicles
- track vehicles
Stand alone signalling equipment may include:

- dual control point machines
- ground frames
- switchlocks
- plunger lock points
- small signal boxes
- quadrant levers
- master keys
- tokens
- Annett keys

**Unit Sector(s)**

Not applicable.

**Competency Field**

W – Equipment and Systems Operations
TLIW3027A Operate minor track equipment

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to operate minor track equipment. The unit covers equipment that can be manually lifted on or off track, including equipment that can be moved and operated on trolleys.

Minor equipment requires a basic operator skill level in manipulation, coordination, alignment and functional activity, with little complexity or variance in overall activity. It typically covers equipment with basic repetitive and alignment type activities.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit involves applying routine operational principles and procedures when operating minor equipment on track as part of workplace activities across a variety of rail operational contexts.

Persons achieving competence in this unit will need to meet organisational requirements to operate each individual piece of equipment.

Operators may need to have fulfilled licence and/or certification requirements for the type of equipment being used.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Perform pre-operational equipment checks | 1.1 Detailed pre-operational equipment checks are conducted according to manufacturer specifications and organisational procedures  

1.2 Log books are checked and completed in accordance with organisational requirements and manufacturer specifications  

1.3 Problems with equipment are identified and rectified in accordance with workplace procedures  

1.4 Identified problems are reported and documented in accordance with organisational procedures |
| **2** Obtain approval to place on track | 2.1 Protection officer or person in charge of work (PICOW) is contacted to obtain approval to place minor equipment on track, and move to designated track at nominated location in accordance with organisational procedures |
| **3** Prepare, operate and monitor minor equipment on track | 3.1 Equipment is travelled to worksite or nominated signal/yard location  

3.2 Equipment is prepared for work  

3.3 Equipment is operated in a safe and efficient manner in accordance with the relevant codes of practice, safeworking systems, and manufacturer’s and organisational procedures  

3.4 Equipment is operated to meet organisational standards and specifications  

3.5 Warning systems are monitored and responded to appropriately during operation |
| **4** Remove equipment from track | 4.1 Approval is requested from the protection officer or PICOW to direct when and where to off track equipment  

4.2 Equipment is propelled to nominated off-track location  

4.3 Protection officer or PICOW is contacted and informed that all equipment is off-tracked  

4.4 Equipment is left stored in appropriate manner and location to ensure its security and protection |
| **5** Perform post-operational equipment checks | 5.1 Post-operational equipment checks are conducted according to manufacturer specifications and organisational |
procedures

5.2 Identified problems are reported in accordance with organisational procedures

5.3 Post-operating service schedule is performed according to organisational procedures

6 Complete documentation

6.1 Log books are checked and completed accurately

6.2 Required documentation is completed in an accurate manner in accordance with organisational procedures
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant legislated rail safety requirements, including acts and regulations from each applicable state or territory
- Relevant OH&S, equal employment opportunity and environmental procedures and regulations
- Organisational procedures for the operation of minor track equipment
- Problems that may occur when operating minor track equipment, and action that can be taken to report or resolve them
- Hazards that may exist when operating minor track equipment, and ways of controlling the risks involved
- Basic knowledge of track structure and geometry where applicable
- Problems that can occur on minor track equipment and related action that should be taken
- Organisational emergency procedures with regard to operating minor track equipment
- Separation distances
- Work on-track rules and regulations overview

Required skills:

- Communicate effectively with others when operating light on-track equipment
- Follow operational instructions
- Complete documentation relating to work activities
- Follow work instructions
- Use appropriate numeric functions when operating light on-track equipment
- Work collaboratively with others when operating light on-track equipment
- Report and rectify within limits of own role identified problems, faults and malfunctions when operating minor track equipment in accordance with regulatory requirements and workplace procedures
- Implement prepared contingency plans for unexpected events when operating minor equipment on track
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work with required attention to detail without injury to self or others, or damage to goods
or equipment
- Select and use required personal protective equipment (PPE) conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Minor track equipment may include:
- dog pullers
- spike drivers
- ballast scarifiers
- multi-spindle borers
- small sleeper spacers
- dog screw setters/drivers
- power track jacks
- various fastening applicators
- joint lifters
- rail-mounted compressor

Liaison may include:
- protection officer
- PICOW
- fellow workers

Communication systems may include:
- two-way radios
- radio headsets
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:
- relevant legislated rail safety requirements, including acts and regulations from each applicable state or
• territory
• operational instructions
• organisational policies and procedures
• relevant log and/or record book
• maintenance notices, records and requests
• local authority regulations and procedures
• technical instructions
• manufacturer’s or workplace equipment instructions and operation manuals
• emergency procedure manuals
• two-way radio and mobile telephone operation procedures
• quality assurance (QA) plans, data and document control
• legislation and industrial agreements, including workplace agreements and awards

Unit Sector(s)
Not applicable.

Competency Field
W – Equipment and Systems Operations
TLIW3034A Apply protective coating systems to structures

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to apply protective coating systems to structures using manual or mechanical methods in accordance with organisational requirements. This includes planning, preparing the surface, applying surface coatings, and completing required documentation.

Licensing or certification requirements are not applicable to this unit. Persons achieving competence in this unit will need to fulfil any legislated OH&S and rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
Work involves applying routine operational principles and procedures to the application of protective coating systems to structures as part of workplace activities across a variety of contexts within the Australian rail system.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relating to the application of surface coating equipment
- Relevant OH&S and environmental protection procedures and guidelines
- Organisational procedures and policies for the application of surface coatings
- Methods for preventing contamination of surfaces during and after surface coating
- Problems that may occur when applying surface coatings, and action that can be taken to resolve them
- Hazards that may occur when applying surface coatings, and ways of controlling the risks involved
- Housekeeping standards and procedures required in the workplace

Required skills:

- Communicate effectively with others when applying surface coatings
- Read and interpret instructions, procedures, information and labels relating to the application of surface coatings
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to the application of surface coatings
- Work collaboratively with others when applying surface coatings
- Report and rectify within limits of own role problems, faults and malfunctions that may occur when applying surface coatings in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Plan own work, including predicting consequences and identifying improvements
- Identify resources required when applying surface coatings
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain equipment to manufacturer specifications
- Identify, select and effectively use relevant materials and equipment when applying surface coatings
- Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment (PPE), conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - explain commonly used protective coating systems and their advantages and disadvantages in given situations
  - correctly apply a protective coating to a new component using manual or mechanical methods
  - correctly apply a protective coating to an old component using manual or mechanical methods
  - identify problems and faults that can occur

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
- high pressure water blasting equipment
- abrasive blast equipment
- mechanical cleaning equipment
- wire brushes
- scaffolding
- manual application tools
- mechanical application equipment

Coatings may be:
- organic
- inorganic
- epoxy

Liaison may include:
- internal or external personnel from other work areas, such as train controllers and electricians

Hazards in the work area may include exposure to:
- chemicals and fumes
- dangerous or hazardous substances
- electrical equipment
- humidity, air temperature and radiant heat
- movement of equipment, goods and vehicles

PPE may include:
- gloves
- safety headwear and footwear
- safety glasses
- respirators
- protective clothing

Communication equipment may include:
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:
- information provided by other workplace personnel
- inspection reports
- work orders
- technical instructions and material safety data sheets
Applicable procedures and codes may include:

- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
- local authority regulations and procedures

Unit Sector(s)
Not applicable.

Competency Field
W – Equipment and Systems Operations
TLIW3035A Heat and cut materials using oxy-LPG equipment for the rail industry

Modification History
Not Applicable.

Unit Descriptor
This unit involves the skills and knowledge required to heat and cut materials using oxy-LPG equipment for the rail industry. It includes planning and preparing for the work, setting up and testing the equipment, heating and cutting materials, shutting down equipment, and completing clean-up activities.

Licensing or certification requirements are not applicable to this unit. Persons achieving competence in this unit will need to fulfil legislated OH&S and rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
Work involves the heating and cutting of steel and includes cutting up waste for salvage; and cutting steel, rails, bolts and cutting holes in plate (with the exception of structural steel members). Heating activities include steel and bolts (excluding structural steel members).

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT PERFORMANCE CRITERIA

1  **Plan and prepare for work**

   1.1 Work instructions, including plans, specifications, quality requirements and operational details are obtained, confirmed and applied to the scope of work to be performed

   1.2 Safety and OH&S requirements are followed in accordance with safety plans and organisational policies

   1.3 Signage and barricade requirements are identified and implemented as required

   1.4 Plant, tools and equipment consistent with the requirements of the job are selected, checked for serviceability, and any faults rectified or reported prior to commencement

   1.5 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use

   1.6 Environmental requirements are identified and work is carried out in accordance with environmental plans and statutory and legislative authority obligations

2  **Set up and test equipment**

   2.1 Appropriate type of fire extinguisher is selected and located to be readily accessible prior to and during operations

   2.2 Regulators are attached to oxy and LPG bottles in accordance with manufacturer specifications and OH&S regulations

   2.3 Lines are purged to manufacturer recommendations prior to lighting up

   2.4 Equipment is tested for leaks and corrective action undertaken or faults reported

   2.5 Correct pressures and cutting tips are selected in accordance with material to be heated or cut and manufacturer specifications

3  **Heat and cut material**

   3.1 Material is accurately marked and secured or clamped ready for cutting

   3.2 Torch is lit correctly and safely in accordance with manufacturer specifications

   3.3 Setting of flame is adjusted for cutting in line with manufacturer recommendations

   3.4 Heat is applied to specified material and weakening effects of the heating process are minimised

   3.5 Correct cutting position is adopted during cutting to set
3.6 Material is correctly cooled

4 Shut down equipment and clean up

4.1 Torch is switched off in accordance with manufacturer specifications

4.2 Gas supply is shut off in accordance with manufacturer specifications

4.3 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification

4.4 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and organisational policies and procedures

5 Complete documentation

5.1 Documentation is completed as required in accordance with workplace procedures
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relating to heating and cutting materials using oxy-LPG equipment for the rail industry
- Relevant OH&S and environmental protection procedures and guidelines
- Oxy-LPG heating and cutting equipment set-up and operating techniques
- LPG heating and cutting equipment types, characteristics, uses and limitations
- Job safety analysis (JSA) and safe work method statements
- Characteristics from material safety data sheets (MSDS)
- Correct storage of materials and environmentally friendly waste management
- Problems that may occur and action that can be taken to resolve them
- Hazards that may occur and ways of controlling the risks involved
- Knowledge of rail stresses

Required skills:

- Communicate effectively with others when heating and cutting materials using oxy-LPG
- Read and interpret instructions, procedures, information and relevant documentation
- Interpret and follow operational instructions and prioritise work
- Complete documentation
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Report and rectify within limits of own role problems, faults and malfunctions that may occur in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Plan own work, including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Maintain equipment to manufacturer specifications
- Identify, select and effectively use relevant materials and equipment
- Adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment (PPE) conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  • the underpinning knowledge and skills
  • relevant legislation and workplace procedures
  • other relevant aspects of the range statement
• Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  • locate, interpret and apply relevant information, standards and specifications
  • comply with site safety plan and OH&S legislation, regulations and codes of practice applicable to workplace operations
  • comply with organisational policies and procedures, including quality requirements
  • safely and effectively use tools, plant and equipment
  • communicate and work effectively and safely with others
  • use oxy-LPG systems to heat and cut rails to specification

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• As a minimum, assessment of knowledge must be
Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
  - conducted through appropriate written/oral tests
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movement of equipment, goods and vehicles

Types of cutting may vary according to:
- location
- rail mass or type
- crossing and switch type
- rail, switch or crossing material

Equipment may include:
- mechanical handling and lifting equipment
- hand tools, including impact wrenches, tie tampers, gauges, track jacks, spiking hammers and bars
- oxy-LPG equipment, including:
  - cylinders
  - regulators
  - cutting tips
  - heating tips
  - gas hoses
  - cutting blowpipes
  - flint lighters
  - hand grinders
  - wire brushes
  - rail thermometers and/or ‘thermomelt’ crayons
  - cutting and boring equipment
  - fastening equipment
  - fume extraction equipment for use with manganese rail
  - measuring tapes and rules
  - clamps and support stands

Materials may include:
- heating and cutting consumables
- rails
- rail bolts
- plain rod, plate and pipe

PPE may include:
- high visibility clothing
- long pants and shirts
- hearing protection
- long gloves
Communication equipment may include:

- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:

- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:

- information provided by other workplace personnel
- inspection reports
- work orders
- technical instructions and MSDS
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
- local authority regulations and procedures
Unit Sector(s)
Not applicable.

Competency Field
W – Equipment and Systems Operations
TLIW3042A Grind rail on tram/light rail systems

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to grind rail welds and faults on tram/light rail systems in accordance with approved standards, safeworking and regulatory requirements, and organisational procedures. It includes determining job requirements, grinding weld and/or weld repair, grinding rail to repair surface defects, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This competency relates to the grinding of new welds and welded repairs on both the rail and check rail, grinding out corrugations and re-profiling the rail.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**1 Determine job requirements**

1.1 New welds and weld repairs are located
1.2 Corrugations on the rail are identified
1.3 Appropriate equipment is selected
1.4 Appropriate repair method and/or profile is selected to ensure completed work will meet specifications
1.5 Site is cleared of obstructions and combustible material

**2 Grind weld repair**

2.1 Rail and check rail are ground to profile using approved equipment in accordance with workplace procedures
2.2 Grinding equipment is operated safely in accordance with occupational health and safety (OH&S) and environmental requirements
2.3 Rail profile and vertical and horizontal alignment are measured to ensure compliance with acceptance standards
2.5 Rail surface condition is assessed for compliance with acceptance standards

**3 Grind rail to repair corrugations**

3.1 Rail is ground using approved equipment in accordance with workplace procedures
3.2 Grinding equipment is operated safely in accordance with OH&S and environmental requirements
3.3 Finished surface is checked to ensure compliance with specification

**4 Re-profile rail**

4.1 Rail is re-profiled using approved equipment in accordance with workplace procedures
4.2 Equipment is operated safely in accordance with OH&S and environmental requirements
4.3 Finished surface is checked to ensure ground profile complies with organisational requirements and specifications

**5 Complete documentation**

5.1 Documentation is completed in accordance with organisational requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Acceptance standards for rail profile and surface condition
- Authorisation/approval processes and procedures
- Documentation and recordkeeping requirements
- Grinding methods and results
- Hazards that may exist when grinding rail and welds, and ways of controlling the risks involved
- Problems that may occur when grinding rail and welds, and action that can be taken to report or resolve the problems
- Relevant communication systems and procedures
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for grinding rail and welds

**Required skills:**

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when grinding rail and welds
- Complete documentation related to grinding rail and welds
- Interpret and follow operational instructions and prioritise work when grinding rail and welds
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret technical data, drawings, instructions and manuals relevant to grinding rail and welds
- Report and/or rectify any identified problems, faults or malfunctions that may occur when grinding rail and welds in accordance with regulatory requirements and workplace procedures
- Select and use hand tools, power tools and equipment
- Select and use required personal protective equipment
- Work collaboratively with others when grinding rail and welds
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying job requirements
  - operating grinding equipment safely
  - grinding welds and weld repairs using appropriate grinding wheel speed and rate of metal removal
  - grinding rail to repair surface defects
  - completing documentation correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type and rate of grinding may vary according to:
  - location
  - purpose of grinding

Equipment may include:
  - hand held grinders
  - rail profile grinders
  - ride on rail profile grinders
  - hand tools
  - gauges
  - electronic rail profiler

Measuring equipment may include:
  - straight edge
  - electronic straight edge
  - profile gauge

Materials may include:
  - grinding wheels

Liaison may include:
  - internal or external personnel from other work areas (e.g. signallers/controllers, electricians)

Communication equipment systems may include:
  - two-way radios
  - telephones/mobile phones
  - agreed audible or hand signal

Depending on the work context, safety and personal protective equipment may include:
  - high visibility clothing
  - hearing protection
  - gloves
  - sunscreen
  - sunglasses
  - safety glasses
  - insect repellent
  - safety headwear
  - fire retardant clothing and overgear (aprons, spats etc.)
  - face shields
  - safety footwear
  - portable radios/mobile phones
  - hand lamps
  - flags
  - safety devices

Information/documents may include:
  - operational instructions, policies and workplace procedures
  - local authority regulations and procedures
  - information provided by other workplace personnel
  - track inspection reports
Applicable procedures and codes may include:
  - work orders
  - technical instructions
  - manufacturer or workplace equipment instructions and operation manuals
  - two-way radio/mobile phone operation procedures
  - conditions of service, legislation and industrial agreements including workplace agreements and awards
  - legislated rail safety requirements including state acts and regulations together with any nationally approved compliance codes and/or guidelines
  - relevant state/territory OH&S and environmental protection legislation

Unit Sector(s)
Not applicable.

Competency Field
W – Equipment and Systems Operations
TLIW3043A Weld rail on tram/light rail systems using electric welding process

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to weld rail, crossings or switches on tram/light rail systems using an electric welding process in accordance with approved standards, safeworking and regulatory requirements, and organisational procedures. It includes preparing rails, crossings or switches for welding; gouging or grinding; setting up welding equipment; performing the welding operation; checking weld conformance; and completing required documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit covers the processes used to repair rail surface defects and restore rail profile to plain rail, crossings and switches.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Prepare rails, crossings or switches for welding | 1.1 Weld repair area is identified and assessed in accordance with standards and procedures  
1.2 Welding equipment and consumables are prepared and checked for serviceability  
1.3 Weld repair area is prepared for welding in accordance with workplace standards and procedures  
1.4 Track components are assembled/aligned to specification where required |
| 2 Assemble and set up welding equipment | 2.1 Welding equipment is set up and adjusted to meet welding process requirements  
2.2 Accessories and consumables are selected for use |
| 3 Assemble and set up gouging and grinding equipment | 3.1 Gouging and grinding equipment is assembled and set up  
3.2 Equipment settings are adjusted to meet process requirements  
3.3 Accessories and consumables are selected for use |
| 4 Remove defect | 4.1 Appropriate method to be used to remove the defect is identified in accordance with organisational standards and procedures  
4.2 Defect is removed using identified method in accordance with organisational standards and procedures |
| 5 Perform welding operation | 5.1 Weld metal is applied to repair area to meet specification in accordance with standards and procedures  
5.2 Welded area is cleaned in preparation for grinding  
5.3 Welded area is ground in accordance with organisational standards and procedures |
| 6 Check weld conformance | 6.1 Finished ground weld area is visually inspected for surface finish and defects  
6.2 Finished ground weld area is checked for conformance to rail/crossing/switch profile acceptance standards |
| 7 Complete post-operative checks and documentation | 7.1 Equipment is checked for serviceability  
7.2 Defective equipment is replaced and/or reported for servicing/repair in accordance with organisational policies and procedures  
7.3 Documentation on work undertaken is completed in accordance with organisational requirements |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Acceptance standards for weld repairs on rail
- Authorisation/approval processes and procedures
- Documentation and recordkeeping requirements
- Fundamentals of tram track and components
- Hazards that may exist when welding rail using an electric welding process, and ways of controlling the risks involved
- Problems that may occur when welding rail using an electric welding process, and action that can be taken to report or resolve the problems
- Relevant communication systems and procedures
- Relevant safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Track standards for tram rail, crossing and switch condition and surface profile
- Workplace procedures for removing defects by gouging, grinding and welding rail using an electric welding process

Required skills:

- Communicate effectively with others when welding rail using an electric welding process
- Complete documentation related to welding rail using an electric welding process
- Implement contingency plans for unexpected events when welding rail using an electric welding process
- Interpret and follow operational instructions and prioritise work when welding rail using an electric welding process
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate communications equipment to required protocol
- Read and interpret technical data, drawings, instructions and manuals relevant to welding rail using an electric welding process
- Report and/or rectify any identified problems, faults or malfunctions that may occur when welding rail using an electric welding process in accordance with regulatory requirements and organisational procedures
- Select and use hand tools, power tools and equipment
- Select and use required personal protective equipment (PPE)
- Work collaboratively with others when welding rail using an electric welding process
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competency in the following in a range of situations:
  - preparing items for welding according to workplace requirements
  - assembling and setting up welding, gouging and grinding equipment and preparing consumables
  - performing welding grinding, gouging and testing operations on rails, crossings or switches
  - ensuring weld conforms to organisational requirements
  - completing documentation in accordance with organisational requirements

Context of and specific resources for assessment

- Performance must be demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace or
  - simulated environment using actual components, tools and equipment
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
• in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and vehicles

Types of weld repairs may vary according to:
- welding process location
- rail mass or type
- crossing and switch type
- rail, switch and crossing material

Welding process may include:
- flux core arc welding
- manual metal arc welding

Welding equipment may include:
- electric welders
- generators
- wirefeed welding unit
- electrode holder
- robotic welder

Equipment may include:
- mechanical handling/lifting equipment
- hand tools including impact wrenches, tie tampers, gauges, track jacks, spiking hammers and bars
- oxy/LPG gouging equipment
- manual or mechanical grinder
- wire brushes
- cutting and boring equipment
- fastening equipment
- fume extraction equipment
- on-line respirator

Materials may include:
- flux core wire
- welding electrodes
- grinding discs

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, signal technicians)

Communications equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the work context, safety and personal protective equipment may include:
- high visibility clothing
- long pants and shirts
- hearing protection
- long gloves
- spats
- sunscreen
- sunglasses
- welding helmet
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- special PPE

Information/documents may include:
- operational instructions
- information provided by other workplace personnel
- rail inspections reports
- work orders
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- organisational policies and procedures
- local authority regulations and procedures relevant
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)
Not applicable.

Competency Field
W – Equipment and Systems Operations
TLIW5001A Apply rail communications systems

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves applying rail communications systems. It includes preparing to apply rail communications systems, recording and logging communications and ensuring safeworking systems are incorporated into communications systems.

Licensing, legislative, regulatory or certification requirements are not applicable to this unit at the time of publication.

Application of the Unit
This unit provides knowledge of rail communications systems in general terms across all types of rail systems.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare to apply rail communications systems

1.1 Communications systems used in the rail industry are outlined

1.2 Main components of fixed and mobile communications systems are identified and explained

1.3 Functions of the different types of communications systems used in the rail industry are explained

1.4 Effectiveness of different types of communications systems are compared

1.5 Communications system/s appropriate to a situation are selected in accordance with organisational policies and procedures

1.6 Working order of selected communications system/s is ensured in accordance with organisational policies and procedures

2 Record and log communications

2.1 Purpose of recording and logging communications is identified

2.2 Methods by which communications are recorded and logged are identified and explained

2.3 Effectiveness of different types of communications recording and logging processes are outlined

2.4 Communications recording and logging processes most appropriate to a situation are selected in accordance with organisational policies and procedure

2.5 Relevant communications systems plans are identified, explained and implemented in accordance with organisational policies and procedures

3 Ensure safeworking systems are incorporated into communications systems

3.1 Different methods of safeworking are identified and communications used for each type are outlined

3.2 Potential problems that can occur with different communications systems are identified and explained
3.3 Methods to overcome identified problems are developed and implemented

**Required Skills and Knowledge**

This section describes the knowledge and skills required for this unit.

**Required knowledge:**
- Changes in rail industry operations and technology with implications for rail safety
- Duty holders and their duties under rail safety legislation
- Key concepts and definitions relating to rail communications systems
- Key principles and practices associated with railway operations
- Key regulatory and standards for participants in the rail industry
- Rail industry terminology, including terminology used in technical standards
- Rail regulatory framework
- Rail safety management systems
- Relevance of national and international standards to the rail industry

**Required skills:**
- Access and use rail safety industry standards
- Communicate effectively with others and interpret complex information relating to rail operations
- Develop and maintain currency of rail industry knowledge and regulatory requirements
- Network and build relationships with a diverse range of rail industry organisations
- Research information related to the rail industry and rail safety regulation
- Review changing regulatory information
- Work ethically in accordance with legislation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communications systems may include:
- internet
- radios
- telephones

Different types of communications systems may include:
- fixed communications:
  - fixed radios
  - post phones
  - recoding equipment
  - telephones
- mobile communications systems:
  - mobile phones
  - mobile radios
- passenger information systems:
  - emails
  - passenger information displays (PIDs)
  - public address (PA) equipment
  - texts

Relevant communications systems plans may include:
- contingency plans
- emergency plans
- energy efficiency plans
- implementation plans
- information communication plans
- maintenance plans
- resources plans
- training plans

Safeworking systems may include:
- automatic train control (ATC)
- block working
- centralised train control (CTC)
- track protection systems
- train orders

Unit Sector(s)

Not applicable.
Competency Field

W – Equipment and Systems Operations
TLIW5002A Manage rail assets and interfaces

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to manage rail assets and interfaces. It includes managing rail infrastructure fixed assets and maintenance regimes; managing rail operation fixed assets and management regimes; applying reliability, availability, maintainability and safety of rail infrastructure; and managing wheel rail interface.

Licensing, legislative, regulatory or certification requirements are not applicable to this unit at the time of publication.

Application of the Unit
This unit involves knowledge of rail assets in general terms. It covers the different rail infrastructure and operational components and can be applied to freight, heavy haul or passenger rail systems.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Manage rail infrastructure fixed assets and maintenance regimes

1.1 Components and functions of track and track bed are identified and explained

1.2 Electrical infrastructure components and functions are identified and explained

1.3 Other fixed assets and their functions are identified and explained

1.4 Organisational track inspection methodologies are identified, analysed and where required, recommendations for improvement are made to management

1.5 Inspection and maintenance regimes for other assets are identified, analysed and where required, recommendations for improvement are made to management

2 Manage rail operation fixed assets and management regimes

2.1 Rail operation assets and their individual life cycles are identified and explained

2.2 Asset maintenance plans are identified, accessed and implemented

2.3 Processes to monitor asset utilisation and their effectiveness in meeting operational needs are identified and followed

2.4 Potential conflict between operational asset utilisation and maintenance requirements are identified, explained and managed

2.5 Organisational technologies and processes that could enhance asset utilisation are identified, analysed and recommended to management

2.6 Inspection and maintenance regimes for other assets are identified and analysed

3 Apply reliability, availability, maintainability and safety of rail infrastructure

3.1 Concepts related to rail infrastructure reliability, availability, maintainability and safety (RAMS) are identified and explained

3.2 Risk assessment is undertaken in relation to rail infrastructure RAMS
3.3 Programs are developed and implemented to ensure rail infrastructure RAMS are applied

3.4 Impacts of safety requirements on rail network are identified, explained and taken into consideration

4 Manage wheel rail interface

4.1 Wheel rail interface is identified and explained

4.2 Defects and problems related to wheel rail interface are anticipated and rectified, and preventative programs are developed and implemented

4.3 Impacts of poor management of wheel rail interface are identified and explained

4.4 Damage that can be caused by poor wheel rail interface is identified and explained

4.5 Methods for measuring and maintaining rail profiles are identified and applied

4.6 Methods for maintaining rolling stock wheels are identified and applied
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Changes in rail industry operations and technology with implications for rail safety
- Duty holders and their duties under rail safety legislation:
  - contractors
  - designers, manufacturers, suppliers, commissioners, erectors and installers
  - de-commissioners
  - managers of private sidings
  - rail safety workers
  - rail transport operators (rail infrastructure managers and/or rolling stock operators)
- Key concepts and definitions relating to rail assets and interfaces
- Key principles and practices associated with railway operations
- Key regulatory requirements and standards for participants in the rail industry
- Rail industry and rail industry terminology, including terminology used in technical standards
- Rail safety management systems
- Rail safety operating principles:
  - ensuring emergencies and incidents are properly managed
  - ensuring interfaces between different organisations are properly defined and managed
  - identifying and managing risk
  - protecting persons from injury
  - protecting property from damage
  - track access
  - train separation
- Rail regulatory framework
- Relevance of national and international standards to the rail industry
- Relevant information:
  - audit program information
  - changes to regulations
  - compliance and enforcement regime
  - rail regulatory requirements
  - safety notices

Required skills:
- Access and use rail safety industry standards
- Develop and maintain currency of rail industry knowledge and regulatory requirements
- Communicate effectively with others and interpret complex information relating to rail operations
- Manage wheel rail data
- Network and build relationships with a diverse range of rail industry organisations
- Research information related to the rail industry and rail safety regulation
- Review changing regulatory information
- Work ethically in accordance with legislation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Fixed assets may include:
- bridges
- cuttings
- level crossings and equipment
- sidings
- signals
- signs and boards
- stations and platforms
- tunnels

Rail operation assets may include:
- buildings
- carriages
- diesel multiple units (DMU)
- electric multiple units (EMU)
- locomotives
- maintenance facilities
- operating equipment
- rolling stock
- stations

Defects and problems may include:
- poor rail condition including:
  - checking defects
  - corrugations
  - rolling contact fatigue
  - manufacturing defects
  - shelling
  - squats
  - wheel burn
  - wheel slip defects
- poor wheel condition including:
  - arris
  - cracks
  - hollow tread
  - scaling
  - skidded wheels
  - spalling
Unit Sector(s)
Not applicable.

Competency Field
W – Equipment and Systems Operations
TLIW5003A Manage rail network control systems

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to manage rail network control systems. It includes identifying network control and train control systems and their functions.

Licensing, legislative, regulatory or certification requirements are not applicable to this unit at the time of publication.

Application of the Unit
This unit involves rail network control systems and applications. It can be applied to networks supporting heavy haul, freight or passenger rail services.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Manage network control systems and their components

1.1 Purpose of network control systems and their functions are identified and explained

1.2 Different types of network control systems are identified and discussed

1.3 Components of each type of network control system are identified and explained

1.4 Principles and major components of interlocking systems are identified, explained and used as the foundation for decision making

1.5 Safety implications associated with different types of signalling and interlocking systems are identified and used as to guide decision making

2 Manage operation of train control systems

2.1 Functions of train control systems are identified and explained

2.2 Main components of a train control system and their purpose are identified and explained

2.3 Interaction of train control systems with rail operations is identified, explained and used as the basis for decision making

2.4 Possible impact train control systems can have on rail operations are identified, explained and taken into consideration in decision making
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:
- Changes in rail industry operations and technology with implications for network control systems
- Duty holders and their duties under rail safety legislation
- Key concepts and definitions relating to rail assets and interfaces
- Key principles and practices associated with railway operations
- Key regulatory requirements and standards for participants in the rail industry
- Rail industry and rail industry terminology, including terminology used in technical standards
- Rail regulatory framework
- Rail safety management system
- Rail safety operating principles:
  - ensuring emergencies and incidents are properly managed
  - ensuring interfaces between different organisations are properly defined and managed
  - identifying, eliminating and controlling risk
  - protecting persons from injury
  - protecting property from damage
  - track access
  - train separation
- Relevance of national and international standards to the rail industry
- Relevant information:
  - audit program information
  - changes to regulations
  - compliance and enforcement regime
  - rail regulatory requirements
  - safety notices
  - Situational awareness

Required skills:
- Access and use rail safety industry standards
- Communicate effectively with others and interpret complex information relating to rail operations
- Develop and maintain currency of rail industry knowledge and regulatory requirements
- Network and build relationships with a diverse range of rail industry organisations
- Research information related to the rail industry and rail regulations
- Review changing regulatory information
- Work ethically in accordance with legislation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Network control systems may include:

- colour light signalling
- digital train control systems
- mechanical signalling
- radio communication

Unit Sector(s)

Not applicable.

Competency Field

W – Equipment and Systems Operations
TLIW5004A Manage train planning

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to manage train planning. It includes preparing to manage train planning, and developing and implementing strategies to optimise train planning.

Licensing, legislative or certification requirements are not applicable to this unit at the time of publication.

Application of the Unit
This unit provides an awareness of rail train planning and strategies for optimising performance. It can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare to manage train planning

1.1 Goals of train planning are identified and explained

1.2 Principal factors involved in train planning are identified and outlined

1.3 Resources required for train planning are identified, explained and obtained

1.4 Methods by which train planning performance can be measured are identified and implemented

2 Develop and implement strategies to optimise train planning

2.1 Factors that contribute to optimal train planning are identified and explained

2.2 Strategies for ensuring optimal train planning is maintained are developed and implemented

2.3 Methods by which optimal train planning performance can be measured are developed and applied

2.4 Strategies are communicated to relevant personnel
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Capacity of network
- Changes in rail industry operations and technology with implications for rail planning
- Duty holders:
  - contractors
  - designers, manufacturers, suppliers, commissioners, erectors and installers
  - de-commissioners
  - managers of private sidings
  - rail safety workers
  - rail transport operators (rail infrastructure managers and/or rolling stock operators)
- How you match maintenance requirements with operational requirements
- Key concepts and definitions relating to rail operations
- Key principles and practices associated with railway operations
- Key regulatory requirements and standards for participants in the rail industry
- Location of maintenance depots
- Rail industry and rail industry terminology, including terminology used in technical standards
- Rail regulatory framework
- Rail safety operating principles:
  - ensuring emergencies and incidents are properly managed
  - ensuring interfaces between different organisations are properly defined and managed
  - identifying and managing risk
  - protecting persons from injury
  - protecting property from damage
  - track access
  - train separation
- Relevance of national and international standards related to the rail industry
- Relevant information:
  - audit program information
  - changes to regulations
  - compliance and enforcement regime
  - rail regulatory requirements
  - safety notices
• Relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to train planning and running
• Train planning and management systems

**Required skills:**

• Access and use rail industry standards
• Communicate effectively with others and interpret complex information relating to rail operations
• Develop and maintain currency of rail industry knowledge and regulatory requirements
• Network and build relationships with a diverse range of rail industry organisations
• Research information related to the rail industry and train planning
• Review changing regulatory information
• Work ethically in accordance with legislation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

**Context of and specific resources for assessment**

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

**Method of assessment**

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Train planning factors may include:

- crew management
- infrastructure constraints
- location of fleet during and after peak times
- locomotive availability
- maintenance schedules
- network capacity
- optimal departure and arrival times
- personnel availability
- physical network
- resource needs and availability
- rolling stock availability
- track access requirements
- train availability
- train services

Unit Sector(s)

Not applicable.

Competency Field

W – Equipment and Systems Operations
TLIX4007A Implement and monitor integrated logistics support plans

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor integrated logistics support plans and associated subordinate plans. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
REQUIRED KNOWLEDGE AND SKILLS

- Configuration management
- Integrated logistics support processes related to planning
- International agreements
- Interoperability
- Logistics support analysis principles and processes
- Organisational policy and procedures impacting on integrated logistics support
- Organisational role relevant to integrated logistics support
- Performance measurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues
- Supply chain concepts
- Technical regulatory framework
- Written communication to a level required in the preparation of correspondence and reports

Required skills:

- Apply integrated logistics support and project management knowledge relevant to work being performed
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration in integrated logistics support planning
- Develop and/or comply with procedures to implement and monitor integrated logistics support plans
- Display resilience by continuing to move forward despite criticism or setbacks
- Ensure that mechanisms are in place to monitor integrated logistics support plans
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the
EVIDENCE GUIDE

performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - apply knowledge of integrated logistics support plans to assist in work and to guide problem solving

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to integrated logistics support
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
EVIDENCE GUIDE

- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
- contractors
- customers
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Integrated logistics support plans may include:
- disposal
- facilities
- technical data
- training
- transitional plans

Organisational policy and procedures may include:
- Australian Standards
- international standards
- organisational instructions and standards

Performance indicators may include:
- costs
- milestones
- production
- resources
- scheduling
- timing

Life cycle may include:
- whole of a particular item/system/process, from identification of a capability need to capability disposal

Compliance requirements may include:
- authority
- delegations
RANGE STATEMENT

- environmental
- legislative
- organisational policy
- regulatory

Unit Descriptor

This unit involves the skills and knowledge required to conduct integrated logistics support activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; maintenance of associated workplace networks; and stakeholder requirements. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

1.3 Legislation and organisational policy and procedures that may impact on integrated logistics support activity are identified and analysed  
1.4 Sources of information relevant to integrated logistics support activities are identified and obtained in accordance with organisational policy and procedures  
1.5 All personnel involved in integrated logistics support are briefed in accordance with standard procedures |
| **2 Conduct integrated logistics support activities** | 2.1 Integrated logistics support methods and techniques appropriate to the area are employed in accordance with plans, schedules and standard procedures  
2.2 Integrated logistics support activities are conducted and concluded within resource constraints  
2.3 Integrated logistics support activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures  
2.4 Resources are allocated to integrated logistics support activities in accordance with the integrated logistics support plan and resource availability |
| **3 Report on integrated logistics support activities** | 3.1 Integrated logistics support performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements  
3.2 Integrated logistics support activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle in accordance with organisational policy and procedure |
| **4 Maintain integrated logistics support records** | 4.1 Integrated logistics support records are completed in accordance with relevant policy and procedures  
4.2 Integrated logistics support records are amended and documented in accordance with organisational policy and procedures |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Integrated logistics support processes
- Organisational policy and procedures related to integrated logistics support
- Organisational role relevant to integrated logistics support
- Product knowledge related to systems and/or equipment in service in the organisation
- Reliability, availability and maintainability
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to integrated logistics support
- Written and oral communication to a level required in the preparation of correspondence and reports

Required skills:
- Apply integrated logistic support and project management knowledge relevant to work being performed
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration in conducting integrated logistics support activities
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify, review and analyse information that may impact on the integrated logistics support activities or that may be impacted by the integrated logistics support activities
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Manage time and prioritise work to ensure objectives are met in accordance with required schedule
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Configuration management
REQUIRED KNOWLEDGE AND SKILLS

- Contract management
- Logistics support analysis principles and processes
- Materiel sustainment processes related to planning
- Organisational policy and procedures impacting on materiel sustainment
- Organisational role relevant to materiel sustainment
- Performance measurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues
- Technical regulatory framework
- Written communication to a level required in the preparation of correspondence and reports

Required skills:

- Apply materiel sustainment and project management knowledge relevant to work being performed
- Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when implementing materiel sustainment plans
- Develop and/or comply with procedures to implement and monitor materiel sustainment plans
- Display resilience by continuing to move forward despite criticism or setbacks, remain positive and respond to pressure in a controlled manner
- Ensure that there are mechanisms in place to monitor materiel sustainment plans
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Negotiate and communicate with key stakeholders (both internal and external), receive their input, and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Undertake performance measurement to enable objectives to be measured against defined parameters

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on implementation processes
  - analyse data and information
  - apply knowledge of materiel sustainment plans to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel sustainment plans
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
EVIDENCE GUIDE

- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
- contractors
- customers
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Materiel sustainment plans may include:
- disposal
- facilities
- finance
- obsolescence
- technical data
- training
- transitional plans

Organisational policy and procedures may include:
- Australian Standards
- international standards
- organisational instructions and standards

Performance indicators may include:
- costs
- milestones
- production
- resources
- scheduling
- timing

Materiel sustainment may include:
- the management and provision of products and services needed to meet the preparedness and performance
RANGE STATEMENT

requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Compliance requirements may include:

- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to conduct materiel sustainment activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; and maintenance of associated workplace networks and stakeholder requirements. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare to conduct materiel sustainment activities | 1.1 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures  
1.2 Effective relationships are developed with stakeholders through consultation  
1.3 Legislation and organisational policy and procedures that may impact on materiel sustainment activities are identified and analysed  
1.4 Sources of information relevant to materiel sustainment activities are identified and obtained, in accordance with organisational policy and procedures  
1.5 All personnel involved in materiel sustainment are briefed in accordance with standard procedures |
| 2 Conduct materiel sustainment activities | 2.1 Materiel sustainment methods and techniques appropriate to the area are employed, in accordance with plans, schedules and standard procedures  
2.2 Materiel sustainment activities are conducted and concluded within resource constraints  
2.3 Materiel sustainment activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures  
2.4 Resources are allocated to materiel sustainment in accordance with materiel sustainment plan and resource availability |
| 3 Report on materiel sustainment activities | 3.1 Materiel sustainment performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements  
3.2 Materiel sustainment activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle, in accordance with organisational policy and procedures |
| 4 Maintain materiel sustainment records | 4.1 Materiel sustainment records are completed in accordance with relevant policy and procedures  
4.2 Materiel sustainment records are amended and documented in accordance with organisational policy and procedures |

## Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Materiel sustainment processes
- Organisational policy and procedures related to materiel sustainment
- Organisational role relevant to materiel sustainment
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to materiel sustainment
- Written and oral communication to a level required in the preparation of correspondence and reports

**Required skills:**

- Analyse and evaluate information, and determine how it may be impacted by the materiel sustainment activities or how materiel sustainment activities might be impacted by the information being considered
- Apply materiel sustainment and project management knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Manage time and prioritise work to ensure objectives are met in accordance with required schedule
- Negotiate and communicate with key stakeholders (both internal and external), receive their input, and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

RANGE STATEMENT

Materiel sustainment activities may include:
- supervisors
- suppliers
- data and information analysis
- data and information management
- data and information retrieval
- identification of data and information
- reporting
- research

Personnel may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers
- team members

Resources may include:
- information technology applications and tools
- financial
- infrastructure
- personnel
- time

Methodologies and procedures may include:
- configuration management
- life cycle costing
- logistics support analysis
- maintenance requirement determination
- procurement
- reliability centred maintenance
- reliability, availability and maintainability
- systems engineering

Compliance requirements may include:
- authority
- delegations
- environmental
- legislative
- regulatory
- organisational policy

Life cycle may include:
- whole of a particular item/system/process, from identification of a capability need to capability disposal

Materiel sustainment records may include:
- databases
- files
RANGE STATEMENT

include:

- finance systems
- logistics information technology systems
- logistics systems
- registers
- spreadsheets
- technical data systems

Unit Descriptor

This unit involves the skills and knowledge required to implement and monitor configuration management plans, including adjusting current and future activity, amending plans, acquiring resources, liaising with stakeholders and providing associated reports. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for configuration management specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify requirements for the provision of configuration management | 1.1 Sources of information relevant to configuration management plans are identified and obtained in accordance with organisational policy and procedures  
1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures  
1.3 Configuration management plans are assessed against reviewed information |
| 2 Implement configuration management plans | 2.1 Performance indicators and other criteria for measurement of achievement are implemented  
2.2 Configuration management risks and impacts relevant to the plan are identified, reported and managed  
2.3 Configuration management plans are implemented in accordance with organisational policy and procedures  
2.4 Participation and contribution to configuration management activities is established and maintained in accordance with the plan |
| 3 Monitor and report on implementation of configuration management plans | 3.1 Configuration management plans are monitored and regularly reviewed in accordance with organisational policy and procedure  
3.2 Plans are amended and documented in accordance with organisational policy and procedures  
3.3 Performance measures are monitored to ensure they address all key aspects of organisational performance and meet the interests of stakeholders  
3.4 Performance data is analysed on a regular and planned basis, both in terms of the indicators and compliance with organisational policy and procedures  
3.5 Performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
REQUIRED KNOWLEDGE AND SKILLS

- Configuration management
- Configuration management processes related to planning
- Organisational policy and procedures impacting on configuration management
- Organisational role relevant to configuration management
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues
- Technical regulatory framework
- Written communication to a level required in the preparation of correspondence and reports

Required skills:

- Apply configuration management and project management knowledge relevant to work being performed
- Demonstrate an understanding of the strategic objectives of the organisation, and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Implement processes to enable configuration management requirements to be effectively transitioned across the life cycle, including integrated logistics support considerations, and validation and verification activities, including environmental, sustainability issues
- Manage time and prioritise work to ensure objectives are met in accordance with the schedule
- Monitor processes to ensure that configuration management systems continue to enable the operational requirements to be attained - this may include performance metrics
- Negotiate and communicate effectively with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall configuration management objectives are achieved

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Configuration management processes
- Organisational policy and procedures related to configuration management
- Organisational role relevant to configuration management
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to configuration management
- Technical regulatory framework
- Written and oral communication to a level required in the preparation of correspondence and reports

Required skills:

- Apply configuration management and project management knowledge relevant to work being performed
- Demonstrate an understanding of the strategic objectives of the organisation, and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify, review and analyse information that may impact on the configuration management program, or may be impacted by the configuration management program
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Manage time and prioritise work to ensure objectives are met in accordance with the schedule
- Negotiate and communicate effectively with key stakeholders (both internal and external), and resolve any potential areas of conflict or concern to ensure that overall configuration management objectives are achieved
- Undertake performance measurement relevant to configuration management to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment
EVIDENCE GUIDE
guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to and apply relevant data and information management processes
  - analyse data and information
  - apply knowledge of materiel configuration management to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to configuration management
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate

- scenarios
- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedures may include:
- Australian Standards
- international standards
- organisational instructions and standards

Legislation may include:
- relevant federal, state and local government legislation and regulations

Configuration management activities may include:
- data and information analysis
- data and information management
- data and information retrieval
- identification of data and information
- reporting
- research

Sources of information may include:
- contractors
- databases
- duty statements
- legislation
RANGE STATEMENT

- supervisors
- suppliers

Personnel may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers
- team members

Resources may include:
- contractual
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

Methodologies and procedures may include:
- configuration management
- costing analysis
- life cycle costing
- logistics support analysis
- maintenance requirement determination
- procurement
- reliability centred maintenance
- reliability, availability and maintainability
- systems engineering

Compliance requirements may include:
- authority
- delegations
- environmental
- legislative
- organisational policy
- regulatory
RANGE STATEMENT

Life cycle may include:

- whole of a particular item/system/process, from identification of a capability need to capability disposal

Configuration management records may include:

- databases
- files
- information technology systems
- registers
- spreadsheets

This unit involves the skills and knowledge required to apply configuration management processes and procedures. The application of processes and procedures is specific to a variety of component processes including: configuration management administrative procedures, configuration management data collection and storage, and configuration management data retrieval. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
This unit was developed for configuration management specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

| **1** Prepare to apply configuration management processes and procedures | 1.1 Requirements for application of processes and procedures are identified from work requests/instructions and are confirmed.  
1.2 Occupational health and safety requirements, including those contained in organisation’s procedures, are applied throughout the operation.  
1.3 Resources and equipment required for the work are identified, acquired and prepared in accordance with organisational procedures.  
1.4 Sources of information relevant to configuration management requirements are identified and obtained in accordance with organisational policy and procedures. |
| **2** Apply configuration management processes and procedures | 2.1 Configuration management processes and procedures are implemented and monitored within resource constraints.  
2.2 Configuration management processes and procedures are amended based on changing circumstances in accordance with organisational policy and procedures. |
| **3** Monitor and report on configuration management processes and procedures | 3.1 Configuration management outcomes are reported in accordance with organisational policy and procedures.  
3.2 Configuration management processes and procedures are monitored and reviewed to ensure systems and/or equipment capability is maintained, in accordance with organisational policy and procedures. |
| **4** Maintain records for configuration management processes and procedures | 4.1 Configuration management records are maintained in accordance with organisational policy and procedures.  
4.2 Configuration management records are amended and documented in accordance with organisational policy and procedures. |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Cataloguing and codification
- Configuration management administrative procedures
- Configuration management data collection and storage requirements
REQUIRED KNOWLEDGE AND SKILLS

- Configuration management data retrieval procedures
- Materiel life cycle
- Organisation role relevant to configuration management
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to configuration management
- Technical regulatory framework
- Written communication to a level required in the preparation of letters and reports

Required skills:

- Apply configuration management knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Operate equipment and systems relevant to configuration management activities
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to and apply relevant data collection, storage and retrieval requirements
  - apply knowledge of configuration management to assist in work and to guide problem solving
  - Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to configuration management
EVIDENCE GUIDE

- plans
- workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation may include:
- enterprises that work in configuration management
- other government departments or instrumentalities that work with materiel

Organisational policy and procedures may include:
- Australian Standards
- international standards
- organisational instructions and standards
RANGE STATEMENT

Configuration management activities may include:
- configuration management administrative procedures
- configuration management data collection and storage
- configuration management data retrieval

Resources may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- time

Configuration management records may include:
- databases
- files
- registers
- spreadsheets

Unit Descriptor

This unit involves the skills and knowledge required to collect, analyse and catalogue codification data and information including identifying required codification information, analysing and preparing information for use, providing explanatory information, and cataloguing the information. Codification is the act of establishing and maintaining an item of supply identification and related data under a recognised cataloguing system and/or the national system of another country participating in international codification systems. Cataloguing is the act of recording and promulgating selected management data relating to the items of supply in recognised catalogues. The application of codification and cataloguing is specific to a variety of component processes including: materiel logistics administrative procedures, materiel logistics data collection and storage, and materiel logistics data retrieval. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for codification and cataloguing specialists working within materiel logistics but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

| 3 Apply cataloguing processes and procedures | 3.1 Codification outcomes are interpreted and catalogued in accordance with organisational policy and procedures  
3.2 Cataloguing processes and procedures are monitored and reviewed to ensure system capability is maintained in accordance with organisational policy and procedures |
| 4 Maintain records for codification and cataloguing processes and procedures | 4.1 Codification and cataloguing records are documented in accordance with organisational policy and procedures  
4.2 Codification and cataloguing records are reviewed and updated in accordance with organisational policy and procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing administrative procedures
- Codification and cataloguing data collection and storage requirements
- Codification and cataloguing data storage and retrieval procedures
REQUIRED KNOWLEDGE AND SKILLS

- Configuration management
- Integrated logistics support
- Materiel life cycle
- Materiel sustainment
- Organisational role relevant to codification and cataloguing
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to codification and cataloguing
- Technical regulatory framework
- Written communication to a level required in the preparation of letters and reports

Required skills:

- Analyse and interpret codification and cataloguing data to source information for external and internal sources
- Apply codification and cataloguing knowledge relevant to work being performed
- Display resilience by continuing to move forward despite criticism or setbacks
- Draw on information from a variety of sources using research, analysis and judgement to identify information that needs to be incorporated into codification and cataloguing data
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Use appropriate information technology and software

</table>
| **1** Perform spares assessment activities | 1.1 Organisation spares assessment and supply information systems are identified and applied  
1.2 Maintenance data, spares usage data and trends are monitored, and required holdings of spares are varied as required  
1.3 Spares availability problems are identified and strategies are determined to resolve problems  
1.4 Acceptable sources of suitable substitute parts are identified and requirements for documentation are specified in accordance with organisational policy and procedures  
1.5 Configuration management requirements are observed in spares assessing |
| **2** Manage repairable items | 2.1 Maintenance and reliability data is monitored and changes to maintenance programs are proposed where necessary  
2.2 Documentation is raised to allocate repairable items to maintenance facilities in accordance with contractual requirements, and organisational policy and procedures  
2.3 Specific investigation or additional maintenance requirements are specified |
| **3** Maintain records | 3.1 Data required for input to integrated logistics support (ILS) records is provided where applicable  
3.2 Systems, procedures and records associated with documenting performance are managed in accordance with the organisational requirements |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes  
- Configuration management  
- Industrial base capability  
- Integrated logistics support  
- Legislative and regulatory environment, including environmental, sustainability issues as it pertains to materiel logistics  
- Logistics governance
REQUIRED KNOWLEDGE AND SKILLS

- Logistics support analysis principles and processes
- Management processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance measurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to materiel sustainment

Required skills:

- Analyse and interpret assessment information to determine where internal and external factors impact on the assessment of spares and management of repairable items
- Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration
- Draw on information from a variety of sources using research, analysis and judgement to develop assessment requirements
- Effectively administer spares and services contracts and their deliverables
- Effectively consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake procurement activities occurring in the spares and repairable item environment
- Use appropriate information technology and software to assess and manage repairable items

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - initiate and efficiently monitor processes
EVIDENCE GUIDE

- initiate any remedial action required
- communicate with stakeholders
- prepare and provide relevant reports and documentation
- effectively and efficiently manage materiel sustainment operations
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to spares and repairable items
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Spares assessment and supply information systems may be:
- developed within the organisation
- manual or computer-based
- proprietary systems purchased by the organisation

Suitable substitute parts may be identified from:
- drawings, standards and specifications in the case of piece parts and materials
- manufacturers catalogues and specifications in the case of complete components (items of products)
- modification data

Organisational policy and procedures may include:
- Australian Standards
- international standards
- logistics support analysis
- organisational instructions and standards

Repairable items may include:
- electrical system components
- electronic systems components
- engines and engine components
- hydraulic, pneumatic and fuel components
- instrument system components
- items of role equipment
- items of safety equipment
- mechanical components
- removable structural components

Investigation or additional maintenance requirements may include:
- compliance with directives or special technical instructions
- incident investigation
- modifications
- service bulletin compliance
- service difficulty (defect) report investigation
- warranty claims

ILS records may include:
- baselines for reliability, availability and maintainability
- failure modes, effects and criticality analysis
- costing analysis
- life cycle costing data
- logistics support analysis plans
RANGE STATEMENT

- logistics support analysis record data

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Logistics information or information systems  
- Logistics knowledge relevant to the work performed  
- Logistics relevant to logistics support to capability and logistics support to operations  
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to logistics

**Required skills:**

- Undertake, analyse and interpret logistics information to determine where internal and external factors impact on the logistics requirements, and adjust planning accordingly  
- Consult and negotiate with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved  
- Display resilience by continuing to move forward despite criticism or setbacks  
- Focus on clear communication of key logistics information, present information confidently and select the appropriate medium for communication to a range of audiences  
- Identify the relationship between organisational goals and recognise how own work
Required skills:

- contributes to the achievement of those goals
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant logistics requirements
  - apply knowledge of logistics to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

- potential areas of conflict or concern to ensure that overall objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of materiel sustainment information, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant materiel sustainment requirements
  - apply knowledge of materiel sustainment to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context
  - Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel sustainment
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands
EVIDENCE GUIDE

such as literacy and the needs of particular groups

- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel sustainment may include:
- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Organisation may include:
- enterprises that work in materiel logistics
- other government departments or instrumentalities that work with materiel

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support
RANGE STATEMENT

designated activities without distinction as to its application for administrative or operational purposes

