- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise during the organisation of the transport of freight and goods in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use communication, computers and systems required for the organisation of the transport of freight and goods
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisation of the transport of freight/goods may include:

- goods
- equipment
- materials
- vehicular traffic

Customers may be:

- internal or external

Operations may be conducted:

- by day or night

Freight/goods to be transported may include:

- dangerous, hazardous, perishable, fragile, packaged goods
- in liquid or solid form

Storage areas may be:

- existing, temporary or permanent

Transport modes may include:

- road, air, rail, sea or combinations

Information needed to facilitate the organisation of the transport of freight/goods may include:

- type, capacity and compatibility of freight/goods
- agreed delivery times and routing schedules
- pick-up and drop-off points
- specified mode of transport
- agreed cost structure

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- authorities and permits
RANGE STATEMENT

- hours of operations
- noise restrictions
- additional gear and equipment
- Australian standards and guidelines for manual handling

Hazards may include:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- dust/vapours
- spills, leakages, ruptures
- service lines

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- Australian and international codes of practice and regulations relevant to the transport of freight
- operations manuals, job specifications and procedures and induction documentation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:
- relevant regulations for the import and export of cargo
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods
RANGE STATEMENT

and hazardous substances, including:

- Australian and International Dangerous Goods Codes
- Australian Marine Orders and the International Maritime Dangerous Goods Code
- IATA Dangerous Goods by Air regulations
- Australian and International Explosives Codes
- Australian and international standards and certification requirements
- international transport regulations, codes and procedures
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to organise the international transport of freight, including confirming customer requirements, organising freight arrangements and communicating with shipping agents and authorities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant codes of practice and regulations for the international transport of freight.

It is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

Work involves the application of routine principles and procedures to organise the international transport of freight.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Confirm customer requirements | 1.1 Customer requirements for the movement of cargo in terms of the nature of goods, the countries of origin and destination, the timescales for collection and delivery and the estimated budget for the transaction are confirmed  
1.2 Customer priorities for the shipment are confirmed  
1.3 Decisions on possible routes, taking into account known variables, are undertaken |
| 2 Organise freight arrangements | 2.1 International regulations, codes of practice for the transport of freight are confirmed  
2.2 Work processes are planned to meet agreed timelines  
2.3 Transport modes (including multi-modal options) are matched to customer requirements, freight type and delivery times  
2.4 Availability of selected carrier(s) is checked including modes of transport, scheduled departure dates and times, transfer times and costs for each stage of shipment  
2.5 Arrangements are made to consolidate freight, where appropriate  
2.6 Freight carrier(s) booking(s) are confirmed  
2.7 Transport of freight to selected international carrier is organised |
| 3 Communicate with shipping agents and authorities | 3.1 Freight documentation is checked for accuracy and forwarded as appropriate to shipping agents and authorities  
3.2 Confirmation of despatch of freight from international carrier is obtained  
3.3 Arrival of cargo at port of entry is confirmed  
3.4 Acceptance of freight documentation is confirmed  
3.5 Payments are authorised  
3.6 Cargo is on-forwarded from point of entry, where required  
3.7 Customer is advised that freight has been forwarded to point of destination |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes of practice and legislative requirements including local and international
REQUIRED KNOWLEDGE AND SKILLS

freight regulations

- Relevant OH&S and environmental procedures and regulations
- Procedures for the interpretation of client requirements
- Procedures for the identification and evaluation of information needed to organise the international transport of freight
- Procedures for calculating volumes and dimensions
- Procedures for reviewing transport options and availability of carriers
- Procedures for liaising with Australian and international contacts using appropriate technology
- Procedures for completing consignment documentation
- Problems that may occur when organising the international transport of freight and appropriate action that can be taken
- Contacts and sources of information/documentation needed when organising the international transport of freight
- Customer service policies and procedures

Required skills:

- Communicate effectively with others when organising the international transport of freight
- Read and interpret instructions, procedures and labels relevant to the international transport of freight
- Complete documentation related to the organisation of the international transport of freight
- Work collaboratively with others when organising the international transport of freight
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when organising the international transport of freight in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Use relevant communication and computer equipment and systems when organising the international transport of freight
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational activities may cover movement of:
- equipment
- goods
- materials
- various forms of freight transport

Requirements for work may include:
- freight forwarding protocols and procedures
- communications equipment
- workplace operations
- authorities and permits
- hours of operation
- relevant regulations

Information needed to organise the international transport of freight may include:
- type, capacity and compatibility of cargo
- agreed delivery times and routing schedules
- pick-up and drop-off points
- specified carrier/mode of transport
- agreed cost structure

Forms of transport may include:
- road
- rail
- sea
- air
- local courier

Consultative processes may involve:
- international and domestic agents, suppliers and clients
- relevant authorities and institutions
- other employees and supervisors
- management
- OH&S specialists
- other professional or technical staff

Communications systems may involve:
- telephone
- fax
- email
- electronic data transfer of information
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- Australian and international codes of practice and regulations relevant to the international transport of freight
RANGE STATEMENT

include:

- operations manuals, job specifications and procedures and
  induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures
- relevant competency standards and training materials
- regulations and codes of practice for the international transport of freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and international dangerous goods codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable procedures and codes may include:

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor stevedoring regulations in accordance with relevant Australian and international regulations and codes of practice. This includes accessing appropriate information on relevant regulations and codes, interpreting regulations and codes relevant to workplace activities, implementing and monitoring compliance with the identified regulations and codes, and completing all required documentation in accordance with regulatory and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the relevant stevedoring regulations, codes of practice and workplace requirements.

Work is performed under limited supervision generally within a team environment. It involves the application of workplace procedures and information on regulations to the implementation and monitoring of compliance with stevedoring regulatory requirements as part of work activities in the stevedoring and/or allied industries.

electronic records as per workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and codes of practice relevant to stevedoring
  operations
- Relevant OH&S and environmental protection procedures and guidelines
- Relevant customs, bond, quarantine and other legislative requirements including IMDG Code
  and Marine Orders
- Workplace/standard operating procedures and policies for the implementation and monitoring
  of compliance with stevedoring regulatory requirements
- Focus of operation of work systems, equipment, management and site operating systems for
  stevedoring operations
- Roles and responsibilities of various workplace personnel in terms of workplace activities and
  regulatory requirements
- Problems that may occur when implementing and monitoring compliance with stevedoring
  regulatory requirements, and appropriate action that can be taken to resolve the problems
- Site layout

Required skills:

- Communicate and negotiate effectively with others when implementing and monitoring
  stevedoring regulations
- Identify and access information on relevant regulations
- Read and interpret regulatory requirements, instructions, procedures and labels relevant to
  stevedoring operations
- Complete documentation related to stevedoring regulations
- Report on compliance related issues
- Work collaboratively with others when implementing and monitoring stevedoring regulations
- Resolve conflict situations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and
Required skills:

- Interactions with others
- Promptly report and/or rectify any identified breaches of stevedoring regulations in accordance with regulatory requirements and workplace procedures
- Coordinate compliance activities in the workplace
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Follow processes for monitoring compliance with regulatory requirements

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - The underpinning knowledge and skills
  - Relevant legislation and workplace procedures
  - Other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - Relevant and appropriate materials and equipment, and
  - Applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in limited or restricted spaces
- in exposed conditions
- in controlled or open environments
- in a range of work environments
- by day or night

Customers may be:
- internal or external
- Workplaces may comprise:
  - large, medium or small worksites

Hazards in the work area may include:
- exposure to chemicals
- exposure to dangerous or hazardous substances
- movements of equipment, goods and materials

Relevant personnel may include:
- the master and officers of a vessel
- the crew of a vessel
- workplace team leaders/supervisors
- other workplace personnel
- customs officers and representatives
- officers of the Australian Quarantine and Inspection Service
- official representatives of other relevant regulatory authorities
- site visitors
RANGE STATEMENT

- contractors
- other technical, maintenance and professional staff

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- Australian and international regulations and codes of practice relevant to stevedoring operations
- operations manuals, job specifications and induction documentation
- workplace standard operating procedures (SOPs) and policies
- guidelines and information on regulatory requirements issued by the relevant regulatory authorities
- documentation required to be completed under the relevant regulatory requirements
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations for stevedoring operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International
RANGE STATEMENT

Maritime Dangerous Goods Code
- IATA Dangerous Goods by Air regulations
- Australian and International Explosives Codes
- other sections of the Marine Orders and other regulations administered by the Australian Maritime Safety Authority (AMSA)
- quarantine regulations administered by the Australian Quarantine and Inspection Service (AQIS)
- customs regulations (export/import/bond requirements)
- relevant state/territory marine authority/port authority regulations
- relevant state/territory OH&S and environmental protection legislation
- water/sewerage regulations
- relevant state/territory road traffic regulations
- licence, patent or copyright arrangements
- workplace relations regulations
- workers compensation regulations

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required by an Accredited Person to carry out the requirements of the quarantine Co-Regulation Schemes in accordance with Australian Quarantine Inspection Service (AQIS) regulatory and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
This unit applies to individuals working as an Accredited Person in accordance with the relevant AQIS accreditation and business Compliance Agreement for commodity and non-commodity Co-Regulation Schemes. Work is undertaken in a range of environments including small to large worksites in the customs broking and international freight forwarding industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Confirm AQIS accreditation status for clearance | 1.1 Appropriate checks are made to assess if the business has a valid Compliance Agreement with AQIS for the relevant Co-Regulation Scheme  
1.2 Ensure information is conveyed to AQIS by answering a question on this matter as appropriate at the time of lodgement of the import declaration |
| 2 Assess a packing declaration | 2.1 Packing declaration is checked to confirm whether or not it contains acceptable straw, timber and bark declarations in accordance with the relevant Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document  
2.2 Packing declaration is checked to confirm that all other critical information is present as detailed in the relevant Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document  
2.3 If the packing declaration is unacceptable or if required information is missing, it is declared to AQIS at the time of lodgement of the import declaration |
| 3 Assess a treatment certificate | 3.1 Treatment certificate is checked to confirm whether or not the treatment provider is acceptable to AQIS  
3.2 Treatment certificate is checked to confirm that all critical fields are present, correct and legible as detailed in the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document  
3.3 Treatment certificate is checked to confirm that this treatment, dosage and duration is acceptable and in accordance with the requirements of the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document |
| 4 Convert quantities detailed in treatment certificates | 4.1 Quantities of fumigants stated in a treatment certificate as being used to treat a given volume of material are checked against AQIS requirements  
4.2 Where necessary, required conversions are carried out to ensure that the quantity of fumigant and volume of material are at the correct dosage |
| 5 Check and confirm unpack destination for FCL/X consignments | 5.1 The unpack postcode for FCL consignments is determined as metropolitan, rural or semi-rural in accordance with the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document  
5.2 If a FCL or FCX consignment is to be unpacked at a rural or semi-rural address as identified by the postcode and the AQIS Containerised Cargo Clearance Resources Document, it is
ELEMENT | PERFORMANCE CRITERIA
--- | ---
6 Confirm that all commodity documentation is valid and meets AQIS requirements | Declared to AQIS at the time of lodgement of the import declaration
6.1 Information contained in packing declarations and treatment certificate is verified as containing a linking consignment identifier or numerical link to the shipment in accordance with the Scheme's Processes and Outcomes Document and the Containerised Cargo Clearance Resources Document
7 Confirm that all commodity documentation is valid and meets AQIS requirements | 7.1 Determine information and documentation required for assessment in accordance with the Scheme's Processes and Outcomes Document
7.2 Assess documentation to determine if the commodity is in scope as required by the Scheme's Processes and Outcomes Document
7.3 Ensure documentation contains linkage to the consignment as required by the Scheme's Processes and Outcomes Document
7.4 Assess documentation in accordance with the requirements of the Scheme's Processes and Outcomes Document
8 Enter required Processing Types and Automatic Entry Processing (AEP) codes | 8.1 Determine the AQIS Processing Type and enter it into the AQIS Processing Type field in the Joint Entry Management Computer System (JEMS) in accordance with the Processes and Outcomes Document for each of the relevant Co-Regulation Schemes
8.2 Determine the Quarantine Approved Premise where the activity is to take place in accordance with the Processes and Outcomes Document for EACH of the relevant Co-Regulation Schemes. The QAP Code is entered into the QAP Field on the Joint Entry Management Computer System (JEMS) in accordance with the Processes and Outcomes Document for each of the relevant Co-Regulation Schemes
9 Ensure that all documentation and records are completed and correctly retained | 9.1 All principal documentation and records of cleared imports including all relevant shipping documents, packing declarations, bills of lading, etc. are maintained in accordance AQIS Co-Regulation Scheme requirements
9.2 Clients are advised that AQIS may call up this documentation during any audit

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
REQUIRED KNOWLEDGE AND SKILLS

- Proficiency in the requirements of the AQIS Co-Regulation Schemes
- Australian and international legislation, codes and regulations relevant to non-commodity quarantine freight clearance operations
- Relevant OH&S and environmental protection procedures and guidelines
- AQIS and workplace procedures and policies for non-commodity quarantine freight clearance operations
- Focus of operation of work systems, equipment, management and site operating systems for non-commodity quarantine freight clearance operations
- Typical problems that may occur during non-commodity quarantine freight clearance and appropriate action that can be taken to resolve the problems
- Information on relevant aspects of non-commodity quarantine freight clearance practices
- Sources of information on new developments in non-commodity quarantine freight clearance procedures
- Techniques to learn the skills and knowledge required for new developments in non-commodity quarantine freight clearance procedures
- Documentation and record requirements for non-commodity quarantine freight clearance operations

Required skills:

- Negotiate, communicate and liaise effectively with clients and others
- Read and interpret instructions, procedures and information relevant to non-commodity quarantine freight clearance procedures
- Select and use relevant computer/communication/office equipment when carrying out non-commodity quarantine freight clearance operations
- Complete documentation related to work activities
- Work collaboratively as part of a freight clearance team
- Plan and organise work activities when carrying out non-commodity quarantine freight clearance procedures
- Identify, interpret and learn skills and knowledge required for relevant new developments in non-commodity quarantine freight clearance services
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Solve problems that may arise when carrying out non-commodity quarantine freight clearance operations
- Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and interpreting the quarantine Co-Regulation Schemes
  - confirming accreditation status for container clearance
  - assessing a packing declaration
  - assessing a treatment certificate
  - converting quantities detailed in treatment certificates
  - identifying that all relevant documentation is valid and meets all requirements

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

An Accredited Person is a person who is:

- accredited under the relevant AQIS Co-Regulation Scheme: who has successfully completed the AQIS approved training course fulfilled accreditation requirements. In order to perform tasks under the Co-Regulations Scheme, an Accredited Person must also operate in a business that is a signatory to an existing Compliance Agreement with AQIS

The AQIS Co-Regulation Schemes are:

- a scheme developed to allow business entities to subscribe to a Compliance Agreement with AQIS, and for the business's Accredited Persons to assess commodity and non-commodity documentation on behalf of AQIS, in order to facilitate the quarantine clearance of freight

Information on relevant aspects of commodity and non-commodity freight clearance practices may include:

- AQIS Containerised Cargo Document for each Co-Regulation Scheme
- Processes and Outcomes Document for each Co-Regulation Scheme
- commodity requirements and treatment
- AQIS AEP system and related procedure statements and codes
- the legislation and procedures relating to the non-commodity quarantine clearance of freight
- ICON an AQIS online database

The term 'straw' may include:

- straw
- cereal
- rice hulls
- and other unprocessed plant materials

The term 'timber' may include:

- crates
- cases
- dunnage
RANGE STATEMENT

- pallets
- skids
- any other timber used as a shipping aid

The term 'bark' is defined as:
- the external natural layer covering trees and branches. This material is distinct and separable from processed timber

Quarantine non-commodity clearance documentation may include:
- packing declarations
- treatment certificates
- shipping documents
- bills of lading
- commercial invoices
- physio sanitary certificates

Unpacking destinations may include:
- metropolitan destinations
- fringe rural destinations
- rural destinations

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- phone
- ICS direct or via proprietary software to ICS
- AQIS Import Management System (AIMS)
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- other employees and supervisors
- clients
- AQIS officers
- management and union representatives

Documentation and records may include:
- the AQIS Containerised Cargo Clearance Document
- Enterprise Compliance Agreement with AQIS
- AQIS Operational Procedure Statements for the Automatic Entry Processing for FCL Scheme
- packing declarations
- treatment certificates
- shipping documents
RANGE STATEMENT

- bills of lading
- commercial invoices
- physio sanitary certificates
- goods identification numbers and codes, manifests, delivery notes, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for non-commodity quarantine clearance activities
- Australian and international regulations and codes of practice for non-commodity quarantine freight clearance operation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- AQIS and client instructions
- quality assurance procedures
- emergency procedures
- Quarantine Act 1908 and Regulations
- codes of practice of the Customs Brokers and Forwarders Council of Australia
- export/import/quarantine/bond requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

Applicable legislation and regulations may include:

Unit Descriptor
This unit involves the skills and knowledge required to carry out customs clearance practices in accordance with Customs and related legislation and workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs related legislation and workplace requirements concerning customs clearance practices. Work is undertaken in a range of environments, including small to large worksites in the custom broking and international freight forwarding industries. Work at this level is performed by those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

12.8 | FOB value field on entry/declaration is completed
12.9 | Calculations are checked for accuracy and verified as required
12.10 | Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures
12.11 | Relevant documentation is passed on to the client

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant sections of customs and related legislation, regulations and codes of practice relevant to customs clearance operations
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for customs clearance operations
- Focus of operation of work systems, equipment, management and site operating systems required for customs clearance operations
- Documentation requirements for customs clearance practices
- Requirements for completing relevant documentation
- Routine issues that may occur during customs clearance and appropriate action that can be taken to deal with the issues
- Sources of information on new developments in customs clearance practices
- Ways of learning the skills and knowledge required for new developments in customs clearance practices
- Steps involved in planning the work activities
- Procedures for managing and controlling hazardous situations when carrying out work activities

**Required skills:**

- Negotiate, communicate and liaise effectively with customers and others
- Read and interpret instructions, procedures and information relevant to customs clearance practices
- Interpret and follow operational instructions and prioritise work
Required skills:

- Plan and organise work activities when carrying out customs clearance practices
- Complete documentation related to work activities
- Select and use relevant computer/communication/office equipment when carrying out customs clearance practices
- Work collaboratively as part of a customs broking team
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
- Deal with routine issues that may arise when carrying out customs clearance practices
- Identify, interpret and learn skills and knowledge required for relevant new developments in customs clearance practices
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - selecting and using the technology required to carry out customs clearance practices
  - determining and identifying offences and applicable time frames
  - applying procedures for compliance with Customs and related legislation
  - conducting calculations and appropriate adjustments undertaken as part of routine customs clearance operations
  - recognising and dealing with routine issues that may arise during customs clearance operations

Context of and specific resources

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of customs clearance practices may include:

- the structure and application of anti-dumping laws in Australia
- differences between the Tariff Concession and By-law and other industry assistance initiatives
- the use of the Penalties and Infringement Notice Scheme
- the various forms and functions of securities and temporary importations
- recovery of shortpaid duties
- the procedures for 'Payments Under Protest'
- Customs Act 1901 and regulations as they relate to refunds, remissions and drawbacks
RANGE STATEMENT

- 'Seizure', 'Forfeiture and 'Condemnation' as it relates to customs clearance practices
- requirements for preferential treatment of goods under free trade agreements and other preferential trade agreements

**Assistance schemes include:**
- Tradex Scheme which provides for an upfront exemption from customs duty and taxes on imported goods intended for re-export or to be used as inputs to exports
- Enhanced Project By-law Scheme (EPBS) provides duty concessions on eligible goods used in major projects

**Tariff concession order refers to:**
- Part 1 of the Schedule of Concessional Instruments published by the Australian Customs which lists goods covered by item 50 of Schedule 4

**By-law refers to:**
- instruments issued to the 4th Schedule to the Customs Tariff Act 1995 items as published by the Australian Customs

**Interim dumping, dumping and countervailing duty:**
- have the meanings contained in Section 269T (Definitions) of the Customs Act 1901

**Interim duty security amount may include:**
- any duty collected under Section 42 of the Customs legislation on any duty payable under the Customs Tariff (Anti-Dumping) Act 1995

**Other concessional schemes may include:**
- Automotive Competitiveness and Investment Scheme (ACIS)
- Quota

**New developments in border clearance operations may include:**
- regulations
- processes
- systems
- technology
- types and packaging of goods
- internal networks such as: own team, staff in other departments, support staff, managers, training staff, etc.
- external networks
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

**Information on new developments in border clearance operations may be obtained from:**
- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts
RANGE STATEMENT

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- clients
- agents
- relevant authorities and institutions
- management representatives

Documentation and records may include:

- Customs and related legislation
- other regulatory requirements pertaining to customs clearance functions
- relevant sections of the Australian Customs Manual
- dumping commodities register
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for customs clearance functions
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable legislation and regulations may include:

- Customs and related legislation pertaining to customs clearance functions
- privacy legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
RANGE STATEMENT

- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S and environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Apply identification principles to goods | 1.1 Objective and analytical classification principles are applied  
1.2 Research resources are accessed to classify goods  
1.3 Precedents are considered  
1.4 Assistance is sought as required  
1.5 Administration Appeals Tribunal (AAT) decisions and court cases are considered  
1.6 Product knowledge research is undertaken |
| 2. Select tariff headings for consideration (4 figure) | 2.1 The principles of statutory construction in the context of particular tariff headings and words are applied  
2.2 Relevant precedents are applied when classifying commodities  
2.3 Aids to interpretation of the tariff are used where applicable  
2.4 Alternate headings are considered as appropriate  
2.5 Pre or post classification potential areas of dispute are identified |
| 3. Select tariff sub-heading (6 or 8 figure) for consideration | 3.1 AAT decisions, court cases and other precedents on tariff classification are interpreted and applied  
3.2 Sub-heading notes are reviewed in hierarchical order  
3.3 The dash system is applied to the classification  
3.4 The correct statistical code is identified |
| 4. Interpret and apply Section and Chapter Notes | 4.1 Tariff classification is determined  
4.2 Rejection of alternate headings are justified by reference to the Section and Chapter Notes |
| 5. Interpret and apply rules for interpretation to goods | 5.1 Interpretative rules are applied to justify tariff classification of goods  
5.2 Research resources are accessed when interpreting and applying rules for interpretation to goods  
5.3 Requirements for tariff classification advice are identified |
| 6. Complete post classification requirements in accordance with legislative requirements | 6.1 Tariff Classification Advice Request is prepared in response to identified problems  
6.2 Classification is entered correctly on the customs entry/declaration in accordance with the requirements of Customs and related legislation and workplace procedures  
6.3 Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures  
6.4 Relevant documentation and other sources of information (e.g. from internet, industry experts, etc.) is retained and passed on to the client in accordance with the requirements of Customs and related legislation and workplace procedures  
6.5 Post entry classification advice to the client is initiated where
ELEMENT PERFORMACE CRITERIA

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Customs and related legislation relevant to the classification of complex commodities for the import and export of goods through customs
- Relevant OH&S and environmental protection procedures and guidelines
- Customs and workplace procedures and policies for the classification of complex commodities for the import and export of goods through customs
- Focus of operation of work systems, equipment, management and site operating systems for the classification of complex commodities for the import and export of goods through customs
- Problems that may occur when classifying complex commodities for the import and export of goods through customs and appropriate action that can be taken to resolve the problems
- Information on relevant aspects of the classification of complex commodities for the import and export of goods through customs
- Types of complex commodities and related classification and documentation requirements
- Sources of information on new developments in the classification of complex commodities for the import and export of goods through customs
- Ways of learning the skills and knowledge required for new developments in the classification of complex commodities for the import and export of goods through customs
- Cultural differences amongst customers, internal and external freight contacts and within the operational team and their implications when providing customs classification services
- Documentation and recording requirements for the classification of commodities for the import and export of goods through customs
- Steps involved in planning the work activities

Required skills:

- Communicate effectively with others when classifying complex commodities for the import and export of goods through customs
- Locate, read and interpret instructions, procedures and information relevant to the classification of complex commodities for the import and export of goods through customs
- Plan and organise work activities when classifying complex commodities for the import and export of goods through customs
Required skills:

- Select and use relevant computer/communication/office equipment when classifying complex commodities for the import and export of goods through customs
- Enter information using appropriate technology
- Maintain workplace documentation and records
- Work collaboratively as part of an operational team
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
- Solve problems that may arise when classifying complex commodities for the import and export of goods through customs
- Identify, interpret and learn skills and knowledge required for relevant new developments in the classification of complex commodities for the import and export of goods through customs
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Learn skills and knowledge required for relevant new developments in the classification of complex commodities
- Select and use appropriate workplace colloquial and technical language and communication technologies in the workplace context
- Follow the designated plan for the work

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - interpreting and applying rules for interpretation to goods
  - selecting and justifying heading (4 figure)
  - locating and justifying a sub-heading (6 or 8 figure)
  - completing post classification requirements
  - interpreting and applying Section and Chapter Notes
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects for the classification of commodities for the import and export of goods may include:

- processes and practices for classifying various types of complex commodities
- the contents and purpose of Customs Tariff Act 1995, Schedule 2, 3 and 4

Objective classification may include:

- the classifier finding out as much as possible about the goods in the condition they are imported or exported

Analytical classification may include:

- technology
- the avoidance of generalised terms such as souvenirs,
RANGE STATEMENT

include:

- printed matter and clothing as these terms do not demonstrate analytical classification as required to correctly identify the goods

Harmonized system terminology may include:

- sufficient identification to be capable of being transferred into tariff terminology. For example, a tool holder could be included in the identification if the holder worked solely or principally with machines described specifically in the harmonized system

Assistance may include:

- advice from more experienced colleagues, customs brokers, experienced classifiers, technical experts
- seeking further details about the goods from the client
- consulting technical experts in the industry that the goods belong to
- classification software
- from customers
- commercially available
- additional resources

Tools may include:

- Harmonised System Explanatory Notes and Commodities
- dictionaries, trade journals, technical publications

Menu may include:

- the list of chapters at the start of the Customs Tariff Act 1995 for imports and the summary of classification in the front of the AHECC

Type may include:

- Type Chapters (refer to Chapters 64-66, 84-95 and 97 in the Harmonized System)

Materials may include:

- Material Chapters (refer to Chapters 1-63 and 67-83 in the Harmonized System)

Merchandise trade may include:

- goods that are covered by a reference number in Schedule 4 of the Customs Tariff Act 1995 or an export statistical item in Chapters 98 and 99 in AHECC

Section and Chapters Notes may include:

- Legal Notes contained within Schedule 3 Customs Tariff Act 1995 and include directional notes (inclusion, restriction, extension) and definitional notes and notes having application across the complete Schedule. All relevant Legal Notes are expected to be considered and applied. Notes that have specific industry application such as paper, chemicals, base metals and some textile notes may require clarification/assistance from other parties

Interpretation rules may include:

- General Rules for the Interpretation of the Harmonized System. They are the rules that are to be followed for every classification

Clarification may include:

- seeking assistance from colleagues, customs broker, more experienced classifier, or technical expert
RANGE STATEMENT

Sub-heading notes may include:

- obtaining additional information from client
- Legal Notes contained within Schedule 3 Custom Tariff Act 1995 and include directional notes (inclusion, restriction, extension) and definitional Notes and Notes having application across the complete Schedule. All relevant Legal Notes are expected to be considered and applied. Notes that have specific industry application such as paper, chemicals, base metals and some textile Notes may require clarification/assistance from other parties

Dash system is:

- a design feature of the Harmonized System which assists with the selection of the appropriate 8 figure classification

New developments in the classification of complex commodities may relate to changes in:

- technology
- legislation
- regulations
- case law
- WCO Classification
- processes
- systems

Information on new developments in the classification of complex commodities may be obtained from:

- internal networks such as: own work team, staff in other departments, support staff, managers, training staff, etc.
- external networks such as: staff in various regulatory authorities
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Ways of learning skills and knowledge required for new developments in customs classification may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the organisation concerned, workplace procedures may be called:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet

Communication in the work area may include:
RANGE STATEMENT

Consultative processes may involve:
- RF systems
- oral, aural or signed communications
- other employees and supervisors
- clients
- agents
- personnel in relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:
- Customs and related legislation
- Australian Harmonized Export Classification Book
- Customs Tariff Act 1995 and Schedules
- precedents database
- dictionaries
- trade or technical publications
- Harmonized System Explanatory Notes (HSEN)
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for relevant equipment
- workplace procedures and policies
- supplier and/or client instructions
- quality assurance procedures
- extrinsic material (as defined in the Acts Interpretation Act)

Applicable legislation and regulations may include:
- Customs and related legislation
- Australian Harmonized Export Classification Book
- Customs Tariff Act 1995 and Schedules
- other legislation related to importing and exporting of goods
- export/import/quarantine/bond requirements
- equal employment opportunity and affirmative action legislation
- equal opportunity legislation
- workplace relations regulations
- relevant state/territory OH&S and environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to carry out complex customs valuation in accordance with Customs and related legislation and workplace requirements. It includes applying the relevant method for the complex customs valuation required; identifying the contract for customs valuation purposes; determining the price and elements of adjusted price; and identifying elements of price related costs. It also includes calculating customs value through the application of currency conversion and factorisation principles, and recording valuation information on customs entry/declaration. Note: A primary responsibility of a customs broker is to ensure compliance with Australian Customs and other related legislation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to individuals working as a customs broker. Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning customs valuation functions. Work is undertaken in a range of environments including small to large worksites in the customs broking and international trade industries. Work at this level is performed by those who provide leadership of others individually or in teams. This unit is normally packaged at AQF IV or above.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT: Apply the relevant valuation method

1. Situations where the transaction value method applies are recognised
2. Situations where alternate methods of valuation apply are recognised
3. Situations where there is insufficient reliable information are identified
4. An appropriate valuation method is selected and applied for the complex customs valuation situation identified

### ELEMENT: Identify the sales transaction

1. Importer and seller are identified
2. Relevant contract or contracts are identified
3. Invoice terms relevant to the contract are identified

### ELEMENT: Identify the import sales transaction

1. Import sales transaction is identified

### ELEMENT: Determine the price in the import sales transaction

1. The price in the relevant import sales transaction is identified

### ELEMENT: Determine the elements of adjusted price for a valuation

1. The correct adjusted price deductions are made, taking into account the relevant legislation and terms of trade

### ELEMENT: Identify elements of price related costs for a valuation

1. Correct price related costs are made, taking into account the relevant legislation and terms of trade

### ELEMENT: Calculate customs value for a valuation

1. The date and place of export are determined in accordance with the Customs Act 1901
2. Valuation elements against imported goods using factorisation are apportioned
3. Alternate valuation methods are applied where necessary
4. Transaction value is calculated by applying applicable rate of exchange
5. Valuation Advice Request is prepared in response to identified problems
6. The requirement for a Valuation Advice Request is identified

### ELEMENT: Record valuation information on customs declaration in accordance with legislative requirements

1. Valuation related fields on a customs declaration are identified
2. Valuation information is entered correctly on customs declaration
3. Calculations are checked for accuracy and verified as required
4. Completed documentation is retained by relevant personnel in the enterprise in accordance with the requirements of Customs and related legislation and workplace procedures
ELEMENT PERFORMANCE CRITERIA
8.5 Post entry valuation advice to the client is initiated where required
8.6 Relevant documentation is passed on to the client

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Customs Act 1901 and related legislation relevant to the conduct of a custom valuation
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for carrying out customs valuation
- Focus of operation of work systems, equipment, management and site operating systems for carrying out customs valuation
- Problems that may occur when carrying out customs valuation and appropriate action that can be taken to resolve the problems
- Information on relevant aspects of customs valuation
- Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- Sources of information on new developments in customs valuation practices
- Ways of learning the skills and knowledge required for new developments in customs valuation practices
- Cultural differences amongst customers, internal and external freight contacts and within the customer service team and their implications when providing customs valuation services
- Documentation requirements for customs valuations
- Penalties and the infringement notice scheme as it applies to goods incorrectly valued

Required skills:
- Negotiate, communicate and liaise effectively with clients and others when conducting customs valuations
- Read and interpret instructions, procedures and information relevant to the conduct of customs valuations
- Select and use appropriate workplace colloquial and technical language and communication technologies in the workplace context
- Identify, interpret and learn skills and knowledge required for relevant new developments in
Required skills:

- customs valuation practices
- Follow the designated plan for the customs valuation work
- Maintain work records
- Select and use relevant computer/communication/office equipment when carrying out customs valuations
- Enter information using appropriate technology when carrying out customs valuations
- Work collaboratively as part of an operational team
- Modify activities depending on differing workplace contexts, risk situations and environments, including taking appropriate initiatives within allowable limits
- Solve problems that may arise when carrying out customs valuations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the relevant method for a customs valuation
  - identifying the import sales transaction for customs valuation purposes
  - recording valuation information on customs entry/declaration
  - calculating customs value for a customs valuation
  - identifying elements of price related costs for a customs valuation
  - determining the price and elements of adjusted price for a complex customs valuation
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information on relevant aspects of customs valuation may include:

- identification and calculation of various aspects kinds of valuation such as:
  - royalties and licence fees
  - commissions
  - rebates
  - packing costs
  - rejection of transaction value
  - related parties
RANGE STATEMENT

- transfer pricing
- alternate valuation methods
- case law as it applies to valuation
- Valuation Advice Request and rulings

Transaction value is:

- the main method for valuing goods for customs purposes

Alternate valuation methods may include:

- Identical Goods Valuation
- Similar Goods Valuation
- Deductive Goods Method
- Computed Value Method
- Fall Back Method

INCOTERMS 2000 are:

- the ICC Official Rules for the Interpretation of Trade Terms, International Chamber of Commerce, 1999

Adjusted price may include:

- deductible financing costs
- post importation costs
- Australian inland freight and insurance
- deductible administrative costs
- overseas freight and insurance

Price related costs may include:

- production assist costs
- packing costs
- foreign inland freight and insurance
- commissions
- royalties and licence fees
- proceeds of resale

Factorisation means:

- the apportionment of costs over a line value (each line of the import declaration for which there is a separate classification)

Valuation advice may include:

- the completion and lodgement of an official Valuation Advice Request with Australian Customs
- advice to the client to pay under protest

Post entry valuation advice may include:

- advising the client what options are available if there is disagreement with the customs value

Verification may include:

- other colleagues within the enterprise
- customs brokers

New developments in complex customs valuation practices including changes in:

- case law
- technology
- products
- regulations
- legislation
- processes
RANGE STATEMENT

Information on new developments in customs valuation practices may be obtained from:

- systems
- internal networks such as: own operational team, staff in other departments, support staff, managers, training staff, etc.
- regulatory authority, WTO, WCO
- bulletins, journals, magazines, books, etc.
- internet websites
- internal and external training programs

Ways of learning skills and knowledge required for new developments in customs valuation practices may include:

- external training programs
- internal training programs
- reading independently
- coaching in the workplace
- online learning on a computer
- networking with relevant internal and external contacts
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the organisation concerned, workplace procedures may be called:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Communication in the work area may include:

- Customs Act 1901 and related legislation
- World Trade Organisation Valuation Agreement
- Australian Customs Manual on Valuation
- manifests, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for customs valuation
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- client instructions
RANGE STATEMENT

- award, enterprise bargaining agreement, other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable legislation and regulations may include:

- Customs Act 1901 and related legislation
- privacy legislation
- export/import/quarantine/bond requirements
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory OH&S and environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to implement safety stock systems. It includes planning and preparing safety stock levels; maintaining safety stock levels; and reviewing the safety stock system. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry but has particular application in a storage facility such as a warehouse.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF IV or above.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and prepare safety stock levels | 1.1 Determined optimum safety stock levels are maintained to ensure constant productivity  
1.2 Purchase, receipt, storage and issue of stock is undertaken when required  
1.3 Safety stock is valued using the nominated valuation method, if required  
1.4 Safety stock rotation procedures are implemented |
| 2 Maintain safety stock levels | 2.1 Records are checked against stock and continuously adjusted and updated when required  
2.2 Safety stock levels are maintained according to organisation policy and procedures and safety stock plan  
2.3 Records are stored for future access  
2.4 Safety stock levels are reconciled with paperwork and any discrepancies are rectified or reported to nominated person/section within designated timelines |
| 3 Review safety stock system | 3.1 Safety stock records are reviewed for discrepancies regarding target outcomes  
3.2 Improvements of safety stock system reviewed with all variables affecting discrepancies identified  
3.3 Required improvements are reported according to organisation's policy and procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Definitions of commonly used terminology such as lead time, lead time demand, forecast, demand history, order cycle
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation including commonly used methods to estimate required safety stock levels
- Code of practice for working collaboratively with others
- Typical problems that can occur and related action that should be taken
REQUIRED KNOWLEDGE AND SKILLS

- Procedures for identifying any problems with the safety stock system in use
- Principles, purpose and location of controls, monitoring devices, and systems
- Steps involved in planning the work activities

Required skills:

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rectifying discrepancies may include:

- updating records to show correct amount
- adjusting financial accounting records
- adjusting stock records
- informing supervisor or appropriate person

Stock discrepancies may include:

- theft or pilferage
- breakage or other damage
- deterioration of the product
- error in recording
- failure to check incoming stock against delivery docket
- obsolescence resulting in stock having to be discarded
RANGE STATEMENT

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- suppliers of storage equipment
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:

- relevant regulations and codes of practice, including ADG code and safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related safety stock systems
- quality assurance procedures
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- technical instructions
- dangerous goods declarations and material safety data sheets, where applicable
- stock records
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:

- Australian and international regulations and codes of practice for the storage and or transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
Unit Sector(s)

Competency Field
Competency Field  A - Handling Cargo/Stock
TLIA4063A Coordinate stevedoring clerical functions

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to coordinate stevedoring clerical functions in accordance with workplace requirements including monitoring clerical functions; solving operational problems; arranging the inspection/survey of containers and/or cargo, preparing for the next shift; and completing and handing over the shift. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant standards, regulations and workplace requirements concerning terminal/wharf operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the coordination of clerical functions at a container/cargo terminal/wharf as part of work activities in the stevedoring, transport, distribution and/or allied industries.

Licensing/Regulatory Information

<td>4.2 Container/cargo movements in the yard are checked and recorded to ensure the incoming shift has up-to-date information on the status of work and container/cargo location</td>
</tr>
</tbody>
</table>

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international standards, codes and regulations relevant to the operation of terminals/wharves including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the coordination of clerical functions at a container or cargo terminal or wharf
- Focus of operation of work systems, equipment, management and site operating systems relevant to the coordination of clerical functions at a container or cargo terminal or wharf
- Problems that may occur when coordinating clerical functions at a container or cargo terminal
REQUIRED KNOWLEDGE AND SKILLS

or wharf and appropriate action that can be taken to resolve the problems

- Relevant handling and safety codes
- Site layout of container or cargo terminal or wharf
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when coordinating clerical functions at a container or cargo terminal or wharf
- Read and interpret instructions, procedures and labels relevant to coordinating clerical functions at a container or cargo terminal or wharf
- Interpret and follow operational instructions and prioritise work when coordinating clerical functions at a container or cargo terminal or wharf
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels
- Complete documentation related to work activities when coordinating clerical functions at a container or cargo terminal or wharf
- Operate electronic communication equipment to required protocol when coordinating clerical functions at a container or cargo terminal or wharf
- Work collaboratively with others when coordinating clerical functions at a container or cargo terminal or wharf
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify, select and use relevant equipment, processes and procedures when coordinating clerical functions at a container or cargo terminal or wharf
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:  
- a range of work environments  
- by day or night

Customers may be:  
- internal or external

Workplaces may comprise:  
- large, medium or small worksites

Work may be conducted in:  
- limited or restricted spaces  
- exposed conditions  
- controlled or open environments

Cargo may include:  
- goods with specialist requirements, including temperature controlled goods and dangerous goods

Hazards in the work area may include exposure to:  
- chemicals  
- dangerous or hazardous substances  
- movements of equipment, goods and materials

Personnel in work area may include:  
- workplace personnel  
- site visitors  
- contractors  
- official representatives

Personal protective equipment may include:  
- gloves  
- safety headwear and footwear  
- safety glasses  
- two-way radios  
- protective clothing  
- high visibility clothing

Communication in the work area may include:  
- phone  
- fax  
- email/internet  
- electronic data transfer (EDI)  
- RF systems  
- radio  
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:  
- company procedures  
- enterprise procedures  
- organisational procedures  
- established procedures

Information/documents may include:  
- goods identification numbers and codes  
- manifests, bar codes, and container identification/serial number
RANGE STATEMENT

- Australian and international codes of practice and regulations relevant to clerical functions at a container/cargo terminal/wharf
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant standards, codes and regulations for terminal and wharf operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant Australian standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Applicable regulations and legislation may include:
Unit Sector(s)

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to plan and manage the storage of dangerous goods and hazardous substances in accordance with all relevant regulatory requirements and workplace procedures including the current ADG Code. This includes defining the objectives of the required handling and storage operations; specifying equipment and system performance requirements; evaluating and selecting bulk handling and storage resources; and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit

Work must be carried out in compliance with all the relevant regulations, standards and codes of practice, including the current ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Define objectives of required handling and storage operation | 1.1 Requirements for bulk handling and storage activities are identified in accordance with workplace requirements  
1.2 Current best practice and future trends for handling and storage equipment are assessed and compared to present operations  
1.3 Consideration of workplace goals and present capabilities and constraints is undertaken in selecting bulk handling and storage resources |
| 2 Specify equipment and system performance requirements | 2.1 Bulk handling and storage equipment and system requirements are documented  
2.2 Performance measures for equipment and system operations are developed and documented  
2.3 Consultations are conducted with relevant employees and management to verify documented requirements |
| 3 Evaluate and select bulk handling and storage resources | 3.1 The range of bulk handling and storage equipment and facilities which meet specifications are researched for costs and benefits including potential adaptability for new business opportunities  
3.2 A rating system is instigated to facilitate comparisons of cost/benefit and other qualitative properties of bulk handling and storage equipment and systems  
3.3 An analysis of current employee competency to required competency is undertaken and documented  
3.4 Equipment is selected based on comparisons of performance specifications including cost, output, set-up requirements, maintenance and retraining |
| 4 Complete documentation | 4.1 Workplace documentation is completed as appropriate  
4.2 Handling and storage requirements are documented and communicated to relevant personnel  
4.3 Reports are compiled and forwarded to appropriate personnel |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations, codes of practice and legislative requirements including local and international regulations relevant to handling and storage
REQUIRED KNOWLEDGE AND SKILLS

- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- Relevant OH&S and environmental protection procedures and regulations
- Workplace procedures for the planning and management of the storage of dangerous goods and hazardous substances
- Problems that may occur during the planning and management of the storage of dangerous goods and hazardous substances and action that can be taken to resolve or report the problems
- Hierarchy of risks and hazards related to the storage of dangerous goods and hazardous substances and ways of controlling the risks involved
- Focus of operation of work systems, resources, management and workplace operating systems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Relevant permit and licence requirements
- Application of all relevant Australian and International Standards
- Operational procedures for safe transfer and storage of dangerous goods and hazardous materials
- Resource availability including the competencies of individuals in the team and group
- Understanding and knowledge of the application of current competencies within functional activity
- Coaching and mentoring approaches to support team members to share knowledge and skills
- Relevant workplace documentation procedures

Required skills:

- Communicate effectively with others when planning and managing the storage of dangerous goods and hazardous substances
- Read and interpret instructions, procedures, technical data, drawings, instructions and manuals relevant to the planning and management of storage of dangerous goods and hazardous substances
- Complete documentation related to the planning and management of the storage of dangerous goods and hazardous substances
- Provide leadership to others when planning and managing the storage of dangerous goods and hazardous substances
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise during the planning and management of the storage of dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events when planning and managing the storage of dangerous goods and hazardous substances
- Prioritise work and coordinate self and others in relation to activities
Required skills:

- Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and apply appropriate technology, information systems and procedures when planning and managing the storage of dangerous goods and hazardous substances

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - planning and assessing options for the safe and efficient storage of dangerous goods and hazardous substances to regulatory requirements as a minimum
  - identifying container markings and HAZCHEM codes
  - completing documentation as required for the storage of dangerous goods and hazardous goods
  - identifying potential hazards and planning work to minimise risks when storing dangerous goods and hazardous goods
  - determining (any) required permits/licensing
  - estimating weight and volume of goods to be stored and any special requirements
  - undertaking a hazard analysis

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken in:

- various work environments in the bulk handling, dangerous goods and freight forwarding sections of the warehousing, storage, transport and distribution industries

Customers may be:

- internal or external

Operations may be conducted:

- by day or night

The workplace environment may involve:

- twenty-four hour operation
- single and multi site location
- large, medium and small workplaces

Work may involve:

- exposure to corrosive chemicals, solvents and adhesives, carcinogenic and other harmful substances
- movement of equipment, goods, and vehicular traffic

Regulatory controls and workplace procedures:

- govern requirements for co-storage, volume, mass and required controls

Requirements for bulk handling

- types of bulk materials
RANGE STATEMENT

and storage activities may include:

- quantities
- handling requirements including any special equipment or operating procedures required
- storage requirements
- stock control methods
- negating contaminant sources
- controlling pest infestation

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- fire/explosions
- noise, light, energy sources
- stationary and moving machinery, parts or components
- radioactive goods
- dust/vapours
- service lines
- spills, leakages, ruptures

Hazard management is consistent with:

- the principle of hierarchy or control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- Personal protective equipment may include: gloves, safety headwear and footwear, safety glasses, mask and respirator, protective clothing, breathing apparatus

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- mask and respirator
- protective clothing
- breathing apparatus

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- suppliers, potential customers and existing clients
RANGE STATEMENT

- government instrumentalities
- emergency services
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:
- Australian and international codes of practice and regulations relevant to bulk handling and storage
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the current ADG Code
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- manufacturers specifications and/or suppliers handling and storage advice
- material safety data sheets
- Safe Working Limits (SWL) and Working Load Limits (WLL) of load shifting equipment and storage facilities
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance standards and procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements
RANGE STATEMENT

Applicable procedures and codes may include:

- relevant codes and regulations for bulk handling and storage
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- all relevant Australian and international standards and certification requirements,
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

Unit Descriptor

This unit involves the skills and knowledge required to plan and manage international freight transfer in accordance with relevant regulatory requirements and workplace procedures, including the ADG and IDG codes. This includes analysing freight transfer requirements, planning and establishing processes for international freight transfer, monitoring and coordinating systems and processes for international freight transfer, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant Australian and international regulations, standards and codes of practice, including the ADG and IDG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1  Analyse freight transfer requirements** | 1.1 Australian and international codes and regulations and workplace policies for international freight transfer are identified.  
1.2 Information on current and potential customers and their international freight requirements are obtained and analysed in accordance with workplace procedures.  
1.3 Special characteristics and customer requirements for the types of freight to be transferred are identified, interpreted and considered in accordance with workplace procedures.  
1.4 Appropriate options for international freight transfer are evaluated in terms of identified special requirements, customer needs and relevant regulatory requirements including Australian and international codes for the transfer of dangerous goods and hazardous materials.  
1.5 Selected options for freight transfer arrangements are documented in accordance with workplace policy and related regulations. |
| **2  Plan systems and processes for international freight transfer** | 2.1 Workplace policies and mission statement are interpreted to define the process requirements for international freight transfer.  
2.2 Appropriate systems are evaluated and established/coordinated to facilitate the organisation of international freight transfer including suitable risk analysis.  
2.3 Human resources needed to organise international freight transfer are identified and documented.  
2.4 Action is initiated to ensure staff are assigned, recruited and/or trained in accordance with identified human resource requirements.  
2.5 Office, computer and communications equipment is identified and action initiated for appropriate assignment or procurements.  
2.6 Quality standards and procedures for proposed international freight transfer processes are documented/updated in accordance with workplace procedures. |
| **3  Monitor and coordinate systems and processes for international freight transfer** | 3.1 International freight forwarding operations are monitored against identified quality standards and compliance with Australian and international regulatory requirements.  
3.2 Non-compliance with quality standards or regulatory requirements is identified and appropriate action is initiated to report and rectify any identified problems.  
3.3 Customer satisfaction with international freight transfer services is monitored using appropriate methods.  
3.4 Customer concerns and suggestions for service improvements. |
ELEMENT PERCENTAGE CRITERIA
are acted upon in accordance with workplace procedures
3.5 Reports and other required documentation related to international freight transfer operations are completed and referred to relevant personnel in accordance with workplace procedures
3.6 Any changes in Australian and international regulations and codes of practice relevant to international freight transfer are monitored, identified and appropriate action is initiated to ensure ongoing compliance of workplace processes and systems

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for the identification and interpretation of requirements of current and potential clients
- Procedures for the identification and evaluation of information needed to manage the international transfer of freight
- Procedures for reviewing options for international freight transfer systems
- Procedures for liaising with relevant Australian and international contacts using appropriate technology
- Procedures for establishing and monitoring suitable international freight transfer operations
- Focus of operation of work systems, resources, management and workplace operating systems
- Contacts and sources of information/documentation needed when managing systems for the international transfer of freight
- Quality and customer service policies and procedures
- Relevant permit and licence requirements
- Application of relevant Australian standards and associated certification requirements
- Operational requirements for the safe transfer and storage of dangerous goods and hazardous materials
- Relevant workplace documentation procedures applicable to the international transfer of freight
Required skills:

- Communicate effectively with others when managing international freight transfer operations
- Read and interpret instructions, procedures, information and labels relevant to the management of international freight transfer operations
- Complete documentation related to the management of international freight transfer operations
- Maintain workplace records and documentation when managing international freight transfer operations
- Provide leadership to others when managing international freight transfer operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Plan and organise systems and activities when managing international freight transfer operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in freight and systems in accordance with standard operating procedures
- Select and apply appropriate technology, information systems and procedures when managing international freight transfer operations

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:

- in various work environments in the bulk handling, dangerous goods and freight forwarding sections of the warehousing, storage, transport and distribution industries

Customers may be:

- internal or external

Operations may be conducted:

- by day or night

The workplace environment may

- twenty-four hour operation
RANGE STATEMENT

involve:

- single and multi-site location
- large, medium and small workplaces

Work systems may include:

- freight forwarding protocols and procedures
- communications equipment
- workplace operations
- authorities and permits
- hours of operation
- relevant regulations

Information needed to organise the international transport of freight may include:

- type, capacity and compatibility of cargo
- agreed delivery times and routing schedules
- pick-up and drop-off points
- specified carrier/mode of transport
- agreed cost structure

Forms of transport may include:

- road
- rail
- sea
- air
- local courier

Consultative processes may involve:

- employees, supervisors and managers
- international and domestic agents, suppliers and current or potential clients
- relevant authorities, government departments and institutions
- representatives of other enterprises and organisations related to the international transfer of freight
- industrial relations and OH&S specialists
- other professional or technical staff

Communications systems may involve:

- telephone
- fax
- email
- electronic data transfer of information
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- Australian and international codes of practice and regulations relevant to the international transfer of freight
- Australian and international regulations and codes of practice for the handling, storage and transport of
RANGE STATEMENT

dangerous goods and hazardous substances, including the ADG and IDG Code
• workplace operating procedures and policies
• operations manuals, job specifications and procedures and induction documentation
• Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
• supplier and/or client instructions
• Australian and International standards, criteria and certification requirements
• communications technology equipment and oral, aural or signed communications
• quality assurance standards and procedures
• emergency procedures
• relevant competency standards and training materials
• QA plans, data and document control
• conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

• regulations and codes of practice for the international transfer of freight
• Australian and international regulations and codes of practice for the handling and transfer of dangerous goods and hazardous substances, including:
  • Australian and International Dangerous Goods Codes
  • Australian Marine Orders and the International Maritime Dangerous Goods Code
  • IATA Dangerous Goods by Air regulations
  • Australian and International Explosives Codes
• relevant regulations for the import and export of cargo
• Australian and international standards and certification requirements
• relevant state/territory OH&S legislation
• relevant state/territory environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.    Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify space requirements | 1.1 The medium-term and long-term storage needs of the organisation are assessed to facilitate planning in accordance with the business plan of the enterprise and legislative requirements  
1.2 Product type, picking frequencies, value, fragility, weight, handling characteristics, quantity and holding periods are assessed to consider type and amount of storage  
1.3 Facility is assessed to determine the stock holding and handling requirements for each inventory item  
1.4 Volume requirements are calculated to ensure that ongoing stock holding needs are met  
1.5 The total space requirement is calculated and used to formulate plan for space utilisation |
| 2 Identify safety and security requirements | 2.1 An assessment is made of risks to ensure maximum safety and security for personnel, stock and facilities  
2.2 Storage handling security and incident/emergency procedures for each class or type of product are identified and documented  
2.3 Fire prevention and firefighting systems are identified in accordance with building code regulations and storage material requirements  
2.4 An evacuation plan is developed in accordance with the safety program of the enterprise |
| 3 Develop documentation system | 3.1 A system for recording and tracing stock location, receive, throughput and despatch is developed and implemented to enable reporting, quality assurance and financial requirements to be met  
3.2 A system for recording communication with carriers, customers and employees is developed and implemented to assess operational effectiveness and to provide data for system improvement |
| 4 Design storage zones | 4.1 Space requirements and equipment operation are accurately assessed to facilitate the planning of warehouse zones  
4.2 An assessment is made of the facility to enable the most effective use of available space  
4.3 Positioning of storage areas, bays, work stations and the like is undertaken in accordance with data obtained from the planning process  
4.4 Provision for maintenance and cleaning is catered for |
| 5 Evaluate facility utilisation | 5.1 A continual system of review is used involving regular checks to ensure storage areas and systems are functioning at optimum levels |
ELEMENT  PERFORMANCE CRITERIA

5.2 Receiving and despatch systems provide efficient operations
5.3 Storage and handling systems provide ease of access and comply with ergonomic principles
5.4 Product handling and storage minimises product damage, contamination and stock losses
5.5 Facility layout remains sufficiently flexible to meet changing storage and handling requirements
5.6 Appropriate reporting systems are established and used to maintain data for the design of improved facilities and systems

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice, including knowledge of fire safety and building regulations applicable to the facility
- Relevant OH&S and environmental procedures and regulations
- Focus of operation of warehouse systems, resources, management and workplace operating systems
- Enterprise business policies and plans including procedures for operations of the facility
- Throughput and storage requirements for specific types of inventory
- Principles, purpose and location of controls, monitoring devices, and systems
- Selection and appropriate application of technology, information systems and procedures
- Procedures for operating electronic communications equipment
- Requirements for completing relevant documentation
- Procedures for managing and controlling hazardous situations when carrying out work activities, particularly those that relate to the storage of materials
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when managing facility and inventory requirements
- Read and interpret plans, diagrams, regulations, codes of practice and other documentation relevant to the management of facilities and inventory requirements
- Provide leadership to others when managing facilities and inventory requirements
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and or rectify any identified problems that may arise during the planning and management of facilities and inventory requirements
- Develop and implement contingency plans for unplanned events which may arise during the management of facilities and inventory requirements
- Prioritise work and coordinate the work of others
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Select and apply appropriate technology, information systems and procedures when managing facility and inventory requirements

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve:

- twenty four hour operation
- single and multi site location
- large, medium and small companies

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Consultative processes may involve:

- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- customers and suppliers
RANGE STATEMENT

Documentation and records may include:
- other professional or technical staff, contractors and maintenance personnel
- regulations and codes of practice relevant to the functions of a storage facility, including the ADG code, fire safety and firefighting regulations, building code regulations, storage and handling procedures, and security procedures relevant to the specific facility
- relevant OH&S and environmental protection regulations
- quality assurance procedures
- emergency procedures, particularly in relation to fire and evacuation
- operations manuals, job specifications and induction documentation
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- building codes, fire safety and firefighting codes and regulations

Unit Sector(s)
Not Applicable

Competency Field
Competency Field       A - Handling Cargo/Stock
TLIA5059A Plan and organise the international forwarding of freight by sea and multimodal transport

Modification History

Not Applicable
Unit Descriptor

This unit involves the skills and knowledge required to plan and organise international forwarding of freight by sea and multimodal transport (covering the importing, exporting and transiting of freight). This includes confirming customers’ freight transport requirements; selecting routing for sea and multimodal transport; advising on and organising the packaging, packing, loading, stowage and storage of the freight; and completing freight forwarding calculations required for sea and multimodal transport. It also includes assisting in the organisation of insurance for sea and multimodal freight transport; organising permits, authorisations etc.; liaising with the freight forwarding global network; tracking and tracing international cargo being forwarded by sea and multimodal transport; and completing documentation and records required for sea and multimodal transport. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for persons involved in planning and organising the international forwarding of freight by sea and multimodal transport as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and conventions applicable to the planning and organising of international freight forwarding by sea or multimodal transport (including the importing, exporting and transiting of goods)
- Standard procedures, codes of practice and protocols for planning and organising international freight forwarding by sea or multimodal transport (including the importing, exporting and transiting of goods)
- Relevant OH&S and environmental procedures and regulations
- Principles of international trade and commerce
- Principles and forms of maritime and multimodal freight transport
- Definitions, purpose and uses of Incoterms and Combin terms
- Types of cargo vessels - their applications, capacity and routes
- Major trade routes, services, conferences, ports and freight terminals as they apply to maritime and multimodal freight transport
- Maritime terminals, cargo handling and terminal equipment at major worldwide ports and freight terminals
- Cargo types, consignments and consolidations
- Containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
- Processes for the chartering of vessels - types of charter, terms and contracts
- Sources of information and documentation needed when planning and organising international freight forwarding by sea or multimodal transport, including permits and authorisations
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- Typical problems that can occur when planning and organising international freight forwarding by sea or multimodal transport and related appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when planning and organising international freight forwarding by sea or multimodal transport, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
Required skills:

- Read and interpret instructions, procedures, information and signs relevant to the planning and organising of international freight forwarding by sea or multimodal transport
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and organising international freight forwarding by sea or multimodal transport including the use of calculators and data entry to a computer
- Operate information and communication technology to required protocol
- Perform required estimates and calculations of variables such as size, weight, distance, risk and costs when planning and organising international freight forwarding involving sea or multimodal transport
- Work collaboratively with others when planning and organising international freight forwarding by sea or multimodal transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning and organising international freight forwarding by sea or multimodal transport in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when planning and organising international freight forwarding by sea or multimodal transport
- Monitor work activities in terms of planned schedule and deadlines
- Apply relevant codes of practice and applicable legislative requirements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - selecting routing for sea and multimodal freight transport
  - advising on and organising the packaging, packing, stowage and storage of freight for sea and multimodal transport
  - completing freight forwarding calculations for sea and multimodal freight transport
  - assisting in the organisation of insurance for sea and multimodal freight transport
  - organising permits, authorisations etc. needed for sea and multimodal freight transport
  - liaising with the freight forwarding global network when organising sea and multimodal freight transport
  - tracking and tracing international cargo being forwarded by sea and multimodal freight transport
  - completing documentation and records required for sea and multimodal freight transport