Materiel logistics is:

the life cycle management of materiel to achieve the stated objectives of the capability managers

Organisational policy and procedures may include:

- Australian Standards
- international standards
- organisational instructions and standards

Unit Descriptor

This unit involves the skills and knowledge required to analyse and apply knowledge of configuration management. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. The application of this knowledge is required by people who are not configuration management specialists but who need the knowledge to inform their decision making. The application of configuration management knowledge is specific to a variety of component processes in material logistics activities. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for logistics specialists working within materiel logistics but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Integrated logistics support
- Configuration management knowledge relevant to the work performed
- Configuration management relevant to materiel and materiel systems
- Materiel life cycle
- Materiel sustainment
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to materiel and materiel systems
- Technical regulatory framework

Required skills:

- Undertake, analyse and interpret configuration management information to determine where internal and external factors impact on the configuration management requirements, and adjust planning accordingly
Required skills:

- Consult and negotiate with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of configuration management information, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify, interpret and analyse configuration management requirements relevant to work being performed
- Use appropriate information technology and software

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for compliance roles and responsibilities** | 1.1 Structure of the organisation is examined to identify the roles, authorities, accountabilities and responsibilities of the various managers and operational staff in maintaining compliance within the technical regulatory framework  
1.2 Technical regulatory framework compliance requirements applicable to the work area/operational unit are identified, confirmed and interpreted  
1.3 Specific responsibilities of the individual or team are identified and clarified  
1.4 Feedback and performance indicators on the operation of the technical compliance management processes and procedures are reviewed and agreed with the manager/team leader  
1.5 Appropriate briefings and training are undertaken to ensure jobholder is aware of roles and responsibilities within the planned technical regulatory framework compliance management system |
| **2 Apply technical compliance management system** | 2.1 Technical regulatory framework components of technical compliance management system are confirmed, and authorised procedures for their implementation are clarified  
2.2 Resources for the application of technical regulatory framework compliance management system are accessed and utilised in accordance with organisational policy and procedures  
2.3 Implementation plan and schedule are accessed and applied in collaboration with managers and operations staff and in accordance with relevant technical regulatory framework  
2.4 Essential technical regulatory framework preconditions for any duty, function or activity are confirmed before proceeding with designated or assigned work |
| **3 Validate individual application of technical compliance management processes** | 3.1 Specified information on individual's role and responsibilities within technical compliance management system is gathered from appropriate sources  
3.2 Feedback and performance indicator satisfaction data is prepared, reviewed and processed in accordance with agreed workplace practices  
3.3 Problems in the application of technical compliance management system and in particular any breach of compliance requirements are identified and appropriate action is initiated to address the problems concerned  
3.4 Reports on any identified breaches of compliance requirements and related action taken are prepared and processed to the responsible authority/stakeholder  
3.5 Records of technical regulatory framework activities are |
ELEMENT | PERFORMANCE CRITERIA

maintained in accordance with approved systems requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Configuration management
- Elements of the technical regulatory framework compliance management systems including:
  - breach management policies and processes including the identification, classification, investigation, rectification and reporting of breaches in compliance requirements
  - compliance complaints handling systems
  - compliance related management information systems
  - compliance reporting procedures
  - continuous improvement processes for compliance including validation and review
  - corporate induction and training processes related to compliance
  - documentation of compliance requirements relevant to the specified work role/area
  - liaison procedures with relevant internal personnel on compliance related matters
  - processes for the internal promulgation of information on compliance requirements
  - reporting processes on compliance including reports on breaches and rectification action
  - specification of local work area compliance management functions, authorities, accountabilities and responsibilities under the technical regulatory framework
  - techniques and performance indicators for validating the individual application of a compliance system
  - Quantitative and qualitative data analysis techniques relevant to compliance applications
  - Relevant Australian Standards and international standards
  - Sources of data relevant to compliance, including environmental, sustainability issues
  - Techniques suitable for applying compliance related systems and activities

Required skills:

- Apply technical regulatory framework knowledge relevant to work being performed
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
Required skills:

- Operate equipment and systems relevant to technical regulatory framework activities
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to and apply relevant data collection, storage and retrieval requirements
  - apply knowledge of a technical regulatory framework compliance management system to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to technical regulatory framework compliance management system
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Technical regulatory framework compliance requirements:

- may include those authorised by the relevant technical regulatory framework and contained in implementation directions from internal authorities
- will be based on:
  - codes of practice
  - environmental, sustainability policies and legislation
  - internal policies
  - organisational policy and procedures
  - standard operating procedures
  - standards

Technical regulatory framework components may include:

- configuration management
- design and design approval
- engineering including engineering change
- integrated logistics support
- logistics
- materiel sustainment
- procurement
RANGE STATEMENT

- quality
- access to appropriate technical expertise
- communication systems
- facilities
- financial
- human resources
- information technology capabilities and systems
- infrastructure
- time
- transport

Resources may include:

Specified information may include:

- plans
- project plans
- standing instructions
- standard operating procedures
- work flow charts
- work instructions
- work procedures

Breaches may include:

Responsible authority/stakeholder may include:

- penalties, which may include sanctions, suspension, loss of formal recognition or accreditation, and court determination in relation to criminal or civil cases
- Public Service Act
- relevant civil legislation and regulations
- relevant commercial legislation and regulations
- compliance management team (where relevant)
- compliance specialists at the operational level
- legal and business advisors and consultants with expertise in compliance management
- project sponsors
- representatives of professional associations and institutes relevant to the organisation's operations and sphere of business
- senior management team
- technical regulatory authorities

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Assist with risk analysis and planning | 1.1 Contribution is made to identify and prioritise risks to the technical integrity of the organisation's materiel  
1.2 Within delegated technical/engineering authority, input is provided to develop risk management strategies and risk management plans within established guidelines  
1.3 Established risk analysis methods, techniques and tools are used to assist in the analysis of risks in accordance with organisational plans  
1.4 Reporting mechanisms for risks to technical integrity are incorporated, in accordance with organisational plans |
| **2** Conduct risk control activities | 2.1 Risk control activities are undertaken in accordance with organisational plans  
2.2 Risks to technical integrity are acted on within technical/engineering authority or reported to others for response  
2.3 Contribution is made to the implementation of agreed risk approaches and the amendment of plans to reflect the changing context  
2.4 Opportunities are identified and reported for action in the same way as risks |
| **3** Contribute to assessing risk management outcomes | 3.1 Contribution is made to the ongoing review of the technical integrity of organisational materiel to determine the effectiveness of risk management activities by accessing data and available information  
3.2 Risk management issues and responses are reported to others for lessons learned or application in future technical/engineering activities |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Risk management as applied in a technical/engineering context, including principles, tools, techniques, standards and processes
- Technical regulatory framework, organisation's engineering management plan and risk management plan
Required skills:

- Apply safety, legislative and statutory requirements, including environmental, sustainability issues relevant to technical risk management
- Apply technical risk management knowledge relevant to work being performed
- Interpret organisational role relevant to technical risk management
- Operate equipment and systems relevant to technical risk management activities
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to and apply relevant data collection, storage and retrieval requirements
  - apply knowledge of technical risk management systems to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts
- Consistency in performance and evidence that candidates have contributed to the management of risk within projects includes applying, within authority, the requirements of the job or work role in relation to:
  - implementing, monitoring, and successfully completing risk management activities
  - contributing to reports of results
  - completing work area housekeeping requirements including the documentation of risk management activity and process outcomes
  - identifying risk
  - controlling risks
  - developing risk management strategies
EVIDENCE GUIDE

- modifying activities to cater for variations in workplace context and environment
- monitoring risks (with emphasis on variation management)
- reviewing risk management within the project
- working and communicating effectively and positively with others involved in the work

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to technical risk management systems and techniques
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Risks may include:
- actual
- likely/probable
- perceived
- potential
- sources of technical risk and associated documents may include:
  - design change
  - Engineering Management Plan
  - Risk Management Plan
  - appropriate standards

Delegated technical/engineering authority may include authority:
- appointed in accordance with the relevant technical regulatory framework
- subject to frequent change in a multi-disciplinary environment
- under limited guidance and supervision
- within agreed authorisation and limits
- within established organisational framework, procedures and routines

Risk analysis methods, techniques and tools may include:
- assisting in qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development
- using personal experience and/or subject matter experts
- using specialist risk analysis tools to assist in the decision making process

Organisational plans may include:
- engineer management plans
- risk management plans

Others may include:
- executive authorities
- higher project authorities
- other stakeholders
- project specialists or personnel
- regulatory authorities
- team members
RANGE STATEMENT

Opportunities may include:
- better means of achieving a result
- changes in the regulatory framework or broader environment that offer scope for rescheduling activities to better effect
- efficiencies or methods to work more effectively, such as ways of shortening an activity
- environmental load minimisation and waste minimisation
- improvements to technical integrity
- risk mitigation

Review may include:
- changes to technical regulatory authority
- technical integrity of organisation's materiel

Data and information may include:
- financial data
- list of potential risk events (risk register/log)
- logistics data, including environmental, sustainability issues
- organisational files and records
- risk analysis and reappraisal
- risk diaries, incident logs, occurrence reports and other such documentation
- risk management lessons learned
- risk management plan
- technical data

Unit Sector(s)
Not Applicable

Competency Field

Competency Field X - Logistics
TLIX4035A Maintain technical data and information

Modification History

Unit Descriptor

This unit involves the skills and knowledge required to maintain the technical data and information of the organisation in good order on a day-to-day basis. It includes gathering together technical data and information that is subject to organisational updates, performing the required updates, retrieving reports from the data management system in response to a request, and monitoring those aspects which are relevant to the immediate business unit requirements. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for technical regulatory framework specialists working within materiel logistics but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

</table>
| **1** Collate technical data and information | 1.1 Technical data and information which should be incorporated into the organisation's records system are identified in accordance with the data and technical information management system  
1.2 Technical data and information which should be incorporated into the organisation's information systems is recorded in accordance with the requirements of the data and technical information management system  
1.3 Technical data and information is sorted and catalogued in accordance with workplace requirements  
1.4 Security and access requirements for technical data and information are adhered to in accordance with the management system |
| **2** Update technical data and information system | 2.1 Technical data and information which is of direct interest to the business unit is routinely monitored  
2.2 New or revised technical data and information is identified and incorporated in accordance with authorised systems  
2.3 Movement and use of the technical data and information is updated in accordance with authorised systems  
2.4 Technical data and information system is updated accurately and within the timeframes set by authorised systems  
2.5 Technical data and information is archived or disposed of in accordance with authorised systems |
| **3** Prepare reports from organisation's technical data management system | 3.1 Request for reports is interpreted and clarification of content and frequency is sought where necessary  
3.2 Reports are prepared from the organisation's technical data management system in accordance with instructions or request  
3.3 Format and style of reports are in accordance with organisational procedures  
3.4 All reports from the organisation's technical data management system are prepared within workplace requirements and in accordance with security and access procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Applicable standards
- Data management principles and processes including functional requirements for data management
- Relevant details of the technical regulatory framework, organisation engineering management plans and technical data management plan

Required skills:

- Apply technical data and information and project management knowledge in technical data and information systems
- Consult and negotiate effectively with stakeholders (both internal and external), receive their input and resolve any potential areas of conflict or concern to ensure that overall technical data and information systems objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Implement processes to enable new technical data and information system requirements to be effectively transitioned across the life cycle - this includes integrated logistics support considerations, including environmental, sustainability issues, and validation and verification activities
- Monitor processes to ensure that the technical data and information systems continue to enable the operational requirements to be attained - this may include performance metrics

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on implementation processes
  - analyse data and information
  - apply knowledge of technical data and information plans to assist in work and to guide problem solving
  - demonstrate understanding of personal role in
EVIDENCE GUIDE

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts.
- Consistency in performance and evidence that candidates have taken responsibility for maintaining technical data and information includes applying, within authority, the requirements of the job or work role in relation to:
  - contributing to reports of results
  - completing work area housekeeping requirements including documenting technical data and information management activity and process outcomes
  - successfully maintaining technical data and information management systems
  - modifying activities to cater for variations in workplace context and environment
  - working and communicating effectively and positively with others involved in the workplace

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment.
- Specific resources for assessment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to technical data and information
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation.
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate.
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups.
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
EVIDENCE GUIDE

- case studies
- demonstration
- feedback from supervisors and peers regarding the candidate's ability
- observation
- portfolios
- projects
- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Data and technical information management system may include:

- allocating access/security status
- capturing structural and contextual metadata
- classifying and indexing items
- computer-based, paper-based, microfiche and manual systems
- generating and allocating unique identifiers to data items
- identifying and recording disposal status items
- identifying technical data and information creators
- links between technical data and information items
- locating and tracking items
- naming/titling items
- negotiating transfer of custody or ownership
- recording the use history of items

Workplace requirements may include:

- arrangements for disposal and archiving of technical data and information
- identifying disposal and/or archiving criteria
- numbering system or naming conventions for technical data and information
- timeframe for processing
- intellectual property restrictions
RANGE STATEMENT

may include:

- protection of privacy
- security restrictions
- trade secrets or commercial in confidence information

Monitoring technical data and information which is of direct interest to the business unit may include:

- audit trail or log of users and activity in systems
- compliance with access rules
- compliance with disposal procedures
- correct use of spelling, spacing and numbering
- data integrity
- disparity, sentencing difficulties or gaps in retention and disposal coverage
- disputes arising from matters, particularly access questions
- failures in tracking or increases in lost items
- input of metadata requirements
- legal precedents requiring changes to system/s
- records of authorisation of destruction
- reliability of optical character recognition techniques
- retention of records
- scanned clarity of images
- security
- space shortages
- storage standards maintenance
- volumes of actions or accumulations of records above or below anticipated levels

Authorised systems may include:

- applicable industry and international standards
- authorised data technical information management frameworks and systems
- engineering management plans (including technical data management plans and configuration management plans)
- relevant organisational instructions
- relevant technical regulatory framework

Reports may include:

- ad hoc reports
- part of a management solution for another support/operational function
- regular records management reports
- specific reports such as:
  - defect trends
  - design support network reviews
  - engineering delegations
  - engineering design
  - engineering instructions and standards
RANGE STATEMENT

- maintenance data
- maintenance instructions
- system management reports

Format and style of reports may be:

- computer-generated
- formal
- informal
- manual

TLIX4036A Analyse, advise on and carry out integrated border clearance transactions

Modification History
Release 1. This is the first release of this unit.

This unit replaces and is equivalent to TLIA4057A Analyse, advise on and carry out integrated border clearance transactions.

Unit Descriptor
This unit involves the skills and knowledge required to analyse, advise on and carry out border clearance transactions and will usually involve analysis of complex interactions between component elements of the transactions, in accordance with Customs and related legislation, and workplace requirements.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements.

Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| **1 Read and interpret documents for import consignment** | 1.1 Documents for import transaction are reviewed and assessed for compliance with Customs and other regulatory body legislation and requirements  
1.2 Customs and/or other legislation is accessed and their implications for import clearance are determined  
1.3 Missing or ambiguous documents and/or information is identified and client is advised |
| **2 Identify and analyse problems** | 2.1 Requirements for import clearance transaction are analysed and concerns are identified and documented  
2.2 Implications and risks associated with identified concerns are assessed and recorded in accordance with workplace procedures |
| **3 Develop and review alternative solutions** | 3.1 Appropriate alternative solutions to identified issues and problems are developed with due consideration to managing the risks involved, legislative requirements and client needs  
3.2 Comparative benefits and risks of alternative solutions are assessed and documented in accordance with workplace procedures  
3.3 Various options and the outcome of the review of their comparative benefits and risks are documented as required |
| **4 Select and justify solution** | 4.1 Alternative solutions are developed based on review outcomes and preferred solution is selected  
4.2 Selection justification is documented in accordance with workplace procedures and policies with due reference to compliance with all legislative requirements, selected solution benefits, risks involved and how they will be managed  
4.3 Critical issues identified during the review and analysis process are discussed and cleared with relevant internal and external personnel as required |
5 **Complete border clearance transaction**

5.1 Results of integrated border clearance transaction review are discussed with the client

5.2 Advice is provided to client on border clearance transaction, recommended solution and rationale for the recommendation

5.3 Integrated border clearance transaction is completed in accordance with agreed approach, relevant legislative requirements and workplace procedures

6 **Document and record border clearance transaction**

6.1 Required documentation for integrated border clearance transaction is completed and verified in accordance with legislative requirements and workplace procedures

6.2 Information is entered into appropriate systems as required

6.3 Records are made of integrated border clearance transaction and information on specific issues, problems and related solutions adopted, and action taken

6.4 Relevant information concerning integrated border clearance transaction is forwarded to client for compliance with Customs and related legislation requirements, and relevant internal and external personnel in accordance with workplace and organisational procedures

6.5 Integrated border transaction records are retained according to Customs and related legislation requirements, and workplace and organisational procedures

7 **Implement formal review mechanisms for dispute resolution**

7.1 Need for a formal review of a dispute related to a border transaction is identified in accordance with relevant Customs requirements and other related legislation

7.2 Appropriate review mechanism for a dispute related to a border transaction is identified in accordance with relevant Customs requirements and other related legislation

7.3 Identified review mechanism is implemented for the resolution of a dispute related to a border transaction in accordance with the relevant Customs requirements and other related legislation
Required Skills and Knowledge
This section describes the knowledge and skills required for this unit.

Required knowledge:
- Biosecurity requirements
- Classification of a consignment in accordance with the Customs Tariff Act
- Commercial and shipping documentation
- Current Incoterms
- Customs and other legislation and policy relevant to the border clearance function
- Documentation requirements for analysing, advising on and conducting integrated border clearance transactions
- Duty Concessions etc.
- Goods and Services Tax
- Issues relevant to a border clearance and appropriate action that can be taken to deal with such issues
- Other indirect taxes, including dumping and countervailing, wine equilisation tax (WET), luxury car tax (LCT)
- Preferential trade agreements including free trade agreements
- Sources of information on new developments in border clearance and related legislative requirements
- Valuation of a consignment in accordance with the Customs Act
- Ways of learning skills and knowledge required for new developments in border clearance and related legislative requirements

Required skills:
- Communicate effectively with clients
- Demonstrate fit and proper person requirements
- Identify and resolve import prohibitions and restrictions
- Identify, interpret and learn skills and knowledge required for relevant new developments in border clearance transactions
- Negotiate, communicate and liaise effectively verbally and in writing with clients and other stakeholders
- Provide quality customer service
- Read and interpret instructions, procedures and information relevant to analysing, advising on and conducting border clearance transactions
- Read and interpret legislation
- Report information or activity that may compromise Australia’s security
- Take responsibility for analysing, advising on and conducting border clearance transactions and related solutions
- Undertake continuous professional development
- Use software application systems
- Work with integrity to maintain professional standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- reading and interpreting transaction request facts
- identifying and analysing problems that may arise in completing a border clearance transaction
- developing and reviewing alternative solutions
- selecting and justifying solutions to typical border clearance transaction problems
- completing border clearance transaction
- documenting and recording border clearance transaction.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant documentation.

Method of assessment

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in appropriately simulated workplace environment and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate mentoring individuals or small groups
- knowledge tests and performance questions
- direct observation of the candidate applying tasks, requirements and work practices.

Assessment of this unit must be undertaken by a registered
training organisation.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of border clearance transactions may include:

- functions and responsibilities of a customs broker
- internal and external review practices available to analyse and review issues and problems arising within border clearance transactions
- processes and practices for advising clients on issues and related solutions arising during an assessment of border clearance transactions
- role and authority of customs, the appropriate regulatory authority responsible for biosecurity, and other regulatory bodies and how they fit into the structure of government and customs broking practices

Analysis of a border clearance transaction must involve:

- careful and detailed consideration of client instructions and needs, all compliance requirements and relevant workplace quality standards
- consideration of all possible interactive effects and risks, and a comparative review of appropriate solutions to problems and issues identified in the course of the analysis

Aspects of border clearance transactions that will need to be examined and analysed to establish any interactive effects and problems may include:

- dispute resolution
- free trade and other preferential tariff agreements
- GST requirements
- import prohibitions and restrictions
- infringement notices and penalties
- permit requirements
- tariff classification requirements
- valuation

Aspects of transaction that may be considered in the consideration of interactive effects and issues can include:

- client requirements
- compliance with all legislation and permit requirements
- cost effectiveness
- risk assessment (to nominee and corporate brokerage, regulatory authorities and client)
- source/s of information
- timeliness

New developments in border clearance requirements and operations may relate to:

- goods
- legislation
- policy and guidelines
- processes
Information on new developments in border clearance requirements and operations may be obtained from:

- systems
- technology
- external networks such as staff in various regulatory authorities, airline, shipping, road transport and storage; personnel, staff in bond stores and other customs broking firms, etc.
- internal and external training programs
- internal networks such as own operations team, staff in other departments, support staff, managers, training staff, etc.
- internet websites
- official booklets, bulletins, journals, magazines, books, etc.

Ways of learning skills and knowledge required for new developments in border clearance requirements and operations may include:

- coaching in the workplace
- external training programs
- internal training programs
- networking with relevant internal and external contacts
- online learning
- reading independently

Workplace procedures may include:

- company procedures
- enterprise procedures
- established procedures
- organisational procedures
- standard operating procedures (SOPs)

Communication in the work area may include:

- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:

- clients
- management representatives
- other employees and supervisors
- other relevant government departments, authorities and institutions
- relevant authorities and institutions

Documentation and records may include:

- Australian Taxation Office legislative requirements
- client instructions
- information from relevant websites
- internal documentation used for border clearance transactions
- manufacturer specifications for equipment required when conducting analysis
Applicable legislation and regulations may include:
- operations manuals, job specifications and induction documentation
- other legislative requirements and publications pertaining to border clearance functions
- relevant Customs and related legislation
- relevant sections of Australian Customs and Border Protection publications
- workplace procedures and policies
- Customs Act 1901 and related legislation
- export/import/quarantine/bond requirements
- privacy legislation
- taxation legislation
- other government and legislative requirements pertaining to border clearance

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to develop and review integrated logistics support plans and associated subordinate plans to ensure efficient and effective delivery of integrated logistics support across the materiel and materiel system life cycle. Integrated logistics support plans document how the materiel or materiel system will be supported to ensure they meet the stated capability requirement. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

Application of the Unit
This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Licensing/Regulatory Information

| 1 Identify integrated logistics support requirements | 1.1 Integrated logistics support planning requirements are identified in accordance with organisational policy and procedures  
1.2 Sources of information relevant to integrated logistics support are identified and accessed in accordance with organisational policy and procedures  
1.3 Standards and legislation applicable to integrated logistics support are identified and accessed  
1.4 Specific integrated logistics support requirements are assessed against available information  
1.5 Costing analysis of requirements is conducted in accordance with organisational policy and procedures |
| 2 Prepare integrated logistics support plans | 2.1 Organisational policy and procedures relevant to integrated logistics support requirements are identified and interpreted  
2.2 Stakeholder consultation is conducted in accordance with relevant organisational policy and procedures  
2.3 Integrated logistics support plans are developed in accordance with legislative requirements and organisational policy and procedures  
2.4 Integrated logistics support plans are promulgated in accordance with organisational policy and procedures |
| 3 Review integrated logistics support plans | 3.1 Integrated logistics support plans are reviewed in accordance with relevant organisational policy and procedures  
3.2 Required changes to integrated logistics support plans are identified and prepared in accordance with relevant organisational policy and procedures  
3.3 Amendments to integrated logistics support plans are prepared and promulgated to relevant stakeholders or personnel in accordance with relevant organisational policy and procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Industrial base capability
REQUIRED KNOWLEDGE AND SKILLS

- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics support analysis principles and processes
- Logistics governance
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to integrated logistics support
- Performance measurement
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to integrated logistics support including environmental, sustainability issues
- Supply chain concepts

Required skills:

- Apply integrated logistics support and project management knowledge in planning
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration when planning for integrated logistics support
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Undertake research and analysis to determine where internal and external factors impact on the integrated logistics support requirements, and adjust planning accordingly
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify the requirements for plans and adjust them as necessary to ensure effective and efficient performance
  - initiate and efficiently monitor processes
  - initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment

- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to integrated logistics support
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
EVIDENCE GUIDE

- projects
- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational policy and procedures may include:

- Australian Standards
- international standards
- logistics support analysis principles and processes
- organisational instructions and standards

Sources of information may include:

- conceptual documents
- contractors
- customers
- legislation, including environmental, sustainability requirements
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Standards and legislation may include:

- Australian Standards
- international standards
- organisational instructions and standards
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Costing may include:

- labour
RANGE STATEMENT

- life cycle costs
- money
- outlay of expenditure
- resources
- time

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulatory authorities
- subordinates
- supervisors
- regulators
- suppliers
- team members

Integrated logistics support plans may include:
- disposal
- facilities
- technical data
- training
- transitional plans

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published

Unit Descriptor

This unit involves the skills and knowledge required to develop integrated logistics support processes and the attendant procedures within the organisation. It includes anticipating and confirming the need for development, the development processes; gathering and analysing information; determining direction; and drafting, releasing and promoting the processes. It also includes the initial development of those procedures that are integral to the processes. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

4.4 Amendments to integrated logistics support policy and procedures are documented and promulgated to relevant stakeholders in accordance with relevant organisational policy |
ELEMENT PERFORMANCE CRITERIA and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Integrated logistics support
- International agreements
- Interoperability
- Logistics support analysis principles and processes
- Management processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to integrated logistics support
- Performance measurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to integrated logistics support including environmental, sustainability issues
- Supply chain concepts

Required skills:

- Apply integrated logistics support and project management knowledge in developing processes and procedures
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration when developing integrated logistics support processes and procedures
- Develop processes and procedures that can be readily understood by users
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined
Required skills:

- Undertake research and analysis to determine where internal and external factors impact on integrated logistics support processes and procedures, and adjust accordingly
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify the requirements for processes and procedures and adjust them as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
  - Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to integrated logistic support
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes
RANGE STATEMENT

Organisational policy and procedure may include:
- Australian Standards
- international standards
- organisational instructions and standards

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including environmental, sustainability and certification requirements

Logistics support analysis is:
- the process for identifying and analysing the functional supportability requirements consistent with the goals of the integrated logistic support program. Logistic support analysis also describes the process for coordinated development of logistics related task data, and the processing of that data to define logistics resource requirements. Logistic support analysis defines analytical process for the preparation for in-service support and disposal, and the interface with Supportability Assessments (Supportability Test and Evaluation)

Costing may include:
- labour
- life cycle costs
- money
- outlay of expenditure
- resources
- time

Promulgated may include:

4.2 Systems, procedures and records associated with documenting performance are managed in accordance with the organisation's requirements  
4.3 Integrated logistics support operations are reviewed in accordance with organisational policy and procedures  
4.4 Changes required are identified and prepared in accordance with organisational policy and procedures  
4.5 Amendments to integrated logistics support operations are incorporated into plans and promulgated to relevant stakeholders, in accordance with organisational policy and procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics including environmental, sustainability issues
- Logistics support analysis principles and processes
- Logistics governance
- Management processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to integrated logistics support
- Performance measurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to integrated logistics support including environmental, sustainability issues
- Supply chain concepts

Required skills:
- Apply integrated logistics support and project management knowledge in developing processes and procedures
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation to identify long-term factors and external considerations that need to be taken into consideration when developing integrated logistics support processes and procedures
- Develop processes and procedures that can be readily understood by users
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work
Required skills:

- contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Undertake research and analysis to determine where internal and external factors impact on integrated logistics support process and procedures, and adjust accordingly
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify integrated logistics support operation processes
  - identify, acquire and adjust resources as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to integrated logistic support
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning
EVIDENCE GUIDE

techniques should suit the language and literacy levels of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:

- conceptual documents
- contractors
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
RANGE STATEMENT

Organisational policy and procedures may include:
- suppliers
- Australian Standards
- international standards
- logistical support analysis
- organisational instructions and standards

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Key performance indicators may include:
- costs
- milestones
- production
- resources
- scheduling
- timings

Costing may include:
- labour
- life cycle costs
- money
- outlay of expenditure
- resources
- time

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including environmental, sustainability and certification requirements

Promulgated may include:
- authorised
- documented
- endorsed
RANGE STATEMENT

- issued
- published

Unit Descriptor

This unit involves the skills and knowledge required to verify and validate integrated logistics support processes and to manage verification and validation processes within the organisation. Verification and validation is a generic term for the complete range of checks that are performed on a system in order to increase confidence that the system is suitable for its intended purpose. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Unit Descriptor

This unit involves the skills and knowledge required to provide specialist advice related to integrated logistics support. Integrated logistics support is a disciplined and iterative approach to materiel management, which addresses supportability throughout the life cycle of a materiel system, with the aim of ensuring operational and preparedness requirements are met, at a minimised life cycle cost, with regulatory, legislative and contractual constraints. The provision of advice may be verbal or in a written format and will relate specifically to issues that are encountered in integrated logistics support activity. It includes the requirement to identify the issues, provide advice, formulate options and select the preferred option to address identified issues. This unit of competency specifically addresses advice that is relevant to integrated logistics support activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for integrated logistics support specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

| 1 Identify and analyse issue/s | 1.1 Circumstances that require the provision of advice relating to integrated logistics support are observed, received and clarified  
1.2 Issue/s are identified and confirmed, if necessary, through consultation with relevant personnel  
1.3 Circumstances are analysed and issue/s are interpreted and clearly defined  
1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify findings that are unclear |
| 2 Formulate options for integrated logistics support advice | 2.1 Options related to the provision of advice are identified and evaluated  
2.2 Options are prioritised and the preferred option/s is chosen |
| 3 Provide specialist integrated logistics support advice | 3.1 Advice is formulated and discussed with stakeholders  
3.2 Stakeholder requirements are negotiated, documented and incorporated within proposed advice  
3.3 Concluding advice is provided in accordance with ethical and practical guidelines and within specified resource constraints |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Analysis process
- Duty of care
- Information sources
- Materiel logistics (materiel sustainment and integrated logistic support)
- Organisational guidelines and standards
- Organisational policy and procedures
- Product knowledge related to systems and/or equipment in service in the organisation
- Professional codes of practice
- Research techniques
- Specialist knowledge in integrated logistics support
- Verbal communication techniques
- Written communication to a level required in the preparation of letters and reports
Required skills:

- Demonstrate a clear understanding of key issues and persuasively negotiate to ensure that integrated logistics support considerations are addressed
- Display insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of integrated logistics support information, present information confidently and select the appropriate medium for communication to influence a range of audiences
- Focus on gaining a clear understanding of others' comments by listening and adapting to the audience to ensure that integrated logistics support considerations are addressed
- Identify, review and analyse information that may impact on the integrated logistics support program or may be impacted by the integrated logistics support program, including environmental, sustainability issues
- Liaise with stakeholders to harness information and opportunities that may impact on the integrated logistics support program
- Prepare and present reports that may be complex and written, to inform and/or to succinctly present an argument to enable results to be achieved
- Provide and receive feedback in a positive manner

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - demonstrate clear communication of integrated logistics support information
  - demonstrate understanding of personal role in relation to wider organisational or project context
  - Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Codification and cataloguing processes
- Configuration management
REQUIRED KNOWLEDGE AND SKILLS

- Contract management
- Industrial base capability
- Legislative and regulatory environment as it pertains to materiel logistics
- Costing analysis which may include life cycle costing
- Logistics governance
- Logistics support analysis principles and processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance measurement
- Planning processes
- Procurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements including environmental, sustainability issues relevant to materiel sustainment
- Supply chain
- Technical regulatory framework

Required skills:

- Apply materiel sustainment and project management knowledge in developing a plan
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation and identify long-term factors and external considerations that need to be taken into consideration when planning for materiel sustainment
- Display insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Draw on information from a variety of sources using research, analysis and judgement to determine where internal and external factors impact on materiel sustainment requirements, and adjust planning accordingly
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel sustainment may include:
- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Organisational policy and procedures may include:
- Australian Standards
- international standards
- logistics support analysis principles and processes
- organisational instructions and standards

Sources of information may include:
- conceptual documents
- contractors
- customers
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
RANGE STATEMENT

Standards and legislation may include:
- suppliers
- Australian Standards
- international standards
- organisational instructions and standards
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including environmental, sustainability and certification requirements

Costing may include:
- labour
- life cycle costs
- money
- outlay of expenditure
- resources
- time

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel sustainment plans may include:
- annual support plans
- disposal
- facilities
- in-service support plans
- system level sustainment plans
- technical data
- through life support plans
- training
- transitional plans

Promulgated may include:
- authorised
- documented
- endorsed
- issued

| **1** Analyse the materiel sustainment environment | 1.1 Operation of the materiel sustainment environment is analysed and key factors and issues are identified  
1.2 External and internal factors likely to impact on materiel sustainment needs and capabilities are continually monitored and analysed  
1.3 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities, in accordance with organisational policy and procedures  
1.4 Legislation and organisational policy and procedures that may impact on materiel sustainment activity are identified and analysed |
| **2** Develop materiel sustainment processes and procedures | 2.1 Consultation and negotiation with stakeholders is conducted in accordance with organisational policy and procedures  
2.2 Materiel sustainment processes for materiel and materiel systems are developed and documented in accordance with organisational policy and procedures  
2.3 Costing analysis of options is undertaken and documented in accordance with organisational policy and procedures  
2.4 Procedures required to support the processes are identified, developed and documented  
2.5 Processes and procedures are approved in accordance with organisational policy and procedures |
| **3** Communicate materiel sustainment processes and procedures | 3.1 Stakeholders are fully informed of the outcomes, in accordance with organisational policy and procedures  
3.2 Materiel sustainment processes and procedures are promulgated in accordance with organisational policy and procedures  
3.3 Materiel sustainment processes and procedures are reviewed in accordance with organisational policy and procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Contract management to develop materiel sustainment
REQUIRED KNOWLEDGE AND SKILLS

- Logistics support analysis principles and processes
- Management processes to develop materiel sustainment
- Materiel sustainment process and procedures
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance measurement as it relates to materiel sustainment
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to materiel sustainment

Required skills:

- Apply materiel sustainment and project management knowledge in developing processes and procedures
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when developing materiel processes and procedures
- Develop processes and procedures that can be readily understood by those responsible for action
- Display resilience by continuing to move forward despite criticism or setbacks; remain positive and respond to pressure in a controlled manner
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Undertake research and analysis to determine internal and external factors that impact on the materiel sustainment program, and incorporate into processes and procedures accordingly
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - analyse materiel sustainment environment
  - identify requirements for processes and procedures and adjust them as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment

- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel sustainment
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups

- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
EVIDENCE GUIDE

- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel sustainment may include:
- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedure may include:
- Australian Standards
- international standards
- logistical support analysis
- organisational instructions and standards
RANGE STATEMENT

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Costing may include:
- labour
- life cycle costs
- money
- outlay of expenditure
- resources
- time

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published

Unit Sector(s)

Competency Field

Competency Field X - Logistics
TLIX5014A Manage materiel sustainment operations

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to prepare for materiel sustainment operations, to manage those operations throughout the materiel life cycle and to report on those operations in the organisational environment. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify materiel sustainment management requirements | 1.1 Sources of information relevant to materiel sustainment are identified and obtained in accordance with organisational policy and procedures  
1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures  
1.3 Materiel sustainment management requirements are defined and documented in accordance with organisational policy and procedures |
| 2 Develop materiel sustainment management operations | 2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures  
2.2 Materiel sustainment operations are developed and recorded taking into account materiel and/or materiel system in accordance with organisational policy and procedures  
2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures  
2.4 Costing analysis processes are developed and documented in accordance with organisational policy and procedures |
| 3 Apply materiel sustainment management operations | 3.1 Materiel sustainment risks and impacts are identified, recorded and managed  
3.2 Materiel sustainment procedures are applied in accordance with legislative requirements  
3.3 Management operations are carried out in accordance with organisational policy and procedures  
3.4 Failures and variances are documented, reported and managed in accordance with organisational policy and procedures  
3.5 Participation and contribution to materiel sustainment activities are established and maintained |
| 4 Review materiel sustainment operations | 4.1 Performance systems and processes are monitored and analysed to assess progress in achieving plans and targets  
4.2 Systems, procedures and records associated with documenting performance are managed in accordance with the organisation's requirements  
4.3 Materiel sustainment operations are reviewed in accordance with organisational policy and procedures  
4.4 Changes required are identified and prepared in accordance with organisational policy and procedures  
4.5 Amendments to materiel sustainment operations are incorporated into plans and promulgated to relevant stakeholders, in accordance with organisational policy and procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Codification and cataloguing processes
- Industrial base capability
- Legislative and regulatory environment as it pertains to materiel logistics, including environmental, sustainability issues
- Logistics governance
- Logistics support analysis principles and processes
- Management processes
- Materiel sustainment
- Organisational policy and procedures
- Organisational role relevant to materiel sustainment
- Performance measurement
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to materiel sustainment

**Required skills:**

- Apply materiel sustainment and project management knowledge to relevant materiel sustainment operations
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when managing materiel sustainment operations
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Manage obsolescence by ensuring implications of obsolescence are taken into consideration, and determining and implementing an obsolescence management strategy in accordance with policy and procedures
- Manage procurement activities occurring in the materiel sustainment environment
- Undertake performance measurement to enable objectives to be measured against defined
Required skills:
- Undertake research and analysis to investigate internal and external factors that impact on the materiel sustainment program
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify and establish materiel sustainment operation processes
  - identify, acquire and adjust resources as necessary to ensure effective and efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment
- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel sustainment
  - plans
  - workplace documentation

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
EVIDENCE GUIDE

- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:

- conceptual documents
- contractors
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Materiel sustainment may include:

- the management and provision of products and services
RANGE STATEMENT

needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Organisational policy and procedures may include:
- Australian Standards
- international standards
- logistics support analysis
- organisational instructions and standards
- through life support

Stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Materiel may include:
- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Logistics support analysis is:
- the process for identifying and analysing the functional supportability requirements consistent with the goals of the integrated logistic support program. Logistics support analysis also describes the process for the coordinated development of logistics related task data, and the processing of that data to define logistics resource requirements. Logistics support analysis defines the analytical process for the preparation for in-service support and disposal, and the interface with Supportability Assessments (Supportability Test and Evaluation)

Key performance indicators may include:
- costs
- milestones
- production
RANGE STATEMENT

- resources
- scheduling
- timings

Costing may include:

- labour
- life cycle costs
- money
- outlay of expenditure
- resources
- time

Legislative requirements may include:

- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Promulgated may include:

- authorised
- documented
- endorsed
- issued
- published

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine the requirements of the supply chain | 1.1 Components of the supply chain are identified and their links and inter-relationships are analysed in accordance with organisational policy and procedures  
1.2 Communication, data access, information sharing and technology requirements for an integrated supply chain are determined  
1.3 Requirements for collaborative planning, forecasting and tailored supply chains are identified  
1.4 Supply chain requirements are documented in accordance with organisational policy and procedures |
| 2 Determine a strategy for supply chain management | 2.1 Strategies for the supply chain are determined that cover outsourcing, choice of suppliers and partners, reshaping contractual relationships and the performance of the entire supply chain rather than individual supply chain segments  
2.2 Strategy includes matching supplier capability to customer requirements including strategies to optimise electronic information sharing and inventory risk management and minimise environmental impacts  
2.3 Strategies to build effective customer supplier relationships are identified  
2.4 Performance management strategies include customer satisfaction requirements across the supply chain continuum  
2.5 Supply chain management strategy includes strategic alliances, electronic business and electronic data interchange  
2.6 Strategy addresses legal, ethical, environmental and security issues relating to supply chain management  
2.7 Strategy includes the integration of supply chain processes into existing business processes |
| 3 Develop a model for supply chain management | 3.1 Supply chain management options are researched, and strengths and weaknesses of each option are identified  
3.2 Supply chain management models are investigated and their requirements are analysed and compared with the capability and culture of the supply chain  
3.3 Model for supply chain management is developed that meets the needs of the organisation including information flow, collaborative planning and forecasting in accordance with the organisation's supply chain management strategy  
3.4 Supply chain management model is developed to support reduced inventory footprints, operating costs, faster cycle times and greater customer satisfaction rates |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Industrial base capability
- Integrated logistics support
- International agreements
- Interoperability
- Legislative and regulatory environment, including environmental, sustainability issues as it pertains to supply chains
- Logistics governance
- Logistics support analysis principles and processes
- Materiel sustainment
- Performance measurement
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Organisational policy and procedures
- Organisational role relevant to supply chains
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to supply chains
- Supply chain concepts

Required skills:

- Analyse and evaluate information, and determine how it may be impacted by the supply chain or how the supply chain might be impacted by the information being considered
- Apply logistics and project management knowledge in establishing supply chains
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation, and identify long-term factors and external considerations that need to be taken into consideration when establishing a supply chain
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify relevant information from the integrated logistics support program and materiel sustainment program that is relevant to the establishment of supply chains
Required skills:

- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings
- Undertake performance measurement to enable objectives to be measured against defined parameters

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - analyse supply chain requirements
  - identify the requirements for plans and adjust them as necessary to ensure effective and efficient performance
  - initiate and efficiently monitor processes
  - initiate any remedial action required
  - communicate with stakeholders
  - prepare and provide relevant reports and documentation
  - Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel logistics
  - plans
  - workplace documentation
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Supply chain may include:
- cash flow
- entire cycle from raw materials to producers, component suppliers, manufacturers, wholesalers, third party service providers, retailers, customers and recyclers, freight, distribution
- use of open and international supply chain management standards

Organisational policy and
- Australian Standards
RANGE STATEMENT

Procedures may include:
- international standards
- logistics support analysis principles and processes
- organisational instructions and standards

Data may include:
- electronic catalogues
- electronic data interchange (EDI)
- inventory data
- logistics databases
- product shipment data
- real-time warehouse inventory status

Technology requirements may include:
- information technology to smooth the flow of data
- radio frequency identification (RFID), barcoding and scanning technology
- wireless application protocol (WAP) to allow personnel to access logistics databases via handheld or palm-sized devices

TLIX5019A Provide specialist materiel sustainment advice

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to provide specialist advice related to materiel sustainment. The provision of advice may be verbal or in a written format and will relate specifically to issues that are encountered in materiel sustainment activity. It includes the requirement to identify the issues, provide advice, formulate options and select the preferred option to address identified issues. This unit of competency specifically addresses advice that is relevant to materiel sustainment activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

Application of the Unit
This unit was developed for materiel sustainment specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. | 1 Identify and analyse issue/s | 1.1 Circumstances that require the provision of advice relating to materiel sustainment are observed, received and clarified  
1.2 Issue/s are identified and confirmed, if necessary, through consultation with relevant personnel  
1.3 Circumstances are analysed and issue/s are interpreted and clearly defined  
1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify findings that are unclear |
| 2 Formulate options for materiel sustainment advice | 2.1 Options related to the provision of advice are identified and evaluated  
2.2 Options are prioritised and preferred option/s is chosen |
| 3 Provide specialist materiel sustainment advice | 3.1 Advice is formulated and discussed with stakeholders  
3.2 Stakeholder requirements are negotiated, documented and incorporated within proposed advice  
3.3 Concluding advice is provided in accordance with ethical and practical guidelines and within specified resource constraints |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Analysis process to provide specialist materiel sustainment
- Duty of care as it applies to materiel sustainment
- Information sources for the provision of materiel sustainment
- Materiel logistics (materiel sustainment and integrated logistics support)
- Organisational guidelines and standards
- Organisational policy and procedures
- Product knowledge related to systems and/or equipment in service in the organisation
- Professional codes of practice
- Research techniques in the provision of materiel sustainment
- Specialist knowledge in materiel sustainment
- Verbal communication techniques in the provision of materiel sustainment
- Written communication to a level required in the preparation of letters and reports
Required skills:

- Approach negotiations with a clear understanding of key issues and persuasively negotiate to ensure that materiel sustainment considerations are addressed
- Display insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of materiel sustainment advice, present information confidently and select the appropriate medium for communication to influence a range of audiences
- Focus on gaining a clear understanding of others’ comments by listening and adapting to the audience to ensure that materiel sustainment considerations are addressed
- Identify, review and analyse information that may impact on the materiel sustainment program or may be impacted by the materiel sustainment program, including environmental, sustainability issues
- Liaise with stakeholders to harness information and opportunities that may impact on the materiel sustainment program
- Prepare and present reports that may be complex, to inform and/or to succinctly present an argument to enable results to be achieved
- Provide and receive feedback in a constructive manner

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - demonstrate clear communication of materiel sustainment information
  - demonstrate understanding of personal role in relation to wider organisational or project context
  - Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel sustainment
EVIDENCE GUIDE

- plans
- workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Advice may be:

- ad hoc
- by request
- formal or informal
- verbal or written
- and may include advice relating to:
RANGE STATEMENT

- acquisitions
- disposal
- environmental, sustainability issues
- in-service support
- inspections
- policy implementation
- staff processes
- technical manual development
- trials and interoperability
- transitional planning
- transport

Materiel sustainment may include:

- the management and provision of products and services needed to meet the preparedness and performance requirements of a materiel system from the time of acceptance into operational service until disposal at minimised life cycle cost. Material sustainment may also be referred to as asset management and includes components of: sustainment management, engineering support, maintenance support, supply support and planning for disposal and/or carrying out end of life tasks

Ethical and practical guidelines must:

- comply with professional codes of practice (as applicable)

Resources may include:

- financial
- information technology applications and tools
- infrastructure
- personnel
- time

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to develop and review configuration management plans and associated subordinate plans to ensure efficient and effective delivery of configuration management across the materiel and materiel system life cycle. Configuration management plans document how the materiel or materiel system will be supported to ensure they meet the stated capability requirement. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

Application of the Unit
This unit was developed for configuration management specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Configuration management
- Legislative and regulatory environment as it pertains to materiel logistics
REQUIRED KNOWLEDGE AND SKILLS

- Logistics governance
- Materiel logistics
- Organisational policy and procedures
- Organisational role relevant to configuration management
- Planning processes
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements relevant to configuration management

Required skills:

- Apply configuration management and project management knowledge relevant to planning
- Consult and negotiate effectively with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall configuration management planning objectives are achieved
- Demonstrate an understanding of the strategic objectives of the organisation and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
- Draw on information from a variety of sources using research, analysis and judgement to identify and develop configuration management plans
- Identify, review and analyse information that may impact on configuration management planning, or may be impacted by configuration management planning
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Undertake performance measurement relevant to configuration management planning to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

Unit Descriptor
This unit involves the skills and knowledge required to prepare for configuration management processes, to manage those processes throughout the materiel life cycle and to report on those processes in the organisational environment. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report change processing and implementation status. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
This unit was developed for configuration management specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

| 1 Identify configuration management requirements | 1.1 Sources of information relevant to configuration management are identified and obtained in accordance with organisational policy and procedures  
1.2 Currency of information is reviewed and documented in accordance with organisational policy and procedures  
1.3 Configuration management requirements are defined and documented in accordance with organisational policy and procedures |
| 2 Develop configuration management processes | 2.1 Consultation with stakeholders is conducted in accordance with organisational policy and procedures  
2.2 Configuration management processes are developed and recorded in accordance with organisational policy and procedures  
2.3 Key performance indicators are developed and documented in accordance with organisational policy and procedures  
2.4 Analysis of configuration management processes is developed and documented in accordance with organisational policy and procedures |
| 3 Apply configuration management processes | 3.1 Configuration management risks and impacts are identified, recorded and managed  
3.2 Configuration management procedures are applied in accordance with legislative requirements  
3.3 Configuration management processes are carried out in accordance with organisational policy and procedures  
3.4 Failures and variances are documented, reported and managed in accordance with organisational policy and procedures  
3.5 Participation and contribution to configuration management processes is established and maintained |
| 4 Review configuration management processes | 4.1 Performance systems and processes are monitored and analysed to assess progress  
4.2 Systems, procedures and records associated with documenting performance are managed in accordance with organisation's requirements  
4.3 Configuration management processes are reviewed in accordance with organisational policy and procedures  
4.4 Changes required are identified and prepared in accordance with organisational policy and procedures  
4.5 Amendments to configuration management processes are incorporated into plans and promulgated to relevant stakeholders in accordance with organisational policy and procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Codification and cataloguing processes
- Configuration management principles and processes
- Industrial base capability
- Legislative and regulatory environment, including environmental, sustainability issues as it pertains to materiel logistics
- Logistics governance
- Management processes
- Organisational policy and procedures
- Organisational role relevant to configuration management
- Product knowledge related to systems and/or equipment in service in the organisation
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to configuration management

Required skills:

- Apply configuration management and project management knowledge relevant to configuration management processes
- Demonstrate an understanding of the strategic objectives of the organisation and identify and assess potential alliances and effective strategies
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of configuration management processes, present information confidently and select appropriate medium for communication to a range of audiences
- Identify, review and analyse information that may impact on configuration management processes, or may be impacted by configuration management processes
- Negotiate and communicate effectively with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall configuration management objectives are achieved
- Undertake research and analysis to identify and develop configuration management processes
- Use appropriate information technology and software for configuration management processes
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify and establish configuration management operation processes
  - identify, acquire and adjust resources as necessary to ensure effective/efficient performance of the processes
  - initiate and efficiently monitor processes
  - initiate any remedial action required
  - effectively and efficiently manage configuration management processes

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to configuration management
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
EVIDENCE GUIDE

- case studies
- demonstration
- feedback from supervisors and peers regarding the candidate's ability
- observation
- portfolios
- projects
- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Sources of information may include:
- contractors
- conceptual documents
- legislation
- managers
- peers
- plans
- policies
- publications
- reference material
- standards
- supervisors
- suppliers

Organisational policy and procedures may include:
- Australian Standards
- international standards
- logistical support analysis
- organisational instructions and standards

Stakeholders may include:
- capability managers
- contractors
- customers
- project managers
RANGE STATEMENT

- regulators
- regulatory authorities
- subordinates
- supervisors
- suppliers
- team members

Key performance indicators may include:
- costs
- milestones
- production
- resources
- timings
- scheduling

Resource processes may include:
- financial
- information technology applications and tools
- infrastructure
- personnel
- transport

Legislative requirements may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Promulgated may include:
- authorised
- documented
- endorsed
- issued
- published

TLIX5025A Provide specialist configuration management advice

Modification History
Not Applicable
Unit Descriptor

This unit involves the skills and knowledge required to provide specialist advice related to configuration management. The provision of advice may be verbal or in a written format and will relate specifically to issues that are encountered in configuration management activity. It includes the requirement to identify the issues, provide advice, formulate options and select the preferred option to address identified issues. This unit of competency specifically addresses advice that is relevant to configuration management activity; it is not intended to cover technical advice that is provided in a broader context of the organisational endeavour or a professional discipline. Configuration management is a discipline applying technical and administrative direction and surveillance to: identify and document the functional and physical characteristics of a configuration item, control changes to those characteristics, and record and report changes to processing and implementation status. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for configuration management specialists working within materiel logistics but is applicable to any individual in this field of work. Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

| **1 Identify and analyse issue/s** | 1.1 Circumstances that require the provision of advice relating to configuration management are observed, received and clarified  
1.2 Issue/s are identified and confirmed, if necessary, through consultation with relevant personnel  
1.3 Circumstances are analysed and issue/s are interpreted and clearly defined  
1.4 Research related to issue/s is conducted and advice of relevant personnel is sought to clarify findings that are unclear |
| **2 Formulate options for configuration management advice** | 2.1 Options related to the provision of advice are identified and evaluated  
2.2 Options are prioritised and the preferred option/s is chosen |
| **3 Provide specialist configuration management advice** | 3.1 Advice is formulated and discussed with stakeholders  
3.2 Stakeholder requirements are negotiated, documented and incorporated within proposed advice  
3.3 Concluding advice is provided in accordance with ethical and practical guidelines and within specified resource constraints |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Analysis process
- Duty of care
- Information sources
- Organisational guidelines and standards
- Organisational policy and procedures
- Product knowledge related to systems and/or equipment in service in the organisation
- Professional codes of practice
- Research techniques
- Specialist knowledge in configuration management
- Technical regulatory framework
- Verbal communication techniques
- Written communication to a level required in the preparation of letters and reports
Required skills:

- Approach negotiations with a clear understanding of key issues and persuasively negotiate to ensure that configuration management considerations are addressed
- Display an insight into how industry operates and the drivers that influence their dealings
- Display resilience by continuing to move forward despite criticism or setbacks
- Focus on clear communication of configuration management advice, present information confidently and select the appropriate medium for communication to a range of audiences
- Identify, review and analyse information that may impact on the configuration management program, or may be impacted by the configuration management program, including environmental, sustainability issues
- Liaise with stakeholders to harness information and opportunities that may impact on the configuration management program
- Prepare and present reports that may be complex, to inform and/or to succinctly present an argument to enable results to be achieved
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - demonstrate clear communication of configuration management information
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to configuration management
  - plans
  - workplace documentation

  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Advice may be:

- ad hoc
- by request
- formal or informal
- verbal or written
- and may include advice relating to:
  - acquisitions
  - disposal
RANGE STATEMENT

- environmental, sustainability issues
- in-service support
- inspections
- policy implementation
- staff processes
- technical manual development
- trials and interoperability
- transitional planning
- transport

Ethical and practical guidelines must:

- comply with professional codes of practice (as applicable)

Resources may include:

- financial
- information technology applications and tools
- infrastructure
- personnel
- time

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Designate detailed technical data and information use, and maintenance responsibilities | 1.1 Responsibilities for technical data and information use and maintenance activities are designated to staff in accordance with approved system framework, organisational policy and the abilities of individual staff  
1.2 Rules for the operation of the system are devised in compliance with approved systems framework  
1.3 Resources for approved budget period are allocated in accordance with policy and the strategic plan |
| 2 Develop key performance indicators for technical data management activities | 2.1 Measurable performance indicators are developed for technical data management activities in accordance with the authorised systems  
2.2 Data management responsibilities of individual personnel/organisational units are identified and documented  
2.3 Acceptable range of variation for compliance is determined based upon data management responsibilities, applicable data management system and organisation's risk management analysis |
| 3 Develop monitoring methodology | 3.1 Methodology for monitoring the technical data management system's rules, standards and procedures is developed based upon authorised systems  
3.2 Methodology developed includes timeframes involved, means of surveillance and form of reporting  
3.3 Methodology, performance criteria and the ranges of variation from the standards and rules are submitted to appropriate authority for approval |
| 4 Monitor a technical data management system | 4.1 Monitoring is undertaken in accordance with approved timeframes and frequency  
4.2 Staff being monitored are notified in accordance with organisational policy and guidelines, where applicable  
4.3 Any variation from data management system's framework, rule, standards and procedures that exceed the agreed limit is noted and details of the situation are recorded  
4.4 Where required, reports are provided to appropriate authority relating to technical data and information use and maintenance, and are in the required format, at the required intervals |
| 5 Identify and respond to problems and changes | 5.1 Problems and changes requiring a systematic response are identified from monitoring reports and external events  
5.2 Recommendations are made for revisions to systems, procedures, and future (strategic) plans in response to identified variations, changes and problems  
5.3 Amendments to systems are devised and implementation is
ELEMENT | PERFORMANCE CRITERIA
--- | ---
planned, in response to problems and changes that require a systemic response
5.4 Recommendations for system amendments and the planning and implementation required are prepared, and approval is sought from appropriate authority
5.5 Procedures for using technical data and information systems, and subsequent alterations and amendments to the procedures are authorised, ensuring that performance indicator parameters and access rules are adhered to

6 Designate technical data and information creation and capture responsibilities
6.1 Responsibilities for technical data and information creation and capture activities are designated to staff in accordance with organisational policy
6.2 Technical data and information creation and capture performance targets are set within the parameters of the technical data management plan
6.3 Resources for the budget period are allocated in accordance with organisational policy and strategic plan

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Area of technical expertise
- Data management, standards, principles, process and functional requirements
- Details of the technical regulatory framework, organisation's engineering management plans and the technical data management plan
- Established communication channels and protocols
- Organisational functions, structure and culture
- Organisational policy, strategies and procedures
- Organisation's data management systems
- Organisation's rules for the capture of, access to, and use and maintenance of, technical data and information
- Organisation’s technical classification scheme and language
- Problem identification and resolution
- Procedures for recording, reporting and maintaining workplace records and information
- Quality assurance principles and processes
REQUIRED KNOWLEDGE AND SKILLS

- Work flow and business process re-engineering principles and practices

Required skills:

- Apply technical data and information and project management knowledge to technical data and information systems
- Consult and negotiate effectively with key stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall technical data and information systems objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Implement processes to enable new technical data and information system requirements to be effectively transitioned across the life cycle - this includes integrated logistics support considerations, including environmental, sustainability issues, and validation and verification activities
- Monitor processes to ensure that the technical data and information systems continue to enable the operational requirements to be attained - this may include performance metrics

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - apply relevant implementation processes
  - monitor and report on implementation processes
  - analyse data and information
  - apply knowledge of technical data and information plans to assist in work and to guide problem solving
  - demonstrate understanding of personal role in relation to wider organisational or project context
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources

- Competency should be assessed in the workplace or in a simulated workplace environment
EVIDENCE GUIDE

for assessment

- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to technical data and information systems
  - plans
  - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this competency may include, but are not limited to, a combination of:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Technical data and information

- as specified and defined in the technical regulatory framework
**RANGE STATEMENT**

may be:  
- included either explicitly or implicitly in the established system framework

Approved system framework:  
- is established by an approved authority and issued as the basis of all technical data and information management
  - contains:
    - high level accountability and functional responsibilities
    - high level control/management requirements and protocols
    - key aspects of technical regulatory framework
    - outline of the structuring rules for repositories, cataloguing systems, security access systems, processes and software
    - protocols on functionality, maintainability and growth
    - technical context
    - technologies/standards

Rules may include:  
- allocating access/security status
- capturing structural and contextual metadata
- classifying and indexing items
- generating and allocating unique identifiers to data items
- identifying and recording disposal status items
- identifying technical data and information creators
- links between technical data and information items
- locating and tracking items
- naming/titling items
- negotiating transfer of custody or ownership
- recording the use of history of items

Measurable performance indicators may include:  
- those developed for specific tasks
- those incorporated in the data management system
- performance indicators that relate to:
  - disposal (percentage of data, unsentenced data, overdue for disposal action, functions/data not covered by disposal schedules)
  - parameters for tracking of technical data and information
  - retrieval and access (security and access rules, response to request time limits, service levels for requests)

Data management responsibilities may include:  
- established systems framework
- organisation's responsibility and accountability analysis
- system's rules, standards and procedures
RANGE STATEMENT

Identified and documented may include:
- established systems framework
- organisation's responsibility and accountability analysis
- system's rules, standards and procedures

Means of surveillance may include:
- examination of results (technical data and information)
- form/s of reporting
- real-time observation (security of process)
- statistical reports
- selected snapshots of the system

Appropriate authority may include:
- chief executive officer
- delegated individual
- external public authority
- nominated senior management representative
- senior management team
- technical/engineering authority

Monitoring may include:
- number of systems
- single data management system

Variation may include:
- increases or decreases in the use of particular technologies/standards
- variations from the data management system's performance or capacity
- variations within the agreed limit but which are consistent

Reports may include:
- technical data and information capture
- technical data and information compliance
- technical data and information creation
- technical data and information maintenance
- technical data and information use

Problems and changes may include:
- changes in administrative changes to functions/activities
- changes to organisational structures
- legislative or technical regulatory changes
- technological change and implementation

Systemic may include:
- current technical data management systems
- technical systems (which generate technical data and information)
- storage facilities systems
- systemic changes which may include:
  - amendment to the classification system
  - bulk movement of technical data and information to control
  - migration of systems
  - new classification and control language
RANGE STATEMENT

- new disposal classes or retention periods
- new organisational or business unit functions

Revisions may include:

- access rules and procedures
- classification and indexing schemes
- disposal schedules
- storage projections and requirements
- technical data and information specifications

Recommendations for system amendments may include:

- changes to/enforcement of procedures
- counselling of non-conforming individuals/business units
- disciplinary action

Unit Sector(s)

Competency Field

Competency Field X - Logistics
TLIX5037A Plan logistic support for deployed operations

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to plan logistic support for deployed elements of an organisation in support of organisational operations. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
This unit of competency is applicable to logistic personnel who have a responsibility to organise the delivery of logistic support in a deployed context. This person will typically plan logistic support for a relatively simple operation. This type of operation would enable planning to be completed by an individual as opposed to a significant operation where planning is usually completed by a team of professionals and operational control is at the highest level of the organisation.

This person will bring management skills and leadership to perform the scope of this unit of competency. Logistic support may be comprised of a range of capabilities from different disciplines including road transport, supply, maintenance, catering or health. All activities are carried out in accordance with relevant organisational policy and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Analyse the logistic requirement | 1.1 Operational requirement is analysed in order to establish the scope and intent of logistic support  
1.2 Operating environment is identified and information is sought to establish the operating and logistic factors relating to the operation  
1.3 Limitations and constraints are determined in order to establish what courses of actions are feasible and realistic  
1.4 Critical facts and assumptions are made in order to allow planning to progress in the absence of developed knowledge of the current situation |
| 2 Analyse risks to logistic support | 2.1 Risk analysis is conducted to identify and mitigate against unacceptable risks in accordance with organisational policy and procedures  
2.2 Liaison with agencies involved in the operation's logistic is undertaken to ensure the most effective coordination of effort  
2.3 Local population and organisations in the operating area are analysed to identify any possible disruption to logistic support |
| 3 Develop the logistic plan | 3.1 Logistic situation is reviewed to inform planning  
3.2 Planning timeline is prepared to guide planning activities and to ensure sufficient time is allowed to disseminate information and subsequent preparation of personnel and equipment  
3.3 Logistic concept is created and based upon the analysis and the principles of logistic, operational suitability, feasibility and acceptance by management  
3.4 Logistic plan is developed in accordance with organisational policy and procedures  
3.5 Plan is adjusted in accordance with changing operational need  
3.6 Contingency plans are developed  
3.7 Logistic plan is communicated to stakeholders |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Logistic concepts
REQUIRED KNOWLEDGE AND SKILLS

- Specialist knowledge of the organisation, function and logistic capabilities
- Organisational policy and procedure pertaining to logistics
- Specialist understanding of customer and stakeholder requirements
- Risks to logistic support
- Organisational role relevant to specialist logistic support
- Environment consideration in planning logistic support
- Organisational writing conventions
- Planning process

Required skills:

- Interpret instructions and apply to actions and tasks
- Prepare and issue instructions that clearly communicate intent and operational tasks
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Analyse the complexities of a task such as limitations, freedoms, vulnerabilities, environmental considerations and time limitations
- Undertake analysis to determine where internal and external factors impact on the logistic support requirements, and adjust planning accordingly
- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage own planning tasks in concert with organisational requirements
- Interpret policies and procedures
- Make decisive, informed decisions that align with organisational requirements
- Move forward despite the difficulty of the planning task
- Use appropriate information technology and software
- Use written and oral communication skills

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
EVIDENCE GUIDE

Demonstrate competency in this unit

Requirements of the elements and performance criteria of this unit and include demonstration of:

- Applying the planning process outlined within the elements and performance criteria in response to a logistic support task in a deployed setting
- Applying organisational policy and procedure relating to planning of logistic support
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - A range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and equipment, and
  - Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - Through activities in an appropriately simulated environment, and/or
  - In an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Limitations and constraints may include:

- restrictions imposed by management
- restrictions on movement
- access to ports, loading areas, lifting equipment
- access to resupply of fuel, water, food
- the requirement to maintain a reserve of capacity or capability
- quarantine restriction

Critical facts and assumptions may include:

- composition of own resources
- location and condition of key equipment
- load capability of roads
- distance
- turnaround time
- availability of local resources

Operating environment may include:

- the terrain and climate
- the location and capability of handling equipment
- availability of local resources
- movement corridors and routes

Operational factors may include:

- mission essential equipment
- operational period
- availability of local resources
- repair policy, including preventive maintenance requirements for material in stock
- service level required at each line of stockholding
- effects of terrain and climatic conditions on personnel and material
- any arrangements for the provision of supplies and services
- predicted usage rates
- expected losses and delays within the logistic network and distribution system through adverse weather, fire or other hazards
- predicted need to relocate stocks during deployment

Logistic factors may include:

- movement lead time between the home location and operating area
- transport lift capacities available
- planned frequency of replenishment
- availability of suitable areas, infrastructure and facilities
- availability of lifting/loading equipment and trained workforce required to provide supply support to the stock
- engineering effort necessary to enhance the logistic network and provide for storage facilities
RANGE STATEMENT

- potential variability of usage rates
- probability of delays in either procurement or delivery

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to organise the deployment and delivery of logistics support in a deployed context in support of organisational operations. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
The application of this unit in the workplace includes preparing for logistics operations, deploying logistics elements and managing the internal operation of a specialist logistics element.

This unit of competency is applicable to logistic personnel who have a responsibility to organise and manage the delivery of logistics support in a deployment context.

This person will bring management skills and leadership to perform the scope of this unit of competency. Logistics elements may be comprised of a range of capabilities from different disciplines including road transport, supply, maintenance, catering or health. The composition of the maintenance team will be guided by the type and scale of operation being supported. All activities are carried out in accordance with relevant organisational policy and procedures.

| 1 Prepare for logistic operations | 1.1 Operational requirement is analysed in order to establish the scope and intent of logistic support  
1.2 Deployment requirements are received and interpreted to determine logistic requirements  
1.3 Reconnaissance of the deployment area is conducted to inform the planning including technical and functional siting considerations  
1.4 Warning instructions are prepared and issued to logistic element personnel to enable them to prepare for deployment  
1.5 Occupational health and safety (OH&S) requirements and recognised safety precautions are applied throughout the operation in accordance with organisational policy and procedures |
| 2 Deploy the logistic support | 2.1 Deployment instructions are prepared and issued to logistic element personnel to inform them of the method and sequence of the deployment  
2.2 Movement to the deployment site is managed in accordance with the operational environment and management instructions  
2.3 Logistic element is deployed, sited and monitored to ensure the operational logistic support requirements are being achieved |
| 3 Provide logistic support | 3.1 Liaison with stakeholders involved in the operation is carried out to ensure the most effective coordination of effort  
3.2 Operational or organisational constraints are recognised and logistic tasks are directed to align with these constraints  
3.3 Logistic support priorities are set in order to align the activities with the organisational objectives  
3.4 The activity is monitored to ensure that the logistic elements are conducting activity with appropriate authority and in accordance with organisational policy and procedures  
3.5 The delivery of logistic support is managed to meet the demands of the operation  
3.6 Personnel are supervised and efficiently and effectively employed within their area of speciality  
3.7 The maintenance integrity of logistic support assets is monitored to ensure assets are available for support tasks when required  
3.8 Logistic information systems are utilised to monitor and coordinate logistic support operations and to inform the decision making process  
3.9 Liaison with agencies involved in the operation is carried out to ensure the most effective coordination of effort |
ELEMENT PERFORMANCE CRITERIA

3.10 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on the operation

3.11 Records are maintained and entered into information systems

4 Close down the site

4.1 Redeployment instructions are prepared and issued to logistic element personnel

4.2 The scaling down and withdrawal of the deployment site is monitored to ensure it is consistent with the operational environment and organisational requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Logistic concepts
- Specialist knowledge of the organisation, function and logistic capabilities
- Organisational policy and procedure pertaining to logistics
- Regulatory and standards requirements pertaining to logistics
- Logistic analysis principles and processes
- Risks to logistic support
- Siting considerations
- Organisational role relevant to specialist logistic support
- Environment consideration in planning logistic support
- Organisational writing conventions
- Planning process

Required skills:

- Interpret instructions and apply to actions and tasks
- Draft and release complex forms of written communication
- Use problem-solving skills to apply a broad range of problem-solving strategies
- Analyse the complexities of a task such as limitations, freedoms, vulnerabilities, time limitations
- Undertake analysis to determine where internal and external factors impact on the logistic
Required skills:

- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage own planning tasks in concert with organisational requirements
- Interpret policies and procedures
- Make decisive, informed decisions that align with organisational requirements
- Move forward despite the difficulty of the task
- Use appropriate information technology and software
- Use oral communication skills
- Use negotiation skills

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Technical and functional siting considerations may include:

- access
- terrain
- hard-standing
- drainage
- facilities and infrastructure
- size
- cover and concealment

Logistic element may include:

- supply
- transport
- health
- catering
- maintenance

Unit Descriptor
This unit involves the skills and knowledge required to plan and coordinate road convoy movement. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
The application of this unit in the workplace includes receiving instructions to undertake road convoy movement, planning all aspects of the movement, and coordinating the movement of vehicles and personnel in accordance with the plan and the requirements of the operating environment.

This person will bring management skills and leadership to perform the scope of this unit of competency. Road convoy movement may be conducted across any terrain comprised of vehicles integral to logistics capabilities from different disciplines including road transport, supply, maintenance, catering or health. All activities are carried out in accordance with relevant organisational policy and procedures.

TLIX5040A Manage contracted support services

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to manage contracted support services in support of organisational operations. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
The unit was written for a person who is given responsibility for managing contracted services in a deployed context, but it has applicability to anyone that manages/administers contract services. The person does not establish the contractual arrangements; this is usually completed by the organisation's headquarters and involves a separate set of skills.

The application of this unit in the workplace includes determining the scope of the contract support to be provided, planning and integrating the contracted support into an organisation's operations, supervising contract support and reporting on contractor performance.

This person will bring management skills and leadership to perform the scope of this unit of competency. Contracted support may be comprised of a range of capabilities from different disciplines such as road transport, supply, maintenance, catering or health. These services are usually procured to supplement organisational capability to fill organisational capability gaps. All activities are carried out in accordance with relevant organisational policy and procedures.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine the scope of contracted support | 1.1 Contract service arrangements are confirmed and clarified where necessary  
1.2 Contract obligations are identified in line with contractual and organisational requirements  
1.3 The Contract Authority is consulted to clarify and assist with contract administration issues  
1.4 Risks to the contract service arrangement are assessed and responded to in line with contract requirements and organisational policy and procedures  
1.5 A contract supervision strategy is developed and documented to establish the environment for contractor integration and production in the workplace |
| 2 Integrate contracted support with own operations | 2.1 Arrangements for interaction and production between contracted personnel and personnel from the organisation are established  
2.2 Opportunities to communicate between contracted personnel and own organisation are established to promote an open and productive environment  
2.3 Concerns expressed by workplace personnel, including contracted personnel, are responded to quickly to resolve issues and provide an equitable workplace  
2.4 An environment of unity and cohesiveness is promoted to enable the integration between contracted personnel and personnel from own organisation |
| 3 Supervise the delivery of contracted support | 3.1 Workplace obligations to the contractor are monitored in accordance with the contract requirements and organisational policy and procedures  
3.2 Performance of the contractor is monitored against service arrangements to ensure all obligations under the agreement are being met  
3.3 Notices of contract variations are reviewed and integrated into the current workplace arrangements in accordance with the contract and organisational policy and procedures  
3.4 Complaints are responded to in a manner that resolves simple issues early and close to the source of the problem  
3.5 Effective communication strategies and processes are established and implemented to assist ongoing communication between own personnel and contractors |
| 4 Report on the performance of contracted support | 4.1 Communication on the performance of the contract is maintained with the Contract Authority in accordance with the contract requirements and organisational policy and procedures |
ELEMENT PERFORMACE CRITERIA

4.2 Performance reporting is carried out in accordance with the contract requirements and organisational policy and procedures

4.3 Contract information is maintained for organisational purposes in accordance with organisational policy and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Commonwealth/state/territory government legislation, policies, practices and guidelines relating to contract administration, including environmental, purchasing guidance, logistics support concepts and OH&S
- Contract performance management
- Privacy and confidentiality requirements
- Probity principles and issues
- Equal employment opportunity, equity and diversity principles
- Specialist knowledge of the organisation, function and logistic support capabilities
- Risk management
- Organisational writing conventions
- Planning processes
- Contract management
- Procurement
- Negotiation

Required skills:

- Interpret and apply complex documents such as contracts, legislation and guidelines
- Draft and release complex forms of written communication
- Use problem-solving skills to apply a broad range of problem-solving strategies
- Analyse the complexities of a task such as limitations, vulnerabilities and time limitations
- Communicate and negotiate with contractors and other stakeholders
- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage own planning tasks in concert with organisational requirements
Required skills:

- Interpret policies and procedures
- Make decisive, informed decisions that align with organisational requirements
- Move forward despite the difficulty of the task
- Use appropriate information technology and software
- Network with diverse range of service providers, contractors and end users
- Assess risk posed to the successful implementation of contract support services

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include:
  - develop a contract supervision strategy for contract support being augmented with own organisation in a field deployment context
  - respond to contract variations and demonstrate how these affect the contract supervision strategy
  - provide accurate and balanced reporting on contract performance

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Contract obligations may include:
- supply adequate resources to undertake work
- provide access to the workplace
- provide a safe workplace
- provide appropriate facilities
- maintain an open line of communication

Risks to the contract may include:
- contractor inability to meet agreements
- end user or buyer inability to meet obligations
- limited number of suppliers
- time limitations or constraints

Contract supervision strategy may include:
- summary of the current situation
- outline of key objectives or mission
- implementation strategy and arrangement for ongoing management and communication
- performance monitoring arrangements
- administrative support arrangements
- control arrangements

Performance of the contractor is monitored may include:
- tracking milestones
- regular meetings
- meeting records and follow-ups
- file management - audit trail
- stakeholder surveys on performance
- ongoing review of deliverables
RANGE STATEMENT

Contract supervision strategy may include:

- communication strategy
- limits of authority
- action on under performance
- action on workplace grievances
- action on contract variation
- strategies for continuous improvement

Contract variation to agreements may include:

- change of scope
- negotiation of new terms and conditions
- dissolution of contracts
- verbal variations, confirmed in writing

Unit Descriptor

This unit involves the skills and knowledge required to organise supply support operations in a deployed context in support of organisational operations. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

The application of this unit in the workplace includes planning supply support, and managing the delivery of supply support services. This involves overseeing local procurement, inventory control, warehousing and the return, salvage and disposal of supplies to meet the specific requirements of an operation.

This unit of competency is applicable to logistic personnel who have a responsibility to organise and manage the delivery of supply support in a deployment context.

This person will bring management skills and leadership to perform the scope of this unit of competency. Supply organisations may be comprised of a range of supply capabilities from different disciplines which when brought together form a composite supply support organisation. The composition of the supply organisation will be guided by the type and scale of operation being supported. All activities are carried out in accordance with relevant organisational policy and procedures.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Manage procurement | 1.1 Local procurement is utilised to contribute to organisational sustainment  
1.2 Deployment input to central procurement is provided to contribute to organisational sustainment  
1.3 Governance requirements relating to procurement are maintained in accordance with organisational policy and procedure |
| 2 Control the inventory of supplies | 2.1 The accounting for stocks is monitored including stocktaking and earmarking stock for specific purposes  
2.2 Logistic information management systems are used to control inventory and to support organisational decision making  
2.3 The positioning and distribution of stock in the supply chain is supervised to accommodate stockholding plans and forecast usage  
2.4 The processing of demands for stock is monitored to ensure stocks are made available for distribution to locations in line with the customers' needs  
2.5 Arrangements for the distribution and delivery of stock are monitored to ensure a smooth transition between supply and distribution  
2.6 Replenishment of stock in the quantities and timeframes determined by usage and provision plan is supervised to ensure appropriate stockholdings |
| 3 Manage the warehousing of supplies | 3.1 Occupational health and safety (OH&S) requirements and recognised safety precautions are applied throughout the operation in accordance with standard procedures  
3.2 The warehouse is sited consistent with the overall logistic support concept and the consideration for siting  
3.3 The functional components of a warehouse are established in accordance with the operational requirements and the commodities required to be supplied  
3.4 The security of stores is established and monitored  
3.5 The principles of warehousing are applied in order to obtain the maximum operational effectiveness from the warehouse and personnel  
3.6 Stock location methods are implemented and monitored  
3.7 Storage principles, as they apply to different commodity groups, are applied  
3.8 Warehousing documentation methods are monitored to ensure warehouse accounting is accurate and visibility of stock location in the supply chain is maintained |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.9 Warehousing procedures relating to receipts and issues are monitored to ensure integrity of the warehousing processes
3.10 Warehousing procedures relating to hazardous stocks, segregation, dispersion requirements and stock compatibility are applied
3.11 Stock inspections are carried out to confirm stock records are correct; life expectancy; repackaging or renewal dates are applied; the serviceability of packaging is being maintained; and to identify requirement for technical inspections or routine maintenance
3.12 The use of material handling equipment is monitored to ensure efficient and safe materials handling within the warehouse

4 Manage the return, salvage and disposal of supplies
4.1 Return processes are monitored to ensure they are applied in accordance with organisational policy and procedures
4.2 Salvage processes and procedures are monitored to ensure the recycling of damaged, discarded, condemned or abandoned materiel is in accordance with organisational policy and procedure
4.3 Disposal processes are monitored to ensure material is appropriately removed from circulation and use in accordance with organisational policy and procedure

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Logistics support concepts
- Specialist knowledge of the organisation, function and logistic support capabilities
- Organisational policy and procedure pertaining to supply
- Logistics support analysis principles and processes
- Organisational role relevant to specialist logistic support
- Environment considerations in providing supply support
- Organisational writing conventions
- Planning process
- Financial delegation limits
REQUIRED KNOWLEDGE AND SKILLS

- Warehousing procedures relating to receipts and issues
- Warehousing procedures relating to hazardous stocks, segregation, dispersion requirements and stock compatibility
- Return processes
- Salvage processes
- Disposal processes
- OH&S

Required skills:

- Apply a knowledge of supply
- Interpret instructions and apply to actions and tasks
- Prepare and issue instructions that clearly communicate intent and operational tasks
- Use problem-solving skills to apply a broad range of problem-solving strategies
- Analyse the complexities of a task such as limitations, freedoms, vulnerabilities, time limitations
- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage own planning tasks in concert with organisational requirements
- Interpret policies and procedures
- Make decisive, informed decisions that align with organisational requirements
- Move forward despite the difficulty of the planning task
- Use appropriate information technology and software

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Local procurement may include:
- the purchase of standard, readily available, commercial items or services
- the manufacture of items

Deployment input to central procurement may include:
- usage rates
- stockholding levels
- operating stock
- reserve stock
- earmarks
- equipment pools

Arrangements for the distribution and delivery of stock may include:
- distribution points
- exchange points
RANGE STATEMENT

- aerial delivery points
- direct delivery
- unit collection
- dumping
- caching

Functional components of a warehouse may include:

- receipt area
- storage area
- issues area
- administration
- stock

Consideration for siting may include:

- access
- terrain
- hard-standing
- drainage
- facilities and infrastructure
- size
- cover and concealment
- security

The principles of warehousing may include:

- logical workflow (one direction)
- minimal internal movement
- minimal stock handling
- minimise the time to effect transactions
- maximise the labour force
- maximum use of available capacity
- safety and security
- efficient use of space
- management of information
- effective stock control measures

Stock location methods may include:

- row and module method
- checkerboard method
- matrix method

Storage principles may include:

- stock characteristics
- transaction rate
- maintenance requirements
- stock classification:
  - oversized stock
  - palletised stock
  - shelf stock
  - bin stock
RANGE STATEMENT

- draw stock
- hazardous stock
- sensitive stock
- density
- height
- standard and non-standard items

Material handling equipment may include:

- fork lift
- pallet jack

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include:
  - the management of at least two different road transport operations such as replenishment operations and passenger transport

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The considerations when planning vehicle movement and tasking may include:

- vehicle availability
- vehicle types
- route
- route capacity
- road network
- support vehicles
- method of operation
- method of movement
- time
- tactical situation
- terrain
- climate
- driver availability
- use of vehicle capacity
- loads to be carried, including compatibility issues in regard to dangerous goods and/or ammunitions
- handling of loads

Route information may include:

- harbour and staging areas
- likely long halt locations and reporting points
- other potential routes
- obstacles
- assembly areas, including laying up points and turnaround areas
- driving time and condition between points
- bridges, fords, waterways, tunnels and culverts
- road width and capacity
- likely effect of weather conditions en route
- state of repair or construction en route
- critical points

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to organise logistic maintenance support operations in a deployed context in support of organisational operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
This unit of competency is applicable to logistic personnel who have a responsibility to organise and manage the delivery of maintenance support in a field deployment context.

The skills will usually be applied in a front-line maintenance facility supporting the maintenance, repair and recovery of equipment to support the organisations operations.

This person will usually be from an engineering background or a technician, and will bring management skills and leadership to perform the scope of this unit of competency. Maintenance teams may be comprised of a range of maintenance elements from different disciplines which when brought together form a comprehensive maintenance support organisation. The composition of the maintenance team will be guided by the type and scale of operation being supported. All activities are carried out in accordance with relevant organisational policy and procedures.

</table>
ELEMENT

PERFORMANCE CRITERIA

2.10 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on the technical integrity of material within the organisation

2.11 Maintenance records are maintained and entered into information systems

3 Forecast repair parts requirements

3.1 Repair parts agencies are liaised with to coordinate the provisioning of repair parts to meet forecast maintenance requirements

3.2 The supply and demand of repair parts is monitored to ensure repair parts and materials are available to support maintenance activities

3.3 The management of repair parts records are monitored to ensure visibility over repair parts to support maintenance planning

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Grades of repair
- Lines of maintenance support
- Types of maintenance support
- The concept of reliability, availability and maintainability/usability codes
- Maintenance policy, procedures and instructions
- Technical regulations, policy and procedure
- Material maintenance plan
- Standard operating procedures
- Maintenance advisory bulletins
- Workshop production management principles
- Workflow management principles
- Backlog management principles
- Back-loading management principles
- Repair parts supply processes
- Repair parts policy as it relates to authorisation to fit and configuration control
- Likely consequences of terrain and weather on material
- Legislative and regulatory requirements
REQUIRED KNOWLEDGE AND SKILLS

- Maintenance role relevant to integrated logistics support
- Maintenance planning processes
- Cannibalisation and salvage policy and procedures

Required skills:

- Apply planning processes
- Supervise a team of tradespeople
- Apply a knowledge of maintenance support planning in the planning of support
- Apply maintenance planning tools to inform maintenance support planning
- Identify the relationship between organisational goals and recognise how own planning contributes to the achievement of those goals
- Communicate technical advice
- Liaise with external agencies to coordinate maintenance support
- Deliver clear, concise, and accurate instructions
- Use information technology and software
- Prepare maintenance reports
- Provide advice to managers

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintenance effort may include:

- technical inspection
- testing
- servicing
- classification
- recovery
- repair
- rebuilding
- salvage
- calibration

Maintenance technical policy and procedure may include:

- maintenance doctrine
- technical regulations
- engineering instructions
- maintenance plans
- standard operating procedures
- maintenance advisory bulletins
RANGE STATEMENT

Maintenance planning tools may include:
- logistic information systems
- maintenance information systems:
  - current availability
  - workflow
  - backlog
  - scheduling
  - back-loading
  - cross-loading

The considerations of production/maintenance planning may include:
- duration of repair work
- location of the equipment
- priority of the equipment
- parent unit activity
- capacity
- capability
- repair policy

Enabling components of maintenance support may include:
- competent and qualified tradespeople
- facilities and support equipment, including recovery equipment
- tools and test equipment
- repair parts
- technical data and documentation
- time
- repair pools

Repair/recovery support may include:
- forward repair of material
- forward recovery of material
- establishment of equipment collection point
- back loading of material

Repair parts may include:
- all essential elements, materials, components, assemblies or sub-assemblies of an end item of equipment required for the maintenance or repair of equipment

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for health support operations** | **1.1** Information is sourced and analysed to identify the health factors to be considered  
**1.2** The considerations of production/maintenance planning are applied to derive the most efficient employment of health element equipment and personnel  
**1.3** The maintenance of health equipment is scheduled within the constraints of delivering health support  
**1.4** The preparedness of health personnel is monitored to ensure personnel are competent, authorised and ready to provide health care  
**1.5** The principles of health support are applied to the preparation and planning of health support  
**1.6** Instructions are prepared and delivered to implement and coordinate health support operations  
**1.7** Technical advice is provided to management and stakeholders |
| **2 Manage evacuation support** | **2.1** Evacuation planning factors are taken into consideration when planning and compiling an evacuation task order  
**2.2** Evacuation assets are maintained in a state of high readiness to respond to evacuation tasking  
**2.3** Processes and procedures are established to enable the despatch and control of evacuation assets in response to tasking  
**2.4** Evacuation support is delivered to support the continuity of care to casualties requiring evacuation via the health element  
**2.5** Evacuation support is delivered within the constraints of the operational environment allowing for appropriate security and protection of evacuation assets  
**2.6** The reception and despatch of casualties with other evacuation modes is coordinated |
| **3 Manage health support** | **3.1** The interrelationship between health elements is managed to enable a continuity of care as the patient transitions through care agencies  
**3.2** Health care specialists and providers are consulted to ensure patient holding is appropriate and is balanced with the care they require and the need to maintain health element mobility  
**3.3** Patient tracking is managed to ensure an accurate picture of patient status at all times and to ensure the personnel administrative system is informed of the patient movements  
**3.4** Health records are maintained to enable an accurate record of care provided and a basis for review and ongoing treatment  
**3.5** Health logistics are managed to ensure the health resources available for care are consistent with the care required and the |
ELEMENT PERFORMANCE CRITERIA

capability of the health element

3.6 Health related reports and returns are prepared and submitted to aid in organisational health planning and coordination

3.7 A knowledge of relevant conventions and laws (such as the Geneva Conventions and the Laws of Armed Conflict) are applied to the delivery of health support

3.8 The welfare and administration of patients and health element personnel is monitored

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- The principles of health support
- Preparedness requirements of health personnel
- Policy and procedure relating to evacuation
- Tasks and composition of health elements and their points of interaction
- Health stores and equipment resupply systems and procedures
- Patient tracking and administration
- Requirements relating to the management of health waste
- Supply, handling, storage of blood products
- Legislative and regulatory environment as it pertains to materiel logistics
- Logistics support analysis principles and processes
- Organisational policy and procedures
- Organisational role relevant to specialist logistic support
- Planning processes

Required skills:

- Lead a team of medical experts as required
- Supervise a team of health care workers
- Apply a knowledge of health planning and coordination
- Apply health planning tools to inform health planning
- Identify the relationship between organisational goals and recognise how own planning
Required skills:
  - contributes to the achievement of those goals
  - Deliver clear, concise, accurate and authoritative instructions
  - Use information technology and software
  - Prepare health related reports and returns
  - Work closely with a senior clinical officer to coordinate health support
  - Liaise with external agencies to coordinate health support

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
  - The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment
  - Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
  - Resources for assessment include:
    - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
    - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
  - Assessment of this unit must be undertaken by a registered training organisation
  - As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
  - Practical assessment must occur:
    - through activities in an appropriately simulated
EVIDENCE GUIDE

environment, and/or
• in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Health support may include:
• triage
• resuscitation
• surgical care
• nursing care
• primary health care
• evacuation (forward retrieval)
• pathology
• medical imaging
• dental care
• environmental health support
• psych support

Health elements may include:
• dental team
• environmental health team
• health assessment team
• field pathology team
• low/medium/high dependency nursing team
• primary health care team
• rehabilitation team
• resuscitation team
• surgical team
• laboratory team
• medical imaging team
• road ambulance evacuation team
• aeromedical evacuation team
• psych support team
• mortuary team
• ships medical emergency team

Preparedness of health element personnel may include:
• competent in generic organisational skills
• competent in health care skills
RANGE STATEMENT

- fit and healthy
- have appropriate credentials for position
- have an authorised Red Cross card and armband
- familiar and confident with health element equipment and operating environment

Health support policy and procedure may include:

- health doctrine
- health instructions
- health policy directives
- standard operating procedures

The principles of health support may include:

- prevention
- conformity
- control
- continuity
- flexibility
- mobility
- proximity

Evacuation planning factors may include:

- casualty/patient estimates
- availability and capability of evacuation assets
- capacity, location and type of supporting health facilities
- level of expertise of health care personnel
- casualty exchange points along the evacuation chain
- protection afforded to health personnel, casualties, health units, evacuation assets
- communication plan
- airspace command and control

Evacuation assets may include:

- ambulance
- air/sea support
- vehicle adapted for casualty transport
- medical equipment
- pharmaceutical stores
- trained and competent personnel

Processes and procedures may include:

- standard operation procedures
- tasking information sheet
- pre-departure briefing
- in-vehicle communications
- check points/rendezvous points/way points
- navigation aids
- route clearances
- forward positioning of evacuation assets
- use of casualty exchange points
RANGE STATEMENT

Evacuation support may include:
- casualty transport
- casualty retrieval
- on-site care
- en route care
- handover
- management of casualty property and effects
- compilation of evacuation records

Reception and despatch may include:
- movement to and from the despatch point via ambulance
- liaison with the mode of evacuation
- transfer to the other evacuation mode
- handover of the casualty to other evacuation modes

Other evacuation modes may include:
- rotary wing aircraft
- fixed wing aircraft
- boat/ship

Patient tracking may include:
- identification
- reporting on admission
- providing updates
- issuing notifications
- reporting on discharge
- maintaining a record of these occurrences
- reporting epidemiological morbidity data

Health record may include:
- medical records
- patient administrative information
- health reports and returns
- health treatment statistics

Health logistics may include:
- pharmaceuticals
- mortuary affairs
- blood
- health support services (maintenance, catering)
- general logistic support (supply, transport, waste)

Health related reports and returns may include:
- incident report
- casualty notification
- patient holding
- situation report
- stock holdings
- epidemiological morbidity data

ELEMENT

PERFORMANCE CRITERIA

of the catering support requirement

3.8 Processes and procedures relating to food usage and resource accounting are monitored

4 Minimise waste and manage disposal of food and waste

4.1 Opportunities to reduce waste are identified and acted on within the catering facility

4.2 Cost control procedures are implemented to minimise waste within the catering facility and to use catering resources efficiently

4.3 The development and implementation of waste management arrangements are monitored to ensure waste management supports good field hygiene and protection of the environment

4.4 Waste management processes and procedures are monitored to ensure compliance with field hygiene and environmental standards

4.5 Agencies responsible for the removal of waste and the monitoring of field hygiene are liaised with to ensure compliance with field hygiene and environmental standards

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Layout and design principles of a field catering facility
- Principles of a HACCP-based approach to managing food safety
- Organisational programs and systems in place to manage and support quality and food safety
- Legal obligations for food safety and quality
- Awareness of common microbiological, physical and chemical hazards related to foods handled
- Suitable standard for materials, measuring devices, equipment and utensils used in the work area
- The relationship between diet and nutrition with individual performance and operational capability
- The five food groups and how these are integrated into a menu
- Different menu systems (such as cyclic menus) used to support operations
- Factors that influence menu development
- Food storage, processing and handling requirements
REQUIRED KNOWLEDGE AND SKILLS

- Procedures for identifying unsafe and/or non-conforming practices or food product
- Options for responding to non-compliance in food safety
- Food waste minimisation methods
- Waste collection, recycling, handling and disposal
- Food recall procedures within own level of responsibility
- Catering documentation and accounting procedures
- Catering cost control strategies
- Relevant OH&S and environmental procedures and guidelines

Required skills:

- Lead a team
- Provide catering support in a field environment
- Liaise and negotiate with stakeholders
- Utilise information technology systems related to catering
- Display resilience by continuing to move forward despite the difficulty of the operation
- Identify the relationship between organisational goals and recognise how own efforts contribute to the achievement of those goals
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
EVIDENCE GUIDE

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Catering support requirements may include:

- provision of field catering facilities
- semi-permanent kitchens
- temporary kitchens
- satellite kitchens
- preparation of fresh rations
- direct to dinner meals
- individually packed meals
- condiment boxes

Catering support planning tools may include:

- ration plan
- feeding matrix
- staff roster

Catering support equipment may include:

- kitchen washing-up facilities
- pots, pans and cooking utensils
- storage racks
- eating utensils
RANGE STATEMENT

- refrigerators
- water heating units
- food storage racking
- garbage bins
- POL drums and containers
- gas cylinders
- fire fighting equipment
- mobile kitchen
- water storage drums and containers
- power generators
- tentage and flooring
- lifting devices

Catering facilities may include:
- semi-permanent kitchens
- temporary kitchens
- satellite kitchens
- components of field kitchens may include:
  - kitchen area
  - messing area
  - kitchen washing-up facilities and pots, pans and utensil storage racks
  - eating utensil wash-up area
  - refrigeration
  - hot water facilities
  - food storage area with racking
  - garbage area
  - POL storage area
  - gas storage area
  - chemical storage area
  - fire fighting equipment area
  - preparation area
  - hand-washing area
  - water storage for kitchen and messing area
  - identified drop-off and pick-up area
  - generators and field power distribution system
  - sullage disposal system

Resources required to meet food safety requirements may include:
- food safety program for the work area which identifies critical control points, control measures and corrective action
- quality policy, system and procedures
RANGE STATEMENT

- work area or system in which quality and food safety practices and procedures are to be monitored
- personal protective clothing and equipment as required
- review/audit arrangements
- reporting and monitoring systems

Food safety programs may include:
- a written document that specifies how a business will control all food safety hazards that may be reasonably expected to occur in all food handling operations of the food business
- related procedures must comply with legal requirements of the Food Safety Standards and must be communicated to all food handlers
- food safety requirements may be specified in general operating procedures

Corrective action may include:
- immediate actions to correct or control the non-conformance by the employment of risk management strategies for food
- preventative actions to stop the non-conformance from occurring again, for example:
  - checking and repairing equipment
  - amending standard operating procedures/work instructions
  - retraining staff

Catering team may include:
- catering supervisors
- cooks
- stewards
- food service assistants

Organisational policies and procedures may include:
- standard operating procedures
- doctrine
- codes of practice
- orders
- instructions
- operating manuals
- relevant Australian Standards
- relevant Commonwealth Acts

Opportunities to reduce waste may include:
- rotating and documenting stock accurately
- storing food correctly and securely
- using reusable by-products of food preparation
- use recyclable products

Cost control procedures may include:
- portion control
- following recipes accurately
RANGE STATEMENT

include:

- ordering suitable quantities of stock

Storage of food may include:

- dry goods storage
- refrigeration
- utensil storage

Waste may include:

- wet waste
- dry waste
- grey water waste

Competency Field

Competency Field  X - Logistics
TLIX5046A Carry out standard customs clearance practices

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to carry out standard customs clearance practices in accordance with the Customs Act 1901 and amendments, as well as related legislation, regulatory requirements and workplace requirements.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the relevant customs and related legislation and workplace requirements concerning customs clearance practices.

Work is undertaken in a range of environments, including small to large worksites in the Custom Broking Industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

import declaration

withdrawn in accordance with provisions of Customs Act 1901 and associated regulations

6.3 Impact of withdrawal of an entry on rate of customs duty payable is interpreted

7 Apply customs controls on regulated premises

7.1 Differentiation is made between types of regulated premises

7.2 Processes applicable to movement permissions are followed

7.3 Fit and proper person check is explained

7.4 Security and access requirements for regulated premise are complied with

7.5 Other licence conditions for a regulated premise are interpreted and applied, recordkeeping and maintenance of customs control of goods are emphasised

7.6 Requirements of failure to comply with licence conditions are explained to licence holder

8 Manage information

8.1 Records are stored in accordance with regulatory requirements and workplace procedures

8.2 Contingency plans for software application system are outlined implemented in accordance with customs and workplace procedures and requirements

9 Identify excisable and excise equivalent goods

9.1 Excisable goods are identified

9.2 Excise equivalent goods are identified

9.3 Reporting requirements for excisable and excise equivalent goods are followed
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable legislation and regulations such as:
  - Customs and related legislation pertaining to customs clearance functions
  - privacy legislation
- Access requirements to a warehouse
- Biosecurity issues that require action
- Bonds
- Customs controls on regulated premises
- Depots
- Different types of regulated premises
- Documentation requirements for customs clearance practices
- Ex warehouse entry format and process
- Examination of cargo in a warehouse
- Excise
- Export of Excise Equivalent Goods
- Focus of operation of work systems, equipment, management and site operating systems required for customs clearance operations
- Legislation establishing the duty rate
- Movement permissions
- Pathway requirements
- Physical security of cargo in a warehouse
- Process and authority required to withdraw an import declaration
- Purpose of warehousing goods and obligations of warehouse proprietors to Customs and Border Protection Service
- Relevant sections of customs and related legislation, regulations and codes of practice relevant to customs clearance operations and identifying consignments
- Requirements for completing relevant documentation
- Routine issues that may occur during customs clearance and appropriate action that can be taken to deal with these issues
- Sale of goods in Bond
- Sources of information on new developments in customs clearance practices
- Steps involved in planning work activities
- Under Bond approvals
- Under Bond movements, acquittals and out turn reports
- Warehouses
• Ways of learning skills and knowledge required for new developments in customs clearance practices
• Workplace procedures and policies for customs clearance operations

**Required skills:**

• Communicate effectively with clients and other stakeholders
• Complete documentation related to work activities
• Identify learning skills and knowledge required for relevant new developments in customs clearance practices
• Interpret and follow operational instructions and prioritise work
• Modify activities depending on workplace contexts, risk situations and environments and take appropriate initiatives within allowable limits
• Negotiate, communicate and liaise effectively with clients and others
• Plan and organise work activities when carrying out customs clearance practices
• Provide quality client service
• Read and interpret Customs Act 1901 and amendments
• Read and interpret instructions, procedures and information relevant to customs clearance practices
• Select and use relevant computer/communication/office equipment and processes when carrying out customs clearance practices
• Solve problems and routine issues that may arise when carrying out customs clearance practices
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying procedures for compliance with Customs and related legislation
- conducting calculations and appropriate adjustments as part of routine customs clearance operations
- recognising and dealing with routine issues that may arise during customs clearance operations.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- knowledge tests and performance questions
- direct observation of the candidate applying tasks, requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of customs clearance practices may include:
- Customs Act 1901, regulations and current amendments
- Customs publications, policy and procedures
- Business continuity plan procedures
- Import licensing
- Quota

Non tariff controls may include:
- Processes
- Regulations
- Systems
- Technology
- Types and packaging of goods

New developments in customs clearance operations may include:
- Bulletins, journals, magazines, books
- External networks
- Internal and external training programs
- Internet websites such as Australian Customs and Border Protection Service
- Independent reading
- Online learning
- Seminars and webinars
- Quality procedures

Ways of learning skills and knowledge required for new developments in border clearance operations may include:

Depending on the organisation concerned, workplace procedures may be called:

Communication in the work area may include:
- Electronic data interchange (EDI)
- Email
- Fax
- Internet
- Oral, aural or signed communications
- Phone
- Agents
- Clients
- Management representatives
- Other employees and supervisors
- Relevant authorities and institutions

Consultative processes may involve:
Documentation and records may include:

- client instructions
- Customs and related legislation
- Customs Notices
- internal documentation used for customs clearance functions
- manifests, delivery notes, consignment notes and special clearances
- manufacturer specifications for equipment
- other regulatory requirements pertaining to customs clearance functions
- quality assurance procedures

Unit Sector(s)
Not applicable.

Competency Field
X – Logistics
TLIX5047A Determine customs value

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to carry out customs valuation using the transaction value method only, for the purpose of determining the customs value.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the Customs Act 1901 as amended and related case law and workplace requirements concerning customs valuation functions.

Work is undertaken in a range of environments including small to large worksites in the customs broking and international trade industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Apply transaction valuation method

1.1 World Trade Organization (WTO) Customs Valuation Agreement is analysed

1.2 Valuation specific information is identified in accordance with Customs Act 1901 as amended

1.3 Situations where it is appropriate to apply transaction valuation method are recognized and analysed

1.4 Situations where alternate methods of valuation apply are recognised

1.5 Situations where there is insufficient reliable information to determine if transaction valuation method applies are identified and referred in accordance with workplace policies and procedures

1.6 Valuation is determined from import documentation in accordance with the Customs Act 1901

2 Identify import sales transaction for customs valuation purposes

2.1 Relevant import sales transaction is identified

2.2 Owner and supplier are identified on documentation

2.3 Any relationship between owner and supplier is acknowledged and implications of relationship for customs valuation are determined and managed in accordance with Customs Act 1901 as amended

3 Determine transaction value

3.1 Price in import sales transaction is identified

3.2 Terms of trade relevant to import sales transaction are identified and analysed

3.3 Adjusted price is calculated

3.4 Price related costs and any other additions or deductions are determined taking into account relevant legislation and terms of specific import sales transaction

3.5 Transaction value is calculated

4 Identify factors that impact on price

4.1 Date and place of export are determined in accordance with Customs Act 1901

4.2 Rate of exchange is confirmed
5 Determine customs value

5.1 Customs value is calculated using appropriate rate of currency exchange

5.2 Costs against goods are apportioned using factorisation

5.3 All calculations are checked for accuracy, documented and verified as required

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable rules, legislation and regulations:
  - case law
  - Customs Act 1901 as amended
  - WTO Customs Valuation Agreement
- Awareness of alternative valuation methods
- Date and place of export
- Factorisation i.e. apportionment of costs over a line value (each line of invoice for which there is a separate classification)
- Price related costs and other legislated additions to or subtractions from price
- Rates of currency exchange
- Transaction value
- WTO Customs Valuation Agreement

Required skills:

- Calculate accurately
- Compare and analyse information
- Identify, interpret and learn skills and knowledge required for relevant new developments in customs valuation practices
- Negotiate, communicate and liaise effectively with clients and others
- Read and interpret legislation
- Solve problems that may arise when determining customs valuations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying transaction valuation method
- identifying relevant import sales transaction for customs valuation purposes
- determining price and elements of adjusted price
- identifying elements of price related costs
- calculating customs value
- recording valuation information on customs import declaration.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on the determination of relevant aspects of customs valuations may include:
- Customs Act 1901 and Customs Regulations principles, theories and history of the Australian valuation system including the WTO Customs Valuation Agreement, and Customs and related legislation
  - transaction value including:
    - adjusted price
    - arm’s length transactions
    - contract of sale
    - import sales transaction
    - price
    - price related costs
    - rebates

Alternate valuation methods may include:
- computed value method
- deductive goods method
- fall back method
- identical goods valuation
- similar goods valuation

Adjusted price may include:
- Australian inland freight and insurance
- deductible administrative costs
- deductible financing costs
- overseas freight and insurance
- post importation costs

Price related costs may include:
- foreign inland freight and foreign inland insurance
- packing costs
- production assist costs
- proceeds of resale

Valuation advice means:
- completing and lodging an application for valuation advice with the regulator

Verification may include:
- customs brokers
- other colleagues within the enterprise

New developments in customs valuation practices including changes in:
- case law
- legislation
- processes and policies
- regulations

Information on new developments in
- bulletins, journals, magazines, books
customs valuation practices may be obtained from:

- external networks such as professional bodies and staff in various regulatory authorities
- internal and external training programs
- internal networks such as own operational team, staff in other departments, support staff, managers, training staff
- internet websites

Ways of learning skills and knowledge required for new developments in customs valuation practices may include:

- coaching in the workplace
- independent reading
- networking with relevant internal and external contacts
- online learning

Workplace procedures may include:

- quality procedures

Communication in the work area may include:

- electronic data interchange (EDI)
- email
- fax
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:

- management
- relevant authorities and institutions
- other employees and supervisors

Documentation and records may include:

- client instructions
- Customs Act 1901 and related legislation
- internal documentation used for customs valuation
- software application system user manuals
- workplace procedures and policies
- WTO Customs Valuation Agreement

**Unit Sector(s)**

Not applicable.

**Competency Field**

X – Logistics
TLIX5048A Determine import and/or export prohibitions and/or restrictions

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to apply special permit requirements as part of customs broking activities in accordance with the Customs Act 1901, related legislation and workplace requirements. It includes identifying goods subject to import/export restrictions and/or prohibitions, identifying required permits, assessing permits for compliance; and facilitating the gaining of such permits.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the Customs Act 1901 and related legislation, regulations and workplace requirements concerning prohibitions and restrictions.

Work is undertaken in a range of environments including small to large worksites in the Customs Broking Industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

---

### Elements and Performance Criteria

1. **Ensure goods comply with import/export restriction and/or prohibition**
   - 1.1 Goods subject to prohibitions and/or restrictions are correctly identified
   - 1.2 Type and requirement of prohibition and/or restriction is correctly identified
   - 1.3 Goods and commodities subject to prohibition and/or restriction are assessed for compliance under the relevant restriction/permit requirement

2. **Facilitate gaining of permits**
   - 2.1 Implications and expectations of special permits are clearly communicated to clients
   - 2.2 Applications are reviewed at client request to ensure compliance with regulatory requirements and client requirements
   - 2.3 Problems arising with permit applications are identified and addressed in accordance with relevant legislation, regulations and workplace policies and procedures
   - 2.4 Negotiations and discussions are entered into with clients and relevant personnel from permit issuing authorities as needed to facilitate issuing of permits
   - 2.5 Application and permit documentation is lodged in accordance with relevant regulatory and workplace requirements
   - 2.6 Application processing is followed up as required
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:
- Australian Dangerous Goods (ADG) Code and relevant wildlife conservation quarantine or other legislative requirements
- Australian Radiation Protection and Nuclear Safety Agency
- Australian Wine and Brandy Corporation
- Biosecurity and other legislation relevant to the application for permits
- Commerce (Imports) Regulations 1940
- Commerce (Trade Descriptions) Act 1905
- Convention on International Trade in Endangered Species (CITES) listings
- Copyright Act 1968
- Customs Act 1901
- Customs (Prohibited Exports) Regulations 1958
- Customs (Prohibited Imports) Regulations 1956
- Department of Infrastructure and Transport
- Department of Sustainability, Environment, Water, Population and Communities
- Imported Food Inspection Scheme (IFIS)
- National Industrial Chemicals Notification and Assessment Scheme (NICNAS)
- Therapeutic Goods Administration
- Trade Marks Act 1995
- Other relevant national and state/territory regulatory requirements and codes of practice
- Problems that may occur when applying for permit requirements and appropriate action that can be taken to resolve the problems
- Relevant database systems
- Relevant permit procedures and guidelines
- Steps involved in planning work activities
- Workplace procedures and policies for the application of permit requirements

Required skills:
- Accurately complete documentation related to work activities
- Communicate, liaise and negotiate effectively with clients and others when completing work activities
- Communicate effectively with a range of stakeholders
- Identify, interpret and learn new skills and knowledge required for the implementation of new developments regarding permit requirements
- Interpret and follow operational instructions and prioritise work
- Plan and organise work activities when applying permit requirements
- Read and correctly interpret appropriate Acts and regulations
- Read and interpret instructions, procedures and information relevant to restrictions and permit requirements
- Select and use relevant sources of information when applying permit requirements
- Solve problems that may arise when applying permit requirements
- Work systematically with required attention to detail
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- identifying goods, consignors or consignments subject to import and/or export permit and/or restrictions
- identifying type of restrictions and/or permits
- identifying valid permits
- verifying goods/consignments meet requirements of any permit and/or import restriction.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- workplace where mentoring individuals or small groups can be conducted
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities
- range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including applicable legislation, and regulations.

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge.