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

environment at the registered training organisation,
and/or
• in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Modes of international freight transport may include:
• sea transport
• transport by inland waterway
• multimodal transport

International freight forwarding includes services related to:
• the importing of goods
• the exporting of goods
• the transiting of goods

Marine vessel types may include:
• container ships
• roll-on/roll-off carriers (RO-RO)
• bulk carriers (dry cargo vessels)
• conventional ships
• tankers (crude oil, chemicals, liquefied gas, liquid foodstuffs)
• heavy lift ships (equipped with cranes and derricks)

Types of multimodal transport include:
• sea/air
• air/road (truck)
• rail/road/inland waterways-sea-rail/road inland waterways
• mini-bridge
• land bridge
• piggyback
• sea train
• rail-sea-land
• inland waterway-sea-inland waterway

Type of barges used in inland waterway carriage may include:
• motor barges
• tugged barges
• tug
• sailing barges

Pre-transport issues in the forwarding of freight by sea and
• adequacy of insurance
• adequacy of packaging
RANGE STATEMENT

multimodal transport may include:

- planning of the packing and loading of cargo into containers
- planning for security, proper stacking and stowage and handling in transit
- planning for the loading of non-containerised cargo onto a vessel (including sea, air, rail, road or other transport)

Requirements for work may include:

- international freight forwarding codes of practice, protocols and procedures
- regulations relevant to international freight forwarding
- authorities and permits relevant to international freight forwarding
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation

Parameters of freight transport services relevant to customer requirements may include:

- standard operating procedures for forwarding of various types of international freight
- type of transport modes
- transport routing
- various consignment methods
- packaging, packing, stowage and storage options including containerisation
- relevant legislative requirements
- required import/export documentation, labelling and requirements
- transport security checks
- insurance requirements
- service costs
- contract arrangements
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Advantages of multimodal transport include:

- minimises time loss at transhipment points
- may provide faster transit of goods
- reduces burden of documentation and formalities
- saves costs
- establishes only one agency to deal with
- reduces costs of exports

Scope of services performed by multimodal transport operators include:

- FCL (full container load))
- LCL (less than full container load)
- weighing and measurement of cargo
- CFS (container-freight station)
RANGE STATEMENT

- consolidation
- booking of space
- CY (container yard)
- liaison with Customs and other relevant regulatory authorities
- assisting in organising required insurance coverage
- return of leased containers
- communication with customer and global contacts
- use of appropriate information and communication technology

Container types may include:
- general cargo containers
- thermal containers
- tank containers
- (dry) bulk containers
- flat racks/open tops (special equipment)

Types of packages used for storing and protecting cargo during transit may include:
- bags
- cartons
- thermal cartons with gel-ice
- cases
- drums
- pallets
- pallecons and other devices for carrying bulk liquids, pastes and powders

Communications systems may involve:
- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Sources of information required to perform international freight forwarding functions may include:
- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Consultative processes may involve:
- customers
- international and domestic agents and suppliers
- relevant authorities, government departments and institutions
RANGE STATEMENT

- representatives of transport companies
- relevant regulatory authorities and institutions
- other professional or technical staff
- management
- freight forwarding specialists

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice applicable to the international forwarding of freight
- summaries and definitions of Incoterm and Combiterm
- customers’ instructions and transport requirements
- workplace standard operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- standard FIATA forms and documentation such as
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- operations manuals, job specifications and procedures and induction documentation
- freight forwarding competency standards and training materials
RANGE STATEMENT

- workplace operating procedures and policies
- Australian and International standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company's quality assurance standards and procedures
- emergency procedures
- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

Applicable regulations and legislation may include:

Competency Field

| Competency Field | A - Handling Cargo/Stock |
TLIA5060A Plan and organise the international forwarding of freight by air transport

Modification History
Not Applicable
Unit Descriptor

This unit involves the skills and knowledge required to plan and organise international forwarding of freight by air transport (covering the importing, exporting and transiting of freight). This includes confirming customers’ freight transport requirements; selecting routing for air freight transport; advising on and organising the packaging, packing, loading, stowage and storage of air freight; and completing freight forwarding calculations for air transport. It also includes assisting in the organisation of insurance for air freight transport; organising permits, authorisations etc.; liaising with the freight forwarding global network; tracking and tracing international cargo being forwarded by air transport; and completing documentation and records required for air freight transport. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for persons involved in planning and organising the international forwarding of freight by air transport as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Select routing for air freight transport | 1.1 Requirements for international air freight transport services are confirmed and clarified with the customer  
1.2 Critical logistics aspects of the freight transport are determined, analysed and are taken into account in planning the freight forwarding solution(s)  
1.3 Checks are made that all conventions for international air freight transport are fulfilled  
1.4 Where the freight forwarding involves special transport services, advice is sought as required from experts or specialists in the area of the special cargo or dangerous goods concerned  
1.5 Suitable routing for air freight transport is selected after consideration of the options available and analysis of the risks involved  
1.6 Alternative routing options are identified for possible use in the event of contingencies |
| 2 Advise on and organise the packaging, packing, stowage and storage of freight for air transport | 2.1 Suitable options are determined for the packaging, packing, stowage and storage of freight given the type of cargo, the mode of transport, the destination and the selected route(s)  
2.2 Where applicable, container types suitable for air freight transport and appropriate for the freight are reviewed and appropriate options selected  
2.3 The pricing of containers and other forms of freight packaging suitable for air freight transport is determined and advice provided to the customer  
2.4 Advice is provided to the customer on the selection, loading and packing of suitable container types and other forms of freight packaging as applicable  
2.5 Documentation required for the selected containers or other forms of packaging suitable for air freight transport is prepared as per standard procedures and regulatory requirements  
2.6 Appropriate action is taken to organise and provide advice to the customer on the packaging, packing, stowage and storage of the freight for the planned forwarding project including the planning of the loading of the selected containers where applicable |
| 3 Complete freight forwarding calculations for air freight transport | 3.1 Calculations required in the course of planning and organising the international forwarding of freight by air freight transport are completed accurately and with the available computational aids |
| 4 Assist in organising insurance for air freight | 4.1 Risks involved in the planned air freight forwarding solution are identified and analysed |

#### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and conventions applicable to the planning and organising of international freight forwarding by air transport (including the importing, exporting and transiting of goods)
- Standard procedures, codes of practice and protocols for planning and organising international freight forwarding by air transport (including the importing, exporting and transiting of goods)
- Relevant OH&S and environmental procedures and regulations
- Principles of international trade and commerce
- Principles and forms of air freight transport
- Definitions, purpose and use of Incoterms and Combiterms
- Types of aircraft - their applications, capacity and routes
- Major air routes, services, conferences, airports and freight terminals as they apply to air freight transport
- Airports, cargo handling and terminal equipment at major worldwide airports and freight terminals
- Cargo types, consignments and consolidations
- Aircraft containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
- Processes for the chartering of aircraft - types of charter, terms and contracts
- Sources of information and documentation needed when planning and organising international freight forwarding by air transport, including permits and authorisations
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- Typical problems that can occur when planning and organising international freight forwarding by air transport and related appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when planning and organising international freight forwarding by air transport, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
- Read and interpret instructions, procedures, information and signs relevant to the planning and organising of international freight forwarding by air transport
Required skills:
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and organising international freight forwarding by air transport including the use of calculators and data entry to a computer
- Operate information and communication technology systems to required protocol
- Perform required estimates and calculations of variables such as size, weight, distance, risk and costs when planning and organising international freight forwarding involving air transport
- Work collaboratively with others when planning and organising international freight forwarding by air transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning and organising international freight forwarding by air transport in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when planning and organising international freight forwarding by air transport
- Monitor work activities in terms of planned schedule and deadlines
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - selecting routing for air freight transport
  - advising on and organising the packaging, packing, stowage and storage of freight for air transport
EVIDENCE GUIDE

- completing freight forwarding calculations for air freight transport
- assisting in the organisation of insurance for air freight transport
- organising permits, authorisations etc. needed for air freight transport
- liaising with the freight forwarding global network when organising air freight transport
- tracking and tracing international cargo being forwarded by air transport
- completing documentation and records required for air freight transport

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Mode of international freight transport is:
- air transport

International freight forwarding includes services related to:
- the importing of goods
- the exporting of goods
- the transiting of goods

Major aircraft types used for international freight transport may include but are not limited to:
- Airbus A320
- Airbus A321
- Airbus A330
- Airbus A340
- Boeing B747
- Boeing B757-200F
- Boeing B767
- Boeing B767-200
- Boeing B767-300
- Boeing B777
- Boeing B777-200
- Boeing B777-300

Pre-transport issues in the forwarding of freight by air transport may include:
- confirmation that the cargo fulfils air cargo security requirements
- adequacy of insurance
- adequacy of packaging
- planning of the packing and loading of cargo into aircraft containers
- planning for security, proper stacking and stowage and handling in transit
- planning for clearance, delivery and receival during transit and at destination

Requirements for work may include:
- international freight forwarding codes of practice, protocols and procedures
- regulations relevant to the international forwarding of freight by air transport
- authorities and permits relevant to the international forwarding of freight by air transport
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation
- standard operating procedures for forwarding of various
RANGE STATEMENT

Services relevant to customer requirements may include:

- Types of international freight by air
- Type of air transport modes
- Air transport routing
- Various consignment methods for air transport
- Packaging, packing, stowage and storage options for air transport, including air freight containerisation or use of unit load devices
- Relevant legislative requirements
- Required import/export documentation, labelling and requirements
- Transport security checks
- Insurance requirements
- Service costs
- Contract arrangements
- Payment requirements and procedures
- Fiduciary and legal responsibilities of either party

Types of aircraft containers or unit load devices (ULDs) may include but are not limited to:

- LD1 Half Size Lower Deck (Accepted by B767, B747)
- LD2 Half Size Lower Deck (Accepted by B767-200, B767-300)
- LD3 Half Size Lower Deck (Accepted by A330, A340, B757-200F, B767, B777, B747)
- LD3-45 Lower Deck (Accepted by A320, A321)
- LD3-45 Wing Pallet With Net (Accepted by A320, A321)
- LD7 Lower Pallet With Net (Accepted by A330, A340, B767-200, B767-300, B777-200, B777-300, B747)
- LD8 Full Width Lower Deck (Accepted by B767-200, B767-300)
- LD9 Full Size Lower Deck (Accepted by A330, A340, B767-200, B767-300, B777-200, B777-300, B747)
- LD29 Full Width Lower Deck (Accepted by B767-200, B767-300, B747)
- M1 Main Deck Pallet With Net (Accepted by B747)
- 96” Lower Deck Pallet With Net (Accepted by A330, A340, B767-200, B767-300, B777-200, B777-300, B747)

Types of packages used for storing and protecting cargo during transit may include:

- Bags and cartons
- Thermal cartons with gel-ice
- Cases
- Drums
- Pallets
- Pallecons and other devices for carrying bulk liquids, pastes and powders
RANGE STATEMENT

Communications systems may involve:
- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:
- customers
- international and domestic agents and suppliers
- airline representatives
- other employees and supervisors
- relevant regulatory authorities and institutions
- management
- freight forwarding specialists
- other professional or technical staff

Sources of information required to perform international freight forwarding functions may include:
- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include but are not limited to:
- Australian and international conventions, codes of practice and regulations relevant to the international transfer of freight
- summaries and definitions of Incoterms and Combiters
- customers’ instructions and transport requirements
- workplace standard operating procedures and policies
- operations manuals, job specifications and procedures and induction documentation
- standard FIATA forms and documentation such as:
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
RANGE STATEMENT

- a Forwarders Warehouse Receipt (FWR)
- a Forwarders Forwarding Instructions (FFI)
- a Shippers Declaration for the Transport of Dangerous Goods (SDT)
- a Shippers Intermodal Weight Certification (SIWC)
- an Original Bill of Lading (OB/L)
- a Master Air Waybill (MAWB)
- a House Bill of Lading (HBL)
- a House Air Waybill (HAWB)
- Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- operations manuals, job specifications and procedures and induction documentation
- Australian and international standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company's quality assurance standards and procedures
- emergency procedures
- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

Applicable regulations and legislation may include:

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>computational aids</td>
</tr>
</tbody>
</table>

4.1 Risks involved in the planned road and rail freight forwarding solution are identified and analysed

4.2 Transport and liability insurance requirements for the proposed forwarding solution are evaluated and considered

4.3 Assistance in selecting and organising appropriate insurance options is provided as per standard procedures and applicable regulatory requirements

5 Organise permits, authorisations etc. needed for road and rail freight transport

5.1 Documentation requirements are determined for the cargo, mode(s) of transport and selected routing concerned, including permits, authorisations etc.

5.2 Documentation requirements are organised and processed as per standard procedures and applicable regulatory requirements

6 Liaise with the freight forwarding global network

6.1 Appropriate liaison with agents, carriers and others in the global network and supply chain is conducted to plan and organise the freight forwarding project

6.2 Appropriate information and communications technology systems and equipment are used when liaising with the freight forwarding global network as per standard operating procedures and regulatory requirements

7 Track and trace international cargo being forwarded by road and rail transport

7.1 International cargo being transported by road or rail freight transport is tracked and traced during a freight forwarding project using the available systems and technology

7.2 Problems with the transit of freight identified during tracking activities are evaluated and appropriate action is initiated to address the problems as per standard procedures

7.3 Advice is provided to the customer on the progress of the international road and rail freight transport project and any action taken to address unexpected contingencies

8 Complete required documentation and records

8.1 Forms and documentation required for the planned freight forwarding project are completed as per standard operating procedures and applicable regulatory requirements

8.2 Data is retrieved from and entered into computer systems as per standard operating procedures and applicable regulatory requirements

8.3 Records of arrangements made and critical transactions are kept as per standard operating procedures and applicable regulatory requirements

**Required Skills and Knowledge**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international regulations and conventions applicable to the planning and organising of international freight forwarding involving road and rail transport (including the importing, exporting and transiting of goods)
- Standard procedures, codes of practice, conventions and protocols for planning and organising international freight forwarding involving road and rail transport (including the importing, exporting and transiting of goods)
- Relevant OH&S and environmental procedures and regulations
- Principles of international trade and commerce
- Principles and forms of road and rail freight transport
- Types of road vehicles, trains and rollingstock - their applications, capacity and routes
- Major road and rail routes, services, conferences, road and rail freight terminals as they apply to road and rail freight transport
- Freight handling and terminal equipment at major worldwide road and rail freight terminals
- Definitions, purpose and use of Incoterms and Combiters
- Freight types, consignments and consolidations
- Road and rail containers and containerisation, including types, purposes, dimensions and specifications; loading principles and processes; load planning for containers
- Sources of information and documentation needed when planning and organising international freight forwarding by road and rail transport, including permits and authorisations
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- Typical problems that can occur when planning and organising international freight forwarding by road and rail transport and related appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when planning and organising international freight forwarding involving road and rail transport, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
- Read and interpret instructions, procedures, information and signs relevant to the planning and organising of international freight forwarding involving road and rail transport
Required skills:

- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and organising international freight forwarding by road and rail transport, including the use of calculators and data entry to a computer
- Operate information and communication technology to required protocol
- Perform required estimates and calculations of variables such as size, weight, distance, risk and costs when planning and organising international freight forwarding involving road and rail transport
- Work collaboratively with others when planning and organising international freight forwarding involving road and rail transport
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning and organising international freight forwarding involving road and rail transport in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when planning and organising international freight forwarding involving road and rail transport
- Monitor work activities in terms of planned schedule and deadlines
- Apply relevant codes of practice and applicable legislative requirements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of:

- selecting routing for road and rail freight transport
- advising on and organising the packaging, packing, stowage and storage of freight for road and rail transport
- completing freight forwarding calculations for road and rail freight transport
- assisting in the organisation of insurance for road and rail freight transport
- organising permits, authorisations etc. needed for road and rail freight transport
- liaising with the freight forwarding global network when organising road and rail freight transport
- tracking and tracing international cargo being forwarded by road and rail transport
- completing documentation and records required for road and rail freight transport

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts

• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace

• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Mode of international freight transport may include:
- road transport
- rail transport
- piggyback (combined transport road-rail transport)

International freight forwarding includes services related to:
- the importing of goods
- the exporting of goods
- the transiting of goods

Trains used for international rail freight transport may include but are not limited to:
- Conventional transport by railwagons or rollingstock, involving complete wagon loads (as part loads have now nearly disappeared), including:
  - various different types of railwagons or rollingstock (railway-owned or privately-owned)
  - special railwagons or rollingstock (e.g. with changeable axles, container-carrying railwagons or rollingstock etc.)
- Combined transport by rail (road-rail transport), including:
  - piggyback (transport by rail of road semi-trailers)
  - container traffic by rail (unaccompanied combined transport)
  - swap-bodies (similar to containers)
  - Euro (pallet wide) containers

Road vehicles used for international freight transport may include but are not limited to:
- vans and light rigid vehicles of varying length, width, height, loading and total weight
- rigid trucks of varying length, width, height, loading and total weight
- semitrailers and multi-combination vehicles of varying length, width, height, loading and total weight
- vehicles capable of participating in combined freight movements such as road/rail, road/ferryboat, roll-on/roll-off vessels
- vehicles capable of carrying special loads such as perishable goods, liquids, gases and heavy-lift cargo
- vehicles with swap-bodies (similar to containers)
- adequacy of insurance
- adequacy of packaging

Pre-transport issues in the forwarding of freight by road and rail transport include:
- adequacy of insurance
- adequacy of packaging
RANGE STATEMENT

rail transport may include:

- planning of the packing and loading of cargo into containers
- planning for security, proper stacking and stowage and handling in transit
- planning for clearance, delivery and receival during transit and at destination

Requirements for work may include:

- international freight forwarding codes of practice, protocols and procedures
- regulations relevant to the international forwarding of freight by road and rail transport
- authorities and permits relevant to the international forwarding of freight by road and rail transport
- workplace standard operating procedures
- information and communications technology and related systems
- global time zones and hours of operation

Parameters of road and rail freight transport services relevant to customer requirements may include:

- standard operating procedures for forwarding of various types of international freight by road and rail
- type of transport modes
- road and rail transport routing
- various consignment methods for road and rail transport
- packaging, packing, stowage and storage options for road and rail transport, including road and rail freight containerisation or use of unit load devices
- relevant legislative requirements
- required import/export documentation, labelling and requirements
- transport security checks
- insurance requirements
- service costs
- contract arrangements
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Types of containers used in road and rail transport may include but are not limited to:

- box (dry van)
- open top
- open side
- bulk
- tanks
- reefer
- platform
- flat
RANGE STATEMENT

Types of packages used for storing and protecting cargo during transit may include:
- bags
- cartons
- thermal cartons with gel-ice
- cases
- drums
- pallets
- pallecons and other devices for carrying bulk liquids, pastes and powders

Consultative processes may involve:
- customers
- international and domestic agents and suppliers
- railway or road transport company representatives
- relevant regulatory authorities and institutions
- other employees and supervisors
- management
- freight forwarding specialists
- other professional or technical staff

Sources of information required to perform international freight forwarding functions may include:
- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Communications systems may involve:
- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include but are not limited to:
- Australian and international regulations and codes of practice for the international forwarding of freight by road and rail
- summaries and definitions of Incoterms and Combiterms
- customers' instructions and transport requirements
- workplace standard operating procedures and policies
- operations manuals, job specifications and procedures and
RANGE STATEMENT

induction documentation

- standard FIATA forms and documentation such as:
  - Waybill for inland transportation
  - Waybill for cross border traffics
  - International Customs Transit Document (e.g. carnet TIR)
  - a Truck Bill of Lading
  - a Rail Bill of Lading
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a House Bill of Lading (HBL)
  - Multimodal Transport Bill of Lading (MTB/L)
- cargo manifests
- pre-advice and pre-alert documents
- Australian and international standards, criteria and certification requirements
- data obtained through communications technology equipment and oral, aural or signed communications
- freight forwarder company's quality assurance standards and procedures
- emergency procedures
- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
RANGE STATEMENT

- relevant Australian and international environmental protection legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field A - Handling Cargo/Stock
TLIB0117A Assist with preparation of a train prior to operation

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to assist with the preparation of a train prior to operation in accordance with organisational procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for and implementing the prescribed pre-departure checks, completing required train documentation, and confirming the train can proceed.

Licensing or certification requirements may be applicable to this unit.

Application of the Unit
Work is performed in conjunction with a train driver. It involves the application of routine operational principles and procedures to prepare for train operation as part of workplace activities across a variety of operational contexts within the Australian rail system.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for pre-departure checks

1.1 Required checks and relevant procedures and standards are identified

1.2 Purpose of the journey and activities to be undertaken are identified

1.3 Constraints and special instructions that may apply for the journey are identified

1.4 Documentation is read to identify and confirm consist, attach/detach information and characteristics of the train

2 Implement pre-departure checks

2.1 Train, or relevant portion of the train, is checked to ensure that rolling stock is coupled and sequenced correctly

2.2 Rolling stock is checked to ensure it is fit for operation in accordance with regulatory requirements and organisational procedures

2.3 Assistance is provided when train braking systems are tested to ensure they are operating effectively

2.4 Visual inspection is conducted to identify obvious faults or defects that would prevent safe transit

2.5 Action is taken within limits of own role to rectify faults and ensure minimum delay to planned running schedule

2.6 Relevant OH&S requirements are followed to prevent injury and damage

3 Confirm train can proceed

3.1 Documentation is completed following checking of rolling stock and train equipment in accordance with organisational procedures

3.2 Relevant personnel are promptly advised of the result of completed checks

3.3 Authority to proceed relevant to the operational situation is obtained and followed
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Procedures for preparing a train for operation
- Pre-departure train testing procedures
- Train preparation documentation procedures
- Communication procedures and protocols
- Maintenance and servicing procedures
- Procedures to be followed in the event of an emergency
- Train coupling equipment and methods
- Safeworking systems and requirements
- Safeworking procedures in electrified areas
- Train characteristics and specifications
- Contingency management processes for unexpected events

Required skills:

- Communicate effectively with others when preparing a train for operation
- Read and interpret instructions, procedures, information and signs relevant to preparing a train for operation
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to the preparation of a train for operation
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing a train for operation
- Report and rectify within limits of own role identified problems, faults and malfunctions when preparing a train for operation in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when preparing a train for operation
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment (PPE) conforming to industry and OH&S standards
- Test air continuity and braking systems
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - carrying out all pre-departure checks correctly
  - identifying typical faults and defects for the type of rolling stock being operated
  - applying appropriate methods to overcome identified faults and defects

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Visual inspections to identify obvious faults and defects may include checking:

- signs of wear and damage to:
  - wheels and braking equipment
  - flexible connections and fittings
  - couplings
  - fuel, oil, water and coolant levels
  - air system for leaks
  - electrical equipment
  - pantographs
  - emergency and safety equipment, such as vigilance control and deadman relays

Relevant personnel may include:

- maintenance personnel
- yard, station and other operational personnel
- train controllers and signallers
- train crews
- depot coordinators
- hand-over crew

Communication methods may include:

- written, including signed communication, lists and forms
- verbal
- line-of-sight signals
- radio
- fixed and mobile telephones

Safety and personal protective equipment may include:

- high visibility clothing
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- portable radios or mobile or satellite phones
- hand lamps
- flags
- safety devices
- hearing protection

Depending on the type of organisation concerned and the local terminology used,
organisational procedures may be known as:

- workplace procedures
- established procedures

Information and documents may include:

- attach/detach information
- workplace procedures, instructions and job specifications
- train consists
- train notices
- out-of-gauge notices
- brake certification
- load or passenger manifests
- OH&S and environmental protection legislation, codes of practice, policies and procedures
- maintenance specifications
- local instructions
- two-way radio operation procedures
- emergency procedure manuals
- conditions of service, legislation and industrial agreements, including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- relevant Australian standards (AS), including AS 4292
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S

Unit Sector(s)

Not applicable.

Competency Field

B – Equipment Checking and Maintenance
TLIB0127A Certify rolling stock prior to handover

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to certify rolling stock as fit for purpose in accordance with relevant organisational practices, regulations and codes of practice. It includes completing certification and documentation in accordance with organisational or client requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit applies to people required to carry out these activities as part of a maintenance role within a defined location on behalf of their own or client’s organisation.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Complete certification requirements

1.1 Certification requirements for particular rolling stock are confirmed by reference to applicable specifications

1.2 Planned activities are identified in accordance with organisational procedures

1.3 Completed maintenance activities are verified against planned activities

1.4 Where required, completed maintenance activities are validated in accordance with organisational procedures

1.5 Where maintenance activities are not completed an assessment is carried out to confirm rolling stock is fit for purpose in accordance with organisational procedures

1.6 Completed maintenance activities are confirmed against operational performance requirements

1.7 Certificate is issued in accordance with organisational procedures

2 Complete documentation

2.1 All required documentation concerning the certification process is completed in accordance with organisational procedures and regulatory requirements

2.2 Required documentation is archived in accordance with organisational procedures and regulatory requirements

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Relevant occupational health and safety (OH&S) and environmental procedures and relevant regulations
- Requirements for completing relevant documentation when certifying rolling stock prior to handover
- Requirements of organisational maintenance systems, procedures, standards and schedules

Required skills:

- Communicate effectively with others when certifying rolling stock prior to handover
- Read and interpret procedures and standards relevant to certifying rolling stock prior to handover
- Work collaboratively with others when certifying rolling stock prior to handover
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying applicable specifications for the type of rolling stock being certified
  - explaining organisational requirements for certifying rolling stock
  - organisational documentation requirements

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rolling stock may include:

- diesel locomotives
- electric locomotives
- railcars/rail motors
- multiple units (including electric multiple units)
- coaches
- wagons
- trams
- light rail cars

Applicable specifications may include:

- original equipment manufacturers specifications
- maintenance plans
- network specifications

An assessment may be:

- risk assessment
- escalation protocol
- audit

Unit Sector(s)

Not applicable.

Competency Field

B – Equipment Checking and Maintenance
TLIB0128A Conduct pre-movement checks on motive power units

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to conduct pre-movement checks on motive power units in accordance with relevant organisational practices, regulations and codes of practice.
It includes conducting pre-start checks, and starting and positioning motive power units in accordance with workplace requirements.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit applies to people required to carry out these activities as part of a maintenance role within a defined location.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Carry out pre-start checks
1.1 Allocation of motive power units is checked in conjunction with appropriate personnel
1.2 Motive power unit to be inspected and prepared is located
1.3 Completion of all maintenance activities is confirmed
1.4 Checks for safety controls are conducted in accordance with organisational procedures
1.5 Internal and external integrity checks are conducted in accordance with organisational procedures
1.6 Where required, fluid levels are checked and appropriate action is taken as required

2  Start motive power unit
2.1 Motive power unit is started in accordance with manufacturer instructions and/or organisational procedures, and any faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
2.2 For critical or serious equipment faults that cannot be readily rectified, motive power unit is shut down, faulty equipment is isolated and tagged, and problem is reported for rectification
2.3 All instruments and gauges are observed, readings are interpreted to confirm effective air and electrical operation, and where a problem is indicated action is taken to determine the cause and to rectify or report the situation
2.4 Where required, fluid levels are rechecked after starting and appropriate action is taken as required
2.5 Pre-movement checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move

3  Complete documentation
3.1 All required documentation concerning inspecting the motive power unit is completed in accordance with organisational procedures and regulatory requirements
3.2 Logbook and other maintenance records on the motive power unit are completed in accordance with organisational procedures and regulatory requirements

4  Position motive power unit
4.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures
4.2 Relevant personnel are made aware that motive power unit is about to be moved in accordance with organisational procedures
4.3 Motive power unit is operated in accordance with standard procedures and regulatory requirements, and within operating and operational constraints
4.4 Motive power unit is positioned in accordance with operational requirements and directions

4.5 Motive power unit performance is monitored during operation to confirm effective operation and/or to identify defects

4.6 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance

4.7 Relevant occupational health and safety (OH&S) and regulatory requirements are followed to ensure safety and to prevent injury and damage

4.8 Relevant personnel are advised that the motive power unit is secured in the required position and is ready for service

**Required Skills and Knowledge**

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
- Procedures for raising and lowering a pantograph on electric motive power units
- Relevant OH&S and environmental procedures and relevant regulations
- Requirements for completing relevant documentation when inspecting and preparing a motive power unit

**Required skills:**

- Adapt to differences in motive power units and associated equipment and procedures
- Communicate effectively with others when inspecting and preparing a motive power unit
- Document outcomes of inspection of a motive power unit
- Interpret and follow instructions and prioritise work
- Modify activities depending on differing operational contingencies, risk situations and environments
- Read and interpret instructions, procedures, information and signs relevant to the visual inspection, preparation, start-up and positioning of a motive power unit
- Work collaboratively with others inspecting and preparing a motive power unit
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying who is responsible for authorising the movement of rolling stock
  - identifying all activities carried out prior to moving a motive power unit
  - identifying start up requirements for a motive power unit

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Motive power units may include all motive power units in service within Australian rail systems and may include:

- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)

Safety controls may include:

- flags
- personal and equipment lock outs

Relevant personnel may include:

- train crews
- train controllers and signallers
- depot coordinators
- yard masters, supervisors
- contractors
- third parties
- maintenance personnel
- cleaning personnel

Unit Sector(s)

Not applicable.

Competency Field

B – Equipment Checking and Maintenance
TLIB0132A Start up and shut down a single locomotive

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to start up and shut down a single locomotive motive and making it as a vehicle. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
These operations are conducted as part of the operation of locomotives and may be carried out by different personnel working within rail operations.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Inspect and prepare locomotive

- **1.1** Identification and location of locomotive is confirmed
- **1.2** Logbook and locomotive are checked for out of service indications and to confirm serviceability
- **1.3** Where applicable, locomotive kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported in accordance with organisational policies and procedures
- **1.4** Fuel, lubricating oils, water, coolant and sand equipment are checked and replenished if required
- **1.5** External visual checks are conducted in accordance with manufacturer and/or organisational policies and procedures

### 2 Start up locomotive

- **2.1** Locomotive is started in accordance with manufacturer instructions and/or organisational procedures
- **2.2** Any operating faults are identified, diagnosed, rectified and/or reported and recorded in appropriate records
- **2.3** All instruments and gauges are observed and readings are interpreted to confirm effective operation in accordance with manufacturer and/or organisational procedures
- **2.4** Where required, fluid levels are rechecked after starting and appropriate action is taken if required

### 3 Conduct in-cab checks

- **3.1** Locomotive in-cab checks are conducted in accordance with manufacturer and/or organisational policies and procedures
- **3.2** Vigilance and safety controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
- **3.3** Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly
- **3.4** Personal in-cab equipment and crew comfort requirements are checked and adjusted for correct functionality and comfort
- **3.5** Auxiliary and emergency equipment is checked and confirmed to be operational in accordance with operating requirements

### 4 Conduct post start up checks

- **4.1** Post start up checks are carried out to ensure locomotive is braking and powering effectively and is safe to move in accordance with manufacturer and/or organisational policies and procedures
- **4.2** If required, personal communication equipment is obtained and checked to ensure that it is functional
5 Raise or lower pantograph (if required)

5.1 If required, pantographs are raised or lowered and confirmed to be operational in accordance with manufacturer instructions and/or organisational policies and procedures

6 Complete start up documentation

6.1 All required documentation concerning inspecting the locomotive is completed in accordance with organisational policies and procedures

6.2 Logbook and other locomotive service records are completed in accordance with organisational policies and procedures

7 Stable locomotive

7.1 Location for stabling the locomotive is identified and confirmed with appropriate personnel

7.2 Where required, directions of appropriate personnel are interpreted and followed

7.3 Locomotive is stabled and shut down in accordance with manufacturer and/or organisational procedures

7.4 Locomotive is secured in accordance with organisational policies and procedures

7.5 Control equipment and cab are secured in accordance with organisational policies and procedures

7.6 If required, additional protection is set in place in accordance with organisational policies and procedures

8 Carry out post-operational checks

8.1 Fuel, oil, water and sand levels are checked and replenished if required

8.2 Outcomes of post-operational checks are recorded in accordance with organisational policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Auxiliary systems on a locomotive and related checks for correct operation
- Braking and safety system procedures for locomotives
- Defects that can occur on a locomotive and related action that should be taken
- External features of a locomotive that must be checked during a visual inspection
- Functions of all supervisory indicators and controls, and related checks for correct operation
- Inspection procedures for a locomotive
- Lubrication requirements for a locomotive
- Procedures for operating electronic communications equipment with required protocol
- Purpose and location of controls, monitoring devices, braking, power source and traction systems
- Relevant legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations

**Required skills:**

- Adapt to differences in locomotives and associated equipment and procedures
- Communicate effectively with others when inspecting, preparing and stabling a locomotive
- Modify activities depending on operational contingencies, risk situations and environments
- Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, start up and stabling a locomotive
- Work collaboratively with others inspecting and preparing a locomotive
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - completing all pre-start-up checks on a locomotives
  - correctly starting up a locomotive
  - shutting down a locomotive

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Locomotives may include:
- diesel locomotives
- electric locomotives
- railcars

Personal in-cab equipment may include:
- entertainment systems
- microwave
- kettle
- hotplate
- fridge

Crew comfort equipment may include:
- toilet
- air conditioning
- heating
- seat
- blinds
- demisters

Auxiliary and emergency equipment may include but not limited to:
- fire extinguishers
- tool box
- first aid kit
- emergency chain
- audible track warning devices
- spill kits
- hydraulic/manual jacks
- spare brake blocks
- spare knuckles
- chocks
- flags

Additional protection may include:
- derailers
- chocks
- catch points
- dump device clamp
- rail anchor

Appropriate personnel may include:
- train controllers and signallers
- depot/yard supervisor
- ground support crew
- maintenance personnel

Safety and personal protective equipment may include:
- gloves
- sunscreen and sunglasses
- safety glasses
• insect repellent
• safety headwear and footwear
• two-way radios
• hand lamps
• safety devices
• high visibility clothing
• hearing protection

Applicable legislation, regulations and codes may include:
• legislated rail safety requirements including acts and regulations from each applicable state/territory and any nationally approved compliance codes and/or guidelines
• relevant Australian Standards and related requirements
• relevant state/territory OH&S legislation
• relevant state/territory environmental protection legislation

Unit Sector(s)

Competency Field
B – Equipment Checking and Maintenance
TLIB1024A Clean transportation units and facilities for passenger use

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to clean transportation units and facilities for passenger use in accordance with workplace and regulatory requirements. It includes identifying and preparing for cleaning; cleaning the facility or unit; identifying any minor maintenance requirements of transportation units and facilities; and completing all work requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with codes/ regulations and workplace requirements relevant to the cleaning of transportation units and facilities for passenger use.

Work is performed under some supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures to the cleaning of transportation units and facilities for passenger use as part of work activities in the transport and allied industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify and prepare for cleaning | 1.1 Transportation units and facilities are inspected for hygiene and cleanliness on an ongoing basis  
1.2 Customer complaints regarding lack of hygiene and cleanliness within transport units and facilities are investigated  
1.3 Transport units or areas requiring cleaning and the nature of the material to be cleaned is identified to determine appropriate response  
1.4 Cleaning procedures are identified and cleaning materials and equipment are organised in accordance with workplace procedures  
1.5 Areas that require cleaning that breach OH&S regulations or workplace standards are cordoned off to prevent access by staff and customers |
| 2 Clean facility or unit | 2.1 Transportation units and facilities are cleaned or detailed to workplace standards  
2.2 Cleaning equipment is operated in accordance with OH&S regulations, codes of practice, and workplace procedures  
2.3 Chemicals are used in accordance with OH&S legislation, codes of practice, policies and procedures  
2.4 Hazardous and general waste is removed in accordance with OH&S regulations, codes of practice and workplace procedures |
| 3 Identify minor maintenance requirements of transportation units and facilities | 3.1 Transport units and facilities are inspected to identify maintenance requirements  
3.2 Minor maintenance of the transport units and facilities is conducted in accordance with the workplace policies and procedures  
3.3 Minor maintenance actions are reported in accordance with workplace procedures  
3.4 Further maintenance requirements of transport units or facilities are reported in accordance with workplace procedures |
| 4 Complete the work | 4.1 Cordoned off area is re-opened for use when safe for customer access  
4.2 Transportation units/facilities cleanliness and appearance is verified prior to the unit being released for service  
4.3 Stocks of cleaning equipment are monitored and replenished as required |

### Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the cleaning of transportation units and facilities for passenger use including, where relevant, the ADG Code and relevant health and hygiene requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the cleaning of transportation units and facilities for passenger use, including the discharging of waste and the charging of water containers
- Focus of operation of work systems, equipment, management and site operating systems for the cleaning of transportation units and facilities for passenger use
- Equipment, chemicals and materials used during the cleaning of transportation units and facilities for passenger use, and the precautions and procedures that should be followed in their use
- Problems that may occur when cleaning transportation units and facilities, and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication requirements when cleaning transportation units and facilities, including radio operation
- Housekeeping standards procedures required in the workplace
- Site layout

Required skills:

- Communicate effectively with others when cleaning transportation units and facilities
- Read and interpret instructions, procedures, information and signs relevant to the cleaning of transportation units and facilities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cleaning transportation units and facilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when cleaning transportation units and facilities in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when cleaning transportation units and facilities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and safely use relevant equipment and materials when cleaning transportation units and facilities
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select, mix and apply appropriate cleaning materials
- Handle and store hazardous substances and materials

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures in reference to cleaning vehicles for passenger use
  - demonstrating an understanding of the OH&S requirements for cleaning transportation units
  - demonstrating an understanding of the OH&S requirements for cordoning off an area to the public when cleaning transportation units

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
- A simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
- a range of work environments
- by day or night

Transportation units may include:
- rail carriages, buses, coaches, ferries and other transport units

Cleaning equipment may include:
- vacuum cleaner
- steam cleaners
- mop and bucket
- polisher
- broom
- hose
- shampoo unit
- shovel
- squeegees
- extension poles
- specialised cleaning unit
RANGE STATEMENT

• remote controlled cleaning unit
• special containers for syringes

Reporting may include:
• verbal communication
• written communication

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances

Facilities could include:
• hard floor (internal)
• soft floor
• ceiling surfaces and fittings
• external surfaces
• hard floor (external)
• glass surfaces
• internal surfaces
• furniture and fittings
• seats
• hard surfaces (e.g. metal, tiled)

Transportation units may include:
• passenger vehicles/carriages/vessels owned leased or hired for which the organisation is responsible for cleaning

Facilities may include:
• any premises owned, leased or hired and used by the transport system's internal and external customers

Chemicals include:
• all types of active and passive materials/agents used for cleaning within the organisation's transportation units and facilities

Hazardous waste includes:
• all materials/agents/items/objects that are identified under the relevant acts, regulations or codes

Equipment used to cordon off areas may include:
• portable barriers
• gate closure
• witches hats
• designated tape
• signage

Personal protective equipment may include:
• gloves
• eye and ear protection
• fume protection
• safety headwear and footwear
• high visibility clothing

Consultative processes may involve:
• other workplace personnel, supervisors and managers

Communication in the work area
• phone
• radio
RANGE STATEMENT

may include:

- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and policies for the cleaning of transportation units and facilities for passenger use
- safety management systems/plans
- work instructions, inspection reports, works orders, job description, and induction materials
- manufacturers specifications for equipment/materials
- Material Safety Data sheets (MSDS)
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice including the National Standards for Manual Handling, the Industry Safety Code and the ADG Code
- relevant health and hygiene legislation, regulations and related documentation
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the cleaning of transportation units and facilities for passenger use, including health and hygiene regulations and the ADG Code
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB1028A Maintain and use hand tools

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to maintain and use hand tools in accordance with workplace requirements, including selecting and using hand tools to complete workplace tasks, maintaining basic hand tools in accordance with manufacturers instructions, and securing and storing hand tools in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with workplace procedures and safeworking codes relevant to the maintenance and use of hand tools.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine procedures to maintain and use hand tools across a variety of operational workplace contexts.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of state/territory regulations, codes of practice and safeworking system requirements
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the use and maintenance of hand tools
- Problems that can occur when using and maintaining hand tools and related action that should be taken
- Materials used when using and maintaining hand tools and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency
- Workplace component and material supply system

Required skills:
Required skills:

- Communicate effectively with others when maintaining and using hand tools
- Read and interpret instructions, procedures, information and signs relevant to the maintenance and use of hand tools
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the use and maintenance of hand tools
- Operate electronic communication equipment to required protocols
- Work both individually and collaboratively with others when maintaining and using hand tools
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when maintaining and using hand tools in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Identify, select and efficiently and effectively use relevant hand tools and related materials
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hand tools may include:
- those required for operations and maintenance

Operations may be carried out in typical rail transport situations, including:
- operations conducted at day or night
- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment

Materials may include:
- servicing materials such as lubricants
- related materials and consumables needed when using tools, e.g. nails, screws, grease, etc.

Safety equipment may include:
- high visibility clothing
- sunscreen and sun glasses
RANGE STATEMENT

- insect repellent
- gloves, safety headwear, mask and footwear
- portable radios
- flags and hand lamps
- safety glasses and hearing protection
- safety devices

Environmental hazards may include:
- leaking oil and fuel
- inappropriate disposal of fluids in drains or sewerage systems
- inappropriate disposal of waste and rubbish

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers/clients
- equipment manufacturers representatives and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Contingency processes may relate to:
- personal injury
- tool malfunctions

Operators of mechanised equipment must have:
- undertaken training
- where appropriate, hold the relevant licence, permit or certificate
- be recognised as competent for the class of machinery being used

Information/records may include:
- workplace operational and technical instructions and procedures for the use and care of hand tools
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the use and servicing of tools
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when using and maintaining hand tools
- OH&S procedures
- QA plans and procedures
RANGE STATEMENT

- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements

Applicable regulations and legislation may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB1030A Undertake general site maintenance

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to undertake general site housekeeping and maintenance in depots, sub-depots, factories, compounds, campsites, etc. in accordance with safeworking and regulatory requirements and workplace procedures. It includes preparing for the work, conducting site housekeeping functions, applying pest and vegetation control measures, and completing all work requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant requirements of the codes of practice and safeworking requirements and regulations of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to general site maintenance carried out as part of workplace activities across a variety of operational contexts.

| 1  Prepare for work | 1.1 Works order including drawings, sketches and material lists is received/accessed, analysed and confirmed if necessary by site inspection  
1.2 Resources, including equipment and materials, are identified and obtained  
1.3 Liaison and communication issues with other personnel at the site are resolved  
1.4 Hazards are identified prior to commencement of work  
1.5 Site safety requirements are observed |
| 2  Conduct site housekeeping functions | 2.1 Stores, materials and equipment are loaded/off-loaded safely and secured  
2.2 Site, including stores and materials, is laid out to plan  
2.3 Stores and materials are checked for serviceability, cleaned as necessary and prepared for use  
2.4 Minor earthwork maintenance is conducted  
2.5 Excess materials and refuse are disposed of/returned as required by workplace procedures |
| 3  Apply pest and vegetation control measures | 3.1 Pest and vegetation control requirements are identified and appropriate control measure is selected and authorised by the appropriate person  
3.2 Chemical control agents are prepared in accordance with safety requirements and workplace procedures  
3.3 Pest control measures are applied, monitored and varied to maintain effectiveness  
3.4 Control measures are applied and pests and vegetation are removed/neutralised |
| 4  Complete the work | 4.1 Worksite is rehabilitated  
4.2 Work completion details are finalised and recorded/advised to appropriate personnel |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant sections of applicable regulatory requirements
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for general site maintenance
- Problems that may occur during site maintenance activities, and action that can be taken to report or resolve the problems
- Hazards that may exist during site maintenance activities, and ways of controlling the risks involved
- Contents of workplace technical manuals and instructions relating to the work activities concerned
- Characteristics of plant and equipment, transport, structures, hardware and electrical components used in work activities
- Impact on work activities of regulatory requirements
- Workplace documentation and records system management related to the work concerned
- Hazardous chemicals used in general site maintenance, and related precautions and personal protection measures
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when carrying out general site maintenance
- Read and interpret instructions, procedures, information, labels and signs relevant to general site maintenance
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to general site maintenance
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when carrying out general site maintenance in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when carrying out general site maintenance
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and organise resources required for work activities
- Use hand tools and minor plant
- Work at heights and in confined spaces

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations are conducted by day or night in all relevant weather conditions and may involve working:

- from a vehicle/platform
- from a ladder
- from an elevating work platform
- from a tree
- on the ground

Stores, materials and equipment may include:

- those required for erection, maintenance and servicing functions

Minor earthworks may include:

- restoration of backfill to complete excavations
- pole and structure foundations
- basic drainage

Vegetation control measures may include:

- hand clearing
- growth retardants
- machinery assisted cleaning
- herbicidal cleaning
- fire cleaning

Pest control measures may include:

- seals
- chemicals
- baits
- traps
- sprays

Communication equipment may include:

- two-way radios, and/or
- telephones

Depending on the type of organisation concerned and the
RANGE STATEMENT

local terminology used, workplace procedures may include:

- organisational procedures
- established procedures

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:

- relevant state/territory codes of practice and safeworking system requirements
- operational instructions, policies and workplace procedures
- relevant logs or record books
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with safeworking and regulatory requirements and workplace procedures, including planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the cleaning up of plant, equipment and worksites as part of workplace activities across a variety of operational contexts within the Australian rail system.

| 1 Plan and prepare work | 1.1 Details of cleaning requirements are identified by instructions, inspections, work orders and schedules  
1.2 Materials and equipment are identified and obtained  
1.3 Relevant legislative, statutory and workplace requirements and standards are identified, applied and monitored throughout the work procedure  
1.4 Environmental regulatory requirements are identified to ensure site is left in an environmentally sound condition  
1.5 Required materials to be removed and methods of removal are identified to facilitate clean up |
| 2 Arrange clear up and disposal/reclamation of material | 2.1 Storage/disposal areas and quarantine zones are identified and arranged to ensure environmentally sound disposal  
2.2 Reclaimed material is removed to storage areas using appropriate methods  
2.3 Non-required materials/services are removed and disposed of in appropriate manner to ensure clean and environmentally stable site  
2.4 Site is inspected for overlooked materials to minimise wastage and losses |
| 3 Operate cleaning equipment and mobile plant | 3.1 Cleaning and mobile plant is operated to site/manufacturers requirements.  
3.2 Operator maintenance is performed to manufacturers/site standards  
3.3 Cleaning equipment is cleaned and stored |
| 4 Finalise work and restore site | 4.1 Drainage is established/restored as necessary to ensure well drained site  
4.2 Re-vegetation/environmental repair is arranged if required to return site to environmentally sound condition  
4.3 Barriers are removed or checked for integrity to ensure access to correct areas  
4.4 Access roads are closed if required to prevent unauthorised access to closed site  
4.5 Site is left in suitable level and surface condition to ensure environmentally sound, safe and clean site |

# Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the cleaning up of plant, equipment and worksites
- Problems that may occur during the cleaning up of plant, equipment and worksites and action that can be taken to report or resolve the problems
- Hazards that may exist when cleaning up plant, equipment and worksites and ways of controlling the risks involved
- Permit to work system where applicable
- Applications and characteristics of plant and equipment
- Cleaning agents/sealants and their properties and precautions for their use
- Cleaning equipment and related materials and their applications
- Plant and equipment cleaning procedures and instructions
- Relevant recording and documentation requirements
- Manufacturers instructions for the servicing and cleaning of equipment

Required skills:

- Communicate effectively with others when cleaning up plant, equipment and worksites
- Read and interpret instructions, procedures, information and signs relevant to the cleaning up of plant, equipment and worksites
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the cleaning up of plant, equipment and worksites
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when cleaning up plant, equipment and worksites
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment and sites in accordance with standard operating procedures
- Use hand and power tools
- Apply cleaning agents, sealants and chemicals
- Handle hazardous materials
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Level and re-vegetate sites
- Identify and reclaim salvageable materials
- Identify and remove water/waste/surplus materials
- Operate and maintain relevant mobile plant and mobile plant equipment
- Apply cleaning agents, sealants and chemicals
- Use barriers correctly

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:

situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Materials may include:
- all purpose garden sprays
- floor stripper
- floor polish
- floor cleaner
- disinfectant
- degreaser
- bleach
- petrochemicals

Tools may include:
- gardening implements
- cleaning tools
- hand tools

Cleaning equipment may include:
- hoses
- lances
RANGE STATEMENT

- pneumatic tube hones
- high speed polishers
- vacuum cleaners
- steam cleaners
- brooms
- buckets
- mops
- shovels
- duster
- internal combustion driven vacuum cleaner

Cleaning operations may also include:
- water lancing
- internal boiler washing

Communication methods may include:
- written
- verbal
- radio

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection and gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Disposal of material may involve:
- the use of a quarantine zone in accordance with environmental regulations and requirements

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- relevant logs or record books
- notices, records and requests
RANGE STATEMENT

- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- environmental regulations and associated requirements
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to use, clean and maintain towing equipment in accordance with workplace requirements. It includes carrying out pre-operation checks on equipment, carrying out basic routine servicing of the equipment, using the towing equipment, cleaning the equipment, and recording and reporting the results of checks in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the OH&S legislation and other relevant regulations covering the use, cleaning and basic servicing of the towing vehicle and the equipment concerned.

Work is performed under limited supervision. It involves the application of regulatory requirements and standard operating procedures to the use, cleaning and servicing of a towing vehicle and its equipment.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Visually inspect vehicle and towing equipment** | 1.1 Towing vehicle and equipment are visually inspected prior to operations as per standard pre-operational functional and safety check procedures and manufacturers specifications  
1.2 Aspects of vehicle or equipment found to be faulty or outside manufacturers or workplace specifications are reported to designated persons for appropriate action |
| **2 Check vehicle and towing equipment for operational capability** | 2.1 Towing vehicle and equipment are checked to ensure that they can be operated in accordance with manufacturers specifications and standard operating procedures  
2.2 Safety systems are all checked for operational effectiveness  
2.3 Routine servicing and lubrication checks of the tow truck and its equipment are carried out in accordance with the service schedule for the vehicle and the equipment concerned |
| **3 Identify and assess impact of faults on towing operations** | 3.1 The effect of any identified faults on the operation of the towing vehicle and equipment is assessed  
3.2 Faulty equipment or components that may affect the safe operation of the vehicle and equipment are isolated, tagged and reported to the appropriate personnel for rectification |
| **4 Use towing equipment on vehicle** | 4.1 Towing equipment is operated in accordance with manufacturers specifications and regulatory requirements  
4.2 Attachment points used in the towing operation and the weight of the vehicle being towed or load being carried are checked to ensure that they are consistent with established towing practice, regulatory requirements and the permissible safe working loads for the tow truck and its associated towing equipment  
4.3 Safety precautions are followed when using the towing equipment on a tow truck in accordance with standard operating procedures and occupational health and safety requirements  
4.4 Personal protective equipment is worn in accordance with standard operating procedures and occupational health and safety requirements |
| **5 Clean towing vehicle and its equipment** | 5.1 Appropriate cleaning process is selected for type of towing vehicle and its equipment in accordance with standard operating procedures  
5.2 Cleaning materials are prepared in accordance with manufacturers instructions and standard operating procedures  
5.3 The required personal protective and safety equipment is selected and used in accordance with regulatory requirements and standard operating procedures  
5.4 Towing vehicle is cleaned using appropriate cleaning materials and tools as per standard procedures |
ELEMENT
6 Record and report results of visual inspection and operational checks

PERFORMANCE CRITERIA
6.1 The results of the visual inspection and operational checks are accurately reported in accordance with regulatory requirements, workplace policy and standard procedures
6.2 Records are clear, unambiguous and concisely kept in accordance with workplace policy
6.3 Clear reference is made to any items which may affect the future safety of the towing vehicle or equipment

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations and standards relevant to the use, cleaning and servicing of a towing vehicle and its equipment
- Relevant OH&S and environmental protection procedures and guidelines
- Standard operating procedures and policies for the use, cleaning and servicing of a towing vehicle and its equipment
- Focus of operation of work systems, equipment, management and workplace standard operating systems for the use, cleaning and servicing of a towing vehicle and its equipment
- The characteristics, capabilities and limitations of the towing vehicle and its equipment
- Tools, materials and equipment used during the use, cleaning and maintenance of a towing vehicle and its equipment and the precautions and procedures that should be followed in their use
- Problems that may occur when using, cleaning and servicing a towing vehicle and its equipment and appropriate action that can be taken to resolve the problems
- Operational safety requirements for the towing vehicle and equipment concerned
- Documentation and record requirements when using, cleaning and servicing a towing vehicle and its equipment
- Housekeeping standards and procedures required when operating and servicing a tow truck and its equipment
- Hazards that may exist when using, cleaning and servicing a towing vehicle and its equipment and the precautions and action that should be taken to minimise or eliminate the hazards concerned

Required skills:
Required skills:

- Communicate effectively with others when using, cleaning and servicing a towing vehicle and its equipment
- Read and interpret instructions, procedures and labels relevant to the operation, cleaning and servicing of a towing vehicle and its equipment
- Complete documentation related to the operation, cleaning and servicing of a towing vehicle and its equipment
- Work safely and collaboratively with others when using, cleaning and servicing a towing vehicle and its equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Modify activities depending on differing towing contexts, risk situations and environments
- Recognise problems concerning the safety and operational capability of the towing vehicle and its equipment and take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating, cleaning and servicing a towing vehicle and its equipment
- Plan own work including predicting consequences and identifying improvements
- Adapt to changes in towing vehicles and associated equipment and procedures
- Use required personal protective equipment conforming to industry and OH&S standards including the operation of portable fire extinguishers
- Select and use relevant equipment, tools and cleaning agents when using, cleaning and servicing a towing vehicle and its equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of towing situations
- by day or night
- in a range of weather conditions

Customers may be:
- vehicle owners
- operators of expressways, freeways, tollways or tunnels
- police and other emergency services personnel
- local government authorities
- car park operators
- road traffic authorities
- owners and operators of equipment elevating work
RANGE STATEMENT

Towing situations may include:
- vehicle accidents
- vehicle breakdowns
- expressway breakdowns and accidents
- tunnel breakdowns and accidents
- stolen cars
- vehicles illegally parked on clearways
- vehicles illegally parked in car parks
- abandoned vehicles
- carriage of equipment such as elevating work platforms, forklifts, small load shifting equipment, etc.