As a minimum, assessment of knowledge must be conducted
through:

- appropriate written and oral tests
- knowledge and performance questions.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Restricted/prohibited goods/commodities subject to biosecurity and wildlife conservation regulations or other regulatory and/or permit requirements may include:

- commodities containing ozone-depleting substances
- dangerous goods, explosives, firearms and ammunition
- flora and fauna
- goods and materials that may be used to construct explosives or weapons of mass destruction (WMD)
- hazardous waste
- heritage and cultural items
- horticultural and agricultural products
- imported foods
- industrial chemicals
- plant, fish and animal products
- therapeutic goods and complementary medicines
- vessels and vehicles
- wines and spirits
- other commodities subject to Australian and overseas government regulations and requiring special permits

Information on relevant aspects of permit requirements may include:

- quarantine permit requirements such as:
  - animal quarantine
  - approved providers
  - cargo clearance
  - conversion quantities
  - foods containing specified ingredients
  - origin
  - plant and animal exports
  - plant quarantine
  - pests and diseases
  - quarantine treatment
  - treatments undertaken

- wildlife conservation requirements such as:
  - acquittals and specimen export records (SER)
  - export/import regulations
  - international treaties for wildlife
conservation

- special permit validation for exports
- wildlife conservation
- other special permit requirements such as:
  - commodities containing ozone-depleting substances
  - dangerous goods, explosives, firearms, ammunition; chemical, biological and radioactive weapons materials and components; other prohibited imports and exports
- hazardous waste
- heritage and cultural items
- imported food program and permit regulations
- prescribed amounts of cash
- requirements for Therapeutic Goods Administration permits (TGA)

Agencies from which permits may be obtained may include:

- Australian Customs and Border Protection Service
- Australian Federal Police
- Australian Wine and Brandy Corporation
- Attorney-General’s Department
- Department of Agriculture, Fisheries and Forestry
- Department of Defence
- Department of Foreign Affairs and Trade
- Department of Health and Ageing
- Department of Infrastructure, Transport and Regional Development and Local Government
- Department of Innovation, Industry, Science, Training and Research
- Department of Sustainability, Environment, Water, Population and Communities
- Department of the Prime Minister and Cabinet
- Health Insurance Commission
- Therapeutic Goods Administration
- Wheat Exports Australia

Checks made during an assessment of a permit or restriction assessment may include:

- accuracy checks
- checks for missing information
- checks for unfulfilled requirements
Workplace procedures may include:

- checks for whether or not supplementary documents are required

Communication in the work area may include:

- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:

- client
- management
- other employees and supervisors
- regulatory authorities

Documentation and records may include:

- dangerous goods declarations and safety data sheets (SDS)/material safety data sheets (MSDS)
- emergency procedures
- goods manifests
- operations manuals, job specifications and induction documentation
- quality assurance procedures
- regulations and codes of practice relevant to import and export procedures
- relevant Australian Standards and certification requirements
- relevant database systems
- workplace policies and procedures related to permit requirements
- other government documentation covering regulated trade (including online)

Restricted/prohibited goods/commodities subject to quarantine and wildlife conservation regulations or other regulatory and/or special permit requirements may include:

- animals, fish and birds
- commodities containing ozone-depleting substances
- dangerous goods, explosives, firearms and ammunition
- flora and fauna
- goods and materials that may be used to construct explosives or weapons of mass destruction (WMD)
- hazardous waste
- heritage and cultural items
- horticultural and agricultural products
- imported foods
Information on relevant aspects of specialist permit requirements may include:

- industrial chemicals
- plant and animal products
- therapeutic goods and complementary medicines
- vehicles
- vessels
- wines and spirits
- other commodities subject to Australian requiring special permits

- quarantine permit requirements, such as:
  - animal quarantine
  - approved providers
  - cargo clearance
  - conversion quantities
  - pests and diseases
  - plant and animal exports
  - plant quarantine
  - origin
  - prescribed substances in foods
  - quarantine treatment
  - treatments undertaken

- wildlife conservation requirements, such as:
  - acquittals and specimen export records (SER)
  - export/import regulations
  - international treaties for wildlife conservation
  - special permit validation for exports
  - wildlife conservation

- other special permit requirements, such as:
  - commodities containing ozone-depleting substances
  - dangerous goods, explosives, firearms, ammunition; chemical, biological and radioactive weapons materials and components; other prohibited imports and exports
  - hazardous waste
  - heritage and cultural items
  - imported food program and permit regulations
  - prescribed amounts of cash
• requirements for Therapeutic Goods Administration (TGA) permits

Unit Sector(s)
Not applicable.

Competency Field
X – Logistics
TLIX5049A Determine indirect taxes

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to determine indirect taxes as part of customs broking activities. It includes assessing the applicability of indirect taxes; determining tax exemptions and taxes to be paid; and documenting the results of all tax determinations.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the relevant Customs, Australian Taxation Office (ATO) and other tax related legislation, and workplace policies and procedures.

Work is undertaken in a range of environments including small to large worksites in the customs broking, international freight forwarding, integrated express delivery and import/export industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
# Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

| 1 Assess applicability of indirect taxes to goods, commodities and transactions | 1.1 Applicability of indirect taxes to goods and commodities is analysed and documented |
| 1.2 Allowable exemptions and specialised schemes relating to indirect taxes are researched for applicability to specific commodities and/or transactions |
| 1.3 Allowable exemptions are applied to goods and commodities in accordance with relevant legislation |
| 1.4 Accuracy of assessments is checked and verified |

| 2 Calculate indirect taxes | 2.1 Correct rate of indirect tax on goods and services is identified and applied in accordance with legislative requirements |
| 2.2 Relevant information such as overseas freight and insurances is obtained as required |
| 2.3 Data is input into software application systems for indirect tax calculation |

| 3 Document indirect tax assessments | 3.1 Indirect tax assessment results are recorded on appropriate documentation in accordance with legislative requirements |
| 3.2 Rates and amounts of indirect taxes payable are checked for accuracy and verified according to workplace procedures |
| 3.3 Completed documentation is stored, retained and provided to clients and other relevant personnel as required in accordance with Customs Act 1901 and related legislation and workplace procedures |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable legislation and regulations:
  - A New Tax System (Goods and Services Tax) Act 1999, Customs and other indirect tax legislation as they relate to implementing indirect tax legislation as part of customs broking activities
  - Customs and related legislation
  - equal opportunity legislation
  - equal employment opportunity and affirmative action legislation
  - export/import/quarantine/bond requirements
  - other indirect taxation legislation
  - workplace relations regulations
- Basic operation of the Goods and Services Tax (GST) system
- Calculations of GST on taxable importations
- Delivered duty paid (DDP) transactions and impact on GST
- Documentation and/or software system requirements for the application of GST and other indirect tax legislation as they relate to customs broking activities
- Key features of GST legislation
- GST:
  - accounting requirements
  - collection and remittance
  - input-taxed supplies
  - registration process
  - system overview
- GST-free goods and supplies
- Impact of GST on:
  - customs functions
  - importers and exporters
- Non-taxable importation
- Roles and responsibilities of Australian Customs Service (Customs) and ATO as they relate to GST
- Scope and operation of GST deferral scheme
- Sources of information to identify GST free goods and exemption codes
- Sources of information on new developments in GST legislation as they relate to customs broking activities
- Special rules pertaining to GST requirements
- Transport and insurance costs attracting GST
Required skills:

- Accurately calculate indirect taxes
- Accurately complete documentation related to work activities
- Communicate and liaise effectively with others when applying GST and other indirect tax legislation as part of customs broking activities
- Identify and interpret
  - luxury car tax (LCT) problems that may occur when applying indirect taxes and appropriate action that can be taken to resolve identified problems
  - non-taxable importations rules
  - wine equalisation tax (WET) rules
- Read and interpret:
  - indirect tax schedules
  - instructions, procedures and information relevant to applying indirect taxes legislation as they relate to customs broking activities
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- determining applicability of GST and determining other indirect taxes
- documenting indirect tax assessments.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies, scenarios and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, legislation and current amendments

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge.

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Allowable exemptions and specialised schemes refers to:
- government initiatives and schemes to promote exports of goods and services

Verification may be undertaken by:
- customs broker
- other experienced colleagues within the organisation

Documentation may be passed on to:
- colleagues for further processing
- customs broker
- manager for checking and verification

New developments in the application of GST and other indirect tax legislation may include changes in:
- ATO and Customs legislation
- lodgement processes and systems
- rates

Information on new developments in the application of GST and other indirect tax legislation may be obtained from:
- bulletins, journals, magazines, books
- external networks such as staff in Customs, ATO and various regulatory authorities, staff in other customs broking enterprises
- internal and external training programs
- internal networks such as own operational team, staff in other departments, support staff, managers, training staff
- internet websites

Techniques to learn skills and knowledge required for new developments in applying GST and other indirect tax legislation may include:
- coaching in the workplace
- continuing professional development
- external training programs
- independent reading
- internal training programs
- networking with relevant internal and external contacts

Workplace procedures may include:
- quality procedures

Communication in the work area may include:
- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:
- management
- other employees and supervisors
- relevant authorities and institutions
Documentation and records may include:

- ATO rulings on GST and other indirect tax legislation
- client instructions
- commercial invoices
- insurance documents
- internal company documentation used for the application of GST and other indirect tax legislation as part of customs broking activities
- operations manuals, job specifications and induction documentation
- relevant documentation and guidance materials on A New Tax System (Goods and Services Tax) Act 1999, Customs and other indirect tax legislation as they relate to the implementation of GST and other indirect tax legislation
- shipping documents
- workplace procedures and policies

Unit Sector(s)
Not applicable.

Competency Field
X – Logistics
TLIX5050A Determine origin of goods and apply preference schemes or free trade agreements

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to determine the origin of goods and interpret the application of preference schemes and/or free trade agreements to those goods.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning the determination of origin of goods.

Work is undertaken in a range of environments including small to large worksites in the customs broking industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Determine eligibility for preferential tariff rates

1.1 Place or country of origin of goods presented for clearance is correctly identified in accordance with commercial documents, including Certificates of Origin

1.2 Eligibility for preferential tariff rates including free trade agreements is assessed in accordance with relevant legislation

1.3 Goods the subject of the consignment are checked to confirm eligibility and/or compliance with Customs Act 1901 and associated legislation and/or appropriate Rule of Origin under Customs Tariff Act 1995

1.4 Certificates of origin are checked for accuracy and compliance with legislation and policy as required

1.5 Compliance with direct shipment rules is confirmed as required

1.6 Client is advised if rectification of information is required

2 Apply relevant preference scheme or free trade agreement

2.1 Requirements of relevant preference scheme are identified, read, correctly interpreted and applied in accordance with relevant legislation

2.2 Requirements of relevant free trade agreement are identified, read, correctly interpreted and applied in accordance with relevant legislation

3 Establish relevant duty rate

3.1 Relevant tariff schedule is referenced in accordance with legislation

3.2 Relevant duty rate is confirmed and applied
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Determining the appropriate duty rates
- Free trade agreements under negotiation
- Function of a customs origin advice
- Legislative and policy requirements in determining:
  - eligibility for preferential rates
  - origin of goods
- Pathway requirements
- Recognition of the requirements for claiming preference or the application of a particular free trade agreement, including certificates of origin and other declarations
- Role and importance of free trade agreements
- Types of preferential tariff schemes including classes of countries and places in relation to which special rates apply

Required skills:

- Accurately assess evidence of compliance
- Apply correct preference scheme and rule
- Apply quality procedures
- Apply relevant free trade agreement
- Communicate effectively with clients
- Correctly identify:
  - eligible/non-eligible goods for preference purposes
  - places and countries to which preferential tariff rates may apply
- Establish correct origin code
- Read and correctly interpret appropriate legislation
- Read and interpret tariff schedules
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- sequencing activity in a way that demonstrates the development of competence
- applying relevant legislative and regulatory knowledge
- correctly using current documents, such as tariff schedules
- providing accurate advice to clients.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- workplace where individual or small group assessment can be conducted
- relevant regulatory and equipment documentation that impacts on work activities
- range of relevant exercises, case studies, scenarios and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and systems
- applicable documentation including workplace procedures, relevant legislation and regulations.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- performance observations of the candidate undertaking the process of determining origin and preference
- written evidence of the correct application of preference and origin in activities such as scenarios
- knowledge questions.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information/documents may include:
- air waybill (AWB)
- bills of lading (B/L) or sea waybills
- certificates of origin
- Customs Act 1901 as amended
- Customs Tariff Act 1995 as amended
- commercial invoices
- manufacturer specifications for equipment
- packing lists
- permits from regulatory bodies (Australian and international)
- relevant free trade agreements
- supplier and/or client instructions
- other documents specific to goods, country of origin/destination

Applicable regulations and legislation may include:
- Customs Act 1901 as amended
- Customs Tariff Act 1995 as amended
- free trade agreements

Work may be conducted:
- by day or night
- in a range of work environments

Clients may be:
- external
- internal

Workplaces may comprise:
- large
- medium
- small worksites

Unit Sector(s)

Not applicable.

TLIX5051A Determine tariff classification of goods

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to determine the tariff classification of goods.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the Customs Tariff Act 1995 and related legislation, and workplace requirements concerning customs commodity classification functions.

Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

5 Utilise extraneous classification tools

5.1 Resources are utilised to assist in classifying goods

5.2 Client is consulted to obtain further details of characteristics of goods to be classified as required

5.3 Assistance is sought as required

5.4 Preliminary classification of goods is made

5.5 Preliminary classification is checked with manager, supervisor or more senior personnel prior to customs import declaration being completed

6 Complete post classification requirements

6.1 Tariff classification advice request is prepared in response to any identified problems

6.2 Classification is entered correctly on customs entry/declaration in accordance with requirements of Customs and related legislative requirements, and workplace procedures

6.3 Completed documentation is retained by relevant personnel in accordance with the requirements of Customs and related legislative requirements, and workplace procedures

6.4 Relevant documentation and other sources of information such as that sourced from the internet or from industry experts, is retained and passed on to client in accordance with Customs and related legislative requirements, and workplace procedures

6.5 Post entry classification advice to client is initiated as required
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable legislation and regulations:
  - Australian Harmonized Export Classification Book
  - Customs Tariff Act 1995
  - Customs and related legislation
  - other legislation related to importing and exporting of goods
- Australian Working Tariff
- Case law
- Harmonised Classification System
- Identification of commodities for tariff classification purposes
- Interpretative rules
- Role and purpose of Customs Tariff Act 1995
- Tariff schedules and by-laws
- TCOs
- Use of legal notes
- Use of section and chapter notes

Required skills:

- Communicate effectively with others
- Examine documents for applicability
- Locate, read and interpret information
- Provide accurate advice to clients
- Read and interpret Customs Tariff Act 1995 and its associated Schedules
- Use software application systems appropriately
- Work methodically and systematically with required attention to detail
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- knowledge of World Customs Organisation and Harmonised Classification System
- knowledge of Customs Tariff Act 1995
- knowledge of Goods Identification for Classification purposes
- using general rules of interpretation
- determining classification code
- identifying tariff concessions
- knowledge of Legal Notes.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant regulatory and goods documentation that impacts on work activities
- range of relevant exercises, case studies, scenarios and/or other suitably simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate documents and equipment.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate using appropriate methods for classifying goods
- knowledge questions and tests for assessment
- direct observation of the candidate applying relevant requirements during work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of classifying commodities for import and export of goods through customs may include:

- content of Customs Tariff Act 1995 and various sections within the Act as they relate to classifying commodities for import and export of goods through customs
- legal notes to the tariff and the context of each note and the application of this context to the classification of commodities for the import and export of goods through customs
- principles of identification of goods for tariff classification purposes
- reasons for Customs Tariff Act 1995 and for the imposition of duty on imported goods
- Rules for the Interpretation of the Harmonized System and the Australian Customs Tariff Act 1995
- schedules of the tariff and the sub-heading structures at various levels in order to arrive at correct classification and duty rates

Where identifying material for classification is not available, sample of goods may be in the form of:

- photographs (still, video or electronically transmitted image)
- written description including technical drawings

Resources to classify goods include:

- case law
- dictionaries
- Harmonized System Explanatory Notes (HSEN)
- precedents database
- trade or technical publications
- websites

Examples of previous related classifications include:

- examples from texts and reference materials including WCO precedents
- precedents

Client consultation may be required where:

- characteristics of goods cannot be determined from available information or require clarification in relation to use, function, context (as a component of another item)

Assistance may include:

- advice from supervisor or manager, more experienced colleagues, customs brokers, training staff, technical experts
- consulting technical experts in the industry, professional association or a training provider
- using reference material within organisation,
New developments in classifying commodities may relate to changes in:

- processes
- regulations
- software application systems
- work systems

Information on new developments in classifying commodities for the import and export of goods may be obtained from:

- Australian Customs
- bulletins, journals, magazines, books
- continuous professional development programs
- external networks such as: staff in regulatory authorities
- internal networks such as: own work team, staff in other departments, support staff, managers, training staff
- websites

Workplace procedures may include:

- quality procedures

Communication in the work area may include:

- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:

- other employees and supervisors
- personnel in relevant authorities and institutions

Documentation and records may include:

- Customs and related legislation
- dictionaries
- extrinsic material (as defined in the Acts Interpretation Act)
- Harmonized System Explanatory Notes (HSEN)
- internal documentation
- machinery operations manuals,
- manufacturer specifications for relevant equipment
- quality assurance procedures
- supplier and/or client instructions
- trade or technical publications
- workplace procedures and policies

Unit Sector(s)

Competency Field

X – Logistics
TLIX5052A Determine complex customs value

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to carry out complex customs valuation in accordance with Customs and related legislation. It includes applying the relevant method for the complex customs valuation required; identifying the contract of sale for customs valuation purposes; determining the price and elements of adjusted price; and identifying elements of price related costs. It also includes calculating customs value through the application of currency conversion and factorisation principles, and recording valuation information on customs declaration.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the Customs Act 1901 as amended and case law concerning customs valuation.

Work is undertaken in a range of environments including small to large worksites in the customs broking and international trade industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

the application for valuation advice

3.4 Post entry valuation advice to client is initiated as required

3.5 Relevant documentation is passed on to client in accordance with legislation and workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable legislation and regulations:
  - Customs Act 1901 and related legislation
  - confidentiality agreements
  - World Trade Organization (WTO) Customs Valuation Agreement
- Application for valuation advice procedure and rulings
- Case law as it applies to valuation
- Continuing professional development
- Customs Act 1901 as amended and related legislation relevant to the conduct of a complex customs valuation
- Determination of:
  - adjusted price
  - customs value
  - import sales transaction
  - price related costs
- Documentation requirements for customs valuations
- Factorisation i.e. appointment of costs over a line value (each line of import declaration for which there is a separate classification)
- Rejection of transaction value
- Related parties
- Sources of information on new developments in customs valuation practices
- Transaction value as the main method for valuing goods for customs purposes
- Transfer pricing
- Valuing Privately Owned Passenger Vehicles (PMVs)
- Ways of learning the skills and knowledge required to implement new development in customs valuation practices:
  - continuing professional development programs
  - independent reading
  - networking with internal and external contacts
  - workplace coaching
- World Trade Organization (WTO) Customs Valuation Agreement

Required skills:

- Apply conflict resolution strategies
- Carry out advanced calculations
- Communicate effectively with clients
- Follow correct hierarchy for customs valuation work
- Identify, interpret and learn skills and knowledge required for new developments in customs valuation practices
- Manage quality client service
- Read and interpret:
  - Customs Act 1901 and related legislation relevant to valuation
  - Practice statements, procedures and information relevant to the conduct of customs valuations
  - WTO Customs Valuation Agreement
- Select and use appropriate workplace colloquial and technical language
- Select and use relevant software application systems and related information when carrying out customs valuations
- Solve problems that may arise when carrying out customs valuations
- Work systematically with required attention to detail
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- identifying import sales transaction for customs valuation purposes
- applying relevant method for a customs valuation
- identifying elements of price related costs for a customs valuation
- determining price and elements of adjusted price for a complex customs valuation
- calculating customs value for a complex customs valuation.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies, scenarios and/or other suitably simulated practical and knowledge assessments
- an appropriate range of operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including legislation and regulations and workplace procedures.

Method of assessment

Practical assessment must occur in:

- a suitably simulated workplace environment and/or
- an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate undertaking complex customs valuation activities
- appropriate written and/or oral tests.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Alternate valuation methods may include:
- Computed Value
- Deductive (Contemporary Sales) Value
- Deductive (Derived Goods Sale) Value
- Deductive (Later Sales) Value
- Fall-back Value
- Identical Goods Value
- Similar Goods Value

Adjusted price may relate to:
- Australian inland freight and insurance
- deductible administrative costs
- deductible financing costs
- overseas freight and insurance

Price related costs may relate to:
- commissions
- foreign inland freight and insurance
- packing costs
- proceeds of resale
- production assist costs
- royalties and licence fees

Valuation advice may include:
- completing and lodging an application for valuation advice with the regulator

Post entry valuation advice may include:
- adjusting customs value

Information on new developments in customs valuation practices may be obtained from:
- internal and external training programs
- internal networks such as own operational team, support staff, managers and training staff
- regulatory authority
- WTO

Workplace procedures may include:
- quality procedures

Communication methods in the work area may include:
- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Documentation and records may include:
- client instructions
- Customs Act 1901 and related legislation
- internal documentation used for valuation
• invoices and evidence of payment
• practice statements
• WTO Customs Valuation Agreement

TLIX5053A Determine tariff classification for complex goods

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to classify complex goods for import and export of goods in accordance with the Customs Act 1901, related legislation and workplace requirements.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried in compliance with relevant Customs Tariff Act 1995, related legislation and workplace requirements concerning customs classification functions.

Work is undertaken in a range of environments including small to large worksites in the custom broking and international freight forwarding industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Apply identification principles to goods
   1.1 Product research is undertaken
   1.2 Research resources to classify goods are accessed
   1.3 Objective and analytical classification principles are applied
   1.4 Administrative Appeals Tribunal (AAT) decisions and court cases are considered
   1.5 Precedents are considered
   1.6 Validation of identification is sought as required

2 Interpret and apply interpretative rules to goods
   2.1 Appropriate interpretative rules are identified and accessed when classifying goods
   2.2 Interpretive rules are applied to justify tariff classification of goods

3 Interpret and apply section and chapter notes to goods
   3.1 Tariff classification is considered in relation to legal notes
   3.2 Rejection of alternate headings is justified by reference to section and chapter notes

4 Select tariff headings
   4.1 Terms in context of particular tariff headings and words are applied
   4.2 References to aid interpretation of tariff are used as required
   4.3 Alternate headings are considered as appropriate

5 Select tariff sub-headings
   5.1 AAT decisions, court cases and other precedents on tariff classification are interpreted and used to inform selection
   5.2 Sub-heading notes are reviewed in hierarchical order
   5.3 Dash system is applied to classification
   5.4 Relevant precedents are applied when classifying goods

6 Complete post classification requirements
   6.1 Requirements for tariff classification advice are identified
   6.2 Tariff Classification Advice Request is prepared in response to identified problems
   6.3 Applications for Tariff Concession Order are made in response to client instructions
6.4 Relevant documentation and other sources of information such as that sourced from the internet or from industry experts, is retained in accordance with legislative requirements and workplace procedures.

6.5 Completed documentation is stored in accordance with Australian Customs and Border Protection and related legislative requirements, and workplace procedures.

6.6 Tariff classification advice is provided to client in accordance with workplace procedures.

6.7 Pre-or post classification areas of dispute are identified and dispute resolution procedures are initiated as appropriate.
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Customs Act 1901 and related legislation relevant to the complex classification of goods
- Dash system
- Documentation and recording requirements to comply with customs requirements when classifying complex goods
- Information on the process of classifying complex goods for import and export of goods through customs
- Interpretative Rules
- Options available for resolving disputes
- Procedural steps required to undertake work activities
- Relevant information to provide to clients
- Sources of information on current developments when classifying complex goods for the import and export of goods through customs (AAT cases, court cases)
- Strategies to classify:
  - functional units
  - multifunction machines
  - parts and accessories
- Strategies to implement new developments in the classification of complex goods
- Tariff Advices
- Types of goods considered complex, and related classification and documentation requirements

Required skills:

- Carry out advanced calculations
- Communicate effectively with clients
- Follow designated process for classifying goods
- Gather and analyse information
- Identify, interpret and learn new skills and new knowledge to maintain currency when classifying complex goods
- Locate, read and interpret instructions, procedures and other information relevant to classifying complex goods
- Maintain workplace documentation and records
- Plan and organise work activities when classifying complex goods
- Read and interpret the Customs Tariff Act 1995 and related legislation for classifying complex goods
• Select and use appropriate technical terms
• Select and use relevant communication methods and office equipment suitable for the task
• Solve problems that may arise when classifying complex goods such as textiles and metals
• Use relevant software application systems when classifying complex goods
• Work systematically with required attention to detail
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- identifying, interpreting and applying rules for interpretation of the tariff to goods
- sequencing activity in a way that facilitates the classification of complex goods
- selecting tariff headings to classify complex goods
- interpreting and applying section and chapter notes
- selecting and justifying heading (4 figure)
- locating and justifying a sub-heading (6 or 8 figure)
- completing post classification requirements.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies, scenarios or other simulated practical and knowledge assessments
- an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including workplace procedures, regulations, operational procedures and software application systems.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate undertaking the classification of complex goods
- appropriate knowledge assessments regarding the classification of complex goods.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects for classifying goods for import and export of goods may include:
- Australian Harmonised Export Commodity Class (AHECC)
- Contents and purpose of Customs Tariff Act 1995, Schedule 1, 2, 3 and 4
- procedures for classifying complex goods

Complex goods may include:
- functional units
- incomplete or unassembled machines
- metals
- multi-function or composite machines
- parts and accessories
- sets
- textiles

Objective classification may include:
- collating as much information as possible about the goods and the condition they are in as imported
- importer advice and illustrative descriptive material (IDM)
- managers/employers

Analytical classification may include:
- tariff parlance
- technical aspects of goods

Harmonised system terminology may include:
- sufficient identification terminology to be transferred into tariff terminology

Clarification and assistance may include:
- advice from client, experienced colleagues, customs staff, industry specific technical experts
- classification software
- commercially available additional resources

Tools may include:
- Harmonised System Explanatory Notes
- technical dictionaries
- trade journals

Summary/overview may include:
- AHECC
- Customs Tariff Act 1995

References may include:
- Australian Harmonised Export Classification
- case law
- Customs and related legislation
- Customs Tariff Act 1995 and its Schedules
- dash system
- illustrative descriptive technical material
New developments in the classification of complex goods may relate to changes in:

- Australian legislation
- case law
- classification processes
- regulations
- software system applications
- World Customs Organization (WCO) Classification

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to assess documentation for compliance with biosecurity border clearance in accordance with legislation, regulatory requirements and workplace requirements.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals assessing documentation for compliance with biosecurity border clearance.

Work must be carried in compliance with the relevant and related legislation and workplace requirements concerning biosecurity border clearance functions. Work is undertaken in a range of environments including small to large worksites in the custom broking and international freight forwarding industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Comply with non commodity documentation requirements and declarations

1.1 Documentation for compliance with non commodity concerns related to cargo type is assessed in accordance with the Non Commodity Containerised Cargo Clearance (NCCC) Processes and Outcomes Document (POD) and the Non Commodity Information Requirements Policy.

1.2 Documentation for compliance with non commodity concern statements is assessed in accordance with NCCC POD.

1.3 Treatment certificates are assessed for compliance with treatment certificate requirements for solid timber packaging or dunnage.

1.4 Documentation to determine delivery location category is assessed in accordance with NCCC POD and Non Commodity Information Requirements Policy.

1.5 Correct answers for non commodity declaration are determined when lodging full import declaration in accordance with NCCC POD.

1.6 Correct answers for non commodity declaration when lodging full import declaration are assessed in accordance with NCCC POD.

1.7 Relevant records are maintained in accordance with regulatory requirements and workplace procedures.

2 Comply with commodity documentation requirements and declarations

2.1 Documentation for commodities is assessed within scope of arrangement in accordance with the Automatic Entry Processing (AEP) for Commodities POD.

2.2 Commodity related documentation is assessed for compliance with commodity concerns in accordance with AEP for Commodities POD.

2.3 Correct commodity code and premises ID are determined for automatic entry processing for commodity as appropriate in accordance with AEP for Commodities POD.

2.4 Relevant records are maintained in accordance with regulatory requirements and workplace procedures.
3 Comply with minimum document requirements

3.1 Documentation is assessed for compliance with overarching requirements in accordance with Minimum Documents policy

3.2 Documentation is assessed for compliance with format requirements in accordance with Minimum Documents policy

3.3 Consignment specific documentation is assessed for compliance with relevant requirements (such as transport documentation or government certification) in accordance with Minimum Documents Policy

3.4 Relevant records are maintained in accordance with regulatory requirements and workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- General awareness of biosecurity border clearance requirements
- Obligations of person engaged in a regulatory arrangement
- Policies regarding compliance with requirements of a regulatory arrangement
- Relevant legislation, regulations, schemes, policies and procedures such as:
  - Automatic Entry Processing for commodities scheme
  - Minimum Document Requirements Policy
  - Non-commodity Information Requirements Policy
  - Non-commodity for Containerised Cargo Clearance (NCCC) scheme

**Required skills:**

- Communicate effectively with others
- Liaise with department officials and industry colleagues
- Maintain records in accordance with regulatory requirements
- Manage quality customer service
- Read and interpret relevant Acts and legislation
- Solve problems
- Use relevant software to lodge full import declarations
- Work with attention to detail
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- sequencing activity in a way that demonstrates competence
- ensuring currency of relevant legislative and regulatory knowledge
- preparing documents with required attention to detail
- lodging documents that are fit for purpose
- maintaining relevant records.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant legislative and regulatory documentation that impacts on work activities
- range of relevant exercises, case studies, scenarios and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate reference materials
- applicable documentation including legislation, regulations, and workplace procedures.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of suitable situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation and/or collation of evidence of the candidate performing tasks
- appropriate knowledge questions
- appropriate problem-solving scenarios
- direct observation of the candidate applying relevant scheme requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Documentation may include:

- Automatic Entry Processing (AEP) for Commodities Processes and Outcomes Document
- industry/enterprise or other performance standards
- Minimum Document Requirements Policy
- Non-commodity for Containerised Cargo Clearance Processes and Outcomes Document
- Non-commodity Information Requirements Policy
- workplace procedures

Appropriate personnel may include:

- consultative committees
- department personnel
- industry technical experts
- managers/employers
- mentors and workplace coaches
- representative government regulatory bodies
- team leaders/supervisors

Information on new developments in biosecurity border clearance operations may be obtained from:

- bulletins, journals, books
- external networks
- independent reading
- internal and external training programs
- online learning and other professional development programs
- relevant government department

Relevant requirements for consignment specific documentation may include:

- government certification
- transport documentation

Unit Sector(s)

Not applicable.
Competency Field

X – Logistics
TLIX5055A Apply anti-dumping and countervailing measures

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to identify goods subject to dumping and/or countervailing measures and to calculate applicable duties.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning the application of anti-dumping and/or countervailing duties.

Work is undertaken in a range of environments including small to large worksites in the Customs Broking Industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| **1 Identify goods subject to anti-dumping and/or countervailing measures** | 1.1 Dumping alert for a particular tariff classification and statistical code in the import declaration is recognised  
1.2 Dumping Commodities Register is reviewed  
1.3 Date of effect is verified  
1.4 Place and/or country of export is determined as subject to anti-dumping and/or countervailing measures  
1.5 Goods are verified as of a kind subject to anti-dumping and/or countervailing measures  
1.6 Custom client identifiers (CCIDs) of the exporter and/or supplier of goods is determined as subject to anti-dumping and/or countervailing measures |
| **2 Determine dumping elements** | 2.1 Exempt goods are declared in accordance with Dumping Commodities Register  
2.2 Dumping specification number (DSN) is determined in accordance with Dumping Commodities Register  
2.3 Dumping export price (DXP) is calculated in accordance with Dumping Commodities Register  
2.4 Currency code for DXP is determined  
2.5 Export country code is determined where required  
2.6 Exchange rate is input where required  
2.7 Dumping unit quantity (DUS) is reported in accordance with software application system requirements |
| **3 Advise clients on anti-dumping and countervailing legislation** | 3.1 Clients are informed of basic requirements of the anti-dumping and countervailing legislation  
3.2 Client understanding of anti-dumping and countervailing information provided is confirmed and any client misunderstanding is clarified |
Required Skills and Knowledge
This section describes the knowledge and skills required for this unit.

Required knowledge:
- Australian anti-dumping and countervailing legislation
- Content and use of Dumping Commodity Register
- Policy and procedures involved in the application, administration, review and revocation of anti-dumping and/or countervailing measures in Australia
- Processes to determine and calculate anti-dumping and countervailing duties

Required skills:
- Accurately calculate anti-dumping and/or countervailing duties
- Communicate effectively with clients
- Identify exempt goods and suppliers
- Identify inclusive goods and suppliers
- Identify relevant country of export
- Read and interpret appropriate Acts and regulations
- Solve problems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- sequencing activity in a way that demonstrates the development of competence
- ensuring currency of relevant legislative and regulatory knowledge
- providing high quality advice to clients.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- workplace where activities with individuals or small groups can be conducted
- relevant documents used in industry
- relevant documents that impact on work activities
- range of relevant exercises, case studies, scenarios and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including legislation and the Dumping Commodities Register.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate undertaking anti-dumping and/or countervailing assessments
- direct observation of the candidate applying relevant Dumping Commodities Register information to work practices
- performance and/or knowledge questions.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:
- Customs Act 1901
- Customs Administration Act 1985
- Customs Regulations 1926
- Customs Tariff (Anti-Dumping) Act 1975
- Customs Tariff (Anti-Dumping) Regulations 2013

Documents may include:
- Dumping Commodity Register

Work may be conducted:
- by day or night
- in a range of work environments

Clients may be:
- external
- internal

Workplaces may comprise:
- large
- medium
- small worksites

Unit Sector(s)

Not applicable.

Competency Field

X – Logistics
TLIX5056A Carry out additional customs clearance practices

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to carry out customs clearance practices that are additional to the standard clearance practices in accordance with the Customs Act 1901 and amendments, as well as related legislation, regulatory requirements and workplace requirements.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the relevant customs related legislation and workplace requirements concerning customs clearance practices.

Work is undertaken in a range of environments, including small to large worksites in the Custom Broking Industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Calculate landed costs
   1.1 Documents are examined and factors required to calculate a landed cost are identified from commercial and customs documentation
   1.2 Client is contacted to verify rate of exchange required
   1.3 Any missing data is identified and rectification processes are initiated

2 Determine eligibility of import transaction for refund, rebate or remission of customs duty
   2.1 Transaction documents are examined for accuracy and completeness
   2.2 Circumstances giving rise to refund, rebate or remission opportunities are identified
   2.3 Relevant reason code is determined from Customs Regulations 1926
   2.4 Timeframes within which refunds are available is determined in accordance with Customs Regulations 1926

3 Determine eligibility of import consignments for entry under relevant legislation
   3.1 Temporary import is identified and established as conforming to the requirements of the Customs Act 1901 and associated regulations
   3.2 Goods are identified as subject to carnet and dealt with in accordance with customs requirements
   3.3 Goods are identified as a temporary import under event status and dealt with in accordance with customs requirements
   3.4 Goods are identified as a temporary importation and dealt with in accordance with customs requirements
   3.5 Application forms for securities relating to temporary imports and/or end use are accurately completed and lodged in accordance with customs requirements

4 Determine eligibility for, calculate drawback claims and advise on TRADEX procedures
   4.1 Sufficient import and export information to prepare claim is collated
   4.2 Drawback claims are determined within the prescribed timeframes and advice is provided
accordingly

4.3 Drawback claim is prepared and calculated in accordance with a customs approved method

4.4 Situations suitable for TRADEX registration are identified and advice is provided

5 Assess goods against export requirements

5.1 Goods subject to export requirements are identified including entry for export, in accordance with the Customs Act 1901 as amended

5.2 Circumstances where permissions are required are identified and such permissions are sought

5.3 Circumstances where permissions are not required are identified

5.4 Relevant export entry and/or application form is completed and lodged in accordance with goods to be exported and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Customs Act 1901, regulations and current amendments as they relate to refunds, remissions and drawbacks
- Drawbacks and Tradex
- Exports
- Landed costs
- Refunds and Post Warrant Amendments
- Refunds, rebates and remissions of duty
- Securities and temporary imports
- Various forms and functions of securities and temporary importations

Required skills:

- Carry out complex calculations
- Communicate effectively with a range of stakeholders
- Examine documents for accuracy and completeness
- Identify non-compliance and respond accordingly
- Implement timeframes
- Manage quality customer service
- Provide accurate advice
- Read and interpret Customs Act 1901 as amended
- Read and interpret Customs Regulations 1926 as amended
- Source information on new developments in customs clearance practices
- Use software application systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying procedures for compliance with customs and related legislation
- conducting calculations and making appropriate adjustments as part of routine activities in customs clearance operations
- using software application systems to carry out customs clearance practices
- implementing dispute resolution procedures.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant regulatory and equipment documentation that impacts on work activities
- range of relevant exercises, case studies, scenarios and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including legislation, and workplace procedures.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- as a minimum, assessment of knowledge must be undertaken through appropriate written/oral knowledge assessments
- direct observation of the candidate carrying out additional customs clearance processes.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Industry support schemes include:

- relevant government department that administers industry support schemes
- Tradex Scheme which provides for an upfront exemption from customs duty and taxes on imported goods intended for re-export or to be used as inputs to exports

New developments in customs clearance operations may include:

- processes
- regulations
- systems
- technology

Information on new developments in customs clearance operations may be obtained from:

- bulletins, journals, magazines, books
- continuing professional development
- external networks
- independent reading
- internal and external training programs
- internet websites – Australian Customs and Border Protection Service
- online learning

Depending on the organisation concerned, workplace procedures may be called:

- quality procedures

Communication in the work area may include:

- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:

- agents
- clients
- customs technical experts
- management representatives
- other employees and supervisors
- relevant authorities and institutions

Documentation and records may include:

- client instructions
- Customs Act 1901 and related legislation
- Customs Regulations 1926 as amended
- internal documentation used for customs clearance functions
- manufacturer specifications for equipment
other regulatory requirements pertaining to customs clearance functions
relevant sections of Australian Customs Notices and Practice Statements

Unit Sector(s)
Not applicable.

Competency Field
X – Logistics
TLIX5057A Prepare documents for customs clearance

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to understand the basic procedures and documentation requirements used in international trade and to prepare documents for customs clearance in accordance with requirements of Customs and related legislative requirements, and workplace procedures.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with Customs and related legislative requirements, and workplace requirements concerning preparing and checking documentation.

Work is performed under some supervision generally within a team environment. Work is undertaken in a range of environments including small to large worksites in the customs broking and freight forwarding industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 **Scope framework for international trade documentation requirements**

1.1 Australia’s role and position in international trade is explained and used to guide custom broking activities

1.2 Australia’s role and involvement in international trade in relation to customs broking activities and the import and export of cargo are explained

1.3 Role and function of World Customs Organization and Customs Co-operation Council are explained and applied to custom broking activities

1.4 Australia’s obligations under international treaties and agreements are explained and used to guide custom broking activities

2 **Enable cargo movement**

2.1 Parties involved in international trade and international movement of cargo are identified

2.2 Documents required for international trade are identified

2.3 Bills of lading, waybills and air waybills are accessed, analysed and used to facilitate cargo movement

2.4 Documentation for import of cargo is correctly identified in accordance with legislative and operative requirements, and workplace policies and procedures

2.5 Documentation for export of cargo is correctly identified in accordance with legislative and operative requirements, and workplace policies and procedures

2.6 Basic freight concepts such as volumetric versus actual weight calculations are explained and applied as required

2.7 Differences between short landed, short shipped and over carried cargo are explained and identified

3 **Apply international trade payment methods**

3.1 Cash or open account payment methods are identified and their implications are documented

3.2 Bills of exchange are identified and analysed, and their implications are documented

3.3 Letters of credit are identified and analysed, and their implications for cargo movement and customs
broking activities are documented

3.4 Currency exchange protection and basic foreign exchange transactions are interpreted in relation to custom broking activities

4 Apply basic marine insurance concepts to cargo movement

4.1 Basic marine insurance concepts are explained

4.2 General average is explained

4.3 Procedures to handle pillage, damage and/or loss are outlined and implemented as appropriate to task

5 Interpret Incoterms

5.1 Purpose of and different types of Incoterms are explained

5.2 Incoterms are applied as required

5.3 Impact of Incoterms on documentation and task requirements are outlined and considered in document preparation

6 Check documentation meets workplace requirements

6.1 Relevant documents are collated and checked

6.2 Each document element is checked for completion with required information to ensure completion of customs clearance requirements

6.3 Documents related to transport safety requirements are checked for correctness and availability

6.4 Problems arising in completing required documents are identified and assistance is sought to resolve identified problems in accordance with workplace procedures

6.5 Workplace procedures for authorisations are followed

6.6 Documents are filed, stored and retained in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable regulations and legislation:
  - Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances
  - Biosecurity legislation and procedures
  - Relevant Customs and related legislation, including taxation legislation
  - Relevant standards and codes for importing/exporting cargo
- Australia’s role and position in international trade
- Australia’s international treaties and agreements
- Basic freight concepts such as volumetric versus actual weight calculations
- Basic marine insurance concepts, including general average and procedures to handle pillage and loss
- Focus of operation of work systems and site operating systems for assisting in completing customs clearances
- Importance and role of bills of lading, waybills and air waybills in moving cargo
- Incoterms and the impact they may have on documentation, charges and costings
- Methods of payment used in international trade
- Parties involved in international movement of cargo
- Relevant workplace procedures for registration and data entry of documentation for customs clearance and/or reporting
- Workplace procedures and policies for completing import and export documentation

Required skills:

- Accurately convey requirements to clients and other stakeholders in writing and verbally
- Communicate effectively with others
- Complete and/or assess accuracy of import and export documentation
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Promptly report and/or rectify any identified problems when completing and/or assessing import and export documentation in accordance with regulatory requirements and workplace procedures
- Read and comprehend statements in English
- Read and interpret instructions and procedures relevant to importing and exporting cargo and freight
- Select and use relevant communications, computing and office equipment when completing import and export documentation
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- identifying documentation for the movement and customs clearance of cargo
- completing and checking documentation and records to meet relevant Customs legislation and related legislative and workplace requirements
- knowledge of the possible impact the choice of Incoterms and/or transport terminology has on preparing documentation for the movement and customs clearance of cargo.

### Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies, scenarios and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

### Method of assessment

Assessment of this unit must be undertaken by a registered training organization.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:  
- by day or night  
- in a range of work environments

Customers may be:  
- external  
- internal

Workplaces may comprise:  
- large  
- medium  
- small worksites

Work may be conducted in:  
- controlled or open environments  
- exposed conditions  
- limited or restricted spaces

Cargo may include:  
- consignments imported/exported by air freight  
- consignments imported/exported by parcels post  
- consignments imported/exported by sea freight  
- goods and dangerous goods  
- goods with specialist requirements, including temperature controlled  
- personal effects  
- wildlife or wildlife products (living or non-living)

Hazards in the work area may include exposure to:  
- chemicals  
- dangerous or hazardous substances

Consultative processes may involve:  
- industrial relations and work health and safety (WHS)/occupational health and safety (OHS) specialists  
- management representatives  
- other employees and supervisors  
- other maintenance, professional or technical staff  
- relevant authorities and institutions  
- suppliers and clients  
- union representatives

Communication in the work area may include:  
- electronic data interchange (EDI)  
- email  
- fax  
- internet  
- oral, aural or signed communications  
- phone  
- radio

Workplace procedures may include:  
- company procedures
include:

- enterprise procedures
- established procedures
- organisational procedures

Information/documents may include:

- air waybill (AWB), bills of lading (B/L) or sea waybills
- certificates of marine insurance, other insurance certificates
- certificates of origin
- cleanliness certificates
- commercial invoices
- dangerous goods declarations and safety data sheets (SDSs)/material safety data sheets (MSDSs)
- emergency procedures
- financial documentation
- goods identification numbers and codes
- handling instructions for cargo (especially for dangerous goods or temperature controlled goods)
- manifests, barcodes, and container identification/serial numbers
- manufacturer specifications for equipment
- operations manuals, job specifications and induction documentation
- other documents specific to goods, country of origin/destination
- packing declarations
- packing lists
- permits from regulatory bodies (Australian and international)
- quality assurance procedures
- relevant Australian and international standards, regulations and codes of practice for the import/export of cargo, including handling and transporting dangerous goods and hazardous substances
- relevant certification requirements
- relevant Customs and related legislation and procedures, including those relating to biosecurity, environment and conservation
- supplier and/or client instructions
- treatment certificates
- transportation and warehousing instructions
- workplace procedures and policies
Unit Sector(s)
Not applicable.

Competency Field
X – Logistics
TLIX5058A Review decisions of regulatory bodies

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to review the decisions of regulatory bodies including the Australian Customs and Border Protection Service (ACBPS). It includes evaluating the need to initiate and/or respond to a dispute, developing and submitting a response and initiating further action.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals who work in the role of Customs Broker in an on-the-job environment.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Determine review options
1.1 Regulatory body decision is evaluated
1.2 Available internal appeal procedures are explained and exhausted
1.3 Available review mechanisms are outlined
1.4 Consultation is held with client

2 Develop dispute response
2.1 Appropriate dispute resolution protocols are followed
2.2 Stakeholders are engaged and consulted in response development process
2.3 Response is drafted and feedback is sought from stakeholders to refine response as required

3 Submit dispute response
3.1 Import declaration is paid under protest in accordance with Customs Act s.167 where required
3.2 Dispute response documentation is forwarded to relevant regulatory authority in accordance with workplace procedures

4 Initiate further action
4.1 Dispute response is read and outcomes are evaluated to determine appropriateness of further action
4.2 Stakeholders are consulted regarding appropriateness and advice regarding escalating and/or retreating is provided
4.3 Appropriate action is taken based on stakeholder consultation, in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Amber line process
- Customs Act s.167 (Payment Under Protest)
- Customs prosecutions
- Forfeiture, seizure and condemnation provisions of Customs Act 1901
- Internal and external appeal processes for reviewing ACBPS decisions
- Monitoring and export examination powers of Customs under Customs Act 1901
- Penalty and Infringement Notice Guidelines of Customs Act 1901
- Penalty and Infringement Notice Provisions of Customs Act 1901

**Required skills:**

- Apply escalation and/or retreat processes
- Articulate rationale for a dispute or response
- Communicate effectively in verbal and written format with clients and stakeholders
- Follow procedures
- Liaise with other organisations
- Manage personal work priorities
- Negotiate effectively
- Read and interpret legislation
- Resolve conflict
- Sequence a submission in logical order
- Solve problems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- sequencing activity in a way that facilitates the development of competence
- ensuring currency of relevant legislative and regulatory knowledge
- developing effective submission documents
- providing high quality client information and advice.

### Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- scenarios where discussions with individuals or small groups can be conducted
- legislation currently used in industry
- time constraints that mirror real work activities
- range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

### Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate identifying and responding to an appeal or dispute situation
- direct observation of the candidate responding to a regulatory dispute
- appropriate knowledge questions.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Regulatory bodies may include:
- Australian Customs and Border Protection Service (ACBPS)
- relevant commonwealth government departments

Delivery methods and practise opportunities may include:
- experiential learning using real scenarios
- explanations
- group work
- mentoring
- problem solving and decision making
- presentations
- combination of the above

Resources may include:
- case law
- case studies
- customs policies and procedures
- relevant legislation
- scenarios

Strategies and techniques may include:
- group discussion
- points of clarification
- targeted questioning

Unit Sector(s)

Not applicable.

TLIX5059A Undertake border clearance functions

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to carry out basic border clearance functions in accordance with Customs and related legislative and workplace requirements.

It includes creating import declarations for import clearance; resolving problems arising from lodgement of entries or import declarations; and undertaking post-entry amendments, where applicable.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a Customs Broker. Work must be carried out in compliance with the relevant Customs and related legislative and workplace requirements concerning the conduct of border clearance functions.

Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

3.5 Options available when a penalty notice is threatened and/or received are outlined and implemented as appropriate
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Applicable legislation and regulations:
  - Customs and related legislation
  - export/import/quarantine/bond requirements
  - privacy legislation
- Authority of customs officers
- Customs legislation, other legislation, regulations and policy relevant to border clearance and cargo reporting functions
- Customs monitoring powers
- Export examination powers
- Functions and responsibilities of a customs broker
- Infringement Notice Guidelines
- Offences
- Problems that may occur when carrying out border clearance functions and appropriate action that can be taken to resolve problems
- Range and types of customs duties and tariffs and how they are applied
- Requirements for completing relevant documentation
- Role and authority of customs and how it fits into the structure of government
- Role of Australian Customs and Border Protection Service (ACBPS) in border clearance functions
- Personal effects and passenger concessions
- Sources of information on new developments in border clearance operations
- Steps involved in planning work activities

**Required skills:**

- Accurately input data into software application processes related to work activities
- Adapt to new skill and knowledge requirements required due to the development of new border clearance operations
- Communicate and liaise effectively with customs officers, clients and others when carrying out border clearance functions
- Identify import restrictions and prohibitions from relevant sources
- Interpret and follow operational instructions and prioritise work
- Plan, organise and monitor own work activities
- Read and interpret Customs legislation and other regulations
- Read and interpret instructions, procedures and information relevant to the conduct of border
clearance functions

- Read and interpret tariff schedules
- Solve problems that arise during border clearances functions
- Work systematically with required attention to detail
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- identifying the role and responsibilities of a customs broker
- identifying the authorities and functions of customs
- determining an appropriate reaction to a customs offence and/or penalty notice.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate information and materials
- applicable documentation including legislation and regulations and workplace procedures.

Method of assessment

Practical assessment must occur in an:

- suitably simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate undertaking border clearance processes
- knowledge tests and performance questions
- direct observation of the candidate applying requirements to real or simulated work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

New developments in border clearance operations may include:
- processes
- regulations
- systems
- technology
- types and packaging of goods

Information on new developments in border clearance operations may be obtained from:
- bulletins, journals, magazines, books
- external networks
- internal and external training programs
- internal networks such as: own team, staff in other departments, support staff, managers, training staff
- internet websites

Adaptability to new skill and knowledge requirements required due to the development of new border clearance operations may include:
- coaching in the workplace
- continuous professional development programs
- external training programs
- independent reading
- internal training programs
- networking with relevant internal and external contacts
- online learning

Workplace procedures may include:
- quality procedures

Communication in the work area may include:
- electronic data interchange (EDI)
- email
- internet
- oral, aural or signed communications
- phone

Consultative processes may involve:
- clients
- customs brokers
- customs technical experts
- other employees and supervisors

Documentation and records may include:
- client instructions
- commercial invoices and packing lists
- Customs and related legislation
- Customs Notices
- dangerous goods declarations and safety data sheets (SDS)/material safety data sheets (MSDS)
• industrial relations agreements or contracts
• internal documentation used for border clearance functions
• manifests, delivery notes, special clearances, consignment notes and authorised weighbridge certificates
• manufacturer specifications for equipment
• operations manuals, job specifications and induction documentation
• other legislation related to border clearance functions
• permits to import and/or export
• quality assurance procedures
• quarantine documentation
• shipping documentation
• workplace policies and procedures related to border clearance

New developments in border clearance operations may include:

• processes
• regulations
• systems
• technology
• types and packaging of goods

Unit Sector(s)

Competency Field
X - Logistics
TLIX6001A Formulate materiel logistics strategies

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to formulate materiel logistics strategies across the life cycle. These strategies are formulated to ensure that the materiel and materiel systems are able to meet their stated capability requirement. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Materiel logistics is the life cycle management of materiel to achieve the stated objectives of the capability managers. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
This unit was developed for logistics specialists working within materiel logistics but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

This unit cannot be used in a qualification in which TLIY208A Contribute to materiel logistics strategies has been used.