Required towing vehicle may include:
- tilt tray tow truck with winch (5 tonne, 7.5 tonne and 10 tonne capacity)
- tow truck with crane and cradle
- towing vehicle with a detachable self loading table top
- articulated drop-deck low loader
- trailer

Purpose of equipment checking and inspection is to ensure:
- it is free from damage and faults that may prejudice safety or limit operational capability

Safety and operational capability checks may be performed:
- on a range of towing vehicles and their associated equipment

Operational and servicing checks may be performed by:
- operating and checking the functionality of various pieces of safety and component equipment (where applicable)
- completing a service checklist for the towing vehicle and its equipment

Potential problems that may be identified during visual inspections and service checks:
- fluid leaks
- low fluid levels
- damaged or worn cables and ropes
- broken equipment or parts
- cracks, surface or structural faults or other damage
- tightness of bolts, fixtures and fittings within specifications

Records and results of pre-operation and operational checks may include:
- details of faulty equipment or specific components
- action taken
- results of checks
- completion of a service checklist or schedules
- details of repair and maintenance work to be undertaken

Personal protective equipment may include:
- gloves
- safety headwear and footwear
RANGE STATEMENT

- safety glasses
- two-way radios
- high visibility clothing (raincoats and vests)
- portable fire extinguishers

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:

- mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications

Information and documents may include:

- standard procedures and policies for the operation, checking and servicing of towing vehicle, equipment and tools
- manufacturers specifications for towing vehicle, equipment and tools
- workplace and client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- industry code of practice
- relevant legislation, regulations and related documentation
- quality assurance standards
- emergency procedures

Applicable legislation, regulations and codes may include:

- relevant standards, codes and regulations pertaining to the towing vehicle and its equipment
- relevant state and territory OH&S legislation
- relevant state and territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to clean up plant, equipment and worksite in accordance with safeworking and regulatory requirements and workplace procedures. It includes planning and preparing work, arranging the clear up and disposal/reclamation of material, operating cleaning equipment and mobile plant, finalising the work and restoring the site. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the cleaning up of plant, equipment and worksites as part of workplace activities across a variety of operational contexts within the Australian rail system.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the cleaning up of plant, equipment and worksites
- Problems that may occur during the cleaning up of plant, equipment and worksites, and action that can be taken to report or resolve the problems
- Hazards that may exist when cleaning up plant, equipment and worksites, and ways of controlling the risks involved
REQUIRED KNOWLEDGE AND SKILLS

- Cleaning agents/sealants and their properties and precautions for their use
- Cleaning equipment and related materials and their applications
- Relevant recording and documentation requirements
- Manufacturers instructions for the cleaning of equipment
- Material safety data sheets (MSDS)

Required skills:

- Read and interpret instructions, procedures, information and signs relevant to the cleaning up of plant, equipment and worksites
- Interpret and follow operational instructions
- Complete documentation related to the cleaning up of plant, equipment and worksites
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems in accordance with workplace procedures
- Apply precautions to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment and sites in accordance with standard operating procedures
- Apply cleaning agents, sealants and chemicals
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and reclaim salvageable materials
- Identify and remove water/waste/surplus materials
- Operate and maintain relevant cleaning equipment
- Use barriers correctly

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the
EVIDENCE GUIDE

performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying and obtaining correct materials and equipment
  - operating cleaning equipment correctly
  - disposing of waste materials correctly
  - leaving site in a suitable condition

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Materials may include:
- floor stripper
- floor polish
- floor cleaner
- disinfectant
- degreaser
- bleach
- petrochemicals

Tools may include:
- cleaning tools
- hand tools

Cleaning equipment may include:
- hoses
- lances
- pneumatic tube hones
- high speed polishers
- vacuum cleaners
- steam cleaners
- brooms
- buckets
- mops
- shovels
- duster
- internal combustion driven vacuum cleaner

Cleaning operations may also include:
- water lancing
- internal boiler washing

Communication methods may include:
- written
- verbal
- radio/mobile phone

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection and gloves
- sunscreen
- sunglasses and safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Disposal of material may involve:
- the use of a quarantine zone in accordance with environmental regulations and requirements

Information/documents may include:
- operational instructions, policies and workplace procedures
- relevant logs or record books
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- environmental regulations and associated requirements
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment in accordance with workplace requirements, including inspecting equipment and work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting the results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the checking and assessment of the operational capability of equipment.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the checking and assessment of the operational capability of equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

| 1 Inspect equipment and work area | 1.1 Equipment is inspected prior to start-up in accordance with workplace pre-operational functional safety check procedures and manufacturers specifications  
1.2 Aspects of equipment/work area found to be outside manufacturers and/or workplace specifications are reported to designated persons for appropriate action |
| 2 Check equipment operational capability | 2.1 Equipment and components are tested after start-up in accordance with manufacturers specifications and workplace procedures  
2.2 Warning systems are all checked for operational effectiveness |
| 3 Identify and assess impact of faults on work requirements | 3.1 Faults are identified and assessment made of the potential effect on the operation of the equipment for the required work  
3.2 Faults that may affect the safe operation of the equipment are reported to the appropriate personnel for rectification |
| 4 Record and report results of inspection and testing | 4.1 The results of the inspection and testing are accurately reported in accordance with regulatory requirements, workplace policy and industry guidelines  
4.2 Records are clear, unambiguous and concisely kept in accordance with workplace policy  
4.3 Clear reference is made to any items which may affect the future safety of the equipment |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Workplace procedures and policies for the checking and assessing of the operational capability of equipment
- Focus of operation of work systems, equipment, management and site operating systems for the checking and assessing of the operational capability of equipment
- The characteristics, capabilities and limitations of the equipment
- Tools and equipment used during the checking and assessing of the operational capability of equipment and the precautions and procedures that should be followed in their use
- Problems that may occur when checking and assessing the operational capability of equipment and appropriate action that can be taken to resolve the problems
REQUIRED KNOWLEDGE AND SKILLS

- Operational safety requirements for the equipment concerned
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when checking and assessing the operational capability of equipment
- Read and interpret instructions, procedures, information, labels and signs relevant to the checking and assessing of the operational capability of equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the checking and assessing of the operational capability of equipment
- Work collaboratively with others when checking and assessing the operational capability of equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use relevant equipment and communications technology when checking and assessing the operational capability of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:  
- a range of work environments  
- by day or night

Customers may be:  
- internal or external

Workplaces may comprise:  
- large, medium or small worksites

Work may be conducted in:  
- limited or restricted spaces  
- exposed conditions  
- controlled or open environments

Purpose of equipment checking and inspection is to:  
- ensure it is free from damage, leaks and obstructions that may prejudice safety or limit operational capability

Safety and operational capability checks may be performed:  
- on a range of equipment used in the stevedoring, transport, warehousing, distribution and/or storage industries

Visual checks may include but are not limited to:  
- pressure over/under specification  
- fluid leaks  
- temperature over/under specifications  
- cracks, surface or structural faults or other damage  
- tightness of bolts, fixtures and fittings within specifications

Records/results of pre-operation tests may include:  
- details of faulty equipment or specific components  
- action taken  
- results of testing  
- details of repair and maintenance work to be undertaken

Operational checks may be performed by:  
- operating/checking the functionality of various pieces of safety and component equipment (where applicable)

Hazards in the work area may include exposure to:  
- chemicals  
- dangerous or hazardous substances  
- movements of equipment, goods and materials  
- a fire or explosion  
- faulty equipment/tools

Consultative processes may involve:  
- workplace personnel  
- supervisors and managers  
- equipment manufacturers  
- site visitors  
- contractors  
- official representatives
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Communication in the work area may include:
- phone
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Information/documents may include:
- workplace procedures and policies for the checking and assessment of the equipment concerned
- manufacturers specifications for equipment/tools
- equipment identification labels, barcodes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant standards, codes and regulations pertaining to the checking and operation of the equipment concerned
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- export/import/quarantine/bond requirements
- relevant Australian standards and certification
RANGE STATEMENT

- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to carry out basic servicing and maintenance of a commercial vehicle, including action to implement vehicle manufacturers specifications for routine checks and maintenance and to ensure that all specified safety requirements are met, and that the vehicle is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to service and maintain a commercial vehicle across a variety of operational contexts.

| 1 Maintain and service the vehicle systems | 1.1 Fluid levels are checked and adjusted following manufacturers specifications and workplace procedures  
1.2 Air levels are checked and adjusted following manufacturers specifications and workplace procedures  
1.3 Routine checks are made of vehicle systems and appropriate action is initiated for maintenance where required in accordance with workplace procedures  
1.4 Appropriate precautions and procedures are followed when servicing/maintaining a vehicle to ensure adequate protection of the environment  
1.5 OH&S procedures are followed when carrying out routine servicing and maintenance of a vehicle |
| 2 Carry out minor repairs to a vehicle | 2.1 Vehicle components are removed, repaired or replaced and refitted to the vehicle using the correct tools and following manufacturers instructions and workplace procedures  
2.2 Tyres on vehicle are repaired or replaced following workplace procedures and manufacturers instructions  
2.3 Worn brakes are identified and action taken in accordance with workplace procedures and manufacturers specifications  
2.4 The need for more complex maintenance procedures is identified and the problem correctly referred following workplace procedures |
| 3 Diagnose minor vehicle faults and undertake repairs for the safe operation of a vehicle | 3.1 Minor faults in the vehicle systems are identified, diagnosed and repaired following manufacturers specifications and workplace procedures  
3.2 Identified faults which create a safety hazard are reported and appropriate action is taken to remove the vehicle from operation pending repair |
| 4 Complete documentation | 4.1 Records of routine servicing, maintenance and repairs are kept in accordance with workplace procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Relevant 'duty of care' requirements for the routine servicing and maintenance of vehicles
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and pollution control procedures
- Procedures for the checking and routine service and maintenance of a commercial vehicle in accordance with workplace and the manufacturer's requirements and established safety rules and regulations
- Problems that may occur during the routine servicing and maintenance of a vehicle and appropriate action and solutions
- Recognition and diagnosis of faults and vehicle irregularities
- Basic principles of operation of systems on commercial vehicles, including: electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres and brakes
- Basic fault finding procedures required during routine servicing and maintenance of vehicles
- Procedures required to minimise waste during routine servicing and maintenance
- Housekeeping standards required for routine servicing and maintenance
- Procedures for the use and maintenance of the materials, tools and parts required for routine servicing and maintenance
- Reporting and documentation requirements

Required skills:

- Communicate effectively with others when carrying out vehicle servicing and maintenance
- Read and interpret instructions, procedures, information and signs relevant to vehicle servicing and maintenance
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to vehicle servicing and maintenance
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions identified when carrying out vehicle servicing and maintenance in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during vehicle servicing and maintenance
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to vehicle or equipment
Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of vehicle servicing and maintenance

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Maintenance may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- in tight or confined spaces, exposed conditions and controlled or open environments
- while in a depot, base or warehouse
- while in the vehicle on the road
- while at a client's workplace

Type of vehicle may include any commercial road transport vehicle including:
- light vehicle
- heavy vehicle
- combination vehicle

Maintenance checks may include:
- routine inspections of vehicle systems
- checks prior to operations
- checks on completion of operations
- checks on completion of maintenance activities

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
RANGE STATEMENT

Minor routine servicing may include:
- topping-up of water levels
- replacement of oils
- replacement of air in tyres

Environmental hazards may include:
- leaking oil and fuel
- defective or inappropriately adjusted exhaust systems
- inappropriate disposal of vehicle fluids in drains or sewerage systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:
- workplace routine servicing and maintenance procedures, checklists and instructions
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- maintenance checklists and records
- vehicle manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when servicing and maintaining vehicles
- OH&S procedures to be followed when servicing and maintaining vehicles

Applicable regulations and legislation may include:
- relevant state/territory roads and traffic authority vehicle maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to carry out an inspection of a commercial vehicle, including action to implement vehicle manufacturers specifications for routine checks, to clean the vehicle, and to ensure that all specified safety requirements are met and that the vehicle is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority concerned with the inspection of commercial vehicles.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine inspection principles and procedures to check the safety and operation of a commercial vehicle across a variety of operational contexts.

</table>
| 1 Check the vehicle | 1.1 A visual check of the internal and external condition of the vehicle is carried out following workplace procedures  
|                 | 1.2 Pre-operational inspections and checks of the vehicle’s tyres, suspension, fluid levels and other critical features are carried out to ensure conformance with the requirements of the relevant roads and traffic authority  
|                 | 1.3 Associated equipment is tested to ensure it functions correctly to manufacturers specifications  
|                 | 1.4 Post start-up and shut-down checks are carried out after engine is started to identify possible engine or electrical problems  
|                 | 1.5 Warning systems (instruments and gauges) are checked to ensure they are operational  
|                 | 1.6 Where relevant, vehicle monitoring device is logged on/off in accordance with manufacturers instructions and workplace policy |
| 2 Clean vehicle | 2.1 Vehicle and associated equipment is cleaned in accordance with workplace procedures and legislation |
| 3 Complete documentation | 3.1 Basic faults are identified and/or diagnosed and appropriate action is taken to report or remedy them as required by workplace procedures and legislation  
|                 | 3.2 Records of inspection are updated and recommended repairs are documented in accordance with workplace policies |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements for the routine inspection of vehicles
- Relevant OH&S and pollution control procedures
- Procedures for the routine inspection of a commercial vehicle in accordance with workplace and manufacturers requirements and established safety rules and regulations, including pre-operational checking procedures, visual inspection procedures and warning systems checking procedures
- Problems that may occur during the routine inspection of a vehicle and appropriate actions and solutions
REQUIRED KNOWLEDGE AND SKILLS

- Basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres, brakes
- Reporting and documentation requirements

Required skills:

- Communicate effectively with others during the routine inspection of a vehicle
- Read and interpret instructions, procedures, information and manuals relevant to the routine inspection of a vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the routine inspection of a vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others during the routine inspection of a vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that are identified during the routine inspection of a vehicle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur during the routine inspection of a vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Use cleaning equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

Unit Descriptor

This unit involves the skills and knowledge required to check conveyor operational status in accordance with workplace requirements, including inspecting conveyor system and work area, checking equipment operational capability, and identifying and assessing faults and reporting results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the checking and assessment of the operational capability of equipment.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the checking and assessment of the operational capability of equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

| 1 Inspect conveyor system and work area | 1.1 The conveyor equipment is checked prior to start-up in accordance with workplace procedures, manufacturers safety checks and specifications to ensure it is free from damage and obstructions that may limit operational capability  
1.2 Work area is checked to ensure that it is safe and appropriate for the required task |
| 2 Check equipment operational capability | 2.1 Conveyors are inspected after start-up in accordance with manufacturers specifications and workplace inspection specifications and procedures  
2.2 Warning systems are checked for operational effectiveness  
2.3 Records are checked to determine maintenance history and requirements and goods carried |
| 3 Identify, assess faults and report results of inspection and testing | 3.1 Faults are identified and assessments made of the potential effect on the operation of the equipment for the required work, and details forwarded to relevant personnel in accordance with workplace procedures  
3.2 Accurate reporting of the results of the inspection and testing is kept in accordance with regulatory requirements, workplace policy and industry guidelines  
3.3 Clear reference is made to any items which may affect the future safety/operation of the equipment  
3.4 Conveyor system is continually monitored for safe and efficient operation |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the checking and assessing of the operational capability of conveyor, including, where relevant, the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the checking and assessing of the operational capability of conveyor
- Focus of operation of work systems, equipment, management and site operating systems for the checking and assessing of the operational capability of conveyor
REQUIRED KNOWLEDGE AND SKILLS

- The purpose, characteristics, capabilities, requirements and limitations of the conveyor
- Conveyed materials' potential for toxicity, reactivity, material grade, type and purpose including information from relevant material data safety sheets and ADG Code documentation (where applicable)
- Function and principles of operation of belt cleaning systems
- Tools and equipment used during the checking and assessing of the operational capability of conveyor and the precautions and procedures that should be followed in their use
- Problems that may occur when checking and assessing the operational capability of conveyor and appropriate action that can be taken to resolve the problems
- Operational safety requirements for the conveyor concerned
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when checking and assessing the operational capability of a conveyor
- Read and interpret instructions, procedures, information and labels relevant to the checking and assessment of the operational status of a conveyor
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the checking and assessment of the operational status of a conveyor
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when checking and assessing the operational capability of a conveyor
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when checking and assessing the operational capability of a conveyor in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of conveyor equipment
- Service conveyor equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
EVIDENCE GUIDE

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Purposes of conveyor checks/inspections are:
- to ensure that the conveyor and its safety devices and warning systems are operational, are in accordance with specifications, and are free from faults that may prejudice safety or limit operational capability

Conveyor may be enclosed or exposed, above or underground. Conveyor belt construction and materials may vary. Types of conveyors may include:
- buckets
- rollers
- air slides
- drag chains
- gravity systems

Aspects of conveyor equipment covered by workplace inspection specifications and procedures may include but is not limited to:
- belt surface and edges
- frame
- idlers
- motive power source
- tensions
- tracking
- speed
- guides

Checks may include but are not
RANGE STATEMENT

limited to:

- instructions
- monitoring of operational performance
- service checks in accordance with manufacturers instructions
- tests and checks of safety devices and warning indicators in accordance with workplace and regulatory requirements
- checks on adjustments against specifications
- checks of readings on gauges and monitors against specifications

Records/results of checks may include:

- details of out-of-performance indications
- details of faulty equipment or specific components
- details of action taken
- results of checks/tests
- details of repair and maintenance work to be undertaken

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Hazards in the work area may include exposure to:

- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving machinery, goods, materials and vehicular traffic
- contamination of, or from, materials being handled
- a fire or explosion
- service lines
- spills, leakages and ruptures
- dust/vapours
- faulty equipment/tools

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- equipment manufacturers
- site visitors
- contractors
- official representatives

Dependent of the type of
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may include:

- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- respirators and fume masks
- protective clothing
- high visibility clothing

Communication in the work area may include:

- phone
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Information/documents may include:

- workplace procedures and policies for the checking and assessment of the equipment concerned
- manufacturers specifications for equipment/tools
- equipment identification labels, barcodes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to the checking and operation of the conveyor system concerned including the ADG Code where applicable
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification
RANGE STATEMENT

- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Sector(s)

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB2022A Diagnose and rectify minor faults

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults in accordance with workplace requirements, including identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, checking and reporting minor repairs and/or maintenance, and providing support in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with workplace procedures and the regulations and safeworking codes of practice relevant to fault diagnosis and rectification.

Work is performed without supervision, generally within a team environment.

Work involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of equipment across a variety of operational transport contexts.

1.3 Equipment and tools required are identified and obtained  
1.4 Work areas and equipment are prepared and made safe for repair/maintenance/component exchange activities |
| 2 Conduct minor maintenance and routine repairs | 2.1 Minor repair/maintenance/component exchange are carried out to comply with the manufacturers specifications and workplace procedures  
2.2 Equipment, tools and materials required are operated, applied and handled to conform to OH&S requirements and manufacturers specifications to prevent injury and damage |
| 3 Check and report minor repairs/maintenance | 3.1 Minor repair/maintenance/component exchange activities are checked for compliance with safety requirements and workplace procedures  
3.2 Equipment is checked to confirm that it has been restored to operational standards  
3.3 Repair/maintenance/component exchange activities are documented in appropriate records or log books |
| 4 Provide support | 4.1 Repairs/maintenance/component exchange activities requiring support are identified and level of support established  
4.2 Assistance to repair/maintenance/component exchange activities is provided where required  
4.3 Repair/maintenance/component exchange work not able to be undertaken or completed is reported to appropriate personnel for follow-up action  
4.4 Work site is checked for cleanliness and operational safety and appropriate action taken to restore site and equipment |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state/territory regulations, codes of practice and safeworking system requirements
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental protection requirements
- Workplace procedures and policies for the diagnosis and repair of minor faults
- Typical minor repair problems that can occur and related action that should be taken
- Tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency
- Workplace component and material supply system

Required skills:

- Communicate effectively with others when diagnosing and rectifying minor faults
- Read and interpret instructions, procedures, information and signs relevant to the diagnosis and rectification of minor faults
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when diagnosing and rectifying minor faults
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when diagnosing and rectifying minor faults in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when diagnosing and rectifying minor faults
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying rolling stock and equipment checks required for a range of rolling stock in the workplace
  - identifying typical faults or defects that may occur on rolling stock and equipment
  - correct workplace requirements for reporting identified rolling stock or equipment defects

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

- environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment, motive power units and rolling stock to be checked and maintained may include:
- all classes of locomotives, motive power units, passenger carriages, rail cars and types of wagons in service within Australian rail systems

Operations may be conducted:
- by day or night
- in all weather conditions.
- in confined spaces
- in exposed conditions
- in controlled or open environments

Minor maintenance/repair component exchange may include:
- minor component change out
- diagnosing minor faults
- identifying correct lubricants
- identifying correct fuel and carrying out refuelling
- identifying correct solvents and cleaning fluids
- maintaining fluid and air pressures
- replacing faulty/damaged/worn equipment
- servicing and cleaning batteries
- inspecting bogies, running gear and ancillary equipment in cabin or on rolling stock

Safety equipment may include:
- high visibility clothing
- end of train markers
- sunscreen and sun glasses
- insect repellent
- gloves, safety headwear, mask and footwear
- portable radios/mobile phones
- flags and hand lamps
- safety glasses and hearing protection
- safety devices

Environmental hazards may include:
- leaking oil and fuel
RANGE STATEMENT

include:

- defective or inappropriately adjusted exhaust systems
- gases emitted from battery charging system
- inappropriate disposal of fluids in drains or sewerage systems
- inappropriate disposal of waste and rubbish

Consultative processes may involve:

- workplace personnel including supervisors and managers
- equipment manufacturers representatives and contractors
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Contingency processes may relate to:

- personal injury
- tool malfunctions

Operators of mechanised equipment must have:

- undertaken training and, where appropriate, hold the relevant license, permit or certificate
- be recognised as competent for the class of machinery being used

Information/records may include:

- workplace operational and technical instructions and procedures for the diagnosis and rectification of minor faults
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the diagnosis and rectification of minor faults
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when diagnosing and rectifying minor faults
- OH&S procedures
- QA plans and procedures
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements

Applicable regulations and

- relevant state/territory regulations, codes of practice and safeworking system requirements
RANGE STATEMENT

legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workers compensation regulations

Unit Sector(s)

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB2023A Provide sanitation and water services support to passenger transportation units

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to provide sanitation and water services support to passenger transportation units in accordance with workplace and regulatory requirements, including planning the decanting and watering of passenger vehicles, carriages or vessels; providing a decanting and water service; and completing all decanting and watering operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures to the provision of sanitation and water services support to passenger transportation units in the transport and allied industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan decanting and watering of passenger vehicles/carriages/vessels** | 1.1 Transport systems vehicles, carriages or vessel type are identified to assess the nature and extent of the servicing required  
1.2 Sanitary waste removal and water system refill are planned to ensure minimal inconvenience and delay to customers and services |
| **2 Provide decanting service** | 2.1 Decanting unit is connected to transport units waste tanks in accordance operational requirements  
2.2 Transport units waste is removed to holding tanks in accordance with workplace procedures  
2.3 Decanting unit is disconnected from transport unit and unit is cleaned to meet workplace and health and hygiene regulations |
| **3 Provide water service** | 3.1 Water supply is connected to transport units water storage tanks in accordance with operational requirements  
3.2 Transport units water storage tanks are filled in accordance with occupational health and safety regulations  
3.3 Water supply is disconnected from transport unit and unit cleaned to meet workplace and health and hygiene regulations |
| **4 Complete decanting and watering** | 4.1 Documentation is completed concerning the removal of waste and the supply of water |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the provision of sanitation and water services support to passenger transportation units, including the discharging of waste and the charging of water containers
- Focus of operation of work systems, equipment, management and site operating systems for the provision of sanitation and water services support to passenger transportation units
- Equipment, chemicals and materials used during the provision of sanitation and water services support to passenger transportation units, and the precautions and procedures that should be
REQUIRED KNOWLEDGE AND SKILLS

followed in their use

- Problems that may occur when providing sanitation and water services support to passenger transportation units and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication requirements when providing sanitation and water services support to passenger transportation units, including radio operation
- Housekeeping standards procedures required in the workplace
- Site layout

Required skills:

- Communicate effectively with others when providing sanitation and water services support to passenger transportation units
- Read and interpret instructions, procedures, information, labels and signs relevant to the provision of sanitation and water services support to passenger transportation units
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of sanitation and water services support to passenger transportation units
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing sanitation and water services support to passenger transportation units
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when providing sanitation and water services support to passenger transportation units in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when providing sanitation and water services support to passenger transportation units
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and safely use relevant equipment and materials when providing sanitation and water services support to passenger transportation units
**Required skills:**
- Select, mix and apply appropriate cleaning materials
- Handle and store hazardous substances and materials
- Store cleaning materials and equipment

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

environment at the registered training organisation, and/or
• in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
• a range of work environments
• by day or night

Transportation units may include:
• rail carriages, buses, coaches, ferries and other transport units incorporating water and sanitation services

Cleaning and decanting equipment may include:
• mops
• buckets
• hoses
• pumps
• waste tanks

Reporting may include:
• verbal communication
• written communication

Hazards in the work area may include exposure to:
• chemicals
• dangerous or hazardous substances

Personal protective equipment may include:
• gloves
• safety headwear and footwear
• high visibility clothing

Consultative processes may involve:
• other workplace personnel
• supervisors and managers

Communication in the work area may include:
• phone
• radio
• oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information/documents may include:
• applicable legislated rail safety requirements including acts and regulations from each state and territory together
RANGE STATEMENT
include: with any nationally approved compliance codes and/or guidelines
- work instructions, job description and induction materials
- manufacturers specifications for equipment/materials
- relevant OH&S and environmental protection requirements and policies
- relevant codes of practice including the National Standards for Manual Handling, the Industry Safety Code and the ADG Code
- relevant health and hygiene legislation, regulations and related documentation
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB2029B Use and maintain minor mechanical equipment

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to use and maintain minor mechanical equipment in accordance with organisational and regulatory requirements. Minor mechanical equipment may encompass both hand and power tools.

It includes carrying out pre-operational checks on equipment, operating mechanical equipment in accordance with workplace requirements, conducting routine maintenance, and securing and storing equipment in accordance with workplace procedures.

Licensing and certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with workplace procedures and the regulations and safe-working codes of practice relevant to the use and maintenance of minor mechanical equipment.

Work is performed under some supervision, generally in a team environment. It involves the application of routine procedures to use and maintain minor mechanical equipment across a variety of operational contexts.

Where required to operate a particular piece of minor mechanical equipment, the operator must hold the relevant licence, permit or certificate to be recognised for the class of equipment being operated.

Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Carry out pre-operational checks | 1.1 Pre-operational checks are conducted to manufacturer specifications to ensure optimum functionality of equipment  
1.2 Necessary adjustments to equipment are made according to manufacturer instructions to ensure efficient operation  
1.3 Faulty equipment is reported to relevant person to ensure equipment is safe and effective to use |
| 2 Operate mechanical equipment | 2.1 Equipment is operated in accordance with manufacturer and workplace operating instructions to ensure safe and effective operation  
2.2 Appropriate personal safety protection is used to minimise the risk of injury to operator  
2.3 Work operational hazards are eliminated or controlled appropriately when using equipment to ensure safe working conditions  
2.4 If required, assisting personnel are given clear instructions about their duties to ensure safe and effective working conditions |
| 3 Conduct routine maintenance | 3.1 Equipment is cleaned and maintained in accordance with manufacturer specifications to ensure optimum functionality  
3.2 Detailed and accurate records are maintained according to workplace procedures |
| 4 Secure and store | 4.1 Equipment is handled and transported in a safe, secure and efficient manner to minimise risk of injury to personnel and damage to equipment  
4.2 Equipment is stored and secured according to manufacturer and workplace procedures to prevent damage to and loss of equipment |

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the use and maintenance of minor mechanical equipment
- Problems that can occur when using and maintaining minor mechanical equipment and related action that should be taken to resolve them
- Tools and equipment for using and maintaining minor mechanical equipment and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when using and maintaining minor mechanical equipment
- Work collaboratively with others when using and maintaining minor mechanical equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with others
- Report identified problems, faults and malfunctions that may arise when using and maintaining minor mechanical equipment in accordance with organisational procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment (PPE)
- Monitor performance of equipment

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - completing a pre-operational check on one piece of equipment used in the job function
  - operating mechanical equipment to manufacturer and workplace requirements
  - carrying out one routine maintenance in a safe manner

Context of and specific resources for assessment

- Access is required to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Practical assessment must occur:
  - in three different activities of the job function in the workplace
  - if in a simulated work environment, using industry-standard equipment
  - A simulator is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
- mechanical handling and lifting equipment
- motorised borers
- PT8 borers
- rail saws
- racket restraints
- side curtains
- portable drills
- rail drills
- rail sheers
- mechanical load restraints
- clipping machines
- dog knockers
- hand trucks
- dog pullers
- vibrating plates
- rattle guns
- generators
- pumps
- compressors
- winches

Equipment operations may be carried out in various situations, including:
- operations conducted at day or night
- all weather conditions
- in confined spaces, exposed conditions and controlled or open environments
- refuelling

Materials may include:
- servicing materials, such as lubricants
- related materials and consumables needed when using tools, such as nails, screws and grease

Safety equipment may include:
- high visibility clothing
- sunscreen and sunglasses
- insect repellent
- gloves, safety headwear, mask and footwear
- portable radios
- flags and hand lamps
- safety glasses and hearing protection
Environmental hazards may include:
- safety devices
- leaking oil and fuel
- inappropriate disposal of fluids in drains or sewerage systems
- inappropriate disposal of waste and rubbish

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- customers
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Information and records may include:
- workplace operational and technical instructions and procedures for the use and maintenance of minor mechanical equipment
- relevant regulations, including state and territory safety codes of practice and safe-working regulations
- maintenance checklists and records for the use and maintenance of minor mechanical equipment
- manufacturer’s instructions, specifications and recommended procedures relating to tools and equipment
- precautions and procedures to be adopted to protect the environment when using and maintaining minor mechanical equipment
- OH&S procedures
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement and other industrial arrangements

Applicable regulations and legislation may include:
- relevant state and territory regulations, codes of practice and safe-working system requirements

| 1 Plan for maintenance of poles and associated hardware | 1.1 Works order is received/accessed, analysed and confirmed, if necessary by site inspection  
1.2 Resources required for the job are identified and scheduled  
1.3 Replacement or additional poles, associated hardware and plant/equipment are transported to the worksite  
1.4 Liaison and communication issues are resolved |
| 2 Prepare the worksite | 2.1 Personnel participating in task, including plant operators and contractors, are fully briefed  
2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided  
2.3 Safeworking practices are observed on or about the running line/track  
2.4 Replacement or additional poles and associated hardware are placed in planned assembly and/or pre-lift location  
2.5 Excavation/foundation is inspected and confirmed as being in accordance with the works order or specification |
| 3 Conduct maintenance of poles and associated hardware | 3.1 Actual maintenance requirement is confirmed by site inspection  
3.2 Pole and associated hardware to be maintained is stabilised if necessary  
3.3 Maintenance of pole and associated hardware is carried out in accordance with the work order and workplace standing requirements |
| 4 Complete the work | 4.1 Worksite is rehabilitated, and work is completed in an agreed time and with minimum waste  
4.2 System data and pole records are updated according to workplace procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including OH&S instructions related to pole erection, site safety and rescue techniques
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures for the maintenance of poles and associated hardware
- Hazards that may exist when maintaining poles and associated hardware and ways of controlling the risks involved
- Mechanical principles related to structures
- Pole maintenance techniques and processes
- Characteristics, capabilities, uses, limitations and location standards of the types of poles
- Switching or de-energising procedures during maintenance operations
- Workplace technical manuals and instructions which relate to the assembly, erection and lift/transfer of poles and association hardware
- Pole treatment chemicals and HAZCHEM requirements
- Soil types and stabilisation processes
- Responsibilities in relation to other authorities, clients and landowners
- Regulations for rigging, traffic control and guidance signals
- Documentation and records systems related to pole management
- Procedures for identifying and using support plant and equipment

Required skills:

- Communicate effectively with others when maintaining poles and associated hardware
- Read and interpret instructions, procedures, information and signs relevant to the maintenance of poles and associated hardware
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining poles and associated hardware
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when maintaining poles and associated hardware in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Required skills:

- Adapt to differences in tools and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Perform basic welding and oxy cutting
- Guide, by convention and signals, operators of plant/equipment during lift/transfer operations
- Work at heights or in confined spaces
- Operate minor plant and equipment
- Use hand tools
- Rig/sling loads for lifting

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted:
- in restricted spaces or exposed conditions
- in controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Pole types may include:
- wood
- concrete
- steel
- composite

Associated hardware may include:
- insulators
- crossarms
- stays
- earth down leads and bond wires
- crossarm braces
- pole steps
- shackle straps
- associated bolts and clamps

Maintenance requirements may be obtained from:
- site inspection
- works orders
RANGE STATEMENT

Maintenance may include:
- removal, repair and replacement of poles
- welding
- chemical treatment
- pole staking and rebutting
- repair and cleaning of associated hardware
- servicing
- reinstatement

Pole stabilisation techniques may include:
- back-fill consolidation
- concreting
- baulking
- reinforcement nailing
- approved steel reinforcing
- temporary and permanent staywires

Methods of erection may include:
- crane
- auger/erector
- winch A frame

Works orders may include:
- drawings
- plans
- resource and materials lists

Resources may include:
- personnel
- plant
- equipment
- transport

Liaison may involve:
- clients
- authorities
- landowners
- personnel

Communication equipment may include:
- two-way radio, and/or
- telephones

Information may be provided:
- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
RANGE STATEMENT

- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to clean road tankers in accordance with workplace procedures and OH&S and environmental protection regulations, including preparing for cleaning operations, steam cleaning a tanker, cleaning a tanker using water and detergent, finalising cleaning operations, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with OH&S and environmental protection regulations and workplace procedures. Work is performed under some supervision, usually in a team environment. Work involves the application of routine principles and procedures to clean commercial tankers across a variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare for cleaning operations | 1.1 Vehicle is positioned under gantry in accordance with workplace procedures  
1.2 Documentation is obtained from the vehicle driver to determine the product which has been previously carried in the tanker  
1.3 The vehicle keys are taken from the driver to prevent 'accidental drive off' before the cleaning process is completed  
1.4 Appropriate cleaning process is selected for type of tanker/load in accordance with workplace procedures  
1.5 Cleaning materials are prepared in accordance with manufacturers instructions and workplace procedures  
1.6 The required personal protection and safety equipment is selected and used in accordance with regulatory requirements and workplace procedures |
| 2 Steam clean a tanker | 2.1 The vehicle is earthed to prevent sparks and explosions  
2.2 Valves are opened to allow draining of the wash materials and hoses attached in accordance with manufacturers instructions and workplace procedures  
2.3 All access points, including vents and washing points, are opened and heat-sensitive auto fill probes removed in accordance with workplace procedures  
2.4 Where the tank has held oil/diesel, a wash consisting of detergent wash and hot water rinse is carried out followed by the application of steam  
2.5 Where the tank has only held petrol, a steam clean only is carried out in accordance with workplace procedures  
2.6 After the wash, the unit is left to drain until liquid ceases to drain from the outlet valves and steam stops leaving the vents on the top of the tank  
2.7 All vents and valves are closed and the auto fill probes reconnected  
2.8 Plastic seals are placed on valves to signify the completed cleaning of the tanker where required in accordance with workplace procedures |
| 3 Clean a tanker using water and detergent | 3.1 High pressure water and detergent is used to clean around the top of the tanker vents and hatches to remove dirt and they are rinsed clean with water  
3.2 Valves on the outlet manifold are opened and connected with flexible pipes to the waste storage facility or recycling tanks for the tank cleaner  
3.3 All hatches are opened and spray balls are placed into the tanks after checking visually for the condition of the tank. Where |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
solid materials are present these are washed out with high pressure water prior to starting the cleaning cycle
3.4 Tank is rinsed then washed with tank wash until waste is clear and then it is recycled into a holding tank for reuse leaving the tankers tank to drain
3.5 Water in the holding tank is topped up and ph tested and solution is replaced if necessary in accordance with workplace procedures
3.6 Tank is rinsed with water in short bursts until the liquid leaving the tank is clear
3.7 Top of tank is hosed off again with water, and spray balls are removed
3.8 The tank is visually checked, through the hatches with the aid of a torch, for cleanliness
3.9 If cleanliness standards have not been achieved, the tanker is re Washed or re-rinsed as required. Hatches are closed
3.10 At the conclusion of cleaning operations drainage hoses are removed, manifold checked for cleanliness, and drainage valves closed and sealed to indicate completed process in accordance with workplace procedures

4 Complete cleaning operations

4.1 Due care is taken to ensure that the disposal of used cleaning materials is in accordance with environmental protection regulations and workplace procedures
4.2 Wash water is suitably treated using available water cleaning and separation processes before draining into the sewerage system
4.3 Cleaning equipment is cleaned, dried, checked and stored in accordance with workplace procedures
4.4 Documentation on the cleaning operations is completed in accordance with workplace procedures and is returned to the driver along with the keys to the vehicle

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements for the routine cleaning of tankers
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and pollution control procedures
- Procedures for the cleaning of a commercial tanker in accordance with workplace and manufacturers requirements and established safety rules and regulations
- Problems that may occur during the routine cleaning of a commercial road tanker and its associated ancillary equipment, and appropriate action and solutions
- Processes for the recognition and diagnosis of faults and vehicle/ancillary system irregularities
- Hazards that may exist during the cleaning of road tankers and ways of controlling the risks involved
- Basic technical knowledge relevant to the cleaning of road tankers
- Emergency procedures
- Materials identification, handling and storage
- Hazardous situations and related personal protection measures
- Relevant recording and documentation procedures
- Precautions and procedures to dispose of or reprocess cleaning wastes in accordance with environmental protection requirements
- Housekeeping standards required for cleaning operations

Required skills:

- Communicate effectively with others when cleaning road tankers
- Read and interpret instructions, procedures, labels and manuals relevant to the cleaning of road tankers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the cleaning of road tankers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when cleaning road tankers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when cleaning road tankers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating
Required skills:

- Carry out required cleaning operations
- Select and use appropriate cleaning equipment and materials
- Minimise waste during cleaning operations
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
EVIDENCE GUIDE

conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include:
- all tankers including those carrying petrol, diesel, oil, milk, wine and other liquid products

Cleaning operations may be carried out in appropriate facilities:
- by day or night
- in typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- while in the a depot, base or warehouse
- while at a client's workplace

Cleaning operations may include:
- steam cleaning
- water and detergent cleaning

Equipment and materials may include:
- detergents and cleaning chemicals
- hoses and spray balls
- steam cleaning equipment
- waste recycling tanks/equipment
- cleaning tools

Safety hazards may include but are not limited to:
- fire/ignition risk
- vapours and noxious gases
- working at heights
- slippery, wet surfaces
- steam burns

Environmental hazards may include:
- leaking oil and fuel
- inappropriate disposal of washing fluids in drains or sewerage systems

Depending on work context, safety and protective equipment
- high visibility waterproof clothing
- hearing protection
RANGE STATEMENT

may include:

- gloves
- safety glasses, headwear and footwear
- safety harness for working on top of tankers

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:

- workplace tanker cleaning procedures, checklists and instructions for the vehicle, tanks and related ancillary equipment
- relevant state/territory roads and traffic authority regulations
- ADG Code as it applies to tanker cleaning
- material safety data sheets
- tanker cleaning checklists and records
- tanker manufacturers specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when cleaning tankers
- OH&S procedures to be followed when cleaning tankers
- emergency procedure manuals
- QA plans and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code as it applies to the cleaning of tankers

Unit Sector(s)

Not Applicable
Competency Field

Competency Field  B - Equipment Checking and Maintenance
TLIB2079A Set up and secure a towing situation

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to plan a towing job and set up towing situation, including obtaining and confirming job instructions, assessing towing requirements, determining a plan of action, and carrying out all required action to set up and secure a towing situation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable OH&S legislation and other relevant regulations covering the setting up and securing of a towing situation.

Work is performed under limited supervision. It involves the application of regulatory requirements and standard operating procedures to the setting up and securing of a towing situation.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Obtain information on towing job** | 1.1 Information on the towing job is obtained from base or depot as per procedures  
1.2 Further information on towing requirements is obtained at the scene of the job |
| **2 Assess towing requirements** | 2.1 Equipment requirements and techniques to carry out the towing job are assessed  
2.2 Potential hazards that may be experienced at the towing site and during the towing operation are identified and appropriate precautions and strategies are adopted to manage and control the risks involved  
2.3 Type of vehicle to be towed is identified and critical aspects of vehicle design determined as they relate to allowable towing arrangements and configurations |
| **3 Determine appropriate plan of action** | 3.1 Sequence of action and plan for the towing activity and the safety and security of persons, vehicles and property are determined as per regulatory requirements and standard operating procedures  
3.2 Towing vehicle and associated equipment to carry out the job are organised to be available for the work |
| **4 Set up and secure the towing situation** | 4.1 The setting up and securing of a towing situation are carried out in accordance with the established action plan  
4.2 Safety equipment, witch's hats and safety signs are deployed as per standard operating procedures and regulatory requirements  
4.3 Onlookers and other personnel in the vicinity of the towing situation are managed as per applicable safety management procedures and security requirements  
4.4 Vehicle or equipment to be towed is manoeuvred into position using relevant equipment as per standard operating procedures and regulatory requirements  
4.5 Vehicle or equipment to be towed is secured using appropriate winches, ropes and cables as per relevant load restraint regulations and standard operating procedures |
| **5 Record and report results of inspection and testing** | 5.1 The assessment of the towing situation and action taken are accurately reported in accordance with regulatory requirements, workplace policy and industry guidelines  
5.2 Records are clear, unambiguous and concisely kept in accordance with workplace procedures  
5.3 Clear reference is made to any issues, hazards or incidents that may have arisen when attending the towing situation and any related action taken |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations and standards relevant to the setting up and securing of a towing situation
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the checking and assessing of the operational capability of equipment
- Focus of operation of work systems, equipment, management and workplace standard operating systems for the checking and assessing of the operational capability of equipment
- The characteristics, applications, capabilities and limitations of the towing equipment
- Tools and equipment used when setting up and securing a towing situation and the precautions and procedures that should be followed in their use
- Problems that may occur when setting up and securing of a towing situation and appropriate action that can be taken to resolve the problems
- Operational safety requirements for the equipment concerned
- Hazards that may exist when setting up and securing of a towing situation and precautions and action that should be taken to minimise or eliminate the hazards concerned
- Documentation and record requirements when checking and assessing the operational capability of equipment
- Housekeeping standards and procedures required when setting up and securing a towing situation

Required skills:

- Communicate effectively with others when setting up and securing a towing situation
- Read and interpret instructions, procedures and information relevant to the setting up and securing of a towing situation
- Read and comprehend simple statements in English
- Complete documentation related to the setting up and securing of a towing situation
- Work safely and collaboratively with others when setting up and securing a towing situation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Modify activities depending on differing workplace contexts, risk situations and towing situations
- Recognise problems concerning the setting up and securing of a towing situation and take
Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Prioritise work activities when setting up and securing a towing situation
- Select and use personal protective equipment as per OH&S requirements
- Select and use equipment and tools required when setting up and securing a towing situation

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of towing situations
- by day or night
- in a range of weather conditions

Customers may be:
- vehicle owners
- operators of expressways, freeways, tollways or tunnels
- police and other emergency services personnel
- local government authorities
- car park operators
- road traffic authorities
- owners and operators of equipment elevating work platforms, forklifts, small load shifting equipment, etc.

Towing situations may include:
- vehicle accidents
- vehicle breakdowns
- expressway breakdowns and accidents
- tunnel breakdowns and accidents
- stolen cars
- vehicles illegally parked on clearways
- vehicles illegally parked in car parks
- abandoned vehicles
- carriage of equipment such as elevating work platforms, forklifts, small load shifting equipment, etc.

Required towing vehicle may include:
- tilt tray tow truck with winch (5 tonne, 7.5 tonne and 10 tonne capacity)
- tow truck with crane and cradle
- towing vehicle with a detachable self loading table top
RANGE STATEMENT

Potential hazards that may occur in various towing situations may include:

- articulated drop-deck low loader
- trailer
- vehicular traffic at the scene
- live electrical wires
- contaminated blood at scene
- weather conditions
- oil on vehicle trays (slippery surfaces)
- unsafe or damaged equipment
- unsafe procedures in the use of towing equipment
- fire at the scene
- spilt or leaking fuel or dangerous or hazardous goods or substances
- unsafe manual lifting procedures
- sharps that may be contaminated with transmittable diseases

Hazard control strategies may include:

- use of flashing lights on vehicles
- deployment of safety equipment such as warning signs or witch’s hats
- strategic positioning of towing vehicle
- use of appropriate personal protective equipment, including reflective vests and raincoats
- use of safe procedures in the use of towing equipment
- checking equipment and isolating, rectifying or reporting any defective equipment
- following correct safety procedures in the event of live fallen electrical wires at an accident scene
- following correct procedures in the event of spilt or leaking fuel or dangerous or hazardous goods or substances as per the Australian Dangerous Goods Code
- using correct portable firefighting equipment to control a fire at the scene
- correct manual lifting strategies
- cleaning of vehicles (including removal of oil from vehicle trays)

Depending on the organisation concerned, operating procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
RANGE STATEMENT

- safety glasses
- two-way radios
- high visibility clothing (raincoats and vests)
- portable fire extinguishers

Communication at towing sites and in the work area may include:

- mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications

Information and documents may include:

- standard procedures and policies for the setting up and securing a towing situation
- manufacturers specifications for towing vehicle, equipment and tools
- workplace and client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- quality assurance standards
- emergency procedures

Applicable legislation, regulations and codes may include:

- relevant standards and codes pertaining to the setting up and securing of a towing situation
- relevant state/territory regulations and licence/permit requirements pertaining to the operation of tow trucks
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine job requirements | 1.1 Structures are inspected as necessary to locate defects  
1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required |
| 2 Prepare component for repair | 2.1 Components requiring replacement are checked against standards and are measured for preparation of replacement component  
2.2 Materials required for job are identified and organised as required to enable appropriate replacement of components  
2.3 Replacement components are cut and shaped to the required standard in accordance with workplace procedures  
2.4 Surfaces of components are treated using appropriate methods and materials as required |
| 3 Perform repairs | 3.1 Component is replaced to required standard in accordance with workplace procedures  
3.2 Connections between timber members are tightened, repaired or replaced using approved material and techniques  
3.3 External timber deficiencies in components are treated with suitable materials as required to minimise degradation of components |
| 4 Clean up site | 4.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards |
| 5 Complete documentation | 5.1 Work as executed documentation is completed as required in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the repair of timber structures and/or components
- Problems that may occur during the repair of structures and/or components, and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing structures and/or components, and ways of controlling
REQUIRED KNOWLEDGE AND SKILLS

- the risks involved
- Functions of different types of timber structures
- Timber structures repair methods and techniques
- Types of timber and their characteristics and features
- Carpentry principles
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when repairing timber structures
- Read and interpret plans and specifications relevant to the repair of timber structures
- Follow operational instructions and work sequences when undertaking timber structures repair
- Complete documentation related to the repair of timber structures
- Operate communication equipment to required protocol
- Work collaboratively with others when repairing timber structures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing timber structures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the repair of timber structures
- Apply precautions to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use relevant tools and equipment
- Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify defects

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - replacing timber components
  - repairing existing timber structures using a range of repair techniques
  - repairing a range of defect types

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  • by day or night  • in all weather conditions

Work may be conducted in:  • restricted spaces  • exposed conditions  • controlled or open environments

Work may involve:  • exposure to chemicals, and dangerous or hazardous substances  • movements of equipment, goods and vehicles

Structures may include:  • underbridges, overbridges, footbridges  • culverts  • retaining walls  • platforms

Equipment may include:  • welding, oxy and cutting equipment  • temporary supports  • manual tools  • small power tools  • air tools and compressor  • scaffolding  • ladders  • elevated work platform (EWP)  • boat/barge

Materials may include:  • timber  • structural steel  • epoxy grouts  • paint (protective treatment)  • bolts and fasteners  • carbon fibre  • concrete

Maintenance methods may include:  • replacing  • repairing  • splicing  • bolting  • bonding  • screwing up  • painting (protective treatment)  • temporarily supporting  • shoring
RANGE STATEMENT

Liaison may include:
- formwork
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- safety harness
- torch
- safety devices
- respirator

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
RANGE STATEMENT

- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable procedures and codes may include:

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the repair of steel structures
- Problems that may occur during the repair of steel structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing structures and/or components, and ways of controlling the risks involved
- Functions of different types of steel structures
- Steel structures repair methods and techniques
- Information on the use of epoxy and grouts for mortar pads
- Basic steel components assembly techniques
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when repairing steel structures
- Read and interpret plans and specifications relevant to the repair of steel structures
- Follow operational instructions and work sequences when undertaking steel structures repair
- Complete documentation related to the repair of steel structures
- Operate communication equipment to required protocol
- Work collaboratively with others when repairing steel structures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing steel structures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the repair of steel structures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use relevant tools and equipment
- Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify defects
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - replacing steel components
  - repairing existing steel structures using a range of repair techniques
  - repairing a range of defect types

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night
- in all weather conditions

Work may be conducted in:  
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:  
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Structures and components may include:  
- underbridges, overbridges, footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
- signal gantries

Equipment may include:  
- welding, oxy and cutting equipment
- temporary supports
- manual tools
- small power tools
- air tools and compressor
- scaffolding
- ladders
- elevated work platform (EWP)
- boat/barge

Materials may include:  
- structural steel
- epoxy grouts
- cement grouts
- paint (protective treatment)
- bolts and fasteners
- carbon fibre

Structures maintenance methods may include:  
- replacing
- repairing
- bolting
- bonding
RANGE STATEMENT

- welding
- painting (protective treatment)

Liaison may include:
- internal/external personnel from other work areas (e.g., train controllers)
- road authorities
- local councils
- landowners

Communication equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- safety harness and ropes
- torch
- safety devices
- respirator

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
RANGE STATEMENT

- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to maintain bridge bearings in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, maintaining bridge bearings, cleaning up the site after maintenance activities, and completing documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of bridge bearings as part of workplace activities across a variety of operational contexts within the Australian rail system.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the maintenance of bridge bearings
- Problems that may occur during the maintenance of bridge bearings, and action that can be taken to report or resolve the problems
- Hazards that may exist when maintaining bridge bearings, and ways of controlling the risks involved
- Functions of different types of bridge bearings
- Routine maintenance methods and techniques
- Relevant recording and documentation procedures

**Required skills:**

- Communicate effectively with others when maintaining bridge bearings
- Read and interpret plans and specifications relevant to the maintenance of bridge bearings
- Follow operational instructions and work sequences when undertaking the maintenance of
Required skills:

- Bridge bearings
- Complete documentation related to the maintenance of bridge bearings
- Operate communication equipment to required protocol
- Work collaboratively with others when doing the maintenance of bridge bearings
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when doing the maintenance of bridge bearings in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the maintenance of bridge bearings
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use relevant tools and equipment
- Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify minor defects

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - inspecting bearings and determining work
EVIDENCE GUIDE

requirements
• routine cleaning and servicing of bridge bearings
• cleaning up worksite
• completing workplace documentation

Context of and specific resources for assessment
• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

#### Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the maintenance of structures
- Problems that may occur during the routine maintenance of structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when completing routine maintenance of structures, and ways of controlling the risks involved
- Routine maintenance methods and techniques
- Relevant recording and documentation procedures

#### Required skills:

- Communicate effectively with others during the routine maintenance of structures
- Follow operational instructions and work sequences when undertaking routine structures maintenance
Required skills:

- Complete documentation related to the routine maintenance of structures
- Operate communication equipment to required protocol
- Work collaboratively with others when completing routine maintenance of structures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when doing routine maintenance of structures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the routine maintenance of structures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use required tools and equipment
- Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify defects and remedies

2.2 Principal turnout components are identified and their purpose is understood |
| 3 Identify track tools and equipment | 3.1 Tools and equipment for track installation and maintenance are identified  
3.2 Track machines for track installation and maintenance are identified |
| 4 Undertake basic track measurement | 4.1 Basic terminology for track measurement is identified and defined  
4.2 Measuring equipment is identified and relevant equipment is selected for taking basic track measurements  
4.3 Measuring equipment is checked for accuracy  
4.4 Measurements are taken accurately and recorded in accordance with workplace requirements |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the basic measurement of track
- Problems that may occur during the basic measurement of track, and action that can be taken to report or resolve the problems
- Hazards that may exist when taking basic track measurements, and ways of controlling the risks involved
- Track terms
- Fundamentals of track structures
- Fundamentals of track layout and geometry
- Track components
- Tools and equipment used in track construction and repair
REQUIRED KNOWLEDGE AND SKILLS

- Relevant communication systems and procedures
- Authorisation/approval processes and procedures

Required skills:

- Communicate effectively with others when taking basic track measurements
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to taking basic track measurements
- Interpret and follow operational instructions
- Complete documentation related to basic track measurement
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when taking basic track measurements in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when taking basic track measurements
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select equipment used for basic track measurement
- Undertake basic track measurement
- Identify basic track tools and equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of
EVIDENCE GUIDE

unit this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:

  - identifying a range of track terminology
  - identifying a number of different track components
  - identifying track tools and equipment relevant to their job role
  - undertaking basic track measurements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:

  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:

  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:

  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Basic track measurements may include:
- length, depth, width, diameter
- gauge, foot gauge
- alignment, superelevation, track centres
- rail gaps, rail temperature

Measuring equipment may include:
- tape measures
- gauge boards
- stringline
- plumb bob
- gap gauge
- rail thermometer

Tools and equipment may include:
- mechanical handling/lifting equipment
- track machines
- hand tools including impact and tension wrenches, grinders, friction rail saws, rail borers, tie tampers, track jacks, spiking hammers and bars
- rail tensors
- cutting and boring equipment
- fastening equipment
- on-track equipment including sleeper spacers
- rail heaters
- rail threaders
- dog pullers

Track components may include:
- rails, rail fastenings and welds
- sleepers and sleeper fastenings
- ballast
- formation and earthworks

Track layout may include:
- plain track
- turnouts
- special trackwork including catchpoints, expansion
### RANGE STATEMENT

Basic track geometry may include:
- tangent track
- curves
- transitions
- superelevation

Track maintenance and construction methods may include:
- basic fettling
- resleepering
- rerailing
- ballasting
- track resurfacing
- ballast cleaning
- rail grinding
- concrete sleeper laying

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers)

Communication equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- works orders
- information provided by other workplace personnel
RANGE STATEMENT

- rail inspections and timekeeping records
- trackworker standard manual
- bridge workers manual
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- local authority regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

|                           | 4.2 Defects in structures are located and identified                                |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for locating defects in structures
- Problems that may occur locating defects in structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when locating defects in structures, and ways of controlling the risks involved
- Structures terms and conventions
- Fundamentals of structure types
- Types of structures defects
- Structures components
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures

Required skills:

- Communicate effectively with others when locating defects in structures
Required skills:

- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to locating defects in structures
- Follow operational instructions and work sequences when locating defects in structures
- Operate electronic communication equipment to required protocols
- Work collaboratively with others when locating defects in structures
- Select and use required personal protective equipment
- Select equipment used for basic structures inspection
- Locate previously identified defects

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying different types of structures and components
  - undertaking basic inspection of structures
  - locating defects in structures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Structures may include:
- underbridges
- overbridges
- footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
RANGE STATEMENT

- signal gantries
- noise barriers
- service crossings
- buffer stops
- lighting towers
- water towers
- turntables
- elevated roads
- track slabs

Materials may include:
- timber
- steel
- concrete/masonry

Equipment may include:
- torch
- geologists hammer
- scaffolding
- extension ladder
- elevated work platforms (EWP)
- boat or barge

Structures components may include:
- girders, corbels, headstocks
- piers, abutments, trestles, piles
- bolts, fasteners
- protective coatings

Methods for locating defects may include:
- visual inspection

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners

Communication equipment systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
RANGE STATEMENT

- safety headwear
- safety footwear
- portable radio/mobile phones
- hand lamps
- flags
- safety harness and ropes
- breathing apparatus
- safety mask
- air monitors
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- previous reports
- works orders
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to use communication systems in a taxicab. It includes identifying features of the taxicab communication system and operating it effectively; using appropriate communication protocols and communicating with a base; and identifying faulty operation of communication equipment and taking appropriate action. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the use of taxicab communication systems in the taxi industry.

Safety checks and equipment tests are performed under limited supervision.

This unit involves the application of established communication principles and practice for taxi drivers and the use of local technical and colloquial language and vocabulary in day-to-day communications.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant codes of practice and legislative requirements including local regulations
- Relevant OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures and policies for the use of communication systems in a taxicab
- Procedures and protocols for the use of communication systems during an emergency
- Features of various communication systems
- Basic communication techniques including the phonetic alphabet
- Basic principles of effective communication
- Basic barriers to effective communication and how to overcome them

Required skills:

- Communicate effectively with others when using communication systems in a taxicab, including both during transmission and receipt of information
- Communicate effectively with multilingual persons or persons with limited ability to speak or understand English
- Read and interpret operating instructions, procedures, information and signs relevant to the use of communication systems in a taxicab
- Apply relevant codes of practice
- Complete documentation related to the use of communication systems in a taxicab
- Operate electronic communication equipment to required protocol
- Interpret and follow operational instructions and prioritise work
- Work collaboratively with others when using communication systems in a taxicab
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Identify, report and/or rectify any problems that may arise when using communication systems in a taxicab in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may occur when using communication systems in a taxicab
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Undertake pre-operational checks for communications systems and equipment
- Carry out minor routine maintenance procedures for communications equipment
Required skills:

- Plan own work including predicting consequences, identifying improvements and interpreting information from the communication systems to increase opportunities for fares

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - operating a taxicab communication system effectively
  - communicating effectively using communication systems
  - maintaining communication equipment operational status
  - using communication system during emergencies
  - identifying communication system problems or faults and taking appropriate action
  - maintaining workplace records and documentation
  - completing work systematically with the required attention to detail without damage to goods or equipment
  - showing evidence of application of relevant workplace procedures
  - showing evidence of an understanding of relevant regulations and codes
  - showing evidence of an understanding of OH&S regulations and hazard prevention policies and procedures
  - showing evidence of an understanding of workplace procedures and work instructions relating to the use of communication equipment

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
EVIDENCE GUIDE

- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- Assessment of this unit must be undertaken on actual taxi radio equipment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication system may include:

- computer dispatch
- mobile phone, both on person or hands-free
- vehicle mounted radio
- security equipment, including duress alarm and camera (if fitted)

Equipment and technology may include:

- taxicab
- taxi meter
- radio/computer dispatch
- street directory
- mobile phone
RANGE STATEMENT

Messages are interpreted by:
- toll tags
- active listening
- two-way conversation
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting

Communication may involve:
- English speaking people
- people with limited ability to communicate in English
- people with communication disabilities
- use of phonetic alphabet

Communication problems may include:
- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communication channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood
- not following correct communication protocols and procedures

Workplace procedures may include:
- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- equal opportunity legislation and related policies

Information/documentation may include:
- workplace communication procedures, protocols, checklists and instructions
- manufacturers specifications for communications equipment
- communication records
- legislation, regulations and related documentation
- emergency procedures

Worksite environment may include:
- customers
- depot personnel
- other drivers
- managers
- police and other emergency service personnel

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Track geometry parameters e.g. alignment, top, line, twist, superelevation associated with maintenance and/or construction
- Workplace procedures for the measuring and recording of track parameters
- Problems that may occur during the measurement and recording of track geometry, and action that can be taken to report or resolve the problems
- Hazards that may exist when measuring and recording track geometry, and ways of controlling the risks involved
- Relevant records procedures
- Details of local authority procedures

**Required skills:**

- Communicate effectively with others when measuring and recording track parameters
- Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to the measurement and recording of track parameters
- Read recorded track geometry data
- Interpret and follow operational instructions
Required skills:

- Complete documentation related to the measurement and recording of track geometry
- Work collaboratively with others
- Promptly report and/or rectify any identified problems when measuring and recording track geometry in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment in accordance with workplace procedures
- Identify, select and use tools and equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - using appropriate measurement tools to measure the range of geometry elements
  - accurately recording and reporting results

Context of and specific resources

Performance is demonstrated consistently over a period
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted:
- by day or night
- in all weather conditions

Recording of track geometry may include measurement of:
- top, surface
- line, alignment
- twist, superelevation
- gauge
- track centres, lateral or vertical clearances

Measurement equipment may include:
- stringline and measuring rules
- gauge and superelevation boards
RANGE STATEMENT

Recording equipment may include:
- tape measures
- measuring trolleys
- electronic measurement devices

Recording equipment may include:
- paper forms, notes
- electronic data entry devices
- paper data capture devices
- electronic data capture devices

Liaison may include:
- internal or external personnel from other work areas (e.g. work teams)

Communication equipment systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and
- legislated rail safety requirements including acts and regulations from each applicable state and territory
RANGE STATEMENT

legislation may include: together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

| 1 Carry out pre-operation checks | 1.1 Pre-operational checks are conducted to manufacturers specifications to ensure optimum functionality of equipment  
1.2 Necessary adjustments to equipment are made to ensure efficient operation, according to manufacturers instructions  
1.3 Faulty equipment is reported to relevant person to ensure equipment is safe and effective to use |
| 2 Operate mechanical equipment | 2.1 Equipment is operated in accordance with manufacturers or workplace operating instructions to ensure safe and effective operation  
2.2 Appropriate personal safety protection is used to minimise the risk of injury to operator  
2.3 Work operational hazards are eliminated or controlled appropriately when using equipment to ensure safeworking conditions  
2.4 Assisting personnel are given clear instructions about their duties if required to ensure safe and effective working conditions |
| 3 Conduct routine maintenance | 3.1 Equipment is cleaned and maintained in accordance with manufacturers specifications to ensure optimum functionality  
3.2 Records are maintained according to workplace procedures |
| 4 Secure and store | 4.1 Equipment is handled and transported in a safe, secure, efficient manner to minimise risk of injury to personnel and damage to equipment  
4.2 Equipment is stored and secured according to manufacturers or workplace procedures to prevent damage and losses of equipment |

# Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures and policies for the operation and maintenance of minor mechanical equipment
- Problems that can occur when operating and maintaining minor mechanical equipment, and
REQUIRED KNOWLEDGE AND SKILLS
related action that should be taken
- Tools and equipment used when operating and maintaining minor mechanical equipment, and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency

Required skills:
- Communicate effectively with others when operating and maintaining minor mechanical equipment
- Read and interpret instructions, procedures, information and signs relevant to operating and maintaining minor mechanical equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to operating and maintaining minor mechanical equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating and maintaining minor mechanical equipment
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when operating and maintaining minor mechanical equipment in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and efficiently and effectively use relevant tools and equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - carrying out pre-operation checks
  - operating mechanical equipment correctly
  - performing routine maintenance on mechanical equipment
  - storing mechanical equipment appropriately

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night  
- in any weather conditions

Work may be conducted in:  
- restricted spaces  
- exposed conditions  
- controlled or open environments

Minor mechanical equipment may include:  
- mechanical handling/lifting equipment  
- compressors  
- small plant such as motorised borers and saws  
- generators

Materials may include:  
- servicing materials such as lubricants  
- related materials and consumables needed when using tools, e.g. nails, screws, grease, saw blades, grinding wheels, drill bits, etc.