Licensing/Regulatory Information
Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Analyse the materiel logistics environment** | 1.1 Operational concept of the materiel and materiel systems are analysed, and key factors and issues are identified for consideration and/or response  
1.2 External and internal factors likely to impact on materiel logistics needs and capabilities are continually monitored and analysed  
1.3 Key stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures  
1.4 Legislation and organisational policy and procedures that may impact on materiel logistics activity are identified and analysed |
| **2 Develop materiel logistics strategies** | 2.1 Consultation and negotiation with key stakeholders is conducted in accordance with organisational policy and procedures  
2.2 Strategic objectives are defined and documented in materiel logistics strategies  
2.3 Costing analysis of strategic options is managed and documented in accordance with organisational policy and procedures |
| **3 Establish priorities for materiel logistics strategies** | 3.1 Strategic priorities are developed and documented that support the organisation's materiel logistics objectives  
3.2 Strategic priorities are analysed to ensure they reflect the capability requirements of key stakeholders, in accordance with organisational policy and procedures  
3.3 Opportunities for strategic alliances and cooperative ventures are incorporated into the strategies |
| **4 Communicate materiel logistics strategies** | 4.1 Strategies are explained to key stakeholders  
4.2 Strategies are promoted across the organisation through a variety of communication channels, in accordance with organisational policy and procedures |
| **5 Evaluate materiel logistics strategies** | 5.1 Materiel logistics strategies are regularly evaluated in accordance with organisational policy and procedures  
5.2 Strategies are amended and documented in accordance with organisational policy and procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Acquisition processes
- Business processes
- Capability performance measurement
- Codification and cataloguing processes
- External environment scanning relating to environmental, sustainable, social, political economic and technological developments
- Industrial base capability
- Integrated logistics support
- International agreements and arrangements
- Interoperability
- Legislative and regulatory environment as it pertains to materiel logistics
- Costing which may include life cycle costing
- Logistics support analysis principles and processes
- Logistics governance
- Materiel logistics
- Materiel system components
- Organisational policy and procedures
- Outsourcing/in-sourcing
- Performance management techniques
- Project management
- Risk management
- Strategic planning methodologies
- Supply chain concepts
- Technical regulation
- Value chain concepts

**Required skills:**

- Align materiel logistics strategy to the strategic objectives of the organisation
- Analyse materiel logistics information to determine where internal and external factors impact on the materiel logistics environment, and adjust strategic planning activities accordingly
- Apply project management knowledge in formulating materiel logistics strategies
- Build and sustain positive relationships with team members, stakeholders and clients
- Commit to action, even in cases of limited information and conditions of uncertainty
Required skills:

- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Display resilience by continuing to move forward despite criticism or setbacks
- Effectively manage materiel logistics contracts and their deliverables
- Exercise judgement by using intelligence and commonsense to shape strategic thinking
- Identify, assess and prioritise competing objectives
- Manage time, and prioritise work to ensure objectives are met in accordance with required schedule
- Prepare complex and sensitive material; present information confidently; and select the appropriate medium for maximum communication effect to influence a range of audiences
- Review and analyse performance measurement data to guide and direct the team to ensure objectives are measured against defined parameters
- Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings
- Undertake research and analysis about operational concepts and strategic objectives to determine the impacts on the materiel logistics environment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify and evaluate priorities, and adjust them as necessary to ensure they meet objectives
  - analyse and evaluate outcomes
  - initiate any remedial action required

- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
EVIDENCE GUIDE

- computer and relevant software
- legislation, guidelines, procedures and protocols relating to materiel logistics
- plans
- workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Materiel may include:

- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support
RANGE STATEMENT

designated activities without distinction as to its application for administrative or operational purposes

Key stakeholders may include:
- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers

Organisational policy and procedures may include:
- Australian Standards
- international standards
- integrated logistics support
- logistics support analysis
- organisational instructions and standards

Legislation may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including certification requirements

Costing may include:
- labour
- life cycle costs
- money
- outlay of expenditure
- resources
- time

Strategic alliances and cooperative ventures may include:
- relatively enduring inter-organisational cooperative arrangements, involving flows and linkages that utilise resources and/or governance structures from autonomous organisations, for the joint accomplishment of individual goals linked to the corporate mission of each sponsoring organisation

Communication channels may include:
- electronic
- media
- plans
- publications
- verbal
- written

Processes for the evaluation may include:
- balanced scorecard measures
- conformance reports
- customer feedback
- gap analysis
RANGE STATEMENT

- key performance indicators
- variance analysis

Unit Descriptor

This unit involves the skills and knowledge required to provide input to the development of materiel logistics strategies by employees, or others, who are not directly responsible for the development process itself. It includes contributions to the consultative, validation and review phases and the provision of feedback on the process. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. Materiel logistics is the life cycle management of materiel to achieve the stated objectives of the capability managers. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for logistics specialists working within materiel logistics but is applicable to any individual in this field of work.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

This unit cannot be used in a qualification in which TLIX6001A Formulate materiel logistics strategies has been used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Analyse the materiel logistics environment | 1.1 Stakeholders are identified and consulted on materiel needs and capabilities in accordance with organisational policy and procedures  
1.2 Effective relationships are developed with stakeholders through consultation  
1.3 Legislation and organisational policy and procedures that may impact on materiel logistics activity are identified and analysed  
1.4 Key factors and issues that have been identified from the operational concept of the materiel and materiel system are reviewed |
| 2 Contribute to materiel logistics strategies | 2.1 Organisation's objectives are contributed to in clear and measurable terms  
2.2 Strategies are contributed to ensure they reflect the capability requirements of key stakeholders  
2.3 Materiel logistics strategies are introduced, consistent with the strategic direction and costing |
| 3 Establish priorities for materiel logistics strategies | 3.1 Strategic priorities are contributed and documented that support the organisation's materiel logistics objectives  
3.2 Strategic priorities are analysed to ensure they reflect the capability requirements of key stakeholders, in accordance with organisational policy and procedures  
3.3 Opportunities for strategic alliances and cooperative ventures are incorporated into the strategies |
| 4 Review strategic performance | 4.1 Performance indicators and other criteria for measurement of achievement are developed and documented  
4.2 All key aspects of organisational performance are addressed in performance measures, to meet the interests of stakeholders  
4.3 Performance data is analysed on a regular and planned basis, in terms of the indicators, performance standards and in accordance with organisational policy and procedures  
4.4 Strategic performance is reported in accordance with organisational policy and procedures  
4.5 Objectives and strategies are reviewed, revised and documented where necessary |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

1. Acquisition processes
2. Business processes
3. Capability performance measurement
4. Codification and cataloguing processes
5. External environment scanning relating to environmental, sustainable, social, political, economic and technological developments
6. Industrial base capability
7. Integrated logistics support
8. International agreements and arrangements
9. Interoperability
10. Legislative and regulatory environment as it pertains to materiel logistics
11. Costing which may include life cycle costing
12. Logistics governance
13. Logistics support analysis principles and processes
14. Materiel logistics
15. Materiel system components
16. Organisational policy and procedures
17. Outsourcing/in-sourcing
18. Performance measurement
19. Project management
20. Strategic planning methodology
21. Supply chain concepts
22. Technical regulation
23. Value chain concepts

**Required skills:**

1. Analyse materiel logistics information to determine where internal and external factors impact on the materiel logistics environment, and adjust strategic planning activities accordingly
2. Apply project management knowledge in contributing to materiel logistics strategies
3. Build and sustain positive relationships with team members, stakeholders and clients
4. Commit to action, even in cases of limited information and conditions of uncertainty
5. Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
Required skills:

- Display resilience by continuing to move forward despite criticism or setbacks
- Exercise judgement by using intelligence and commonsense to shape strategic thinking
- Identify, assess, and prioritise competing objectives to facilitate development of the overall materiel logistics strategy
- Manage time and prioritise work to ensure objectives are met in accordance with required schedule
- Prepare complex and sensitive material, present information confidently and select the appropriate medium for maximum communication effect to influence a range of audiences
- Source information on best practice approaches adopted in both the public and private sectors, demonstrating an insight into how industry operates and the business drivers that influence industry with their dealings, including environmental, sustainability issues
- Undertake research and analysis to determine operational concepts and strategic objectives and to identify impacts on the materiel logistics environment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
  - adhere to relevant occupational health and safety requirements
  - identify the requirements for contribution and adjust them as necessary to ensure they meet objectives
  - initiate and efficiently monitor processes
  - initiate any remedial action required
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
  - computer and relevant software
  - legislation, guidelines, procedures and protocols relating to materiel logistics
  - plans
EVIDENCE GUIDE

Method of assessment

- workplace documentation
- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
  - authenticated evidence from the workplace and/or training programs
  - case studies
  - demonstration
  - feedback from supervisors and peers regarding the candidate's ability
  - observation
  - portfolios
  - projects
  - questioning
  - reviews or reports prepared by the candidate
  - scenarios
  - simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:

- capability manager
- contractors
- customers
- employees
- government agencies
- owners
- project managers
RANGE STATEMENT

- regulators
- subordinates
- supervisors
- suppliers

Materiel may include: all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes.

Organisational policy and procedures may include:
- Australian Standards
- international standards
- organisational instructions and standards

Legislation may include:
- regulations related to such matters as export and import licensing, taxes and duties
- relevant federal, state and local government legislation and regulations including environmental, sustainability and, certification requirements

Strategies may include:
- long-term plans which will guide the organisation in achieving its mission

Product may include:
- materials, parts, components, subassemblies, assemblies and equipment. The term product can encompass a family of products. A family of products is defined as all products of the same classification, design, construction, material, type, produced with the same production facilities, processes and quality of material, under the same management and quality controls, but having the acceptable variety of physical and functional characteristics defined and specified in the applicable engineering documentation.

Logistics support analysis is:
- the process for identifying and analysing the functional supportability requirements consistent with the goals of the integrated logistic support program. Logistic support analysis also describes the process for coordinated development of logistics related task data, and the processing of that data to define logistics resource requirements. Logistic support analysis defines analytical process for the preparation for in-service support and disposal, and the interface with Supportability Assessments (Supportability Test and Evaluation).

Performance indicators may include:
- series of measurements/targets for each of the key result areas of the strategies
Unit Sector(s)

Competency Field
Competency Field  X - Logistics
TLIX6046A Plan deployed logistic support for significant operations

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to plan logistic support involving numerous logistic elements on deployment in support of significant organisational operations. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

Application of the Unit
The application of this unit in the workplace includes responding to organisational support tasks by developing the logistic plan which enables the organisation to operate effectively and achieve its objectives.

This unit of competency would typically apply to a senior logistician who is supporting a significant or complex deployment which has more than one logistic element. This type of operation could involve the use of various organisational assets (such as Defence, Police and Fire) and may be within Australia or overseas. This activity would usually occur in a headquarters as part of a planning team.

This person will bring well developed management and communication skills as well as skills in a specialist discipline of logistics such as road transport, supply, maintenance, catering or health. All activities are carried out in accordance with relevant organisational policy and procedures.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1  Analyse the logistics requirement | 1.1 Operational requirement is analysed in order to establish the scope and intent of logistic support 
1.2 The operating environment is identified and analysed to assess the effect on delivery of logistic support 
1.3 Infrastructure within the operating environment is analysed to identify its potential to support logistic operations and/or vulnerabilities that require consideration in planning 
1.4 Risks to the delivery of logistic support are identified and analysed to determine their likelihood of occurrence and the potential consequences for the logistic operation 
1.5 Critical facts and assumptions are made in order to allow planning to progress in the absence of developed knowledge of the current situation 
1.6 Specialist logistic requirements are determined so that the different logistic element estimates are developed and considered in the operations sustainability requirements 
1.7 Logistic capabilities are analysed against operational requirements to identify critical shortfalls and/or define the limits of logistic support 
1.8 Logistic planning information is communicated to other planning staff and management throughout the operation |
| 2  Develop the logistic plan | 2.1 Logistic information management systems are utilised to compile and analyse planning data and information 
2.2 Options are developed, analysed and tested to establish the broad advantages and disadvantages 
2.3 Tasks, priorities, and decisive points are identified and validated 
2.4 The preferred course of action is identified 
2.5 The integration of contracted support is considered for inclusion in the plan 
2.6 Policy and procedure are developed to support the logistic activity within the operational area of deployment 
2.7 Logistic organisational structure is developed to meet the estimates within organisational resource constraints 
2.8 Control arrangements are established within the framework of operational command and management 
2.9 The logistic plan is developed to support the implementation of the selected course of action 
2.10 Plan is adjusted in accordance with changing operational need 
2.11 Contingency plans are developed |
ELEMENT PERFORMANCE CRITERIA
2.12 Logistics plan is communicated to stakeholders

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Logistics concepts
- Specialist knowledge of the organisation, function and logistic capabilities
- Organisational policy and procedure
- Organisational role relevant to specialist logistic support
- Environmental considerations in planning logistic support
- Organisational writing conventions
- Planning process
- Logistics principles and processes
- Risks to logistic support

Required skills:
- Interpret instructions and apply this to the development of own actions and tasks
- Analyse the complexities of a task
- Identify the operation's intent and recognise how own planning contributes to mission success
- Work cooperatively as a member of a team
- Undertake analysis to determine where internal and external factors impact on the logistic support requirements
- Use numeracy skills to accurately analyse and validate information
- Read and write at a level to cope with a range of complex workplace materials
- Use organisational skills to manage planning tasks in concert with other stakeholders
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Move forward despite the difficulty of the planning task
- Interpret technical policy and doctrine
- Make decisive, informed decisions that align with organisational requirements
- Use appropriate information technology and software
- Prepare and issue written instructions
Required skills:

- Use planning tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operating environment may include:
- geographical area of operation
- climate
- local population
- areas of interest
- the terrain over which logistic capabilities must operate
- availability of local resources
- restricted terrain
- movement corridors and routes

Infrastructure may include:
- bridges
- roads
- buildings/warehouses
- communications infrastructure
- ports
- loading facilities
- water supply and production facilities
- fuel storage and production facilities
- refrigeration
- hard-standing
- power stations and nodes
- health facilities
- vehicles/trains/airplanes

Risks may include:
- environmental threats
- operational threats
- technical threats
- health threats

Specialist logistic support requirements may include:
- health support
- catering support
- transport support
- maintenance support
- supply support

Logistic capabilities may include:
- health elements such as:
  - dental
  - environmental health
  - low/medium/high dependency nursing
  - primary health care
  - rehabilitation
RANGE STATEMENT

- resuscitation
- surgical
- laboratory
- medical imaging
- road ambulance evacuation
- aeromedical evacuation
- psych support
- mortuary
- catering elements such as:
  - permanent kitchen
  - semi-permanent kitchen
  - satellite kitchen
- transport elements such as:
  - road transport
  - water transport
  - air despatch
  - terminal ops
  - movements control
  - postal services
- supply elements such as:
  - procurement
  - provisioning
  - warehousing
  - supply control
  - return, salvage and disposal

Logistic support plans may include:

- outline of the current situation including information on the observed environmental factors, infrastructure and threats within the operating environment
- mission or objective statement including an explanation of the purpose for the logistic support, the method it will be achieved by and the endstate which will make the achievement of the mission
- outline of the method of execution including groupings and tasks, key events and timings, sequencing, integration, other organisation, coordination, etc.
- the administrative and logistic aspects of the plan including rations, fuel, water, personnel issues, transportation, maintenance, recovery, health care, etc.
- the command and control arrangements, including appointments, and issues relating to technical vs
RANGE STATEMENT

operational responsibilities
- the communications and information system arrangements including methods to communicate, specified language, schedules, support agencies, hardware/software, training, etc.
- contained within the logistic support plan may be a number of additional specific plans such as the:
  - health support plan
  - distribution support plan
  - maintenance support plan

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to monitor and provide logistic staff support for significant deployed operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
The application of this unit in the workplace includes providing the necessary staff support to enable an organisation to prepare for a deployment, to deploy, to remain sustained in an operating area and then to redeploy to its home location. The nature of these deployments may be within Australia or to overseas locations.

This unit of competency is applicable to senior logistic personnel who have a responsibility to monitor and coordinate logistics support at an organisational level.

This person will bring well developed management and communication skills as well as skills in a specialist discipline of logistics such as road transport, supply, maintenance, catering or health support. The context of this performance is typically in the headquarters of an organisation with full access to information technology and support services. All activities are carried out in accordance with relevant organisational policy and procedures.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT | PERFORMANCE CRITERIA
---|---
1. **Support preparations for deployment** | 1.1 Communications and reporting procedures are established with the different logistic elements  
1.2 Corporate training requirements are formulated, resourced and implemented to ensure staff competence  
1.3 Organisational requirements are defined, communicated to stakeholders and monitored in accordance with organisational policy and procedure  
1.4 Deficiencies in manpower and equipment are identified and an organisational response is developed  
1.5 The scoping and definition of requirement for contracted support to organisational deployment and sustainment is undertaken  
1.6 Planning data is gathered from subordinate organisations, collated and analysed in order to develop contingency plans  
1.7 The collation and preparation of movement documentation for deployment is coordinated  
2. **Support deployed elements of the organisation** | 2.1 Operational demands and deployment information are accessed and analysed to identify the factors to be considered in supporting operations  
2.2 Liaison with relevant agencies and supporting organisations (such as external contracted services) is conducted to gather information, access services and coordinate deployment activities and movements  
2.3 The procurement and delivery of equipment and stores is monitored and the initiation of appropriate action to overcome shortages is undertaken  
2.4 The operations of deployed elements are monitored and where issues are identified organisational responses are developed and communicated  
2.5 The accounting for, and attribution of costs for, all logistic activities associated with the deployment of the organisation is monitored to ensure compliance with organisational policy and procedures  
2.6 Personnel rotation and reinforcement arrangements are monitored to ensure the placement of personnel in support of operations is consistent with the operational requirements and organisational policy and procedure  
2.7 Personnel and material tracking is monitored to ensure an accurate knowledge of the location and status of personnel and material  
3. **Support organisation** | 3.1 The priorities for extraction of logistic elements are determined
ELEMENT  
 extraction and redeployment

PERFORMANCE CRITERIA

based on the need to support organisational activities

3.2 Redeployment plan is developed

3.3 Liaison with relevant agencies is conducted to gather information, access services and coordinate redeployment activities and movements

Required Skills and Knowledge

REQUiRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Logistics concepts including knowledge of mobilisation, deployment, reception, staging, onward movement, integration, sustainment, redeployment and reconstitution
• Specialist knowledge of the organisation, function and logistic support capabilities
• Organisational policy and procedure
• Channels of communication and processes for obtaining advice, approvals
• Legislation, regulations, and guidelines relating to deployment logistic support
• Equal employment opportunity, equity and diversity principles
• Environmental considerations in planning logistic support
• Organisational writing conventions
• Planning process

Required skills:

• Interpret instructions and apply this to the development of actions and tasks
• Analyse the complexities of a task
• Identify the operation's intent and recognise how own planning contributes to operation success
• Work cooperatively as a member of a team
• Undertake analysis to determine where internal and external factors impact on the health support requirements, and adjust planning accordingly
• Use numeracy skills to accurately analyse and validate information
• Use organisational skills to manage own planning tasks in concert with other staff planners
• Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
• Move forward despite the difficulty of the planning task
Required skills:

- Interpret policy and procedures
- Make decisive, informed decisions that align with organisational requirements
- Use appropriate information technology and software
- Prepare and issue written instructions

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Corporate training requirements may include:
- medical/health training
- mission specific training
- team training
- corporate governance training

Organisational requirements may include:
- identification documents
- medical and dental clearances (including inoculations)
- phone, email and postal services
- pay and allowances briefs
- full birth certificate or citizenship requirements
- official secrecy requirements acknowledgement
- delegations
- relevant licences
- notification of death or injury arrangements
- overseas notification form for electoral office

Planning data may include:
- deployment planning data sheets
- inventories
- manifest
- movement tables

Relevant agencies may include:
- movement authorities
- Australian Quarantine Inspection Service
- Australian Customs
- Department of Foreign Affairs and Trade
- headquarters/central office

Redeployment plan may include:
- threats and hostilities (if any)
- local support
- timeframes
- cleaning, inspecting and clearance of equipment
- quantity of stores and equipment to be moved
- number of personnel to be moved
- resources
- coordination requirements
- quarantine or customs requirements

Unit Descriptor

This unit involves the skills and knowledge required to manage the deployment and delivery of complex or significant logistics support in a deployed context in support of organisational operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

The application of this unit in the workplace includes preparing for logistics operations, deploying a logistics team from a home location to a field environment, managing the internal operation of the logistic support and the extraction and return to a home location.

This unit of competency is applicable to senior logistic personnel who have a responsibility to organise and manage the delivery of integrated logistics support in a field deployment context. This unit is designed for large operations that require significant logistic support; a typical example would be an overseas deployment for disaster support and would involve numerous logistic elements such as transport, warehousing, maintenance, supply and health.

This person will bring well developed management skills and leadership to perform the scope of this unit of competency. Logistics teams may be comprised of a range of capabilities from different disciplines including road transport, supply, maintenance, catering and health. The composition of the logistics team will be guided by the type and scale of operation being supported. All activities are carried out in accordance with relevant organisational policy and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Manage the preparation of logistic elements for deployment | 1.1 Operational requirement is analysed in order to establish the scope and intent of logistic support  
1.2 Deployment requirements are received and interpreted to determine logistic support required  
1.3 Occupational health and safety (OH&S) requirements and recognised safety precautions are applied throughout the operation in accordance with standard procedures  
1.4 Corporate training requirements are formulated, resourced and implemented to ensure staff competence  
1.5 Deficiencies in manpower and equipment are identified and an organisational response is developed  
1.6 Forecast shortages on arrival in the operating area are anticipated and action is taken to ensure logistic support can be established and sustained  
1.7 The preparation, packaging and marking of equipment and stores, including hazardous material, is managed to ensure effective and efficient movement  
1.8 Movement documentation of both personnel and materiel is managed to ensure it is completed  
1.9 Organisational requirements are managed to ensure all personnel are ready for deployment and provided with support for the duration of the operation  
1.10 Instructions are prepared and issued to logistic element managers to enable them to prepare for deployment |
| **2** Manage the movement of the logistic elements | 2.1 Movement to the point of departure and arrival is coordinated to ensure the efficient movement all personnel and material  
2.2 The preparation of material for movement is managed to ensure the packaging, containerisation and sequencing of transportation is consistent with the operational need  
2.3 Waivers required for the movement of hazardous cargo are obtained in accordance with organisational policy and procedure  
2.4 Relevant agencies are liaised with to ensure the effective and efficient movement of all personnel and material  
2.5 Logistic support to the reception and staging area is coordinated to avoid congestion of personnel and materiel during disembarkation in the operational area |
| **3** Manage the deployment and concentration of logistic elements within the area of operations | 3.1 Operational deployment instructions are received and interpreted to determine deployment requirements, tasks and operational commander's intent  
3.2 Logistic deployment instructions are prepared and issued to |
ELEMENT | PERFORMANCE CRITERIA
---|---
logistic element managers
3.3 Movement to the deployment site is managed in accordance with the operational environment and management instructions
3.4 Logistic team is sited
3.5 Operational or organisational constraints are recognised and logistic tasks are directed to align with these constraints
3.6 The activity is monitored to ensure that the logistic elements are conducting activity with appropriate authority and in accordance with organisational policy and procedures
3.7 The delivery of logistic support is managed to meet the demands of the operation
3.8 Logistic support priorities are set in order to align the activities with the organisational objectives
3.9 Logistic information systems are utilised to monitor and coordinate logistic support operations and to inform the decision making process
3.10 Technical advice regarding the usage and allocation of logistic support is provided to maximise the efficiency and effectiveness of services to the supported organisation
3.11 Liaison with agencies involved in the operation is carried out to ensure the most effective coordination of effort
3.12 Management and stakeholders are advised when significant issues or developments arise that may adversely impact on the operation
3.13 Reports and returns relevant to integrated logistic support are prepared and issued in accordance with organisational policy and procedure

4 Manage the extraction of logistic elements from the area of operations and redeployment to home location
4.1 Redeployment instructions are prepared and issued to logistic element managers
4.2 The scaling down and withdrawal of the deployment site is monitored to ensure it is consistent with the operational environment and organisational requirements
4.3 Movement to the departure port is coordinated to ensure it is consistent with the operational requirements
4.4 Return movement to home base is coordinated through relevant authorities in accordance with organisational policy and procedure

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Logistics concepts including a knowledge of mobilisation, deployment, reception, staging, onward movement, integration, sustainment, redeployment and reconstitution
- Specialist knowledge of the organisation, function and logistic capabilities
- Organisational policy and procedure
- Channels of communication and processes for obtaining advice, approvals
- Legislation, regulations, and guidelines relating to deployment logistic support
- Equal employment opportunity, equity and diversity principles
- Environmental considerations in logistic support
- Organisational writing conventions
- Planning process
- Functional and technical siting requirements of specialist logistic teams
- General knowledge of specialist logistic support services, including transport, material maintenance, supply, catering and health support
- The likely logistic needs of deployed dependencies
- Planning process

Required skills:

- Interpret instructions and apply this to the development of actions and tasks
- Analyse the complexities of a task
- Identify the operation's intent and recognise how own planning contributes to operation success
- Work cooperatively as a member of a team
- Undertake analysis to determine where internal and external factors impact on the health support requirements, and adjust planning accordingly
- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage own planning tasks
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Move forward despite the difficulty of the task
- Make decisive, informed decisions that align with organisational requirements
- Liaise with internal and external organisations and representatives to plan and accomplish tasks
- Control risk during the planning and execution of integrated logistic support
- Interpret policy and procedures
Required skills:
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment
- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Integrated logistic team or logistic elements may include:
- a combined logistic team which may include:
  - maintenance support team
  - health support team
  - transport and distribution support team
  - supply support team
  - catering support team

Corporate training requirements may include:
- medical/health training
- mission specific training
- team training
- corporate governance training

Equipment and stores may include:
- vehicles
- trailers
- field accommodation
- materials handling equipment
- communication devices
- health supplies and equipment
- catering facilities
- field maintenance equipment

Organisational requirements may include:
- identification documents
- medical and dental clearances (including inoculations)
- phone, email and postal services
- pay and allowances briefs
- full birth certificate or citizenship requirements
- official secrecy requirements acknowledgement
- delegations
- relevant licences
- notification of death or injury arrangements
- overseas notification form for electoral office

Organisational policy and procedure may include:
- instructions
- operating manuals
- standard operating procedures
- relevant Australian Standards
- relevant Commonwealth Acts

Relevant agencies may include:
- Australian Customs
- Civil Aviation Authorities
RANGE STATEMENT

- Port Authorities
- Australian Quarantine and Inspection Services
- headquarters/central office
- other supporting organisations

Siting may include:

- the physical placement of logistic capabilities onto an area in order to achieve efficiency and functionality of the logistic support to be provided
- siting considerations may include:
  - access
  - ground
  - hard-standing
  - drainage
  - circuits
  - facilities and infrastructure
  - security
  - size

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to undertake provisioning for deployed elements of an organisation in support of organisational operations. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit
Application of the Unit
The application of this unit in the workplace includes the process of planning and controlling the necessary stockholding levels of all items of supply. Supply provisioning is a quantitative analysis and involves detailed mathematical calculations of supply factors such as known usage rates and time factors.

This unit of competency is typically applicable to senior logistic personnel who have a responsibility to plan and coordinate logistics supply support at an organisational level.

This person will bring well developed management and communication skills as well as skills in a specialist discipline of supply support.

The function is typically performed in the headquarters of an organisation with full access to information technology and support services. All activities are carried out in accordance with relevant organisational policy and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Analyse the operational requirement | 1.1 Operational requirement is analysed in order to establish the provisioning requirements
 | 1.2 The operational factors are analysed to identify the variables to be considered in provisioning
 | 1.3 The technical supply factors are analysed to identify the variables to be considered in provisioning
 | 1.4 Liaison with other logistic planners is undertaken to inform the specialist supply aspects of the provisioning requirement
2 Calculate the provisioning requirements | 2.1 Stock holding factors are determined and analysed in order to provide a basis for provisioning calculation
 | 2.2 Time factors are determined and analysed in order to establish the duration of supply and the lead time required for provisioning
 | 2.3 Usage rates are calculated to define the frequency and quantity of stock that will be consumed by dependencies
 | 2.4 Total liability period is calculated to establish the period that dependencies will be required to provide initial self-sustainment before routine replenishment is available
 | 2.5 Assets and liabilities are identified through analysis of stockholding and time factors in accordance with organisational policy and procedure
 | 2.6 Surpluses or deficiencies are calculated based on the established assets and liabilities
3 Develop and report the provisioning requirement | 3.1 Provisioning data is created based upon the analysis and provisioning calculations
 | 3.2 Provisioning requirement is adjusted in accordance with changing operational need
 | 3.3 Provisioning requirement is communicated to stakeholders

**Required Skills and Knowledge**

**REQUİRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Logistics support concepts
- Specialist knowledge of the organisation, function and logistic support capabilities
REQUIRED KNOWLEDGE AND SKILLS

- Organisational policy and procedure pertaining to procurement and provisioning
- Organisational role relevant to specialist provisioning
- The imperatives of supply
- Composition and capability of supply systems and installations
- The national support base that supports procurement
- The provisioning calculation processes
- The fundamentals of sustainment to deployed provisioning
- Time and stockholding factors and their effect on provisioning
- Organisational role relevant to specialist logistic support
- Environment considerations in provisioning
- Organisational writing conventions
- Planning process as they apply to deployed operations
- Relevant risk factors as they apply to deployed operations

**Required skills:**

- Interpret policy and instructions and apply to actions and tasks
- Prepare and issue instructions that clearly communicate intent and tasks
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Analyse the complexities of a task such as limitations, freedoms, vulnerabilities, time limitations
- Undertake analysis to determine where internal and external factors impact on the logistic support requirements, and adjust planning accordingly
- Use numeracy skills to accurately analyse and validate information and complete mathematical calculations that are required as part of the provisioning process
- Use organisational skills to manage own planning tasks in concert with organisational requirements
- Interpret policies and procedures
- Make decisive, informed decisions that align with organisational requirements
- Engage with a range of stakeholders to research and collate provisioning information
- Move forward despite the difficulty of the task
- Use appropriate information technology and software

**Evidence Guide**
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of the following:
  - accurately identify the inputs required to undertake provisioning in accordance with the operational task
  - calculate provisioning requirements of all classes of supply
  - produce the outputs required of provisioning to support distribution planning

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operational factors may include:
- concept of operations
- composition and locations of organisations to be supported
- range and quantities of equipment held by each organisation
- determination of mission essential equipment
- operational viability period (OVP) for which the organisation is likely to be self-sufficient
- operational situation and the degree of dispersion required
- availability of local resources
- repair policy, including preventive maintenance requirements for materiel in stock
- service level required at each line of stockholding
- effects of terrain and climatic conditions on personnel and materiel
- any arrangements for the provision of supplies and services by the local population or other supporting organisations
- expected duration of operations
- predicted usage rates
- expected losses and delays within the logistic network and distribution system through adverse weather, fire or other hazard
- predicted need to relocate stocks during operations
- movement lead time between the home location and the area of operations
- transport lift capacities available
- planned frequency of replenishment
- availability of suitable areas, infrastructure and facilities, MHE and trained manpower required to provide supply support to the stock
- engineering effort necessary to enhance the logistic network and provide for storage facilities
- potential variability of usage rates
- probability of delays in either procurement or delivery
- health specialists
- distribution specialist
- catering specialist
- maintenance specialist
- supply specialist
RANGE STATEMENT

Stockholding factors may include:
- type of stockholding
- dues-in
- dues-out
- usage rates
- supply margin

Time factors may include:
- deployment period
- consumption period
- provisioning lead time, including:
  - internal lead time
  - supplier lead time
  - freight lead time

Provisioning calculations may include:
- usage rate
- supply margin
- total liability period
- minimum stockholding
- maximum stockholding
- reorder point
- reorder quantity
- assets/liabilities
- surpluses/deficiencies

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to plan logistics distribution operations in a deployed context in support of organisational operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
The application of this unit includes developing distribution support plans to deliver supplies and transport to sustain an organisation. Whilst the conduct of distribution planning is conducted individually, it is also conducted alongside other logistic planners in a cooperative environment where planners share information and work together to produce a cohesive and integrated logistic support plan.

This unit of competency is applicable to logistic personnel who have a responsibility to plan and coordinate logistics support at an organisational level.

This person will bring well developed management and communication skills as well as specialist distribution skills.

The function is typically performed in the headquarters of an organisation with full access to information technology and support services. All activities are carried out in accordance with relevant organisational policy and procedures.

| 1 Analyse the operational requirement | 1.1 Operational task is received and analysed for distribution requirements  
1.2 Information is sourced and analysed to identify the operational and technical factors to be considered in supporting distribution operations  
1.3 Logistic information management systems are utilised to compile and analyse distribution planning data and information  
1.4 The usage rates of different supply classes are calculated based on historical data and consideration of the operational and technical supply factors  
1.5 Provisioning calculations are undertaken to develop stock holding plans and to identify the arrangements for replenishment, including reorder points and reorder quantities  
1.6 Distribution estimates are produced |
| 2 Develop the distribution plan | 2.1 Distribution capabilities are identified based on the stock distribution requirement and operational and technical support requirements  
2.2 Organisational structure is developed to meet the distribution requirements within organisational resource constraints  
2.3 The integration of contracted support is considered for inclusion in the plan  
2.4 Technical control arrangements are established within the framework of operational command and management  
2.5 Distribution plan is created and approved in accordance with organisational policy and procedures  
2.6 Risk analysis is conducted against the distribution plan to identify and mitigate against unacceptable risks  
2.7 Recommendations are provided to management regarding distribution operations and the employment of distribution capabilities  
2.8 Distribution plan is communicated to stakeholders |
| 3 Integrate the maintenance plan with the logistic support plan | 3.1 Liaison with other logistic stakeholders is undertaken to ensure the distribution plan is integrated into the larger logistic or operational plan  
3.2 Distribution plan is adjusted in accordance with changing operational need or the need to synchronise with other logistic functions |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Logistics support concepts
- Techniques to deal with opposing views and to negotiate a consensus position
- Logistics support concepts including a knowledge of mobilisation, deployment, reception, staging, onward movement, integration, sustainment, redeployment and reconstitution
- Specialist knowledge of transport logistics including stock distribution and transportation strategies
- Environmental considerations in planning logistic support
- Organisational structures and support services
- Legislative and regulatory environment as it pertains to distribution and logistic support

Required skills:

- Interpret instructions and apply this to the development of own actions and tasks
- Analyse the complexities of a task
- Identify the operation's intent and recognise how own planning contributes to mission success
- Work cooperatively as a member of a team
- Communicate complex ideas and arguments in a persuasive manner
- Read and write at a level to cope with a range of complex workplace materials
- Undertake analysis to determine where internal and external factors impact on the logistic requirements
- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage planning tasks in concert with other stakeholders
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Move forward despite the difficulty of the planning task
- Interpret technical policy and doctrine
- Make decisive, informed decisions that align with organisational requirements
- Use appropriate information technology and software
- Prepare and issue written instructions
- Use planning tools
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operational and technical factors may include:

- transport operating environment, including the distance over which dependencies must be supported, the terrain and climate over which transport modes must operate, the
RANGE STATEMENT

location and capability of material handling equipment, partner and local nation support and own capabilities
• threats, including local population/gangs/military forces, environmental, logistic threats and driver fatigue
• constraints, including timings, routes and route classifications, driver fatigue, load capabilities of vehicles, priority of load, destination and tempo
• composition and locations of organisations to be supported
• range and quantities of equipment held by each organisation
• identification of mission essential equipment
• identification of operational viability period for which the organisation is likely to be self-sufficient
• availability of local resources
• repair policy, including preventive maintenance requirements for materiel in stock
• service level required at each line of stockholding (this is usually between 65 and 85 per cent, but may be higher for repair parts)
• effects of terrain and climatic conditions on personnel and materiel
• arrangements for the provision of supplies and services by a local supply agencies or partners
• expected duration of operations
• predicted usage rates
• expected losses and delays within the logistic network and distribution system through adverse weather, fire or other hazard
• predicted need to relocate stocks during operations
• cargo dimensions
• vehicle dimensions
• cargo throughput
• forecast demands
• environmental data such as routes, climate, terrain and traffic
• surge capacity
• Subsistence items. This class includes foodstuffs, combat rations and packaged water
• General stores. This class includes tents, tarpaulins, minor equipment, stationery, and administrative and housekeeping items
• Petrol, oils and lubricants. This class includes petroleum,
RANGE STATEMENT

oils and lubricants (POL)
- Construction items. This class includes construction materials and engineer stores
- Ammunition. This class includes all types of ammunition and explosive ordnance (EO)
- Personal demand items. This class includes personal items and canteen stores
- Principal items. This class includes major items of equipment, such as vehicles, together with major assemblies and included accessories
- Medical and dental stores. This class consists of medical and dental stores, including pharmaceutical items, medical and dental equipment and associated repair parts
- Repair parts. This class includes repair parts for maintenance support

Provisioning calculations may include:
- supply margin
- minimum stockholding
- maximum stockholding
- reorder point
- reorder quantity
- total liability period
- assets and liabilities
- surpluses or deficiencies

Distribution estimates may include:
- transport estimate, including:
  - equipment availability reports
  - cargo dimensions
  - vehicle dimensions
  - anticipated and actual cargo throughput
  - routes, climate, terrain and traffic information
  - future demands
- supply estimate, including:
  - provisioning of materiel and services
  - establishment and operation of supply installations
  - stockholding requirements
  - supply control measures

Distribution capabilities may include:
- heavy road transport
- specialist road transport (water/fuel/special cargo)
- air transport
- sea/river transport
- warehouse
RANGE STATEMENT

- transhipment depots
- food storage
- fuel storage
- material lifting equipment
- specialist advisors

Distribution plans may include:

- Replenishment process. A description of the replenishment process by stock, type and level of support
- Target stocking levels. Includes operating and reserve stocking level policies. Usually supported by a target stocking level matrix
- Specialist equipment stockholding levels and locations for resupply
- Petrols/oils/lubricants stockholding levels and locations for resupply. Includes details of local providers where necessary
- Rations. Stockholding levels and locations for resupply. Includes details of local providers where necessary
- Water. Stockholding levels and locations for water resupply. Includes details of the provision of water, that is local resources, bottled etc.
- Distribution control to identify authority and control issues
- Local purchase policy and approved vendors
- Reports and returns policy
- Details priorities and tasks for distribution assets to conduct in order to support the operation

Unit Descriptor

This unit involves the skills and knowledge required to plan logistics maintenance operations in support of organisational operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

This unit of competency is applicable to logistic personnel who have a responsibility to plan and coordinate maintenance support at an organisational level.

The candidate will bring well developed management and communication skills as well as skills in the specialist discipline of maintenance support. The function is typically performed in the headquarters of an organisation with full access to information technology and support services. All activities are carried out in accordance with relevant organisational policy and procedures.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Analyse the requirement** | 1.1 Operational task is received and analysed for maintenance requirements  
1.2 Information is sourced and analysed to identify the maintenance factors to be considered in supporting operations  
1.3 Recommendations are provided to management regarding maintenance support and the employment of maintenance capabilities |
| **2 Develop the maintenance plan** | 2.1 Logistic information management systems are utilised to compile and analyse maintenance planning data and information  
2.2 Maintenance equipment failure and repair data are used to establish the type and scope of maintenance support required for the deployment  
2.3 Maintenance estimates are produced to support courses of action  
2.4 Maintenance policy and procedure are reviewed and or amended or developed to support the maintenance activity within the operational area of deployment  
2.5 Maintenance organisational structure is developed to meet the maintenance estimates within organisational resource constraints  
2.6 The integration of contracted maintenance support is considered for inclusion in the plan  
2.7 Technical control arrangements are established within the framework of operational command and management  
2.8 Maintenance plan is created in accordance with organisational policy and procedures  
2.9 Risk analysis is conducted against the maintenance plan to identify and mitigate against unacceptable risks  
2.10 Maintenance plan is communicated to stakeholders |
| **3 Integrate the maintenance plan with the logistic plan** | 3.1 Liaison with other logistic stakeholders is undertaken to ensure the maintenance plan is integrated into the larger logistic or operational plan  
3.2 Maintenance plan is adjusted in accordance with changing operational need or the need to synchronise with other logistic functions |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Logistics support concepts
- Grades of repair
- Lines of maintenance support
- Types of maintenance support
- Reliability, availability, maintainability (RAM)
- Maintenance doctrine, instructions and advisory bulletins
- Technical regulations, policy and procedure
- Maintenance planning
- Integrated logistics support (ILS)
- Workflow management principles
- Backlog management principles
- Back-loading management principles
- Operational requirements of maintenance support
- Likely consequences of terrain and weather on material
- Organisational structures and support services
- Legislative and regulatory environment pertaining to materiel maintenance

Required skills:

- Interpret instructions and apply this to the development of own actions and tasks
- Analyse the complexities of a task
- Identify the operation's intent and recognise how own planning contributes to mission success
- Work cooperatively as a member of a team
- Undertake analysis to determine where internal and external factors impact on the logistic support requirements
- Use numeracy skills to accurately analyse and validate information
- Read and write at a level to cope with a range of complex workplace materials
- Use organisational skills to manage planning tasks in concert with other stakeholders
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Move forward despite the difficulty of the planning task
- Interpret technical policy and doctrine
- Make decisive, informed decisions that align with organisational requirements
- Use appropriate information technology and software
Required skills:

- Prepare and issue written instructions
- Use maintenance planning tools

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information may include:
- equipment availability reports
- production reports
- backlog reports (particularly if the backlog is manpower or repair parts related)
- estimated repair times (based on actual history)
- actual repair times
- Mean Time Between Failure / Mean Time Between Maintenance (MTBF/MTBM) for equipment types
- throughput per equipment type (how reliable an equipment type is)
- productive and non-productive times for tradespersons

Maintenance equipment failure and repair data may include:
- Mean Time Between Failure (MTBF)
- Mean Time Between Maintenance (MTBM)
- failure rate
- casualty repair grading
- repair liability
- maintenance personnel calculation
- capabilities vs requirements
- equipment casualty estimates

Maintenance estimate may include:
- mission essential equipment list
- levels of repair
- repair limits
- out of role repairs
- recovery process
- repair pools
- trade repair
- repair parts holding policy
- equipment collection points
- fleet specific equipment

Maintenance plan may include:
- maintenance policies and procedures
- technical chains of command
- technical support networks
- external support agencies
- cross-loading
- back-loading
- salvage
- cannibalisation
- destruction
RANGE STATEMENT

- repair pool holdings

Unit Descriptor
This unit involves the skills and knowledge required to plan health support in support of organisational operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit of competency was written to support Defence operations that are likely to involve casualties and are therefore supported by health elements. However, the skills and knowledge are applicable to a variety of deployed operations such as health support for natural disasters and humanitarian activities.

The candidate will bring well developed management and communication skills as well as specialist skills in health coordination and the management of health services. This type of coordination would typically occur in an organisational headquarters with full access to information technology and staff support services. All activities are carried out in accordance with relevant organisational policy and procedures.

</thead>
</table>
| **1** Analyse the health requirements | 1.1 Operational situation and tempo are analysed in order to establish the scope and intent of health support  
1.2 Information is sourced and analysed to identify the health support planning factors  
1.3 Information systems are utilised to compile and analyse casualty planning data  
1.4 Health risk assessments are prepared to classify the health risks to the organisation and to inform the development of the health estimate  
1.5 Casualty estimates are produced to inform health planning and compilation of the health estimate  
1.6 Health estimates are produced to support a number of courses of action to support command appreciation |
| **2** Develop the health support plan | 2.1 Health support organisational structure is developed to meet the health estimates within organisational resource constraints  
2.2 The lines of health support and types of health support are identified along with clear lines of responsibility and agreed casualty exchange points  
2.3 The imperatives of health support are applied to the development of the health support plan and identification of a preferred course of action  
2.4 Health support control measures are determined to provide adequate regulation of casualties and to support casualty survivability  
2.5 Health information requirements are planned and integrated into the health support plan to ensure health information is collected and analysed to inform ongoing health planning  
2.6 Health administration requirements are planned and integrated into the health support plan  
2.7 Health plan is developed to detail the provision of services and the establishment and operation of operational health elements  
2.8 Health plan is communicated to stakeholders |
| **3** Integrate the health plan | 3.1 Liaison with other stakeholders is undertaken to ensure the health plan is integrated into the larger logistic or operational plan  
3.2 Health plan is adjusted in accordance with changing operational tempo or the need to synchronise with other logistic functions  
3.3 Specialist health input and recommendations are provided to management regarding health support and the employment of health support capabilities |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Organisational policy and procedure pertaining to health support
- Principles of health support
- Preparedness requirements of health personnel and equipment
- Policy and procedure relating to surface evacuation
- Tasks and composition of health elements and their points of interaction
- Health stores and equipment including resupply systems and procedures
- Patient tracking and administration
- Environment consideration in planning health support
- Health intelligence sources, collection and analysis processes
- Health capabilities
- Health planning inputs to the staff planning process
- Estimation of casualty numbers and types
- Requirements relating to the management of health waste
- Supply, handling, storage of blood products
- Legislative and regulatory environment pertaining to materiel logistics and health services delivery
- The functionality and operation of logistic information management systems
- Risks to health support
- Staff planning process
- Writing conventions
- Integrated logistics support (ILS)

Required skills:

- Interpret instructions and apply this to the development of actions and tasks
- Analyse the complexities of a task
- Identify the operation's intent and recognise how own planning contributes to operation success
- Work cooperatively as a member of a team
- Undertake analysis to determine where internal and external factors impact on the health
Required skills:

- support requirements, and adjust planning accordingly
- Use numeracy skills to accurately analyse and validate information
- Use organisational skills to manage own planning tasks in concert with other staff planners
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Move forward despite the difficulty of the planning task
- Interpret policy and procedures
- Make decisive, informed decisions that align with organisational requirements
- Use appropriate information technology and software
- Prepare and issue written instructions

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit

Context of and specific resources for assessment

- Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Health support planning factors may include:

- the casualty estimate and its possible effects on the delivery of health support
- health information and health intelligence
- resource availability and restrictions, including specialist personnel, contract health practitioners and equipment
- evacuation policy and mode availability
- availability of local infrastructure
- blood sourcing, transport and holding policy
- health capability development requirements waste disposal plan
- the link with personnel and logistic staff for handling remains
- the location of the health facilities
- marking and notification of health elements

Casualty planning data may include:

- types of casualties and casualty profile
- rate of casualty arrival
- level of conflict
- casualty flow
- numbers of casualties
- return to duty rates
- walking, sitting and litter percentages
- evacuation priorities
- anatomic wound distribution
- disease and non-battle injury experience
RANGE STATEMENT

- assessment of hospital bed requirements
- surgical workload data
- theatre of operations beds
- casualty accumulation factor

Health risk assessment may include:
- the identification of health risks in the intended operating environment, including:
  - environment health risks: weather, terrain, vegetation, animal or disease
  - occupational health risks: road traffic accident or industrial injury
  - operational health risks: physical injury, chemical/biological injury or psychiatric injury
- the analysis and assessment of health risks
- the treatment of risks by developing and integrating control measures within the health support plan

Casualty estimates may include:
- on-duty casualty rate
- non-duty casualty rate
- operational stress reaction
- calculation of hospital beds and holding policy

Health estimate may include:
- health information, intelligence and surveillance outputs
- casualty estimate
- health related characteristics of the operation
- health related characteristics of the environment
- summary of the health risks and risk factors

Types of health support may include:
- dental team
- environmental health team
- health assessment team
- field pathology team
- low/medium/high dependency nursing team
- primary health care team
- rehabilitation team
- resuscitation team
- surgical team
- laboratory team
- medical imaging team
- road ambulance evacuation team
- aero-medical evacuation team
- psych support team
- mortuary team
- ships medical emergency team
RANGE STATEMENT

Health support imperatives may include:
- prevention
- immediate first aid
- resuscitation within the hour
- initial wound surgery within three hours

Support control measures may include:
- treatment and holding policies
- casualty management plans
- casualty regulation
- triage and treatment priorities
- evacuation priorities

Health plan may include:
- identification of the health mission (mission statement)
- the execution:
  - general outline - broad statement of how health support is to be provided, broken down (where appropriate) into operational phases
  - groupings and tasks - a list of health service elements or units in a logical sequence, detailing the health support tasks for which elements/units are responsible during the operation, by phases, where appropriate
  - coordinating instructions - matters of coordination necessary for successful implementation and explanation of the plan
  - timings of key events
  - operating locations and boundaries
  - holding or staging policies
  - casualty evacuation, including procedures for surface evacuation and aero-medical evacuation
  - locations and capabilities of supporting health facilities
  - opening and closing times of medical facilities
  - treatment of local population
  - preventative medicine/environmental health measures
  - movement of medical elements
  - specific clinical requirements
  - priorities for evacuation and treatment
  - protection and working of health personnel, facilities and transport
  - administration and logistics - to include holdings and resupply of medical and dental stores; repair of medical and dental equipment; and arrangements for exchange of and reserve pools for litters and blankets, blood supply documentation of casualties
  - organisational structure and authority - appointment of a
RANGE STATEMENT

medical authority and alternatives, locations of medical commanders, medical communications networks, medical reports and returns, medical liaison, health planning groups and conferences

Other stakeholders may include:

- health specialists
- distribution specialist
- catering specialist
- maintenance specialist

ELEMENT  

PERFORMANCE CRITERIA

4 Coordinate health administration

4.1 Accurate records of organisational clinical workload and patient care statistics are maintained to provide a basis for analysis and the improvement of services

4.2 Medical reports and returns are prepared and issued to provide an accurate picture of health status

4.3 Advice is prepared and provided on health administration matters to health elements to ensure the delivery of health care and handling of health administrative matters are in accordance with organisational policy and procedure

4.4 Casualty notification and update reports are prepared and issued to notify and provide updates on casualty status to family or other interested parties

4.5 Relevant agencies are liaised with to seek advice on casualty welfare and administration and to ensure that health support provided is in accordance with organisational policy and procedure

4.6 Health support operations are monitored to ensure that health support provided is in accordance with organisational policy and procedure

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Organisational policy and procedure pertaining to health support
- Principles of health support
- Casualty regulation strategies, concepts and principles
- Health information collection, analysis and application
- Policy and procedure relating to evacuation
- Tasks and composition of health elements and their points of interaction
- Health stores and equipment including resupply systems and procedures
- Patient tracking and administration
- Mortuary requirements relating to health support
- Requirements relating to the management of health waste
- Supply, handling, storage of blood products
REQUIRED KNOWLEDGE AND SKILLS

- Laundry requirements relating to health support
- Legislative and regulatory environment as it pertains to materiel logistics and health services delivery
- The functionality and operation of logistic information management systems
- Risks to health support
- Environment consideration in health support

Required skills:

- Interpret instructions and apply to actions and tasks
- Identify the operation’s intent and recognise how own work contributes to operational success
- Work cooperatively as a member of a team
- Undertake analysis to determine where internal and external factors impact on the health support requirements and adjust planning accordingly
- Use numeracy skills to accurately analyse and validate information
- Identify viable and useful health information sources and facilitate their collection
- Collate and analyse health information to identify current and emerging health threats
- Apply the outcomes of health risk analysis to the planning and coordination of current operations
- Make decisive, informed decisions that align the current health support operation to the organisational requirements
- Use organisational skills to manage own tasks in concert with other planners
- Use problem-solving skills to apply a broad range of problem-solving strategies to planning outcomes
- Move forward despite the difficulty of the planning task
- Interpret policies and procedures
- Use appropriate information technology and software
- Prepare and issue written instructions

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of the following:

• maintain a health threat assessment (health estimate) based on the collection and analysis of health information
• make specific recommendation to a medical specialist regarding emerging health threats
• coordinate the provision of health support service to deployed health facilities
• coordinate health administration in accordance with organisational policy and procedure
• apply organisational policy and procedure relating to the delivery of health support

Context of and specific resources for assessment

• Competency should be demonstrated on at least one occasion covering the scope of the unit of competence
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
  • In both real and simulated environments, access is required to:
    • relevant and appropriate materials and equipment, and
    • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment, and/or
  • in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Health information requirements may include:
- casualty encounters
- types of injuries
- types of illnesses
- severity of condition
- location of onset
- preventative measures in place
- environmental information

Health elements may include:
- dental team
- environmental health team
- health assessment team
- field pathology team
- low/medium/high dependency nursing team
- primary health care team
- rehabilitation team
- resuscitation team
- surgical team
- laboratory team
- medical imaging team
- road ambulance evacuation team
- aero-medical evacuation team
- psych support team
- mortuary team
- ships medical emergency team

Organisational policy and procedure may include:
- instructions
- operating manuals
- standard operating procedures
- relevant Australian Standards
- relevant Commonwealth Acts
- organisational instruction

Aims of casualty regulation may include:
- efficient routing of casualties to the health facility best able to cope with their condition
- even distribution of patients, to ensure that there are adequate beds and treatment capabilities for current and anticipated needs
- minimise the number of times casualties are handled
- prevent the routing of evacuation platforms from one treatment facility to another in an attempt to find available beds or treatment capability
RANGE STATEMENT

- casualties are evacuated no further than their condition or the operational situation demands

Health related waste may include:
- bio-hazard waste (liquid and solid)
- chemical waste (medical imaging)

Health administration matters may include:
- casualty entitlement
- casualty equipment management
- casualty welfare
- entitlement to treatment
- records management
- reports and returns
- casualty notifications

Relevant agencies may include:
- welfare agencies
- health authorities
- parent organisations
- philanthropic agencies

Monitored may include:
- patient holding
- bed availability
- surgical team availability
- casualty rates (actual vs estimate)
- status and performance of the medical supply chain (and particularly blood holdings)
- compliance with health policy
- status of specialist reinforcements
- status of casualties in transit

</table>
| 1. Identify tree felling requirements | 1.1. Instructions for tree felling operations are received and clarified with supervisor prior to work being undertaken.  
1.2. Topography and site conditions are assessed and factors influencing the natural direction of fall are identified and confirmed with supervisor.  
1.3. Tree is visually assessed and factors influencing the tree felling operation are identified and confirmed with supervisor.  
1.4. Natural direction of fall, safe fall zone and exclusion zone are determined and confirmed with supervisor.  
1.5. Occupational Health and Safety (OHS) hazards associated with felling operation are identified, risks assessed and reported to the supervisor. |
| 2. Prepare for tree felling | 2.1. Felling equipment and component options that are appropriate to the task being undertaken are selected and prepared.  
2.2. Appropriate support tools are prepared, transported and placed to minimise felling delays.  
2.3. Suitable safety equipment and Personal Protective Equipment (PPE) are selected, checked, used, maintained and stored.  
2.4. Fall zone is cleared of obstacles and articles which may be damaged by felled tree.  
2.5. Clear escape route is established appropriate to the site and according to recognised guidelines. |
| 3. Fell tree | 3.1. Location of other personnel is noted and monitored.  
3.2. Standard tree felling techniques are determined by ground conditions and state of canopy.  
3.3. Corrective action is taken in response to changing conditions or problems encountered.  
3.4. Planned escape route is used when tree starts to fall.  
3.5. Fall of tree and movement on ground are monitored until felled tree is stable.  
3.6. Safe working practices are employed according to OHS requirements. |
| 4. Complete tree felling operation | 4.1. Appropriate method of clearing the site of felled tree is determined.  
4.2. Machinery required for removal of felled tree is selected and used according to manufacturer’s specifications and OHS requirements. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- interpret work procedures
- demonstrate safe working practices
- communicate orally and using hand signals with other personnel
- participate in teams and contribute to team objectives
- determine safe fall zones and exclusion zones
- measure distances
- monitor and maintain tree felling tools and equipment
- recognise structural defects, common diseases, pests, and nutrition deficiencies
- operate a chainsaw
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

### Required knowledge

- basic operational and maintenance requirements of tree felling equipment
- safe working practices for chainsaw operation
- safety procedures and potential hazards for working safely in the amenity tree industry
- emergency and first aid procedures
- the effect of tree removal on the environment
- local government regulations that apply to tree removal where appropriate
- identification of services and other hazards that affect the performance of the unit
REQUIRED SKILLS AND KNOWLEDGE

- principles and methods of inspecting trees to identify structural defects.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:</td>
</tr>
<tr>
<td>• prepare and properly maintain equipment</td>
</tr>
<tr>
<td>• determine the tree felling conditions, direction of fall, safe fall zone, exclusion zone and escape route</td>
</tr>
<tr>
<td>• use safe tree felling techniques</td>
</tr>
<tr>
<td>• use safe tree removal techniques</td>
</tr>
</tbody>
</table>

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Trees may include:

- all species of trees and woody tree like vegetation forms.