Safety and personal protective equipment may include:  
- high visibility clothing  
- sunscreen and sun glasses  
- insect repellent  
- gloves  
- safety headwear  
- mask  
- footwear  
- safety glasses and hearing protection  
- portable radios/mobile phones  
- flags and hand lamps  
- safety devices

Environmental hazards may include:  
- leaking oil and fuel  
- inappropriate disposal of fluids in drains or sewerage systems  
- inappropriate disposal of waste and rubbish

Liaison may include:  
- internal or external personnel from other work areas
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established or standard procedures

Contingency processes may relate to:

- personal injury
- tool malfunctions

Information/records may include:

- workplace operational and technical instructions and procedures for the use and maintenance of minor mechanical equipment
- relevant regulations including state/territory safety codes of practice and safeworking regulations
- maintenance checklists and records for the use and maintenance of minor mechanical equipment
- work orders
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when operating and maintaining minor mechanical equipment
- OH&S procedures
- QA plans, data and document control
- data and document control procedures
- relevant Australian standards and certification requirements
- emergency procedures manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- two-way radios
RANGE STATEMENT

systems may include:

- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

| 1 Determine job requirements | 1.1 Structures are inspected as necessary to locate defects  
1.2 Job requirements are determined in accordance with workplace procedures, including identification of scope of work and resources required |
| 2 Prepare components for repair | 2.1 Components requiring repair are prepared in accordance with workplace procedures  
2.2 Materials required for job are identified and organised as required to enable appropriate repair of components |
| 3 Perform repairs | 3.1 Defective area is removed in accordance with workplace procedures  
3.2 Repairs are carried out to required standard in accordance with workplace procedures |
| 4 Clean up site | 4.1 Site is cleaned up to ensure it is restored and environmentally sound and safe in accordance with workplace procedures and environmental regulations and standards |
| 5 Complete documentation | 5.1 Documentation is completed as required in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the repair of concrete/masonry structures
- Problems that may occur during the repair of structures, and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing concrete/masonry structures, and ways of controlling the risks involved
- Functions of different types of concrete/masonry structures
- Concrete/masonry structures repair methods and techniques
- Information on the use of epoxy and grouts for mortar pads and cracks
- Basic concrete construction techniques
- Relevant recording and documentation procedures
Required skills:

- Communicate effectively with others when repairing concrete/masonry structures
- Read and interpret plans and specifications relevant to the repair of concrete/masonry structures
- Follow operational instructions and work sequences when undertaking concrete/masonry structures repair
- Complete documentation related to the repair of concrete/masonry structures
- Operate communication equipment to required protocol
- Work collaboratively with others when repairing concrete/masonry structures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing concrete/masonry structures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise during the repair of concrete/masonry structures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use relevant tools and equipment
- Adapt to differences in tools and equipment and work requirements in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify defects

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
EVIDENCE GUIDE

- other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing components to be repaired
  - repairing existing concrete/masonry structures using a range of repair techniques
  - repairing a range of defect types

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in dry weather conditions
RANGE STATEMENT

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Structures and components may include:
- concrete structures
- masonry structures
- underbridges, overbridges, footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
- signal gantries

Equipment may include:
- welding, oxy and cutting equipment
- temporary supports
- manual tools
- air tools and compressor
- small power tools
- scaffolding
- ladders
- elevated work platforms (EWP)
- boat/barge

Materials may include:
- epoxy grouts
- cement grouts
- paint (protective treatment)
- carbon fibre
- bolts and fasteners
- reinforcement

Maintenance methods may include:
- repairing
- painting (protective treatment)
- cathodic protection
- bonding

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
- landowners
RANGE STATEMENT

Communication systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- safety harness
- torch
- safety devices
- respirator

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- work orders
- technical instructions
- material safety data sheets (MSDS)
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes
- legislated rail safety requirements including acts and regulations from each applicable state and territory
RANGE STATEMENT

may include: together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to install and maintain guard rails in accordance with safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, installing guard rails, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the installation and maintenance of guard rails as part of workplace activities across a variety of operational contexts within the Australian rail system.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Determine job requirements | 1.1 Worksite is identified  
1.2 Obstructions are cleared from gangways/flangeways to ensure safe passage of trains  
1.3 Installation, replacement or repair method is selected to meet work requirements in accordance with worksite standards and procedures  
1.4 Plant, equipment and materials are prepared for work |
| **2** Install guard rail | 2.1 Existing rail is removed, if required, to enable fitting of new rail  
2.2 New or replacement guard rail is installed to standards using suitable equipment and fastening system to restore functionality of guard rail  
2.3 Final job is checked for compliance to standards to enable services to be restored safely |
| **3** Complete documentation | 3.1 Documentation on work undertaken is completed in accordance with workplace requirements |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of guard rails
- Problems that may occur during the installation and maintenance of guard rails, and action that can be taken to report or resolve the problems
- Hazards that may exist when carrying out the installation and maintenance of guard rails, and ways of controlling the risks involved
- Principles of guard rail function
- Guard rail installation and maintenance techniques and processes
- Technical manuals and instructions which relate to the installation and maintenance of guard rails
- Standards applicable to use of guard rails
- Emergency procedures
Required skills:

- Read and interpret instructions, procedures, information and signs relevant to the installation and maintenance of guard rails
- Interpret and follow operational instructions
- Complete documentation related to the installation and maintenance of guard rails
- Operate communication systems to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out the installation and maintenance of guard rails in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to materials or equipment
- Select appropriate material for guard rails
- Install and remove guard rails
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - installing or maintaining the guard rails on
EVIDENCE GUIDE

underbridges, level crossings in open track
- ensuring completed work meets track geometry requirements

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles
RANGE STATEMENT

Guard rails include:
- guard rails installed on level crossings and sharp curves to prevent derailment
- guard rails installed on underbridges and near vulnerable structures to limit lateral movement of derailed wagons

Types of guard rail may vary according to:
- rail mass
- rail type
- bearer type
- location of guard rail (between the running rails or outside the running rails)

Tools may include:
- rail tongs
- mechanical lifting and handling devices
- hand tools
- small plant
- on-track equipment (e.g. dog puller)

Materials may include:
- fastening components
- new or part worn rail for guard rails
- special steel section guard rails
- splay rails
- specially fabricated 'vee'

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Work may involve:
- exposure to chemicals, dangerous or hazardous substances
- movements of equipment, materials and vehicles

Communication equipment systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signal

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
RANGE STATEMENT

Information/documents may include:
- hand lamps
- flags
- safety devices
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- notices, records and requests
- work orders
- technical instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)
Not Applicable

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB2104A Identify, diagnose and rectify faults on electric passenger trains

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to identify, diagnose and rectify faults on electric passenger trains in accordance with safeworking and regulatory requirements and workplace procedures. It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, and checking and reporting minor repairs and/or maintenance in accordance with workplace procedures. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Work must be carried out in compliance with workplace procedures and the regulations and safeworking codes of practice relevant to fault diagnosis and rectification.

Work is generally performed without supervision and within a team environment. It involves the application of routine fault identification, diagnosis and rectification procedures to maintain the safety and operation of equipment on electric passenger trains operating within Australian rail systems.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify/diagnose faults | 1.1 Electric passenger train and equipment is monitored for potential faults  
1.2 Faulty or damaged components or equipment are identified and assessed  
1.3 Where fault can be rectified, equipment and/or tools required are identified and obtained  
1.4 Where fault or component is to be repaired/replaced, work area and equipment are prepared and made safe for repair/component exchange activities |
| 2 Carry out fault rectification/repairs | 2.1 Rectification/repair/component exchange is carried out to comply with workplace procedures  
2.2 Where used, equipment, tools and materials required are operated, applied and handled to conform to OH&S requirements and manufacturers specifications to prevent injury and damage  
2.3 Activities are carried out in accordance with OH&S and workplace procedures |
| 3 Check and report rectification/repairs | 3.1 Rectification/repair/component exchange activities are checked for compliance with safety requirements and workplace procedures  
3.2 Equipment is checked to confirm that it has been restored to operational standards  
3.3 Rectification/repair/component exchange activities are reported and accurately documented in appropriate records or log books |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant state regulations, codes of practice and safeworking system requirements
- Relevant OH&S and environmental protection requirements
- Workplace procedures and policies for the identification, diagnosis and repair of faults
- Typical repair problems that can occur and related action that should be taken
- Tools/equipment used when identifying, diagnosing and rectifying faults, and the procedures and precautions for their care, use and storage
REQUIRED KNOWLEDGE AND SKILLS

- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when identifying, diagnosing and rectifying faults
- Read and interpret instructions, procedures, information and signs relevant to the identification, diagnosis and rectification of faults
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to identifying, diagnosing and rectifying faults
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when identifying, diagnosing and rectifying faults
- Promptly report when identifying, diagnosing and rectifying faults in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when identifying, diagnosing and rectifying faults
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment

EVIDENCE GUIDE

demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying typical faults that may occur on electric passenger trains
  - correctly rectifying a range of faults on an electric passenger train
  - explaining and/or demonstrating procedures for reporting faults and inoperative equipment

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of trains may include: any electric passenger trains in service within Australian rail systems

Operations may be conducted: by day or night
in all weather conditions.
in exposed conditions and controlled or open environment

Fault rectification/repair component exchange may include: minor component change out

Fault rectification/repair component exchange may include: diagnosing faults
replacing faulty/damaged/worn equipment
resetting circuit breakers
operating isolating taps/cock
resetting safety apparatus
isolating faulty components
tying up loose equipment
operating diagnostic equipment

Safety equipment may include: high visibility clothing
sunscreen and sun glasses
insect repellent
gloves and footwear
portable radios
flags and hand lamps
safety glasses
safety devices

Environmental hazards may include: leaking oil or gases
noise from defective or inappropriately adjusted equipment

Consultative processes may include: supervisors and managers
union representatives
fitters/maintenance staff
train examiners

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: company procedures
enterprise procedures
organisational procedures
established or standard procedures

Contingency processes may relate to: personal injury
tool malfunctions or loss

Information/records may include: workplace operational and technical instructions and procedures for the identification, diagnosis and
RANGE STATEMENT

- rectification of faults
- records for the identification, diagnosis and rectification of faults
- tool/equipment manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when identifying, diagnosing and rectifying minor faults
- OH&S procedures
- relevant Australian standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements

Applicable regulations and legislation may include:

- relevant state regulations, codes of practice and safeworking system requirements
- relevant state OH&S legislation
- relevant state environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

TLIB2111A Assist with testing train braking system on electric passenger train

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to assist with testing the train braking system on electric passenger trains in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for train brake inspection and testing, inspecting and testing train brake operation, dealing with identified faults, and recording/reporting the results of a brake test in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated state and territory rail safety requirements together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the testing of a train braking system as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 **Prepare for train brake inspection and testing** | 1.1 OH&S legislation, codes of practice, policies and procedures are identified and followed
| 1.2 Isolation or securing of train is confirmed in accordance with workplace procedures to make the work area safe for the inspection and test
| 1.3 Ensure the brake system is ready for inspection and testing
2 **Test train brake operation** | 2.1 Brake tests are conducted to ensure compliance to required standards
| 2.2 Where required, modified brake tests are conducted to workplace procedures to meet required standard
| 2.3 Continuity tests are conducted to conform with workplace procedures to ensure train braking system meets functional specifications
| 2.4 Where faults are identified, appropriate corrective action is taken to ensure operational safety
3 **Record / report brake test faults or defects** | 3.1 Faults or defects found during brake tests are reported and/or recorded as per workplace procedures

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable minimum standards and approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Brake systems, their components and their operation
- Types of brake tests and their purpose
- Diagnostic techniques
- Communication protocols
- Documentation requirements relating to brake testing
- Procedures to be followed in the event of an emergency

**Required skills:**

---
Required skills:

- Communicate effectively with others when testing train braking system
- Read and interpret instructions, procedures, information and signs relevant to the testing of train braking system
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing of train braking system
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when testing train braking system
- Promptly report and/or rectify any identified problems, faults or malfunctions when testing train braking system in accordance with regulatory requirements and workplace procedures
- Apply rail safety practices and regulations
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Assess brake system defects
- Operate and adapt to differences in brakes and related equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
EVIDENCE GUIDE

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly performing all types of brake tests applicable to workplace
  - identifying different types of failures/defects that could occur
  - correctly identifying procedures to be followed in the event of a failed brake test

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
**RANGE STATEMENT**

Operations may be conducted:
- in all weather conditions
- by day or night

Locations for tests may include:
- depots
- sidings
- platforms

Brake tests may include:
- brake leakage test
- air continuity test
- modified brake test
- train brake test
- power against the brake test

Safety and protective equipment may include:
- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Relevant personnel can include:
- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and instructions and job specification
- induction and training materials
- brake instruction documentation
- safeworking documentation
RANGE STATEMENT

- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable state/territory legislated rail safety requirements together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB2119A Carry out maintenance of trailers

Modification History
Not applicable.

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to carry out basic servicing and maintenance of a commercial trailer, including action to implement trailer manufacturer's specifications for routine checks and maintenance, and to ensure that all specified safety requirements are met and that the trailer is operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the regulations of the relevant roads and traffic authority.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine checking and maintenance principles and procedures to maintain a commercial trailer across a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify faults and perform routine maintenance | 1.1 Trailer faults are identified and diagnosed in accordance with workplace procedures  
1.2 Trailer components are lubricated in accordance with manufacturers instructions and workplace procedures |
| 2 Carry out repairs on trailers | 2.1 Trailer's air/hydraulic brake system is inspected and adjusted, and any required minor maintenance or repairs carried out  
2.2 Trailer's electrical system is checked for correct operation and any required minor maintenance or repairs carried out  
2.3 Trailer's suspension and axles are inspected and identified faults repaired and/or reported in accordance with workplace procedures  
2.4 Trailer's wheels and tyres are inspected, removed, repaired and refitted, as required, in accordance with workplace policy |
| 3 Complete documentation | 3.1 Records of routine maintenance and repairs are kept in accordance with workplace procedures |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant duty of care requirements for the routine servicing and maintenance of trailers
- Relevant OH&S and pollution control procedures
- Procedures for the checking, and routine service and maintenance of a commercial trailer in accordance with workplace and manufacturers requirements and established safety rules and regulations
- Problems that may occur during the routine servicing and maintenance of a trailer and appropriate actions and solutions
- Recognition and diagnosis of faults and trailer irregularities
- Basic principles of operation of systems on commercial trailers, including electrical systems, tyres, brakes and coupling systems
- Basic fault finding procedures required during routine servicing and maintenance of trailers
- Housekeeping standards required for routine servicing and maintenance
- Procedures for the use and maintenance of the materials, tools and parts required for routine servicing and maintenance
REQUIRED KNOWLEDGE AND SKILLS

- Reporting and documentation requirements

Required skills:

- Communicate effectively with others during the routine servicing and maintenance of a trailer
- Read and interpret instructions, procedures, information and signs relevant to the routine servicing and maintenance of a trailer
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the routine servicing and maintenance of a trailer
- Operate electronic communication equipment to required protocol
- Work collaboratively with others during the routine servicing and maintenance of a trailer
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified during the routine servicing and maintenance of a trailer in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Service trailer and equipment in terms of maintenance schedule and standard operating procedures
- Carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

- Maintenance may be carried out in operations conducted at day or night
**RANGE STATEMENT**

typical road transport situations, including:

- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- while in a depot, base or warehouse
- while in the vehicle on the road
- while at a client's workplace

Trailers may include:

- any commercial trailers attached to vehicles used in the Australian transport industry

Maintenance checks may include:

- routine inspections of trailer and its systems
- checks prior to operations
- checks on completion of operations
- checks on completion of maintenance activities

Minor routine repairs may include:

- the replacement of blown globes in trailer lights
- minor repairs to couplings
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures

Minor routine servicing may include:

- topping up of water levels
- lubrication of trailer components
- checking of air in tyres
- checking of air/hydraulic brake systems
- checking of suspension and axles

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:

- workplace routine servicing and maintenance procedures, checklists and instructions
- relevant state/territory roads and traffic authority trailer maintenance regulations
- maintenance checklists and records
- trailer manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when servicing and maintaining trailers
- OH&S procedures to be followed when servicing and maintaining trailers

Applicable regulations and legislation may include:

- relevant state/territory roads and traffic authority vehicle maintenance regulations and requirements
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant state/territory environmental protection legislation

Unit Sector(s)
Not Applicable

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB2121B Maintain rail joints

Modification History
Release 1 - Revised unit.
This unit replaces and is equivalent to TLIB2121A Maintain rail joints.

Unit Descriptor
This unit involves the skills and knowledge required to maintain rail joints in accordance with approved standards, safeworking and regulatory requirements, and workplace procedures. It includes identifying and determining parameters or components that require repair, cutting and boring rail, maintaining rail joints, and completing required documentation. Licensing or certification requirements are not applicable to this unit. Persons achieving competence in this unit will need to fulfil legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Application of the Unit
Work is performed under minimal supervision, generally in a team environment. It involves the application of routine operational principles and procedures to maintain rail joints as part of workplace activities across a variety of operational contexts within the Australian rail system. Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Authorisation/approval processes and procedures
- Documentation requirements
- Fundamentals of track structures relating to rail joints
- Hazards that may exist when maintaining rail joints, and ways of controlling the risks involved
- Problems that may occur when maintaining rail joints, and action that can be taken to report or resolve them
- Rail joint components
- Rail joint defects
- Relevant communication systems and procedures
- Relevant safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Track standards relating to rail joints
- Workplace procedures for maintaining rail joints

**Required skills:**

- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Communicate effectively with others when maintaining rail joints
- Complete documentation related to maintaining rail joints
- Determine specifications using appropriate numeric functions
- Identify and locate parameters or components of rail joints requiring adjustment or replacement
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocols
- Read and interpret instructions, procedures, information, technical data, standards and drawings relating to maintaining rail joints
- Report and rectify within limits of own role, problems, faults and malfunctions identified when maintaining rail joints in accordance with regulatory requirements and workplace procedures
- Select and use hand tools, power tools and equipment
- Select and use required personal protective equipment (PPE) conforming to industry and OH&S standards
- Use relevant plant and mechanised equipment
- Work collaboratively with others when maintaining rail joints
- Work systematically with required attention to detail without injury to self or others, or
damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - examining rail joints to determine defects and selecting appropriate repair methods
  - checking component parts and carrying out appropriate maintenance activities
  - completing documentation to organisational requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
- mechanical handling and lifting equipment
- track machines
- hand tools, including impact or tension wrenches, grinders, friction rail saws, rail punches, rail borers, tie tampers, gauges, track jacks, spiking hammers and bars
- rail tensors
- fastening equipment
- oxy-acetylene equipment

Materials may include:
- resilient and static fastenings
- sleeper plates or pads
- anchors
- bolts
- nuts
- washer clips
- shims
- fishplates
- swage fastenings

Rail joint parts and surroundings to be checked may include:
- joint insulation
- expansion gap
- fishplates
- fish bolts
- sleepers
- sleeper fastening
- rail anchoring and rail bonds
- track geometry

Fastenings may include:
- pandrol clips, fist fastenings, Trac Lok or Rex Lock
- dog spikes and dog screws
- bolts, spring washers and nuts
- double shouldered sleeper plates
- insulated sleeper pads

Types of rail joint may include:
- mechanical joints
- mechanical junction joints
- insulated mechanical joints
- insulated plate joints
- bow plates
- bonded insulated joints

Rail ends on curves may require:
- bending (also known as pressing or crowing)
Special transitional rail joints may be:

- required between changes of mass/wear

Liaison may include:

- internal or external personnel from other work areas, such as train controllers and electricians

Communication systems may include:

- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and PPE may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:

- company procedures
- enterprise procedures
- workplace procedures
- established procedure

**Unit Sector(s)**

Not applicable.

**Competency Field**

B – Equipment Checking and Maintenance
TLIB2122A Apply awareness of fundamentals of rail operations in yards or sidings

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves applying an awareness of the fundamentals of rail operations in yards or sidings.
It includes fixed structures, rail vehicles and rolling stock, signals, safety devices, primary activities and safety systems.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit is intended as an introduction to rail yards or sidings for people entering the rail industry who will be working on or around them.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Identify basic yard/siding structures, layout and terminology**
   - 1.1 Basic terminology for track, trackside equipment and fixed structures is identified
   - 1.2 Features of track, including geography and geometry are identified
   - 1.3 Infrastructure categories and their purpose are identified
   - 1.4 Other principal structure types and their purpose are identified
   - 1.5 Relevant stakeholders for reporting structural faults or anomalies are identified

2. **Identify above and below ground services**
   - 2.1 Principal overhead and/or electrical components and their purpose are identified and explained
   - 2.2 Power supply voltages are identified
   - 2.3 Methods of isolation are identified and their purpose is explained

3. **Identify rail track vehicles and rolling stock**
   - 3.1 Types of trains and rolling stock are identified
   - 3.2 Types of rail track vehicles are identified
   - 3.3 Relevant stakeholders for reporting rolling stock faults or anomalies are identified

4. **Identify signals and safety devices**
   - 4.1 Types, location and purpose of signals are identified
   - 4.2 Types, location and purpose of safety devices are identified
   - 4.3 Relevant stakeholders for reporting signal or safety device faults or anomalies are identified

5. **Identify primary rail activities and safety systems**
   - 5.1 Primary rail activities and, where applicable, other operators are identified
   - 5.2 Types and purpose of safety systems are identified
   - 5.3 Relevant stakeholders for reporting safety events are identified
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Relevant communication systems and procedures

Required skills:

- Communicate effectively with others
- Interpret and follow operational instructions
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying layout, main features and equipment in a rail yard or siding
  - identifying all activities carried out in the rail yard or siding
  - identifying possible safety events and appropriate responses

Context of and specific resources for assessment

- Resources for assessment may include:
  - a range of relevant exercises, case studies and/or other knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Assessment may occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Track components may include:
- rails, rail fastenings and welds
- sleepers and sleeper fastenings
- ballast
- formation and earthworks
- drainage pits
- cess

Track layout may include:
- plain track
- gauge
- turnouts
- special track including catchpoints/derails, expansion switches, diamond crossings and slips

Yard layouts may include:
- road identification
- walkways
- road crossings
- mainline/network connections
- orientation
- through roads

Overhead and/or electrical components may include:
- catenary
- stanchions
- drop wire
- contact
- steady arm
- feeder
- spark gaps
- earth straps
- tension weights
- pantographs
- high voltage cables
- power supplies
- isolation points

Rail track vehicles may include:
- road/rail vehicles
- maintenance vehicles
- track machines
- trolleys
- elevated platforms
- cherry pickers

Safety events may include:
- incidents
- accidents
• near misses

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB2125A Apply awareness of tram or light rail track fundamentals

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to apply an awareness of tram or light rail fundamentals. It includes identifying tram/light rail track terminology, track and system components and the tools and equipment used on or around tram/light rail track. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including state acts and regulations together with any nationally approved compliance codes and/or guidelines.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify tram/light rail track and structures terminology and components
   1.1 Basic terminology related to tram/light rail track and structures infrastructure is identified
   1.2 Main components of tram/light rail track and structures are identified

2 Identify tram/light rail track components
   2.1 Track components and their purpose are identified and explained
   2.2 Tram crossing types and components and their purpose are identified and explained
   2.3 Manual, electrical and spring-operated points are identified and their use is explained

3 Identify tram/light rail electrical system features
   3.1 Overhead trolley system components, voltages and exclusion zones are identified and explained
   3.2 Below ground electrical system is identified and explained
   3.3 Reporting procedures and protocols for identified electrical system faults and defects are explained

4 Identify tram/light rail tools and equipment
   4.1 Tools and equipment for tram/light rail track installation and maintenance are identified
   4.2 Track machines for tram/light rail track installation and maintenance are identified

5 Identify tram/light rail track and system faults or problems
   5.1 Possible faults for tram/light rail track and system are identified
   5.2 Reporting procedures and protocols for identified track and system faults are explained
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable safety, occupational health and safety (OH&S) and environmental procedures and regulations related to tram/light rail
- Authorisation/approval processes and procedures
- Fundamentals of tram/light rail track and structures
- Fundamentals of tram/light rail track layout and geometry
- Relevant communication systems and procedures
- Tools and equipment used in tram/light rail track construction and repair
- Traffic management requirements
- Tram/light rail track and overhead trolley components
- Tram/light rail track terminology

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others
- Interpret and follow operational instructions
- Modify activities depending on operational contingencies, risk situations and environments
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying a range of tram/light rail terminology
  - identifying a number of different tram/light rail components
  - identifying tools and equipment relevant to their job role

Context of and specific resources for assessment

- Performance is demonstrated in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Measuring equipment may include:**
- tape measures
- gauge boards

**Tools and equipment may include:**
- mechanical handling/lifting equipment
- track machines
- hand tools including grinders, friction rail saws, track jacks, sledge hammers, jack hammers, shovels, pick axes and bars
- cutting equipment
- fastening equipment
- on-track equipment

**Track components may include:**
- rails and rail fastenings
- sleepers and sleeper fastenings
- ballast
- formation and earthworks
- temporary crossover

**Track layout may include:**
- plain track
- turnouts
- special trackwork, including catchpoints, spring loaded points, manual points, automatic points
- H crossing
- scissor crossing
- crossover
- grand union
- terminus
- sidings

**Basic track geometry may include:**
- tangent track
- curves
- transitions
- super-elevation

**Track maintenance and construction methods may include:**
- closures
- track repairs
- ballasting
- rail grinding
- welding
- point adjusting
- track cleaning
- drain cleaning
- re-sleepering
Liaison may include:

Communication equipment may include:

Depending on work context, safety and personal protective equipment may include:

Information/documents may include:

Applicable regulations and legislation may include:

- re-timbering
- internal or external personnel from other work areas (e.g. signalman/controller)
- two-way radios
- telephones/mobile phones
- high visibility clothing
- flame retardant clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- whistle
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- works orders
- material safety data sheets (MSDS)
- timekeeping records
- traffic management plans
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- two-way radio/mobile phone operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- local authority regulations
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB2130A Diagnose and rectify minor faults on on-track vehicles

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to diagnose and rectify minor faults on on-track vehicles in accordance with organisational requirements. Licensing, legislative, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
Work involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of on-track vehicles. This unit only covers minor repairs as defined by organisational policies.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify repair and maintenance requirements

1.1 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair

1.2 Identified faulty or damaged components outside own scope, as determined by organisational policies, are reported in accordance with organisational procedures

1.3 Where repair/maintenance/component exchange is appropriate, equipment and tools required are identified and obtained

1.4 Work areas and equipment are prepared and made safe for repair/maintenance/component exchange activities

2 Conduct repairs and minor maintenance

2.1 Routine repair/maintenance/component exchange is carried out in accordance with manufacturer specifications and organisational procedures

2.2 Equipment, tools and materials are operated, applied and handled in conformance to occupational health and safety (OH&S) requirements and manufacturer specifications to prevent injury and damage

3 Check and report minor repairs and/or maintenance

3.1 Minor repair/maintenance/component exchange activities are checked for compliance with manufacturer specifications and workplace procedures

3.2 Equipment is checked to confirm it has been restored to operational standards

3.3 Worksite is checked for cleanliness and operational safety, and appropriate action is taken to restore site and equipment

3.4 Repair/maintenance/component exchange activities are documented in accordance with organisational requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Hazards that may exist when diagnosing and rectifying minor faults with on-track vehicle/s and ways of controlling the risks involved
- Organisational procedures for diagnosing and rectifying minor faults with on-track vehicle/s
- Problems that may occur when diagnosing and rectifying minor faults with on-track vehicle/s and action that can be taken to report or resolve the problems
- Relevant rail safety, OH&S and environmental procedures and regulations
- Tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements

**Required skills:**

- Adapt to differences in track vehicles and associated equipment and procedures
- Communicate effectively with others
- Modify activities depending on operational contingencies, risk situations and environments
- Read and interpret instructions, procedures, information and signs relevant to diagnosing and rectifying minor faults with on-track vehicle/s
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying equipment checks required for a range of on-track vehicles in the workplace
  - identifying typical faults or defects that may occur on on-track vehicles
  - carrying out minor repairs, maintenance and component exchange on different on-track vehicles
  - following correct workplace requirements for reporting identified defects
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - demonstrating correct procedure for identifying minor faults
  - correctly changing out faulty component
  - reporting minor faults and complete organisational documentation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including organisational procedures, regulations, codes of practice and operation
Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Minor repair/maintenance/ component exchange may include:
- minor component change out
- diagnosing minor faults
- identifying correct lubricants
- identifying correct fuel and carrying out refuelling
- identifying correct solvents and cleaning fluids
- maintaining fluid and air pressures
- replacing faulty/damaged/worn equipment
- servicing and cleaning batteries

On-track vehicles may include:
- rail crane
- spot tamper
- ballast regulator
- inserter/ remover (TR10)
- track recorder
- tamper
- dynamic stabiliser
- rail grinder
- ballast cleaner
- track layer
- tie inserter
- scarifier
- tie cranes
- track jack

Safety equipment may include:
- high visibility clothing
- gloves
- safety headwear
- respiratory protection
- safety footwear
- safety glasses
- hearing protection
- safety devices

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable sections of legislated rail safety requirements including acts and regulations from each applicable state and/or territory together with any nationally approved compliance codes and/or guidelines
- Communication procedures and protocols
- Maintenance and servicing procedures
- Procedures to be followed in an emergency
- Relevant occupational health and safety (OH&S) and environmental procedures and regulations
- Relevant sections of the ADG Code and any other dangerous goods regulations (for freight operations only)
- Train preparation documentation procedures

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when preparing a train for operation
- Complete documentation related to preparing a train for operation
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to preparing a train for operation
- Report and/or rectify any identified problems, faults or malfunctions when preparing a train for operation in accordance with regulatory requirements and workplace procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others when preparing a train for operation
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Constraints and special instructions may include:
- speed restrictions
- shunt requirements
- ADG separation
- locomotive marshalling
- network owner requirements

Safety and protective equipment may include:
- high visibility clothing
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- portable radios
- mobile/satellite phones
- hand lamps
- flags
- safety devices
- hearing protection

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information/documents may include:
- train consists
- train notices
- out-of-gauge notices
- dangerous goods documentation
- brake certification
- load/passenger manifests
- OH&S and environmental protection legislation, codes of practice, policies and procedures
- local instructions
- emergency procedure documentation
- manufacturer specifications
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and
- legislated rail safety requirements including acts and regulations from each applicable state and territory together
legislation may include: with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards including AS 4292 Railway safety management
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB2133A Test medium/heavy track vehicle braking system

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to test the braking system on medium/heavy track vehicle/s in accordance with manufacturer specifications and/or organisational procedures. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit applies to people involved in testing a track vehicle braking system as part of workplace activities within the rail industry.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| **1 Plan and prepare for track vehicle brake inspection and testing** | 1.1 Logbooks and any other documentation are checked for existing defects  
1.2 Track vehicle is isolated or secured, in accordance with workplace procedures, to make the work area safe prior to inspection |
| **2 Inspect and test track vehicle brake operation** | 2.1 Visual and audible inspection is conducted to identify faults or defects  
2.2 Brakes are applied and released to ensure track vehicle braking system meets functional specifications  
2.3 Identified defects and faults are rectified and/or reported in accordance with manufacturer specifications and/or organisational procedures |
| **3 Complete documentation** | 3.1 Documentation concerning inspecting and testing the braking system is completed in accordance with organisational procedures  
3.2 Logbook and other service records on the track vehicle are completed in accordance with organisational procedures |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Hazards that may exist during the start up and shut down of medium/heavy self-propelled track vehicles and ways of controlling the risks involved
- Organisational procedures for conducting brake tests on medium/heavy self-propelled track vehicles
- Problems that may occur during testing of brakes on medium/heavy self-propelled track vehicles and action that can be taken to report or resolve the problems
- Relevant rail safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Types of brake tests and their purpose

Required skills:

- Adapt to differences in track vehicles and associated equipment and procedures
- Communicate effectively with others
- Modify activities depending on differing operational contingencies, risk situations and environments
- Read and interpret instructions, procedures, information and signs relevant to testing brakes on a track vehicle
- Work collaboratively with others
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identify correct procedure for testing braking system
  - correctly conduct brake test
  - complete brake test documentation
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - conducting inspections and testing of different types of brakes on medium/heavy track vehicle/s
  - identifying defects and faults in track vehicle braking systems
  - implementing workplace procedures to deal with identified defects and faults
  - completing records of test results in accordance with workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of brakes and tests may include:
- hand/park brake
- service brake
- train brake
- emergency brake

Safety and protective equipment may include:
- high visibility clothing
- gloves
- safety glasses
- safety headwear
- safety footwear
- hearing protection

Information/documents may include:
- workplace procedures and instructions and job specification
- manufacturer specifications and standards

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB3002A Test equipment and isolate faults

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to test equipment and isolate faults in accordance with workplace requirements, including identifying scope of the operational test; planning operational tests; checking the equipment through full operating range; and isolating faults and/or formulating recommendations for adjustment, repair or replacement in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the testing of equipment and the isolation of faults.

Work is performed under some supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures to the testing and the isolation of faults in equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

**Employability Skills**

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## ELEMENT

### PERFORMANCE CRITERIA

1. **Identify scope of operational check**
   1.1 Physical condition of equipment is observed
   1.2 Test procedures and parameters are identified in accordance with workplace procedures and manufacturers specifications
   1.3 Preliminary observations are recorded
   1.4 Test procedures are discussed with appropriate staff and necessary permission obtained

2. **Plan operational checks**
   2.1 Specifications and notes from preliminary observations are checked and areas to be clarified are identified
   2.2 Sequence of tests is planned noting areas where results and observations should be recorded
   2.3 Safe area for testing is identified
   2.4 Arrangements are made for any additional resources (including staff)

3. **Check unit through full operating range**
   3.1 Test is undertaken observing relevant safety and operational requirements
   3.2 Results are recorded and findings confirmed

4. **Isolate fault and/or formulate recommendations**
   4.1 Proposals for equipment repair are recorded based on faults found, cost/time implications and workplace approval systems
   4.2 Report is explained to relevant workplace personnel including any options and recommendations
   4.3 Parts are procured and/or repairs undertaken in accordance with enterprise procedures

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant sections of regulatory requirements applicable to the testing of equipment and the isolation of faults
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures and policies for the testing of equipment and the isolation of faults, including the tagging and reporting of faulty equipment and components
- Focus of operation of work systems, equipment, management and site operating systems for the testing of equipment and the isolation of faults
REQUIRED KNOWLEDGE AND SKILLS

- Fault-finding techniques including identification of cost/time effective rectification procedures
- Tools, meters, gauges and equipment used during the testing of equipment and the isolation of faults and the precautions and procedures that should be followed in their use
- Guidelines relating to the safe use of machinery and equipment including the tagging of unserviceable or damaged items
- Faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify the identified faults in the equipment or its components
- The characteristics, capabilities and limitations of the equipment
- Operational safety requirements for the equipment concerned
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Documentation and record requirements

Required skills:

- Communicate effectively with others when testing equipment and isolating faults
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, information and signs relevant to the testing of equipment and the isolation of faults
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing of equipment and the isolation of faults
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when testing equipment and isolating faults
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when testing equipment and isolating faults in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant meters, gauges, equipment and tools when testing equipment and isolating faults
Required skills:

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Apply basic mechanical, hydraulic, electrical and electronic principles to testing and fault identification activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Tests and the isolation of faults may be performed:
- on a range of equipment used in the stevedoring, transport, warehousing, distribution and/or storage industries

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Tests may include but are not limited to:
- tests of operational performance
- tests as part of routine servicing
- identification of causes of poor or out-of-specification performance
- tests following servicing and/or adjustment of equipment

Records/results of tests may include:
- details of faulty equipment or specific components
- details of action taken
- results of testing and associated recommendations
- details of repair and maintenance work to be undertaken

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
RANGE STATEMENT

- movements of equipment, goods and materials
- a fire or explosion
- faulty equipment/tools

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- equipment manufacturers
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Information/documents may include:
- workplace procedures and policies for the checking and assessment of the equipment concerned
- manufacturers specifications for equipment/tools
- equipment identification labels, barcodes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to the checking and operation of the equipment concerned
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Sector(s)
Not Applicable

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB3005A Carry out maintenance of vehicles designed to carry special loads

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to carry out basic servicing and routine maintenance of a commercial vehicle designed to carry a special load, including action to implement manufacturers specifications for routine checks and maintenance of the vehicle and its associated ancillary equipment, and to ensure that all specified safety requirements are met and that the vehicle and its ancillary equipment are operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the regulations of the relevant roads and traffic authority and workplace procedures and policy concerning vehicle maintenance.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to maintain the safety and operation of a commercial vehicle designed to carry special loads across a variety of operational contexts.

Licensing/Regulatory Information

Refer to Unit Descriptor
Pre-Requisites

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Diagnose vehicle faults and undertake repairs for the safe operation of a vehicle | 1.1 Faults in the vehicle and/or ancillary equipment electrical system are identified, diagnosed and repaired following manufacturers specifications and workplace procedures  
1.2 Faults in the fuel system are identified, diagnosed and repaired following manufacturers specifications and workplace procedures |
| 2 Maintain the vehicle systems | 2.1 Fluid levels in the vehicle and/or ancillary equipment are checked and adjusted following manufacturers specifications and workplace procedures  
2.2 Air/hydraulic fluid levels in the vehicle and/or ancillary equipment are checked and adjusted following manufacturers specifications and workplace procedures  
2.3 Safety equipment is inspected in accordance with regulatory requirements and workplace procedures |
| 3 Carry out minor repairs to a vehicle | 3.1 Vehicle components are removed, repaired or replaced and refitted to the vehicle using the correct tools and following manufacturers instructions and workplace procedures  
3.2 Tyres are repaired or replaced on vehicle following workplace procedures and manufacturers instructions  
3.3 The need for more complex maintenance procedures is identified and the problem correctly referred following workplace procedures  
3.4 OH&S procedures are followed throughout maintenance activities |
| 4 Complete documentation | 4.1 Records of routine maintenance and repairs are kept in accordance with workplace procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant duty of care requirements for the routine servicing and maintenance of vehicles designed to carry special loads
- Relevant OH&S and pollution control procedures
- Procedures for the checking and routine servicing and maintenance of a commercial vehicle designed to carry special loads in accordance with workplace and manufacturers requirements
REQUIRED KNOWLEDGE AND SKILLS

and established safety rules and regulations

- Problems that may occur during the routine servicing and maintenance of a vehicle and its associated ancillary equipment, and appropriate action and solutions
- Recognition and diagnosis of faults and vehicle/ancillary system irregularities
- Basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust system, tyres, brakes, and relevant ancillary systems
- Basic fault finding procedures required during routine servicing and maintenance of vehicles designed to carry special loads
- Procedures required to minimise waste during routine servicing and maintenance
- Housekeeping standards required for routine servicing and maintenance
- Procedures for the use and maintenance of the materials, tools and parts required for routine servicing and maintenance
- Reporting and documentation requirements

Required skills:

- Communicate effectively with others when carrying out the routine servicing and maintenance of a commercial vehicle designed to carry special loads
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out the routine servicing and maintenance of a commercial vehicle designed to carry special loads
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when carrying out the routine servicing of a vehicle designed to carry special loads in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:

- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of servicing activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include all vehicles designed to carry special loads, for example:
- concrete agitator
- livestock transporter
- armoured car
- tanker
- refrigerated vehicle
- waste vehicle
- fresh produce vehicle
- car carrier
- container carrier
- recovery vehicle

Maintenance may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- while in a depot, base or warehouse
- while in the vehicle on the road
- while at a client's workplace
- refrigeration systems
- concrete agitation systems
- car transporter systems
- livestock transporter systems
- waste loading/discharge systems
- recovery systems
- tanker pumping and related systems
- on-board cranes and hoists
- armoured car systems

Ancillary equipment will be dependent on type of special load carried and may include:

Maintenance checks may include:
- routine inspections of vehicle systems
RANGE STATEMENT

- routine inspections of ancillary systems
- checks prior to operations
- checks on completion of operations
- checks on completion of maintenance activities

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
- minor repairs to ancillary systems in accordance with instructions

Minor routine servicing may include:
- topping up of water levels
- replacement of oils
- replacement of air in tyres
- topping up of fluid levels in ancillary systems where relevant

Environmental hazards may include:
- leaking oil and fuel
- defective or inappropriately adjusted exhaust systems
- inappropriate disposal of vehicle fluids in drains or sewerage systems

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:
- workplace routine servicing and maintenance procedures, checklists and instructions for both the vehicle and associated ancillary equipment
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- maintenance checklists and records
- vehicle manufacturers instructions, specifications and recommended procedures
- precautions and procedures to be adopted to protect the environment when servicing and maintaining vehicles designed to carry special loads
- OH&S procedures to be followed when servicing and maintaining vehicles designed to carry special loads
- relevant state/territory roads and traffic authority vehicle
RANGE STATEMENT

legislation may include:
- maintenance regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field: B - Equipment Checking and Maintenance
TLIB3006A Carry out inspection of vehicles designed to carry special loads

Modification History

Unit Descriptor

This unit involves the skills and knowledge required to carry out an inspection of a commercial vehicle designed to carry a special load, including action to implement manufacturers specifications for routine checks of the vehicle and its associated equipment, to clean the vehicle and its associated equipment, and to ensure that all specified safety requirements are met and that the vehicle and equipment are operational to the requirements of both the workplace and the relevant state/territory roads and traffic authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the regulations of the relevant roads and traffic authority and workplace procedures and policy concerning vehicle inspection.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle checking and maintenance principles and procedures to inspect a commercial vehicle designed to carry special loads across a variety of operational contexts.

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant duty of care requirements for the routine inspection of vehicles designed to carry special loads
- Relevant OH&S and environmental procedures and regulations
- Procedures for the checking and routine inspection of a commercial vehicle designed to carry special loads in accordance with workplace and manufacturers requirements and established safety rules and regulations including visual inspection procedures, pre-operational checking procedures and warning systems checking procedures
REQUIRED KNOWLEDGE AND SKILLS

- Problems that may occur during the routine inspection of a vehicle and its associated ancillary equipment, and appropriate actions and solutions
- Techniques for the recognition of faults and vehicle/ancillary system irregularities
- Basic principles of operation of systems on commercial vehicles, including electrical systems, fuel systems, cooling systems, steering systems, exhaust systems, tyres, brakes, and relevant ancillary systems
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when carrying out the routine inspection of a vehicle and its associated ancillary equipment
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the routine inspection of a vehicle and its associated ancillary equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the routine inspection of a vehicle and its associated ancillary equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out the routine inspection of a vehicle and its associated ancillary equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when carrying out the routine inspection of a vehicle and its associated ancillary equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when carrying out the routine inspection of a vehicle and its associated ancillary equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include all vehicles designed to carry special loads, for example:
- concrete agitator
- livestock transporter
- armoured car
- tanker
- refrigerated vehicle
- waste vehicle
- fresh produce vehicle
- car carrier
- container carrier
- recovery vehicle

Inspection may be carried out in typical road transport situations, including:
- at day or night
- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- while in a workplace, depot, base or warehouse
- while in the vehicle on the road
- while at a client's worksite

Ancillary equipment will be dependent on type of special load carried and may include:
- refrigeration systems
- concrete agitation systems
- car transporter systems
- livestock transporter systems
- waste loading/discharge systems
- recovery systems
- tanker pumping and related systems
- on-board cranes and hoists
- armoured car systems

Inspection may include:
- visual checks of vehicle
- routine checks of vehicle systems
- checks in accordance with a detailed inspection schedule

Routine checks may include:
- water levels
- oil levels
- air pressure in tyres
- brakes
- lights
- condition of tyres
- battery
- exhaust system
RANGE STATEMENT

Environmental hazards may include:
- suspension
- functions of associated ancillary equipment
- leaking oil and fuel
- defective or inappropriately adjusted exhaust systems
- inappropriate disposal of vehicle fluids in drains or sewerage systems

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/records may include:
- workplace routine inspection procedures, checklists and instructions for both the vehicle and associated ancillary equipment
- relevant state/territory roads and traffic authority vehicle maintenance regulations
- inspection checklists and records
- manufacturers instructions, specifications and recommended procedures for both the vehicle and any associated ancillary equipment
- precautions and procedures to be adopted to protect the environment when inspecting and servicing vehicles designed to carry special loads
- OH&S procedures to be followed when inspecting and servicing vehicles designed to carry special loads
- applicable regulations and legislation may include:
- relevant state/territory roads and traffic authority regulations and requirements pertaining to the inspection of vehicles designed to carry special loads
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB3011A Set up and rig crane for lift

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift, including the systematic positioning and stabilisation of the crane and its assembly. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the setting up and rigging of a crane prior to lift in a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Position and stabilise crane | 1.1 Crane is directed to position as per job plan to ensure safe operation in accordance with applicable Australian Standards, codes of practice and manufacturers specifications  
1.2 Ground is checked to ensure it is firm enough to bear the load  
1.3 Appropriate plates or packing are correctly used to adequately distribute the load  
1.4 Any outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturers instructions and the appropriate Australian Standard and other relevant statutory regulations  
1.5 Outrigger packing is checked for adequacy prior to and after lift is taken |
| 2 Assemble crane | 2.1 The block is reeved in accordance with manufacturers instructions  
2.2 Any counterweights are installed to manufacturers specifications  
2.3 Any attachments are set up in accordance with manufacturers instructions  
2.4 A qualified rigger is consulted and other personnel are assisted as necessary to ensure efficient and safe assembly and set-up of crane  
2.5 Straight fly jibs and luffing fly jibs are assembled and fitted in accordance with manufacturers instructions |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and rigging of mobile cranes
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Procedures for prioritising and multi-tasking work
- Procedures for fitting attachments and fly jibs
REQUIRED KNOWLEDGE AND SKILLS

- Company work procedures concerning the setting up and rigging of a mobile crane at a worksite
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements
- Procedures for the identification and correct use of equipment, processes and procedures

Required skills:

- Communicate effectively with others when setting up and rigging a crane for a lift
- Read and interpret instructions, procedures, information and signs relevant to the setting up and rigging of a crane for a lift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the setting up and rigging of a crane for a lift
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when setting up and rigging a crane for a lift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when setting up and rigging a crane for a lift
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition of equipment
- Fit fly jibs and attachments

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - applying procedures for fitting attachments and fly jibs
  - demonstrating an understanding of the consultation processes

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in a variety of weather conditions
- using a workcage/workbox
- using a superlift attachment (300t and over cranes)

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
RANGE STATEMENT

Requirements for access and/or lift may include:
- dogman/rigger
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Documentation/records may include:
- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:
- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
RANGE STATEMENT

- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Obtain and confirm job instructions/work specifications | 1.1 Job instructions are obtained and checked to ensure specifications include all necessary information  
1.2 Lift plan and other work specifications are interpreted and clarification sought if necessary  |
| 2 Coordinate loading of gear and equipment | 2.1 Specific gear necessary for job is identified and obtained  
2.2 Equipment is properly packed and secured according to company procedures to ensure injury and damage are avoided during transportation  |
| 3 Assess job requirements and work area | 3.1 Adequate site access and egress is identified  
3.2 Potential hazards are identified and appropriate elimination or control measures selected  
3.3 Weight and dimensions of load are estimated or confirmed in consultation with customer and relevant personnel to ensure job is within limits of crane capacity  
3.4 Site information is interpreted and requirements confirmed with site supervisor  
3.5 Area is assessed to ensure there is sufficient space to establish crane and conduct lift  
3.6 Need to move mobile crane is assessed and, where applicable, route to be travelled is planned to ensure crane traverses firm surfaces and slopes are avoided where possible  
3.7 Any concerns about the safety or feasibility of the lift are discussed with the customer and if not resolved, reported to supervisor  
3.8 Payment arrangements are confirmed with customer where required  
3.9 Customer requirements are anticipated and suggestions made which will maximise safety and efficiency and minimise inconvenience  |
| 4 Design job plan | 4.1 The job plan is developed to include hazard prevention/control measures and safety procedures in line with applicable Australian Standards, codes of practice and equipment manufacturers specifications  
4.2 Cranes load chart is consulted and information on permissible loads, radii, weights, boom and jib configurations taken into account in planning the job  
4.3 The job plan takes into account job requirements and customer priorities, and workplace rules and procedures  
4.4 Job plan is discussed and confirmed with relevant personnel  
4.5 Job plan details are documented as required  |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
5 Set up work area | 5.1 Site personnel and public are advised of any danger and site/work area is isolated as necessary in line with legislative, regulatory and customer requirements
 | 5.2 Site safety procedures are followed
 | 5.3 Required protective equipment is identified and fitted in accordance with manufacturers guidelines and customer requirements
 | 5.4 Ancillary equipment is assembled and erected where appropriate
 | 5.5 Load destination and travel route where applicable are prepared to accept load

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Company work procedures for the planning of mobile crane jobs and the setting up of work areas
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements
- Identification and correct use of equipment, processes and procedures

**Required skills:**

- Communicate effectively with others when planning job and setting up work area
- Read and interpret instructions, procedures, information and signs relevant to the planning of a lifting job and the setting up of the work area
- Interpret and follow operational instructions and prioritise work
Required skills:

- Complete documentation related to the planning of a lifting job and the setting up of the work area
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when planning a lifting job and setting up the work area
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when planning a lifting job and setting up the work area in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition of equipment during setting up processes and take appropriate action

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources

- Performance is demonstrated consistently over a period
EVIDENCE GUIDE for assessment

of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Unit Descriptor
This unit involves the skills and knowledge required to carry out routine maintenance of a mobile crane, including obtaining and confirming job instructions and work specifications, coordinating the loading of gear and equipment, assessing job requirements and work areas, designing the job plan and setting up the work area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and maintenance.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine maintenance principles and procedures to servicing and maintenance of mobile cranes in a variety of operational contexts.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
---|---
1 Plan maintenance operations | 1.1 Tags, service records, log books and crane manufacturers information are read prior to commencing maintenance, noting previously identified and manufacturers recommendations
1.2 Maintenance schedules are read and maintenance tasks noted to match the schedule
1.3 A step by step procedure is worked out to minimise time delays and to sequence maintenance processes consistent with manufacturers recommendations

2 Complete pre-maintenance checks | 2.1 Appropriate safe work area is selected for conduct of maintenance
2.2 Required tools, consumables and equipment are identified and assembled
2.3 Equipment is inspected for visible faults and loose or damaged components

3 Identify and assess any faults found | 3.1 Conditions found are compared with manufacturers information and intended use of crane
3.2 Conditions noticed which may cause difficulties in the future are identified and the potential effect on the safe and efficient operation of the mobile crane is documented
3.3 Potential fault conditions are reported to the appropriate personnel

4 Conduct maintenance operations and safety check | 4.1 Fluid replacements and lubrication operations are completed
4.2 Fluid levels are checked and adjusted
4.3 Mechanical components are checked for secure attachments and tensions
4.4 Mechanical adjustments are made
4.5 The maintenance plan is followed and appropriate adjustments are made to the plan to deal with unexpected events
4.6 Own work and crane system operations are checked to ensure that the crane's operational condition is to the required specifications
4.7 Tools, equipment and unused consumables are returned to the appropriate locations and waste is disposed of within workplace policy and procedures

5 Complete maintenance records | 5.1 Accurate reporting of the results of the safety check and the maintenance conducted is completed and filed in accordance with procedures, industry guidelines and any statutory requirements
5.2 Clear reference in reports is made to any items which may not yet require maintenance but may affect the future working
ELEMENT | PERFORMANCE CRITERIA
--- | ---
condition or safety of the mobile crane

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations, permit and licence requirements pertaining to mobile crane operational safety and maintenance
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational safety and maintenance procedures for crane crews
- Use, characteristics, capabilities and limitations of the lubrication and adjustment tools and equipment
- Workplace procedures for the planning of mobile crane jobs and the setting up of work areas
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of crane systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

**Required skills:**

- Communicate effectively with others when maintaining a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to the maintenance of a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of a mobile crane
- Work collaboratively with others when maintaining a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Identify non-conformities which may compromise operational capability
- Implement contingency plans for unexpected maintenance issues
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
Required skills:

- Prioritise and multi-task work when maintaining a mobile crane
- Monitor work activities in terms of planned maintenance schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self, others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and correctly use crane equipment and related maintenance processes and procedures
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes when maintaining a mobile crane

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Maintenance may include:
- routine inspections of crane and its associated equipment
- checks prior to operations
- checks on completion of operations
RANGE STATEMENT

Routine checks/servicing may include:

- checks on completion of repairs
- checking and topping up of water levels
- replacement of oils
- replacement of air in tyres
- checking pressure, fluid leaks, temperature
- checking tightness of bolts, fixtures, attachments and fittings to ensure they are within specifications
- checking for cracks, surface or structural faults or other damage

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety checks may include:

- warning devices
- operating lights or audible cues
- braking and transmissions
- lifting devices
- steering and suspension
- windscreen wipers
- isolation switches and shut down devices
- mechanical, electrical, electronic, hydraulic or pneumatic components

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the loading and unloading of a tracked crane prior to lift in a variety of operational contexts.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT | PERFORMANCE CRITERIA
--- | ---
1. Inspect site | 1.1 Site access and exit routes are identified  
                    1.2 Site hazards are identified  
                    1.3 Loading and unloading area is selected based on assessment of work site requirements, physical conditions, proximity to job and safety of operations

2. Unload/load crane from/onto float | 2.1 Vehicle is inspected and checked prior to unloading  
                                            2.2 Pre-operational checks are conducted in accordance with manufacturers instructions and workplace requirements  
                                            2.3 Float is positioned on site in designated loading/unloading area noting ground conditions and potential site hazards  
                                            2.4 Lashings, chains, stabilisers and chocks are safely removed and correctly stowed and secured in designated areas  
                                            2.5 Loading ramps are secured  
                                            2.6 Crane is driven on/off float ensuring no injury to personnel or damage to equipment and site  
                                            2.7 Crane is stabilised, shut down and secured

3. Secure crane for travel | 3.1 Weight and dimensions of crane are established and compared to carrying capacity of vehicle  
                                 3.2 Crane is correctly positioned on float  
                                 3.3 Crane is secured using appropriate securing equipment and shackled to anchorage points in accordance with workplace/float securing system and manufacturers specifications  
                                 3.4 Securing equipment is tightened to ensure security during travel  
                                 3.5 Ramps are loaded and secured

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Application of relevant agreements, codes of practice or other legislative requirements
- Relevant OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Identification and correct use of equipment, processes and procedures related to the loading and unloading of wheeled or tracked cranes
- Focus of operation of work systems and equipment
- Operational procedures for crane crews
- Procedures for prioritising and multi-tasking work
- Wheeled or tracked mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Workplace procedures for the planning of mobile crane jobs and the setting up of work areas
- Workplace procedures for the loading and unloading of wheeled or tracked cranes
- Guidelines relating to the safe use of machinery and equipment

Required skills:

- Communicate effectively with others when loading and unloading wheeled or tracked cranes
- Read and interpret instructions, procedures, information and signs relevant to the loading and unloading of wheeled or tracked cranes
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading and unloading of wheeled or tracked cranes
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when loading and unloading wheeled or tracked cranes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur during the loading and unloading of wheeled or tracked cranes in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that could occur during the loading and unloading of wheeled or tracked cranes
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:
  standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
  - The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
    - the underpinning knowledge and skills
    - relevant legislation and workplace procedures
    - other relevant aspects of the range statement

Context of and specific resources for assessment
  - Performance is demonstrated consistently over a period of time and in a suitable range of contexts
  - Resources for assessment include:
    - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
    - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
  - Assessment of this unit must be undertaken by a registered training organisation
  - As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
  - Practical assessment must occur:
    - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may include:
- any wheeled or tracked unit

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and
RANGE STATEMENT

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction processes
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
RANGE STATEMENT

- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to undertake a site inspection in preparation for a lift requiring a mobile crane, including arranging the site inspection, clarifying customer requirements, defining job requirements and completing necessary records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and safety.

Work is performed with general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to conduct of site inspections prior to mobile crane lifts in a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Arrange site inspection** | 1.1 Available information about customer requirements is obtained from relevant personnel  
1.2 Need for site inspection is confirmed through appropriate questioning and discussion  
1.3 Mutually acceptable meeting time is arranged with customer  
1.4 Full customer details are recorded according to workplace procedures |
| **2 Clarify customer requirements** | 2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion  
2.2 Alternative job methods are suggested where applicable and a safe and cost effective method negotiated with the customer  
2.3 Clients ability to provide any necessary competent personnel is ascertained |
| **3 Define job requirements** | 3.1 Information regarding load and movement requirements is accessed and any necessary measurements are taken to enable accurate estimation of job requirements  
3.2 Specific scheduling needs are ascertained taking into account legislative and customer requirements  
3.3 Information from site inspection and customer is used to identify hazards and contingencies  
3.4 Specific site and job requirements are identified  
3.5 Lift study is arranged as required to provide additional information or meet customer expectations  
3.6 Necessity to be on site during lift is assessed in line with workplace policy taking into consideration complexity of job, potential hazards and expertise of available personnel  
3.7 Need for permits/authorisations is determined |
| **4 Complete records** | 4.1 Required records are updated accurately, legibly and promptly according to workplace procedures  
4.2 Records include all relevant information about the job |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
REQUIRED KNOWLEDGE AND SKILLS

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and safety
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Site inspection procedures and protocols
- Operational procedures for crane crews for the conduct of a site inspection for a lift using a mobile crane
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:

- Communicate effectively with others when conducting a site inspection for a lift using a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to a site inspection for a lift using a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a site inspection for a lift using a mobile crane
- Work collaboratively with others when conducting a site inspection for a lift using a mobile crane
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may be identified when conducting a site inspection for a lift using a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when conducting a site inspection for a lift using a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:

- Identify and correctly use equipment, processes and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

RANGE STATEMENT

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be any lattice boom mobile crane involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for assembly may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- slings, chains, nets, brackets and other specialised lifting equipment
- personal protective equipment
- support trucks
RANGE STATEMENT

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Documentation/information may include:

- relevant state/territory regulations and licence/permit requirements pertaining to the assembly of mobile cranes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable regulations and legislation may include:

Unit Descriptor

Unit Descriptor  This unit involves the skills and knowledge required to conduct a full train examination in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for the examination of the train, preparing the train for examination, examining the rolling stock, examining the loads, and documenting and actioning the examination results. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit  Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the conduct of a full train examination as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for examination** | 1.1 Train consist and information on load detail is established for examination purposes  
1.2 Location for full train examination is confirmed and other relevant personnel notified of examination  
1.3 Customer defect notices/carded wagon information is established for examination purposes  
1.4 Materials and equipment required to conduct the full train examination are prepared  
1.5 OH&S requirements applicable to the examination are confirmed  
1.6 Other relevant train documentation is accessed and reviewed to establish key information on rolling stock required for examination |
| **2 Prepare train for examination** | 2.1 Applicable safety device or system is used to ensure train is isolated or secured for examination  
2.2 Road is locked out using appropriate techniques to ensure safety during examination  
2.3 Flags, banners, signs and other relevant safety equipment is positioned before and during examination to ensure safety is maintained |
| **3 Examine rolling stock** | 3.1 Types of rolling stock and capacities are confirmed as appropriate for the safe transportation of passengers or freight  
3.2 Brake systems are checked and all brake tests are conducted and certificates issued as appropriate  
3.3 Structure of rolling stock and major components are checked and tested to ensure operational safety  
3.4 Rolling stock is carded and information is recorded within enterprise system  
3.5 Train irregularities are noted and corrective action initiated in accordance with operational requirements  
3.6 End-of-train monitor is attached and correct operation is confirmed  
3.7 OH&S legislation, codes of practice, policies and procedures are observed during the examination to prevent injury and damage  
3.8 Communication is maintained with other personnel involved to ensure safe, efficient and complete examination |
| **4 Examine loads** | 4.1 Load security is checked and confirmed to meet operational safety requirements  
4.2 Load contamination is identified and rectified in accordance
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | with OH&S and dangerous goods requirements
 | 4.3 Load dimensions are confirmed appropriate to wagon type and checked against documentation for accuracy
 | 5.1 Required documentation is completed and forwarded for recording examination results and initiating any required corrective actions
 | 5.2 Other relevant personnel are informed of remedial or appropriate action required prior to resumption of train service

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Workplace procedures for the conduct of a full train examination
- Train movement documentation procedures
- Communication protocols
- Procedures to be followed in the event of an emergency
- Standards and specifications for all items requiring examination during a train examination
- Signals and signalling systems
- Contingency management processes for unplanned events

**Required skills:**

- Communicate effectively with others when conducting a full train examination
- Read and interpret instructions, procedures, information and signs relevant to the conduct of a full train examination
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a full train examination
- Operate electronic communication equipment to required protocol
- Work both individually and as part of a team when conducting a full train examination
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and
Required skills:

interactions with others

- Promptly report and/or rectify any identified problems, faults or malfunctions identified during a full train examination in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur during a full train examination
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Assess rolling stock defects when conducting a full train examination
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational...
EVIDENCE GUIDE

situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:

- the full range of weather conditions
- the full range of light conditions
- typical running temperatures of trains

Locations for examinations may include:

- heavy traffic
- high volume city freight terminals
- remote regional yard and siding locations

Persons involved in examination may include:

- self only or self in conjunction with other personnel

Train under examination may be:

- loaded or unloaded

Items examined may include:

- brake equipment
- draw gear
- superstructures
- out-of-gauge conditions
- wheels and axles
RANGE STATEMENT

- bearings
- locking and securing devices
- dangerous goods condition and separation
- air and electrical connections
- load condition (damage, leaks etc.)
- load securing devices (chains, ropes, pins etc.)
- steps, handrails and handbrakes
- rolling stock sequence
- trailing items (ropes, hoses etc.)
- bogies and brake rigging

Communication methods may include:
- written
- verbal
- line-of-sight signals
- radio

Relevant personnel can include:
- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals

Safety and protective equipment may include:
- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Corrective action may include:
- notification of others who will deal with problem
- detachment and replacement of defective rolling stock

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and instructions and job specification
- induction and training materials
- repair cards and books
- inspection reports
- consist forms
- wagon cards
- transport instructions
- incident reports
- safeworking forms
- out-of-gauge documents
- load and weight records
- dangerous goods manifest
- drivers advice (train load)
- mechanical condition advice forms
- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- ADG Code and regulations

Unit Sector(s)

Not Applicable
Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB3019B Test train braking system

Modification History
Release 1. Revised unit.
This unit replaces and is equivalent to TLIB3019A Test train braking system.

Unit Descriptor
This unit involves the skills and knowledge required to test a train braking system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes planning and preparing for, and testing train brake operation; dealing with identified faults; and recording the results of a brake test in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines. Work is performed without supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the testing of a train braking system as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare for train brake inspection and testing

1.1 Brake test documentation, rolling stock data and other relevant reports are read to confirm required action

1.2 If required, appropriate tools and equipment are obtained and checked prior to inspection

1.3 OH&S legislation, codes of practice, policies and procedures are identified and followed

1.4 Train is isolated or secured in accordance with workplace procedures to make the work area safe for the inspection

2 Inspect and test train brake operation

2.1 Brake leakage test is conducted to ensure compliance with required standards

2.2 Modified brake tests are conducted to ensure compliance with required standards

2.3 Air continuity test is conducted to ensure train braking system meets functional specifications

2.4 Brakes are applied and released to ensure train braking system meets functional specifications

2.5 Hoses and pipe components are inspected for defects requiring repair or replacement

2.6 Defects and faults are identified and rolling stock is carded

3 Deal with identified faults

3.1 Plans and/or procedures for replacement or repair of identified defective components are implemented in accordance with workplace procedures and manufacturers specifications

3.2 Confirmation/verification of minor repairs or replacements is obtained

3.3 Defective rolling stock not fit to run is identified and detachment arrangements are made in compliance with workplace procedures
4 Record test results

4.1 Brake test records are completed to reflect inspection results in accordance with workplace policies and procedures

4.2 Records are filed in accordance with workplace policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Brake systems, their components and their operation
- Types of brake tests and their purpose
- Tools and equipment applications
- Diagnostic techniques
- Communication protocols
- Documentation requirements relating to brake testing
- Procedures for completing relevant documentation

**Required skills:**

- Communicate effectively with others when testing a train braking system
- Read and interpret instructions, procedures, information and signs relevant to the testing of a train braking system
- Interpret and follow operational instructions and prioritise work
- Work collaboratively with others when testing a train braking system
- Report any identified problems, faults or malfunctions when testing a train braking system in accordance with regulatory requirements and workplace procedures
- Apply rail safety practices and regulations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in brakes and related equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Assessment must include exercises which demonstrate competent performance of the following in a range of situations:

- conducting inspections and testing of brake operations on all relevant types of passenger train, freight train or railcar
- identifying defects and faults in train braking systems
- implementing workplace procedures to deal with identified defects and faults
- completing records of test results in accordance with workplace procedures

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organization.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
- all weather conditions
- the full range of light conditions
- typical running temperatures of trains

Locations for tests may include:
- heavy traffic
- high volume city freight terminals
- passenger yards or sidings
- station platforms
- remote regional yard and siding locations

Movement status of rolling stock to be tested may include:
- arriving
- departing
- stationary

Load status of train during brake testing may be:
- loaded or unloaded

Tests may include:
- brake leakage test
- air continuity test
- modified brake test
- train brake test
- hose and pipe components repair or replacement

Safety and protective equipment may include:
- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
Information/documents may include:

- workplace procedures and instructions and job specification
- manufacturers specifications and standards
- brake inspection and testing documentation
- safeworking documentation
- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Descriptor
This unit involves the skills and knowledge required to conduct a train roll-by inspection in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing to carry out a roll-by inspection of a moving train from the ground or on-train when crossing/passing trains, inspecting a moving train in accordance with workplace procedures, and reporting and/or actioning the inspection results. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the conduct of a roll-by inspection of a moving train as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Prepare for an on-ground or on-train roll-by inspection | 1.1 Documentation and other relevant reports are read to confirm inspection requirements  
1.2 Individual responsibilities required to complete the roll-by inspection are agreed, where necessary, with relevant personnel  
1.3 Position is taken for the roll-by inspection at the planned time to ensure complete observation without personal risk  
1.4 Conditions are assessed and necessary actions are taken to ensure roll-by inspection is effective
2 Conduct a roll-by inspection of a moving train | 2.1 Train identification and status is confirmed  
2.2 Condition of rolling stock and load are systematically observed as the train passes and specific faults are identified and noted  
2.3 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection  
2.4 Inspection is conducted in accordance with OH&S workplace policies and procedures to prevent injury and damage  
2.5 Faults requiring urgent action are noted and appropriate action is taken to initiate immediate response to minimise risk from continued movement of train
3 Report and action on-ground roll-by inspection results | 3.1 Reports of on-ground inspections are completed to reflect inspection results  
3.2 Appropriate personnel are informed of any faults or defects requiring rectification  
3.3 Records are circulated and filed in accordance with workplace policies and procedures
4 Report on-train roll-by inspection results | 4.1 Outcomes of on-train roll-by inspections are transmitted to appropriate personnel  
4.2 Records of on-train roll-by inspections are made in accordance with workplace policies and procedures

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
REQUIRED KNOWLEDGE AND SKILLS

- Procedures for planning a roll-by inspection of a moving train
- Procedures for carrying out a roll-by inspection of a moving train
- Procedures for completing documentation relevant to a roll-by inspection of a moving train
- Security procedures
- Standards and specifications for all items requiring examination
- Contingency management processes for unexpected situations that may arise when carrying out a roll-by inspection of a moving train
- Communication protocols
- Documentation requirements relating to a roll-by inspection

Required skills:

- Communicate effectively with others when carrying out a roll-by inspection of a moving train
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a roll-by inspection of a moving train
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out a roll-by inspection of a moving train
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when carrying out a roll-by inspection of a moving train in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may occur when carrying out a roll-by inspection of a moving train
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - interpreting documentation and reports to confirm roll-by inspection requirements
  - positioning at appropriate location and time to conduct roll-by inspection
  - systematically observing condition of rolling stock and load of moving train
  - identifying faults in rolling stock and load of moving train
  - identifying and actioning urgent faults to minimise risk from continued movement of train
  - preparing actioned reports of inspection results

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
- all weather conditions
- the full range of light conditions
- typical running temperatures of trains

Locations for examinations may include:
- heavy traffic
- high volume city freight terminals
- crossing loops
- remote regional yard and siding locations

Persons involved in examination may include:
- self only or self in conjunction with other personnel

Load status of train during examination may include:
- loaded or unloaded

Condition of rolling stock and load may include:
- brake equipment
- draw gear
- superstructures
- out-of-gauge conditions
- wheels
- bearings
- locking and securing devices
- dangerous goods condition and separation
- air and electrical connections
- load condition (damage, leaks etc.)
- load securing devices (chains, ropes, pins etc.)
- trailing items (ropes, hoses etc.)

Communication methods may include:
- written
RANGE STATEMENT

include:

- verbal
- line-of-sight signals
- radio
- mobile/satellite phone

Appropriate personnel can include:

- train controllers
- other train examiners/inspectors
- maintenance personnel
- train crews
- yard and other operational personnel
- those responsible for controlling signals

Safety and protective equipment may include:

- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace procedures and instructions and job specification
- repair cards and books
- inspection reports
- consist forms
- wagon cards
- transport instructions
- incident reports
- safeworking forms
- out-of-gauge documents
- load and weight records
- dangerous goods manifest
RANGE STATEMENT

- drivers advice (train load)
- mechanical condition advice forms
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- relevant sections of ADG Code and regulations

Unit Descriptor

This unit involves the skills and knowledge required to prepare for train operation in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for and implementing the prescribed pre-departure checks and confirming the required train documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures to prepare for train operation as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare for pre-departure checks           | 1.1 Required checks and relevant procedures and standards are identified  
                                              | 1.2 Purpose of the journey and activities to be undertaken are identified  
                                              | 1.3 Constraints and special instructions that may apply for the journey are identified  
                                              | 1.4 Documentation is read to identify and confirm consist, attach/detach information, loading information and characteristics of the train  
                                              | 1.5 Where necessary, compliance with relevant regulatory and ADG Code requirements are identified  
                                              | 2 Implement pre-departure checks             | 2.1 Motive power control systems are set up and checked in accordance with workplace policies and procedures  
                                              | 2.2 Train, or relevant portion of the train, is checked to ensure that rolling stock is coupled and sequenced correctly  
                                              | 2.3 Train braking systems are applied and released to ensure they are operating effectively  
                                              | 2.4 Visual inspection is conducted to identify any obvious faults or defects that would prevent safe transit  
                                              | 2.5 Corrective action is taken to rectify faults and ensure minimum delay to planned running schedule  
                                              | 2.6 Relevant OH&S requirements are followed to prevent injury and damage  
                                              | 3 Confirm train is OK to proceed             | 3.1 Relevant personnel are promptly advised of the result of completed checks  
                                              | 3.2 Authority to proceed relevant to the operational situation is obtained and followed  

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
REQUIREd KNOWLEDGE AND SKILLS

- Procedures for preparing a train for operation
- Set-up procedures for equipment used in the control of trains
- Pre-departure train testing procedures
- Train preparation documentation procedures
- Communication procedures and protocols
- Maintenance and servicing procedures
- Procedures to be followed in the event of an emergency
- Train coupling equipment and methods
- Safeworking systems and requirements
- Safeworking procedures in electrified areas
- Train characteristics and specifications
- Relevant sections of the ADG Code and other dangerous goods regulations (for freight operations only)
- Contingency management processes for unexpected events

Required skills:

- Communicate effectively with others when preparing a train for operation
- Read and interpret instructions, procedures, information and signs relevant to preparing a train for operation
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of a train for operation
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing a train for operation
- Promptly report and/or rectify any identified problems, faults or malfunctions when preparing a train for operation in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when preparing a train for operation
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:

standards

- Set up and check train control systems
- Test air continuity and braking systems

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - carrying out all pre-departure checks correctly
  - identifying typical faults or defects for the type of rolling stock being operated
  - applying appropriate methods to overcome identified faults or defects

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted:

- by day or night
- in all relevant weather conditions

Motive power units may include all motive power units in service within Australian rail systems and may include:

- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)

Rolling stock may include:

- all rolling stock in service within Australian rail systems including both passenger cars and freight rolling stock

Train consists may include:

- correct coupling and sequencing of train requires that couplings are locked in place and flexible connections between rolling stock are made
- positioning and set-up of remote control equipment is correct
- the separation of dangerous goods complies with ADG Code and regulatory requirements

Visual inspections to identify obvious faults/defects may include checking:

- wheels and braking equipment for signs of wear or damage
- flexible connections and fittings for signs of wear or damage
- couplings for signs of wear or damage
- fuel, oil, water and coolant levels
- air system for leaks
RANGE STATEMENT

- electrical equipment
- pantographs
- emergency and safety equipment such as vigilance control and deadman relays

Relevant personnel can include:
- maintenance personnel
- yard, station and other operational personnel
- train controllers and signallers
- train crews
- depot coordinators
- hand-over crew

Communication methods may include:
- written, including signed communications, lists and forms
- verbal
- line-of-sight signals
- radio
- fixed and mobile telephones

Safety and protective equipment may include:
- high visibility clothing
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- portable radios
- mobile/satellite phones
- hand lamps
- flags
- safety devices
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- the Code of Practice for the Defined Interstate Rail Network in situations where operations are carried out on that network
- workplace procedures and instructions and job specification
- induction and training materials
- train consists
- train notices
- out-of-gauge notices
RANGE STATEMENT

- dangerous goods manifests
- brake certification
- load/passenger manifests
- OH&S and environmental protection legislation, codes of practice, policies and procedures
- maintenance specifications
- local instructions
- two-way radio operation procedures
- emergency procedure manuals
- manufacturers specifications
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian standards including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB3027A Set up and shut down on-train remote control system

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to set up and shut down an on-train remote control system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes setting up the remote control system, setting up the lead control system, and shutting down the remote control equipment. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the setting up and shutting down of the on-train remote control system as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Set up remote control system | 1.1 Remote control system components are set up in accordance with operational plans and manufacturers instructions  
1.2 Remote motive power units are placed in required operating mode  
1.3 Communication code is entered and air and electrical systems are activated  
1.4 Brake and traction systems are tested using approved personnel to ensure correct operation |
| 2. Set up lead control system | 2.1 Cab console is checked, electrical systems are activated and the system self-test is confirmed  
2.2 Communication code is entered and confirmation obtained that system has entered link mode  
2.3 Full control is obtained and brake tests are conducted, using lead control equipment, to ensure correct braking is operational  
2.4 Procedures to establish total control are repeated where necessary  
2.5 Train is moved using the full range of tests to ensure operational safety and control |
| 3. Shut down remote control equipment | 3.1 Shut-down procedures of lead and remote control equipment are followed to ensure train security and de-activation of the system  
3.2 Equipment indicators or functions are operated to ensure the shut-down process is correct and complete |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Controls, instruments and indicators of an on-train remote control unit and their purpose, location and use
- Procedures for the operation of remote control units
- Set-up and shut-down procedures
REQUIRED KNOWLEDGE AND SKILLS

- Braking and safety system procedures
- Procedures for the control of motive power units
- Procedures for managing hazardous situations involving on-train remote control systems
- Procedures for identifying equipment defects in remote control units and assessing any identified defective units for appropriate action
- Critical on-train remote control information including compatible coupling, braking and drive equipment, ancillary systems, and signalling systems

Required skills:

- Communicate effectively with others when setting up and shutting down an on-train remote control system
- Read and interpret instructions, procedures, information and signs relevant to the setting up and shutting down of an on-train remote control system
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the setting up and shutting down of an on-train remote control system
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when setting up and shutting down an on-train remote control system
- Promptly report and/or rectify any identified problems, faults or malfunctions when setting up and shutting down an on-train remote control system in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Judge speeds and movements when operating unit over short distances

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - setting up remote control system in a range of configurations and/or trains
  - conducting post set-up tests to ensure remote control system is operating correctly
  - shutting down remote control system correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted:
- by day or night
- in all relevant weather conditions

On-train remote control equipment may be:
- any mechanism and operating system to allow the control of one motive power unit which is part of a train from another unit which is part of the same train

Motive power units may include:
- diesel locomotives
- electric locomotives
- railcars
- non-operational units

All motive power units in service within Australian rail systems and may include:
- diesels
- electric locomotives
- railcars
- non-operational units

Remote control operation may be used:
- within a yard for the purpose of marshalling
- shunting or on running lines
- on running lines

Safety and protective equipment may include:
- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- hearing protection

Information/documents may include:
- workplace procedures and instructions and job specifications
- induction and training materials
- relevant log or record books
- maintenance specifications, notices, records and requests
- local instructions
- equipment operation manuals
RANGE STATEMENT

- operational instructions, policies and procedures
- emergency procedure manuals
- two-way radio operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Sector(s)

Not Applicable

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB3040A Inspect poles and associated hardware

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to inspect poles and associated hardware in accordance with safeworking and regulatory requirements and workplace procedures, including planning and preparing for the inspection, conducting the inspection of the poles and associated hardware, and completing the inspection in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the inspection of poles and associated hardware as part of workplace activities across a variety of operational contexts within the Australian rail system.

| 1 Plan and prepare for inspection | 1.1 Inspection program or works order is received/accessed, analysed and confirmed, if necessary by site inspection  
1.2 Resources required for the job are identified and scheduled  
1.3 Liaison and communication issues are resolved  
1.4 Personnel participating in task, including plant operators and contractors, are fully briefed |
| 2 Conduct inspection of poles and associated hardware | 2.1 Worksite requirements are confirmed and hazards identified by site inspection  
2.2 Road signs, barriers and warning devices are positioned, and worksite protection is provided  
2.3 Safeworking practices are observed on or about the running line/track  
2.4 Pole structures, including foundations and hardware, are inspected by test or examination against approved specifications |
| 3 Complete the inspection | 3.1 Worksite is rehabilitated, and work is completed in an agreed time and with minimum waste  
3.2 Inspection reports are completed and pole records are updated according to workplace procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations, including OH&S instructions related to pole erection, site safety and rescue techniques
- Workplace procedures for the inspection of poles and associated hardware
- Problems that may occur during the inspection of poles and associated hardware, and action that can be taken to report or resolve the problems
- Hazards that may exist when inspecting poles and associated hardware and ways of controlling the risks involved
- Workplace and commercial technical manuals, publications and instructions which relate to pole quality and chemical treatment
REQUIRED KNOWLEDGE AND SKILLS

- Characteristics, capabilities, uses, limitations and location standards of the types of poles
- Mechanical principles related to structures
- Pole maintenance techniques and processes
- Soil types and stabilisation processes
- Diagnostic and fault finding techniques relevant to the inspection of poles and associated hardware
- Regulatory and workplace requirements for rigging, traffic control and guidance signals for planned operations
- Workplace documentation and records systems related to pole management
- Procedures for the use of relevant support plant and equipment

Required skills:

- Communicate effectively with others when inspecting poles and associated hardware
- Communicate plans, intentions and safety criteria to others
- Read and interpret technical instructions and manuals, procedures, information and signs relevant to the inspection of poles and associated hardware
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the inspection of poles and associated hardware
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting poles and associated hardware
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when inspecting poles and associated hardware in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when inspecting poles and associated hardware
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use appropriate pole testing equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
Required skills:

- Use hand tools
- Operate relevant minor plant and equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation,
EVIDENCE GUIDE

and/or

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals, dangerous or hazardous substances
- movements of equipment, materials and vehicles

Pole types may include:
- wood
- concrete
- steel
- composite

Associated hardware may include:
- insulators
- crossarms
- stays
- earth down leads and bond wires
- crossarm braces
- pole steps
- shackle straps
- associated bolts and clamps

Maintenance requirements may be obtained from:
- site inspection
- works orders
- workplace personnel
- client requests

Inspection/testing devices may include:
- electronic data capture devices
- computers
- sonic testing devices
- shigometer
- X-ray
- CAT-scanner
- proof load tester
RANGE STATEMENT

Works orders may include:
- drills
- drawings
- plans
- resource and materials lists.
- materials lists

Resources may include:
- personnel
- plant
- equipment
- transport

Liaison may involve:
- clients
- authorities
- landowners
- personnel

Communication equipment may include:
- two-way radios
- telephones

Information may be provided:
- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
RANGE STATEMENT

- relevant log or record book
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable regulations and legislation may include:

Unit Descriptor
This unit involves the skills and knowledge required to service and clean mechanical signalling equipment and infrastructure in accordance with safeworking and regulatory requirements and workplace standards and procedures. It includes cleaning and servicing the equipment/infrastructure, and checking/testing the operation and functionality of the equipment/infrastructure after cleaning. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each applicable state and/or territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the servicing and cleaning of mechanical infrastructure signalling equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Clean and service equipment** | 1.1 All necessary cleaning and servicing equipment, resources and consumables are confirmed ready for use  
1.2 All rubbish, weeds and obstructions are removed from equipment and housings  
1.3 Initial visual check of operational equipment is performed to identify any equipment faults  
1.4 External surfaces are inspected and where necessary are prepared/painted to organisational standards to protect the equipment  
1.5 All internal and external surfaces and operational components are cleaned and lubricated to ensure operational effectiveness  
1.6 All chemicals, lubricants and consumables are used and disposed of in compliance with material safety data sheets and OH&S codes and practices and environmental procedures |
| **2 Check equipment operation** | 2.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures  
2.2 Track clearance check is made before conducting equipment operation check to ensure safe train movement  
2.3 Authorised equipment operation check is carried out in accordance with operating procedures to identify any equipment faults  
2.4 Operational effectiveness of equipment is confirmed through observation during train movements if required  
2.5 Equipment faults are identified, reported and appropriate corrective action is taken  
2.6 Serviced equipment is locked and secured to prevent unauthorised access |

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each applicable state and/or territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Workplace standards and procedures for the servicing and cleaning of mechanical signalling equipment and infrastructure
- Problems that may occur during the servicing and cleaning of mechanical signalling equipment and infrastructure, and action that can be taken to report or resolve the problems
- Hazards that may exist when servicing and cleaning mechanical signalling equipment and infrastructure, and ways of controlling the risks involved
- Fundamentals of signalling and operations of mechanical signalling equipment
- Rail/train movement systems
- Fault detection techniques
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements
- Recording procedures
- Track/turnout layout

Required skills:

- Communicate effectively with others when servicing and cleaning mechanical signalling equipment and infrastructure
- Read and interpret instructions, procedures, information, diagrams and signs relevant to the servicing and cleaning of mechanical signalling equipment and infrastructure
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the servicing and cleaning of mechanical signalling equipment and infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when servicing and cleaning mechanical signalling equipment and infrastructure
- Promptly report any identified problems, faults or malfunctions that may be identified when servicing and cleaning mechanical signalling equipment and infrastructure in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when servicing and cleaning mechanical signalling equipment and infrastructure
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Use hand, portable, power and air tools
- Safely use chemical cleaning agents, solvents and lubricants
- Carry out visual inspection and functional checking tests
- Check/confirm operational requirements
- Use basic computer skills

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - cleaning and servicing equipment to organisational standards
  - checking correct operation of equipment

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in all weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Signal equipment may include:
- point machines
- hydraulic and pneumatic points
- signals
- points
- ground frames
- channel irons
- wire ropes
- point rodding
- level crossings
- signal signage
- signal locations/housings
RANGE STATEMENT

- foundations/support/sleepers
- indicating devices point and signal
- cranks compensators

Cleaning and servicing equipment may include:
- steam cleaners
- hand tools
- brushes/wire and paint
- hand held power/air tools
- brush/weed trimmers

Chemicals and consumables may include:
- paints and paint strippers
- cleaning and de-greasing agents
- solvents
- weed killers
- oils
- greases
- cleaning rags

Rubbish removal/disposal may be carried out using:
- internal and/or external operating rules and procedures

Visual checks may include:
- security of nuts, bolts, support structures, equipment housings
- rust
- breakage
- graffiti
- rubbish build up
- environmental damage/degradation

Operational checks may include:
- mechanical movement
- linkages
- interferences
- alignment
- wear
- loose fittings

Communication equipment may include:
- two-way radios
- telephones/mobile phones

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
RANGE STATEMENT

- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Information/documents may include:

- operational instructions, policies and workplace procedures
- authority to access the site or to operate equipment, including:
  - written authority
  - verbal authority
  - authority as detailed in organisation operating rules and procedures
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Workplace standards and procedures for the repair and adjustment of mechanical signalling equipment and infrastructure (excluding interlocking equipment)
- Problems that may occur during the repair and adjustment of mechanical signalling equipment and infrastructure and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing and adjusting mechanical signalling equipment and infrastructure and ways of controlling the risks involved
- Documentation/authorisation processes and procedures, technical specifications manuals
- Material safety data sheets for cleaning and lubricating equipment
- Mechanical fitting techniques
- Workshop facilities, personnel and manufacturing/repair capabilities
- Overview of other non-mechanical operations and personnel
- Material procurement procedures
- Fundamentals of signalling and operations of mechanical signalling equipment
- Use of chemicals, solvents and lubricants
- Fault detection techniques
- Recording procedures

Required skills:

- Communicate effectively with others when repairing and adjusting mechanical signalling equipment and infrastructure
- Read and interpret instructions, procedures, information, diagrams and signs relevant to the repair and adjustment of mechanical signalling equipment and infrastructure
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the repair and adjustment of mechanical signalling equipment and infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when repairing and adjusting mechanical signalling equipment and infrastructure
- Promptly report and/or rectify any identified problems, faults or malfunctions when repairing and adjusting mechanical signalling equipment and infrastructure in accordance with regulatory requirements and workplace procedures.
- Implement contingency plans for unexpected events when repairing and adjusting mechanical signalling equipment and infrastructure
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Adapt to differences in equipment in accordance with standard operating procedures
- Safely use chemical cleaning agents, solvents and lubricants
- Select and use hand, portable, power and air tools
- Check compliance with operational specification
- Repair and replace equipment
- Apply relevant test procedures
- Operate mechanical signalling equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly diagnosing faults
  - repairing identified equipment faults correctly
  - correctly adjusting and testing equipment following repair

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in all weather conditions

Equipment may include:
- signals
- points equipment
- ground frames
- level crossing and tramway crossing mechanisms
- frames
- rods
- bars
- structures
- housings
- boxes
- signage

Repairs may include:
- filing
- grinding
- replacement of components including bushes, pivot pins,
RANGE STATEMENT

Adjustments may include:
- adjustments using designed adjustment components
- shimming
- the checking of clearances and tolerances

Cleaning and lubrication includes:
- all cleaning operations by hand
- chemical or steam cleaning
- the application of lubricating oils and greases

Operational compliance includes:
- manufacturers and/or safeworking operational specifications for functional movements, operations and outcomes

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Tools and equipment may include:
- hand tools
- portable power generators
- air compressors
- measuring rules
- gauges

Communication equipment may include:
- two-way radios
- telephones/mobile phones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company standards and procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- relevant log or record book
- maintenance notices, records and requests
- local instructions
RANGE STATEMENT

- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to carry out off-site repair, overhaul and assembly of mechanical signalling equipment in accordance with safeworking and regulatory requirements and workplace procedures. It includes assessing equipment condition, replacing out-of-specification components, producing components where required, assembling components, and testing and adjusting equipment to ensure overall system integrity. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines. Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the off-site repair, overhaul and assembly of mechanical signalling equipment as part of workplace activities across a variety of operational contexts within the Australian rail system.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant rail safety, OH&S and environmental procedures and regulations
• Workplace procedures for the off-site repair, overhaul and assembly of mechanical signalling equipment
• Problems that may occur during the off-site repair, overhaul and assembly of mechanical signalling equipment, and action that can be taken to report or resolve the problems
• Hazards that may exist when off-site repairing, overhauling and assembling mechanical signalling equipment, and ways of controlling the risks involved
• Fundamentals of signalling and operations of mechanical signalling equipment
• Fault detection techniques
• Authorisation/approval processes and procedures
• Documentation and record keeping requirements

Required skills:

• Communicate effectively with others when off-site repairing, overhauling and assembling mechanical signalling equipment
• Read and interpret instructions, procedures, information and signs relevant to the off-site repair, overhaul and assembly of mechanical signalling equipment
• Interpret and follow operational instructions and prioritise work
• Complete documentation related to the off-site repair, overhaul and assembly of mechanical signalling equipment
• Operate electronic communication equipment to required protocol
• Work collaboratively with others when off-site repairing, overhauling and assembling mechanical signalling equipment
• Promptly report and/or rectify any identified problems, faults or malfunctions when off-site repairing, overhauling and assembling mechanical signalling equipment in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unexpected events when off-site repairing, overhauling and assembling mechanical signalling equipment
Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use hand, portable, power and air tools
- Safely use chemical cleaning agents, solvents and lubricants
- Carry out visual inspection and checking
- Check/confirm compliance with operational specifications
- Use appropriate painting techniques
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly identifying faults
  - carrying out appropriate repairs in accordance with workplace requirements
  - correctly testing equipment following repairs
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in all weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Signal equipment may include:
- point machines
- hydraulic and pneumatic points
RANGE STATEMENT

- signals
- points
- equipment
- ground frames
- channel irons
- wire ropes
- point rodding
- level crossing signs
- signal locations/housings
- foundations/supports/sleepers

Cleaning and servicing equipment may include:
- steam cleaners
- hand tools
- brushes/wire and paint
- hand-held power/air tools
- brush/weed trimmers

Chemicals and consumables may include:
- paints and paint strippers
- cleaning and degreasing agents
- solvents
- weed killers
- oils
- greases
- cleaning rags

Rubbish removal/disposal may be carried out:
- using internal and/or external operating rules and procedures

Visual checks may include:
- rust
- breakage
- graffiti
- rubbish build up
- environmental damage/degradation

Operational checks may include:
- mechanical movement
- linkages
- clearances
- interferences
- alignment
- wear
- loose fittings

Communication equipment may include:
- two-way radios
- computers
- telephones/mobile phones
RANGE STATEMENT

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- operational instructions, policies and workplace procedures
- authority to access the site or to operate equipment, including:
  - written authority
  - verbal authority
  - authority as detailed in organisation operating rules and procedures
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
Unit Sector(s)

Unit Descriptor

This unit involves the skills and knowledge required to maintain mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements and workplace procedures, including diagnosing and correcting faults in the devices, and testing and adjusting the repaired equipment to meet workplace and manufacturers standards. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of mechanical signalling locking and interlocking devices as part of workplace activities across a variety of operational contexts within the Australian rail system.

</table>
| 1 Diagnose locking/interlocking equipment faults | 1.1 Out-of-specification or non-operating mechanical locking and interlocking signalling equipment/components are correctly identified through operational testing  
1.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations  
1.3 Work is planned to ensure minimum disruption to train operations and safe repair activities  
1.4 Support/assistance with diagnosis or repair operations is obtained through liaison with appropriate personnel |
| 2 Correct equipment faults | 2.1 Mechanical locking and interlocking signalling equipment and component cleaning/lubrication and adjustment is performed to specifications to ensure required level of operations  
2.2 Equipment and components are replaced or repaired as per operational specifications to ensure required level of operations  
2.3 Viability of repairs to replaced equipment/components is evaluated and equipment tagged for repair or disposed of in line with workplace requirements  
2.4 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification |
| 3 Test and adjust locking/interlocking equipment | 3.1 All locking/interlocking equipment functions are tested to ensure operational compliance with required standards  
3.2 Final cleaning, lubricating and adjustments to equipment are carried out to ensure operational compliance  
3.3 Equipment is locked/secured as specified to ensure safety and protection from elements or persons  
3.4 Records of repair activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the repair and adjustment of mechanical locking and interlocking signalling equipment
- Problems that may occur during the repair and adjustment of mechanical locking and interlocking signalling equipment and action that can be taken to report or resolve the problems
- Hazards that may exist when repairing and adjusting mechanical locking and interlocking signalling equipment and ways of controlling the risks involved
- Contents of technical specifications and manuals
- Documentation/authorisation processes and procedures
- Track layout
- Material safety data sheets
- Mechanical fitting techniques
- Workshop facilities, personnel and manufacturing/repair capabilities
- Overview of other operations and personnel (i.e. non-mechanical)
- Material procurement procedures
- Principles of railway signalling, particularly those dealing with mechanical locking and interlocking equipment
- Use of chemicals, solvents and lubricants
- Fault detection techniques

Required skills:

- Communicate effectively with others when repairing and adjusting mechanical locking and interlocking signalling equipment
- Read and interpret instructions, procedures, information and signs relevant to the repair and adjustment of mechanical locking and interlocking signalling equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the repair and adjustment of mechanical locking and interlocking signalling equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when repairing and adjusting mechanical locking and interlocking signalling equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when repairing and adjusting mechanical locking and interlocking signalling equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when repairing and adjusting mechanical
Required skills:

- locking and interlocking signalling equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate mechanical locking and interlocking signalling equipment
- Correctly use protective paints and lubricants including appropriate painting techniques
- Select and use hand, portable, power and air tools
- Repair and replace mechanical locking and interlocking equipment
- Apply relevant test procedures
- Operate mechanical signalling equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,
EVIDENCE GUIDE

and/or

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night
- in all relevant weather conditions

Equipment may include:  
- both locking and interlocking equipment including:
  - signals
  - points equipment
  - ground frames
  - level crossing and tramway crossing mechanisms
  - frames
  - rods
  - bars
  - platforms
  - structures
RANGE STATEMENT

- housings
- boxes
- signage

Repairs may include:
- filing
- grinding
- replacement of components including:
  - bushes
  - pivot pins
  - gears
  - wear plates
  - welding
  - joining

Adjustments may include:
- designed adjustment components
- shimming
- checking of clearances and tolerances

Cleaning and lubrication includes:
- all cleaning operations by hand, chemical or steam cleaning
- the application of protective paints or sealing agents
- the application of lubricating oils and greases

Operational compliance includes:
- manufacturers or workplace specifications for functional movements, operations and outcomes

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Tools and equipment may include:
- hand tools
- portable power generators
- air compressors
- measuring rules
- gauges

Communication equipment may include:
- two-way radios
- telephones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
RANGE STATEMENT

- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant log or record books
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to maintain aerial signal/telecommunications lines and cables in accordance with safeworking and regulatory requirements and workplace procedures, including inspecting and servicing line and cable routes, diagnosing any identified line and cable faults and repairing any line and cable faults to the standards specified to ensure system integrity. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the maintenance of aerial signal/telecommunications lines and cables as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Inspect and service line and cable routes | 1.1 Routes are inspected and recorded and arrangements are made for the removal of any obstructions, damage, infringing vegetation to provide free access to cables/aerials  
1.2 Routes are physically inspected to determine any breaks, misalignments, damage and insulation wear requiring repair  
1.3 Poles are inspected for deterioration and a safety assessment is made |
| 2 Diagnose line and cable faults | 2.1 Permission to test isolated equipment is confirmed prior to any work being undertaken  
2.2 Probable location of fault is identified from visual inspection and circuit tests are conducted to isolate fault area  
2.3 The nature of the fault is identified from further tests and corrective action required is identified to enable appropriate arrangements for resources and for work to be performed  
2.4 Disconnection/insulation procedures are applied to enable maintenance work to be carried out in isolation to systems where lines are in close proximity to high voltage services |
| 3 Repair line and cable faults | 3.1 Work site is made safe in accordance with organisations safety requirements to enable repair work to be safely undertaken  
3.2 Aerial lines/cables are repaired to operational and technical requirements using appropriate jointing or replacement/repair procedures  
3.3 Repaired/replaced line/cable is tested to specified standards to ensure conformity to operational and technical requirements  
3.4 Appropriate personnel are notified of completed repairs/replacement and appropriate documentation is completed in accordance with organisations requirements and returned to appropriate organisation/department as required |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures for the maintenance of aerial signal/telecommunications lines and cables
- Problems that may occur during the maintenance of aerial signal/telecommunications lines and cables, and action that can be taken to report or resolve the problems
- Hazards that may exist when maintaining aerial signal/telecommunications lines and cables, and ways of controlling the risks involved
- Electrical theory and principles relevant to aerial cables
- Line/cable technical specifications
- Test equipment and procedures
- Fault diagnosis/problem solving
- Techniques for the operation of support equipment
- Pole top rescue procedures
- Common aerial cable system faults
- Clearance procedures from other services
- AS 3000 and AUSTEL requirements relevant to aerial cables
- Documentation and record keeping requirements

Required skills:

- Communicate effectively with others when maintaining aerial signal/telecommunications lines and cables
- Read and interpret instructions, procedures, information, technical data and drawings relevant to the maintenance of aerial signal/telecommunications lines and cables
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of aerial signal/telecommunications lines and cables
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining aerial signal/telecommunications lines and cables
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when maintaining aerial signal/telecommunications lines and cables in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when maintaining aerial signal/telecommunications lines and cables
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
**Required skills:**

- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use hand tools, power tools and equipment
- Use relevant test equipment and aerial cable testing techniques
- Diagnose and repair aerial cable faults
- Carry out line/cable/conductor jointing and termination
- Use mechanised equipment
- Carry out a pole top rescue

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Aerial signal/telecommunications lines and cables to be maintained may include:
- all those in service in the Australian rail systems

Cables may include:
- multi core wires
- open wires
- low voltage

All signalling cables and cable products must be:
- supplied and installed to AS 3000 or appropriate organisational standards
RANGE STATEMENT

Fittings may include:
- poles
- cross arms
- insulators including spindles, stays and guards
- aerial lines
- transpositioning
- joint sleeves
- tie wires

Test equipment may include:
- meggers
- isolator and probe sets
- wire test sets
- pulse echo fault locaters
- ohm meters
- earth fault locaters
- earth testers
- arrestor testers
- multi meters
- test phones
- tone generators
- insulation and continuity testers
- oscilloscopes

Faults may include:
- crossed wires
- high resistance joints
- broken/damaged insulators
- crossed/damaged lead-in cables
- circuit faults
- damage caused by bushfires
- storm damage
- wind damage
- earth conductors

Faults may be reported by:
- train crews
- public response
- fault centres
- fault indicators
- internal users
- train controllers

Communication equipment may include:
- two-way radios
- computers
- telephones

Safety and protective equipment
- high visibility clothing
- hearing protection
RANGE STATEMENT

may include:

- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- circuit diagrams and schematics
- engineering drawings
- line diagrams
- line field books
- signalling/telecommunication circuits
- pole testing technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB3075A Inspect and prepare a motive power unit

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to inspect, prepare and start a motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes the checking and preparing of the motive power unit, visually examining the motive power unit, conducting in-cab checks, and starting and positioning the motive power unit for service in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed without supervision, generally within a team environment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Start motive power unit | 1.1 Roster is checked and interpreted for day's train driving activities  
1.2 Allocation of motive power units is checked in conjunction with appropriate personnel  
1.3 Motive power unit to be inspected and prepared is located  
1.4 Motive power unit is started in accordance with manufacturers instructions and/or workplace procedures and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up  
1.5 In the case of safety, critical or serious equipment faults that cannot be readily rectified, the motive power unit is shut down, the faulty equipment isolated and tagged and the problem reported for rectification  
1.6 All instruments and gauges are observed and readings interpreted to confirm effective operation, including air and electrical. Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation  
1.7 Where required, fluid levels are rechecked after starting and appropriate action is taken if required  
1.8 Pre-departure checks are carried out to ensure motive power unit is braking and powering effectively and is safe to move |
| 2 Prepare for work activities | 2.1 Roster is checked and interpreted for day's train driving activities  
2.2 Allocation of motive power units is checked as per notices in conjunction with train controllers and roster clerk  
2.3 Trackside safety and, if appropriate, basic electrification awareness procedures are followed while locating the allocated motive power unit in the yard  
2.4 Motive power unit inspection and preparation duties are identified and interpreted  
2.5 Train schedules and notices and other operational and regulatory documentation are accessed and interpreted in accordance with workplace procedures  
2.6 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional  
2.7 Required personal protective equipment is obtained for use during the day's train driving activities  
2.8 Motive power unit to be inspected and prepared is located in the yard |
| 3 Inspect and prepare motive power unit | 3.1 Features, functions and location of motive power unit and associated equipment are identified |
ELEMENT | PERFORMANCE CRITERIA
---|---
3.2 Log book is checked to confirm serviceability of unit
3.3 Preparation and safety checks are conducted, in accordance with OH&S and other workplace policies and procedures
3.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements
3.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities (where applicable) are checked against journey requirements and appropriate action is taken to replenish them if required
3.6 Relevant OH&S and regulatory requirements are followed
4 Conduct in-cab checks
4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements
4.2 Cab layout is checked and confirmed to meet operating requirements
4.3 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed as per workplace procedures and manufacturers operating requirements
4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly
4.5 Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly
4.6 Seat, windows, blinds, air conditioners, heaters and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements
4.8 Fire extinguisher and emergency toolbox are checked to confirm that they are in position and meet operational requirements
5 Complete documentation
5.1 All required documentation concerning the inspection of the motive power unit is completed in accordance with workplace procedures and regulatory requirements
5.2 Log book and other service records on the motive power unit are completed in accordance with workplace procedures and regulatory requirements
6 Position motive power unit
6.1 Authority to move and position motive power unit is obtained and relevant personnel are advised of intention and procedures
ELEMENT | PERFORMANCE CRITERIA
--- | ---
6.2 Motive power unit is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints
6.3 Motive power unit is positioned in accordance with operational requirements and directions
6.4 Motive power unit performance is monitored during operation in order to confirm effective operation or to identify defects
6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance
6.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage
6.7 Train controller and other relevant personnel are advised that the motive power unit is secured in the required position and is ready for service

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- Inspection procedures for a motive power unit
- In-cab pre-operational checks for a motive power unit
- Start-up procedures for motive power units
- Operating procedures for motive power units
- Braking and safety system procedures for motive power units
- Operating controls to start, accelerate, decelerate and stop a motive power unit
- Procedures for adjusting controls to optimise the operation of a motive power unit
- Procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
- Procedures for starting and operating auxiliary systems on a motive power unit
- Procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
REQUIRED KNOWLEDGE AND SKILLS

- External features of a motive power unit that must be checked during a pre-operational visual inspection
- Procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on a motive power unit and related action that should be taken
- Requirements for completing relevant documentation when inspecting and preparing a motive power unit
- Procedures to be followed in the event of an emergency
- Functions of all supervisory indicators and controls and related checks for correct operation
- Communication equipment checks
- Lubrication requirements for a motive power unit
- Cleaning requirements for a motive power unit
- Functions of auxiliary systems on a motive power unit and related checks for correct operation
- Fuel tank capacity and range (where applicable)
- Procedures for raising and lowering a pantograph on electric motive power units
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others when inspecting and preparing a motive power unit
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, start-up and positioning of a motive power unit
- Document outcomes of inspection of a motive power unit
- Complete documentation related to the preparation and positioning of a motive power unit
- Work collaboratively with others inspecting and preparing a motive power unit
- Interpret and follow instructions and prioritise work
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in motive power units and associated equipment and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Check and replenish fluids and carry out lubrication requirements on a motive power unit
Required skills:

- Conduct a visual inspection of a motive power unit and associated equipment
- Prepare a motive power unit prior to service
- Position a motive power unit in readiness for service

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competency performance of the following in a range of situations:
  - carrying out pre-operational checks on motive power units in accordance with workplace procedures
  - identifying typical faults or defects that may occur
  - identifying rectification/reporting procedures for typical faults or defects

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Motive power units may include:
- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)

Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a motive power unit may include:
- lights
- hoses
RANGE STATEMENT

- couplings
- destination boards (electric urban train services)
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut-out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

In-cab pre-operational checks will include:

- brake checks
- driver’s safety control test
- functionality checks of supervisory controls and indicators
- traction
- in-cab check of communication equipment
- radio communication check
- seat
- windows and blinds
- air conditioners and heaters
- door locks
- fire extinguishers
- emergency toolbox
- passenger service resources
- check that handbrake is on
- check log book
- switch batteries on
- switch auxiliary compressor on
- pantograph up
- close main circuit breaker
- observe and interpret gauges (electric and air)
- take appropriate action if gauge readings are outside normal operation range
- recheck fluid levels
- start motive power unit

Electric motive power unit start-up sequence will include:

- check that handbrake is on
- check log book

Diesel motive power unit start-up sequence will include:

- check that handbrake is on
- check log book
RANGE STATEMENT

- check all fluid levels (including radiator, crankcase oil, water, compressor oil and governor oil) and take appropriate action if outside required levels
- battery switch on
- isolation switch to 'start'
- all circuit breakers on
- observe and interpret gauges (electric and air)
- take appropriate action if gauge readings are outside normal operation range
- recheck fluid levels
- start motive power unit

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
RANGE STATEMENT

- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of motive power unit may involve:
- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock

Information and documents may include:
- notices in drivers' notice board/box
- reference cards
- train driver roster sheet and/or table card
- operational instructions, policies and procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

| **1 Plan and prepare an electric tram** | 1.1 Roster is checked and interpreted for day's tram driving activities  
1.2 Allocation of electric trams is checked in conjunction with tram controllers and roster clerk  
1.3 Electric tram inspection and preparation duties are identified and interpreted  
1.4 Tram schedules and notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures  
1.5 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional  
1.6 Required personal protective equipment is obtained for use during the day's tram driving activities  
1.7 Electric tram to be inspected and prepared is located in the depot  
1.8 Depot safety and basic electrical equipment awareness procedures are followed while locating the tram in the depot. |
| **2 Visually inspect and prepare electric tram** | 2.1 Features, functions and location of electric tram and associated equipment are identified  
2.2 Log book is checked to confirm serviceability of unit  
2.3 Pre-start internal and external safety and maintenance checks are conducted, in accordance with OH&S and other workplace policies and procedures  
2.4 Electric tram and equipment are checked by visual inspection and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements  
2.5 Availability of traction power and sand if required are checked against journey requirements as per workplace procedures and regulatory requirements  
2.6 Relevant OH&S and regulatory requirements are followed |
| **3 Conduct on-tram checks** | 3.1 Electric tram is checked in correct sequence and all lights are confirmed operating to optimum requirements  
3.2 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed as per workplace procedures and manufacturers operating requirements  
3.3 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly  
3.4 Communication equipment is checked to ensure that it is |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | functioning correctly and appropriate action is taken if it is not working correctly
3.5 Seat, windows, blinds and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort
3.6 Ancillary equipment is checked and is confirmed to be operational in accordance with operating requirements
3.7 Fire extinguisher, point bars and any other required tools are checked to confirm that they are in position and meet operational requirements
4 Start electric tram | 4.1 Electric tram is started in accordance with instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
4.2 In the case of safety, critical or serious equipment faults that cannot be readily rectified, the electric tram is shut down and reported for rectification in accordance with procedures
4.3 All instruments and gauges are observed and readings interpreted to confirm effective operation, including air and electrical. Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
4.4 Sand operation (if applicable) is checked after starting and appropriate action is taken if not effectively functioning
4.5 Pre-departure checks are carried out to ensure electric tram is braking and powering effectively and is safe to move
5 Position electric tram | 5.1 Authority to move and position electric tram is obtained and relevant personnel are advised of intention and procedures
5.2 Electric tram is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints
5.3 Electric tram is positioned in accordance with operational requirements and directions
5.4 Tram performance is monitored during operation in order to confirm effective operation or to identify defects
5.5 Equipment defects are identified, rectified and recorded or relevant personnel are advised for assistance
5.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage
5.7 Relevant personnel are advised that the electric tram is secured in the required position and is ready for service
6 Complete documentation | 6.1 All required documentation concerning the inspection, preparation and start-up of the electric tram is completed in accordance with workplace procedures and regulatory
ELEMENT PERFORMANCE CRITERIA

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Relevant OH&S and environmental procedures and regulations
- Electric tram controls, instruments and indicators and their purpose, location and use
- Monitoring devices; braking and power equipment; safety systems; ancillary systems; and any signalling systems
- Visual inspection procedures for an electric tram
- On-tram pre-operational checks for an electric tram
- Start-up procedures for an electric tram
- Braking and safety system procedures for electric trams
- Operating controls to start, accelerate, decelerate and stop an electric tram
- Procedures for adjusting controls to optimise the operation of an electric tram
- Procedures for managing and controlling hazardous situations when preparing and starting up an electric tram
- Procedures for starting and operating ancillary systems on an electric tram
- Functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on an electric tram
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- External features of an electric tram that must be checked during a pre-operational visual inspection
- Procedures for minor maintenance including cleaning
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on an electric tram and related action that should be taken
- Requirements for completing relevant documentation when inspecting, preparing and starting an electric tram
- Procedures to be followed in the event of an emergency
REQUIRED KNOWLEDGE AND SKILLS

- Functions of all supervisory indicators and controls and related checks for correct operation
- Communication equipment checks
- Cleaning requirements for an electric tram
- Functions of ancillary systems on an electric tram and related checks for correct operation
- Procedures for raising and lowering a pantograph or trolley pole on an electric tram
- Procedures for operating any electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term management of fatigue

Required skills:

- Communicate effectively with others when inspecting, preparing, starting up and positioning an electric tram
- Operate any electronic communication equipment to required protocol
- Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, starting and positioning of an electric tram
- Document outcomes of visual inspection of an electric tram
- Complete documentation related to the inspection, preparation, start up and positioning of an electric tram
- Work collaboratively with others during the inspection, preparation, start up and positioning of an electric tram
- Interpret and follow instructions and prioritise work
- Identify and assess tram defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in trams and associated equipment and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Check and replenish sand (where applicable) on an electric tram
- Conduct a visual inspection of an electric tram and associated equipment
- Prepare and start an electric tram prior to service
- Position an electric tram in readiness for service
- Apply fatigue management knowledge and techniques
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:
- hand-operated or foot pedal control systems or both

Electric tram equipment may include:
- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Pre-operation checks may include:
- sand levels
- brake testing
- lights - internal and external
- air systems
- interlocks and door controls

Visual inspection of an electric tram may include:
- lights
- hoses
- couplings
- destination indicators or signs
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand
- pantographs or trolley poles
- electrical cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air)
RANGE STATEMENT

In-cab pre-operational checks may include:

- visible faults (e.g. oil leaks, tears and cracks)
- brake checks
- driver's safety control test
- functionality checks of supervisory controls and indicators
- traction controls
- in-cab check of communication equipment (depending on type of tram this may include radio, intercom, PA systems, passenger emergency intercom, passenger emergency systems, etc.)
- radio communication check with tram controller
- seat (ergonomic setting for safety, function and comfort)
- windows and blinds
- door locks
- fire extinguishers
- point bars, any other tools and tool boxes

Electric tram start-up sequence may include:

- check log book
- pantograph or trolley pole up
- switch on batteries, if any
- switch on compressor, if any
- close all power control switches
- close all light switches and set lights for proposed direction of travel
- check sand levels and functions
- check handbrake/park brake is functioning correctly
- observe and interpret gauges
- take appropriate action if gauge readings outside normal operation range
- start tram

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
RANGE STATEMENT

Maintenance personnel
- immediate internal or external customers
- internal and external suppliers
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- relevant national and state or territory transport regulations and codes of practice
- notices in drivers’ notice board/box
- reference cards
- tram driver roster sheet and/or table card
- operational instructions, policies and procedures:
  - emergency procedures manual
  - conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to examine timber structures in accordance with safeworking and regulatory requirements and workplace procedures. It includes obtaining all relevant previous reports, performing the detailed examination, initiating appropriate necessary actions if any, and completing all required documentation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the conduct of a detailed timber structures examination as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT | PERFORMANCE CRITERIA
---|---
1 Obtain previous reports | 1.1 Operational history of structure is reviewed from available sources
| 1.2 Previous defects identified in reports are noted to enable rechecking of problem areas
| 1.3 Relevant personnel are contacted to identify any reported complaints or indications of wear or damage
2 Perform detailed examination | 2.1 Timber structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures
| 2.2 Connections between timber components are visually inspected and checked for signs of wear, looseness, corrosion, deterioration and damage in accordance with workplace procedures
| 2.3 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures
| 2.4 Defects or deficiencies are identified in accordance with workplace procedures
3 Take appropriate actions | 3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures
| 3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner
4 Complete documentation | 4.1 Examination schedule or work report data is completed in accordance with workplace procedures
| 4.2 Documentation on work undertaken is completed in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the conduct of a detailed timber structures examination
- Problems that may occur during the conduct of a detailed timber structures examination, and action that can be taken to report or resolve the problems
- Hazards that may exist when conducting a detailed timber structures examination, and ways of
REQUIRED KNOWLEDGE AND SKILLS

controlling the risks involved

- Timber structures examination methods and techniques
- Fault detection techniques
- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when conducting a detailed timber structures examination
- Read and interpret plans and specifications relevant to a detailed timber structures examination
- Follow operational instructions and work sequences when undertaking timber structures examination
- Identify defects
- Complete documentation related to a detailed timber structures examination
- Operate communication equipment to required protocol
- Work collaboratively with others when conducting a detailed timber structures examination
- Promptly report and/or rectify any identified problems, faults or malfunctions when conducting a detailed timber structures examination in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan and organise remedial work
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and use measuring instruments and equipment
- Select and use required personal protective equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - examining a range of structure types
  - taking appropriate action for identified defects
  - completing documentation of examination results

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals, dangerous or hazardous substances
- movements of equipment, materials and vehicles

Structures may include:
- underbridges
- overbridges
- footbridges
- culverts
- retaining walls
- platforms
- buffer stops
- elevated roads/pits

Equipment may include:
- torch
- geologists hammer
- measuring tape
- spirit level with straight edge
- plumb bob
- boring equipment and probe
- camera
- binoculars
- mirror
- vernier calipers
- demec gauge, points and adhesive
- scaffolding
- extension ladder
- elevated work platforms (EWP)
- boat or barge

Structures examination methods may include:
- visual examination
- hammer test
- bore and probe
- deflection test

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
- local councils
RANGE STATEMENT

Communication equipment systems may include:
- landowners
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Information/documents may include:
- local authority regulations and procedures
- work orders
- examination reports and defect lists
- relevant log or record book
- local instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes
RANGE STATEMENT

and/or guidelines

- relevant state/territory regulations, codes of practice and
  safeworking system requirements
- relevant Australian Standards and related requirements,
  including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

</tbody>
</table>

1 **Determine job requirements**

1.1 Faults and deficiencies in track geometry are identified, and work required for restoration of track to required standard is determined

1.2 Appropriate repair methods are identified to enable repairs to be effected

1.3 Job requirements and resources are determined according to workplace procedures and scope of work

2 **Restore track geometry**

2.1 Survey data are used where required to establish correct geometry

2.2 Appropriate lifting and lining methods and equipment are used to lift and line track to restore running surface to required geometry in accordance with workplace standards and procedures

3 **Confirm compliance after work**

3.1 Track geometry is checked for compliance with acceptance standards

3.2 Vertical and horizontal structural and overhead clearances are checked against required standards to allow safe passage of trains

3.3 Track structure where work has been undertaken is checked for compliance with standards required to enable reinstatement of service

3.4 Appropriate operating conditions are applied in accordance with workplace procedures

4 **Complete documentation**

4.1 Documentation on work undertaken is completed in accordance with workplace requirements

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for checking and repairing track geometry
- Problems that may occur when carrying out work activities to check and repair track geometry, and action that can be taken to report or resolve them
- Hazards that may exist when checking and repairing track geometry, and ways of controlling the risks involved
- Relevant Australian standards, technical specifications and manuals
- Documentation and/or work authorisation and work completion processes and procedures
- Fault detection techniques
- Track geometry maintenance methods and techniques
- Defects that can affect safe operation, including:
  - Defects in track structure, including sleeper condition, spacing, fastening condition, rail joint condition, ballast profile and packing
  - Clearance defects
  - Defects in earthworks
- Track stability and the work requirements for differing weather conditions
- Track geometry acceptance standards
- Track certification requirements
- Relevant work recording procedures
- Procedures to be followed in the event of an emergency
- Details of relevant local authority procedures