AHCARB205A Operate and maintain chainsaws

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the process of maintaining, preparing and operating hand-held chainsaws in a work environment and defines the standard required to: select, use, maintain and store suitable personal protective equipment; carry out routine checks and maintenance on chainsaw; apply appropriate chainsaw technique and cutting methods according to manufacturer's specifications and documented low risk work procedures; assess and minimise environmental impacts of chainsaw use; maintain records of chainsaw training and certification, risk assessment and use. |

Application of the Unit

| Application of the unit | This unit applies to cross-cutting fallen timber using safe cutting techniques. |

Licensing/Regulatory Information

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
## ELEMENT

1. **Recognise and apply workplace safety procedures**

   1.1. Occupational Health and Safety (OHS) procedures relevant to the maintenance and operation of chainsaws are recognised and applied.
   1.2. OHS hazards are identified, risks assessed and risk controls are implemented.
   1.3. Personal Protective Equipment (PPE) is selected and used.
   1.4. Relevant licensing and legislative requirements with regard to the operation of chainsaws are recognised, accessed and applied.

2. **Check and maintain chainsaw**

   2.1. Tools and materials required for maintenance procedures are selected, checked and confirmed against maintenance plan.
   2.2. Routine checks and maintenance procedures are conducted prior to operation and according to manufacturer's specifications and maintenance plan.
   2.3. Chainsaw faults or malfunctions are identified, tagged and reported for repair according to manufacturer's specifications and enterprise requirements.
   2.4. Completed chainsaw maintenance procedures are detailed and recorded.

3. **Operate chainsaw**

   3.1. Sawing materials are identified and positioned for operation according to documented low risk work procedures.
   3.2. Cutting methods are determined appropriate to type of material and risk controls implemented.
   3.3. Chainsaw is operated according to manufacturer's specifications and operator's manual.
   3.4. Effective worksite communication is maintained to ensure efficient workflow and address immediate problems.
   3.5. Environmental implications associated with chainsaw operation are identified, assessed and controlled according to documented requirements.

4. **Complete and check chainsaw operation**

   4.1. Chainsaw damage, malfunctions or irregular performance are recorded and reported according to enterprise requirements.
   4.2. Chainsaw is cleaned, maintained and stored according to manufacturer's specifications and enterprise requirements.
   4.3. Relevant reports are maintained to industry
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | standards according to enterprise requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- identify hazards and implement safe operating procedures
- safely cross-cut fallen timber using compression and tension cuts with a hand held chainsaw
- maximise volume and quality of recovery
- demonstrate safe and environmentally responsible workplace practices
- obtain relevant licenses and permits
- read and interpret manufacturer's specifications, work and maintenance plans, and Material Safety Data Sheets (MSDSs).
- effectively communicate information, interpret and apply task instructions, and maintain records and reports
- estimate and measure dimensions, and calculate volumes
- recognise caution or hazard signs and symbols
- interpret tasks or information from labels, manuals or written instructions
- record information accurately or verbally report information
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- relevant State/Territory legislation and regulations with regard to the operation of chainsaws
- OHS legislative requirements and Codes of Practice
- hazards and risks when using chainsaws
- operating principles and operating methods
- various types of chainsaws and respective functions
<table>

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- select, use, maintain and store suitable personal protective equipment
- carry out routine checks and maintenance on chainsaw
- apply appropriate chainsaw technique and cutting methods according to manufacturer's specifications and documented low risk work procedures
- assess and minimise environmental impacts of chainsaw use
- maintain records of chainsaw training and certification, risk assessment and use.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

The range statement relates to the unit of competency as a whole.

Chainsaws may include:

- all types and models of hand-held chainsaws in a work environment.

AURV328961A Recover vehicle

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the competence required to recover a vehicle by transporting and towing. |

Application of the Unit

| Application of the unit | The unit includes identification and confirmation of work requirement, preparation for work, selecting the recovery method, preparing the recovery vehicle and the vehicle to be recovered, operating the recovery vehicle, cleaning up the recovery worksite and completion of work finalisation processes, including clean-up and documentation. Work requires individuals to demonstrate judgement and problem-solving skills in managing own work activities and contributing to a productive team environment. Work is carried out in accordance with award provisions. |

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work | 1.1. Work instructions are used to determine the job requirements, including job sheets, recovery types, vehicles preparation and recovery procedures.  
1.2. Job specifications are read and interpreted.  
1.3. OH&S requirements, including personal protection needs, are observed throughout the work.  
1.4. Vehicle and method of recovery are identified.  
1.5. Hand, power tooling and safety equipment are identified and checked for safe use.  
1.6. Procedures are determined to minimise waste material/components.  
1.7. Procedures are identified for maximising energy efficiency while completing the job. |
| 2. Ascertain type of recovery | 2.1. Details are obtained by visual surveillance of recovery scene.  
2.2. Information is obtained from officials at scene.  
2.3. Hazards are recognised and included in requirements for recovery.  
2.4. All activities are carried out according to industry regulations/guidelines, OH&S legislation, and enterprise procedures/policies. |
| 3. Prepare vehicle to be recovered for tow/lift | 3.1. Vehicle is prepared for tow/lift using recognised enterprise guidelines and legislative requirements.  
3.2. Vehicle is prepared for recovery without causing damage to any component or system.  
3.3. All activities are carried out according to industry regulations/guidelines, OH&S legislation, and enterprise procedures/policies. |
| 4. Prepare recovery vehicle for tow/lift | 4.1. Recovery vehicle is prepared using recognised enterprise guidelines and legislative requirements.  
4.2. Recovery vehicle is prepared without causing damage to any component or system.  
4.3. All activities are carried out according to industry regulations/guidelines, OH&S legislation, statutory requirements and enterprise procedures/policies. |
| 5. Operate recovery vehicle | 5.1. Vehicle/equipment is operated using recognised industry guidelines and legislative requirements.  
5.2. Lifting and loading procedures are followed.  
5.3. Vehicle is operated without causing damage to any |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | component or system.
5.4. Recovered vehicle is safely conveyed to agreed destination.
5.5. All activities are carried out according to industry regulations/guidelines, OH&S legislation, and enterprise procedures/policies.

6. Clean up recovery worksite
6.1. Area of recovery and its near vicinity is cleared of debris and dangerous objects/hazardous materials.
6.2. Worksite is cleaned without causing damage to any component or system.
6.3. Clean-up procedures are completed within recognised enterprise guidelines and legislative requirements.

7. Clean up work vehicle and maintain equipment
7.1. Material that can be reused is collected and stored.
7.2. Waste and scrap is removed following workplace procedure.
7.3. Equipment and work vehicle are cleaned and inspected for serviceable condition in accordance with workplace procedures.
7.4. Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.
7.5. Operator maintenance is completed in accordance with manufacturer/component supplier specifications and worksite procedures.
7.6. Tooling is maintained in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

Required skills
- collect, organise and understand information related to work orders, plans and safety procedures for recovery type, preparation of vehicles, recovery procedure and worksite clean-up requirements
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with worksite supervisor, other workers
## REQUIRED SKILLS AND KNOWLEDGE

<td></td>
</tr>
<tr>
<td>completing area rehabilitation</td>
<td></td>
</tr>
<tr>
<td>completing workplace/equipment documentation.</td>
<td></td>
</tr>
</tbody>
</table>

### Context of, and specific resources for assessment

Application of competence is to be assessed in the workplace or simulated worksite.

Assessment is to occur using standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with regulatory requirements, including Australian Standards.

The following resources should be made available:

- workplace location or simulated workplace
- materials relevant to recovery of vehicles
- equipment, hand and power tooling appropriate to recovery of vehicles
- activities covering mandatory task requirements
- specifications and work instructions.

### Method of assessment

- Assessment must satisfy the endorsed assessment guidelines of the automotive industry's RS&R Training Package.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
EVIDENCE GUIDE

- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies.
- Assessment may be applied under project related conditions and require evidence of process.
- Assessment must confirm a reasonable inference that competence is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.
- It is preferable that assessment reflects a process rather than an event and occurs over a period of time to cover varying quality circumstances. Evidence of performance may be provided by customers, team leaders/members or other persons subject to agreed authentication arrangements.
- Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Recovery</th>

| Release 2 | New release of this unit released with version 6 of BSB07 Business Services Training Package.  
- Inclusion of ‘environmental sustainability business practices and standards’ in the Range Statement |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to determine and analyse existing and required resources, their effective application and the accountability for their use.

Application of the Unit

This unit applies to individuals with a broad knowledge of business resources who contribute well developed skills and knowledge to ensure adequate resources are available to perform the work of the organisation. They may have responsibility to provide guidance or to delegate aspects of these tasks to others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Determine resource requirements** | 1.1. Determine *resource requirements* in accordance with business and operational plans, and organisational requirements  
1.2. Provide opportunities to individuals and workgroups to contribute to the identification of resource requirements  
1.3. Ensure resource expenditure is realistic and makes efficient use of available budget resources  
1.4. Present recommendations on resource requirements in the required format, style and structure using relevant *business equipment and technology* |
| **2. Acquire and allocate resources** | 2.1. Acquire physical resources and services in accordance with organisational requirements  
2.2. Check resources to ensure quality and quantity, in line with service agreements  
2.3. Allocate resources promptly to enable achievement of workgroup objectives  
2.4. Ensure consultation with individuals and teams on allocation of resources is participative and is conducted using *appropriate interpersonal skills* |
| **3. Monitor and report on resource usage** | 3.1. Measure effectiveness of resource planning, and assess against actual costs, identified shortfalls and surpluses  
3.2. Develop and implement methods of monitoring resource use to enable timely and accurate reporting against business and operational plans  
3.3. Identify improvements in resource planning through consultation and *feedback*, and implement in accordance with organisational requirements  
3.4. Maintain *records* concerning equipment and resource purchases, in accordance with organisational requirements |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to request advice, to receive feedback and to work with a team
- literacy skills to draft complex reports and to display logical information on resource usage
- numeracy skills to interpret, compare and calculate resource usage costs
- planning skills to schedule and track resource use and availability.

Required knowledge

- common equipment faults
- functions of a range of business equipment
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - occupational health and safety (OHS)
- organisational policies, plans and procedures
- record management processes and techniques related to maintenance schedules.
Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</tr>
<tr>
<td>• demonstration of techniques</td>
</tr>
<tr>
<td>• oral or written questioning to assess knowledge of functions of a range of business equipment.</td>
</tr>
<tr>
<td><strong>Guidance information for assessment</strong></td>
</tr>
<tr>
<td>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</td>
</tr>
<tr>
<td>• other general administration units.</td>
</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Resource requirements may include: | • human resources  
| | • location/premises  
| | • OHS resources  
| | • plant/machinery  
| | • raw materials  
| | • refurbishment  
| | • staff amenities  
| | • stock and supplies  
| | • storage space  
| | • technological equipment/software  
| | • training materials |

| Organisational requirements may include: | • access and equity principles and practices  
| | • business and performance plans  
| | • defined resource parameters  
| | • ethical standards  
| | • goals, objectives, plans, systems and processes  
| | • legal and organisational policies, guidelines and requirements  
| | • management and accountability channels  
| | • manufacturers' and operational specifications  
| | • OHS policies, procedures and programs  
| | • environmental sustainability business practices and standards  
| | • quality and continuous improvement processes and standards  
| | • quality assurance and/or procedures manuals  
| | • reporting requirements  
| | • security and confidentiality requirements |

| Business equipment and technology may include: | • answering machine  
| | • binder  
| | • computer  
| | • fax machine  
| | • photocopier  
| | • printer  
| | • shredder |
### Appropriate interpersonal skills

- clarity of language
- consultation methods, techniques and protocols
- seeking feedback from group members to confirm understanding
- summarising and paraphrasing
- using appropriate body language

### Feedback sources may include:

- customer/client response data
- employee data
- equipment meter readings
- financial forecasts
- sales orders
- suppliers’ invoices

### Records may include:

- computerised or manual
- financial statements
- invoices
- maintenance schedules
- order forms
- petty cash forms
- purchase orders
- stock list and inventory control

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1. Respond to complaints | 1.1 Process *customer complaints* using *effective communication* according to organisational procedures established under organisational policies, legislation or codes of practice  
1.2 Obtain, *document and review reports relating to customer complaints*  
1.3 Make decisions about customer complaints, taking into account applicable legislation, organisational policies and codes  
1.4 Negotiate resolution of the complaint and obtain agreement where possible  
1.5 Maintain a register of complaints/disputes  
1.6 Inform customer of the outcome of the investigation |
| 2. Refer complaints | 2.1 Identify complaints that require referral to other personnel or external bodies  
2.2 Make *referrals* to appropriate personnel for follow-up in accordance with individual level of responsibility  
2.3 Forward all documents and investigation reports  
2.4 Follow-up appropriate personnel to gain prompt decisions |
| 3. Exercise judgement to resolve customer service issues | 3.1 Identify implications of issues for customer and organisation  
3.2 Analyse, explain and negotiate appropriate options for resolution with customer  
3.3 Propose viable options in accordance with appropriate legislative requirements and enterprise policies  
3.4 Ensure matters for which a solution cannot be negotiated are referred to appropriate personnel |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to:
  - interpret customer complaints
  - monitor and advise on customer service strategies and resolutions
- communication skills to:
  - people with diverse abilities
  - relate to people from culturally diverse backgrounds
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to:
  - apply organisational procedures to a range of situations
  - deal with customer enquiries or complaints
  - exercise judgement in this application
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety (OHS)
- importance of good communication skills and the individual’s role in processing customer complaints
- organisational procedures and standards for processing complaints and recommending appropriate action.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Customers may include: | • customers with routine or specific requests  
• internal or external customers  
• people from a range of social, cultural or ethnic backgrounds  
• people who may be unwell, drug affected or emotionally distressed  
• people with varying physical and mental abilities  
• regular and new customers. |
| Complaints may include: | • different types of severity, formality and sources  
• scenarios where external bodies such as police are required  
• straightforward customer dissatisfaction  
• level of documentation required. |
| Effective communication may include: | • giving customers full attention  
• maintaining eye contact (for face-to-face interactions), except where eye contact may be culturally inappropriate  
• speaking clearly and concisely  
• using appropriate language and tone of voice  
• using clear written information/communication  
• using appropriate non-verbal communication (body language) personal presentation (for face-to-face interactions). |
| Document and review reports relating to customer complaints may include: | • completing forms and written reports  
• using audio-visual tapes  
• using computer-based systems. |
| Referrals may include: | • external bodies:  
• Ombudsman  
• Independent Commission Against Corruption (ICAC)  
• police  
• relevant superiors in the organisational hierarchy. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- **communication skills to:**
  - participate in sustained complex interpersonal exchanges and to interact with others
  - listen to, incorporate and encourage feedback
  - conduct oral presentations to a group, to consult participants and to answer questions
  - manage and work with a group to construct an action plan
  - chair meetings

- **literacy skills to:**
  - categorise and organise information
  - assess information for relevance and accuracy
  - identify and elaborate on key agenda items and source additional information

- **numeracy and time management skills to allow for sufficient meeting preparation**

- **problem-solving skills to choose appropriate solutions from available options.**

### Required knowledge

- **culturally appropriate techniques to communicate with people from diverse backgrounds and people with diverse abilities**

- **key provisions of relevant legislation from all forms of government, standards and codes that may affect aspects of business operations, such as:**
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - copyright
  - occupational health and safety

- **formats for minutes and agendas**

- **group dynamics**

- **meeting terminology, structures, arrangements and responsibilities of chairperson**

- **organisational procedures and policies regarding meetings, chairing and minutes.**
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- applying conventions and procedures for formal and informal meetings
- chairing meetings in relation to agreed agendas.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to reference material in regard to meeting venues, catering, transport suppliers
- access to names and contacts for meeting participants
- access to office supplies and equipment
- access to computers and relevant software.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of minutes, agendas and other communication
- review of testimony from team members, colleagues, supervisors or managers.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other general administration units.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Agendas may include:** | • correspondence  
| | • date, time and location of meeting  
| | • date of next meeting  
| | • general business  
| | • major agenda items  
| | • matters or business arising from the minutes  
| | • minutes of the previous meeting  
| | • reports  
| | • statement of the meeting’s purpose  
| | • welcome |

| **Meeting purpose may include:** | • discussion forum for internal or external clients  
| | • planning and development of a project  
| | • progress of a project  
| | • range of business items  
| | • setting of enterprise or team goals |

| **Meeting arrangements may include:** | • booking an appropriate venue  
| | • deciding on process for recording of meeting  
| | • establishing costs and operating within a budget  
| | • identifying any specific needs of participants  
| | • organising accommodation and transport  
| | • organising appropriate communication technology  
| | • organising catering  
| | • organising a minute taker  
| | • preparing relevant documentation for participants  
| | • scheduling date and time for the meeting |

| **Meeting papers may include:** | • agenda  
| | • chairperson’s report  
| | • correspondence  
| | • draft documentation |

| 1. Prepare a presentation | 1.1. Plan and document presentation approach and intended outcomes  
1.2. Choose *presentation strategies, format and delivery methods* that match the *characteristics* of the target audience, location, resources and personnel needed  
1.3. Select *presentation aids, materials* and *techniques* that suit the format and purpose of the presentation, and will enhance audience understanding of key concepts and central ideas  
1.4. Brief others involved in the presentation on their roles/responsibilities within the presentation  
1.5. Select *techniques to evaluate presentation effectiveness* |
| 2. Deliver a presentation | 2.1. Explain and discuss desired outcomes of the presentation with the target audience  
2.2. Use presentation aids, materials and examples to support target audience understanding of key concepts and central ideas  
2.3. Monitor non-verbal and verbal communication of participants to promote attainment of presentation outcomes  
2.4. Use persuasive communication techniques to secure audience interest  
2.5. Provide opportunities for participants to seek clarification on central ideas and concepts, and adjust the presentation to meet participant needs and preferences  
2.6. Summarise key concepts and ideas at strategic points to facilitate participant understanding |
| 3. Review the presentation | 3.1. Implement *techniques to review the effectiveness* of the presentation  
3.2. Seek and discuss reactions to the presentation from participants or from key personnel involved in the presentation  
3.3. Utilise feedback from the audience or from key personnel involved in the presentation to make changes to central ideas presented |
### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- facilitation and presentation skills to communicate central ideas of a message in an informative and engaging manner, and to utilise verbal and non-verbal techniques to sustain participant engagement
- literacy skills to prepare presentation information and to write in a range of styles for different target audiences.

**Required knowledge**

- data collection methods that will support review of presentations
- industry, product/service
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - occupational health and safety
  - principles of effective communication
  - range of presentation aids and materials available to support presentations.

BSBCOM501B Identify and interpret compliance requirements

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to identify and interpret the range of internal and external compliance requirements and obligations that must be fulfilled by an organisation. A range of legislation, rules, regulations and codes of practice may apply to this unit at the time of endorsement, depending on job roles and jurisdictions. |

© Commonwealth of Australia, 2014
### Application of the Unit

| Application of the unit | This unit applies to individuals working as a chief executive or manager in a small organisation (where it would be part of their broad role) or as a member of a compliance management team within a larger organisation. These individuals require a sound theoretical knowledge of compliance and well established skills in identifying and interpreting compliance requirements relevant to the operations and sphere of business of the organisation and/or industry sector concerned. The unit also applies to internal or external consultants as part of a broader advisory role to the chief executive or management team of a large or small organisation on compliance management policies and systems. As the activities are focused primarily on identifying and interpreting specific legislative requirements, codes of practice, and internal standards and procedures as they relate to a particular organisation, this unit differs from BSBCOM601B Research compliance requirements and issues. Researching compliance issues is a higher order competence aimed at carrying out research into a wider range of compliance-related issues, such as the costs of compliance, the potential impact of compliance on an organisation or industry, and the risks and consequences of non-compliance. |

### Licensing/Regulatory Information

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Clarify the scope of operations | 1.1. Identify and review the relevant range of operations and the sphere of business arrangements of the organisation  
1.2. Conduct an analysis of the operations and business arrangements of the organisation and identify the functions, products and services that may be subject to compliance requirements  
1.3. Develop and document work activity plans for determining relevant compliance requirements  
1.4. Obtain approval of plans from relevant organisational personnel |
| 2. Identify compliance requirements | 2.1. Conduct a search of information on internal and external compliance requirements using appropriate search resources, including relevant Australian and international standards  
2.2. Ensure the search of compliance requirements scans across all relevant jurisdictions of laws, regulations, and industry and organisational codes and standards and identify pertinent compliance requirements  
2.3. Progressively review information collected in terms of its relevance to the organisation's operations, services and products  
2.4. Organise and store gathered information on relevant compliance requirements in an appropriate format for further analysis |
| 3. Interpret, analyse and prioritise identified compliance requirements | 3.1. Review and interpret collected information in terms of its relevance to the organisation's functions, services and products  
3.2. Discuss and clarify with relevant internal or external personnel ambiguities, uncertainties and problems experienced in interpreting identified compliance information  
3.3. Identify, analyse and prioritise relevant compliance requirements in terms of critical implications for the organisation and risks and consequence of possible breaches  
3.4. Group pertinent compliance requirements into those that are critical and central to the organisation's operations, those that are important in some circumstances but are not central to the |

</table>
| organisation's operations, and those that are pertinent but are incidental to the organisation's operations | 4. Document compliance requirements  
  4.1. Organise and document outcomes of the identification and interpretation activities  
  4.2. Prepare and communicate reports of relevant compliance requirements and assessment of implications to relevant personnel performing specific compliance management functions |
### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- **interpersonal skills to:**
  - contribute to the development of a positive culture of compliance within an organisation
  - work with internal and external personnel with an interest in an organisation's compliance program and management system

- interpersonal and communication skills to relate to internal and external personnel, including those representing relevant regulatory authorities, professional institutes and organisations, including standards' organisations

- literacy skills to read and interpret various types of documents and to write reports containing complex concepts

- organisational and time-management skills to conduct compliance management activities

- project management skills to:
  - scope and plan the conduct of compliance requirement identification activities
  - manage other personnel involved in the identification and interpretation of compliance management activities

- research and analytical skills to identify and interpret compliance requirements

- technical skills to use communications technology effectively

#### Required knowledge

- elements of compliance programs and related management systems, including:
  - documentation of compliance requirements relevant to the organisation
  - specification of compliance management functions, accountabilities and responsibilities within the organisation
  - compliance-related management information systems
  - record-keeping systems required for compliance management
  - liaison procedures with relevant internal and external personnel on compliance-related matters
  - breach management policies and processes, including the identification, classification, investigation, rectification and reporting of breaches in compliance requirements
  - compliance reporting procedures
  - corporate induction and training processes related to compliance management

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Range of operations may include: | • full range of operations of an organisation at a particular site  
|                                | • full range of operations of an organisation distributed across multiple sites  
|                                | • full range of operations of an organisation, including mobile units such as vehicles, railway trains, maritime vessels and aircraft  
|                                | • operations of a particular section or organisational unit. |

| Compliance requirements may include: | • cross-industry, industry-specific and internal organisational compliance requirements in such areas as (examples in alphabetical groupings):  
|                                    | • anti-discrimination, including discrimination by race, sex, disability, religion, etc.; alcohol licensing, including licensing regulations covering clubs, pubs, licensed premises, etc.; aviation  
|                                    | • bankruptcy  
|                                    | • chemical use, child protection, construction, conveyancing/real estate, copyright, corporate governance, customs, credit  
|                                    | • education, electricity, environmental protection, equal opportunity  
|                                    | • financial services, including banking; fire; food hygiene; freedom of information; freight forwarding  
|                                    | • gambling, gene technology  
|                                    | • health, human rights  
|                                    | • insurance, immigration, intellectual property  
|                                    | • land management  
|                                    | • maritime, mining  
|                                    | • pharmaceuticals, patents, privacy  
|                                    | • quarantine  
|                                    | • racing, rail transport, road transport  
|                                    | • safety, including cross-industry generic regulations as well as industry, equipment or product-specific subcategories, e.g. marine safety, rail safety, food |
## RANGE STATEMENT

<table>
<thead>
<tr>
<th>Safety, aviation safety, road safety, dangerous goods, construction safety, mine safety, etc.; security; sewage; superannuation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- taxation, telecommunications, tobacco, trade practices and consumer protection.</td>

</tr>
</tbody>
</table>

**Information on internal and external compliance requirements** may include:

- internal policies, standard operating procedures, standards, and codes of practice.
- published material relevant to compliance held in either internal or external libraries.
- relevant legislation, regulations and licensing requirements pertinent to the organisation's operations and sphere of business.

**Search resources** may include:

- computer terminals linked to data sources either via the internet, internal networks, or CDs.
- library resources and materials, including compliance-related books, journals, manuals, standards, CDs and other multimedia resources.
- published information on such things as relevant legislation, regulations, licensing requirements, codes of practice and Australian standards.

**Relevant Australian and international standards** may include:

- AS 3806:2006 Compliance programs
- AS ISO 10002:2006 Customer satisfaction - Guidelines for complaints handling in organizations
- AS ISO 15489:2004 Records management

**Jurisdictions of laws, regulations, industry and organisational codes and standards**

- global
- industry
- local
## RANGE STATEMENT

**may include:**
- national
- organisational
- state or territory.

**Information on relevant compliance requirements may include:**
- correspondence, emails and other written information provided by internal and external personnel contacted during search activities
- information downloadable from relevant websites
- newsletters, bulletins and information sheets and other similar periodic documentation distributed by relevant regulatory authorities and standards bodies
- published information on legislation, regulations, codes of practice, standards, licensing requirements, standard operating procedures, etc.
- records of conversations and meetings with relevant internal and external personnel.

**Relevant internal personnel may include:**
- board of directors
- chief executive officer
- compliance management team
- compliance specialists at the operational level
- frontline managers
- senior management team.

**Relevant external personnel may include:**
- legal and business advisors and consultants with expertise in compliance management
- representatives of professional associations and institutes relevant to the organisation's operations and sphere of business
- representatives of relevant authorities in pertinent compliance areas.

**Relevant personnel performing specific compliance management functions may include:**
- compliance management consultants
- compliance management officers
- compliance managers
- legal personnel specialising in compliance management
- line managers with specific compliance functions.

BSBCOM601B Research compliance requirements and issues

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to explore and investigate various aspects and issues associated with compliance requirements and a related compliance program/management system. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to the higher level research activities needed to identify and investigate critical aspects of compliance requirements and related systems. It may be focused on researching aspects and issues to do with compliance requirements and systems for a specific organisation, or aspects and issues of compliance more generally, such as across a particular industry or the national economy. The unit applies to officers in regulatory authorities or large organisations with roles and responsibilities related to identifying and investigating impacts, issues and policy implications of various aspects of compliance. It also applies to internal or external consultants who carry out research activities for clients on various aspects of compliance as a compliance researcher or member of a compliance management team (usually within a larger organisation). |
Licensing/Regulatory Information
Not applicable.

Elements and Performance Criteria Pre-Content

<p>| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |</p>
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Clarify the purpose and scope of the research | 1.1. Confirm and clarify the purpose and scope of the research in collaboration with the client/s and relevant internal and/or external personnel.  
1.2. Document the purpose and scope of the required research in accordance with organisational and/or client requirements. |
| 2. Develop the research plan | 2.1. Develop a suitable research methodology to enable sufficiently valid and reliable outcomes for the required research.  
2.2. Prepare the research plan for the proposed project.  
2.3. Obtain approval of plan from relevant internal and/or external personnel. |
| 3. Gather required research data | 3.1. Collect relevant research data using appropriate research techniques and sources in accordance with the agreed research plan.  
3.2. Gather and interpret from appropriate sources, information on relevant Australian and international standards pertaining to compliance requirements and related systems.  
3.3. Organise, interpret and review collected data in terms of its relevance to the project's purpose and objectives.  
3.4. Discuss ambiguities, uncertainties and problems experienced while interpreting collected data and address appropriately in conjunction with relevant internal or external personnel.  
3.5. Organise interpreted research data for later analysis. |
| 4. Analyse collected data | 4.1. Analyse data in accordance with planned methodology.  
4.2. Review and discuss outcomes of the analysis with relevant internal or external personnel. |
| 5. Determine research findings and outcomes | 5.1. Interpret the outcomes of the data analysis in accordance with the project objectives.  
5.2. Develop and discuss preliminary findings, identified issues and related recommendations with relevant internal and/or external personnel.  
5.3. Undertake any additional data collection and analysis required to clarify aspects of findings, issues and related action options. |
## ELEMENT
### PERFORMANCE CRITERIA

| 6. Document and disseminate research outcomes | 6.1. Prepare a draft report of the research outcomes, findings and recommendations in accordance with the agreed structure and format, and distribute to relevant internal and/or external personnel for comment and feedback
|  | 6.2. Edit the report based on the feedback obtained
|  | 6.3. Proofread the report prior to publication
|  | 6.4. Ensure the outcomes, findings and recommendations in the report are signed off by *authorised personnel*
|  | 6.5. Produce and disseminate the report to nominated internal and/or external personnel in accordance with agreed arrangements |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- Interpersonal skills to contribute to a positive culture of compliance within an organisation
- Interpersonal skills to relate to internal and external personnel and in particular those representing relevant regulatory authorities, professional institutes and organisations, standards organisations
- Project management skills to:
  - Manage other personnel involved in the research activity
  - Manage time
  - Manage finances
- Research skills to:
  - Conduct literature and internet searches
  - Assist with various types of research surveys
  - Assist with the analysis and organisation of research data, including qualitative and quantitative data, using appropriate techniques
  - Develop research plans.

### Required knowledge

- Compliance requirements relevant to the organisation research methods and techniques suitable for compliance related research projects
- Elements of compliance program/management systems including:
  - Specification of compliance management functions, accountabilities and responsibilities within the organisation
  - Compliance related management information systems
  - Record keeping systems required for compliance management
  - Liaison procedures with relevant internal and external personnel on compliance related matters
  - Breach management policies and processes including the identification, classification, investigation, rectification and reporting of breaches in compliance requirements
  - Compliance reporting procedures
  - Corporate induction and training processes related to compliance management
  - Processes for the internal and external promulgation and promotion of information on compliance requirements and compliance program/management system
  - Compliance complaints handling systems
  - Continuous improvement processes for compliance including monitoring.

BSBCUS201B Deliver a service to customers

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with *BSB07 Business Training Package version 6.0*.  
Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.  
Replaces BSBCUS201A Deliver a service to customers |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to deliver all aspects of customer service at an introductory level. It includes creating a relationship with customers, identifying their needs, delivering services or products and processing customer feedback.

Application of the Unit

This unit applies to individuals who perform a range of routine tasks in the workplace using a limited range of practical skills and fundamental knowledge of customer service in a defined context under direct supervision or with limited individual responsibility.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

</tr>
</tbody>
</table>
### Elements and Performance Criteria

| 1. Establish contact with customers | 1.1 Acknowledge and greet **customer** in a professional, courteous and concise manner according to **organisational requirements**  
1.2 Maintain personal dress and presentation in line with organisational requirements  
1.3 Communicate using appropriate **interpersonal skills** to facilitate accurate and relevant exchange of information  
1.4 Maintain sensitivity to customer specific needs and any cultural, family and individual differences  
1.5 Establish rapport/relationship with customer and express a genuine interest in customer needs/requirements |
|-----------------------------------|----------------------------------------------------------------------------------|
| 2. Identify customer needs         | 2.1 Use appropriate questioning and active listening to determine customer needs  
2.2 Assess customer needs for urgency to identify priorities for service delivery  
2.3 Provide customer with information about available options for meeting customer needs and assist customer to identify preferred option/s  
2.4 Identify personal limitations in addressing customer needs and seek assistance from **designated persons** where required |
| 3. Deliver service to customers    | 3.1 Provide prompt customer service to meet identified needs according to organisational requirements  
3.2 Provide information regarding problems and delays, and follow-up within appropriate timeframes as necessary  
3.3 Communicate with customers in a clear, concise and courteous manner  
3.4 Identify **opportunities** to enhance the quality of service and products, and take action to improve the service whenever possible |
| 4. Process customer feedback       | 4.1 Promptly recognise **customer feedback** and handle sensitively according to organisational requirements  
4.2 Accurately record any feedback and communication between customers and the organisation according to organisational standards, policies and procedures  
4.3 Identify any unmet customer needs and discuss suitability of other products/services  
4.4 Support customers to make contact with other services according to organisational policies and procedures |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to convey meaning clearly, concisely and coherently
- literacy skills to communicate with customers and to develop required product knowledge
- numeracy skills to interpret customer requirements and to meet customer needs
- problem-solving skills to deal with customer enquiries or complaints
- self-management skills to:
  - comply with policies and procedures
  - seek learning and development opportunities.

Required knowledge

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety (OHS)
- organisational policies and procedures relating to customer service and the customer service process.
**Evidence Guide**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<table>

</table>
| - direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
- analysis of responses to case studies and scenarios  
- demonstration of techniques  
- observation of presentations  
- oral or written questioning to assess knowledge of customer service and communication techniques  
- review of information provided to customers about problems and delays, and customer follow-up  
- review of documentation recording feedback and communication between customers and the organisation. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Customers may include: | • contacts from other organisations  
| | • external customers  
| | • internal customers  
| | • members of the public  
| | • patients  
| | • service users. |

| Organisational requirements may include: | • access and equity principles and practice  
| | • anti-discrimination and related policy  
| | • following OHS procedures for dealing with customers  
| | • legal and organisational policies, guidelines and requirements  
| | • quality and continuous improvement processes and standards  
| | • quality assurance and/or procedures manual. |

| Interpersonal skills may include: | • listening actively to what the customer is communicating  
| | • providing an opportunity for the customer to confirm their request  
| | • questioning to clarify and confirm customer needs  
| | • seeking feedback from the customer to confirm understanding of needs  
| | • summarising and paraphrasing to check understanding of customer’s message  
| | • using appropriate body language. |

| Designated persons may include: | • manager, supervisor or team leader  
| | • more experienced personnel with specific knowledge or information  
| | • staff from other work areas with particular product or service knowledge. |

| Opportunities may include: | • advice about warranties, guarantees or support services  
| | • packaging options  
| | • pricing options  
| | • procedures for delivery of goods or service  
| | • provision of product knowledge  
| | • systems for recording complaints. |
Customer feedback may be about:

- damaged goods or delivery problems
- delays
- invoicing errors
- quality of customer service
- quality of service provision.

</table>
| Release 1 | This version first released with *BSB07 Business Training Package version 6.0*
| | Revised unit. Performance criteria amended so that the learner is not required to ‘incorporate evidence of customer satisfaction in decision to modify products or services’. Required skills updated to focus on learning and development practices and compliance with policy and procedures. |
| | Replaces BSBCUS301A Deliver and monitor a service to customers |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify customer needs and monitor service provided to customers. Operators may exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over either a short or long term interaction.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.
**Employability Skills Information**

This unit contains employability skills.

## Elements and Performance Criteria

| 1. Identify customer needs | 1.1 Use *appropriate interpersonal skills* to accurately identify and clarify *customer needs and expectations*
| | 1.2 Assess customer needs for urgency to determine priorities for service delivery according to *organisational requirements*
| | 1.3 Use *effective communication* to inform customers about available choices for meeting their needs and assist in the selection of preferred options
| | 1.4 Identify limitations in addressing customer needs and seek appropriate assistance from *designated individuals*
| 2. Deliver a service to customers | 2.1 Provide prompt service to customers to meet identified needs in accordance with organisational requirements
| | 2.2 Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery
| | 2.3 Sensitively and courteously handle *customer complaints* in accordance with organisational requirements
| | 2.4 Provide assistance or respond to customers with *specific needs* according to organisational requirements
| | 2.5 Identify and use available *opportunities* to promote and enhance services and products to customers
| 3. Monitor and report on service delivery | 3.1 Regularly review customer satisfaction with service delivery using *verifiable evidence* according to organisational requirements
| | 3.2 Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements
| | 3.3 Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements
| | 3.4 Regularly seek customer feedback and use to improve the provision of products and services
| | 3.5 Ensure reports are clear, detailed and contain recommendations focused on critical aspects of service delivery
**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- analytical skills to identify trends and positions of products and services
- communication skills to monitor and advise on customer service strategies
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to deal with customer enquiries or complaints
- technology skills to select and use technology appropriate to a task
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • identifying needs and priorities of customers  
• distinguishing between different levels of customer satisfaction  
• treating customers with courtesy and respect  
• responding to and reporting on, customer feedback  
• knowledge of organisational policy and procedures for customer service. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
| Assessment must ensure:                          | • access to an actual workplace or simulated environment  
• access to office equipment and resources  
• examples of customer complaints  
• examples of documents relating to customer service standards and policies. |

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
|                     | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• review of reports on customer service delivery  
• analysis of responses to case studies and scenarios  
• demonstration of techniques  
• oral or written questioning to assess knowledge of customer service strategies. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Appropriate interpersonal skills may include:          | • listening actively to what the customer is communicating  
|                                                      | • providing an opportunity for the customer to confirm their request  
|                                                      | • questioning to clarify and confirm customer needs  
|                                                      | • seeking feedback from the customer to confirm understanding of needs  
|                                                      | • summarising and paraphrasing to check understanding of customer message  
|                                                      | • using appropriate body language.  
| Customers may include:                                | • corporate customers  
|                                                      | • individual members of the organisation  
|                                                      | • individual members of the public  
|                                                      | • internal or external  
|                                                      | • other agencies.  
| Customer needs and expectations may include:          | • accuracy of information  
|                                                      | • advice or general information  
|                                                      | • complaints  
|                                                      | • fairness/politeness

<tr>
<td>Release 1</td>
<td>New release of this Qualification released with version 6 of BSB07 Business Services Training Package. Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.</td>
</tr>
</tbody>
</table>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation. Operators may have staff involved in delivering customer service and are responsible for the quality of their work. In many instances the work will occur within the organisation’s policies and procedures framework. At this level, the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies, will be required.

Application of the Unit

Many managers are involved in ensuring that products and services are delivered and maintained to standards agreed by the organisation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1. Plan to meet internal and external customer requirements | 1.1 Investigate, identify, assess, and include the needs of customers in planning processes  
1.2 Ensure plans achieve the quality, time and cost specifications agreed with customers |
| 2. Ensure delivery of quality products and services | 2.1 Deliver products and services to customer specifications within organisation’s business plan  
2.2 Monitor team performance to consistently meet the organisation’s quality and delivery standards  
2.3 Assist colleagues to overcome difficulty in meeting customer service standards |
| 3. Monitor, adjust and review customer service | 3.1 Develop and use strategies to monitor progress in achieving product and/or service targets and standards  
3.2 Develop and use strategies to obtain customer feedback to improve the provision of products and services  
3.3. Develop, procure and use resources effectively to provide quality products and services to customers  
3.4 Make decisions to overcome problems and to adapt customer services, products and service delivery in consultation with appropriate individuals and groups  
3.5 Manage records, reports and recommendations within the organisation’s systems and processes |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to:
  - coach and mentor staff and colleagues
  - monitor and advise on customer service strategies
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to:
  - deal with customer enquiries or complaints
  - deal with complex and non-routine difficulties
- technology skills to select and use technology appropriate to a task
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - Australian consumer law
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs
- techniques for solving complaints including the principles and techniques involved in the management and organisation of:
  - customer behaviour
  - customer needs research
  - customer relations
  - ongoing product and/or service quality
  - problem identification and resolution
• quality customer service delivery
• record keeping and management methods
• strategies for monitoring, managing and introducing ways to improve customer service relationships
• strategies to obtain customer feedback.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Customers may be:                      | • Board members                     |
|                                        | • clients, purchasers of services    |
|                                        | • co-workers, peers and fellow frontline managers |
|                                        | • members of the general public who make contact with the organisation, such as prospective purchasers of services |
|                                        | • potential funding bodies           |
|                                        | • supervisors                        |
|                                        | • suppliers of goods and services and contractors providing goods and services. |

| Quality may refer to:                  | • characteristics of a product, system, service or process that meet the requirements of customers and interested parties. |

| Products and services may include:    | • either products or services        |
|                                        | • goods                             |
|                                        | • ideas                             |
|                                        | • infrastructure                   |
|                                        | • private or public sets of benefits. |

| Strategies may refer to:              | • databases and other controls to record and compare data over time |
|                                        | • electronic feedback mechanisms using intranet, internet and email |
|                                        | • feedback forms and other devices to enable communication from customers |
|                                        | • long-term or short-term plans for monitoring achievement and evaluating effectiveness |
|                                        | • policies and procedures           |
|                                        | • questionnaires, survey and interviews |
|                                        | • training and development activities. |

| Resources may include:                | • buildings/facilities              |
|                                        | • equipment                         |
|                                        | • finance                           |
|                                        | • information                       |
|                                        | • people                            |
|                                        | • power/energy                      |

BSBFIM501A Manage budgets and financial plans

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to undertake financial management within a work team in an organisation. This includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances, and reviewing and evaluating effectiveness of financial management processes in line with the financial objectives of the work team and the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit addresses the requirement for managers to ensure that financial resources are used effectively. This is done by ensuring access to budget/s and ongoing monitoring expenditure against the budget/s. The unit applies to managers working in small and large business environments and not for profit organisations. |

Licensing/Regulatory Information
Not applicable.

## Employability Skills Information

| Employability skills | This unit contains employability skills. |

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan financial management approaches | 1.1. Access *budget/financial plans* for the work team  
1.2. Clarify budget/financial plans with *relevant personnel* within the organisation to ensure that documented outcomes are achievable, accurate and comprehensible  
1.3. Negotiate any changes required to be made to budget/financial plans with relevant personnel within the organisation  
1.4. Prepare *contingency plans* in the event that initial plans need to be varied |
| 2. Implement financial management approaches | 2.1. Disseminate relevant details of the agreed budget/financial plans to team members  
2.2. Provide *support* to ensure that team members can competently perform *required roles* associated with the management of finances  
2.3. Determine and access *resources and systems* to manage financial management processes within the work team |
| 3. Monitor and control finances | 3.1. Implement *processes* to monitor actual expenditure and to control costs across the work team  
3.2. Monitor expenditure and costs on an agreed cyclical basis to identify cost variations and expenditure overruns  
3.3. Implement, monitor and modify contingency plans as required to maintain financial objectives  
3.4. *Report* on budget and expenditure in accordance with organisational protocols |
| 4. Review and evaluate financial management processes | 4.1. Collect and collate for analysis, *data and information on the effectiveness of financial management processes* within the work team  
4.2. Analyse data and information on the effectiveness of financial management processes within the work team and identify, document and recommend any improvements to existing processes  
4.3. Implement and monitor agreed improvements in line with financial objectives of the work team and the organisation |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills to read and understand a budget and to update a budget
- technology skills to use software associated with financial record keeping.

Required knowledge

- basic accounting principles
- organisational requirements related to financial management
- relevant legislation and current requirements of the Australian Taxation Office, including GST
- requirements for organisational record keeping and auditing
- principles and techniques involved in:
  - budgeting
  - cash flows
  - electronic spreadsheets
  - GST
  - ledgers and financial statements
  - profit and loss statements.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Budget/financial plans may include: | • cash flow projections  
| | • long-term budgets/plans  
| | • operational plans  
| | • short-term budgets/plans  
| | • spreadsheet-based financial projections  
| | • targets or key performance indicators for production, productivity, wastage, sales, income and expenditure |
| Relevant personnel may include: | • financial managers, accountants or financial controllers  
| | • supervisors, other frontline managers |
| Contingency plans may include: | • contracting out or outsourcing human resources and other functions or tasks  
| | • diversification of outcomes  
| | • finding cheaper or lower quality raw materials and consumables  
| | • increasing sales or production  
| | • recycling and re-using  
| | • rental, hire purchase or alternative means of procurement of required materials, equipment and stock  
| | • restructuring of organisation to reduce labour costs  
| | • risk identification, assessment and management processes  
| | • seeking further funding  
| | • strategies for reducing costs, wastage, stock or consumables  
| | • succession planning |
| Support may include: | • access to specialist advice  
| | • documentation of procedures  
| | • help desk or identified experts within the organisation  
| | • information briefings or sessions |
### RANGE STATEMENT

- intranet-based information
- training including mentoring, coaching and shadowing

**Required roles** may include:

- arranging for use of corporate credit cards
- banking
- debt collection
- ensuring security, accuracy and currency of financial operations
- invoicing clients, customers and consumers
- maintaining journals, ledgers and other record keeping systems
- maintaining petty cash system
- purchasing and procurement
- wages and salaries payments and record keeping

**Resources and systems** may include:

- hardware and software
- human, physical or financial resources
- record keeping systems (electronic and paper-based)
- specialist advice or support

**Processes** to monitor actual expenditure and to control costs across the work team include:

- reporting of:
  - assets
  - consumables
  - equipment
  - expenditure
  - income
  - stock
  - wastage

**Reporting** may include data from:

- bank statements
- credit card statements
- financial reports
- invoices and receipts
- ledgers and journals
- logs
- petty cash records
- spreadsheet-based records

**Data and information on the effectiveness of financial management processes** may include records (paper-based and

BSBHRM402A Recruit, select and induct staff

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to execute tasks associated with the recruitment cycle. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a role in recruitment, selection and induction functions who work under the direction of a human resources manager. It is not assumed that the individuals addressed by this unit have staff who report to them, although this may be the case. Performance of the work described in this unit will be underpinned by in depth knowledge of the work of the organisation, and how recruitment and selection practices fit with other human resource functions. |

Licensing/Regulatory Information
Not applicable.

</table>
| 1. Determine job descriptions | 1.1. Clarify time lines and requirement for appointment  
1.2. Assist with preparation of *job descriptions* which accurately reflect the role requirements in accordance with organisational procedures and *legislation, codes and national standards* and *occupational health and safety (OHS)* considerations  
1.3. Consult with relevant personnel about job descriptions  
1.4. Ensure that job descriptions do not contravene legislative requirements  
1.5. Obtain approvals to advertise position |
| 2. Plan for selection | 2.1. *Advertise* vacancies for *staffing requirements* in accordance with organisational policies and procedures  
2.2. Consult with relevant personnel to convene selection panel and to develop interview questions  
2.3. Short list applicants  
2.4. Ensure that interview questions do not breach legislative requirements  
2.5. Schedule interviews and advise relevant personnel of times, dates and venues |
| 3. Assess and select applicants | 3.1. Participate in interview process and assess candidates against agreed selection criteria  
3.2. Discuss assessment with other selection panel members  
3.3. Correct any biases or deviations from agreed procedures and negotiate for preferred candidate  
3.4. Contact referees for referee reports  
3.5. Prepare selection report and make recommendations to senior personnel for appointment  
3.6. Advise unsuccessful candidates of outcomes and respond to any queries  
3.7. Complete all necessary documentation in accordance with organisational procedures  
3.8. Secure agreement of preferred candidate |
| 4. Appoint and induct successful candidate | 4.1. Provide successful candidate with employment contract and other documentation  
4.2. Advise managers and staff of starting date and make |
ELEMENT | PERFORMANCE CRITERIA

necessary administrative arrangements for pay and employee record keeping
4.3. Advise manager and work team of new appointment
4.4. Arrange induction in accordance with organisational policy

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to use networks to source suitable applicants, to listen to and understand what is being said in interviews, and to advise on the outcomes of the selection process
- literacy skills to work with job descriptions to devise suitable questions for interviews, to prepare letters for unsuccessful applicants and to make job offers
- organising and scheduling skills to arrange interviews and venues.

Required knowledge

- documentation required for recruitment and selection
- human resource functions, human resource life cycle and the place of recruitment and selection in that life cycle
- principles of equity, diversity and relevant legislation.
- range of interviewing techniques and other selection processes and their application.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstrated ability to work with job descriptions to source and select suitable staff
- interviewing and other selection techniques that demonstrate awareness of equal opportunity and anti-discrimination requirements
- knowledge of the human resource life cycle.

### Context of and specific resources for assessment

Assessment must ensure:

- access to an appropriate range of documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports on recruitment and selection
- demonstration of selection techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of interviewing techniques
- review of advertisements for staffing vacancies
- review of documentation provided to successful candidate
- oral or written questioning to assess knowledge of selection processes.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Human Resources.

BSBINM401A IMPLEMENT WORKPLACE INFORMATION SYSTEM

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to implement the workplace information system. It involves the identification, acquisition, initial analysis and use of appropriate information, which plays a significant part in the organisation's effectiveness.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers play a significant role in contributing to the organisation's effectiveness in identifying, acquiring, analysing and using appropriate information.

At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning and evaluation, leadership and guidance of others, and some discretion and judgement. |

Licensing/Regulatory Information
Not applicable.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and source information needs | 1.1. Determine and locate information required by teams  
1.2. Acquire and review information held by the organisation to determine suitability, accessibility, currency and reliability according to organisational policies |
| 2. Collect, analyse and report information | 2.1. Collect information, which is adequate and relevant to the needs of teams, in a timely manner  
2.2. Ensure information is in a format suitable for analysis, interpretation and dissemination  
2.3. Analyse information to identify and report relevant trends and developments in terms of the needs for which it was acquired |
| 3. Implement information systems | 3.1. Implement management information systems effectively to store, retrieve and regularly review data for decision making purposes  
3.2. Use technology available in the work area to manage information effectively  
3.3. Submit recommendations for improving the information system to designated persons and/or groups |
| 4. Prepare for information system changes | 4.1. Collect information about information system future needs in consultation with colleagues, including those who have a specialist role in resource management  
4.2. Ensure estimates of information system future needs reflect the organisation's business plans, and customer and supplier requirements  
4.3. Support proposals to secure resources by clearly presenting submissions that describe realistic options, benefits, costs and outcomes  
4.4. Prepare team members to work with new technology and information system changes |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to work with information, and to research and present information in ways that are appropriate to the work team
- technology skills to work with a range of information systems.

### Required knowledge

- information management systems and technology that would be associated with the workplace such as:
  - budgets and financial management systems
  - customer information software or records
  - databases
  - personal digital assistant (PDA)
  - product and service information
  - project management software
  - record management systems
  - spreadsheets.

- continuous improvement and quality assurance data
- data available internally or externally
- data shared and retrieved in various forms such as in writing or verbally, electronically or manually
- financial and contractual data
- marketing and customer-related data
- organisational performance data
- planning and organisational documents
- policies and procedures

### Organisational policies may include:
- guidelines for decision making throughout the organisation that link the formulation of strategy with its implementation
- sets of accepted actions approved by the organisation
- Standard Operating Procedures

### Technology may include:
- computerised systems and software such as databases, project management and word processing
- telecommunications devices
- any other technology used to carry out work roles and responsibilities

### Designated persons and/or groups may include:
- groups designated in workplace policies and procedures
- managers or supervisors with management roles and responsibilities concerning information systems
- other stakeholders accessing the information system such as customers and service providers
- other work groups or teams whose work will be affected by the system
## RANGE STATEMENT

**Colleagues** may include:
- employees at the same level or more senior managers
- occupational health and safety committee members and other specialists
- people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- team members

**Business plans** may include:
- cash flow projections
- long-term budgets/plans
- operational plans
- short-term budgets/plans
- spreadsheet-based financial projections
- targets or key performance indicators for production, productivity, wastage, sales, income and expenditure

BSBINM501A Manage an information or knowledge management system

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to organise learning to use an information or knowledge management system and to manage the use of the system. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to managers who have responsibility for seeing that key information and corporate knowledge are retained, accessible to others and improve business outcomes. The unit does not address the requirement to select the technical system (software or hardware), which is seen as the role of an information technology specialist, although in some smaller organisations this may be a part of the manager’s role. |

Licensing/Regulatory Information
Not applicable.

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Organise learning to use information or knowledge management system | 1.1. Identify learning needs of relevant personnel and stakeholders for input into, and use of, an information or knowledge management system.  
1.2. Identify and secure human, financial and physical resources required for learning activities to use an information or knowledge management system.  
1.3. Organise and facilitate learning activities.  
1.4. Promote and support use of the system throughout the organisation.  
1.5. Monitor and document effectiveness of learning activities. |
| 2. Manage use of information or knowledge management system | 2.1. Ensure implementation of policies and procedures for the information or knowledge management system are monitored for compliance, effectiveness and efficiency.  
2.2. Address implementation issues and problems as they arise.  
2.3. Monitor integration and alignment with data and information systems.  
2.4. Collect information on achievement of performance measures.  
2.5. Manage contingencies such as system failure or technical difficulties by accessing technical specialist help as required. |
| 3. Review use of information or knowledge management system | 3.1. Analyse effectiveness of system and report on strengths and limitations of the system.  
3.2. Review business and operational plan and determine how effectively the system is contributing to intended outcomes.  
3.3. Make recommendations for improvement to system, policy or work practices. |
### Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

**Required skills**

- analytical and problem-solving skills to ensure the system is working in accordance with organisational expectations and to deal with contingencies
- technology skills to work with and manage the use of the information or knowledge management system.

**Required knowledge**

- legislation, codes of practice and national standards, for example:
  - privacy and confidentiality legislation
  - freedom of information legislation
  - AS 5037:2005 Knowledge management - A guide
- organisational policies and procedures, for example:
  - records management
  - information management
  - customer service
  - commercial confidentiality
- organisational operations, and existing data and information systems.
# Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- analysis of the strengths and weaknesses of information or knowledge management system/s and evaluation of suitability for a particular work or organisational context
- knowledge of relevant legislation, codes of practice and national standards.