**Required skills:**
- Communicate effectively with others when carrying out work activities to check and repair track geometry
- Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to work activities to check and repair track geometry
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities to check and repair track geometry
- Record and report results of track work in required format
- Operate electronic communication equipment to required protocol
- Report and rectify within limits of own role identified problems when carrying out work activities in accordance with regulatory requirements and workplace procedures
- Plan and organise work, including determining work requirements and work methods
- Implement contingency plans for unexpected events when carrying out work activities
• Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
• Monitor work activities in terms of planned schedule
• Modify activities depending on differing operational contingencies, risk situations and environments
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Adapt to differences in equipment in accordance with standard operating procedures
• Identify, select and use tools and equipment required in work activities to check and repair track geometry
• Select and use required personal protective equipment (PPE)
• Identify track geometry defects
• Select and use appropriate lifting and lining methods and equipment to correct geometry defects
• Use appropriate measurement methods to assess and correct geometry defects
• Identify defects affecting safe operation, including:
  • defects in track structure, including sleeper condition, spacing, fastening condition, rail joint condition, ballast profile and packing
  • structure and track centre clearance defects
  • defects in earthworks
• Assess defects against acceptance standards and apply appropriate restrictions

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises that demonstrate competent performance of the following in a range of situations:
  - identifying a number of different faults and deficiencies
  - determining appropriate repair methods for identified faults
  - using appropriate lifting and lining methods and equipment to restore running surface to required geometry
  - after work is completed, certifying track to operational standards
  - completing documentation in accordance with standards and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Ballasted track geometry to be checked and repaired may include:**
- plain track
- turnouts and special track work

**Track geometry repair methods may include:**
- manual fettling with hand tools and light equipment
- manual fettling with small on-track or off-track plant (spot tampers, etc.)
- resurfacing with large on-track plant

**Manual fettling includes:**
- any operation where measurement of geometry (before and after) is conducted by hand-held equipment and lifts and pulls are manually calculated

**Resurfacing operations include:**
- any operation where measurements and calculations of lifts and pulls are carried out automatically or semi-automatically by resurfacing plant

**Equipment may include:**
- mechanical lifting and handling devices
- basic hand tools and small plant
- track jacks
- on-track machines, such as tampers, liners or regulators
- manual and electronic measuring equipment

**Certifying track after work includes:**
- confirming safe clearances of any structure erected adjacent to or over the track

**Reinstatement of service may include:**
- unrestricted operation of rail traffic
- operation under speed restriction
- restricted clearance operation
- operation under tonnage restrictions

**Liaison may include:**
- internal or external personnel from other work areas

**Communication equipment systems may include:**
- two-way radios
- telephones, including mobile phones
- agreed audible or hand signals

**Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:**
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- dust mask
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety headwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Information and documents may include:
- maintenance notices, records and requests
- local instructions
- local authority regulations and procedures
- work orders
- technical instructions
- manufacturer or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- two-way radio or mobile telephone operation procedures
- emergency procedures manual
- quality assurance (QA) plans, data and document control
- conditions of service, legislation and industrial agreements, including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements, including acts and regulations from each applicable state or territory, together with any nationally approved compliance codes and guidelines
- relevant state or territory regulations, codes of practice and safeworking system requirements
- relevant Australian standards (AS) and related requirements, including AS 4292
- relevant state or territory legislation relating to:
  - environmental protection
RANGE STATEMENT

Competency Field
Competency Field B - Equipment Checking and Maintenance
TLIB3095A Check and repair points and crossings

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to check and repair points and crossings in accordance with approved standards, safeworking and regulatory requirements and workplace procedures. It includes determining job requirements, maintaining components and tolerances, installing components, conducting post-installation checks, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the checking and repair of points and crossings as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Determine job requirements | 1.1 Faults and deficiencies in points and crossings are identified and work required for restoration of track to required standard is determined  
1.2 Appropriate repair methods are identified to enable repairs to be effected  
1.3 Job requirements are determined in accordance with workplace procedures, including identification of the scope of work activities and resources required |
| **2** Maintain components and tolerances | 2.1 Clearances are adjusted to specifications to ensure correct functioning  
2.2 Wearing surfaces are cleaned and lubricated as required to minimise wear and ensure correct functioning |
| **3** Install components | 3.1 New components are prepared to specifications ready for installation  
3.2 New components are installed in accordance with standards and workplace procedures |
| **4** Conduct post-installation checks | 4.1 Functional checks are carried out to ensure correct operation  
4.2 Completed work is checked for compliance to acceptance standards in accordance with workplace procedures  
4.3 Appropriate operating conditions are applied in accordance with workplace procedures |
| **5** Complete documentation | 5.1 Required documentation is completed in accordance with workplace procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the checking and repair of points and crossings
- Problems that may occur during the checking and repair of points and crossings, and action that can be taken to report or resolve the problems
- Hazards that may exist when checking and repairing points and crossings, and ways of controlling the risks involved
REQUIRED KNOWLEDGE AND SKILLS

- Features and principles of operation of points and crossings
- Special maintenance requirements for points and crossings
- Defects that can occur in points and crossings
- Measurement techniques
- Types of lubricants
- Clearances/tolerances
- Tension of fittings
- Defect tolerances and maintenance techniques
- Component replacement techniques
- Installation and maintenance requirements for manual points equipment
- Points and crossings acceptance standards
- Relevant communication systems and procedures
- Authorisation/approval processes and procedures
- Documentation and record keeping requirements

Required skills:

- Communicate effectively with others when checking and repairing points and crossings
- Read and interpret instructions, procedures, information, technical data, standards and drawings relevant to the checking and repair of points and crossings
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the checking and repair of points and crossings
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when checking and repairing points and crossings
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when checking and repairing points and crossings in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when checking and repairing points and crossings
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:

- Select and use required personal protective equipment
- Select and use hand tools, power tools and equipment
- Identify/locate defects in points and crossings
- Use relevant plant and mechanised equipment
- Use appropriate equipment and methods to make accurate measurements on points and crossings
- Determine work requirements and work methods
- Select and use appropriate installation and repair techniques and equipment to correct defects in points and crossings
- Select and use appropriate lubricants
- Undertake functional checks after work has been completed
- Measure and compare completed work to construction or maintenance acceptance limits
- Identify defects in special trackwork affecting safe operation
- Complete relevant documentation accurately

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying faults and appropriate repair methods
  - cleaning and adjusting components, and/or
  - preparing and installing replacement components
  - conducting functional checks on completed works
  - completing documentation to required workplace
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
RANGE STATEMENT

- movements of equipment, materials and vehicles

Equipment may include:
- off-track plant, cranes
- mechanical lifting and handling devices
- hand tools and small plant
- rail saws, rail drills

Maintenance may include:
- adjusting switch bearing
- adjusting switch set
- adjusting switch housings
- adjusting clearances at crossings and switches
- tightening or replacing fastenings
- replacing switches, switch housings, stockrails, closure rails, crossings and checkrail units
- drilling switches and stockrails
- replacing plates, studs and chocks
- adjusting bearer spacing

Points and crossing may include:
- turnouts
- diamond crossings
- slips
- catchpoints
- expansion switches

Components may include:
- switches
- crossings
- stockrails
- closure rails
- rail braces
- bearer plates
- bolts, clips
- studs/switch stops
- heel blocks
- housings
- anti-creep devices
- chairs
- switch rollers
- checkrails
- chocks
- manual points equipment

Crossings may include:
- fabricated cant
- Rail Bound Manganese
- monoblock
- Davis
RANGE STATEMENT

- compound crossings
- swing nose
- spring wing type crossings
- single or dual gauge

Bearers may include:
- timber
- concrete
- steel

Fastenings may include:
- slip/friction
- resilient

Measuring equipment may include:
- measuring tapes
- stringline
- rail gauges (switch, crossing)
- gauge boards

Manual points equipment may be:
- asymmetrical
- conventional
- undercut
- housed

Heels of switches may be:
- fixed
- flexible

Operations of switches may be:
- manual
- interlocked

Communication equipment/systems may include:
- two-way radios
- computers
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- dust mask
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- works orders
- information provided by other workplace personnel
- technical instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Liaison may include:

- internal or external personnel from other work areas (e.g. signals staff)

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

| 1 Obtain previous reports | 1.1 Operational history of structure is reviewed from available sources  
1.2 Previous defects identified in reports are noted to enable rechecking of problem areas  
1.3 Relevant personnel are contacted to identify any reported complaints or indications of wear or damage |
| 2 Perform detailed examination | 2.1 Concrete and masonry structures and components are visually inspected and checked for signs of movement, deterioration and damage in accordance with workplace procedures  
2.2 Relevant inspection aids are used to perform detailed inspection to identify defects in accordance with workplace procedures  
2.3 Defects or deficiencies are identified in accordance with workplace procedures |
| 3 Take appropriate actions | 3.1 Major defects affecting safe passage are acted on as soon as possible in accordance with workplace procedures  
3.2 Defects and deficiencies are reported to enable repairs to be effected in a timely manner |
| 4 Complete documentation | 4.1 Examination schedule or work report data is completed in accordance with workplace procedures  
4.2 Documentation on work undertaken is completed in accordance with workplace requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for conducting concrete/masonry structures examinations
- Problems that may occur during the conduct of a detailed concrete/masonry structures examination, and action that can be taken to report or resolve the problems
- Hazards that may exist when conducting a detailed concrete/masonry structures examination, and ways of controlling the risks involved
- Concrete/masonry structures examination methods and techniques
- Fault detection techniques
REQUIRED KNOWLEDGE AND SKILLS

- Relevant recording and documentation procedures

Required skills:

- Communicate effectively with others when conducting a detailed concrete/masonry structures examination
- Read and interpret plans and specifications relevant to a detailed concrete/masonry structures examination
- Follow operational instructions and work sequences when undertaking concrete/masonry structures examination
- Identify defects
- Complete documentation related to a detailed concrete/masonry structures examination
- Operate communication equipment to required protocol
- Work collaboratively with others when conducting a detailed concrete/masonry structures examination
- Promptly report and/or rectify any identified problems, faults or malfunctions when conducting a detailed concrete/masonry structures examination in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and use measuring instruments and equipment
- Select and use required personal protective equipment

Evidence Guide

EVIDENCE GUIDE

unit

this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - examining a range of structure types
  - taking appropriate action for identified defects
  - completing documentation of examination results

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals, dangerous or hazardous substances
- movements of equipment, materials and vehicles

Structures may include:
- underbridges
- overbridges
- footbridges
- culverts
- tunnels
- retaining walls
- platforms
- overhead wiring structures
- signal gantries
- noise barriers
- service crossings
- buffer stops
- track slabs

Equipment may include:
- torch
- geologists hammer
- measuring tape
- spirit level with straight edge
- plumb bob
- camera
- binoculars
- mirror
- vernier calipers
- demec gauge, points and adhesive
- scaffolding
- extension ladder
- elevated work platforms
- boat or barge
- corer meter

Structures examination methods may include:
- visual examination
- hammer test
- corer meter testing

Liaison may include:
- internal/external personnel from other work areas (e.g. train controllers)
- road authorities
RANGE STATEMENT

Communication equipment systems may include:
- local councils
- landowners
- two-way radios
- telephones/mobile telephones
- agreed audible or hand signals
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- tripods
- harness and ropes
- respirator
- safety mask
- gas detectors
- safety devices

Depending on work context, safety and personal protective equipment may include:
- local authority regulations and procedures
- work orders
- examination reports and defect lists
- relevant log or record book
- local instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information/documents may include:
- local authority regulations and procedures
- work orders
- examination reports and defect lists
- relevant log or record book
- local instructions
- manufacturers or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
RANGE STATEMENT

Information may be provided:

- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- via trackside signals

Applicable procedures and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the examination, recording and reporting of track and right of way infrastructure
- Track and right of way infrastructure condition standards
- Problems that may occur during the examination of track and right of way
- Hazards that may exist when examining track and right of way infrastructure, and ways of controlling the risks involved
REQUIRED KNOWLEDGE AND SKILLS

- Track measurement equipment and techniques
- Track and right of way defects and their causes
- Track deterioration rates under differing operating conditions
- Data analysis techniques for the analysis of track and right of way infrastructure parameters
- Relevant records procedures

Required skills:

- Read and interpret instructions, procedures, information, plans, drawings and specifications relevant to the examination of track and right of way infrastructure
- Read and interpret track recording data
- Apply track and right of way infrastructure condition standards
- Undertake track and right of way infrastructure examination tasks
- Identify condition of track and right of way infrastructure
- Measure, calculate and record data accurately
- Analyse data and prioritise identified defects
- Take appropriate action to repair or protect defects
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the examination of track and right of way infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when examining track and right of way infrastructure
- Promptly report and/or rectify any identified problems when examining track and right of way infrastructure in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Monitor work activities in terms of planned schedule
- Work systematically with required attention to detail without injury to self or others
- Identify, select and use tools
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment
EVIDENCE GUIDE

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing for examination
  - examining track and right of way
  - analysing examination results
  - reporting findings

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Track and right of way infrastructure may include:
- track components
- turnouts
- formation
- drainage
- earthworks
- trackside signs
- fencing
- level crossings

Examination methods may include:
- visual assessment
- measurement of parameters
- analysis of recorded data

Examination tasks may include:
- component condition and wear
- geometry
- clearances
- stability
- post irregularity examinations
- special seasonal examinations

Available data may include:
- previous examination results
- current examination results
- track recording car data
- track patrol reports
- work reports
- track condition history

Depending on the type and seriousness of identified defects, appropriate action may include:
- stop trains
- speed restrictions
- immediate repair action
- report for programmed repair action
- monitor for further deterioration
RANGE STATEMENT

Liaison may include:
- internal or external personnel from other work areas

Tools and equipment may include:
- hand tools
- track boards
- measuring rules
- gauges
- electronic measuring equipment

Communication equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- maintenance notices, records and requests
- local authority regulations and procedures
- work orders
- technical instructions
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements
RANGE STATEMENT

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications

Unit Descriptor

**Unit Descriptor**

This unit involves the skills and knowledge required to visually inspect track infrastructure in accordance with safeworking and regulatory requirements and workplace procedure. It includes patrolling the track and right of way infrastructure, and recording and documenting identified defects in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

**Application of the Unit**

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the visual inspection of the railway track infrastructure as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Patrol track infrastructure | 1.1 Appropriate inspection method is employed to conduct visual examinations of track and right of way for the identification of defects  
1.2 Visual examinations are performed in accordance with workplace procedures and in line with inspection schedules  
1.3 Variations from allowable tolerances, defects and deficiencies likely to affect train safety are identified to enable appropriate action to be taken on the repairs required  
1.4 Unsatisfactory conditions are assessed in terms of seriousness and priority |
| 2 Record and document defects | 2.1 Appropriate action is taken to safeguard operation of the rail system  
2.2 Inspection schedule or work report data is completed in accordance with workplace procedures  
2.3 Defects and deficiencies are reported to enable repairs to be effected in a timely manner |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the visual inspection of track and right of way
- Problems that may occur during the visual inspection of track and right of way, and action that can be taken to report or resolve the problems
- Hazards that may exist when visually inspecting track and right of way, and ways of controlling the risks involved
- Contents of relevant technical specifications and manuals
- Track and right of way standards
- Different types of track and right of way defects
- Defect deterioration under differing operating conditions
- Visible rail defect types
- Techniques for prioritising defect rectification
- Fault identification and analysis techniques
REQUIRED KNOWLEDGE AND SKILLS

- Emergency procedures
- Details of local authority procedures

Required skills:

- Communicate effectively with others when visually inspecting track and right of way
- Read and interpret instructions, procedures, information and signs relevant to the visual inspection of track and right of way
- Identify different types of track and right of way defects
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the visual inspection of track and right of way
- Record and report results of visual inspection of track and right of way in required format
- Operate communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions when visually inspecting track and right of way in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events during the visual inspection of track and right of way
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify, select and use tools and equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - patrolling the track and right of way infrastructure
  - recording and documenting identified defects to workplace standards

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces or exposed conditions
- controlled or open environments

Work may involve:
- exposure to chemicals, and dangerous or hazardous substances
- movements of equipment, goods and vehicles

Track and right of way infrastructure may include:
- track geometry
- track components
- turnouts
- formation
- drainage
- earthworks
- clearances
- trackside signs
- fencing

Patrol methods may include:
- walking
- engine
- road/rail vehicle
- track vehicle

Patrol inspections may include:
- patrol in abnormal weather (heat, cold, wet etc.)
- special patrols as directed

Faults may include:
- track geometry defects (top, twist, line, gauge)
- pumping or unstable track
- obstructions to train movements
- obstructions to the wheel path of the train
- defective or broken rails, joints, breakaways, and loose or foul joints, fishbolts and fishplates
- failures of sleepers, transoms and fastenings
- breaches of fencing and ineffective safety barriers
- missing or incorrect speed signs
- track formation, cutting or embankment failure
- failed or ineffective drainage
- ballast deficiencies and foul ballast
- crossing and switch failures

Tools may include:
- hand tools
RANGE STATEMENT

Depending on the type and seriousness of identified defects, appropriate action may include:
- small plant
- stop trains
- speed restrictions
- immediate repair action
- report for programmed repair action
- monitor for further deterioration

Liaison may include:
- internal or external personnel from other work areas

Communication equipment may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals
- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Information may be provided:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radio/mobile phone
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- maintenance notices, records and requests
- local authority regulations and procedures
- work orders
- technical instructions
- QA plans, data and document control
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace
RANGE STATEMENT

- procedures
  - emergency procedure manuals
  - two-way radio/mobile phone operation procedures
  - emergency procedures manual
  - conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to adjust rail in accordance with safeworking and regulatory requirements and workplace procedures. It includes identifying and determining the requirements for rail adjustment, undertaking rail adjustment, and completing all required documentation. Licensing or certification requirements may be applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment. It involves the application of routine operational principles and procedures to adjust rail as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify and determine the requirements for rail adjustment | 1.1 Appropriate adjustment method is determined and resources are arranged  
1.2 Adjustment length is established depending on track geometry and location in accordance with workplace procedures |
| 2 Adjust rail | 2.1 Anchor points are identified and created as necessary to enable rail adjustment to be undertaken in accordance with workplace procedures  
2.2 Track is released and rail is vibrated to achieve stress free state in accordance with workplace procedures  
2.3 Appropriate measurements are taken and used to calculate adjustment requirements in accordance with workplace procedures  
2.4 Rail length is adjusted using appropriate method to achieve desired rail stress  
2.5 Rail is joined using appropriate method in accordance with workplace procedures  
2.6 Track fastenings are restored in accordance with workplace procedures  
2.7 Creep control marks are installed or reset in CWR track in accordance with workplace procedures (if applicable) |
| 3 Complete documentation | 3.1 Completed work is checked for compliance to standards to ensure safe operations of trains  
3.2 Required documentation is completed in accordance with workplace procedures |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for rail adjustment
- Problems that may occur when adjusting rail, and action that can be taken to report or resolve the problems
- Hazards that may exist when adjusting rail, and ways of controlling the risks involved
- Basic rail adjustment theory and critical aspects of rail stress
REQUIRED KNOWLEDGE AND SKILLS

- Rail adjustment procedures
- Temperature and alignment limitations on adjustment
- Documentation and record keeping requirements

Required skills:

- Communicate effectively with others when adjusting rail
- Read and interpret instructions, procedures, information and signs relevant to rail adjustment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to rail adjustment
- Operate communication equipment to required protocol
- Work collaboratively with others when adjusting rail
- Promptly report and/or rectify any identified problems, faults or malfunctions that may be identified when adjusting rail in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify, select and use hand tools
- Establish appropriate adjustment length
- Measure and calculate adjustment condition
- Use rail adjustment procedures for adjustment in different track configurations
- Use ‘rail out - rail in’ method appropriately and correctly (if applicable)
- Install and reset creep control marks in CWR track (if applicable)
- Complete documentation and record keeping requirements

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying and determining appropriate methods for rail adjustment
  - taking appropriate measurements and calculating adjustments
  - ensuring track is restored correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, materials and vehicles

Adjustment methods may vary according to:
- rail length
- adjustment condition (initial or re-adjustment)
- proximity to fixed points (turnouts, bridges etc.)

Adjustment methods may include:
- conversion of jointed track to CWR
- adjustment of existing CWR
- adjustment of existing jointed track
- 'rail out - rail in' method

Adjustment length may vary according to:
- track curvature
- proximity to fixed points (turnouts, bridges etc.)
- adjustment temperature
- equipment limitations

Appropriate measurements may include:
- rail temperature
- rail gaps
- rail longitudinal movement

Rail joints may include:
- aluminothermic welds
- flashbutt welds
- fishplated joints

Track fastenings may include:
- anchors
- non-resilient fastenings
- resilient fastenings

Measuring equipment may
- rail thermometers
RANGE STATEMENT

include:
- gap gauges
- tape measures
- measuring wheels
- stringline

Tools and equipment may include:
- mechanical handling/lifting equipment
- hand tools including hammers, impact wrenches, grinders, tension wrenches, friction rail saws, and rail punches
- rail tensors
- rail heaters
- rail threaders
- fastening equipment

Communication

equipment/systems may include:
- two-way radios
- telephones/mobile phones
- agreed audible or hand signals

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers)

Safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- dust mask
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, policies and workplace procedures
- works orders
- notices, records and requests
- technical instructions
- manufacturers or workplace equipment operation manuals
RANGE STATEMENT

- emergency procedure manuals
- two-way radio/mobile phone operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information may be provided:
- electronically
- in writing, via forms/documents/plans
- orally, via face-to-face communications
- trackside signals

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements, including AS 4292
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to maintain mechanical signalling locking and interlocking devices in accordance with safeworking and regulatory requirements and workplace procedures. It includes installing equipment and components, diagnosing and correcting faults in the devices, and testing and adjusting the repaired equipment to meet workplace and manufacturers standards. This unit excludes the initial assembly of the interlocking device. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the installation and maintenance of mechanical signalling locking and interlocking devices as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Assemble components | 1.1 Correct components are identified and selected to comply with job specifications  
| | 1.2 Equipment and components are pre-assembled and positioned for installation in compliance with work orders and job specifications  
| 2 Install equipment and components | 2.1 Equipment/component layout is prepared and checked to ensure position matches the job specifications  
| | 2.2 All fastening positions are marked and drilled for installation  
| | 2.3 Equipment and components are secured in the correct sequence and position, and are installed in compliance with the job specifications  
| | 2.4 Additional requirements or alterations to existing components are identified and appropriate follow-up action is taken  
| | 2.5 Manufacturing of additional components is carried out to allow for complete installation  
| | 2.6 Alterations to existing components are carried out to provide for the installation of new equipment  
| | 2.7 All interlinking components are correctly attached and secured ready for testing in compliance with work specifications  
| 3 Diagnose locking/interlocking equipment faults | 3.1 Out-of-specification or non-operating mechanical locking and interlocking signalling equipment/components are correctly identified through operational testing  
| | 3.2 Viability of adjustments/replacements/repairs to equipment/components is correctly evaluated to ensure cost effective operations  
| | 3.3 Work is planned to ensure minimum disruption to train operations and safe repair activities  
| | 3.4 Support/assistance with diagnosis or repair operations is obtained through liaison with appropriate personnel  
| 4 Correct equipment faults | 4.1 Mechanical locking and interlocking signalling equipment and component cleaning/lubrication and adjustment is performed to specifications to ensure required level of operations  
| | 4.2 Equipment and components are replaced or repaired as per operational specifications to ensure required level of operations  
| | 4.3 Viability of repairs to replaced equipment/components is evaluated and equipment is tagged for repair or disposed of in line with workplace requirements  
| | 4.4 Liaison with or support to other personnel is maintained to ensure equipment is maintained within specification  
| 5 Test and adjust | 5.1 Test procedures are coordinated and liaison with appropriate
### ELEMENT
locking/interlocking equipment

### PERFORMANCE CRITERIA

personnel is maintained to ensure overall safety

5.2 All locking/interlocking equipment functions are tested to ensure operational compliance with required standards

5.3 Final cleaning, lubricating and adjustments to equipment are carried out to ensure operational compliance

5.4 Equipment is locked/secured as specified to ensure safety and protection from elements or persons

5.5 Records of maintenance/repair/commissioning activities are correctly completed and forwarded to appropriate personnel for use in identifying future maintenance requirements

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant rail safety, OH&S and environmental procedures and regulations
- Workplace standards and procedures for the installation and maintenance of mechanical locking and interlocking signalling equipment
- Problems that may occur during the installation and maintenance of mechanical locking and interlocking signalling equipment and action that can be taken to report or resolve the problems
- Hazards that may exist when installing and maintaining mechanical locking and interlocking signalling equipment and ways of controlling the risks involved
- Contents of technical specifications and manuals
- Documentation/authorisation processes and procedures
- Track layout
- Material safety data sheets (MSDS)
- Mechanical fitting techniques
- Workshop facilities, personnel and manufacturing/repair capabilities
- Overview of other operations and personnel (i.e. non-mechanical)
- Material procurement procedures
- Principles of railway signalling, particularly those dealing with mechanical locking and interlocking equipment
- Use of chemicals, solvents and lubricants
- Fault finding techniques
REQUIRED KNOWLEDGE AND SKILLS

- Adjustment and testing applications

Required skills:

- Communicate effectively with others when installing and maintaining mechanical locking and interlocking signalling equipment
- Read and interpret instructions, procedures, designs, technical diagrams, information and signs relevant to the installation and maintenance of mechanical locking and interlocking signalling equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the installation and maintenance of mechanical locking and interlocking signalling equipment
- Work collaboratively with others when installing and maintaining mechanical locking and interlocking signalling equipment
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining mechanical locking and interlocking signalling equipment in accordance with regulatory requirements and workplace procedures
- Identify and/or Implement contingency plans for unexpected events when installing and maintaining mechanical locking and interlocking signalling equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate mechanical locking and interlocking signalling equipment
- Correctly use protective paints and lubricants including appropriate painting techniques
- Select and use hand, portable, power and air tools
- Apply relevant test procedures

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly assembling components
  - installing equipment and components
  - diagnosing faults on locking and interlocking equipment
  - correcting equipment faults
  - correctly adjusting and testing locking and interlocking equipment
  - correctly interpreting designs

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in all weather conditions

Locking and interlocking devices to be installed and maintained may include:
- all those in service in the Australian rail system
- large or small operating lever frames
- single or multiple lever ground frames
- interlocking machine/s
- operating and interlocking cams/locks

Equipment may include:
- staff/token and Annett locks
- bolt locks
- switchlocks
- emergency switch machine lock or emergency operating lock
- electric lever locks
- circuit controllers
- ground frames
- manual control floor or shelf mounted activation controls
- facing point locks
- levers and catch rods
- electric point motors
- lever locks
- locking devices
- warding/keying or index plates

Installing and repairs may include:
- filing
- grinding
- cutting
- bending
- shaping
- welding
- drilling
RANGE STATEMENT

- bolting
- clamping with ferrous and non-ferrous bar
- rod
- tube
- chain
- wire rope
- replacement of components including:
  - bushes
  - pivot pins
  - gears
  - wear plates
  - welding
  - joining

Adjustments may include:
- designed adjustment components
- shimming
- checking of clearances and tolerances

Cleaning and lubrication includes:
- all cleaning operations by hand, chemical or steam cleaning
- the application of protective paints or sealing agents
- the application of lubricating oils and greases

Operational compliance includes:
- manufacturers or workplace standards and specifications for functional movements, operations and outcomes

Liaison may include:
- internal or external personnel from other work areas (e.g. train controllers, electricians)

Tools and equipment may include:
- hand tools
- portable power generators
- air compressors
- measuring rules
- jigs
- vices
- cutting equipment
- drills
- spanners
- files
- bending devices
- verniers
- gauges
- clamps

Communication equipment may include:
- two-way radios
- telephones/mobile phones
RANGE STATEMENT

include:

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:

- relevant log or record books
- maintenance notices, records and requests
- local instructions
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace standards and procedures
- approved designs
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to check and assess the operational capabilities of equipment prior to an electric passenger train entering service. Actions are completed in accordance with workplace requirements, including inspecting equipment and work area, checking the operational capability of equipment and its safety devices, identifying and assessing the impact of faults on safety and work requirements, and recording and reporting the results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the preparation of an electric passenger train.

Work is generally performed without supervision and within a team environment. It involves the application of regulatory requirements and workplace procedures to the preparation of an electric passenger train.

ELEMENT PERFORMACE CRITERIA
equipment are reported

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Workplace procedures and policies for the checking and assessing of the operational capability of equipment when preparing an electric passenger train for service
- The characteristics, capabilities and limitations of the equipment
- Problems that may occur when preparing an electric passenger train for service, and appropriate action that can be taken to resolve the problems
- Operational safety requirements when preparing an electric passenger train for service
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others while preparing an electric passenger train for service
- Read and interpret instructions, procedures, information, labels and signs relevant to preparing an electric passenger train for service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to preparing an electric passenger train for service
- Work collaboratively with others when preparing an electric passenger train for service
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use relevant equipment and communications technology when checking and assessing the operational capability of equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - checking and testing train equipment
  - visually inspecting the exterior of an electric passenger train
  - reporting faults and inoperable equipment
  - completing preparation within agreed timeframes

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
EVIDENCE GUIDE

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- by day or night

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- a range of work environments
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Purpose of equipment checking and inspection is to ensure:
- it is free from damage, leaks and obstructions that may prejudice safety or limit operational capability
- it operates within prescribed limits

Visual checks may include but are not limited to:
- pressure over/under specification
- fluid leaks
- temperature over/under specifications
- cracks, surface or structural faults or other damage
- tightness of bolts, fixtures and fittings within specifications

Records/results of pre-operation tests may include:
- details of faulty equipment or specific components
- action taken
- results of testing
- details of repair and maintenance work to be undertaken
RANGE STATEMENT

Operational checks may be performed by:

- operating/checking the functionality of various pieces of safety and component equipment (where applicable)

Consultative processes may involve:

- workplace personnel
- supervisors and managers
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- high visibility clothing

Communication in the work area may include:

- two-way radios
- telephones/mobile phones
- train to base radio
- hand signals
- flags
- oral
- written instructions

Information/documents may include:

- workplace procedures and policies for the preparation of electric passenger trains
- manufacturers specifications for equipment/tools
- supplier instructions
- relevant OH&S requirements and policies
- relevant Australian Standards and certification requirements
- material safety data sheets where applicable
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- legislated rail safety requirements including acts and regulations from the applicable state together with any nationally approved compliance codes and/or guidelines
- relevant standards, codes and regulations pertaining to the checking and operation of the equipment concerned
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
RANGE STATEMENT

- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Sector(s)
Not Applicable

Competency Field
Competency Field
B - Equipment Checking and Maintenance
TLIB3108A Test operation of electric passenger train braking system

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to test the operation of an electric train braking system in accordance with workplace procedures and the requirements of relevant safeworking regulations and codes of practice. It includes preparing for train brake inspection and testing, inspecting and testing train brake operation, dealing with identified faults, and recording the results of a brake test in accordance with workplace requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from the applicable state and territory, together with any nationally approved compliance codes and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of operational principles, regulations, safeworking codes, protocols and procedures to the testing of electric train braking systems as part of workplace activities across a variety of operational contexts within the Australian rail industry.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare for train brake inspection and testing | 1.1 OH&S legislation, codes of practice, policies and procedures are identified and followed  
1.2 Train is isolated or secured in accordance with workplace procedures to make the work area safe for the inspection and testing  
1.3 The brake system is checked to ensure it is ready for inspection and testing |
| 2 Test train brake operation (no inspection) | 2.1 Brake tests are conducted to ensure compliance to required standards  
2.2 Where required, modified brake tests are conducted in accordance with workplace procedures to meet required standard  
2.3 Continuity tests are conducted to conform with workplace procedures to ensure train braking system meets functional specifications  
2.4 Brakes are applied and released on train and their function confirmed  
2.5 Faults are identified and appropriate corrective action is taken to ensure operational safety |
| 3 Deal with identified faults | 3.1 Identified faults are reported, rectified or isolated according to workplace procedures  
3.2 Confirmation/verification to continue is determined as per workplace procedures  
3.3 If required, detachment/uncoupling arrangements are made in accordance with operational requirements |
| 4 Record brake test faults or defects | 4.1 Faults or defects found during brake tests are recorded and/or reported as per workplace procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable minimum standards and approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
REQUIRED KNOWLEDGE AND SKILLS

- Brake systems, their components and their operation
- Types of brake tests and their purpose
- Diagnostic techniques
- Communication protocols
- Documentation requirements relating to brake testing
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when testing train braking system
- Read and interpret instructions, procedures, information and signs relevant to the testing of train braking system
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when testing train braking system
- Promptly report and/or rectify any identified problems, faults or malfunctions when testing train braking system in accordance with regulatory requirements and workplace procedures
- Apply rail safety practices and regulations
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Assess brake system defects
- Operate and adapt to differences in brakes and related equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the
EVIDENCE GUIDE

performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - conducting pre-safety tasks prior to brake test
  - conducting all relevant brake tests
  - identifying possible faults and appropriate reporting and rectification/isolation procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in all weather conditions
- by day or night

Movement status of rolling stock to be tested may include:
- arriving
- departing
- stationary

Tests may include:
- brake leakage test
- power against brake test
- air continuity test
- modified brake test
- train brake tests

Safety and protective equipment may include:
- high visibility clothing
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- hearing protection

Relevant personnel may include:
- train controller/signaller
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may be known as:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and instructions and job specification
- brake instruction documentation
- safeworking documentation
RANGE STATEMENT

- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable state/territory legislated rail safety requirements including acts and regulations together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Not Applicable

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB3112A Prepare electric passenger train as part of guard duties

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required as part of guard duties to check and assess the operational capabilities of equipment when preparing an electric passenger train prior to entering service. Actions are completed in accordance with workplace requirements, including carrying out pre-preparation checks; inspecting, starting and testing equipment; checking equipment; carrying out visual checks and reporting the results of inspection and testing in accordance with workplace procedures and relevant regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the preparation of an electric passenger train.
Safety checks and equipment tests are performed without supervision.
Work involves the application of regulatory requirements and workplace procedures to the preparation of an electric passenger train.

|         |                      | 3.6 Passenger operated equipment is visually checked to ensure operational readiness  |
| 4       | Record and report faults/defects | 4.1 Faults/defects are accurately recorded and/or reported in accordance with workplace requirements  
|         |                      | 4.2 Accurate records are kept in accordance with workplace requirements  
|         |                      | 4.3 Potential defects which may affect the future safety of the equipment are recorded and/or reported  |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Workplace procedures and policies for the checking and assessing of the operational capability of equipment when preparing an electric passenger train for service
- The characteristics, capabilities and limitations of the equipment
- Problems that may occur when preparing an electric passenger train for service and appropriate action that can be taken to resolve the problems
- Operational safety requirements when preparing an electric passenger train for service
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others while preparing an electric passenger train for service
- Read and interpret instructions, procedures, information, labels and signs relevant to preparing an electric passenger train for service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to preparing an electric passenger train for service
- Work collaboratively with others when preparing an electric passenger train for service
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Select and use relevant equipment and communications technology when checking and assessing the operational capability of equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying typical faults/defects that may occur on electric passenger trains
  - assisting in checking and testing train equipment to workplace requirements
  - visually inspecting the interior of an electric passenger train
  - reporting and/or recording faults and inoperable equipment
  - completing preparation within agreed timeframes

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
- a range of work environments
- by day or night

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Purpose of equipment checking and inspection is to ensure:
- it is free from damage, leaks and obstructions that may prejudice safety or limit operational capability
- it operates within prescribed limits

Visual checks may include but are not limited to:
- pressure over/under specification
- fluid leaks
- temperature over/under specifications
- cracks, surface or structural faults or other damage
- tightness of bolts, fixtures and fittings within specifications

Records/results of pre-operation tests may include:
- details of faulty equipment or specific components
- action taken
- results of testing
- details of repair and maintenance work to be undertaken

Operational checks may be performed by:
- operating/checking the functionality of various pieces of safety and component equipment (where applicable)

Consultative processes may
- workplace personnel
RANGE STATEMENT

involve:
- supervisors and managers
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- high visibility clothing

Communication in the work area may include:
- two-way radios
- telephones/mobile phones
- train to base radio
- hand signals
- flags
- oral
- written instructions

Information/documents may include:
- workplace procedures and policies for the preparation of electric passenger trains
- manufacturers specifications for equipment/tools
- supplier instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from the applicable state/territory together with any nationally approved compliance codes and/or guidelines
- relevant standards, codes and regulations pertaining to the checking and operation of the equipment concerned
- relevant state OH&S legislation
- relevant state environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
RANGE STATEMENT

- workers compensation regulations

Competency Field B - Equipment Checking and Maintenance
TLIB3113B Diagnose and rectify minor faults on motive power units and rolling stock

Modification History
Release 1. Revised unit.
This unit replaces and is equivalent to TLIB3113A Diagnose and rectify minor faults on motive power units and rolling stock.

Unit Descriptor
This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults on motive power units and rolling stock in accordance with workplace requirements. It includes identifying maintenance and/or repair requirements, conducting minor maintenance and routine repairs, checking and reporting minor repairs and/or maintenance, and providing support in accordance with workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with workplace procedures and the regulations and safeworking codes of practice relevant to fault diagnosis and rectification. Work is performed under some supervision, generally within a team environment. It involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of equipment across a variety of operational rail transport contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency.  

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1. **Identify maintenance/repair requirements**
   - 1.1 Condition of rolling stock and/or motive power unit ancillary equipment is assessed as part of job role
   - 1.2 Faulty or damaged components or equipment are identified and assessed for component exchange or minor repair
   - 1.3 Equipment and tools required are identified and obtained
   - 1.4 Equipment is prepared and work areas are checked to ensure repair/maintenance/component exchange activities are carried out in a safe environment
   - 1.5 Faulty or damaged components or equipment that are not able to be repaired or exchanged are reported for further maintenance in accordance with workplace procedures

2. **Conduct minor maintenance and routine repairs**
   - 2.1 Minor repair/maintenance/component exchange are carried out in accordance with the manufacturers specifications and workplace procedures
   - 2.2 Equipment, tools and materials required are operated, applied and handled in accordance with OH&S requirements and manufacturers specifications to prevent injury and damage

3. **Check and report minor repairs/maintenance**
   - 3.1 Minor repair/maintenance/component exchange activities are checked for compliance with safety requirements and workplace procedures
   - 3.2 Equipment is checked to confirm that it has been restored to operational standards
   - 3.3 Repair/maintenance/component exchange activities are documented in accordance with workplace procedures and regulatory requirements
   - 3.4 Work area is checked for cleanliness and operational safety
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Relevant state/territory regulations, codes of practice and safeworking system requirements
- Relevant OH&S and environmental protection requirements
- Workplace procedures and policies for the diagnosis and repair of minor faults
- Typical minor repair problems that can occur, and related action that should be taken
- Tools and equipment used when diagnosing and rectifying minor faults and the procedures and precautions for their care, use and storage
- Workplace documentation and records requirements
- Procedures to be followed in the event of an emergency
- Workplace component and material supply system

Required skills:

- Communicate effectively with others when diagnosing and rectifying minor faults
- Read and interpret instructions, procedures, information and signs relevant to the identification, diagnosis and rectification of minor faults
- Complete documentation related to work activities
- Work collaboratively with others when identifying, diagnosing and rectifying minor faults
- Implement contingency plans for unplanned events that may occur when rectifying minor faults
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Operate tools and equipment when diagnosing and rectifying minor faults
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Assessment must include exercises which demonstrate competent performance of the following in a range of situations:

- carrying out checks of different types of motive power units and rolling stock
- identifying possible faults and defects and the appropriate remedial activities
- carrying out minor repair, maintenance and component exchange activities correctly

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Equipment, motive power units and rolling stock to be checked and maintained may include:**

- all classes of locomotives, motive power units, rail cars, wagons or carriages in service within Australian rail systems

**Minor maintenance/repair component exchange may include:**

- minor component change out
- changing flexible air hoses/hosebags
- auto-coupling knuckles
- brake blocks
- inspecting wheels and ancillary equipment in cabin or on rolling stock

**Safety equipment may include:**

- high visibility clothing
- sunscreen and sun glasses
- insect repellent
- gloves, safety headwear, mask and footwear
- portable radios
- flags and hand lamps
- safety glasses and hearing protection
- safety devices

**Consultative processes may involve:**

- workplace personnel including supervisors and managers
- union representatives
- industrial relations and OH&S specialists
- other train crew

**Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:**

- company procedures
- enterprise procedures
- workplace procedures
- established or standard procedures

**Contingency processes may relate to:**

- personal injury
- tool malfunctions

**Information/records may include:**

- workplace operational and technical instructions and procedures for the diagnosis and rectification of minor faults
- relevant regulations including state/territory safety codes of practice
- maintenance checklists and records for the diagnosis and rectification of minor faults
- tool/equipment manufacturers instructions, specifications and
Applicable regulations and legislation may include:

- recommended procedures
- precautions and procedures to be adopted to protect the environment when diagnosing and rectifying minor faults
- OH&S procedures
- relevant Australian Standards and certification requirements
- emergency procedures
- award, enterprise bargaining agreement, other industrial arrangements
- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Standard railway terminology
- Fundamentals of track structures and equipment
- Fundamentals of track layout and geometry
- Overhead and electrical components
- Types of rail track vehicles, trains and rolling stock
- Relevant communication systems and procedures
- Procedures for fault reporting

Required skills:

- Communicate effectively with others
- Interpret and follow operational instructions
- Interpret voltage readings for power supplies
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

• The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  • the underpinning knowledge and skills
  • relevant legislation and workplace procedures
  • other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and/or equipment, and/or
  • applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment, and/or
  • in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Track components may include:**
- rails, rail fastenings and welds
- sleepers and sleeper fastenings
- ballast
- formation and earthworks
- drainage pits
- cess or shoulder

**Track layout may include:**
- plain track
- gauge
- turnouts
- special track, including catchpoints/derails, expansion switches, diamond crossings and slips

**Trackside equipment may include:**
- signal posts
- signage
- kilometre posts
- relay huts
- trunking
- troughing
- point machines
- gantries
- level crossing equipment
- post/signal phones
- track stands
- train stops

**Infrastructure may include:**
- bridges
- tunnels
- level crossings
- stations
- platforms
- signal boxes
- safeworking cabins

**Overhead and electrical components may include:**
- catenary
- stanchions
- drop wire
- contact
- steady arm
- feeder
• spark gaps
• earth straps
• tension weights
• pantographs
• high voltage cables
• power supplies
• isolation points

Rail traffic may include:
• light locomotives
• locomotive hauled freight trains
• locomotive hauled passenger trains
• railcars
• electrical multiple units (EMUs)
• diesel multiple units (DMUs)

Rail track vehicles may include:
• road/rail vehicles
• maintenance vehicles
• track machines
• trolleys
• elevated platforms
• cherry pickers

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB3120A Test mechanical signalling equipment and isolate faults

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to test mechanical signalling equipment and isolate faults in accordance with safeworking and regulatory requirements and workplace procedures. It includes undertaking preparation tasks, conducting testing and/or isolation of equipment, checking equipment operation, and finalising the testing and/or isolation of equipment in accordance with workplace procedures and relevant regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the testing of mechanical signalling equipment and the isolation of faults.

Work is performed under minimal supervision, generally within a team environment. It involves the application of regulatory requirements and workplace procedures to the testing and the isolation of faults in mechanical signalling equipment.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare to test and/or isolate equipment | 1.1 Testing is appropriately sequenced in accordance with job schedule  
1.2 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite  
1.3 Location of equipment to be tested/isolated is determined from job specifications and diagrams  
1.4 Tools, equipment and testing devices needed to test and/or isolate are obtained in accordance with established procedures and checked for correct operation and safety |
| 2 Test and/or isolate equipment | 2.1 Initial visual check of operational equipment is performed to identify any equipment faults  
2.2 Identified equipment is isolated in accordance with relevant operational rules and procedures  
2.3 Established methods for dealing with unexpected situations are discussed with appropriate personnel and documented  
2.4 Unexpected situations are dealt with safely and with the approval of an authorised person |
| 3 Check equipment operation | 3.1 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures  
3.2 Authorised equipment check is carried out in accordance with operating procedures to identify any equipment faults  
3.3 Operational effectiveness of equipment is confirmed through observation during train movements if required  
3.4 Equipments faults are correctly identified, recorded and appropriate corrective action is taken  
3.5 Service equipment is locked and secured to prevent unauthorised access  
3.6 Work completion is documented and appropriate personnel are notified in accordance with established procedures |
| 4 Finalise testing and/or isolation of equipment | 4.1 Test results are documented in accordance with organisation requirements  
4.2 Faulty or replaced equipment is tagged and despatched to maintain equipment spares  
4.3 Fully operational equipment is handed over to approved personnel ensuring that hand over procedures are accurately followed and final documentation is completed |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of regulatory requirements &/or organisation's procedures where applicable to the testing of mechanical signalling equipment and the isolation of faults
- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures and policies for the testing of mechanical signalling equipment and the isolation of faults, including the tagging and reporting of faulty equipment and components
- Focus of operation of work systems, equipment, management and site operating systems for the testing of mechanical signalling equipment and the isolation of faults
- Fault-finding techniques including identification of cost/time effective rectification procedures
- Tools, meters, gauges and equipment used during the testing of mechanical signalling equipment and the isolation of faults and the precautions and procedures that should be followed in their use
- Guidelines relating to the safe use of machinery and equipment including the tagging of unserviceable or damaged items
- Faults that may occur with equipment, and appropriate action that can be taken to report and/or rectify the identified faults in the equipment or its components
- The characteristics, capabilities and limitations of the equipment
- Operational safety requirements for the equipment concerned
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Documentation and record requirements

Required skills:

- Communicate effectively with others when testing mechanical signalling equipment and isolating faults
- Read and interpret instructions, procedures, information and signs relevant to the testing of mechanical signalling equipment and the isolation of faults
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the testing of mechanical signalling equipment and the isolation of faults
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when testing mechanical signalling equipment and isolating faults
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when testing mechanical signalling equipment and isolating faults in accordance with regulatory requirements and workplace procedures
Required skills:

- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant meters, gauges, equipment and tools when testing mechanical signalling equipment and isolating faults
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Apply basic mechanical, hydraulic, pneumatic and electrical awareness to testing and fault identification activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - preparing to test and/or isolate equipment
  - testing and/or isolating equipment
  - checking equipment operation
  - finalising testing and/or isolation of equipment

Context of and specific resources

- Performance is demonstrated consistently over a period
EVIDENCE GUIDE

for assessment

of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of external work environments

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Work may be conducted in:

- limited or restricted spaces
- exposed conditions
- controlled or open environments

Tests and the isolation of faults may be performed:

- on a range of equipment used in transport industries
RANGE STATEMENT

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Tests may include but are not limited to:
- tests of operational performance
- tests as part of routine servicing
- identification of causes of poor or out-of-specification performance
- tests following servicing and/or adjustment of equipment

Records/results of tests may include:
- details of faulty equipment or specific components
- details of action taken
- results of testing and associated recommendations
- details of repair and maintenance work to be undertaken
- defect (non-conformance)

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- a fire or explosion
- faulty equipment/tools
- trains
- motor vehicles
- plant and machinery

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company standards and procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- equipment manufacturers
- site visitors
- contractors
- technical personnel

Communication in the work area may include:
- phone/mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications
RANGE STATEMENT

Information/documents may include:

- workplace procedures and policies for the checking and assessment of the equipment concerned
- specifications for equipment/tools
- equipment identification labels, serial numbers
- supplier and/or client instructions
- material safety data sheets (MSDSs)

Applicable regulations, legislation and codes may include:

- relevant state/territory regulations, codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Basic railway terminology
- Fundamentals of track layout
- Overhead and/or electrical components where applicable
- Relevant safety, occupational health and safety (OH&S) and environmental procedures and regulations

**Required skills:**

- Communicate effectively with others
- Interpret and follow operational instructions
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Motive power unit types may include:
- diesel electric
- diesel hydraulic
- electric
- hybrid
- electric multiple unit
- diesel multiple unit
- steam

Air/vacuum equipment may include:
- compressor
- exhauster
- reservoirs
- pipes
- hoses
- isolating cocks/valves

Electrical equipment may include:
- generators
- motors
- batteries and isolating switches
- wiring
- gauges
- circuit breakers
- pantographs

Mechanical equipment may include:
- engine
- pumps
- couplers/uncoupling devices

Control systems may include:
- brake valves
- throttle
- reverser
- dynamic brake

Cooling and lubricating systems may include:
- radiators
- pipes
- pumps
- header tanks
- radiator fans
- filling points

Auxiliary equipment may include:
- sanding equipment
- headlights
- ancillary lighting
- blowers
Safety system equipment and components may include:

- crew comfort
- wipers and washers
- horns
- vigilance control system
- deadman devices
- data loggers
- audible track warning devices
- flags
- chocks

**Unit Sector(s)**

Not applicable.

B – Equipment Checking and Maintenance
TLIB3124A Apply awareness of steam locomotive fundamentals

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to apply an awareness of steam locomotive fundamentals including configurations, components, types of equipment and their basic operation. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit is intended as an introduction to steam locomotives for people entering the rail industry who will be working on or around them.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify basic locomotive configurations
   1.1 Different locomotive configurations are identified
   1.2 Basic layout of different types of locomotive is identified

2 Identify boiler construction and components
   2.1 Different boiler construction and configurations are identified
   2.2 Primary boiler fittings are identified
   2.3 Boiler secondary fittings are identified

3 Identify air/vacuum systems and operation
   3.1 Basic air/vacuum components relevant to locomotive type are located and identified
   3.3 Uses and operation of air/vacuum system are identified

4 Identify electrical systems and operation
   4.1 Basic electrical components relevant to locomotive type are located and identified
   4.2 Uses and operation of electrical system/s are identified

5 Identify mechanical systems and operation
   5.1 Basic mechanical components relevant to locomotive type are located and identified
   5.2 Uses and operation of mechanical system are identified

6 Identify control systems and operation
   6.1 Basic control system components relevant to locomotive type are located and identified
   6.2 Uses and operation of control systems are identified

7 Identify lubricating systems and operation
   7.1 Basic lubricating systems and components relevant to locomotive type are located and identified
   7.2 Uses and operation of lubricating systems are identified

8 Identify auxiliary equipment and its operation
   8.1 Basic auxiliary equipment components relevant to locomotive type are located and identified
   8.2 Uses and operation of auxiliary equipment are identified
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**
- Basic railway terminology
- Fundamentals of track layout
- Relevant safety, OH&S and environmental procedures and regulations

**Required skills:**
- Communicate effectively with others
- Interpret and follow operational instructions
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying equipment on a single steam locomotive

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Locomotive configurations may include:
- wheel arrangements
- articulation
- fuels

Boiler construction and configuration may include:
- smokebox layout
- exhaust systems
- tubes, tube plates and tube nest arrangements
- stays
- superheater equipment
- steam regulators and associated equipment
- firebox and combustion chamber and associated equipment

Primary boiler fittings may include:
- sight glasses
- safety valves
- feed water valves
- pressure gauges
- blowdown
- inspection openings
- steam ranges and manifolds

Secondary boiler fittings may include:
- feed water heaters
- injectors
- stokers
- oil burners
- ash pan
- syphons and arch tube
- brick arch and refractory
- fusible plugs

Air/vacuum equipment may include:
- compressor
- exhauster
- reservoirs
- pipes
- hoses
- isolating cocks/valves

Electrical equipment may include:
- turbo generators
- batteries and isolating switches
- wiring
- gauges
- radio/communications equipment
Mechanical equipment may include:
- engine and components
- motion and valve gear
- couplers/uncoupling devices
- compensating gear
- suspension
- between frame components

Control systems may include:
- brake valves
- throttle
- reverser
- firing/stoker controls

Lubricating systems may include:
- lubrication types
- lubrication equipment

Auxiliary equipment may include:
- sanding equipment
- whistle
- warning devices
- headlights
- ancillary lighting

**Unit Sector(s)**

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Brake systems, their components and their operation
- Communication protocols
- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S procedures and regulations
- Types of brake tests and their purpose
- When it is applicable to release train brake

Required skills:

- Apply rail safety practices and regulations
- Communicate effectively with others when testing heritage locomotive or train braking systems
- Interpret and follow operational instructions
- Modify activities depending on operational contingencies, risk situations and environments
- Promptly report any identified problems, faults or malfunctions when testing heritage locomotive and train braking systems in accordance with regulatory requirements and organisational procedures
- Read and interpret instructions, procedures, information and signs relevant to testing heritage locomotive and train braking systems
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others when testing heritage locomotive and train braking systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying procedures to test heritage train brake systems
  - assisting with a heritage train brake test
  - applying and removing handbrakes and brakes on a heritage locomotive

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- Access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations conducted by day or night in:
- all weather conditions
- full range of light conditions

Locations for tests may include:
- heavy traffic
- yards or sidings
- station platforms

Tests may include:
- air continuity test
- modified brake test
- train brake test

Safety and protective equipment may include:
- high visibility clothing
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- hearing protection

Information/documents may include:
- workplace procedures, instructions and job specifications
- manufacturer specifications and standards
- brake inspection and testing documentation
- safeworking documentation
- brake test certification
- equipment operations manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards
Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB3129A Conduct pre-movement checks on rolling stock

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to conduct pre-movement checks on rolling stock in accordance with relevant workplace practices, regulations and codes of practice. It includes conducting pre-movement checks, moving and stabling the rolling stock in accordance with organisational requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit applies to people required to carry out these activities as part of a maintenance role within a defined location.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Carry out pre-movement checks
   1.1 Allocation of rolling stock is checked in conjunction with appropriate personnel
   1.2 Rolling stock to be inspected and prepared is located
   1.3 Completion of all maintenance activities is confirmed
   1.4 Checks for safety controls are conducted in accordance with organisational procedures
   1.5 Internal and external integrity checks are conducted in accordance with organisational procedures
   1.6 Where required, fluid levels are checked and appropriate action is taken as required

2 Move rolling stock
   2.1 Rolling stock is shunted in accordance with manufacturer instructions and/or organisational procedures, and any faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up
   2.2 For critical or serious equipment faults that cannot be readily rectified, rolling stock shunt is halted, faulty equipment isolated and tagged, and problem is reported for rectification
   2.3 Functionality of equipment is interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
   2.4 Where required, fluid levels are rechecked after starting and appropriate action is taken if required

3 Stable rolling stock
   3.1 Correct clearances for stabling location are confirmed
   3.2 Rolling stock is secured in accordance with organisational procedures
   3.3 Where required, personal or equipment lockouts are applied in accordance with organisational procedures
   3.4 Where applicable, appropriate documentation is completed in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Procedures for managing and controlling hazardous situations when preparing and starting up rolling stock
- Relevant occupational health and safety (OH&S) and environmental procedures and relevant regulations
- Requirements for completing relevant documentation when inspecting and preparing rolling stock

Required skills:

- Adapt to differences in rolling stock and associated equipment and procedures
- Communicate effectively with others when inspecting and preparing rolling stock
- Document outcomes of inspecting rolling stock
- Interpret and follow instructions and prioritise work
- Modify activities depending on differing operational contingencies, risk situations and environments
- Read and interpret instructions, procedures, information and signs relevant to visually inspecting and preparing rolling stock
- Work collaboratively with others inspecting and preparing rolling stock
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying who is responsible for authorising the movement of rolling stock
  - identifying all activities carried out prior to moving rolling stock
  - identifying rolling stock stabling requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rolling stock may include:
- freight wagons
- passenger cars
- railcars
- track maintenance equipment

Inspecting rolling stock may include:
- lights
- couplings
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- electrical cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

Relevant personnel may include:
- train crews
- train controllers and signallers
- depot coordinators
- yard masters, supervisors
- contractors
- third parties
- maintenance personnel
- cleaning personnel

Unit Sector(s)

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to conduct inspection of safeworking procedures and infrastructure in accordance with safeworking and regulatory requirements and workplace procedures, including planning and preparing for the inspection, inspecting the safeworking infrastructure, inspecting for compliance with safeworking procedures, and completing required reports and taking remedial action in accordance with workplace and regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of regulatory requirements and operational principles and procedures to conduct an inspection of safeworking procedures and infrastructure as part of workplace activities across a variety of operational contexts within the Australian rail system. Safeworking procedures and infrastructure inspected may include any of those in use within Australian rail system.

| | 2.2 Safeworking facilities are checked for correct operation and maintenance |
| 3 Inspect for compliance of safeworking procedures | 3.1 Safeworking forms are checked for sufficient supply and correct completion  
| | 3.2 Work practices of relevant workers are checked to ensure compliance with safeworking procedures |
| 4 Complete reports and take remedial action | 4.1 Reports are completed in accordance with workplace requirements  
| | 4.2 Where necessary, follow-up action is taken to ensure safe passage of train and equipment |

# Required Skills and Knowledge

## REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the inspection of safeworking procedures and infrastructure
- Problems that may occur during the inspection of safeworking procedures and infrastructure and action that can be taken to report or resolve the problems
- Hazards that may be identified during an inspection of safeworking procedures and infrastructure and ways of controlling the risks involved
- Safeworking system requirements/regulations
- Relevant Australian Standards, technical specifications and manuals
- Documentation/authorisation processes and procedures
- Material safety data sheets
- Hazardous situations associated with workplace activities and ways of controlling the risks
REQUIRED KNOWLEDGE AND SKILLS

involved

- Relevant records procedures
- Emergency procedures manuals
- Operational equipment manuals and operating instructions

Required skills:

- Communicate effectively with others when inspecting safeworking procedures and infrastructure
- Read and interpret instructions, procedures, information and signs relevant to the inspection of safeworking procedures and infrastructure
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the inspection of safeworking procedures and infrastructure
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when inspecting safeworking procedures and infrastructure
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when inspecting safeworking procedures and infrastructure in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when inspecting safeworking procedures and infrastructure
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in situations and equipment in accordance with standard operating procedures
- Identify, select and use relevant office equipment required when inspecting safeworking procedures and infrastructure
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • by day or night
• in all relevant weather conditions

Work may be conducted in: • restricted spaces or exposed conditions
• controlled or open environments

Work may involve exposure to: • chemicals
• dangerous or hazardous substances
• movements of equipment, materials and vehicles

Conditions under which examination is undertaken may include: • full range of weather conditions
• full range of light conditions
• typical running temperatures of trains

Infrastructure to be inspected may include: • telephones
• catchpoints
• scotchblocks
• rigid levers
• Annett keys
• trackwork and perway signs
• signals and marker plates
• station limit and station indicator boards
• warning bells, boomgates, flashlights, level crossing signage
• safeworking instruments

Facilities to be inspected may include: • train order and pilot key sheds
• signal cabins/boxes

Relevant workers may include: • workplace personnel
• contractors

Communication equipment may include: • two-way radios
• computers
• telephones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: • company procedures
• enterprise procedures
• organisational procedures
• established procedures

Safety and protective equipment may include: • high visibility clothing
• hearing protection
• gloves
• sunscreen
RANGE STATEMENT

- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- working timetables
- track layouts
- signalling diagrams
- written advice
- inspection schedules
- reports
- maintenance notices, records and requests
- relevant Australian Standards
- manufacturers or workplace equipment operation manuals
- operational instructions, policies and workplace procedures
- emergency procedure manuals
- two-way radio operation procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

Unit Sector(s)
Not Applicable

Competency Field

Competency Field  B - Equipment Checking and Maintenance
TLIB4071A Install and maintain pole mounted switches and transformers

Modification History
Not Applicable
Unit Descriptor

This unit involves the skills and knowledge required to install and maintain pole mounted switches and transformers in accordance with safeworking and regulatory requirements and workplace procedures, including planning the installation and maintenance, preparing the worksite, installing switches and transformers in accordance with workplace specifications, maintaining switches and transformers, and completing all work in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfill the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to the installation and maintenance of pole mounted switches and transformers as part of workplace activities across a variety of operational contexts within the Australian rail system.