## Context of and specific resources for assessment

Assessment must ensure:
- access to system
- access to system user feedback.

## Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- assessment of written reports reviewing and evaluating information or knowledge management systems
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of relevant organisational policies and procedures
- review of identified learning needs personnel and stakeholders regarding the information or knowledge management system
- evaluation of monitoring and documentation about the effectiveness of learning activities
- analysis documentation reporting on the strengths and limitations of the system
- review of recommendations made for improvements to the system, policy or work practices.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant personnel** include:
- managers, leaders, supervisors and coordinators
- owners
- staff, team members and colleagues

**Stakeholders** include:
- clients and customers
- employee representatives
- funding bodies
- industry, professional and trade associations
- regulatory bodies and authorities
- sponsors
- tenderers, suppliers and contractors

**Information or knowledge management** is defined as:
- equipment, strategies, methods, activities and techniques used formally and informally by individuals and the organisation to identify, collect, organise, store, retrieve, analyse, share and draw on information and knowledge valuable to the work of the organisation

**An information or knowledge management system**:
- comprises policies, protocols, procedures and practices to manage information or knowledge within the organisation and among relevant stakeholders

**Learning activities** include:
- coaching and mentoring programs
- help desks
- information sessions, briefings, workshops and training programs
- paper-based or electronic (including intranet) learning opportunities
- use of expert workers such as coaches and mentors to help other personnel use the system

**Policies and procedures for the information or knowledge management system** cover:
- complying with legislative requirements (such as privacy, confidentiality and defamation requirements) and other policies and procedures
- content guidelines
### RANGE STATEMENT

- ensuring accuracy and relevance of knowledge input into the system
- mechanisms, formats and styles of input to system, including appropriate alternative formats for people with a disability
- permissions for input
- removing out-of-date, inaccurate and content that is no longer relevant
- selecting, maintaining and disposing of knowledge in the system
- sharing knowledge in the system

**Performance measures** include:

- key performance indicators
- other systems and measures to enable assessment of how, when, where and why outcomes are being achieved
- performance objectives
- performance standards (including codes of conduct)
- qualitative or quantitative mechanisms to measure individual performance

BSBINN502A Build and sustain an innovative work environment

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to create an environment that enables and supports the application of innovative practice. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals working in leadership or management roles in any industry or community context. The individual could be employed by the organisation, but may also be an external contractor, the leader of a cross organisation team or of a self formed team of individuals. The work group could be permanent or temporary in nature. The unit focuses on the skills and knowledge required to develop and implement a holistic approach to the integration of innovation across all areas of work practice. It also acknowledges the importance of wider contextual evaluation for potential innovations to ensure their value and benefit. |

Licensing/Regulatory Information

</tr>
</tbody>
</table>
| 5. Provide learning opportunities | 5.1. Pro-actively share relevant information, knowledge and skills with colleagues  
5.2. Provide or encourage *formal and informal learning opportunities* to help develop the skills needed for innovation  
5.3. Create opportunities in which individuals can learn from the experience of others |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication, consultation and negotiation skills to model and lead, open and collaborative relationships
- comprehension skills to interpret and develop information that may deal with complex ideas and relate to issues both within and outside a given workplace context
- planning and organisational skills to implement wide-ranging practical processes and procedures that support innovation
- problem-solving skills to assess and respond to challenges and risks around innovation at an operational management level
- self-management and learning skills to evaluate and enhance personal effectiveness, and to promote a culture of ongoing learning and development.

Required knowledge

- benefits of providing coaching and learning opportunities in relation to innovation
- concept of innovation, what it is and what it means for different people either working independently or within an organisation
- context for innovation in the relevant workplace context including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- different ways of rewarding performance
- factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- legislative framework that impacts on operations in the relevant workplace context
- management principles and leadership styles, including the impact of different approaches on innovation
- typical challenges and barriers to innovation within teams and organisations, and ways of overcoming these
- ways in which workplace climate can affect individual attitudes and performance.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- establishment of procedures and practices (for a project or a workplace) which support and foster innovative work practice and include sound evaluation processes
- modelling of behaviour that supports innovative work practice
- knowledge and understanding of the role of leaders and managers in encouraging innovation, and the issues and challenges associated with building and sustaining an innovative work environment.

#### Context of and specific resources for assessment

Assessment must ensure:

- involvement of a team for which the candidate provides leadership and guidance.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- evaluation of outcomes and processes from activities managed by the candidate, particularly in relation to how innovation and innovative practice was encouraged and supported
- oral or written questioning to assess knowledge of ways that innovation can be fostered and the typical challenges and barriers to innovation.

#### Guidance information for assessment

Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended.
Range Statement

<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. </tr>
</tbody>
</table>

### Leadership and management activities may include:
- people management practices
- planning processes
- regular management meetings
- review processes

### Risks may include:
- budgetary issues
- challenging changes in relationships, work practices and general workplace climate
- unforeseen impacts of innovative ideas

### Working conditions may include:
- family-friendly leave entitlements
- flexible working hours
- social leave
- study leave
- time provided for coming up with ideas

### Workplace procedures may relate to:
- briefing processes
- client relations
- performance management
- project management
- staff meetings
- training

### Evaluation of innovative ideas may relate to:
- analysing consistency with overall goals, values or vision
- assessing resource requirements and practicalities
- assessing the potential to find 'champions' or supporters
- evaluating the external factors that may impact on the idea
- exploring the implications of ideas that may stretch or change existing ways of doing things

### Collaborative work arrangements might be:
- cross section
- vertical teams
- within a section
- working with supplier organisations or partner

3.4. Identify folder/subfolder and **file attributes**  
3.5. Move folders/subfolders and files using cut and paste, and drag and drop techniques  
3.6. Save folders/subfolders and files to **appropriate media** where necessary  
3.7. Search for folders/subfolders and files using appropriate software tools  
3.8. Restore deleted folder/subfolders and files as necessary |
| 4. Print information | 4.1. Print information from installed printer  
4.2. View progress of print jobs and delete as required  
4.3. Change default printer if installed and required |
| 5. Shut down computer | 5.1. Close all open applications  
5.2. Shut-down computer according to user procedures |
Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- literacy skills to identify work requirements, to comprehend basic workplace documents, to interpret basic user manuals and to proofread simple documents
- communication skills to identify lines of communication, to request advice, to effectively question, to follow instructions and to receive feedback
- problem-solving skills to solve routine problems in the workplace, while under direct supervision
- technology skills to use equipment safely while under direction, basic keyboard and mouse skills and procedures relating to logging on and accessing a computer
- basic typing techniques and strategies.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - OHS
  - basic ergonomics of computer use
  - main types and parts of computers, and basic features of different operating systems
  - suitable file naming conventions.

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to identify lines of communication, to request advice, to effectively question, to follow instructions and to receive feedback
- literacy skills to identify work requirements, to comprehend basic workplace documents, and to produce and proofread simple documents
- problem-solving skills to solve routine problems in the workplace, while under direct supervision
- technology skills to use equipment safely while under direction, and to use basic keyboard, touch typing and mouse skills to produce simple documents.

**Required knowledge**

- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as OHS
- organisational benchmarks for keyboarding.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- applying touch typing technique to enter alphanumeric characters
- safely using keyboard.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of workplace documentation.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- demonstration of techniques
- oral or written questioning to assess knowledge of keyboard operations and functions
- review of completed documents.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBITU101A Operate a personal computer
- other general administration units.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Ergonomic requirements** may include: | - avoiding radiation from computer screens  
- chair height, seat and back adjustment  
- document holder  
- footrest  
- keyboard and mouse position  
- lighting  
- noise minimisation  
- posture  
- screen position  
- workstation height and layout |
|--------------------------------------|
| **Work organisation** may include:   | - exercise breaks  
- mix of repetitive and other activities  
- rest periods  
- visual display unit (VDU) eye testing |
|--------------------------------------|
| **Touch typing technique** may vary according to: | - level of competency of operator  
- workplace requirements |
|--------------------------------------|
| **Speed and accuracy** must be:      | - consistent with degree of experience of operator  
- relevant to level of responsibility |

BSBMGT401A Show leadership in the workplace

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to work with teams and individuals, their standard of conduct and the initiative they take in influencing others. At this level, work will normally be carried out within routine and non routine methods and procedures which require the exercise of some discretion and judgement. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline management provides the first level of leadership within the organisation. This unit applies to people who are making the transition from being a team member, to taking responsibility for the work and performance of others. Frontline managers have a strong influence on the work culture, values and ethics of the teams they supervise. As such it is important that frontline managers model good practice, professionalism and confidently represent their organisation. |

BSBMGT403A Implement continuous improvement

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to implement the organisation's continuous improvement systems and processes. Particular emphasis is on using systems and strategies to actively encourage the team to participate in the process, monitoring and reviewing performance, and identifying opportunities for further improvements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers have an active role in implementing the continuous improvement process to achieve the organisation's objectives. Their position, closely associated with the creation and delivery of products and services, means that they have an important role in influencing the ongoing development of the organisation. At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning and evaluation, and leadership and guidance of others. |

BSBMGT502B Manage people performance

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to all managers and team leaders who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.
The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.
This is a unit that all managers/prospective managers who have responsibility for other employees should strongly consider undertaking. |

Licensing/Regulatory Information

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to articulate expected standards of performance, to provide effective feedback and to coach staff who need development
- risk management skills to analyse, identify and develop mitigation strategies for identified risks
- planning and organisation skills to ensure a planned and objective approach to the performance management system.

**Required knowledge**

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant awards and certified agreements
- performance measurement systems utilised within the organisation
- unlawful dismissal rules and due process
- staff development options and information.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| *documented performance indicators and a critical description and analysis of performance management system from the workplace*
| *techniques in providing feedback and coaching for improvement in performance*
| *knowledge of relevant awards and certified agreements.* |

### Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of techniques in providing feedback and coaching
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other management units.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th><strong>Performance standards</strong> mean:</th>
<th>• level of performance sought from an individual or group which may be expressed either quantitatively or qualitatively</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Code of Conduct</strong> means:</td>
<td>• agreed (or decreed) set of rules relating to employee behaviour/conduct with other employees or an agreed (or decreed) set of rules relating to employee behaviour/conduct with other employees or customers</td>
</tr>
<tr>
<td><strong>Performance indicators</strong> mean:</td>
<td>• measures against which performance outcomes are gauged</td>
</tr>
<tr>
<td><strong>Risk analysis</strong> means:</td>
<td>• determination of the likelihood of a negative event preventing the organisation meeting its objectives and the likely consequences of such an event on organisational performance</td>
</tr>
</tbody>
</table>
| **Performance management** means: | • in accordance with relevant industrial agreements  
• process or set of processes for establishing a shared understanding of what an individual or group is to achieve, and managing and developing individuals in a way which increases the probability it will be achieved in both the short- and long-term |
| **Excellence in performance** means: | • regularly and consistently exceeding the performance targets established while meeting the organisation’s performance standards |
| **Termination** means:        | • cessation of the contract of employment between an employer and an employee, at the initiative of the employer within relevant industrial agreements |

BSBMGT515A Manage operational plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans. Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to people who manage the work of others and operate within the parameters of a broader strategic and/or business plan. The task of the manager at this level is to develop and implement an operational plan to ensure that the objectives and strategies outlined in the strategic and/or business plan are met by work teams. However in some larger organisations operational plans may be developed by a strategic planning unit. At this level work will normally be carried out within complex and diverse methods and procedures, which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

| 1. Develop operational plan | 1.1. Research, analyse and document **resource requirements** and develop an operational plan in consultation with relevant personnel, colleagues and specialist resource managers  
1.2. Develop and/or implement **consultation processes** as an integral part of the operational planning process  
1.3. Ensure details of the operational plan include the development of **key performance indicators** to measure organisational performance  
1.4. Develop and implement **contingency plans** at appropriate stages of operational planning  
1.5. Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required  
1.6. Obtain approval for plan from relevant parties and ensure understanding among work teams involved |
| 2. Plan and manage resource acquisition | 2.1. Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation’s human resources management policies and practices  
2.2. Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the organisation’s policies, **practices and procedures** |
| 3. Monitor and review operational performance | 3.1. Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets  
3.2. Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance  
3.3. Identify areas of under performance, recommend solutions, and take prompt action to rectify the situation  
3.4. Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources  
3.5. Negotiate recommendations for variations to operational plans and gain approval from designated persons/groups |
### ELEMENT  | PERFORMANCE CRITERIA
--- | ---
 | 3.6. Develop and implement systems to ensure that procedures and records associated with documenting performance are managed in accordance with organisational requirements

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- literacy skills to access and use workplace information and to write a succinct and practical plan
- technology skills to use software to produce and monitor the plan against performance indicators
- planning and organisational skills
- coaching skills to work with people with poor performance
- numeracy skills to allocate and manage financial resources.

#### Required knowledge

- models and methods for operational plans
- budgeting processes
- alternative approaches to improving resource usage and eliminating resource inefficiencies and waste.
## Evidence Guide

<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Evidence of the following is essential:</td>
</tr>
<tr>
<td>• development of an operational plan with details of how it will be implemented and monitored</td>
</tr>
<tr>
<td>• knowledge of models and methods for operational plans.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment must ensure:</td>
</tr>
<tr>
<td>• access to appropriate documentation and resources normally used in the workplace.</td>
</tr>
</tbody>
</table>

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of budgeting processes
- review of operational plan, key performance indicators and contingency plans
- evaluation of employee recruitment and induction strategies
- evaluation of processes implemented to acquire physical resources and services.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Resource requirements

- goods and services to be purchased and ordered
- human, physical and financial resources - both current and projected
- stock requirements and requisitions

### Relevant personnel, colleagues and specialist resource managers

- employees at the same level or more senior managers
- managers
- occupational health and safety committee/s and other people with specialist responsibilities
- supervisors
- union or employee representatives

### Consultation processes

- email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans
- mechanisms used to provide feedback to the work team in relation to outcomes of consultation
- meetings, interviews, brainstorming sessions

### Operational plans

- action plans
- annual plans
- management plans
- tactical plans

### Key performance indicators

- measures for monitoring or evaluating the efficiency or effectiveness of a system which may be used to demonstrate accountability and to identify areas for improvements

### Contingency plans

- contracting out or outsourcing human resources and other functions or tasks
- diversification of outcomes
- finding cheaper or lower quality raw materials
**RANGE STATEMENT**

</tr>
</tbody>
</table>

**Organisation's policies, practices and procedures** may include:

- organisational culture
- organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources
- Standard Operating Procedures
- undocumented practices in line with organisational operations

**Designated persons/groups** may include:

- groups designated in workplace policies and procedures
- managers or supervisors whose roles and responsibilities include decision making on operations
- other stakeholders such as Board members
- other work groups or teams whose work will be affected by recommendations for variations

BSBMGT516C Facilitate continuous improvement

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to lead and manage continuous improvement systems and processes. Particular emphasis is on the development of systems and the analysis of information to monitor and adjust performance strategies, and to manage opportunities for further improvements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to managers who take an active role in managing a continuous improvement process in order to achieve an organisation's objectives. Where managers are closely associated with the creation and delivery of products and services, they play an important part in influencing the ongoing development of the organisation. At this level, work will normally be carried out using complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem-solving and decision-making strategies. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
## Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Strategies** may refer to:
- clarification of roles and expectations
- communication devices and processes, such as intranet and email communication systems, to facilitate input into workplace decisions
- long-term or short-term plans that factor in opportunities for team input
- mentoring and 'buddy' systems to support team members to participate in decision making
- performance plans
- reward and recognition programs for high performing staff
- training and development activities.

**Systems** may refer to:
- forums and meetings
- newsletters and reports
- policies and procedures
- electronic communication devices.

**Continuous improvement processes** may include:
- cyclical audits and reviews of workplace, team and individual performance
- evaluations and monitoring of effectiveness
- modifications and improvements to systems, processes, services and products
- policies and procedures that allow an organisation to systematically review and improve the quality of its products, services and procedures
- seeking and considering feedback from a range of stakeholders.

**Stakeholders** may include:
- business or government contacts
- funding bodies
- individuals within the work team
- internal and external contacts
- organisation’s clients and customers
- professional associations
- senior management and board members.
### RANGE STATEMENT

<table>
<thead>
<tr>
<th>Committees</th>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>unions and employee groups.</td>
<td></td>
</tr>
</tbody>
</table>

**Sustainability requirements** may include:

- addressing environmental and resource sustainability initiatives, such as environmental management systems, action plans, green office programs, surveys and audits
- applying the waste management hierarchy in the workplace
- complying with regulations and corporate social responsibility considerations for sustainability to enhance the organisation's standing in business and community environments
- determining organisation's most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment
- implementing ecological footprinting
- implementing environmental management systems, e.g. ISO 14001:1996 Environmental management systems life cycle analyses
- implementing government initiatives, e.g. Australian government's Greenhouse Challenge Plus
- improving resource and energy efficiency
- initiating and maintaining appropriate organisational procedures for operational energy consumption
- introducing a green office program (a cultural change program)
- introducing green purchasing
- introducing national and international reporting initiatives, e.g. Global Reporting Initiative
- introducing product stewardship
- reducing emissions of greenhouse gases
- reducing use of non-renewable resources
- referencing standards, guidelines and approaches, such as sustainability covenants and compacts or triple bottom line reporting
- supporting sustainable supply chain.

**Knowledge management systems** may include:

- best practice transfer
- communities of practice
- cross-project learning
- expert directories
- knowledge brokers’ knowledge mapping
- knowledge repositories
- measuring and reporting intellectual capital
- mentoring
**RANGE STATEMENT**

- performance management
- post-project reviews
- proximity and architecture
- social software
- storytelling.

**Operational progress**

- customer service indicators
- OHS indicators
- productivity gains
- success in meeting agreed goals and performance indicators.

**Recording of work team performance**

- annotated performance plans
- quantitative data, such as production figures
- recommendations for improvement
- records and reports.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- interpersonal skills to communicate and inspire trust and confidence of others and to ensure their cooperation and support
- networking skills to ensure support from key groups and individuals for concepts/ideas/products/services
- risk management skills to analyse, identify and develop mitigation strategies for identified risks.

#### Required knowledge

- business ethics and their application
- leadership styles and their application
- legislation, codes and by-laws relevant to the organisation's operations
- organisation mission, purpose and values
- organisation objectives, plans and strategies
- organisational change processes.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- input from a wide range of sources providing evidence in respect to a broad range of activities and application of business ethics
- demonstration of personal competence that links to the organisation's requirements for managers
- effective communication skills and an ability to win commitment to the organisation and its activities
- knowledge of leadership styles and their application
- knowledge of legislation, codes and by-laws relevant to the organisation's operations.

### Context of and specific resources for assessment

Assessment must ensure:
- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of demonstrated leadership techniques
- observation of presentations
- review of media and language used when communicating with individuals and groups
- evaluation of accountabilities and responsibilities assigned to teams
- review of documentation outlining personal objectives and work program outcomes
- review of professional development activities undertaken to improve self performance and professional competence.

### Guidance information for

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Expectations of the organisation include:**
- environmental management
- occupational health and safety
- product safety
- service
- values and ethics
- other relevant factors

**Incidents may include:**
- emergency response
- environmental event (emissions, noise, etc.)
- product failure
- workplace accident

**Risk management means:**
- process of identification of potential negative events and the development of plans to mitigate or minimise the likelihood of the negative event occurring and/or the consequences in the event it does occur

**Accountabilities and responsibilities means:**
- clarification of who is to be accountable for a decision or action prior to its execution, and identification of groups, individuals and activities for which a person is responsible for managing

**Positive work environment means:**
- environment where employees identify with the organisation and its purpose and where communication is free-flowing, decisions are transparent and conflict is positive and constructive

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Stakeholders may include: | • Board  
• customers  
• employees  
• government agencies  
• owners  
• shareholders  
• technical advisers |
|---------------------------|--------------------------------------------------|
| Research may include:     | • commissioned research  
• demographics  
• economics  
• internal research  
• market segmentation  
• political  
• product  
• social  
• technological |
| Global context means:     | • examination on a world-wide basis of factors which may impact on the long-term strategic direction of the business |
| Due diligence means:      | • process by which an investor, lawyer, auditor, or other qualified person, verifies the accuracy of data provided by another organisation |

BSBMGT617A Develop and implement a business plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to run a business operation and covers the steps required to develop and implement a business plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who are running an organisation or who take a senior role in determining the effective functioning and success of the organisation. As such, they may oversee the work of a number of teams and other managers. Business plans are critical tools for business growth and development. They will vary depending on the needs of the organisation. This unit covers the typical elements of a business plan and the standard approaches to be used in implementing a business plan. The business plan should be supported by a strategic plan, and may also be supported by a marketing plan and cash flow forecasts. |

Licensing/Regulatory Information
Not applicable.

</thead>
</table>
| 1. Develop business plan | 1.1. Review and evaluate pre-existing *strategic, business and operational plan*, if available  
1.2. Analyse and interpret business vision, mission, values and objectives  
1.3. Consult with *key stakeholders*  
1.4. Review market requirements for the product or service, profile customer needs and research pricing options  
1.5. Develop *performance objectives and measures* through consultation with key stakeholders  
1.6. Identify financial, human and physical resource requirements for the business  
1.7. Consider any permits or licences that may be required for new activity  
1.8. Write *business plan* |
| 2. Monitor performance | 2.1. Communicate business plan to all relevant parties and ensure understanding of performance requirements and timeframes  
2.2. Ensure skilled labour is available to implement plan  
2.3. Test performance measurement systems and refine, if necessary  
2.4. Ensure timely reports on all key aspects of the business are available, user-friendly and balanced in terms of financial and non-financial performance  
2.5. Report system failures, product failures and variances to the business plan as they occur |
| 3. Respond to performance data | 3.1. Analyse performance reports against planned objectives  
3.2. Review performance indicators and refine if necessary  
3.3. Ensure groups and individuals contributing to under-performance are *coached*, and provide training where appropriate  
3.4. Review system processes and work methods regularly as part of continuous improvement |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analytical and research skills to review the market, to research competitors and to review pricing structures
- coaching and communication skills to remediate any under-performance in the work group or individuals
- planning and organising skills to sequence activities and to develop a logical structure.

#### Required knowledge

- performance measurement approaches and benchmarking
- options for developing business plans.

</table>
| 1. Plan promotional activities | 1.1. Access marketing plan for international business activity to inform planning of promotional activities  
1.2. Access relevant information sources to support planning of promotional activities  
1.3. Identify and assess promotional activities to ensure compatibility with organisational requirements and cultural appropriateness  
1.4. Plan and schedule promotional activities according to the marketing needs of the organisation  
1.5. Determine overall promotional objectives in consultation with designated individuals and groups both in international and domestic settings  
1.6. Ensure time lines and costs for promotion of activities are realistic and consistent with budget resources  
1.7. Develop action plans to provide details of products and/or services being promoted |
| 2. Coordinate promotional activities | 2.1. Identify and prepare personnel and resources to support promotional activities, both in international and domestic settings, to facilitate the achievement of promotional goals  
2.2. Identify, agree upon and allocate roles and responsibilities of overseas and domestic personnel for delivery of promotional activities  
2.3. Establish and conduct relationships with targeted groups in overseas settings in a manner which enhances the positive image of the organisation  
2.4. Supervise and support roles and responsibilities of overseas personnel involved in promotional activities  
2.5. Use international business networks to assist in the implementation of promotional activities |
| 3. Review and report on promotional activities | 3.1. Analyse audience feedback and data to determine the impact of the promotional activity on the delivery of products and/or services  
3.2. Assess the effectiveness of planning processes to identify possible improvements in future international promotional activities  
3.3. Collect and provide feedback to personnel and agencies involved in the promotional activity both in international and domestic settings  
3.4. Analyse costs and time lines to evaluate the benefits |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | accruing from the internationally based promotional activities
3.5. Prepare conclusions and recommendations from verifiable evidence and provide constructive advice on future directions of internationally based promotional activities

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- interpersonal skills to establish rapport and build relationships with clients
- organisational and time management skills to sequence tasks and meet time lines
- research, data collection, assessment and evaluation skills to determine appropriate promotional activities for international markets
- technology skills to record and use information gathered about promotional activities.

Required knowledge

- available overseas media
- cultural characteristics of groups within target market
- international business networks
- marketing strategies and promotional activities
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
  - bilateral or regional trade agreements
  - occupational health and safety (OHS)
  - Trade Practices Act
  - World Trade Organisation rules.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstration of planning, coordinating and reviewing of promotional activities to align with marketing plans and market research undertaken for the international markets selected
- report detailing promotional activities undertaken and recommendations to inform and guide future promotional activities in international settings
- knowledge of relevant Australian, international and local legislation.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to workplace documents including completed reports
- access to feedback on activity from overseas personnel/clients.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports on promotional activities
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations promoting goods, services or organisation to international clients or business associations/networks
- observation of techniques used when undertaking promotional activities
- oral or written questioning to assess knowledge of cultural characteristics of groups within target market
- review of action plans developed to provide details of
## EVIDENCE GUIDE

| **products and/or services being promoted** | • analysis of audience feedback and data  
• assessment of conclusions and recommendations  
prepared and advice on future directions of  
internationally based promotional activities. |
| **Guidance information for assessment** | Holistic assessment with other units relevant to the

for example:  
• international business units  
• other marketing units. |
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information sources** may include:
- academics and training providers
- Austrade and other Australian, state/territory government departments and agencies
- overseas embassies, consulates, government departments and agencies within Australia and overseas
- trade and industry publications

**Promotional activities** may include:
- advertisements
- client functions
- demonstration activities
- distribution of free samples
- employee functions
- media announcements
- product launches
- web pages

**Organisational requirements** may include:
- access and equity principles and practice
- allocation of responsibilities for products and/or services
- confidentiality and security requirements
- consideration of cultural issues
- defined resource parameters
- ethical standards
- filing and documentation storage processes
- goals, objectives, plans, systems and processes
- legal and organisational policy/guidelines and requirements
- OHS policies, procedures and programs
- payment and delivery options
- pricing and discount policies
- quality and continuous improvement processes and standards
- quality assurances and/or procedures manuals
- replacement and refund policy and procedures
### RANGE STATEMENT

**Cultural appropriateness** refers to:
- appropriateness of activity related to the culture of countries selected for promotion of products and/or services

**Designated individuals and groups** may refer to:
- colleagues
- committees
- customers
- external organisations such as Austrade, state/territory government departments and agencies, chambers of commerce
- line management
- supervisor

**Personnel and resources** may refer to:
- contractors engaged for specific purposes within promotional activity
- management
- marketing funds
- organisational personnel both in international and domestic settings
- promotional products
- samples
- technology
- time
- venue

**Roles and responsibilities** may include:
- codes of conduct
- considerations of cultural issues
- contractual arrangements with consultants or specialists hired for promotional activity
- job description and employment arrangements
- marketing plans
- organisation's policy relevant to work role
- skills, training and competencies
- supervision and accountability requirements including OHS
- team structures

**International business networks** may refer to:
- formal or informal networks
- government sponsored networks through Austrade or state/territory government agencies, chambers of commerce
- individuals, groups, organisations
- personal or business networks
- professional or trade networks
### RANGE STATEMENT

*Feedback* may be collected from:

- customer/client response data
- employee data
- focus groups
- market share data
- sales orders
- word-of-mouth reports

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to identify hazards, to assess risks in the work area and to review data relating to monitoring and evaluating incidents (accidents), environmental issues and the effectiveness of risk control measures
- literacy skills to comprehend documentation and to interpret OHS requirements
- coaching and mentoring skills to provide support to colleagues.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - OHS
- legal responsibilities of employers, supervisors and employees in the workplace
- hazards and associated risks which exist in the workplace
- organisational policies and procedures relating to hazard management, fire, emergency, evacuation, incident (accident) investigating and reporting
- relevance of consultation as a key mechanism for improving workplace culture.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<tr>
<td></td>
<td>• providing specific, clear and accurate information and advice on workplace hazards to workgroup</td>
</tr>
<tr>
<td></td>
<td>• knowledge of legal responsibilities of employers, supervisors and employees in the workplace.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of documentation relating to hazards in the worklace
- examples of documents relating to workplace safety, hazard identification and risk assessment.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of records communicating the outcomes of consultation over OHS issues to the workgroup
- analysis of responses to case studies and scenarios
- demonstration of techniques
- review of reports to management on the costs associated with providing training for the work team
- oral or written questioning to assess knowledge of workplace safety and hazards
- examples of risk assessments
- evaluation of actioning of team member hazard
## EVIDENCE GUIDE

| reports | review of OHS records of occupational injury and disease incidents in work area. |

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- management units
- other OHS units.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **OHS legislation and codes of practice** may include: | • common law duties to meet the general duty of care requirements  
• health and safety representatives and health and safety committees  
• prompt resolution of health and safety issues  
• provision of information, induction and training  
• regulations and approved codes of practice relating to hazards present in work area  
• relevant state/territory legislation  
• requirements for the maintenance and confidentiality of records of occupational injury and disease |
| --- | --- |
| **Organisation's OHS policies, procedures and programs** may include: | • consultative arrangements for employees in work area  
• dangerous goods transport and storage  
• emergency and evacuation procedures  
• first aid provision/medical practitioner contact and attention  
• hazard reporting procedures  
• hazardous substances use and storage  
• incident (accident) investigation  
• OHS arrangements for on site contractors, visitors and members of public  
• OHS audits and safety inspections  
• plant and equipment maintenance and use  
• procedures for hazard identification  
• procedures for risk assessment, selection and implementation of risk control measures  
• purchasing policy and procedures  
• safe operating procedures/instructions  
• site access  
• use and care of personal protective equipment |
### RANGE STATEMENT

**Identified hazards and the outcomes of risk assessment** may include:

- checking equipment before and during work
- consulting work team members
- daily informal employee consultation and regular formal employee meetings
- housekeeping
- OHS audits and review of audit reports
- review of health and safety records including hazard reports, hazardous substances and dangerous goods registers, injury records
- workplace inspections in area of responsibility

**Organisational consultation procedures** may include:

- attendance of health and safety representatives at management and OHS planning meetings
- counselling/disciplinary processes
- early response to employee suggestions, requests, reports and concerns put forward to management
- election of health and safety representatives in accordance with legislative requirements
- formal and informal meetings
- health and safety committees
- other committees, for example, planning and purchasing

**Procedures to control risks** may include:

- consultation with employees and their representatives
- job/process/workplace re-design e.g. introduce mechanical handling equipment, re-arrange material flow/timing/scheduling, raise/lower work platforms
- removing the cause of a risk at its source (eliminating the hazard) e.g. removing stored goods permanently from emergency exit passageways
- selecting control measures in accordance with the hierarchy i.e. work through hierarchy from most effective to least effective control

**OHS records** may include:

- audit and inspection reports
- consultation e.g. meetings of health & safety committees, workgroup meeting agendas including OHS items and actions
- first aid/medical post records
- hazardous substances registers
- induction, instruction and training
RANGE STATEMENT

- manufacturer's and supplier's information including dangerous goods storage lists
- plant and equipment maintenance and testing reports
- workers compensation and rehabilitation records
- workplace environmental monitoring records

BSBOHS509A Ensure a safe workplace

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to establish, maintain and evaluate the organisation's occupational health and safety (OHS) policies, procedures and programs in the relevant work area in accordance with OHS legal requirements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Managers play an important role in ensuring the safety of the workplace and the wellbeing of their staff. This unit applies to managers working in a range of contexts. It takes a systems approach and ensures compliance with relevant legislative requirements. All those who have, or are likely to have, a management responsibility for OHS should undertake this unit. It is relevant for those with managerial responsibilities, either as an owner or employee-manager of a business. |

Licensing/Regulatory Information

### Employability Skills Information

| Employability skills | This unit contains employability skills. |

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish and maintain an OHS system | 1.1. Locate and communicate OHS policies which clearly express the organisation's commitment to implement relevant OHS legislation in the enterprise  
1.2. Define OHS responsibilities for all workplace personnel in accordance with OHS policies, procedures and programs  
1.3. Identify and approve financial and human resources for the effective operation of the OHS system |
| 2. Establish and maintain participative arrangements for the management of OHS | 2.1. Establish and maintain participative arrangements with employees and their representatives in accordance with relevant OHS legislation  
2.2. Appropriately resolve issues raised through participative arrangements and consultation  
2.3. Promptly provide information about the outcomes of participation and consultation in a manner accessible to employees |
| 3. Establish and maintain procedures for identifying hazards, and assessing and controlling risks | 3.1. Develop procedures for ongoing hazard identification, and assessment and control of associated risks  
3.2. Include hazard identification at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created by the proposed changes  
3.3. Develop and maintain procedures for selection and implementation of risk control measures in accordance with the hierarchy of control  
3.4. Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and promptly provide resources to enable implementation of new measures  
3.5. Identify intervention points for expert OHS advice |
| 4. Establish and maintain a quality OHS management system | 4.1. Develop and provide an OHS induction and training program for all employees as part of the organisation's training program  
4.2. Utilise system for OHS record keeping to allow identification of patterns of occupational injury and disease in the organisation  
4.3. Measure and evaluate the OHS system in line with the organisation's quality systems framework  
4.4. Develop and implement improvements to the OHS system |
ELEMENT | PERFORMANCE CRITERIA
---|---
| system to achieve organisational OHS objectives
| 4.5. Ensure compliance with the OHS legislative framework so that legal OHS standards are maintained as a minimum

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytic skills to analyse relevant workplace data in order to identify hazards, and to assess and control risks
- communication skills to consult with staff and to promote a safe workplace
- problem-solving skills to deal with complex and non-routine difficulties
- technology skills to store and retrieve relevant workplace data.

**Required knowledge**

- application of the hierarchy of control (the preferred order of risk control measures from most to least preferred, that is, elimination, engineering controls, administrative controls, personal protective equipment)
- hazard identification and risk management
- relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations and anti-discrimination
- reporting requirements.
## Evidence Guide

**Overview of assessment**

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- detailed knowledge and application of all relevant OHS legislative frameworks
- establishment and maintenance of arrangements for managing OHS within the organisations' business systems and practices
- identification of intervention points for expert OHS advice
- principles and practice of effective OHS management in a small, medium or large business.

### Context of and specific resources for assessment

Assessment must ensure:
- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of OHS policies, information provided on the OHS system, information about the outcomes of participation and consultation provided to employees
- oral or written questioning to assess knowledge of OHS and OHS legislation
- evaluation of OHS induction and training
- review of OHS record keeping system.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other OHS units

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**OHS legislation** will depend on state/territory legislation and requirements, and will include:

- common law duties to meet general duty of care requirements
- regulations and approved codes of practice relating to hazards in the work area
- requirements for establishment of consultative arrangements including those for health and safety representatives, and health and safety committees
- requirements for effective management of hazards
- requirements for provision of information and training including training in safe operating procedures, procedures for workplace hazards, hazard identification, risk assessment and risk control, and emergency and evacuation procedures
- requirements for the maintenance and confidentiality of records of occupational injury and disease

**Control of associated risks** may include:

- administrative
- counselling/disciplinary processes
- elimination
- engineering
- housekeeping and storage
- issue resolution
- OHS records maintenance and analysis
- personal protective equipment
- purchasing of supplies and equipment
- workplace inspections including plant and equipment

**Organisational health and safety record keeping** may relate to:

- audit and inspection reports
- workplace environmental monitoring records
- consultation e.g. meetings of health & safety committees, work group meeting agendas

<tbody>
<tr>
<td>This unit describes the performance outcomes, skills and knowledge required to contribute to the control of a project's scope by assisting with the identification of objectives, deliverables, constraints, assumptions and outcomes; and by applying controls once the project has commenced.</td>
</tr>
</tbody>
</table>

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.
Application of the Unit

This unit applies to a project team member working under the direction of a project manager with other project team members. The individual may be operating within an organisation or as a consultant. The skills should be applied in the context of multiple complex projects, with the individual operating as part of a specialist project management team.

In the context of this unit a complex project is defined as a project which involves:

- a comprehensive and multi faceted project plan
- a formal internal or external communications strategy
- a dedicated and diverse project budget
- multiple administrative components
- multiple operational components
- a wide range of stakeholders
- a project operations team.

The functions performed by a worker managing a straightforward project or a section of a larger project where project management is not the main focus of the job role are covered by BSBPMG510A Manage Projects.

The functions performed by a project manager to manage the scope of the whole project are addressed in BSBPMG502A Manage Project Scope.

| 1. Contribute to scope definition | 1.1. Contribute to the identification of project deliverables  
1.2. Contribute to the identification of measurable outcomes to enable evaluation of project performance  
1.3. Contribute to the development of the scope management plan |
| 2. Apply project scope controls | 2.1. Undertake work in accordance with agreed project management plan and by using established change control procedures and performance measurement procedures  
2.2. Monitor and control aspects of project scope and communicate instances of non-compliance with overall scope to the project manager and other team members  
2.3. Measure progress to determine potential, perceived and actual scope changes  
2.4. Appropriately report scope changes  
2.5. Provide assistance in the review of project outcomes to determine the effectiveness of initial and subsequent scope management approaches |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills sufficient to interpret potentially complex project plans and documentation
- planning and organisational skills to monitor and respond to compliance issues and to measure progress against agreed objectives
- teamwork and communication skills to liaise with other members of the project team on a range of project scope management issues and challenges.

Required knowledge

- elements which make up a project scope management plan
- methods for measuring work outcomes and progress against plans
- factors likely to impact on project scope
- methods for segmenting and documenting the work of a project.
Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine project schedule | 1.1. Determine the duration, effort, sequence and dependencies of tasks from the scope definition as the basis for the project schedule  
1.2. Obtain input and approval for the project schedule from stakeholders  
1.3. Select and use *methods, techniques and tools*, within delegated authority, to determine preferred schedule, *time management plan/s*, resource allocation and financial requirements  
1.4. Obtain agreement to the schedule from relevant project authority and communicate this agreement to stakeholders to provide the basis for measurement of progress |
| 2. Implement project schedule | 2.1. Implement mechanisms to measure, record and report progress of activities in relation to the agreed schedule and plans  
2.2. Conduct ongoing analysis of options to identify variances and to forecast the impact of changes to the schedule  
2.3. Review progress throughout the project life cycle and implement agreed schedule changes to ensure consistency with changing scope, objectives and constraints related to time and resource availability  
2.4. Develop responses to perceived, potential or actual schedule changes, ensure agreement by a higher project authority, and implement to maintain project objectives |
| 3. Assess time management outcomes | 3.1. Review project outcomes from available *records* and information to determine the effectiveness of time management activities  
3.2. Identify and document time management issues and recommended improvements, and pass on to relevant project authority for application in future projects |
Required Skills and Knowledge

REQUERED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read, develop and interpret project schedules
- self management skills to ensure vision and priorities are clear
- organisational skills to sequence tasks and see that objectives are met
- communication skills to convey expectations and to advise others of progress
- technology skills to use appropriate software to develop project schedules
- analytical skills to review and evaluate process.

Required knowledge

- techniques and tools for project schedules
- project life cycle
- time management methodologies, their capabilities, limitations, application and outcomes.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Others may include: | • relevant project authority  
|                     | • program manager  
|                     | • project specialists or other personnel  
|                     | • team members |

| Project costs are estimated to a level of accuracy available considering: | • availability of information at the time  
| | • contingencies to allow for identified risks and uncertainty  
| | • organisational requirements, for example overhead and profit margin  
| | • stage of the project life cycle |

| Delegated authority means that activities will: | • be conducted routinely or as changing circumstances dictate  
| | • be done independently within broad guidance or by taking the lead of a team  
| | • involve consultation with other project members, teams and internal stakeholders  
| | • involve the selection, use and supervision of appropriate time management methods, tools and techniques  
| | • take into account internal organisational change and external environmental change |

| Financial management processes and procedures may include: | • approval processes  
| | • communication and reporting processes  
| | • financial authorisations/delegations  
| | • invoice procedures |

| Reviewing may include evaluations of: | • agreed major milestones, for example phases and sub-contracts  
| | • change of key personnel  
| | • delivery of major deliverables  
| | • finalisation of project and other agreed milestones |

| Records may include: | • budgets, commitment and expenditure  
| | • cost management lessons learned |

| 1. Implement human resource and stakeholder planning activities | 1.1. Identify project stakeholders and verify their expectations in order to quantify project outcomes  
1.2. Determine resource requirements for individual tasks, with input from stakeholders and guidance from a higher project authority, to determine project staffing levels and required competencies  
1.3. Establish *project organisation and structure* to align individual and group competencies with project tasks  
1.4. Allocate *staff* to the project with the approval of a higher project authority, to meet work requirements throughout the project life cycle  
1.5. Develop and use **HRM methods, techniques and tools** to implement procedures and plans to ensure clarity of understanding and ongoing HRM |
| 2. Implement staff training and development | 2.1. Communicate designated staff responsibilities, authority and individual performance measurement criteria to the project team and other relevant stakeholders, to ensure clarity of understanding of the work and to provide a basis for ongoing assessment  
2.2. Identify, plan and implement ongoing development and training of project team members to achieve HRM and overall project objectives, with agreement of a higher project authority  
2.3. Measure individuals’ performance against agreed criteria and initiate actions to overcome shortfalls in performance and to encourage career progression |
| 3. Manage the project team and stakeholders | 3.1. Implement processes to promote continuous improvement of staff, and take actions to improve staff and overall project effectiveness  
3.2. Monitor and report internal and external influences on individual and project team member performance and morale to a higher project authority, if necessary, for remedial action  
3.3. Implement established procedures for interpersonal communication, counselling and conflict resolution to maintain a positive working environment  
3.4. Continually review stakeholder expectations to resolve expectation variance and to ensure project is on track to deliver expected outcomes  
3.5. Identify and manage inter-project and intra-project |

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- planning skills to identify skills required and to allocate project responsibilities to staff
- communication and leadership skills to motivate staff, convey expectations and ensure outcomes are met
- interpersonal skills to resolve conflict
- coaching and mentoring skills to boost performance
- analytical skills to review project and to identify improvements.

#### Required knowledge

- roles and responsibilities in project management
- methods for managing and improving performance
- HRM legislation, methods, techniques and tools.
## Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstrated evidence of successfully managing project staff so that outcomes were achieved on multiple complex projects
- knowledge of HRM legislation, methods, techniques

### Context of and specific resources for assessment

Assessment must ensure:

- access to workplace documentation
- consideration of feedback from project team and other stakeholders on how human resources were managed.

### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project human resources and their application to different situations
- analysis of responses addressing case studies and scenarios which present project human resource management issues and problems
- assessment of staff allocated to the project
- evaluation of processes used to measure individuals' performance against agreed criteria and to overcome shortfalls in performance
- evaluation of how procedures for interpersonal communication, counselling and conflict resolution were implemented.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Project Management.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Project organisation and structure** may be affected by established organisational responses to external influences such as:

- accepted work practices
- relevant legislation, such as anti-discrimination, equal employment opportunity, affirmative action and occupational health and safety
- workplace bargaining

**Staff** may be:

- external to the organisation, such as consultants, auditors and quality assurance specialists
- from within the organisation, such as staff on loan from other projects

**HRM methods, techniques and tools** may include established organisational responses to:

- conflict resolution
- HRM forecasts, staffing plans and job descriptions
- individual and group competency identification and development
- performance monitoring, assessment and reporting
- staff recruitment and reallocation

BSBPMG507A Manage project communications

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to link people, ideas and information at all stages in the project life cycle. Project communications management ensures the timely and appropriate generation, collection, dissemination, storage and disposal of project information through formal structures and processes. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

© Commonwealth of Australia, 2014  
Transport & Logistics Industry Skills Council
### Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant. In the context of this unit a complex project is defined as a project which involves:  
- the need for a comprehensive and multi faceted project plan  
- the need for a formal internal or external communications strategy  
- a dedicated and diverse project budget  
- multiple administrative components  
- multiple operational components  
- a wide range of stakeholders  
- a project operations team.  
The functions performed by a program manager to manage communications within multiple projects are addressed in BSBPMG607A Direct communications management of a project program. |

### Licensing/Regulatory Information

**Delegated authority** means that activities may:
- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate communications management methods and tools
- take into account internal organisational change and external environmental change

**Project management information system** is a means for communicating knowledge about the project and provides a systematic approach to the storing, searching and retrieval of information relevant to the project and may include:
- complex computer-based systems
- modified systems to cater for unique project requirements
- simple manual systems

**Communication networks** may include:
- client organisation and end users
- formal networks
- informal networks
- organisation's communication networks
- specific networks

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- problem-solving skills to resolve contractual and logistic issues
- negotiation skills to obtain required agreement in procurement and contracting discussions
- planning and organisational skills to identify procurement and contract requirements and to adjust and sequence these appropriately
- literacy and numeracy skills to produce and work with a range of procurement and contract documentation
- technology skills to use procurement and financial management software.

#### Required knowledge

- contracts and legal obligations as they relate to project management
- procurement options, procedures and documentation
- relevant legislation, codes and national standards relevant.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstrated experience in managing procurement and contracting processes in multiple complex projects
- knowledge of contracts and legal obligations as they relate to project management.

**Context of and specific resources for assessment**

Assessment must ensure:

- access to workplace documentation in the area of procurement and contracts
- consideration of evidence from stakeholders as to how procurement was managed.

**Method of assessment**

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project procurement and their application to different situations
- analysis of responses in addressing case studies and scenarios which present project procurement and contract management issues and problems
- review of procurement management plan
- review of communication of agreed proposals and/or specifications to prospective contractors or suppliers
- assessment of evaluation of responses and selection processes for preferred contractors or suppliers
- review of identification and reporting of procurement management problems.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
EVIDENCE GUIDE

- other units in the Diploma of Project Management.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Delegated authority** refers to planning and activities that may:

- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate procurement management methods, tools and techniques
- take into account internal organisational change and external environmental change

**Procurement management plan** identifies and outlines:

- how procurement arrangements are communicated to stakeholders
- processes to be used for procurement of resources
- process for monitoring and evaluating procurement related to the project
- procurement objectives, strategies and time lines
- resources to be obtained against a time line and budget
- responsibilities for staff/team members

**Modifications** may be made:

- in consultation with project team members, section heads, project manager and stakeholders
- independently or with higher project authority endorsement if necessary
- regularly throughout the project life cycle
- taking into account internal organisational change and external environmental change

**Procurement records and information** may include:

- contract change proposals and approvals
- contract discharge and asset disposal register
- contract documentation
- contract negotiation documentation
### RANGE STATEMENT

- contractor selection criteria, processes and recommendations

BSBPMG510A Manage projects

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage a straightforward project or a section of a larger project. This unit addresses the management of projects including the development of a project plan, administering and monitoring the project, finalising the project and reviewing the project to identify lessons learnt for application to future projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | The unit focuses on the application of project management skills and the requirement to meet time lines, quality standards, budgetary limits and other requirements set for the project. The unit does not apply to specialist project managers. For specialist project managers, the units of competency in the Project Management competency field will be applicable. |

Licensing/Regulatory Information

**Required skills**

- communication and negotiation skills to work with team members and other stakeholders to maintain project schedules
- literacy skills to read, write and review a range of documentation
- planning and organising skills to develop, monitor and maintain implementation schedules
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

**Required knowledge**

- relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - OHS
- organisational structure, and lines of authority and communication within the organisation
- how the project relates to organisation's overall mission, goals, objectives and operations.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- development of a project plan
- details of monitoring arrangement/s and evaluation of the project plan's efficacy to address time lines and budgets of project
- knowledge of relevant legislation.

**Context of and specific resources for assessment**

Assessment must ensure:

- access to workplace project documentation.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of how the project relates to the organisation's overall mission, goals, objectives and operations
- review of project risk management plan and project plan
- evaluation of project reports forwarded to stakeholders
- analysis of documentation reviewing project outcomes and processes against the project scope and plan
- evaluation of documentation outlining lessons learnt from the project.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other project management units.
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Project scope and other relevant documentation

- contract or other agreement
- project brief
- project plan or summary
- other documents outlining expected outcomes of the project, inclusions and exclusions from project, timeframes for project, quality standards for project, project resources

### Stakeholders

- clients or customers (internal and external)
- funding bodies
- management, employees and relevant key personnel (internal and external) with special responsibilities
- project sponsor

### Delegating authority

- customer or client
- funding body
- manager or management representative
- project sponsor

### Project parameters

- finances for project
- integration of project within organisation
- legislative and quality standards
- physical, human and technical resources available or required for project
- procurement requirements associated with project
- reporting requirements
- risks associated with project, including OHS
- scope of project
- time lines

### Project management tools

- cost schedule control system
- Critical Path Method
- Gantt and bar charts
- life cycle cost analysis
- logistics support analysis
### RANGE STATEMENT

**Support for project team members** may include:  
• additional physical, human and technical resources (within allocated budget) if and as required  
• encouragement  
• feedback  
• learning and development  
• regular project team meetings  
• supervision, mentoring and coaching  

**Required record keeping systems** may include systems for:  
• correspondence  
• financial data including costs, expenditure, income generated, purchases  
• project outcomes  
• quality data including any test results  
• recording of time spent on project and progress in completing project  
• samples, prototypes, models  

**Risk management** may include:  
• changing roles and responsibilities within project team  
• negotiating an extension of deadline, or redefining completion or quantities or quality of outcomes  
• outsourcing some aspects of the project  
• reducing costs  
• researching and applying more efficient methods for completing project tasks  
• seeking further resources to meet deadline  
• sharing of ideas to gain improvements to work undertaken within the project  

**Necessary sign offs** may be required by:  
• clients, customers  
• funding body  
• management  
• project sponsor

BSBPMG604A Direct cost management of a project program

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to analyse, coordinate, and refine the budgets of multiple projects that contribute to an overall program budget. It covers directing project budget development, managing program costs and directing the financial completion of projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s. For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager. The functions performed by a project manager to manage costs within individual projects are addressed in BSBPMG504A Manage project costs. |

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct project budget development | 1.1. Direct project managers to determine resource requirements for individual tasks, in consultation with appropriate stakeholders, to develop a project budget which contributes to the program budget  
1.2. Direct project cost estimation to enable budgets and cost management processes to be developed for the project life cycles  
1.3. Direct and authorise cost strategies and cost management plans to ensure clarity of understanding and ongoing management of project finances and the program budget overall |
| 2. Manage program costs | 2.1. Develop and maintain cost management systems to direct monitoring of actual expenditure and to control costs throughout multiple project life cycles and for the program overall  
2.2. Conduct analysis, evaluate options and implement responses to project cost variations to maintain control over changing financial and overall program objectives  
2.3. Monitor internal and external influences on program costs and, where necessary, seek approval from business management for changes to the approved program budget |
| 3. Direct financial completion | 3.1. Provide direction for project finalisation activities to achieve integrated financial and physical project completion within program and therefore client and organisational expectations  
3.2. Review project outcomes from available records at the finalisation of each project, and analyse information to determine the effectiveness of cost management systems  
3.3. File program lessons learned as a resource for future reference and, where necessary, refer to higher project authority for application in planning strategic direction changes and business outcomes for future projects |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- technology skills to oversee project financial performance
- numeracy skills to develop and interpret project budgets and to provide financial information
- literacy skills to communicate decisions and to write quality reports
- leadership skills to inspire trust and confidence in teams, managers and stakeholders
- communication and interpersonal skills to convey expectations, resolve conflict and motivate performance
- planning skills to review project resource requirements and to cost estimates
- problem-solving skills to resolve costing issues.

### Required knowledge

- regulatory and legislative financial reporting requirements
- methods for costing and estimating project resources
- methods for monitoring and controlling project expenditure.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Cost estimation may take account of:
- availability of information at the time
- contingencies to allow for identified risks and uncertainty
- government regulations, industry codes of practice and organisational influences
- overhead and profit margin
- stage in each project's life cycle

### Cost management plans and activities throughout program management may:
- be conducted non-routinely to meet complex and changing circumstances
- be done independently or by taking the lead in a team environment
- involve consultation with, and selective involvement of, appropriate project stakeholders
- involve the selection, modification and supervision of the use of appropriate cost management methods, processes, procedures, tools and techniques
- take into account the impact of organisational and environmental change on the project/program and vice versa

### Management of project finances may include:
- approval processes
- audit and review
- communication, reports and briefs
- financial authorisations/delegations
- invoice procedures

### Development of cost management systems may involve:
- application of personal judgement
- authorising and revising financial delegations
- cost modelling and estimating
- financial analysis, for example benefit-cost analysis, cash flow analysis, earned value analysis
- modification of program methodologies and procedures
## RANGE STATEMENT

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | • program obligation, expenditure forecasting and long-term planning  
|   | • progress and financial change management  
| **Finalisation activities** may include: | • comparison of one project’s cost management outcomes with success rates of other projects and with overall (organisation) budgetary expectations  
|   | • direction of project team managers in their:  
|   | • final audit/reconciliation  
|   | • close-out of account codes and other financial documentation  
|   | • settling of financial liabilities  
|   | • transfer of assets to the client or originating owner  
|   | • transition of responsibility/ownership of project deliverables/products  
|   | • warranty requirements resolution  
| **Records** may take the form of: | • budgets, commitment and expenditure  
|   | • cost management lessons learned  
|   | • cost management plans  
|   | • financial charts and graphs  
|   | • financial summaries  
|   | • program and/or organisation files and records  
|   | • records of potential and actual costs  
|   | • reports to higher authority |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct human resources management planning | 1.1. Direct human resource requirement analysis for projects to determine numbers and skill levels required for the overall program  
1.2. Direct stakeholder assessment to establish a basis for stakeholder management within projects and the overall program  
1.3. Direct responsibility assignment for project activities and tasks, and establish authorisation protocols |
| 2. Manage program organisation and staffing | 2.1. Determine resource requirements for projects in consultation with project managers and appropriate stakeholders, to establish program staffing levels, allocation to projects and required competencies  
2.2. Direct project organisation and structure to optimise alignment of individual and group competencies within projects  
2.3. Direct recruitment of staff for allocation to projects or reallocation within the organisation, within agreed delegated authority, to meet competency requirements throughout the program  
2.4. Direct project managers' use of *human resources management (HRM) methods, techniques and tools*, and modify for program requirements  
2.5. Utilise organisational HRM system and HRM processes across projects |
| 3. Direct project staff performance management | 3.1. Obtain agreement of performance measurement criteria for clarity of roles and responsibilities and ongoing assessment  
3.2. Ensure systems for ongoing *development and training* of personnel across the program are established and implemented by project managers  
3.3. Measure individuals' performance against agreed criteria and authorise actions to overcome shortfalls in performance and encourage career progression |
| 4. Provide overall leadership to project teams | 4.1. Manage a system of continuous improvement of staff to enhance program effectiveness  
4.2. Analyse individual and team performance and morale levels and take action where necessary  
4.3. Direct procedures for interpersonal communication, counselling and conflict resolution by project managers, and review results to maintain and promote a positive working environment |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.4. Identify and positively manage intra-organisational and intra-project conflict to maximise achievement of program objectives
4.5. Aggregate HRM lessons learned for application in planning and, where appropriate, pass on information to others for consideration in strategic planning and direction

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- planning skills to identify human resource requirements across the program
- literacy skills to communicate decisions and to write quality reports
- high level leadership skills to inspire trust and confidence in teams, managers and stakeholders
- communication and interpersonal skills to convey expectations, negotiate, resolve conflict and motivate performance
- problem-solving skills to address HRM issues across the program
- coaching and mentoring skills.