Persons working on energised overhead or underground systems or electrical equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent to carry out the work involved.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan installation and maintenance | 1.1 Works order is analysed and confirmed, if necessary by site inspection  
1.2 Resources required for the job are identified and scheduled according to organisation procedures  
1.3 Switch equipment and transformer is transported to the worksite  
1.4 Liaison and communication issues are resolved according to organisation negotiation procedures |
| 2 Prepare the worksite | 2.1 Work plan and resources required are confirmed/checked at the work-site  
2.2 Personnel participating in the activity, including plant operators and contractors, are fully briefed  
2.3 Road signs, barriers and warning devices are positioned to ensure a safe worksite  
2.4 Safeworking practices are observed on or about the running track/line  
2.5 Work-site is laid out in accordance with the work plan so as to ensure a minimum of waste and rework  
2.6 Systems/circuits are isolated as required, proved safe to work on in accordance with works order, and electrical permits are received/accepted/returned |
| 3 Install switches and transformers | 3.1 Switch equipment, transformers and earthing systems are installed and connected  
3.2 Transformer is tested and voltage output adjusted  
3.3 Visual inspection is carried out to confirm that equipment/apparatus is in a safe condition to test and/or commission  
3.4 Commission is carried out according to works order/plan |
| 4 Maintain switches and transformers | 4.1 Maintenance requirement is confirmed by detailed diagnosis at site  
4.2 Maintenance, including removal, repair, replacement and reinstatement, is carried out in accordance with the works order and the condition of equipment |
| 5 Complete the work | 5.1 Worksite is rehabilitated  
5.2 Appropriate authority is notified on completion of work  
5.3 Records and documentation for updating system data are completed |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the installation and maintenance of pole mounted switches and transformers
- Problems that may occur during the installation and maintenance of pole mounted switches and transformers
- Hazards that may exist when installing and maintaining pole mounted switches and transformers
- Switching or de-energising procedures and maintenance operations
- Characteristics, capabilities and uses of types of equipment included in the range of variables
- Visual inspection procedures
- Distribution system earthing procedures
- Relevant organisation and commercial publications, including construction manuals and technical instructions as they relate to the installation and maintenance of electrical equipment
- The responsibilities and rights of other authorities, clients and landowners
- Statutory/organisation traffic control requirements, rigging regulations and guidance signals for plan operations
- Live line working techniques and equipment
- Relevant electrical/electronic theory and principles
- Relevant recording and documentation procedures
- Relevant sections of Australian Standards AS 4292 and AS 3000

Required skills:

- Communicate effectively with others when installing and maintaining pole mounted switches and transformers
- Read and interpret instructions, procedures, information, technical data, manuals and drawings relevant to the installation and maintenance of pole mounted switches and transformers
- Interpret and follow operational instructions and prioritise work
- Communicate plans, intentions and safety criteria to others
- Complete documentation related to the installation and maintenance of pole mounted switches and transformers
- Operate electronic communication equipment to required protocol
Required skills:

- Perform calculations required for installation procedures
- Work collaboratively with others when installing and maintaining pole mounted switches and transformers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when installing and maintaining pole mounted switches and transformers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use hand and power tools and equipment
- Select and use test equipment and testing techniques
- Apply appropriate repair/testing practices and procedures
- Rig/sling loads for lifting
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Work may involve exposure to:
- chemicals
- dangerous or hazardous substances
RANGE STATEMENT

Switchgear covered by the unit may include:
- movements of equipment, materials and vehicles
- sectionalisers
- dropout fuses
- disconnectors
- isolators
- air break switches
- links
- fuses
- fuse switches
- circuit-breakers

Electrical apparatus may include:
- transformers
- surge diverters
- earthing systems

Liaison may involve:
- personnel
- plant
- equipment
- transport

Communication equipment may include:
- two-way radios
- computers
- telephones

Installation and maintenance work may be performed with:
- the system energised, subject to the organisation's procedures including those for the use of live line working techniques and equipment

Maintenance may include:
- the removal, repair and replacement of switching equipment and transformers including the repair, replacement and cleaning of associated hardware

Safety and protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices

Depending on the type of company procedures
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may include:

- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, policies and workplace procedures
- works orders, including drawings, plans, materials and resource lists
- equipment/operational management information
- technical and engineering instructions
- manufacturers or workplace equipment operation manuals and specifications
- emergency procedure manuals
- two-way radio operation procedures
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292 and AS 3000
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- ADG Code and associated requirements

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB4076A Inspect and prepare a heritage motive power unit

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to inspect and prepare a heritage motive power unit in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice. It includes the checking and preparing of the motive power unit, visually examining the motive power unit, conducting in-cab checks, and starting and positioning the motive power unit for service in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under some supervision, generally within a team environment.

| 1 Start heritage motive power unit | 1.1 Roster is checked and interpreted for day's train driving activities  
1.2 Allocation of motive power units is checked in conjunction with train controllers and roster clerk  
1.3 Motive power unit to be inspected and prepared is located in the yard  
1.4 Motive power unit is started in accordance with manufacturers instructions and any operating faults are recognised, diagnosed, reported and recorded in appropriate records for follow-up  
1.5 In the case of safety, critical or serious equipment faults that cannot be readily rectified, the motive power unit is shut down, the faulty equipment isolated and tagged and the problem reported for rectification  
1.6 All instruments and gauges are observed and readings interpreted to confirm effective operation, including air and electrical. Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation  
1.7 Fluid levels are rechecked after starting and appropriate action taken if required  
1.8 Pre-departure checks are carried out to ensure heritage motive power unit is braking and powering effectively and is safe to move |
| 2 Prepare for motive power unit work activities | 2.1 Roster is checked and interpreted for day's train driving activities  
2.2 Allocation of motive power units is checked as per notices in conjunction with train controllers and roster clerk  
2.3 Trackside safety and basic electrification awareness procedures are followed while locating the allocated motive power unit in the yard  
2.4 Motive power unit inspection and preparation duties are identified and interpreted  
2.5 Train schedules and notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures  
2.6 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional  
2.7 Required personal protective equipment is obtained for use during the day's train driving activities  
2.8 Motive power unit to be inspected and prepared is located in the yard |
| 3 Inspect and prepare | 3.1 Features, functions and location of motive power unit and |
### ELEMENT
motive power unit

### PERFORMANCE CRITERIA
associated equipment are identified

3.2 Log book is checked to confirm serviceability of unit

3.3 Preparation and safety checks are conducted, in accordance with OH&S and other workplace policies and procedures

3.4 Motive power unit, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements

3.5 Availability of appropriate fuel, lubricating oils, water, coolant and sand quantities (where applicable) are checked against journey requirements and appropriate action is taken to replenish them if required

3.6 Relevant OH&S and regulatory requirements are followed

### Conduct in-cab checks

4.1 Motive power unit is checked in correct sequence and all equipment is confirmed to be operating to optimum requirements

4.2 Cab layout is checked and confirmed to meet operating requirements

4.3 Pre-departure mechanical checks are correctly performed and correct functioning of all equipment is confirmed as per workplace procedures and manufacturers operating requirements

4.4 Supervisory controls and indicators are checked to ensure they are functioning correctly and appropriate action is taken if they are not working correctly

4.5 Communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not working correctly

4.6 Seat, windows, blinds, air conditioners, heaters and other personal in-cab equipment are checked and adjusted for correct functionality, safety and comfort

4.7 Auxiliary equipment is checked and is confirmed to be operational in accordance with operating requirements

4.8 Fire extinguisher, emergency toolbox and other required equipment are checked to confirm that they are in position and meet operational requirements

### Complete documentation

5.1 All required documentation concerning the inspection of the motive power unit is completed in accordance with workplace procedures and regulatory requirements

5.2 Log book and other service records on the motive power unit are completed in accordance with workplace procedures and regulatory requirements

### Position motive power

6.1 Authority to move and position heritage motive power unit is
ELEMENT

PERFORMANCE CRITERIA  

obtained and relevant personnel are advised of intention and procedures  

6.2 Motive power unit is operated in accordance with standard procedures and regulatory requirements and within operating and operational constraints  

6.3 Motive power unit is positioned in accordance with operational requirements and directions  

6.4 Motive power unit performance is monitored during operation in order to confirm effective operation or to identify defects  

6.5 Equipment defects are identified, reported, rectified and recorded or relevant personnel are advised for assistance  

6.6 Relevant OH&S and regulatory requirements are followed to ensure safety and to prevent injury and damage  

6.7 Train controller and other relevant personnel are advised that the motive power unit is secured in the required position and is ready for service  

Required Skills and Knowledge  

REQUIRED KNOWLEDGE AND SKILLS  

This describes the essential knowledge and skills and their level required for this unit.  

Required knowledge:  

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations  
- Relevant OH&S and environmental procedures and regulations  
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems  
- Visual inspection procedures for a heritage motive power unit  
- In-cab pre-operational checks for a heritage motive power unit  
- Start-up procedures for motive power units  
- Operating procedures for motive power units  
- Braking and safety system procedures for motive power units  
- Operating controls to start, accelerate, decelerate and stop a motive power unit  
- Procedures for adjusting controls to optimise the operation of a motive power unit  
- Procedures for managing and controlling hazardous situations when preparing and starting up a motive power unit
REQUIRED KNOWLEDGE AND SKILLS

- Procedures for starting and operating auxiliary systems on a motive power unit
- Procedures for checking fuel and fluid levels and carrying out lubrication processes on a motive power unit
- External features of a motive power unit that must be checked during a pre-operational visual inspection
- Procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on a motive power unit and related action that should be taken
- Requirements for completing relevant documentation when inspecting and preparing a heritage motive power unit
- Procedures to be followed in the event of an emergency
- Functions of all supervisory indicators and controls and related checks for correct operation
- Communication equipment checks
- Lubrication requirements for a motive power unit
- Cleaning requirements for a motive power unit
- Functions of auxiliary systems on a motive power unit and related checks for correct operation
- Fuel tank capacity and range (where applicable)
- Procedures for raising and lowering a pantograph on electric motive power units
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others when inspecting and preparing a heritage motive power unit
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation, start-up and positioning of a motive power unit
- Document outcomes of visual inspection of a motive power unit
- Complete documentation related to the preparation and positioning of a motive power unit
- Work collaboratively with others as part of a train crew
- Interpret and follow instructions and prioritise work
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

 environments

- Adapt to differences in motive power units and associated equipment and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Check and replenish fluids and carry out lubrication requirements on a motive power unit
- Conduct a visual inspection of a motive power units and associated equipment
- Prepare a motive power unit prior to service
- Position a motive power unit in readiness for service

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
EVIDENCE GUIDE

registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Heritage motive power units may include all heritage motive power units in service within Australian rail systems and may include:
- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)

Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights
- lights
- hoses
- couplings
- destination boards (electric urban train services)
RANGE STATEMENT

- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- pantographs (in case of electric MPUs)
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

In-cab pre-operational checks will include:

- brake checks
- electro-pneumatic brake cut out test (for electric urban trains)
- driver's safety control test
- functionality checks of supervisory controls and indicators
- traction
- in-cab check of communication equipment (depending on type of MPU this may include radio, intercom, PA systems, passenger emergency intercom, passenger emergency systems, etc.)
- radio communication check with train controller
- seat
- windows and blinds
- air conditioners and heaters
- door locks
- fire extinguishers
- emergency toolbox
- passenger service resources

Electric heritage motive power unit start-up sequence will include:

- check that handbrake is on
- check log book
- switch batteries on
- switch auxiliary compressor on
- pantograph up
- close main circuit breaker
- observes and interpret gauges (electric and air)
- take appropriate action if gauge readings outside normal operation range
- recheck fluid levels
RANGE STATEMENT

Diesel motive power unit start-up sequence will include:
- start heritage motive power unit
- check log book
- check all fluid levels (including radiator, crankcase oil, water, compressor oil and governor oil) and take appropriate action if outside required levels
- battery switch on
- isolation switch to 'start'
- all circuit breakers on
- handbrake on
- observes and interpret gauges (electric and air)
- take appropriate action if gauge readings outside normal operation range
- recheck fluid levels
- start heritage motive power unit

Risk minimisation may require differentiating between faults, defects and deficiencies that:
- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:
- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Safety and personal protective equipment may include:
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of heritage motive power unit may involve:
- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock

Information and documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- notices in drivers' notice board/box
- reference cards
- train driver roster sheet and/or table card
- operational instructions, policies and procedures:
  - emergency procedures manual
  - conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to inspect and prepare a heritage steam locomotive with relevant workplace practices, rail regulations and codes of practice. It includes the checking and preparation of a heritage steam locomotive, visually examining the locomotive, conducting in-cab checks, and moving and positioning the locomotive for service in accordance with workplace requirements. This unit replaces part of the previous unit TDTC1401A Prepare, operate, monitor and stable steam locomotive. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to inspect, prepare and position a steam locomotive as part of workplace activities across a variety of operational contexts in the Australian heritage rail system.

Licensing/Regulatory Information

Employability Skills Information
Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Light fire and raise steam** | 1.1 Roster is checked and interpreted for day's train driving activities  
1.2 Allocation of locomotives is checked as per notices and in conjunction with train controllers and roster clerk  
1.3 Locomotive to be inspected and prepared is located in the yard  
1.4 Pre-light-up procedures applicable to the type of fire box are identified and followed to enable safe boiler operation  
1.5 Light-up procedures and safety practices are followed to build up steam within the boiler and to ensure 'smoking' is minimised  
1.6 Instruments and equipment are monitored to ensure safe and efficient operation as steam pressure is raised to operating level  
1.7 Where a problem is indicated, action is taken to determine the cause and to rectify or report the situation |
| **2 Prepare for steam locomotive work activities** | 2.1 Roster is checked and interpreted for day's train driving activities  
2.2 Allocation of locomotives is checked as per notices and in conjunction with train controllers and roster clerk  
2.3 Trackside safety and basic electrification awareness procedures are followed while locating the allocated locomotive in the yard  
2.4 Locomotive inspection and preparation duties are identified and interpreted  
2.5 Train schedules and notices and other operational and regulatory documentation is accessed and interpreted  
2.6 Communication equipment required for the day's operations is obtained and checked to ensure that it is functional  
2.7 Required personal protective equipment is obtained for use during the day's train driving activities  
2.8 Locomotive to be inspected and prepared is located in the yard |
| **3 Inspect and prepare locomotive** | 3.1 Features, functions and location of locomotive and associated equipment are identified  
3.2 Log book is checked to confirm serviceability of locomotive  
3.3 Preparation and safety checks are conducted, in accordance with OH&S and other workplace policies and procedures  
3.4 Locomotive, kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported as per workplace procedures and regulatory requirements  
3.5 Availability of appropriate fuel, lubricating oils, water and sand quantities (where applicable) are checked against journey requirements and appropriate action is taken to replenish them if necessary |

ELEMENT  PERFORMANCE CRITERIA

6.7 Train controller and other relevant personnel are advised that the locomotive is secured in the required position and is ready for service

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Relevant OH&S and environmental procedures and regulations
- Locomotive controls, instruments and indicators and their purpose, location and use
- Inspection procedures for a heritage steam locomotive
- In-cab pre-operational checks for a heritage steam locomotive
- Procedures for lighting fire and raising steam on heritage steam locomotives
- Operating procedures for locomotives
- Braking and safety system procedures for steam locomotives
- Operating controls to start, accelerate, decelerate and stop a heritage steam locomotive
- Procedures for adjusting controls to optimise the operation of a heritage steam locomotive
- Procedures for managing and controlling hazardous situations when preparing and firing up a heritage steam locomotive
- Procedures for starting and operating auxiliary systems on a locomotive
- Procedures for checking fuel and fluid levels and carrying out lubrication processes on a locomotive
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- External features of a steam locomotive that must be checked during a pre-operational visual inspection
- Procedures for minor maintenance including cleaning, brake shoe/pad replacement and sand box requirements
- Procedures for identifying equipment defects, assessing and reporting for appropriate action
- Typical defects that can occur on a steam locomotive and related action that should be taken
- Requirements for completing relevant documentation when inspecting and preparing a steam locomotive
REQUIRED KNOWLEDGE AND SKILLS

- Procedures to be followed in the event of an emergency
- Functions of all supervisory indicators and controls and related checks for correct operation
- Communication equipment checks and operating procedures
- Lubrication requirements for a heritage steam locomotive
- Cleaning requirements for a heritage steam locomotive
- Functions of auxiliary systems on a heritage steam locomotive and related checks for correct operation
- Fuel capacity and range (where applicable)
- Local procedures and operating requirements
- Procedures for operating communications equipment with required protocol

Required skills:

- Communicate effectively with others when inspecting and preparing a heritage steam locomotive
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures and information and signs relevant to the visual inspection, preparation and positioning of a heritage steam locomotive
- Document outcomes of visual inspection of a heritage steam locomotive
- Complete documentation related to the preparation and positioning of a steam locomotive
- Work collaboratively with others as part of a train crew
- Interpret and follow instructions and prioritise work
- Identify and assess steam locomotive defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in steam locomotives and associated equipment and procedures
- Monitor and anticipate operational problems and hazards and take appropriate action
- Check and replenish fluids and carry out lubrication requirements on a steam locomotive
- Conduct an inspection of a steam locomotives and associated equipment
- Prepare a steam locomotive prior to service
- Light fire and raise steam on a steam locomotive
- Position a steam locomotive in readiness for service
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Heritage steam locomotives may include:
- any heritage steam locomotives in service within Australia

Equipment on a heritage steam locomotive may include:
- steam locomotive instrumentation (gauges)
- feed water controls
- boiler controls and safety devices
- braking systems
- driving and other operational controls
- communication systems
- warning equipment
- ancillary systems
- vigilance systems
- traction systems
- head and marker lights

Communications equipment may include:
- portable and fixed two way radio
- mobile phone

 Inspection of a heritage steam locomotive may include:
- lights
- hoses
- couplings
- brake equipment
- wheels
- seals
- sand and fuel
- glass windows and doors
- audible faults (e.g. hiss of escaping air or steam)
- visible faults (e.g. oil leaks, tears and cracks)

Pre-operational checks will include:
- brake checks
- driver's safety control test
- functionality checks of supervisory controls and indicators
- check of communication equipment (depending on type of locomotive, this may include radio, passenger emergency systems, etc.)
- radio communication check with train controller
- windows and blinds
- fire extinguishers
- emergency toolbox
RANGE STATEMENT

Auxiliary equipment may include:

- steam regulator
- cab sprinkler
- gauges
- generator
- sandboxes
- whistle
- steam turbine generator
- all ancillary valves
- hand brake
- injectors
- lubricators
- gauge glasses
- blower
- damper
- cylinder cocks
- mechanical stoker
- oil burning apparatus

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures

- standard operating procedures
- company procedures
- enterprise procedures

Unit Sector(s)

Not Applicable

Competency Field

Competency Field B - Equipment Checking and Maintenance
TLIB4078A Carry out a train roll-by inspection

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to carry out a train roll-by inspection in accordance with organisational policies and procedures, and relevant safeworking requirements.

Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This activity includes conducting a roll-by inspection of crossing/passing trains from the ground or on-train and reporting and/or actioning the inspection results.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Prepare for roll-by inspection

1.1 Appropriate documentation is read to confirm inspection requirements

1.2 Position is taken at the planned time to complete roll-by inspection without personal risk

1.3 Conditions are assessed and necessary actions are taken to ensure roll-by inspection will be effective

### 2 Conduct a roll-by inspection

2.1 Identification and status of train is confirmed with relevant personnel

2.2 Condition of rolling stock is observed and identified faults are noted

2.3 Communication is maintained with relevant personnel to ensure safe, efficient and complete roll-by inspection

2.4 Inspection is conducted in accordance with work health and safety (WHS)/occupational health and safety (OHS), network owner and/or organisational policies and procedures to prevent injury and damage

2.5 Faults requiring immediate action are noted and appropriate action is taken to stop train

### 3 Report and action roll-by inspection results

3.1 Appropriate personnel are informed of results of roll-by and any faults or defects requiring rectification

3.2 Inspection results are recorded, reported and/or filed as required, in accordance with organisational policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Communication protocols
- Contingency management processes for unexpected situations that may arise when carrying out a roll-by inspection of a moving train
- Relevant Australian Standards
- Relevant information/documents such as:
  - dangerous goods documentation
  - mechanical condition advice forms
  - organisational procedures and instructions, and job specifications
  - out-of-gauge documents
  - wagon cards
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection regulations
- Relevant sections of the Australian Dangerous Goods (ADG) Code and regulations
- Relevant standard operating procedures
- Types of roll-by inspection of a moving train

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when carrying out a roll-by inspection of a moving train
- Identify safe position for person conducting roll-by inspection
- Implement contingency plans for unexpected situations that may occur when carrying out a roll-by inspection of a moving train
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
- Work collaboratively with others when carrying out a roll-by inspection of a moving train
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Locations for roll-by inspections may include:
- crossing loops
- main line
- sidings
- stations
- terminals
- yards

Conditions may include:
- adverse weather conditions
- dust
- limited access
- terrain
- time of day
- train movements
- vehicle movements

Appropriate personnel may include:
- ground support
- network control
- operational staff
- track workers
- train crew

Condition of rolling stock and load may include:
- air and electrical connections
- bearings
- brake equipment
- dangerous goods condition
- draw gear
- end of train markers/monitors
- lights (carriage, marker, tail, etc.)
- load condition (shifted, damaged, leaks, etc.)
- locking and securing devices
- loose or trailing items (chains, ropes, pins etc.)
- out-of-gauge conditions
- wheels and bogies

Safety and protective equipment may include:
- gloves
- hand lamps
- hearing protection
- high visibility clothing
- insect repellent
- portable radios
- safety:
- footwear
- glasses
- headwear
- sunscreen

Organisational procedures may include:
- company procedures
- enterprise procedures
- established procedures
- workplace procedures

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB4079A Conduct a general train examination

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to conduct a general train examination in accordance with organisational procedures and the requirements of relevant safeworking regulations and codes of practice.
Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit includes preparing for the examination, undertaking a general train examination including rolling stock integrity, components and loading, and reporting the examination results.
This unit applies to train drivers required to conduct a general train examination.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

#### 1 Prepare for a general train examination

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1</td>
<td>Location of examination and information about items to be examined are obtained and activities are planned</td>
</tr>
<tr>
<td>1.2</td>
<td>Materials, documentation and equipment required for the examination are identified, obtained and prepared for use</td>
</tr>
<tr>
<td>1.3</td>
<td>Examination is started at planned time and location to minimise delays to train availability</td>
</tr>
<tr>
<td>1.4</td>
<td>Train identification and status is confirmed and required actions are taken to ensure train remains safe for duration of examination</td>
</tr>
<tr>
<td>1.5</td>
<td>Individual responsibilities required to complete examination are agreed with relevant personnel</td>

</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Communication protocols related to the examination of a stationary train
- Contingency management processes
- Emergency procedures
- Guidelines relating to equipment capability and limitations
- Organisational policies and procedures for conducting a general train examination
- Relevant Australian Standards
- Relevant commonwealth and state/territory environmental protection regulations
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and regulations including codes of practice for manual handling
- Standards and specifications for all items requiring examination

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to conducting a general train examination
- Report and/or rectify any identified problems, faults or malfunctions identified during a general train inspection in accordance with regulatory requirements and organisational procedures
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Locations for examination may include:
- sidings
- terminals
- yard

Information may include:
- brake test certification
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- consist forms
- dangerous goods manifest
- driver’s advice (train load)
- equipment operations manuals
- inspection reports
- legislated rail safety requirements including state/territory Acts and regulations, and nationally approved compliance codes and/or guidelines
- load and weight records
- mechanical condition advice forms
- organisational procedures and instructions, and job specifications
- out-of-gauge documents
- repair cards and books
- transport instructions
- wagon cards

Items to be examined may include:
- air and electrical connections
- bearings
- bogie and associated equipment
- brake equipment
- coupler connections and associated equipment
- doors and or/ hatches
- draw gear
- frame or superstructure
- load condition (damage, leaks etc.)
- load securing devices (chains, ropes, pins etc.)
- locking and securing devices
- out-of-gauge conditions
- steps, handrails and handbrakes
- trailing items (ropes, hoses etc.)
- wheels and axles

Documentation may include:
- brake test certification
include:
- consignment cards
- dangerous goods documentation
- defect cards
- inspection reports
- load and weight records
- organisational procedures and instructions
- out of gauge documentation
- timetables
- train consist

Relevant safety equipment may include:
- derailers
- flags
- lighting
- isolation lockout protection process equipment
- personal safety tag
- signals
- warning signs

Relevant equipment may include:
- appropriate tools
- end of train marker or monitor
- job specific personal protective equipment
- portable radio
- road vehicle
- torch/hand lamp

Relevant personnel may include:
- additional train examiners
- customers
- maintenance personnel
- train controllers
- train crews
- other operational personnel

Personal protective equipment may include:
- gloves
- hearing protection
- high visibility clothing
- insect repellent
- safety:
- footwear
- glasses
- headwear
- sunglasses
- sunscreen

Organisational procedures may include:
- company procedures
- enterprise procedures
- established procedures
• workplace procedures

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB4080A Identify, diagnose and rectify minor faults on motive power units and rolling stock

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to identify, diagnose and rectify minor faults in accordance with workplace requirements, including identifying repair requirements, conducting minor repairs, checking and reporting minor repairs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with organisational procedures and the regulations and safeworking codes of practice relevant to fault diagnosis and rectification. Work involves the application of routine minor fault diagnosis and rectification procedures to maintain the safety and operation of motive power units and rolling stock across a variety of operational rail transport contexts.

Licensing/Regulatory Information
Refer to the Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify faults, defects and deficiencies
   1.1 Operational capability of rolling stock and/or motive power unit ancillary equipment is evaluated
   1.2 Faulty or damaged components or equipment are identified and assessed
   1.3 Impact of faults on work requirements is identified and safe operating capabilities are evaluated
   1.4 Work areas and equipment are made safe for inspection

2 Conduct minor repairs
   2.1 Minor repairs are carried out in accordance with manufacturer specifications and organisational procedures
   2.2 Equipment, tools and required materials are operated, applied and handled in accordance with work health and safety (WHS)/occupational health and safety (OHS) requirements and manufacturer specifications to prevent injury and damage

3 Check and report minor repairs
   3.1 Minor repairs are checked for compliance with safety
   3.2 Equipment is checked to ensure it conforms to organisational standards
   3.3 Repairs are recorded in appropriate records or logbooks
   3.4 Operational capabilities are monitored and further evaluated
   3.5 Communication is maintained with relevant personnel
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Communication protocols
- Emergency procedures
- Isolation systems
- Operational requirement of rolling stock
- Relevant information/records may include:
  - award, enterprise bargaining agreement, other industrial arrangements
  - checklists and records for diagnosing and rectifying minor faults
  - data and document control procedures
  - precautions and procedures to be adopted to protect the environment when diagnosing and rectifying minor faults, defects and deficiencies
  - relevant regulations including state/territory safety codes of practice
  - tool/equipment manufacturer instructions, specifications and recommended procedures
  - workplace operational and technical instructions and procedures for diagnosing and rectifying minor faults, defect and deficiencies
- Relevant Australian Standards and certification requirements
- Relevant organisational standards
- Relevant state/territory environmental protection legislation
- Relevant state/territory regulations, codes of practice and safeworking system requirements
- Relevant WHS/OHS legislation, regulations, codes and procedures
- Tools and equipment used when diagnosing and rectifying minor faults, defects and deficiencies and the procedures and precautions for their care, use and storage
- Typical minor repair problems that can occur, and related action that should be taken
- Workplace component and material supply system
- Workplace documentation and record requirements
- Workplace procedures and policies for the diagnosis and repair of minor faults, defects and deficiencies

**Required skills:**

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when rectifying minor faults, defects and deficiencies
- Conduct risk assessment to identify hazards
- Implement contingency plans when diagnosing and rectifying minor faults, defects and deficiencies
• Make decisions based on evaluation of faults, defects and deficiencies and operational capabilities
• Modify activities depending on differing operational contingencies, risk situations and environments
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Operate tools and equipment when identifying, diagnosing and rectifying minor faults, defects and deficiencies
• Read and interpret instructions, procedures, information and signs relevant to the identification, diagnosis and rectification of minor faults, defects and deficiencies
• Select and use required personal protective equipment conforming to industry and WHS/OHS standards
• Work collaboratively with others when identifying, diagnosing and rectifying minor faults, defects and deficiencies
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Assessment must include exercises that demonstrate competent performance of the following in a range of situations:

- carrying out checks of different types of motive power units and rolling stock
- identifying possible faults, defects and deficiencies, and appropriate remedial activities
- carrying out minor repairs correctly.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Minor repairs may include:
- broken or leaking brake and branch pipes
- changing brake blocks
- changing flexible air hoses/hosebags
- coupling systems, for example changing knuckles
- inspecting wheels and ancillary equipment in cabin or on rolling stock
- isolating equipment
- minor component change out
- safety systems

Safety equipment may include:
- communication equipment
- flags and hand lamps
- gloves, safety headwear, mask and footwear
- high visibility clothing
- insect repellent
- safety devices
- safety glasses and hearing protection
- sunscreen and sunglasses

Organisational procedures may include:
- company procedures
- enterprise procedures
- established or standard procedures
- workplace procedures

Contingency plans may include:
- emergency response plans
- instructions from infrastructure owner
- instructions from network controller
- personal injury

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB4081A Provision a motive power unit

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to provision a motive power unit prior to it entering service. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Activities for this unit include checking fuel, oil, water and sand levels, and replenishing them as required; restocking consumables; general housekeeping and completing documentation as required.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1  Check and replenish fuel, oil, water and sand levels                | **1.1** Motive power unit is positioned and secured at required service point in accordance with organisational requirements  
**1.2** Fuel, oil, water and sand levels are checked following manufacturer and/or organisational procedures  
**1.3** Where indicated, fuel, oil, water and sand levels are replenished following manufacturer and/or organisational procedures  
**1.4** Equipment is used in accordance with manufacturer and/or organisational policies and procedures  
**1.5** Faults and/or deficiencies are identified and reported to relevant personnel |
| 2  Check and restock consumables                                        | **2.1** Consumables are checked for availability and serviceability  
**2.2** Replacement consumables are acquired in accordance with organisational policies and procedures  
**2.3** Faults and/or deficiencies are identified and reported to relevant personnel |
| 3  Carry out general housekeeping                                       | **3.1** Rubbish is removed and disposed of in accordance with organisational policies and procedures  
**3.2** Relevant areas of the motive power unit are cleaned in accordance with organisational policies and procedures  
**3.3** Cleaning materials are utilised in accordance with safety data sheets (SDS)/material safety data sheets (MSDS) and/or manufacturer instructions and organisational policies and procedures  
**3.4** Faults and/or deficiencies are identified are reported to relevant personnel  
**3.5** Documentation is completed in accordance with organisational policies and procedures |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Potential faults and/or deficiencies
- Relevant motive power unit terminology and layout
- Relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations

Required skills:

- Communicate effectively with others
- Interpret and follow operational instructions
- Read and interpret instructions, procedures, information, signs, symbols and diagrams relating to provisioning a motive power unit
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include:

- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Consumables may include:
- cleaning agents
- emergency equipment
- fire extinguisher
- first aid kit
- fuses
- hand towel
- light globes
- logbook
- potable water
- safeworking forms
- spare batteries
- toilet chemicals
- toilet paper
- tool box
- torches

Relevant areas of a motive power unit may include:
- cooking equipment
- fridge
- mirrors
- operator cab
- running boards
- side windows
- toilet
- vestibule
- windscreens
- wiper blades

Documentation may include:
- logbook
- service records

Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB4082A Set up motive power units in multi-coupled consist

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to set up one or more motive power units in multi-coupled consist in accordance with network owner and regulatory requirements. It includes motive power units in power or when being hauled dead or offline. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
These operations are conducted as part of operating motive power units and may be carried out by different personnel working within rail operations.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Prepare motive power units for coupling**
   1.1 Identification and location of motive power units to be coupled is confirmed
   1.2 Motive power units are marshalled into desired position and orientation to meet consist requirements in accordance with organisational policies and procedures

2. **Set up motive power units for multi-consist operation**
   2.1 Motive power units are coupled in accordance with manufacturer instructions and/or organisational procedures
   2.2 Relevant hose pipes and electrical connections are made in accordance with manufacturer instructions and/or organisational procedures
   2.3 Fuel lines are coupled as required in accordance with manufacturer instructions and/or organisational procedures
   2.4 As required, area is checked before pantographs are raised or lowered to ensure safety, in accordance with organisational procedures

3. **Set up in-cab controls for multi-consist operation**
   3.1 Motive power unit controls are set up for multi-consist operation in accordance with manufacturer and/or organisational policies and procedures
   3.2 Vigilance and safety controls are set-up as required to ensure they are functioning correctly in multi-consist operation
   3.3 Motive power unit equipment is set up or adjusted for multi-consist operation in accordance with manufacturer and/or organisational policies and procedures

4. **Perform post start up checks**
   4.1 Post start-up checks are carried out to ensure all motive power units are braking and powering effectively and are safe to move, in accordance with manufacturer and/or organisational policies and procedures
   4.2 Handbrakes on all motive power units are applied/released in accordance with manufacturer and/or organisational policies and procedures
   4.3 Pantographs are raised or lowered where required in accordance with manufacturer and organisational procedures
### 5 Haul dead motive power units

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Auxiliary systems on a motive power unit and related checks for correct operation
- Braking and safety system procedures for motive power units
- Capacities, compatibilities and types of motive power units
- Defects that can occur on motive power units and related action that should be taken
- Electrical awareness
- External features of motive power units that must be checked during a visual inspection
- Functions of all supervisory indicators and controls, and related checks for correct operation
- Inspection procedures for motive power units
- Isolation systems
- Purpose and location of controls, monitoring devices, braking, power source and traction systems
- Relevant Australian Standards and related requirements
- Relevant environmental protection legislation, regulations, codes, policies and procedures
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes, policies and procedures

**Required skills:**

- Adapt to differences in motive power units and associated equipment and procedures
- Communicate effectively with others in accordance with organisational protocols when inspecting, preparing and stabling a motive power unit
- Identify where systems isolation is required and implement isolation
- Modify activities depending on operational contingencies, risk situations and environments
- Read and interpret instructions, procedures, information and signs relevant to visually inspecting, preparing, starting up and stabling a motive power unit
- Work collaboratively with others inspecting and preparing a motive power unit
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Motive power units may include:
- diesel motive power units
- electric motive power units
- railcars

Motive power unit controls may include:
- battery isolation switch
- brake equipment and isolation valves
- circuit breakers
- dead engine device
- driver safety systems
- knife switches
- multi-unit switch
- pantograph equipment
- reverser handle
- throttle

Motive power unit equipment may include:
- air conditioner
- blinds/curtains
- exterior lighting
- heaters
- interior lighting
- jumper cable
- windows

Appropriate personnel may include:
- depot/yard supervisor
- ground support crew
- maintenance personnel
- train controllers and signallers

Safety and personal protective equipment may include:
- communication equipment
- gloves
- hand lamps
- hearing protection
- high visibility clothing
- insect repellent
- safety:
  - devices
  - footwear
  - glasses
  - headwear
- sunscreen and sunglasses
Unit Sector(s)
Not applicable.

Competency Field
B – Equipment Checking and Maintenance
TLIB5010A Plan and implement maintenance schedules

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to plan and implement maintenance schedules in accordance with relevant regulatory requirements and workplace procedures. This includes establishing maintenance requirements, organising maintenance activities, organising resources, and completing all required procedures and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the relevant Australian regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource co-ordination and allocation and provides leadership of others individually or in teams.

Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Establish maintenance requirements** | 1.1 Equipment specifications, service requirements and workplace procedures are checked for recommended maintenance intervals and processes  
1.2 Special requirements for maintenance of storage zones are identified  
1.3 Comparisons with previous experience, future equipment use, work requirements and standard operating procedures are made to inform the planning process  
1.4 Work plan and work schedule are developed  
1.5 Contractors and/or maintenance providers (internal/external) are identified  
1.6 Costings for process are identified based on work schedule (equipment/staff off-line), equipment manufacturers recommendations, charges for materials, equipment and consumables and external/internal labour charges  
1.7 Required interruptions, processes and procedures are documented and recorded  
1.8 Clearances for any required costs for maintenance are obtained |
| **2 Organise maintenance activities** | 2.1 Work schedules and staff rosters are checked to identify times when the maintenance process may be scheduled including optimum timing for any shut down  
2.2 Permission from supervisory personnel is obtained for timing of maintenance to optimise the maintenance process and work  
2.3 Detailed work plans are developed to accord with work schedules, availability of expertise and the resource availability  
2.4 Employees with the required competencies are identified and where necessary appropriate training and assessment is facilitated  
2.5 Approvals for work schedule, employee work pattern and maintenance schedule adjustments are obtained and work plan is refined to ensure the maintenance program will maintain workplace outputs in terms of workplace policy |
| **3 Organise resources** | 3.1 Required equipment, personnel and consumables are allocated in accordance with workplace procedures  
3.2 Consumables, equipment and expertise are located and coordinated to meet maintenance work schedule  
3.3 Externally sourced equipment, consumables and expertise are identified and appropriate arrangements made for procurement |
| **4 Complete maintenance procedures** | 4.1 Completed work is checked against the maintenance schedule and the work plan  
4.2 Records of work are completed and forwarded to appropriate |
ELEMENT PERFORMANCE CRITERIA
personnel noting areas where additional maintenance is required to maintain optimum work output and equipment life

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and international regulations, codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for identification and interpretation of maintenance requirements
- Procedures for identification and evaluation of information needed to plan and implement maintenance schedules
- Procedures for reviewing system options for maintenance operations including appropriate risk analysis
- Procedures for liaising with manufacturers and suppliers
- Procedures establishing and/or monitoring suitable maintenance systems
- Focus of operation of maintenance systems, resources, management and workplace operating systems
- Characteristics and capabilities of equipment, materials and processes used
- Relative features and risks of various maintenance systems, their applications and processes, and issues involved in their use
- Quality and customer service standards, policies and procedures
- Application of relevant Australian and international standards and associated certification requirements
- Resource availability including the competencies of individuals in the team/group
- The application of current competencies within functional activity
- Coaching and mentoring approaches to support team members to share knowledge and skills
- Relevant workplace documentation procedures
- Contacts and sources of information/documentation needed when planning and implementing maintenance systems
- Procedures for operating electronic communications equipment

Required skills:
Required skills:

- Communicate effectively with others when planning and implementing maintenance schedules
- Read and interpret instructions, procedures, information and signs relevant to the planning and implementing of maintenance schedules
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and implementing of maintenance schedules
- Work collaboratively with others in the planning and implementing of maintenance schedules
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Adapt to differences in equipment in accordance with standard operating procedures
- Ensure the servicing of equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken in:
- various work environments in the warehousing, storage, transport and distribution industries

Customers may be:
- internal or external

Operations may be conducted:
- by day or night

The workplace environment may involve:
- twenty-four hour operation
- single- and multi-site location
- large, medium and small workplaces

Work systems may include:
- preventative and remedial maintenance schedules, protocols and procedures
RANGE STATEMENT

- faulty equipment tagging and repair/replacement systems
- equipment inventory and identification systems
- communications equipment
- workplace operations
- authorities and permits
- hours of operation
- relevant regulations

Consultative processes may involve:
- employees, supervisors and managers
- equipment manufacturers and suppliers
- contractors
- industrial relations and OH&S specialists
- other professional or technical staff

Communications systems may involve:
- telephone
- fax
- email
- electronic data transfer of information
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- Australian and international codes of practice and regulations relevant to equipment maintenance
- Australian and international regulations and codes of practice for the handling, storage and transport of dangerous goods and hazardous substances, including the ADG Code
- workplace operating procedures, maintenance schedules and policies
- operations manuals, job specifications and procedures and induction documentation
- Safe Working Limits (SWL) and Working Load Limits (WLL) of transport options
- supplier and/or client instructions
- statistical information on equipment malfunctions, maintenance and repairs
- relevant Australian standards, criteria and certification requirements
- communications technology equipment and oral, aural or signed communications
- quality assurance and customer service standards and
RANGE STATEMENT

- procedures
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:

- regulations and codes of practice related to equipment maintenance
- Australian and international regulations and codes of practice for the handling, storage and transfer of dangerous goods and hazardous substances
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to conduct tram/light rail track cleaning operations in accordance with approved standards, safeworking and regulatory requirements and organisational procedures. It includes preparing vehicle for operations, operating cleaning vehicle, cleaning rail track and points, disposing of waste and completing all required documentation. Licensing or certification requirements are applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including state acts and regulations together with any nationally approved compliance codes and/or guidelines. Operators must hold a medium-rigid vehicle licence.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1  | Prepare for operations | 1.1 Vehicle logbook is checked in accordance with organisational requirements  
  |  | 1.2 Pre-operational vehicle checks are conducted  
  |  | 1.3 Any identified faults or defects are recorded in accordance with organisational requirements  
  |  | 1.4 Worn brushes are replaced  
  | 2  | Operate cleaning vehicle on track | 2.1 Vehicle is driven to cleaning location and hazard warning equipment is operated in accordance with organisational policies and procedures  
  |  | 2.2 Fleet operations are notified when on site and ready to begin cleaning operations  
  |  | 2.3 Vehicle is correctly aligned with the track and trolley is lowered in accordance with organisational and/or manufactures requirements  
  |  | 2.5 Brushes are switched on for operation in accordance with organisational requirements  
  |  | 2.6 Vehicle is driven along the track and brushes are monitored for effective operation  
  | 3  | Operate cleaning vehicle to clean points | 3.1 Correct alignment of points is verified before starting cleaning operations  
  |  | 3.2 At least 25 metres of track prior to automatic points are cleaned in accordance with organisational policies and procedures  
  |  | 3.3 Visual contact with assistant is maintained at all times when cleaning points  
  |  | 3.4 Cleaning vehicle is driven through points and, when points have been changed, reversed back through the points  
  | 4  | Dispose of waste | 4.1 Collected waste is disposed of in accordance with organisational policies and procedures  
  |  | 4.2 Waste collection container and surrounding area of the vehicle is cleaned  
  | 5  | Complete documentation | 5.1 Documentation is completed in accordance with organisational requirements |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Documentation and recordkeeping requirements
- Hazards that may exist during cleaning of rail and points, and ways of controlling the risks involved
- Problems that may occur during cleaning rail and points, and action that can be taken to report or resolve the problems
- Relevant communication systems and procedures
- Relevant safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Workplace procedures for the cleaning of rail and points

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when cleaning rail and points
- Complete documentation related to cleaning rail and points
- Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions and manuals relevant to cleaning rail and points
- Report and/or rectify any identified problems, faults or malfunctions that may occur when cleaning rail and points in accordance with regulatory requirements and workplace procedures
- Select and use required personal protective equipment
- Work collaboratively with others cleaning rail and points
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - completing pre-work checks correctly
  - correctly replacing brushes
  - correct operation when positioning the cleaning vehicle
  - cleaning straight track and points to required standards
  - cleaning out waste collection container

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- Access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Hazard warning equipment may include:
- rotating lights
- flashing arrow boards
- reversing beepers
- reversing cameras
- signage

Communication equipment systems may include:
- two-way radios
- mobile phones
- agreed audible or hand signal

Depending on the work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- safety devices

Information/documents may include:
- operational instructions, policies and workplace procedures
- local authority regulations and procedures
- information provided by other workplace personnel
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- two-way radio/mobile phone operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable procedures and codes may include:
- legislated rail safety requirements including state acts and regulations together with any nationally approved compliance codes and/or guidelines
- relevant road regulations including state acts and regulations together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S and environmental protection legislation
Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC0079A Operate a motive power unit within defined limits

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a motive power unit within defined limits in accordance with relevant workplace practices, rail regulations and codes of practice. It includes operating the controls of the motive power unit and monitoring its performance. It also includes working collaboratively with other train crew and relevant personnel.

Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Defined limits are considered to be yards, terminals or sidings.
This unit is not intended to be used as a qualification for the operation of a motive power unit on a main line.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Local procedures and operating requirements
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Personal protective equipment required when operating a motive power unit within the defined limits and procedures for its use
- Procedures for managing safety and hazardous situations that may arise when operating and monitoring a motive power unit within the defined limits
- Procedures for operating and monitoring a motive power unit within defined limits
- Procedures for operating and monitoring ancillary equipment on a motive power unit
- Procedures for operating electronic communications equipment within required protocol
- Procedures to be followed in an emergency when operating a motive power unit within the defined limits
- Relevant rail safety, OH&S and environmental procedures and regulations
- Requirements for communicating and working collaboratively with other relevant personnel
- Speed and load limits for a motive power unit within the defined limits

Required skills:

- Adapt to differences in motive power units and associated equipment and procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a motive power unit within the defined limits
- Communicate effectively with others when operating and monitoring a motive power unit within the defined limits
- Identify and assess motive power unit defects and deficiencies, and take appropriate action to report, isolate, repair or replace any identified defective equipment in accordance with workplace procedures
- Modify activities depending on operational contingencies, risk situations and environments
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to operating and monitoring a motive power unit within the defined limits
- Select and use required personal protective clothing and equipment, conforming to industry and OH&S standards
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

### Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Motive power units may include all motive power units in service within Australian rail systems and may include:

- diesel locomotives
- electric locomotives
- railcars

Defined limits may include:

- yards
- terminals
- private sidings

Motive power equipment may include:

- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required)
- isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation, concerned organisational procedures may be known as:

- standard operating procedures
- company procedures
- enterprise procedures
- workplace procedures
- established procedures
Safety and personal protective equipment may include:

- gloves
- sunscreen
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- mobile phones
- hand lamps
- safety devices
- audible indicators
- high visibility clothing
- hearing protection

Information and documents may include:

- motive power unit operational records and user logbooks
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- legislated rail safety requirements including Acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not applicable.

Competency Field

C – Vehicle Operation
TLIC0083A Access rail track to travel track vehicle under a proceed authority

Modification History
Release 1 - New unit of competency
This unit replaces and is equivalent to TLIC3055A Access rail track to travel track vehicle under occupancy authority.

Unit Descriptor
This unit involves the skills and knowledge required to safely access the rail track to travel track machines under an Occupancy Authority in accordance with Access Provider, legislative and regulatory requirements.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including Acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines.
The unit includes the application of Access Provider rules, procedures and protocols for rail safety but does not include the implementation of worksite protection.
All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

1 **Access rail track**

   1.1 Permission to occupy rail track is requested from network control officer

   1.2 Permission to occupy rail track is documented in accordance with occupancy authority requirements

   1.3 Appropriate personal protective equipment (PPE) is used conforming to Access Provider requirements

   1.4 Limits of travel are determined and agreed with network control officer

   1.5 Where applicable, points are manually operated to gain access to the track as authorised by network control officer

   1.6 Awareness is maintained to identify local conditions and any changed circumstances

   1.7 Communication with network control officer is maintained using communication rules and procedures

2 **Travel track vehicle on track**

   2.1 Speed limit is observed for type and classification of track vehicle and type of track

   2.2 Speed is varied to meet local conditions

   2.3 Permission is obtained to pass signals at STOP in accordance with workplace procedures

   2.4 Position of points are identified and, where applicable, operated to establish correct direction as authorised by network control officer

   2.5 Signals are identified and obeyed

   2.6 Level crossing protection equipment is operated for the safe passage of track vehicle/s in accordance with workplace procedures

   2.7 Where fitted, vigilance unit is operated in accordance with workplace procedures

   2.8 Unsafe situations and/or emergencies are identified, and appropriate action is taken in accordance with workplace procedures

3 **Remove track vehicle from track**

   3.1 Network control officer is informed when track vehicle is off and clear of track

   3.2 Occupancy Authority is correctly cancelled or fulfilled
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider policies, procedures and protocols in the event of identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures for working around electrical infrastructure
- Access Providers and organisational policies, procedures and protocols
- Operational communication protocols and systems
- Rail terminology as defined by the applicable Access Provider
- Recognition of points, signals and location features

Required skills:

- Communicate effectively with individuals and work groups
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Use appropriate PPE conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - demonstrating requesting and documenting permission to occupy track
  - explaining how to determine limits of travel
  - conducting a safety assessment
  - demonstrating observing speed limit appropriate for type of vehicle, type of track and local conditions
  - explaining and demonstrating passing signals in accordance with rules and procedures
  - demonstrating how to identify position of points and their correct operation
  - identifying signals
  - demonstrating operation of a vigilance unit
  - identifying appropriate response to typical unsafe situations and/or emergencies
  - demonstrating cancellation or fulfilment of an occupancy authority using appropriate procedures and documentation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and
  - in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology will be:
- as defined by the applicable track safeworking system and operating procedures

Work may occur:
- by day or night, under varied weather conditions and situations

Safety assessment will be:
- as defined within the workplace procedures
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching rail traffic
  - changed local conditions

Network control officer may be:
- network controller
- train controller
- area controller
- signaller

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communications equipment and systems may include:
- hand and audible signals
- radios
- telephones/mobile phones
- signage

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Where applicable, worksite protection equipment may include:
- warning devices, whistles and sirens
- railway track signals
- demarcation barriers
- lights and flags
- electronic devices
Information and documents may include:

- signage
- workplace procedures, policies and work instructions
- emergency plan
- pre-work briefing

Types of track protection may include:

- lookout
- track occupancy authority (TOA)
- track work authority (TWA)
- local possession authority (LPA)
- absolute signal blocking (ASB)

Limits of protection may include:

- signals
- signs
- block point

Type of vehicle may include:

- road/rail
- track vehicles

Varied conditions may include:

- gradients
- line of sight
- weather
- condition of rail
- multiple rail traffic crews
- multiple vehicles

Alterations to occupancy authority may include:

- extending time
- reducing time

Unit Sector(s)

Not applicable.

Competency Field

C – Vehicle Operation
TLIC0084A Access rail track to travel track vehicles under manual block working conditions

Modification History
Release 1 - New unit of competency
This unit replaces and is equivalent to TLIC3056A Access rail track to travel track vehicle/s under block working conditions.

Unit Descriptor
This unit involves the skills and knowledge required to travel a track vehicle or convoy of track vehicles under Manual Block Working conditions in accordance with Access Provider, legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including Acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines. The unit includes the application of Access Provider rules, procedures and protocols for rail safety but does not include the implementation of worksite protection. All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan for travel movements

1.1 Travel requirements are established and application for approval is initiated

1.2 Movements are confirmed with network control officer prior to travel

1.3 Pre-start briefing is conducted with track vehicle operators to clarify travel movements and their responsibilities in accordance with advertised approval and workplace procedures, as applicable

2 Access track

2.1 Permission to occupy track is requested from network control officer

2.2 Appropriate personal protective equipment (PPE) is used in accordance with Access Provider requirements

2.3 Limits of travel are identified and protection of the route by network control officer is confirmed

2.4 Stand alone signalling control equipment is identified and, where required, points are operated to gain access to the track as authorised by network control officer

2.5 Any changed local conditions are identified

2.6 Communications with network control officer is maintained using appropriate communication protocols and systems in accordance with access providers and workplace procedures

3 Travel track vehicle/s on track to worksite

3.1 Communication protocols and systems are used to coordinate the convoy when applicable

3.2 Speed limit is maintained for type of vehicle/s and track conditions

3.3 Speed limit is varied to meet local conditions

3.4 Permission is obtained to pass signals at STOP in accordance with workplace procedures

3.5 Track vehicle is managed so as to be able to stop short of other track vehicles or obstruction on track

3.6 Stand alone signalling control equipment is identified and, where required, points are operated to establish correct direction as authorised by network control officer

3.7 Signals are identified and obeyed

3.8 When necessary, level crossing protection equipment is operated for the safe passage of track vehicle/s in accordance with workplace procedures

3.9 Unsafe situations and/or emergencies are identified and
appropriate action is taken in accordance with workplace procedures

4 Clear limit of travel

4.1 Network control officer is informed when track vehicle/s has arrived and is clear of limit of travel

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider and organisational policies, procedures and protocols
- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures for working around electrical infrastructure
- Operational communication protocols and systems
- Rail terminology as defined by the applicable Access Provider
- Recognition of points, signals and location features

Required skills:

- Communicate effectively with individuals and work groups
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Use appropriate PPE conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - planning travel movements and identifying limits of travel
  - conducting a safety assessment
  - demonstrating correct movement observing speed limit appropriate for type of vehicle, track and local conditions
  - demonstrating operation of level crossing equipment in accordance with workplace procedures
  - demonstrating communication with network control officer using appropriate protocols and communication systems
  - explaining appropriate response to unsafe situations and/or emergencies

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
through activities in an appropriately simulated environment, and
in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology will be:
- as defined by the applicable track safeworking system and operating procedures

Work may occur:
- by day or night, under varied weather conditions and situations

Safety Assessment will be:
- as defined within the workplace procedures
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching rail traffic
  - speed of approaching rail traffic
  - position of safety
  - changed local conditions

Network control officer may be:
- network controller
- train controller
- area controller
- signaller

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communications equipment and systems may include:
- hand and audible signals
- radios
- telephones/mobile phones
- signage

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection
Where applicable, worksite protection equipment may include:
- warning devices, whistles and sirens
- railway track signals
- demarcation barriers
- lights and flags
- electronic devices
- signage

Information and documents may include:
- workplace procedures, policies and work instructions
- worksite safety plan
- emergency plan
- pre-work briefing
- worksite protection plan

Limits of protection may include
- signals

Type of vehicle may include:
- track vehicles

Varied conditions may include:
- gradients
- line of sight
- weather
- condition of rail
- multiple rail traffic crews
- multiple vehicles

**Unit Sector(s)**
Not applicable.

**Competency Field**
C – Vehicle Operation
TLIC1013A Ride courier/delivery bicycle

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to ride a courier/delivery bicycle while safely carrying loads. This includes pre-operational checks of the bicycle; the systematic, safe and efficient control of all functions; and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the regulations/permit requirements of the relevant state/territory roads and traffic authority pertaining to the riding of the bicycle on public roads.

Work is generally performed with indirect supervision, and with limited accountability and responsibility for self in achieving the prescribed outcomes.

Driving involves the application of routine procedures to pick up and deliver products, documents and materials from and to customers across a variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Inspect bicycle for operational capability** | 1.1 Work area is checked to ensure that operational checks of bicycle may be conducted safely  
1.2 The bicycle is checked prior to operation in accordance with manufacturers safety checks, specifications and workplace procedures to ensure it is free from damage that may limit operational capability  
1.3 Component operation is tested in accordance with manufacturers specifications and workplace procedures  
1.4 Warning systems are all checked for operational effectiveness  
1.5 Air pressure and lubrication are checked against specifications  
1.6 Where required, appropriate products are used to maintain specified levels  
1.7 Faults are identified and assessments made of their potential effect on the operation of the bicycle for the required work operations, and are reported to the appropriate personnel for rectification  
1.8 Personal protective equipment is identified, worn and adjusted to meet recommended Australian Standards, legislative, regulatory or policy requirements |
| **2 Ride the bicycle** | 2.1 Road area is checked for hazards prior to and during journey(s)  
2.2 Bicycle is steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturers instructions and workplace policy  
2.3 Gears are managed to ensure efficiency and performance and to minimise gear damage and fatigue  
2.4 Hazards are identified and/or anticipated and avoided or controlled through defensive riding  
2.5 The bicycle is parked and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures  
2.6 The bicycle is securely loaded and manoeuvred with due consideration to any required precautions related to characteristics of the load and/or relevant government regulations pertaining to special loads  
2.7 Any required signs or indicators are fixed to the bicycle |
| **3 Monitor traffic and road conditions** | 3.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations  
3.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities |
ELEMENT

4 Monitor and maintain bicycle performance

PERFORMANCE CRITERIA

4.1 Performance of bicycle operation is monitored during use
4.2 Defective or irregular performance or malfunctions are reported to the appropriate authority
4.3 Records are maintained/updated and information is processed in accordance with workplace procedures
4.4 Clear reference in any reports is made to any items which may affect the future efficient use and/or safety of the equipment

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Bicycle handling procedures
- Workplace operational instructions
- Procedures to be followed in the event of an emergency
- Pre-operational checks carried out on bicycle and related action
- Map reading and road navigation techniques
- Cycling hazards and related defensive riding techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a courier cyclist
- Requirements of courier work systems/operations and relevant equipment
- Procedures and policies concerning the identification, acceptance and carrying of dangerous/hazardous goods

Required skills:

- Communicate effectively with others when riding a commercial courier or delivery bicycle
- Read and interpret instructions, procedures, information and signs relevant to the riding of a commercial courier or delivery bicycle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the riding of a commercial courier or delivery bicycle
- Operate electronic communication equipment to required protocol
Required skills:

- Work collaboratively with others when riding a commercial courier or delivery bicycle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when riding a commercial courier or delivery bicycle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when riding a commercial courier or delivery bicycle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques when riding a commercial courier or delivery bicycle
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of bicycle and its equipment and take appropriate action if required
- Service bicycle in terms of maintenance schedule and standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot or base
- while at a customer's workplace or premises

Customers may be:

- internal or external
## RANGE STATEMENT

**Bicycle handling procedures may include:**
- steering and manoeuvring a bicycle
- accelerating and braking
- parking
- using defensive riding techniques

**Pre-operational checks may include:**
- visual check of bicycle for operational capability
- checks of tyre pressures
- checks of operation of lights
- checks of gearing, steering and brakes
- check of seat adjustment

**Minor routine repairs may include:**
- replacement of blown globes in bicycle lights
- changing tyres
- repairing tyre punctures

**Hazards may include:**
- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise
- wet and iced roads
- oil on road
- animals and objects on road

**Personal protective equipment may include:**
- helmet
- sunglasses
- sun cream

**Hazardous or dangerous goods may include:**
- medical samples or supplies
- acids, alkalines or solvents

**Consultative processes may involve:**
- customers
- other employees and supervisors
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff
- local government authorities

**Factors that can cause traffic delays and diversions may include:**
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
RANGE STATEMENT

- road works
- building construction
- road closures for special events such as marches, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documentation may include:

- state/territory licence requirements relevant to courier cyclists
- state/territory road rules
- workplace instructions and procedures for courier cyclists including emergency procedures
- bicycle manufacturers instructions, specifications and recommended riding procedures including pre-operational checks of bicycle
- operations manuals including quality assurance procedures
- induction documentation
- competency standards and training materials
- HAZCHEM codes and dangerous/hazardous goods codes and procedures
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- conditions of service, legislation and industrial agreements
- OH&S procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority regulations and licence requirements pertaining to the courier cyclist
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- applicable dangerous/hazardous goods codes and legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to operate commercial vehicles safely. It includes the monitoring of traffic and associated equipment and, management of vehicle condition, and performance and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit. Provisional car licence must be held prior to commencement of this unit of competency.