**Required knowledge**

- human resource management methods, techniques and tools
- relevant legislation
- models of performance management and performance development.
# Evidence Guide

<table>

</tr>
</tbody>
</table>

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- demonstrated experience in directing human resources across a range of concurrent projects so that project objectives are achieved
- knowledge of relevant legislation.

## Context of and specific resources for assessment

Assessment must ensure:
- access to workplace HRM documentation
- consideration of feedback from project teams and stakeholders as to how human resource management was handled.

## Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate
- analysis of responses addressing different project scope management case studies and scenarios
- oral or written questioning to assess knowledge of strategies for managing project human resources and their application to different situations
- observation of demonstrated techniques in performance feedback and/or conflict resolution
- observation of performance in role plays
- review of the measurement of individuals' performance against agreed criteria
- evaluation of how the staff continuous improvement system was managed
- assessment of analysis of individual and team performance and morale levels.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,
for example:

- other units in the Advanced Diploma of Project Management.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Project organisation and structure may be affected by external influences such as: | • accepted work practices  
• legislation, including anti-discrimination, equal employment opportunity, affirmative action and occupational health and safety  
• workplace bargaining |
|---|---|
| Staff may: | • be external to the organisation, such as consultants, collaborative or alliance agencies and external authorities  
• come from within the organisation, such as staff on loan from other programs/projects |
| Human resources management methods, techniques and tools may include: | • conflict resolution  
• HRM forecasts, staffing plans and job descriptions  
• individual and group competency identification and development  
• performance monitoring, assessment and reporting  
• staff recruitment and reallocation |
| Development and training may be formal or informal, and may include: | • general management  
• interpersonal communications  
• project administration, for example computer applications, filing systems  
• project management  
• specialist/professional skills and career progression  
• team building and group activities |

BSBPMG609A Direct procurement and contracting for a project program

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to direct the management of contracting and procurement activities across projects and programs. It covers setting up the contracting process, directing the management of contract and procurement processes and finalising contracts for projects across the program. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s. For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager. The functions performed by a project manager to manage procurement within individual projects are addressed in BSBPMG509A Manage project procurement. It should be noted that conflicting priorities between projects are managed with higher project authority support, in this case project governance committees or senior management. |

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Procurement strategies, methods and management plans** may include:

- conflict resolution processes
- contract performance plans and an associated performance monitoring processes
- contractor and sub-contractor responsibilities, controls and reporting relationships
- explanatory information (for example background, restrictions or expectations) relating to special terms and conditions, planning for long lead-time items and critical program components, and transition plans
- procurement, test and acceptance procedures and payment schedules

**Proposals** may take the form of:

- expressions of interest
- quotations
- submissions
- tenders

**Records** may take the form of:

- contract analysis, evaluation of options and strategy development
- contract discharge procedures and outcomes
- contract negotiation documentation, for example contract negotiation strategies, plans, team and individual directives
- contractor identification, evaluation and selection records
- development and management of contract change procedures
- procurement management lessons learned
- procurement management plans
- product specifications
- progress measurement and conflict resolution process records
- test and acceptance procedures

## Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- communication skills to liaise with suppliers and end users of purchases
- literacy skills to document purchases and write reports on purchasing activities
- information management and research skills to analyse and assess purchasing options and offers
- technology skills to use of software to keep records of purchases made
- data collection skills to keep records related to purchasing.

## Required knowledge

- codes of ethics and conduct
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
  - consumer protection legislation
  - contract law
  - import of goods and services, where relevant
  - sale of goods legislation
  - Trade Practices Act
- organisation policy and procedures relating to:
  - purchasing strategies
  - record-keeping systems related to purchasing and assets
  - standard contracting arrangements
- product knowledge about the goods and services being supplied
- purchasing and procurement principles for:
  - accountability
  - probity and transparency
  - risk management
  - value for money.

**Range Statement**

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Purchasing strategies may include:
- criteria for making purchasing decisions
- legal requirements and policies and procedures that underpin strategies and that are relevant to role
- policies, procedures, guidelines and documentation formats for purchasing from suppliers including entities owned by the organisation, partners, alliance members and local and distant suppliers

#### Limits may include:
- approval processes for purchases
- expenditure approval limits

#### Relevant personnel may include:
- CEOs
- managers
- leaders
- coordinators
- supervisors
- other persons authorised to commit the organisation to purchases
- internal users of purchased goods and services
- owner
- Board members
- specialist personnel involved in purchasing, asset maintenance and finance

#### Purchasing methods may include:
- credit card purchases
- direct purchases from retail outlets
- online purchases
- petty cash
- purchases using standing agreements or accounts with suppliers
- written and/or verbal quotations
- written and/or verbal supply agreements

#### Purchase records may include:
- corporate credit card transaction documentation
### RANGE STATEMENT

- invoices, statements and payment requests
- petty cash vouchers
- purchase requests and orders
- receipt advices for goods and services
- records of supplier performance

BSBREL401A Establish networks

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to develop and maintain effective work relationships and networks. It covers the relationship building and negotiation skills required by workers within an organisation as well as freelance or contract workers. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a broad knowledge of networking and negotiation who contribute well developed skills in creating solutions to unpredictable problems through analysis and evaluation of information from a variety of sources. They may have responsibility to provide guidance or to delegate aspects of tasks to others. |

Licensing/Regulatory Information
Not applicable.

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop and maintain business networks | 1.1. Use appropriate *network strategies* to establish and maintain relationships that promote the development of business opportunities  
1.2. Identify and pursue network opportunities to maximise a range of contacts  
1.3. Communicate information regarding new networks to inform individuals, colleagues and clients of potential benefits  
1.4. Participate in *professional networks and associations* to obtain and maintain personal knowledge and skills |
| 2. Establish and maintain business relationships | 2.1. Develop and maintain relationships to promote benefits consistent with *organisational/client requirements*  
2.2. Gain and maintain trust and confidence of contacts through demonstration of high standards of business practices  
2.3. Use a high level of *negotiation skills* to encourage positive outcomes  
2.4. Identify difficult situations and negotiate solutions using collaborative problem-solving techniques  
2.5. Seek specialist advice in the development of contacts where appropriate |
| 3. Promote the relationship | 3.1. Develop strategies to represent and promote the interests and requirements of the relationship  
3.2. Use appropriate presentation skills to communicate the goals and objectives of the relationship  
3.3. Effectively communicate issues, policies and practices of the relationship to a range of audiences, in writing and verbally  
3.4. Obtain *feedback* to identify and develop ways to improve promotional activities within available opportunities |
Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to receive and report on feedback, to maintain effective relationships and to manage conflict
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- leadership skills to gain trust and confidence of clients and colleagues
- negotiation skills to achieve mutually acceptable outcomes
- technology skills to support effective communication and presentation.

**Required knowledge**

- client or organisational policies, plans and procedures
- related organisations, agencies and networks
- trends and forecasts for relevant industries, services and products.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- establishing contacts and participating in networks
- identifying opportunities for networking
- knowledge of related organisations, agencies and networks
- maintaining records of relevant contacts.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of networking strategies and documentation.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation communicating issues, policies and practices of the relationship to a range of audiences
- evaluation of promotional strategies
- observation of negotiation of solutions between groups and individuals
- observation of promotional presentations.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- interpersonal communication units
- other relationship management units.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Network strategies** may include:
- association memberships
- conference participation
- distributing materials
- individual marketing
- maintaining regular contact
- seminar attendance

**Professional networks and associations** may include:
- advisory committees
- colleagues
- committees
- government agencies
- internal/external customers
- lobby groups
- local inter-agency groups
- other organisations
- professional/occupational associations
- project specific ad hoc consultative/reference groups
- specific interest or support groups
- suppliers
- work team

**Organisational/client requirements** may be included in:
- access and equity principles and practices
- defined resource parameters
- ethical standards
- goals, objectives, plans, systems and processes
- legal and organisational policies, guidelines and requirements
- marketing plan
- occupational health and safety policies, procedures and programs
- quality and continuous improvement processes and standards
- quality assurance and/or procedures manuals
## RANGE STATEMENT

**Negotiation skills** may include:
- assertiveness
- bargaining
- collaboration
- confidence building
- conflict reduction
- empathising
- offers and counter offers
- solution designing
- stress management

**Feedback** may include:
- accuracy and sufficiency of information
- appropriateness of audience
- benefits to organisation
- impact of message
- liaison with networks
- participation of competitors
- use of media

BSBRKG304B Maintain business records

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to maintain the records of a business or records system in good order on a day to day basis. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals requiring some understanding of relevant theoretical knowledge relating to recordkeeping functions. It is not assumed that individuals at this level would have responsibility for supervising the work of others; however it is assumed that as a recordkeeping practitioner their work will support effective recordkeeping and governance practices across the organisation.

The application is in relation to the maintenance of records from an existing business or records system that has guidelines and processes to assist in the process. Work carried out in the interest of system maintenance will be performed under supervision or in consultation with more senior staff or users of the system. |

Licensing/Regulatory Information
Not applicable.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to explain and clarify procedures, and to interview users to identify their records/information needs
- literacy skills to read and interpret nature of record content, functions and problems
- problem-solving and analysis skills to identify and manage records.

### Required knowledge

- key provisions of relevant legislation from all forms of government, regulations, standards and documentation that may affect aspects of business operations, such as:
  - AS 5044.1:2002 AGLS Metadata element set
  - AS 5090:2003 Work process analysis for recordkeeping
  - AS ISO 15489:2004 Records management
  - AS ISO 23081.1:2006 Information and documentation - Records management processes - Metadata for records - Principles
  - Australian Stock Exchange(ASX) Principles of Good Corporate Governance
  - ethical principles
  - codes of practice
  - privacy and freedom of information
  - archives and records legislation
  - occupational health and safety
- general principles and processes of records management and records management systems, such as:
  - systems of control
  - records continuum theory
  - mandate and ownership of business process
  - environmental context
  - records characteristics.

| 4. Monitor and review effectiveness of risk treatment/s | 4.1. Regularly review implemented treatment/s against *measures of success*  
4.2. Use review results to improve the treatment of risks  
4.3. Provide assistance to auditing risk in own area of operation  
4.4. Monitor and review management of risk in own area of operation |
Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

**Required skills**

- literacy skills sufficient to read and understand a variety of texts; and to write, edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- research and data collection skills to monitor and evaluate risks
- problem-solving skills to appropriately address identified risks.

**Required knowledge**

- Australian and international standards for risk management
- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - occupational health and safety
- organisational policies and procedures relating to risk management processes and strategies
- auditing requirements relating to risk management.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- identification, analysis and evaluation of risks</td>
<td></td>
</tr>
<tr>
<td>- demonstrated understanding of personal role in relation to wider organisational or project context</td>
<td></td>
</tr>
<tr>
<td>- demonstrated understanding of risk management processes and procedures.</td>
<td></td>
</tr>
</tbody>
</table>

Context of and specific resources for assessment

<table>
<thead>
<tr>
<th>Assessment must ensure:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- access to workplace documentation relating to risk management</td>
</tr>
<tr>
<td>- access to risk management tools and frameworks.</td>
</tr>
</tbody>
</table>

Method of assessment

<table>
<thead>
<tr>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate</td>
</tr>
<tr>
<td>- review of documentation outlining risk analysis processes and outcomes</td>
</tr>
<tr>
<td>- analysis of responses to case studies and scenarios</td>
</tr>
<tr>
<td>- oral or written questioning to assess knowledge of Australian and international standards for risk management</td>
</tr>
<tr>
<td>- review of implementation of treatment plans.</td>
</tr>
</tbody>
</table>

Guidance information for assessment

<table>
<thead>
<tr>
<th>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</th>

</tbody>
</table>
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Context may include: | • any related projects or organisations  
• any resources, including physical assets, which are vital to operations  
• key operational elements and service of the organisation  
• organisation or project, how it is organised and its capabilities  
• own role and responsibilities in relation to overall project or organisation design |
|---|---|
| Risks may include: | • commercial and legal relationships  
• economic circumstances and scenarios  
• human behaviour  
• individual activities  
• management activities and controls  
• natural events  
• political circumstances  
• positive risk  
• technology - technological issues |
| Tools may include: | • documentation to assist in process of identifying risk, and assessing impact and likelihood of occurrence  
• standard instruments developed for the organisation and contextualised for sections of the workplace's operations, such as checklists and testing procedures  
• tools to prioritise risks, including where relevant, numerical scoring systems for risks |
| Stakeholders may include: | • contractors  
• employees  
• financial managers  
• insurance agents  
• managers  
• public |
## RANGE STATEMENT

| **RANGE STATEMENT** |  
|---------------------|---|
| • service providers |  
| • suppliers |  
| • unions |  
| • volunteers |  

### Risk categorisation may include:

- likelihood of risks:
  - almost certain
  - likely
  - possible
  - unlikely
  - rare
- consequences of risks:
  - insignificant
  - minor
  - moderate
  - major
  - catastrophic
  - current control measures

### Level of risk may include:

- low, treated with routine procedures
- moderate, with specific responsibility allocated for the risk, and monitoring and response procedures implemented
- high, requiring action, as it has potential to be damaging to the organisation or project
- extreme, requiring immediate action, as it has potential to be devastating to the organisation or project

### Control measures may include:

- hierarchy of controls:
  - reduction in likelihood of risks
  - reduction of consequences of risks
  - retention of risks
  - risk aversion
  - transfer of responsibility of risks

### Measures of success may include:

- costs
- reductions in impact
- reductions in likelihood
- reductions in occurrence

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage risks in a range of contexts across the organisation or for a specific business unit or area.

Application of the Unit

This unit addresses the management of the risk across the organisation or within a business unit or area. It does not assume any given industry setting.
This unit applies to individuals who are working in positions of authority and are approved to implement change across the organisation, business unit, program or project area. They may or may not have responsibility for directly supervising others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<td>4.6 Evaluate risk management process</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication and literacy skills to consult and negotiate, to prepare communications about risk management, and to encourage stakeholder involvement
- organisational and management skills to plan and implement risk management processes
- problem-solving and innovation skills to find practical ways to manage identified risks.

Required knowledge

- legislation, codes of practice and national standards, for example:
  - duty of care
  - company law
  - contract law
  - environmental law
  - freedom of information
  - industrial relations law
  - privacy and confidentiality
  - legislation relevant to organisation’s operations
  - legislation relevant to operation as a business entity
- organisational policies and procedures, including:
  - risk management strategy
  - policies and procedures for risk management
  - overall operations of organisation
  - reasonable adjustment in the workplace for people with a disability
  - types of available insurance and insurance providers.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

| **Risks** may include those relating to: | • commercial relationships  
| | • economic circumstances and scenarios  
| | • human behaviour  
| | • individual activities  
| | • legislation  
| | • management activities and controls  
| | • natural events  
| | • political circumstances  
| | • technology.  

| **Scope** may apply to: | • given project  
| | • specific business unit or area  
| | • specific functional such as:  
| | • financial management  
| | • OHS  
| | • governance  
| | • external environment  
| | • internal environment  
| | • whole organisation.  

| **Relevant parties** may include: | • all staff  
| | • internal and external stakeholders  
| | • senior management  
| | • specific teams or business units  
| | • technical experts.  

| **Research** may include: | • data or statistical information  
| | • information from other business areas  
| | • lessons learned from other projects or activities  
| | • market research  
| | • previous experience  
| | • public consultation  
| | • review of literature and other information sources.  

| **Tools and techniques** may include: | • brainstorm  
| | • checklists  
| | • fishbone diagrams  

---

© Commonwealth of Australia, 2014
Transport & Logistics Industry Skills Council
Flowcharts and scenario analysis may be used in the evaluation of risks.

**Likelihood** may refer to:
- probability of a given risk occurring, such as:
  - very likely
  - likely
  - possible
  - unlikely
  - rare.

**Impact or consequence** may refer to:
- significance of outcomes if the risk occurs, such as:
  - disastrous
  - severe
  - moderate impact
  - minimal impact.

**Evaluation** of risks includes:
- considering the likelihood of the risk occurring
- considering the impact of the risk
- determining which risks are most significant and are therefore priorities for treatment.

**Options** may include:
- avoiding the risk
- changing the consequences
- changing the likelihood
- retaining the risk
- sharing the risk with a third party.

**Action plans** should include:
- what actions are required
- who is taking responsibility
- time lines
- monitoring processes.

BSBSUS501A Develop workplace policy and procedures for sustainability

Modification History
Not applicable.

Unit Descriptor

<table>
<thead>
<tr>
<th>Unit descriptor</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit describes the performance outcomes, skills and knowledge required to develop and implement a workplace sustainability policy, including the modification of the policy to suit changed circumstances.</td>
</tr>
<tr>
<td>This unit requires the ability to access industry information, applicable legislative and occupational health and safety (OHS) guidelines.</td>
</tr>
<tr>
<td>While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit.</td>
</tr>
</tbody>
</table>
Application of the Unit

This unit addresses the knowledge, processes and techniques necessary to develop approaches to sustainability within workplaces, including the development and implementation of policy.

This unit applies to people with managerial responsibility who undertake work developing approaches to create strategies within workplaces, including the development and implementation of policy and includes:

- communicating with relevant stakeholders
- developing and monitoring policies
- reviewing and improving policies.

A person who demonstrates competence in this unit must be able to provide evidence of the ability to develop and implement integrated sustainability policies and procedures within an enterprise. The review of the policy after implementation will also need to be evidenced.

The context of the unit applies to all sectors of the business industry; it may be applied to all sections of an organisation, including the office, the factory floor, or work area. With such a broad application, the unit will need to be contextualised as it is applied across an organisation and across different industry sectors.

Licensing/Regulatory Information

Not applicable.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop workplace sustainability policy | 1.1. Define *scope* of sustainability policy  
1.2. Gather information from a range of *sources* to plan and develop policy  
1.3. Identify and consult *stakeholders* as a key component of the policy development process  
1.4. Include appropriate *strategies* in policy at all stages of work for minimising resource use, reducing toxic material and hazardous chemical use, and employing life cycle management approaches  
1.5. Make recommendations for policy options based on likely effectiveness, timeframes and cost  
1.6. Develop policy that reflects the organisation's commitment to sustainability as an integral part of business planning and as a business opportunity  
1.7. Agree to appropriate methods of implementation |
| 2. Communicate workplace sustainability policy | 2.1. Promote workplace sustainability policy, including its expected outcome to key stakeholders  
2.2. Inform those involved in implementing the policy as to outcomes expected, activities to be undertaken and responsibilities assigned |
| 3. Implement workplace sustainability policy | 3.1. Develop and communicate procedures to help implement workplace sustainability policy  
3.2. Implement strategies for continuous improvement in resource efficiency  
3.3. Establish and assign responsibility to use recording systems for tracking continuous improvements in sustainability approaches |
| 4. Review workplace sustainability policy implementation | 4.1. Document outcomes and provide feedback to key personnel and stakeholders  
4.2. Investigate successes or otherwise of policy  
4.3. Monitor records to identify trends that may require remedial action and use to promote continuous improvement of performance  
4.4. Modify policy and or procedures as required to ensure improvements are made |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to adjust communication to suit different audiences; to respond effectively to diversity; to work as a member of a team to consult on and validate policy
- literacy skills to read and evaluate complex and formal documents such as policy and legislation
- problem skills to effectively manage different points of view and dissenting stakeholders
- research, analytical and writing skills to research, analyse and present information; to prepare written reports requiring precision of expression and language and structures suited to the intended audience

#### Required knowledge

- best practice approaches relevant to own work area
- environmental or sustainability legislation, regulations and codes of practice applicable to industry and organisation
- equal employment opportunity, equity and diversity principles and occupational health and safety implications of policy being developed
- policy development processes and practices
- principles, practices and available tools and techniques of sustainability management relevant to the particular industry context
- quality assurance systems relevant to own organisation
- relevant industry competency
- relevant organisational polices, procedures and protocols
- relevant systems and procedures to aid in the achievement of workplace sustainability
## Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Evidence of the following is essential:</td>
</tr>
<tr>
<td>- candidate's involvement as a key person in planning, developing and implementing organisational policy and that the developed policy complies with legislative requirements</td>
</tr>
<tr>
<td>- implementation strategy, as part of the policy, that has been devised, implemented and reviewed showing a measurable improvement utilising the chosen benchmark indicators</td>
</tr>
<tr>
<td>- communicating with stakeholders to discuss possible approaches to policy development and implementation, and contributing to the resolution of disputes among stakeholders</td>
</tr>
<tr>
<td>- developing and monitoring policies for analysing data on enterprise resource consumption</td>
</tr>
<tr>
<td>- using software systems for recording and filing documentation for measurement of current usage and using word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information</td>
</tr>
<tr>
<td>- reviewing and improving policies by identifying improvements and benchmarking against industry best practice and attempting new approaches continuously over time.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

<table>
<thead>
<tr>
<th>Assessment must ensure:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- access to an actual workplace or simulated environment</td>
</tr>
<tr>
<td>- access to relevant legislation/standards/guidelines</td>
</tr>
<tr>
<td>- access to a range of workplace documentation and personnel, information and resources (such as compliance obligations, organisational plans, work responsibilities)</td>
</tr>
<tr>
<td>- access to reports from other parties involved in the development and implementation of policy</td>
</tr>
<tr>
<td>- evidence is collected over time, involving both</td>
</tr>
</tbody>
</table>
### EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Formative and summative assessment</th>

<tr>
<td></td>
<td>- BSBMGT616A Develop and implement strategic guidance information for assessment methods.</td>
</tr>
</tbody>
</table>

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- Direct questioning combined with review of portfolios of evidence and third party workplace reports of on the job performance by the candidate
- Response to case studies
- Review of policy developed and procedural documentation outlining the approach taken
- Review of implementation strategy, plans and work plans
- Analysis of methods used to involve stakeholders in policy development, implementation and review
- Analysis of inefficiencies or opportunities for improvements identified in the workplace
- Evaluation of participation in sustainability work practices and programs such as an environmental management framework
- Observation over time in relation to review of work area relating to policy and procedures being developed to assess measurement of resources used, hazards and compliance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of workplace sustainability policy may include:

- addressing sustainability initiatives through reference to standards, guidelines and approaches such as:
  - ecological footprinting
  - Energy Efficiency Opportunities Bill 2005
  - Global Reporting Initiative
  - green office program
  - green purchasing
  - Greenhouse Challenge Plus (Australian government initiative)
  - ISO 14001:1996 Environmental management systems life cycle analyses
  - life cycle analyses
  - product stewardship
  - supply chain management
  - sustainability covenants/compacts
  - triple bottom line reporting
  - integrated approach to sustainability which includes environmental, economic and social aspects, or a specific approach that focuses on each aspect individually
  - investigating particular business and market context of the industry/organisation
  - meeting relevant laws, by laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act):
    - international
    - commonwealth
    - state/territory
    - industry
## RANGE STATEMENT

<table>

BSBWOR201A Manage personal stress in the workplace

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 2 | New release of this Qualification released with *version 6 of BSB07 Business Services Training Package*.  
Outdated advice removed |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to manage personal stress in a customer contact environment.

Application of the Unit

This unit requires an awareness of sources of personal stress, the development of strategies to effectively manage stress, time management and recovery from stressful contacts or situations. This particularly applies in a contact centre environment due to the very measured, structured, high volume and potentially repetitive nature of the work but could apply in any work environment.

Competence in this unit requires resilience and self management of the stress that can be encountered in a customer contact environment.

This work is undertaken with some guidance and supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable
Employability Skills Information

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop personal awareness of stress | 1.1. Recognise *signs and sources of stress*  
1.2. Acknowledge stress and *difficult situations*  
1.3. Analyse and understand potential areas of stress in the work environment |
| 2. Develop stress management techniques | 2.1. Develop an effective understanding of a range of *stress management techniques*  
2.2. Use appropriate techniques effectively to manage stressful situations  
2.3. Focus on areas of stress within personal control  
2.4. Adopt strategies to effectively reduce, manage and deal with stress |
| 3. Manage time | 3.1. Develop and understand job role priorities  
3.2. Develop techniques to support the achievement of *key performance indicators (KPIs)* and priorities  
3.3. Use appropriate *time management tools and techniques*  
3.4. Regularly evaluate tools and techniques  
3.5. Promptly identify and inform relevant personnel of any variations and difficulties affecting work requirements, through regular reviews |
| 4. Recover from a stressful contact | 4.1. Review the contact or situation  
4.2. Analyse the root cause/s of stressful contact or situation  
4.3. Depersonalise the context of contact or situation  
4.4. Discuss outcomes with appropriate staff members  
4.5. Prepare for next contact or situation in a positive manner  
4.6. Follow-up or take action where needed |
| 5. Maintain personal stamina and resilience | 5.1. Identify *sources of fatigue* in contact centre role  
5.2. Adopt work routine and procedural strategies to minimise stress and fatigue  
5.3. Monitor personal performance against performance requirements  
5.4. Adapt *stamina management strategies* to maximise performance  
5.5. Seek assistance from team members and management in managing stamina |
| 6. Maintain work/life | 6.1. Identify work/life priorities |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
balance | 6.2. Adopt strategies to support work/life priorities  
6.3. Give high priority to health and wellbeing  
6.4. Monitor work/life balance  
6.5. Develop the ability to effectively leave work behind at the end of the day

**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- analytical skills to understand the needs of internal and external customers  
- communication skills to relate to people from diverse backgrounds and people with diverse abilities  
- customer service skills to handle customer contacts confidently and effectively  
- interpersonal skills to establish rapport and to build relationships with customers, team members and stakeholders  
- literacy skills to communicate and articulate clearly and effectively  
- negotiation skills to effectively deal with customers and work colleagues  
- organisational skills to manage own tasks within timeframes  
- problem-solving skills to solve problems creatively, independently and confidently  
- self-confidence skills to confidently introduce own ideas and abilities  
- self management skills to evaluate and monitor own performance and wellbeing  
- teamwork skills to participate positively within the team and to be supported by the team.

**Required knowledge**

- escalation pathways  
- job role priorities and KPIs  
- internal and external sources of assistance  
- occupational health and safety guidelines and policies  
- signs and sources of existing and potential stress or difficult situations  
- stress management and reduction techniques  
- time management tools and techniques  
- workplace policies and procedures.
## Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • understanding of signs and sources of stress  
• understanding of job role priorities and KPIs  
• knowledge of occupational health and safety guidelines and policies. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
| Assessment must ensure:                          | • access to workplace information and data  
• access to KPI and performance management documentation  
• access to relevant legislation, standards and guidelines. |

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
|                     | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• oral and/or written questioning to assess knowledge of signs and sources of stress  
• direct observation of the candidate effectively managing time and work priorities  
• oral and/or written questioning to assess knowledge of time management tools and techniques  
• oral and/or written questioning to assess knowledge of process to work through and recover from a stressful situation  
• oral and/or written questioning to assess knowledge of signs of work/life balance. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Signs of stress may include: | • absence from work  
• conflict  
• fatigue  
• lack of self-esteem and confidence  
• poor work performance  
• sickness |
|---|---|
| Sources of stress may include: | • challenging KPIs and/or priorities  
• complex tasks  
• difficult customer contact  
• external factors  
• inadequate physical environment  
• interpersonal relationships |
| Difficult situations may include: | • changing regulations and legislation  
• customer abuse  
• customer complaint  
• high number of customer contacts  
• sensitive customer situations  
• unreliable technology |
| Stress management techniques may include: | • debriefing with peers and/or line manager  
• relaxation methods  
• specific training  
• stretching and exercises  
• taking breaks |
| KPIs may include: | • call rates  
• compliance with schedules (adherence)  
• customer satisfaction results  
• performance measures  
• quality assurance ratings  
• sales targets  
• targets |
| Time management tools and techniques may include: | • diary and/or schedule  
• organising information  
• prioritisation of tasks  
• self-management of training requirements |
**Sources of fatigue** may include:
- ergonomic factors
- excessive overtime
- external issues
- overload of information
- repetitive tasks and/or contacts
- shift rostering and hours of work

**Stamina management strategies** may include:
- management of personal wellbeing, for example:
  - breaks
  - hydration
  - life balance
  - meals
  - recognising fatigue
- management of the environment, for example:
  - ergonomics
  - climate
  - noise
- management of work, for example:
  - minimising re-working
  - sequencing tasks

<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with *BSB07 Business Training Package version 6.0*  
Revised unit. Performance criteria and required skills updated to focus on learning and development practices, KPIs and compliance with policy and procedures.  
Replaces BSBWOR301A Organise personal work priorities and development |

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to organise own work schedules, to monitor and obtain feedback on work performance, and to maintain required levels of competence. Operators may exercise discretion and judgement using appropriate theoretical knowledge of work scheduling and performance improvement to provide technical advice and support to a team.

Application of the Unit
This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>1. Organise and complete own work schedule</th>
<th>1. Ensure that work goals, objectives or KPIs are understood, negotiated and agreed in accordance with organisational requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1.2 Assess and prioritise workload to ensure tasks are completed within identified timeframes</td>
</tr>
<tr>
<td></td>
<td>1.3 Identify factors affecting the achievement of work objectives and incorporate contingencies into work plans</td>
</tr>
<tr>
<td></td>
<td>1.4 Use business technology efficiently and effectively to manage and monitor scheduling and completion of tasks</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2. Monitor own work performance</th>
<th>2.1 Accurately monitor and adjust personal work performance through self-assessment to ensure achievement of tasks and compliance with legislation and work processes or KPIs</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2.2 Ensure that feedback on performance is actively sought and evaluated from colleagues and clients in the context of individual and group requirements</td>
</tr>
<tr>
<td></td>
<td>2.3 Routinely identify and report on variations in the quality of and products and services according to organisational requirements</td>
</tr>
<tr>
<td></td>
<td>2.4 Identify signs of stress and effects on personal wellbeing</td>
</tr>
<tr>
<td></td>
<td>2.5 Identify sources of stress and access appropriate supports and resolution strategies</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>3. Coordinate personal skill development and learning</th>
<th>3.1 Identify personal learning and professional development needs and skill gaps using self-assessment and advice from colleagues and clients in relation to role and organisational requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>3.2 Identify, prioritise and plan opportunities for undertaking personal skill development activities in liaison with work groups and relevant personnel</td>
</tr>
<tr>
<td></td>
<td>3.3 Access, complete and record professional development opportunities to facilitate continuous learning and career development</td>
</tr>
<tr>
<td></td>
<td>3.4 Incorporate formal and informal feedback into review of further learning needs</td>
</tr>
</tbody>
</table>
**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to give and receive constructive feedback relating to development needs
- literacy skills to read and understand the organisation’s procedures
- planning skills to organise work priorities according to work goals and objectives
- problem-solving skills to solve routine problems
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety (OHS)
- organisational policies, plans and procedures
- methods to elicit, analyse and interpret feedback
- principles and techniques of goal setting, measuring performance, time management and personal assessment
- competency standards and how to interpret them in relation to self
- methods to identify and prioritise personal learning needs.
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>
| **Evidence of the following is essential:** | • preparing work plans  
• scheduling and prioritising work objectives and tasks  
• knowledge of the principles and techniques of goal setting, measuring performance, time management and personal assessment. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
| **• access to an actual workplace or simulated environment** | • access to office equipment and resources  
• examples of work schedules and performance improvement plans. |

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
| **• direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate** | • review of self-assessment documentation outlining learning and development needs  
• analysis of responses to case studies and scenarios  
• demonstration of techniques  
• oral or written questioning to assess knowledge of methods to identify and prioritise personal learning needs  
• evaluation of planning for personal skill development activities and professional development opportunities. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Work goals and objectives may include: | • budgetary targets  
| | • production targets  
| | • reporting deadlines  
| | • sales targets  
| | • team and individual learning goals  
| | • team participation. |

| KPIs may include: | • key performance indicators on customer satisfaction  
| | • key performance indicators on customer effort  
| | • monitoring time taken to answer calls  
| | • operating within reporting protocols  
| | • score tools such as net promoter  
| | • understanding metrics. |

| Organisational requirements may include: | • access and equity principles and practice  
| | • business and performance plans  
| | • defined resource parameters  
| | • ethical standards  
| | • goals, objectives, plans, systems and processes  
| | • legal and organisational policies, guidelines and requirements  
| | • OHS policies, procedures and programs  
| | • quality and continuous improvement processes and standards  
| | • quality assurance and/or procedures manuals. |

| Factors affecting the achievement of work objectives may include: | • budget constraints  
| | • competing work demands  
| | • environmental factors such as time, weather  
| | • resource and materials availability  
| | • technology/equipment breakdowns  
| | • unforeseen incidents  
| | • workplace hazards, risks and controls. |

| Business technology may include: | • computer applications  
| | • computers  
| | • email  
| | • facsimile machines |
| **Feedback on performance** may include: | • formal/informal performance appraisals  
| | • obtaining feedback from clients  
| | • obtaining feedback from supervisors and colleagues  
| | • personal, reflective behaviour strategies  
| | • routine organisational methods for monitoring service delivery. |
| **Products and services** may include: | • either products or services  
| | • goods  
| | • ideas  
| | • infrastructure  
| | • private or public sets of benefits. |
| **Signs of stress** may include: | • absence from work  
| | • alcohol or other substance abuse  
| | • conflict  
| | • poor work performance. |
| **Personal wellbeing** may include: | • cultural  
| | • emotional  
| | • social  
| | • spiritual. |
| **Sources of stress** may include: | • complex tasks  
| | • cultural issues  
| | • work and family conflict  
| | • workloads. |
| **Supports and resolution strategies** may include: | • awareness raising  
| | • counselling  
| | • employee assistance programs (EAP)  
| | • family support  
| | • group activities  
| | • job design  
| | • mediation  
| | • sharing load  
| | • time off  
| | • training. |
| **Professional development opportunities** may include: | • career planning/development  
| | • coaching, mentoring and/or supervision |
| • formal/informal learning programs  
| • internal/external training provision  
| • performance appraisals  
| • personal study  
| • quality assurance assessments and recommendations  
| • recognition of current competence/skills recognition  
| • work experience/exchange/opportunities  
| • workplace skills assessment. |

BSBWOR402A Promote team effectiveness

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to promote teamwork. It involves developing team plans to meet expected outcomes, leading the work team, and proactively working with the management of the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers have an important leadership role in the development of efficient and effective work teams. They play a prominent part in team planning, supervising the performance of the team and developing team cohesion. They provide leadership for the team and bridge the gap between the management of the organisation and the team members. As such they must 'manage up' as well as manage their team/s. |

Licensing/Regulatory Information
Not applicable.

Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers</td>
</tr>
<tr>
<td>4. Liaise with management</td>
<td>4.1. Maintain open communication with line manager/management at all times 4.2. Communicate information from line manager/management to the team 4.3. Communicate unresolved issues, concerns and problems raised by the team/team members to line manager/management and ensure follow-up action is taken 4.4. Communicate unresolved issues, concerns and problems related to the team/team members raised by line managers/management to the team and ensure follow-up to action is taken</td>
</tr>
</tbody>
</table>
### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- Communication skills to:
  - boost team morale
  - deal with team conflict
  - deliver messages from management
  - facilitate discussion
  - mentor and coach
- Leadership skills
- Planning and organising skills.

#### Required knowledge

- Organisational goals, objectives and plans
- Organisational policy and procedures framework
- Organisational structure, including organisational chart
- Principles and techniques associated with:
  - Delegation and work allocation
  - Goal setting
  - Group dynamics and processes
  - Individual behaviour and difference
  - Leadership
  - Motivation
  - Negotiation
  - Planning.

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Team purpose, roles, responsibilities, goals, plans and objectives may include: | • action plans, business plans and operational plans linked to strategic plans  
• expected outcomes and outputs  
• goals for individuals and the work team  
• individual and team performance plans and key performance indicators  
• occupational health and safety (OHS) responsibilities |
| --- | --- |
| Consultation may include: | • attending meetings, interviews, brainstorming sessions  
• using email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual effectiveness  
• using mechanisms to provide feedback to the work team in relation to consultation outcomes |
| Responsibility for own work may involve: | • individual and joint actions  
• individuals and teams |
| Feedback may refer to: | • formal/informal gatherings between team members where there is communication on work related matters  
• informal communication of ideas and thoughts on specific tasks, outcomes, decisions, issues or behaviours |
| Relevant persons may include: | • colleagues  
• direct superior or other management representatives  
• OHS committees and other people with specialist responsibilities |
| Communication may include: | • face-to-face  
• formal/informal interaction |

BSBWOR501A Manage personal work priorities and professional development

Modification History
Not Applicable

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to manage own performance and professional development. Particular emphasis is on setting and meeting priorities, analysing information and using a range of strategies to develop further competence. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to managers and focuses on the need for managers to be organised, focussed and skilled, in order to effectively manage the work of others. As such it is an important unit for most managers, particularly as managers serve as role models and have a significant influence on the work culture and patterns of behaviour.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish personal work goals | 1.1. Serve as a positive role model in the workplace through personal work planning and organisation  
1.2. Ensure personal work goals, plans and activities reflect the organisation's plans, and own responsibilities and accountabilities  
1.3. Measure and maintain personal performance in varying work conditions, work contexts and contingencies |
| 2. Set and meet own work priorities | 2.1. Take initiative to prioritise and facilitate competing demands to achieve personal, team and organisational goals and objectives  
2.2. Use technology efficiently and effectively to manage work priorities and commitments  
2.3. Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to |
| 3. Develop and maintain professional competence | 3.1. Assess personal knowledge and skills against competency standards to determine development needs, priorities and plans  
3.2. Seek feedback from employees, clients and colleagues and use this feedback to identify and develop ways to improve competence  
3.3. Identify, evaluate, select and use development opportunities suitable to personal learning style/s to develop competence  
3.4. Undertake participation in networks to enhance personal knowledge, skills and work relationships  
3.5. Identify and develop new skills to achieve and maintain a competitive edge |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to receive, analyse and report on feedback
- literacy skills to interpret written and verbal information about workplace requirements
- organisational skills to set and achieve priorities.

### Required knowledge

- principles and techniques involved in the management and organisation of:
  - performance measurement
  - personal behaviour, self-awareness and personality traits identification
  - personal development plan
  - personal goal setting
  - time management
- management development opportunities and options for self
- organisation's policies, plans and procedures
- types of learning style/s and how they relate to the individual
- types of work methods and practices that can improve personal performance.
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to facilitate all aspects of teamwork within the organisation. It involves taking a leadership role in the development of team plans, leading and facilitating teamwork and actively engaging with the management of the organisation.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to managers and addresses the need for managers to facilitate work teams and to build a positive culture within work teams. The unit takes a systematic and planned approach to developing teams. It includes the soft skills as well as more structured approaches to the management of teams.

At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies.

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• range of techniques that can be used to build work teams, strengthen communications in the team and resolve conflict</td>
</tr>
<tr>
<td></td>
<td>• methods for engaging with stakeholders and obtaining advice from outside the work team, to ensure team is focussed and on track</td>
</tr>
<tr>
<td></td>
<td>• knowledge of group behaviour.</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

## Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of team building techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- review of performance plans developed for work team
- review of policies and procedures developed to ensure team members take responsibility for own work.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Consultation** may refer to: | • conducting meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual performance plans  
• mechanisms used to provide feedback to the work team in relation to outcomes of consultation |
| --- | --- |
| **Accountabilities** may refer to: | • responsibilities as defined in position descriptions, codes of conduct/behaviour, duty statements or similar  
• statement of conduct outlining responsibilities/actions/performance |
| **Performance plans** may refer to: | • individual performance plans linked to team goals  
• team plans based on work assignments and responsibilities |
| **Outcomes, outputs, key performance indicators** may refer to agreed: | • changes in work roles and responsibilities  
• improved individual and team, performance and participation  
• improvements to systems, operations  
• measures for monitoring and evaluating the efficiency or effectiveness of systems or services  
• quality standards and expectations  
• targets for productivity improvements such as reduced downtime, higher production levels, decreases in absenteeism  
• targets for training and development |
| **Strategies** may refer to: | • clarification of roles and expectations  
• electronic communication devices and processes, such as intranet and email communication systems, to facilitate input  
• long-term or short-term plans factoring in |
opportunities for team input
- mentoring and 'buddy' systems to support team members in providing input
- newsletters and briefings
- training and development activities

**Policies and procedures** may refer to:
- organisational guidelines and systems that govern operational functions
- procedures that detail the activities that must be carried out for the completion of actions and tasks
- Standard Operating Procedures

**Processes** may refer to:
- brainstorming options with the team for addressing concerns
- creating a matrix of issues and concerns and distributing for comment
- discussions with individuals regarding their concerns
- distributing drafts for comment with a range of options for resolution of concerns
- training and development sessions

**Stakeholders** may include:
- Board members
- business or government contacts
- funding bodies
- union/employee groups and representatives
- work team

**Line manager/management** may refer to:
- chief executive officer
- direct superior
- other management representatives

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

Required skills
- communication skills to advocate, consult, negotiate and mediate conflict
- innovation and problem-solving skills to manage sensitive and important issues
- planning and time management skills to meet critical deadlines, to sequence tasks, to prepare submissions and to present cases.

Required knowledge
- enterprise and workplace bargaining processes
- key entities in the Australian industrial relations system, including courts and tribunals, trade unions, employer bodies
- relevant industrial, occupational health and safety, equal opportunity and anti-discrimination legislation in both the Commonwealth and state jurisdictions.
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Long-term industrial relations objectives may relate to: | • effective management of grievances, conflict situations and dispute resolution procedures  
| | • employee commitment  
| | • employee satisfaction  
| | • job design  
| | • negotiation outcomes  
| | • organisational culture  
| | • relations with unions or other peak bodies  
| | • restructuring  
| | • salary, remuneration, benefits or bonuses  
| | • workforce planning  
| | • workplace reform  
| Cost benefit means: | • calculation to determine whether the results/outcomes of a particular course of action are sufficient to justify the costs and risks in taking that action  
| Risk analysis means: | • determination of the likelihood of a negative event preventing the organisation meeting its objectives and the likely consequences of such an event on organisational performance  
| Implementation plan may include: | • documented objectives, methodology and timeframe  
| | • project plan  
| Associated industrial relations activities may include: | • clarification of terms and conditions of employment of those persons affected  
| | • consultation with employee representatives including unions and elected staff representatives  
| | • ensuring the legality of proposed strategies, policies and initiatives  
| | • referring to employer representatives for advice and support  
| Conflict management | • controlling difficult situations using legal remedies  

### RANGE STATEMENT

**techniques/procedures** may include:
- dispute resolution procedures
- negotiating/bargaining

**Certify** refers to:
- Australian Workplace Agreements
- workplace collective agreements

CPCCCM2007B Use explosive power tools

Modification History
Minor changes made to range statement, including addition of photovoltaic (solar) panels
Equivalent to CPCCCM2007A

Unit Descriptor
This unit of competency specifies the outcomes required to apply safe and effective operation of explosive power tools (EPT), used to fasten materials or fix fasteners to bases. It includes both direct action and indirect action explosive powered fastening tools.

Application of the Unit
This unit of competency supports achievement of skills to safely and effectively use a range of EPT used in the construction industry.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Plan and prepare.  

1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans and specifications.

1.6 Materials appropriate to work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

2  Set out fasteners.  

2.1 Minimum distances for set out from edge of substrate material are adhered to in accordance with legislation, regulations and codes of practice.

2.2 Material is located and temporarily held or fixed into designed position according to detailed drawings.

3  Use EPT.  

3.1 EPT is checked for operation according to manufacturer specifications and safety (OHS) requirements for use of EPT.

3.2 Fastener is selected according to requirements of job.

3.3 Charge is selected to assessed requirements for material, base and penetration.
3.4 **Attachments** and accessories are installed to EPT in accordance with manufacturer specifications and safety (OHS) requirements.

3.5 **Fastener and charge** in EPT are located to manufacturer specifications.

3.6 EPT operation is carried out and fastener is fixed into place in accordance with manufacturer recommendations, legislation, regulations and codes of practice.

3.7 Fastening penetration is checked and appropriate depth into material is applied.

3.8 Power regulating device is adjusted for conditions.

3.9 Misfire procedures are carried out according to manufacturer recommendations, legislation, regulations and codes of practice.

3.10 Temporary holding and fixings are removed without damage to material.

4 Secure and store equipment and charges.

4.1 Charges are stored in designated container in accordance with legislation, regulations and codes of practice and used charges are recorded.

4.2 Unused fasteners, the EPT and attachments are stored in a carry case in line with manufacturer recommendations.

4.3 Logbook is checked and maintenance recorded according to manufacturer recommendations.

5 Maintain EPT and kit.

5.1 Safety features of tools are checked for serviceability in accordance with manufacturer operating manual.

5.2 Tools are cleaned and lubricated to manufacturer recommendations.

5.3 Periodic maintenance service is carried out to manufacturer specifications.

5.4 Diminished stocks of charges and fasteners are replenished to designed effectiveness of EPT kit.
6 Clean up.

6.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
      - report faults
      - use language and concepts appropriate to cultural differences
      - use and interpret non-verbal communication, such as hand signals
      - written skills to record maintenance in logbook
    - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- EPT materials
- EPT charges and fasteners
- equipment safety manuals and instructions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- fix metal or timber to a steel, concrete or masonry base on one project of each to job specifications, including:
  - completion of stripping and assembly of the tool
  - completing log of serviceability
  - maintaining and cleaning
CPCCCM2007B Use explosive power tools

- selecting charges and fasteners applicable to base material and material being fixed
- misfire procedures
- using attachments
- complying with storage and security regulations and OHS requirements for the working environment
- selecting signage
- test fire.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions where specified
• memos
• MSDS
• organisation work specifications and requirements
• plans and specifications
• regulatory and legislative requirements pertaining to using EPT
• relevant Australian standards
• safe work procedures related to using EPT
• signage
• verbal or written and graphical instructions
• work bulletins
• work schedules.

**Planning and preparation** include:

• work site inspection
• equipment defect identification
• assessment of conditions and hazards
• determination of work requirements.

**Safety (OHS)** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling of materials
• hazard control
• hazardous materials and substances
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • lighting
  • photovoltaic (solar) panels
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** may include:
- direct action EPT
- indirect action EPT
- clamps and levels.

**Materials** include:
- timber
- metals
- patented fasteners.

**Environmental requirements** include:
- clean-up management
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Minimum distance for set out of fasteners** is to be in accordance with:
- regulated minimum distances
- bases, including concrete, masonry or steel.

**Use of EPT** includes:
- stripping and assembling tools
- completing log of serviceability
- maintaining and cleaning tools
- selecting charges and fasteners applicable to the base material and material being fixed
- misfire procedures
- using attachments
- complying with storage and security regulations
and OHS requirements for the working environment
  - selecting signage
  - test fire.

**Attachments** include:
  - channel, rebate and other manufacturer attachments.

**Fastener and charge** include:
  - firing a test shot with misfire procedures, complying with the regulated safety procedure for misfire.

**Unit Sector(s)**

**Functional area**

**Unit sector** Construction

Not applicable.
CPCCCM2008B Erect and dismantle restricted height scaffolding

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCCM2008A

Unit Descriptor
This unit of competency specifies the outcomes required to erect and dismantle restricted height scaffolding to provide work platforms for various occupational applications. It includes placement of safety barriers and only involves modular scaffolding restricted to a height of 4 metres.

Application of the Unit
This unit of competency supports achievement of skills to handle, erect and dismantle a range of restricted height scaffolding systems, which may include working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained from relevant sources of information, confirmed and applied for planning and preparation purposes.

1.2 *Workplace health and safety (WHS)* requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, *tools and equipment* are selected to carry out tasks consistent with job requirements, are checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 *Scaffolding* quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* obligations, and are applied.
2 Erect scaffolding.  
2.1 **Purpose for scaffolding** is confirmed and associated work tasks are identified.

2.2 Expected loading on scaffold and supporting structure is determined using load tables.

2.3 Site access and egress routes are identified.

2.4 Scaffolding and components are selected and inspected with damaged components labelled and rejected or repaired.

2.5 Adequate footing is established in accordance with Australian standard for scaffolding.

2.6 Scaffolding is erected in accordance with regulations, planned hazard prevention and control measures, acceptable safe work practices and manufacturer requirements.

3 Inspect, repair and alter scaffolding.  
3.1 Critical structural and safety areas of scaffolding are inspected for damage, corrosion and wear.

3.2 Current use of scaffolding is checked for compliance with type of scaffolding equipment.

3.3 Inspection log and handover are completed.

3.4 Scaffolding is reviewed to determine if changes or modifications were scheduled as per original planning.

3.5 Alteration or repair is carried out where specified.

4 Dismantle scaffolding.  
4.1 Scaffolding is dismantled using reverse procedure as for erection.

5 Clean up.  
5.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
    - report faults
    - use language and concepts appropriate to cultural differences
    - use and interpret non-verbal communication, such as hand signals
    - written skills to record maintenance in logbooks
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
• relevant Acts, regulations and codes of practice
• scaffolding equipment
• scaffolding techniques
• shifting devices
• types, characteristics, uses and limitations of plant, tools and equipment
• workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

• locate, interpret and apply relevant information, standards and specifications
• comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
• comply with organisational policies and procedures, including quality requirements
• safely and effectively use tools, plant and equipment
• communicate and work effectively and safely with others
• complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
  • three bays (one with a return)
  • one lift with ladder
  • fall and edge protection.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- Competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace.
- Where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
- All assessment that is part of a structured learning experience must include a combination of direct, indirect, and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy, and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders, or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- Diagrams or sketches
- Engineers' design specifications and manufacturer specifications and instructions, where specified
- Instructions issued by authorised organisational or external personnel
- Memos
- MSDS
- Regulatory and legislative requirements pertaining to erecting and dismantling restricted height
scaffolding
• relevant Australian standards
• safe work procedures related to erecting and dismantling restricted height scaffolding
• signage
• verbal or written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Planning and preparation include:
• work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
• erection of scaffolding to a maximum height of 4 metres, including placement, sequencing, squaring, levelling and the reverse for dismantling
• establishment of footings, including review of JSAs to determine bearing capacity of ground or working surfaces
• alteration and repair, which may be required due to storm damage, accidents, misuse and process changes.

Workplace health and safety is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling of materials
• hazard control
• hazardous materials and substances
  • safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
    • earth leakage boxes
    • lighting
    • photovoltaic (solar) panels
    • power cables, including overhead service trays, cables and conduits
    • restricted access barriers
    • surrounding structures
    • traffic control
    • trip hazards
    • work site visitors and the public
    • working at heights
    • working in confined spaces
• working in proximity to others
• working with dangerous materials
• organisational first aid
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• use of firefighting equipment
• use of tools and equipment
• workplace environment and safety.

**Tools and equipment** include:

- aluminium modular scaffolding equipment
- hammers
- ladders
- scaffolding planks
- shovels and spanners
- spirit levels
- steel box spanners
- tape measures.

**Scaffolding type and quantity requirements:**

- types of restricted height scaffolding may include systems scaffolding, A frame, H frame, tube and coupler, and aluminium (and modular to a maximum height of 4 metres).

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified
- workplace operations and procedures.

**Environmental requirements** include:

- clean-up protection
- noise and dust
- waste management.

**Statutory and regulatory authorities** include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Purpose for scaffolding** includes:

- work platforms for various occupational applications.

CPCCCM2010B Work safely at heights

Modification History
Photovoltaic (solar) panels added to range statement
Equivalent to CPCCCM2010A

Unit Descriptor
This unit of competency specifies the outcomes required to work safely on construction sites where the work activity involves working above 1.5 metres from ground level and where fall protection measures are required.

Application of the Unit
Construction work is undertaken on domestic and commercial work sites within new construction, renovation or refurbishment, and maintenance.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Identify work area requirements.**
   - 1.1 Site of proposed *work at heights* is identified from relevant *information*.
   - 1.2 Method of accessing work area is identified.
   - 1.3 Tasks to be completed are identified from work orders and supervisor instructions.
   - 1.4 Fall protection equipment is identified if required by site job *workplace health and safety (WHS)* analysis and *statutory and regulatory* requirements.
   - 1.5 Approved methods of moving tools and equipment to work area are identified to minimise potential of falling objects, removal of scaffold components, inappropriate carrying of materials on ladders, and excessive bending or twisting in pass-up situations.

2. **Access work area.**
   - 2.1 Fall protection equipment where required is correctly fitted, adjusted and anchored.