Application of the Unit

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle across a variety of job roles.

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental/emissions procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions, and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a commercial vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a commercial vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a commercial vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a commercial vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when driving a commercial vehicle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when driving a
Required skills:

commercial vehicle

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a commercial vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor performance of vehicle and take appropriate action where required
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating operation of a commercial vehicle and its associated equipment
  - demonstrating a theory and practical understanding of driving principles
  - demonstrating an understanding of possible associated equipment for commercial vehicles
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,
EVIDENCE GUIDE

and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through appropriately simulated activities at the training organisation, and/or
  - in an appropriate range of situations in the workplace
- A simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Commercial vehicle may include:
- commercial vehicles equal to or less than 4.5 tonnes GVM and seating up to 12 adults, including the driver, and all types of transmission that is used or intended to be used to carry goods of all types for hire or reward. Hired or leased vehicles and vehicles owned by a business to carry its own goods are included

Driving may be carried out in typical road transport situations, including:
- by day or night
- in typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may
- starting a vehicle
RANGE STATEMENT

include:

- eco driving
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- load and load restraints
- check operation of associated equipment

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Eco driving may include:

- engine management
- brake management
- ancillary brakes
- gear selection
- using air-conditioning only when necessary
- not idling engine for extended periods when not in use
- anticipating traffic flow to prevent driving at congested times

Associated equipment may include:

- tail gate loaders
- electronic doors
- gates, curtains
- ramps
- stairs
- hydraulic lifters
- ticket machines

Driving hazards may include:

- wet and iced roads
- oil on road
- animals and objects on road
RANGE STATEMENT

- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- other road users
- following distance
- traffic flow
- time of day or night

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including pre-operational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable regulations, legislation and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to the class of vehicle
- relevant state/territory road rules
RANGE STATEMENT

- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Competency Field

Competency Field  C - Vehicle Operation
TLIC2002A Drive light rigid vehicle

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to drive a light rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition, and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to light rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial light rigid vehicle across a variety of driving contexts.

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental procedures and regulations
- Light rigid vehicle controls, instruments and indicators and their use
- Light rigid vehicle handling procedures
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques including the use of a GPS device where applicable
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Workplace driving and operational instructions
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a commercial light rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a commercial light rigid vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a commercial light rigid vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a commercial light rigid vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when driving a commercial light rigid vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a commercial light rigid vehicle
- Monitor work activities in terms of planned schedule
Required skills:

- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor and anticipate traffic hazards and take appropriate action
- Carry out pre-operational checks on the vehicle in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:

- all light rigid vehicles including trucks and buses greater than 4.5 tonnes or seating more than 12 adults including the driver

Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
RANGE STATEMENT

Minor routine repairs may include:
- checks of brakes
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Competency Field C - Vehicle Operation
TLIC2009A Drive taxicab

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to drive a taxicab safely including systematic and efficient control of all taxi functions, monitoring of traffic and road conditions, management of taxi condition, and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a taxi driver licensing examination conducted by, or under the authority of, the relevant state/territory authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to a commercial taxicab.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a taxicab across a variety of driving contexts.

| 3 Monitor and maintain vehicle performance | 3.1 Taxi performance is maintained through pre-operational inspections and checks of the vehicle  
3.2 Taxi is maintained in accordance with state/territory licensing regulations and workplace standards  
3.3 Performance and efficiency of taxi operation is monitored during use  
3.4 Defective or irregular performance or malfunctions are repaired or reported to the appropriate authority in accordance with workplace procedures  
3.5 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic/taxicab control authority
- Relevant OH&S and environmental procedures and regulations
- Taxicab controls, instruments and indicators and their use
- Taxicab handling procedures
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Driving hazards and related defensive driving techniques
- Taxicab security procedures and precautions
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a taxicab
- Read and interpret instructions, procedures, information and signs relevant to the driving of a taxicab
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a taxicab
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a taxicab
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or address any identified problems, security incidents, faults or malfunctions that may arise when driving a taxicab in accordance with regulatory requirements
Required skills:

- Implement contingency plans for unexpected events or security incidents when driving a taxicab
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a taxicab
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor performance of taxicab and its equipment and take appropriate action where required
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
EVIDENCE GUIDE

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
- all taxicabs relevant to specific licence classifications

Driving may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot or base
- while at a customer's workplace or work site

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
RANGE STATEMENT

- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may include:

- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory taxicab driving licence/regulatory requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to taxicabs
- relevant state/territory road rules
- relevant state/territory taxicab control regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Competency Field

Competency Field C - Vehicle Operation
TLIC2012A Ride courier/delivery motorcycle

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to ride a courier/delivery motorcycle while safely carrying loads. This includes pre-operational checks of the motorcycle; the systematic, safe and efficient control of all functions; and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the regulations/permit requirements of the relevant state/territory roads and traffic authority pertaining to the riding of a motorcycle on public roads.

Work is generally performed with indirect supervision, and with limited accountability and responsibility for self in achieving the prescribed outcomes.

Driving involves the application of routine procedures to pick up and deliver products, documents and materials from and to customers across a variety of operational contexts.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Motorcycle handling procedures
- Workplace operational instructions
- Procedures to be followed in the event of an emergency
- Pre-operational checks carried out on motorcycle and related action
- Map reading and road navigation techniques
- Motorcycling hazards and related defensive riding techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a courier motorcyclist
- Requirements of courier work systems/operations and relevant equipment
- Procedures and policies concerning the identification, acceptance and carrying of dangerous/hazardous goods

Required skills:

- Communicate effectively with others when riding a commercial courier or delivery motorcycle
- Read and interpret instructions, procedures, information and signs relevant to the riding of a commercial courier or delivery motorcycle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the riding of a commercial courier or delivery motorcycle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when riding a commercial courier or delivery motorcycle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when riding a commercial courier or delivery motorcycle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of motorcycle and take appropriate action

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be carried out in typical road transport situations, including:
- operations conducted day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot or base
- while at a customer's workplace or premises

Customers may be:
- internal or external

Motorcycle handling procedures may include:
- starting a motorcycle
- steering and manoeuvring a motorcycle
- accelerating and braking
- stopping and parking
- using defensive riding techniques

Pre-operational checks may include:
- visual check of motorcycle for operational capability
- checking and topping up fluid levels
- checks of tyre pressures
- checks of operation of lights
- checks of gearing, steering and brakes
- check of seat adjustment

Minor routine repairs may include:
- replacement of blown globes in motorcycle lights
- changing of tyres
- repair of tyre punctures
RANGE STATEMENT

Hazards may include:
- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise
- wet and iced roads
- oil on road
- animals and objects on road

Personal protective equipment may include:
- helmet
- sunglasses
- sun cream

Hazardous or dangerous goods may include:
- medical samples or supplies
- explosives
- acids, alkalines or solvents

Consultative processes may involve:
- customers
- other employees and supervisors
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff
- local government authorities

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- road closures for special events such as marches, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documentation
- state/territory licence requirements relevant to courier
RANGE STATEMENT

may include:

- motorcyclists
- state/territory road rules
- workplace instructions and procedures for courier motorcyclists including emergency procedures
- motorcycle manufacturers instructions, specifications and recommended riding and servicing procedures including preoperational checks of motorcycle
- operations manuals including quality assurance procedures
- induction documentation
- competency standards and training materials
- HAZCHEM codes and dangerous/hazardous goods codes and procedures
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- conditions of service, legislation and industrial agreements
- OH&S procedures
- relevant state/territory roads and traffic authority regulations and licence requirements pertaining to the courier motorcyclists
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- applicable dangerous/hazardous goods codes and legislation

Applicable procedures and codes may include:

Unit Sector(s)

Competency Field

Competency Field C - Vehicle Operation
TLIC2025A Operate four wheel drive vehicle

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to operate a four wheel drive vehicle safely in a range of conditions. These include driving a four wheel drive vehicle on normal roads, traversing slopes, ascending and descending steep slopes and stall recovery. It also includes operation of the vehicle in rugged terrain, the use of a jack and the completion of all pre- and post-operational checks. Licensing, legislative, regulatory or certification requirements may be applicable to this unit. Provisional car licence must be held prior to the commencement of this unit of competency for driving on public land/roads.

Application of the Unit

Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of four wheel drive vehicle operating principles and procedures to maintain the safety and operation of a commercial four wheel drive vehicle across a variety of on-road and off-road contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 **Operate four wheel drive vehicles on normal roads** | 1.1 Pre-start checks of vehicle and equipment are carried out to manufacturers specifications and roadworthy requirements  
1.2 Tyres are checked for pressure suitable for terrain and/or changed in accordance with workplace procedures  
1.3 Loads are secured in accordance with workplace and legislative requirements  
1.4 Vehicle is driven on-road and off-road to legislative and workplace requirements, at appropriate speeds for conditions and hazards  
1.5 Vehicle is parked and shut down in accordance with workplace and manufacturers requirements |
| 2 **Operate vehicle on, or across, a slope** | 2.1 Pre-start checks of vehicle and equipment are carried out to manufacturers specifications and roadworthy requirements  
2.2 Tyres are checked for pressure suitable for terrain and/or changed to operational guidelines  
2.3 Loads are secured in accordance with workplace and legislative requirements  
2.4 Vehicle is driven on-road and off-road to regulatory and workplace requirements at appropriate speeds for conditions and hazards |
| 3 **Operate vehicle ascending a steep slope including stall recovery** | 3.1 Intended vehicle path is inspected prior to negotiation of slope  
3.2 Appropriate gear is selected to ascend grade, and engine revolutions are maintained to ensure constant traction  
3.3 Air-conditioning unit is turned off to avoid engine acceleration  
3.4 Foot brake is applied as vehicle stalls, handbrake applied and ignition turned off  
3.5 Clutch is depressed and reverse gear is selected  
3.6 Clutch is released and handbrake is slowly released  
3.7 Ignition is turned on and brakes are released  
3.8 Vehicle is started and allowed to reverse down the slope  
3.9 Brakes are applied as necessary to control descent |
| 4 **Operate vehicle descending a steep slope including stall recovery** | 4.1 Intended vehicle path is inspected prior to negotiation of the slope  
4.2 Appropriate gear is selected to ascend grade, and engine revolutions are maintained to ensure constant traction  
4.3 Air-conditioning unit is turned off to avoid engine acceleration  
4.4 Braking is used to control descent and skidding is avoided by the application of brakes to emulate ABS  
4.5 Ignition is turned off, foot brake is applied, and handbrake is slowly released |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | engaged
4.6 Clutch is depressed and low gear is selected
4.7 Clutch is released and handbrake is slowly released
4.8 Ignition is turned on and brakes are released
4.9 Vehicle is started and allowed to continue down the slope
4.10 Brakes are applied as necessary to control descent and skids are steered into
5 Operate vehicle in rugged terrain | 5.1 Intended vehicle path is inspected prior to negotiation of rugged terrain
5.2 Correct gear/range is selected to negotiate terrain
5.3 Freewheel hubs are engaged and disengaged in accordance with driving conditions
5.4 Vehicle controls are set in accordance with manufacturers instructions for operation in the surrounding terrain
5.5 Traction is maintained in accordance with requirements of the vehicle and the surrounding terrain
5.6 Selection of appropriate gear/range before negotiating terrain is demonstrated
5.7 Where necessary, chains are fitted to vehicle in accordance with manufacturers instructions
5.8 Vehicle load is inspected, positioned and secured to maximise traction for four wheel driving
5.9 Terrain is negotiated in accordance with requirements for specific driving conditions
6 Operate jack | 6.1 Jack is located under vehicle in accordance with vehicle manufacturers specifications and workplace procedures
6.2 Jack is used and operated in accordance with manufacturers specifications and workplace procedures
7 Complete operations | 7.1 Vehicle is parked and shut down to workplace and manufacturers requirements
7.2 Faults or malfunctions are corrected and/or reported in accordance with workplace requirements
7.3 Vehicle and equipment are cleaned and stored after use in accordance with workplace requirements
7.4 Any reports required by the workplace are completed in accordance with workplace procedures

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the operation of four wheel drive vehicle in both on-road and off-road situations
- Problems that may occur when operating a four wheel drive vehicle, and action that can be taken to report or resolve the problems
- Hazards that may exist when operating a four wheel drive vehicle in both on-road and off-road situations, and ways of controlling the risks involved
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures and techniques for a range of conditions, including rock, mud, sand, ice and snow
- Procedures to be followed in the event of a driving emergency
- Efficient driving techniques and safe driving strategies
- The effect on the centre of gravity of changing fluid loads
- Hazards and risks associated with traversing cross slopes
- Effects of hard surface driving (such as highway wind up) on the 4x4 system
- The appropriate use of diff locks
- Pre- and post-operational checks and related action
- Documentation and record keeping requirements
- Environmental impact of 4X4 driving

Required skills:

- Communicate effectively with others when operating a four wheel drive vehicle
- Read and interpret instructions, procedures, information and signs relevant to the operation of a four wheel drive vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a four wheel drive vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a four wheel drive vehicle in accordance with regulatory requirements and
Required skills:

- workplace procedures
- Implement contingency plans for unexpected situations that may arise when operating a four wheel drive vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of four wheel drive vehicle and its equipment, and take appropriate action if required
- Conduct pre-start checks
- Monitor and anticipate traffic hazards and take appropriate action
- Drive vehicles in a range of conditions
- Demonstrate emergency procedures in the operation of vehicles
- Identify and correct minor operational faults
- Clean and store vehicles and equipment
- Skills and attitude to reduce environmental impact

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating operation of a 4x4 vehicle
EVIDENCE GUIDE

- applying relevant legislation and workplace procedures

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
- A simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Vehicles include:
- all terrain vehicles
- cars and utilities
- a range of trailers
- light trucks

Operations may be carried out in typical four wheel drive situations,
- by day or night
- typical weather conditions
RANGE STATEMENT

including:

- on the open road
- in rugged terrain off-road conditions that can be smooth, rough, uneven, slippery, boggy, sandy, steep or hilly
- on a steep slope
- during emergency response
- while at a client's workplace or worksite

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Considerations when driving may include:

- operational characteristics of the type of four wheel drive vehicle
- workplace procedures
- traffic conditions
- levels of emergency response
- adverse weather
- traffic regulations
- warning devices
- adverse terrain

Traffic conditions to be taken into account when driving may include:

- speed limits for operation
- legal parking
- traffic pattern and density
- known peak periods and special community functions
- effects of weather on roads
- road surface/off-road terrain
- visibility

Operational hazards may include:

- steep slopes and rugged terrain
- wet and iced road/terrain
- flooded road/terrain
- oil on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
RANGE STATEMENT

- animals and objects on road
- windy or foggy sections of road/terrain

Workplace guidelines/procedures may include:

- pre- and post-operation checks
- standards of operation
- storage and usage of fuels and lubricants
- policies and routines relating to wear and damage
- precautions and safeguards
- emergency response driving
- driving in adverse terrain
- driving in special environments
- reporting routines

Pre-start checks may include:

- fuel, water, oil
- brake and transmission fluid levels
- battery water levels and electrolyte checks
- tyres
- belts
- leads
- hydraulic lines and connections
- air cleaners
- air-conditioners
- brakes
- off-road safety equipment in line with manufacturers recommendations

Manufacturers specifications may include:

- engine characteristics
- systems warning function
- four wheel drive operation
- radius of turning circle
- safety procedures

Installed devices may include:

- warning lights
- tachometer
- temperature gauge
- electrical charging
- ancillary systems indicator
- speedometer
- oil pressure
- brake warning lights
- audible warning devices
- hose

Minor routine servicing may include:

- the replacement of blown globes in vehicle lights
- replacement of broken fan belt
RANGE STATEMENT

include:

- replacement of blown fuse
- door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable regulations, legislation and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to the class of four wheel drive vehicle
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field C - Vehicle Operation
TLIC2040A Provide wheelchair accessible taxi services to passengers with disabilities

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to operate wheelchair accessible taxis used for the transport of people with disabilities. It includes carrying out pre-operational checks of the vehicle and its ancillary equipment; communicating effectively with passengers; securing passengers and ancillary/mobility equipment; providing appropriate support to passengers during their journey; and manoeuvring the vehicle with due consideration of the passenger's disability. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit

This unit applies to all taxi drivers who are entering the role of drivers of wheelchair accessible taxis. Work involves transferring passengers, and applying both manual loading and unloading with the aid of equipment/appliances. The work involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle conveying people with disabilities in varying driving contexts. Transporting passengers with disabilities must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Carry out pre-operational checks on vehicles | 1.1 The pre-operational checks for the vehicle and its associated ancillary equipment are carried out in accordance with manufacturers requirements, government regulations and workplace policies and procedures  
1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures |
| **2** Communicate effectively with passengers | 2.1 Appropriate communication methods are selected and used to meet the requirements of passengers with disabilities  
2.2 Appropriate and effective verbal and non-verbal communication skills are used including appropriate body language and language style  
2.3 Effective listening skills are demonstrated  
2.4 Questions are used to gain appropriate information |
| **3** Assist passengers into and out of the vehicle in a manner suited to their disability | 3.1 Passenger characteristics are identified and taken into account when determining appropriate assistance into and out of the vehicle  
3.2 Compatibility of passenger's mobility device and vehicle's loading, anchoring and carrying equipment is assessed in accordance with regulations  
3.3 Passengers are assisted into and out of the vehicle, demonstrating compliance with loading regulations and workplace safety requirements  
3.4 Passengers and their mobility device/wheelchair are secured safely in accordance with vehicle and equipment specifications and regulations  
3.5 Vehicle equipment is operated and stowed in accordance with company procedures and manufacturers instructions  
3.6 Ancillary equipment is stowed safely in vehicle following relevant regulations  
3.7 Passengers are picked up and set down in a safe and efficient manner, taking into account suitable locations and safe use of equipment  
3.8 Relevant OH&S and passenger welfare is considered |
| **4** Drive a vehicle used by passengers with disabilities | 4.1 Ongoing support is provided to passengers to maximise their travelling comfort  
4.2 The vehicle is driven safely in accordance with the regulations for the class of vehicle involved  
4.3 The vehicle is driven in accordance with road and traffic conditions with due consideration to any required precautions related to the disability of the passengers and relevant government regulations |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.4 Signs or indicators are fixed to the vehicle if required
4.5 Documentation/transactions relevant to the provision of the taxi subsidy scheme is completed

5 Plan and organise daily work activities
5.1 Workload is assessed and prioritised
5.2 Daily routine is planned to take into account work schedules and network/communication bookings
5.3 Clarification of requirements of tasks is sought when appropriate
5.4 Achievable time and other performance measures are agreed
5.5 Tasks are completed with variations to plan identified and reported

6 Apply ethical behaviour
6.1 Ethical behaviour is applied that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers with disabilities

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations and licence requirements of the relevant state/territory road traffic authority including the need to give priority to wheelchair passengers
- Equal opportunity/anti-discrimination legislation
- Relevant OH&S and environmental procedures and regulations
- Procedures and protocols for the provision of wheelchair accessible taxi services to customers
- Customer service policies and procedures
- Typical problems that can occur when providing wheelchair accessible taxi services to customers, and related appropriate action that can be taken to prevent or solve them
- Sources of information and documentation needed when providing wheelchair accessible taxi services to customers
- Characteristics of various disabilities: intellectual/physical, congenital/acquired
- Characteristics of permanent/temporary and multiple disabilities including (singularly or multiple): cerebral palsy, spina bifida, multiple sclerosis, paraplegia, quadriplegia, muscular dystrophy, epilepsy, arthritis, diabetes, asthma, psychological disabilities, visual/hearing impairment, intellectual disabilities
- Various types of mobility aids that cannot be secured safety in wheelchair accessible taxis
- Alternate transport modes if mobility aids cannot be safely secured in a wheelchair accessible
REQUIRED KNOWLEDGE AND SKILLS

- taxi vehicle
- Passengers that cannot be seated in or on certain mobility aids whilst in transit
- Etiquette/protocols for interacting with passengers with disabilities
- Vehicle operational checks
- Methods of securing a range of wheelchair/mobility devices and passengers with various disabilities
- Procedures to be followed in the event of a driving emergency
- Taxi transport subsidy scheme bookings and fare concessions
- Vehicle and ancillary equipment controls, instructions and indicators and their use
- Duty of care responsibilities when transporting passengers with disabilities

Required skills:

- Communicate effectively with others when providing wheelchair accessible taxi services to customers
- Read and interpret instructions, procedures, information and signs relevant to the provision of wheelchair accessible taxi services to customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision wheelchair accessible taxi services to customers
- Operate electronic equipment to required protocol
- Work collaboratively with others when providing wheelchair accessible taxi services to customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unanticipated situations that may occur when providing wheelchair accessible taxi services to customers
- Promptly report and/or rectify any identified problems that may arise when providing wheelchair accessible taxi services to customers, in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Apply relevant codes of practice and legislative requirements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and appropriately apply technology, information systems and procedures to complete
Required skills:

workplace tasks
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Assess risks and hazards when assisting passengers with disabilities into and out of the vehicle
- Take precautions to control risk when assisting passengers with disabilities into and out of the taxicab
- Ability to safely use manual handling techniques and to operate loading equipment
- Apply techniques for manoeuvring and driving vehicles transporting passengers with disabilities
- Monitor traffic and road conditions
- Conduct pre-operational checks on vehicle and ancillary equipment and take related action
- Apply fatigue management knowledge and techniques
- Monitor performance of taxicab and its equipment and take appropriate action where required

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - exercising all required safety precautions and procedures during loading, unloading and driving operations
  - assisting passengers into and out of the vehicle in accordance with workplace procedures
  - securing passengers for safe transport in accordance with relevant standards and procedures
  - maintaining the comfort and dignity of passengers with disabilities
  - providing customer service and working effectively with others
  - carrying out pre-operational checks on vehicles used by passengers with disabilities
  - identifying driving hazards and using appropriate
EVIDENCE GUIDE

defensive driving techniques

- following safe handling procedures for vehicles used by passengers with disabilities

- recognising and adapting ethical behaviour that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers with special needs

- following emergency procedures when required

- monitoring and maintaining vehicle performance and its effect on the environment

- reporting and/or rectifying any identified vehicle faults or malfunctions in accordance with manufacturers instructions

- applying procedures for taxi subsidy scheme bookings and payments

- completing workplace documentation

- participating in a range of interactions with passengers with disabilities

- following OH&S regulations and legislation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:

  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or

  - access to an appropriate range of relevant operational situations in the workplace

  - participation in a range of interactions with passengers with a range of disabilities

  - drive and operate a vehicle used to transport passengers with disabilities in a range of operational situations - this is not to be done in a simulated environment

- In both real and simulated environments, access is required to:

  - relevant and appropriate materials and/or equipment, and/or

  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- Practical assessment must occur using a wheelchair accessible taxi or taxi approved by the state regulations

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Pre-operational checks may include:
- visual check of vehicle and ancillary equipment
- checking compatibility of mobility devices and vehicle loading, anchoring and carrying equipment
- checking and topping up fluid levels
- checking tyre pressure
- checking operation of vehicle lights and indicators
- checking brakes before moving vehicle

Ancillary equipment may include:
- ramps
- hoists

Workplace procedures may include:
- company policies and procedures
- established workplace procedures

Passengers may have a range of disabilities which may involve:
- intellectual/physical disability
- congenital/acquired disability
- permanent/temporary disability
- operations conducted during the day or night
- in all weather conditions
- different terrain and road surfaces

Assistance into and out of the vehicle, picking up, setting down and transporting of passengers may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- reversing a vehicle

Vehicle handling procedures must include:
RANGE STATEMENT

- operating the controls, instruments and indicators of the vehicle and the ancillary equipment
- using defensive driving techniques
- managing vehicle blind spots and height restrictions
- managing engine performance and its effect on the environment

Driving hazards may include but are not limited to:

- 'unstable' passengers
- wet and iced roads
- road damage
- bridge/tunnel damage
- road works
- oil on road
- animals and objects on road
- road closures for special events such as marches, parades
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas
- foggy conditions

Unit Sector(s)
Not Applicable

Competency Field

Competency Field C - Vehicle Operation
TLIC2049A Operate heavy vehicle on unsealed roads

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to operate a heavy vehicle on unsealed roads safely. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, and effective management of hazardous situations whilst operating a heavy vehicle on unsealed surfaces. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Operation of a heavy vehicle on unsealed roads must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy vehicles.

Operation of a heavy vehicle on unsealed roads is performed with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Operation of a heavy vehicle on unsealed roads involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a heavy vehicle across a variety of driving contexts and job roles.

Licensing/Regulatory Information

Employability Skills Information
Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Anticipate and make the transfer from sealed to unsealed road surfaces | 1.1 Unsealed road surfaces are identified by sight  
1.2 Adjustments are made to driving techniques before unsealed surface is encountered  
1.3 Vehicle speed and line are adjusted for smooth transition from sealed to unsealed  
1.4 Control of vehicle is maintained throughout transition  
1.5 Appropriate signage, lights and the like are checked for operational effectiveness on exiting sealed surfaces  
1.6 Whilst entering unsealed surfaces the heavy vehicle is managed and operated to ensure effective control of the vehicle |
| 2 Operate the heavy vehicle on unsealed surfaces | 2.1 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage when operating on unsealed surfaces  
2.2 Braking system of the heavy vehicle is managed and operated to ensure effective control of the vehicle whilst operating on unsealed surfaces  
2.3 Driving hazards on unsealed surfaces are identified and/or anticipated and avoided or controlled through defensive driving techniques  
2.4 Appropriate procedures are followed in the event of a driving emergency  
2.5 Heavy vehicle is operated in consideration to the surrounding environmental sensitivity of operating on unsealed roads |
| 3 Anticipate and make the transfer from unsealed to sealed road surfaces | 3.1 Sealed road surfaces are identified by sight  
3.2 Adjustments are made to driving techniques before sealed surface is encountered  
3.3 Vehicle speed and line are adjusted for smooth transition from unsealed to sealed  
3.4 Control of vehicle is maintained throughout transition  
3.5 Appropriate signage, lights and the like are checked for operational effectiveness on exiting unsealed surfaces  
3.6 Whilst exiting unsealed and sealed surfaces the heavy vehicle is managed and operated to ensure effective control of the vehicle  
3.7 Heavy vehicle is inspected and cleared of road debris prior to re-entering sealed surfaces |

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant road-bridge classification of unsealed roads
- Heavy vehicle handling procedures
- Workplace driving and operational instructions
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried on heavy vehicles and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Driving hazards and related defensive driving techniques
- Factors which may cause traffic delays and diversions, and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when operating a heavy vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a heavy vehicle on unsealed roads
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a heavy vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating heavy vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unexpected events when driving a heavy vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a heavy vehicle
Required skills:

- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required
- Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - using techniques for heavy vehicle operation on unsealed roads
  - identifying requirements for reconditioning of vehicles
  - identifying awareness of environmental sensitivities when driving on unsealed roads
  - identifying techniques for entering and exiting sealed and unsealed road surfaces

Context of and specific resources

- Performance is demonstrated consistently over a period
EVIDENCE GUIDE

for assessment

of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

- A simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

For the purposes of this unit heavy vehicle includes:

- medium ridged
- heavy ridged
- heavy combination
- multi combination

Unsealed road may include:

- an open road
- a private road
- formed unsealed roads
- dirt tracks
- remote areas
RANGE STATEMENT

Operation of a heavy vehicle on unsealed roads may be carried out in typical road transport situations, including:

- workplace or worksite
- by day or night
- in typical weather conditions
- on the open road
- on a private road
- on formed unsealed roads
- on dirt tracks
- in remote areas
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checks and top up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- checks of coupling equipment

Hazards could include:

- wet and iced roads
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- slow moving vehicles

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
RANGE STATEMENT

- road works
- building construction
- emergency situations such as bushfires, etc.
- livestock movement
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory heavy vehicle driving licence/permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including pre-operational checks of vehicle
- emergency procedures
- vehicle work diaries or record book (where required)
- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to operating heavy vehicles on unsealed roads
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Operate a terminal tractor | 1.1 Vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturers instructions and company policies  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage  
1.3 The vehicle is safely driven in reverse, maintaining visibility and achieving accurate positioning for the coupling to a trailer  
1.4 Trailer is coupled, tug test is performed, legs are sufficiently raised from the ground and air and electrical leads connected in preparation for manoeuvring, in accordance with manufacturers instructions and relevant company policies  
1.5 A clear travel path is identified and the coupled vehicle is moved and positioned in a manner safe for loading, unloading or parking in accordance with workplace instructions  
1.6 Trailer legs are lowered sufficiently for unhitching, air and electrical leads are disconnected, turntable is released for uncoupling and vehicle is safely manoeuvred from underneath trailer  
1.7 Vehicle lights and indicators are used in accordance with traffic regulations, manufacturers instructions and company policy  
1.8 The vehicle is parked, shut down and is secured in accordance with manufacturers specifications, and workplace procedures  
1.9 Vehicle positioning and movement are convenient and safe for loading and unloading in accordance with workplace instructions  
1.10 All associated equipment is operated in accordance with manufacturers and workplace instructions |
| 2 Monitor and maintain vehicle performance | 2.1 Vehicle performance is safety maintained through pre-operational inspections and checks of the vehicle  
2.2 Performance and efficiency of vehicle operation is monitored during use  
2.3 The vehicle is driven in a manner that incorporates eco driving principles  
2.4 Defective or irregular performance or malfunctions are repaired as a minor repair or reported to the appropriate authority  
2.5 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental/emissions procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures
- Workplace driving and operational instructions
- Driving hazards and related defensive operating techniques
- Procedures to be followed in the event of a operating emergency
- Engine power management and safe operating strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Principles of stress management when operating a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a terminal tractor
- Read and interpret instructions, procedures, information and signs relevant to the operating of a terminal tractor
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operating of a terminal tractor
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a terminal tractor
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when driving a terminal tractor in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when operating a terminal tractor
Required skills:
tractor
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a terminal tractor
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor performance of vehicle and take appropriate action where required
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating operation of a terminal tractor and its associated equipment
  - demonstrating an understanding of possible associated equipment for terminal tractor
  - demonstrating the ability to couple and uncouple a trailer
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,
EVIDENCE GUIDE

and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
- A simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Terminal tractor may include:
- TUG
- terminal tractor
- prime mover

Operating a terminal tractor may be carried out in workplace situations, including:
- by day or night
- in typical weather conditions
- on a private road
- while at a depot, base, wharf or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:
- starting a vehicle
- eco driving
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
RANGE STATEMENT

- reversing a vehicle
- operating vehicle controls, instruments and indicators
- managing engine performance
- hydraulic oil
- lift of turntable

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- load and load restraints
- check operation of associated equipment

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Eco driving may include:

- engine management
- brake management
- ancillary brakes
- gear selection
- using air-conditioning only when necessary
- not idling engine for extended periods when not in use
- anticipating traffic flow to prevent driving at congested times

Associated equipment may include:

- hydraulic turntable lift controls
- air hoses
- electrical leads

Operating hazards may include (examples only):

- wet and iced surfaces
- oil on surfaces
- objects on surfaces
- fire in vehicle
- leaking fuel
- lack of air
- lack of hydraulic fluid
- faulty brakes
- faulty steering mechanism on vehicle
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- foggy conditions
- time of day or night
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including pre-operational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to the class of vehicle
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field C - Vehicle Operation
TLIC2054B Access rail track to run track vehicle within defined worksite

Modification History
New release - this unit replaces and is equivalent to TLIC2054A.

Unit Descriptor
This unit involves the skills and knowledge required to safely access the rail track to run a track vehicle within a defined worksite on a rail network during rail work activities. The unit includes Access Provider rules, procedures and protocols for rail safety. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines. The unit includes the application of Access Provider rules, procedures and protocols for rail safety. All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## 1 Access defined worksite

| 1.1 | Authority to enter the defined worksite is confirmed with protection officer |
| 1.2 | Appropriate personal protective equipment (PPE) is used conforming to Access Provider requirements |
| 1.3 | Limits of the defined worksite and type of track protection provided are identified and confirmed |
| 1.4 | Communication with protection officer is maintained in accordance with the workplace procedures |

## 2 Run track vehicle within defined worksite

| 2.1 | Permission for all rail movements within the worksite is obtained from the protection officer |
| 2.2 | Speed limit is observed for type or classification of track vehicle and type of track |
| 2.3 | Speed limit is varied to meet local conditions |
| 2.4 | Track vehicle is managed so as to be able to stop short of any workers or obstruction on track |
| 2.5 | Unsafe situations and/or emergencies are identified, and appropriate action is taken in accordance with workplace procedures |

## 3 Exit defined worksite

| 3.1 | Protection officer is notified when clear of the defined worksite |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider and organisational policies, procedures and protocols
- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures for working around electrical infrastructure
- Operational communication protocols and systems
- Points and signals recognition
- Rail terminology as defined by the applicable Access Provider
- Types of track protection

Required skills:

- Communicate effectively with individuals and work groups
- Follow workplace policies, procedures and protocols
- Identify changed conditions
- Identify unsafe situations and emergencies
- Use required PPE conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - explaining how to safely access defined worksite
  - explaining how to safely egress defined worksite
  - identifying changed conditions
  - observing speed limit appropriate for type of vehicle, type of track and local conditions
  - explaining appropriate response to identified unsafe situations and/or emergencies

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
- platforms/buildings
- structures

Situational safety assessment will be:
- as defined within the workplace procedures
- as defined in the safety assessment work including:
  - view - line of sight
  - direction of approaching rail traffic
  - speed of approaching rail traffic
  - position of safety
  - changed local conditions

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communications equipment and systems may include:
- hand and audible signals
- two-way radio
- telephone/mobile phone
- signage

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Where applicable, worksite protection equipment may include:
- warning devices, whistles
- railway track signals
- demarcation barriers
- lights and flags and sirens
- electronic devices

Information and documents may include:
- workplace procedures, policies and work instructions
- emergency plan
- pre-work briefing
- worksite protection plan

Types of track protection may
- lookout
- track occupancy authority (TOA)
include:

- track work authority (TWA)
- local possession authority (LPA)
- absolute signal blocking (ASB)
- electronic authority system blocking (EASB)

Defined worksite may be an area protected by:

- track occupancy authority (TOA) and local possession track occupancy authority (TOA)
- track work authority (TWA)
- local possession authority (LPA)

Type of vehicle may include:

- road/rail
- track vehicles

Varied local conditions may include:

- gradients
- line of sight
- weather
- condition of rail
- multiple rail crews
- multiple vehicles

**Unit Sector(s)**

Not applicable.

**Competency Field**

C – Vehicle Operation
TLIC2058A Travel medium or heavy self-propelled on-track equipment

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to travel a medium or heavy self-propelled track vehicle on a rail network in accordance with the network owner’s policies and procedures.

Persons achieving competence in this unit will need to meet organisational requirements to operate each individual piece of equipment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit involves the application of operational principles and procedures to travel a medium or heavy self-propelled track vehicle as part of workplace activities across a variety of operational contexts.

Operators will need to have fulfilled licence and certification requirements for the type of equipment being used.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant rail safety OH&S and environmental procedures and regulations
- Organisational procedures for travelling medium or heavy self-propelled track vehicles
- Problems that may occur during the travel of medium or heavy self-propelled track vehicles, and action that can be taken to report or resolve them
- Hazards that may exist when travelling medium or heavy self-propelled track vehicles, and ways of controlling the risks involved
- Emergency procedures
- Network owner’s rules and regulations applicable to the job role

Required skills:

- Communicate effectively with others when travelling medium or heavy self-propelled track vehicles
- Follow operational instructions
- Complete documentation related to travelling medium or heavy self-propelled track vehicles
- Work collaboratively with others when travelling medium or heavy self-propelled track vehicles
- Report and rectify within limits of own role identified problems, faults or malfunctions when travelling medium or heavy self-propelled track vehicles in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities, particularly maintaining separation distance
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated by consistently meeting the requirements of the critical aspects for assessment over a period of time by means of evidence of work performed in a log book or similar documentation.

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Medium or heavy self-propelled track vehicles may include:
- rail crane
- spot tamper
- ballast regulator
- inserter/remover (TR10)
- track recorder
- tamper
- dynamic stabiliser
- rail grinder
- ballast cleaner
- track layer

Liaison may include:
- protection officer
- person in charge of work (PICOW)
- fellow workers

Communication systems may include:
- two-way radios
- radio headsets
- telephones, including mobile phones
- agreed audible or hand signals

Appropriate person may include:
- network control officer
- traffic officer
- possession officer
- PICOW
- track protection officer

Travel in a safe and efficient manner may include:
- route knowledge
- time of day
- prevailing weather conditions
- track conditions
- safe braking distances
- separation between vehicles
- communication between vehicles
- reading and/or interpreting on-board controls
- vigilance systems
- warning systems
- high visibility clothing
- hearing protection
- gloves

Depending on work context, safety and personal protective equipment may include:
- sunscreen
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices
- company procedures
- enterprise procedures
- workplace procedures
- established procedures
- relevant legislated rail safety requirements, including acts and regulations from each applicable state or territory
- operational instructions
- organisational policies and procedures
- relevant log and/or record book
- maintenance notices, records and requests
- local authority regulations and procedures
- technical instructions
- manufacturer’s or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio and/or mobile telephone operation procedures
- legislation and industrial agreements, including workplace agreements and awards

**Unit Sector(s)**

Not applicable.
Competency Field
C – Vehicle Operation
TLIC2059A Propel and operate light on-track equipment

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to propel and operate light on-track equipment.

Light on-track equipment is considered to be less than 10 tonnes that may be lifted on or off track mechanically.

Light on-track equipment requires a basic operator skill level in manipulation, coordination, alignment and functional activity, with little complexity or variance in overall activity. This typically covers equipment carrying out basic repetitive and alignment type activities.

Persons achieving competence in this unit will need to meet organisational requirements to operate each individual piece of equipment.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit involves the application of routine operational principles and procedures to propel and operate light equipment on track as part of workplace activities across a variety of rail operational contexts.

Operators will need to have fulfilled licence and/or certification requirements for the type of equipment being used.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## ELEMENT PERFORMANCE CRITERIA

### 1 Perform pre-operational equipment checks

1.1 Detailed pre-operational equipment checks are conducted according to manufacturer specifications and organisational procedures

1.2 If applicable, log books are checked and completed accurately in accordance with organisational requirements and manufacturer specification

1.3 Problems with equipment are identified and rectified in accordance with workplace procedures

1.4 Identified problems are reported and documented in accordance with organisational procedures

### 2 Obtain approval to place equipment on track

2.1 Protection officer or person in charge of work (PICOW) is contacted to obtain approval to place light on-track equipment on track and move to designated location in accordance with network owner’s procedures

### 3 Operate light equipment on track

3.1 Equipment is travelled to designated location in accordance with network owner’s procedures

3.2 Equipment is prepared for work

3.3 Equipment is operated in a safe and efficient manner in accordance with the relevant codes of practice, safeworking systems, manufacturer and organisational procedures

3.4 Equipment is operated to meet organisational standards and specifications

3.5 If applicable, warning systems are monitored and responded to appropriately during operation

### 4 Stable or off track equipment

4.1 Protection officer or PICOW is contacted to direct where and when to stable or off track equipment

4.2 Equipment is propelled to nominated stabling or off-track location

4.3 Equipment is stabled or off tracked as directed

4.4 Protection officer or PICOW is contacted and informed when the light on-track equipment is stabled or off tracked

4.5 Equipment is left stored in appropriate manner and location to ensure security and protection of equipment

### 5 Perform post-operational equipment

5.1 Post-operational equipment checks are conducted according to manufacturer specifications and organisational

procedures

5.2 Identified problems are reported in accordance with organisational procedures

5.3 Post-operating service schedules are conducted according to organisational procedures

6 Complete documentation

6.1 If applicable, log books are checked and completed

6.2 Required documentation is completed in accordance with organisational procedures
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant rail safety, OH&S and environmental procedures and regulations
- Organisational procedures for the operation of light on-track equipment
- Problems that may occur when operating light on-track equipment, and action that can be taken to report or resolve them
- Hazards that may exist when operating light on-track equipment, and ways of controlling the risks involved
- Emergency procedures
- Network owner’s rules and regulations applicable to the job role

Required skills:
- Communicate effectively with others when operating minor track equipment
- Follow operational instructions
- Complete documentation related to work activities
- Use appropriate numeric functions when operating equipment
- Work collaboratively with others when operating minor track equipment
- Report and rectify within limits of own role identified problems, faults and malfunctions when operating minor track equipment in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work with required attention to detail without injury to self or others, or damage to equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the
performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated by consistently meeting the requirements of the critical aspects for assessment over a period of time by means of evidence of work performed in a log book or similar documentation.
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Light on-track equipment may include:
- spike pullers (ride on)
- spike drivers
- ballast scarifiers
- multi-spindle borers
- small sleeper spacers
- dog screw setters/drivers
- power track jacks
- various fastening applicators
- joint lifters
- rail-mounted compressors
- profile grinders

Liaison may include:
- protection officer
- PICOW
- fellow workers

Communication systems may include:
- two-way radios
- radio headsets
- telephones, including mobile phones
- agreed audible or hand signals

Depending on work context, safety and personal protective equipment may include:
- high visibility clothing
- hearing protection
- gloves
- sunscreen
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios and mobile phones
- hand lamps
- flags
- safety devices

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:
- relevant legislated rail safety requirements, including acts and
regulations from each applicable state or territory
- operational instructions
- organisational policies and procedures
- relevant log and/or record book
- maintenance notices, records and requests
- local authority regulations and procedures
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio or mobile telephone operation procedures
- legislation and industrial agreements, including workplace agreements and awards

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC2074A Couple and uncouple track maintenance vehicles

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to safely couple/uncouple track vehicles in accordance with safeworking and organisational policies and procedures. Licensing, legislative, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
This unit is intended for all types of track maintenance vehicles which are required to be coupled and uncoupled as part of operational requirements.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Prepare to couple track maintenance vehicles

1.1 Coupling instructions are interpreted and confirmed as meeting minimum operating standards

1.2 Location of vehicles and required movements are identified

1.3 Communication methods to be used are agreed and confirmed

1.4 Vehicle/s to be coupled are secured in accordance with organisational procedures

### 2 Couple track maintenance vehicles

2.1 Setting of route and having correct authority in place is ensured prior to movement of track vehicles

2.2 Required warning is given before vehicle is moved

2.3 Vehicle is moved in a controlled manner to enable safe coupling and prevent damage

2.4 Coupling mechanisms are checked to ensure they are correctly engaged

2.5 Where applicable, connecting brake hoses and/or electrical couplings are connected in accordance with organisational procedures and/or manufacturer specifications

2.6 Securing devices are released/removed in accordance with organisational procedures

### 3 Uncouple and secure track maintenance vehicles

3.1 Vehicles are positioned to meet uncoupling requirements in accordance with organisational procedures

3.2 Securing devices are applied/attached in accordance with organisational procedures

3.3 Brake hoses and/or electrical couplings are disconnected in accordance with organisational procedures and/or manufacturer specifications

3.4 Coupling devices are correctly disengaged

3.5 Before vehicle is moved, required warning is given

3.6 Vehicles are separated in a controlled manner to enable safe uncoupling and prevent damage
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Communication protocols
- Identifying equipment defects and assessing for appropriate action
- Minimum operating requirements
- Principles of operation of protective devices, air and electrical couplings, handbrakes, derailleurs and coupling equipment
- Relevant legislated occupational health and safety (OH&S) and rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines

**Required skills:**

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when coupling/uncoupling track maintenance vehicles
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to coupling/uncoupling track maintenance vehicles
- Report and/or rectify any identified problems, faults or malfunctions when coupling/uncoupling track maintenance vehicles in accordance with regulatory requirements and workplace procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others when coupling/uncoupling track maintenance vehicles
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identify communication methodologies and requirements
  - demonstrate correct method for coupling track vehicles
  - demonstrate correct method for uncoupling track vehicles
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying alternative coupling equipment and methods for track maintenance vehicles in the workplace
  - demonstrating the correct use of communication methods during coupling and uncoupling activities
  - correctly securing vehicles before coupling and after uncoupling has been completed

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Track maintenance vehicles may include:
- track machines
- shunting tractors
- road/rail vehicles
- wagon
- track inspection vehicles
- overhead wiring maintenance vehicle

Communication methods may include:
- hand signals
- light signals
- flags
- verbal
- audible (horns, whistles etc.)

Required warnings may include:
- verbal
- audible (horns, whistles etc.)

Coupling mechanisms may include:
- automatic couplers
- draw hooks
- tow bar
- transition coupler

Securing devices may include:
- hand brake
- park brake
- chocks

Personal protective equipment may include:
- gloves
- safety eyewear
- hearing protection
- safety headwear
- safety footwear
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information/documents may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- notices
- yard orders
- manufacturers specifications
- emergency procedures

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC2075A Drive and monitor medium or heavy self-propelled on-track equipment

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to drive and monitor medium/heavy self-propelled on-track equipment in accordance with safeworking requirements, network owners and/or organisational policies and procedures. Medium/heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed. Licensing, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit does not cover the operation of the medium/heavy self-propelled on-track equipment to complete work activities. This must be covered by individual assessments for the equipment concerned.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Drive and monitor medium/heavy self-propelled on-track equipment

1.1 Authority is obtained from relevant personnel to travel vehicle in accordance with network owner procedures

1.2 Vehicle is driven in accordance with manufacturer instructions and organisational procedures

1.3 Vehicle handling techniques are applied to eliminate or minimise risk of injury to personnel or damage to equipment

1.4 Vehicle is monitored to maintain optimum running conditions and identify faults, defects and inefficiencies

1.5 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of vehicle

2 Control and monitor medium/heavy self-propelled on-track equipment

2.1 Events and circumstances affecting planned running schedule are communicated to relevant personnel in accordance with organisational procedures

2.2 Instructions received from relevant personnel are interpreted and applied to ensure safe and effective control of the vehicle

2.3 Communications are maintained with relevant personnel during train journey in accordance with relevant safeworking systems, network requirements and organisational procedures

2.4 Instructions concerning vehicle operation are given to relevant personnel to ensure safe and efficient running

3 Respond to changed operating factors

3.1 Temporary signs and/or signals, hand signals and verbal movement commands are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures

3.2 Hazardous/emergency situations are recognised and actions are taken in accordance with safeworking systems, network owner requirements and organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Completing required documentation
- Procedures to be followed in emergencies
- Relevant occupational health and safety (OH&S) and environmental procedures and regulations
- Relevant sections of legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Use of communications equipment

Required skills:

- Communicate effectively with others when assisting with train operations
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures and information relevant to vehicle operations
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others when assisting with train operations
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and organisational procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - demonstrating correct management techniques
  - identifying typical faults or defects that may occur
  - using correct communication protocols when driving and monitoring on-track equipment
  - correctly responding to trackside signs and signals

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the organisational
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including organisational procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur on a medium/heavy self-propelled on-track vehicle:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Vehicles may include:
- single medium/heavy self-propelled on-track equipment
- vehicles coupled together
- attached rolling stock

Medium/heavy self-propelled track vehicles may include:
- rail crane
- spot tamper
- ballast regulator
- inserter/remover (TR10)
- track recorder
- tamper
- dynamic stabiliser
- rail grinder
- ballast cleaner
- track layer

Track and road characteristics may include:
- track and bridge limitations
- speed limitations
- gauge limitation
- curves and gradients
- curfews
- location of signals and crossings
- emergency cross-overs

Vehicle handling techniques may include:
- brake operation
- use of tractive effort
- brake application and release

Relevant personnel can include:
- network control officer
- train controller
- maintenance personnel
- train crews
- yard and other operational personnel
- traffic officer
- station staff
- track protection officer
- signaller
- hand signaller

Temporary signs and/or signals may include:
- speed restrictions
- perway signs
- flashing lights
- strobe lights
railway track signals
• crossing protection
• flags
• warning signs

Hazardous/emergency situations may include but are not limited to:
• obstruction on track
• track defects
• unauthorised people on track
• animals on track
• crossings
• signal failures
• adverse weather conditions
• chemical spill
• fire beside track
• derailments

Depending on the type of organisation concerned, organisational procedures may be called:
• standard operating procedures
• company procedures
• enterprise procedures
• workplace procedures
• established procedures
• site procedures

Safety and personal protective equipment may include:
• gloves
• sunscreen and sunglasses
• safety eye wear
• safety headwear
• safety footwear
• flags
• audible indicators
• fire extinguishers
• high visibility clothing
• hearing protection

Applicable legislation, regulations and codes may include:
• legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
• relevant Australian Standards and related requirements
• relevant state/territory OH&S legislation
• relevant state/territory environmental legislation
Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC2076A Establish and operate braking system on medium/heavy self-propelled on-track equipment

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to establish, test and operate the braking system on a medium/heavy self-propelled on-track maintenance vehicle and dealing with brake system faults and failures. Medium or heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed. Licensing, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
This unit is intended for those persons who will drive medium/heavy self-propelled on-track equipment to ensure the braking system is suitable for operation prior to the on-track equipment being driven and to identify any faults when in transit. Depending on the type of test being used this activity may require the assistance of a second person.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Appropriate sections of legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Brake systems, their components and their operation
- Relevant occupational health and safety (OH&S) and environmental procedures and regulations
- Tools and equipment applications
- Types of brake tests and their purpose

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Assess brake system defects
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in brakes and related equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to operating a train braking system
- Report any identified problems, faults or malfunctions when operating a train braking system in accordance with regulatory requirements and workplace procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identify correct procedure for testing braking system
  - correctly conduct brake test
  - operate brake when driving on-track vehicle
  - identify possible brake faults that may occur

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur on a track maintenance vehicle:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Brake system types may include:
- air brake
- electronically controlled pneumatic braking (ECP)

Brake system tests may include:
- brake leakage test
- air continuity test
- train brake test
- penalty brake test
- hose and pipe components repair or replacement

Brake system faults may include:
- minor leakage
- excessive leakage
- burst hose pipe/hose bag
- brake equipment fault/failure
- worn brake component
- external tampering

Safety and protective equipment may include:
- high visibility clothing
- gloves
- safety eyewear
- safety headwear
- safety footwear
- portable radios/mobile phones
- hearing protection

Information/documents may include:
- workplace procedures and instructions, and job specification
- manufacturer specifications and standards
- brake inspection and testing documentation

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Sector(s)

Not applicable.
Competency Field

C – Vehicle Operation
TLIC2078A Identify and respond to signals and trackside signs

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to identify, interpret and respond to fixed signals and trackside signs in accordance with network owner and/or organisational policies and procedures. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit is suitable for people who are required to identify and respond to trackside signals and signs as part of their job role. They may be working within a rail operational or infrastructure environment.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Identify and respond to running signals and indicators**
   - 1.1 Types and functions of running signal and indicators are identified in accordance with network owner procedures
   - 1.2 Indications and aspects displayed by running signals and indicators are identified and interpreted
   - 1.3 Hand signals and/or track warning signals are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures
   - 1.4 Rail traffic speed and movement is controlled appropriate to the indication displayed by the running signal or indicator
   - 1.5 Illegal or irregular indications or aspects displayed by running signals or indicators are indentified and appropriate action is taken

2. **Identify and respond to shunting signals and subsidiary signals**
   - 2.1 Types and functions of shunting signals and subsidiary signals are identified in accordance with network owner procedures
   - 2.2 Indications displayed by shunting signals and subsidiary signals are identified and interpreted
   - 2.3 Rail traffic speed and movement is controlled appropriate to the indication displayed by the shunting signal
   - 2.4 Illegal or irregular indications displayed by shunting signals are identified and appropriate action is taken

3. **Interpret and respond to trackside signs**
   - 3.1 Permanent trackside signs are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures
   - 3.2 Temporary trackside signs are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational procedures

4. **Respond to and report defective or irregular signals or trackside signs**
   - 4.1 Defective or irregular signals and trackside signs are responded to in accordance with safeworking systems, network owner requirements and organisational procedures
   - 4.2 Defective or irregular signals and trackside signs are reported and recorded in accordance with safeworking systems, network owner requirements and organisational procedures

Transport & Logistics Industry Skills Council
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable legislation, regulations and codes such as: relevant network owner and/or organisational policies and procedures, relevant Australian Standards and related requirements, relevant state/territory environmental legislation
- Procedures to be followed in emergencies
- Relevant sections of legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Signalling system for each network
- Use of communications equipment

Required skills:

- Communicate effectively with others
- Complete required documentation
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures and information (including numerical information) relevant to vehicle operations
- Work collaboratively with others when identifying and responding to signals and trackside signs
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and organisational procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying types of fixed signals used in rail networks
  - identifying the different indications and aspects displayed by fixed signals in the rail networks
  - identifying types of trackside signs in the rail networks
  - responding to different indications and aspects displayed by fixed signals in the rail networks
  - responding to different trackside signs in the rail networks
  - correct workplace requirements for responding to illegal or irregular indications displayed by running signals or shunting signals

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the organisational
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including organisational procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Running signals may include:
- single colour light
- double colour light
- semaphore
- indicators
- position light repeaters
- colour light repeaters
- banner repeaters
- turnout repeaters
- co acting
- starting
- home starting
- distant
- outer home
- home
- automatic
- controlled
- turnout units

Indicators may include:
- route indicators
- colour light point indicators
- colour light catch point indicators
- mechanical light point indicators
- mechanical catch point indicators
- U indicators

Indications and aspects may include:
- clear
- caution
- medium caution
- low speed
- close up
- stop

Shunting signals may include:
- colour light shunting signals
- semaphore shunting signals
- intermediate shunting signals
- banner shunting signals
- shunt repeater
- wrong road signals

Subsidiary signals may include:
- calling on signals
- shunt ahead signals
- dead end signals
Permanent trackside signs may include:
- shunt repeater
- permanent speed signs
- yard limit signs
- landmarks
- shunting limit signs
- stop signs
- catch point
- derail signal
- rolling stock prohibition signs
- whistle signs/boards
- no whistle signs
- clearance markers
- signal designation signs
- instruction signs
- level crossing signs

Temporary signs may include:
- caution speed signs
- warning speed signs
- clearance signs
- worksite warning signs

**Unit Sector(s)**
Not applicable.

**Competency Field**
C – Vehicle Operation
**Modification History**
Release 1 - New unit of competency

**Unit Descriptor**
This unit involves the skills and knowledge required to start up, prepare, shut down and stable a medium/heavy self-propelled track vehicle on a rail network in accordance with network owner policies and procedures.

Medium or heavy on-track equipment generally weighs more than 10 tonnes and is permanently railed.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Application of the Unit**
This unit is suitable for people required to start up and prepare a medium/heavy self-propelled track vehicle prior to leaving a stabling location. It also covers stabling a medium/heavy self-propelled track vehicle, including shutting the vehicle down and securing it.

**Licensing/Regulatory Information**
Not applicable.

**Pre-Requisites**
Not applicable.

**Employability Skills Information**
This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1. Inspect and prepare track vehicle

   1.1 Identification and location of track vehicle is confirmed
   1.2 Logbook and track vehicle are checked for out of service indications and to confirm serviceability and logbook is completed accurately in accordance with organisational requirements or manufactures specification
   1.3 Where applicable, track vehicle kit and equipment are checked and defects and deficiencies are recorded and rectified, isolated, tagged (where applicable) or reported in accordance with organisational procedures
   1.4 Consumables are checked and replenished as required
   1.5 External visual checks are conducted in accordance with manufacturer and/or organisational procedures
   1.6 Problems are identified and rectified in accordance with organisational procedures
   1.7 Identified problems are reported and/or documented in accordance with organisational procedures

2. Start up track vehicle

   2.1 Track vehicle is started in accordance with manufacturer instructions and/or organisational procedures
   2.2 Any operating faults are identified, diagnosed, rectified and/or reported and recorded in appropriate records
   2.3 Appropriate instruments and gauges are observed and readings are interpreted to confirm effective operation in accordance with manufacturer and/or organisational procedures
   2.4 Where required, fluid levels are rechecked after starting and appropriate action is taken if required

3. Conduct in-cab checks

   3.1 Track vehicle in-cab checks are conducted in accordance with manufacturer and/or organisational procedures
   3.2 Driver safety systems are checked to ensure they are functioning correctly and appropriate action is taken if they are not
   3.3 All communication equipment is checked to ensure that it is functioning correctly and appropriate action is taken if it is not
   3.4 Auxiliary and emergency equipment is checked and confirmed to be operational in accordance with operating requirements
   3.5 All required documentation concerning inspecting track vehicle is completed in accordance with organisational procedures

4. Stable medium/heavy

   4.1 Approval is requested from appropriate person to direct when
Start up, shut down and stable medium/heavy self-propelled on-track equipment

4.2 Track vehicle is moved to nominated stabling location

4.3 Appropriate person is contacted and informed that track vehicle is at nominated location and intact

4.4 Track vehicle is stabled as directed

4.5 Track vehicle is left in appropriate manner to ensure security and protection of vehicle and ancillary equipment

5 Shut down track vehicle

5.1 Track vehicle is shut down in accordance with manufacturer and/or organisational procedures

5.2 Track vehicle is secured in accordance with organisational procedures

5.3 Control/isolation equipment and cab is secured in accordance with organisational procedures

6 Perform post-operational procedures

6.1 Post-operational checks are conducted in accordance with manufacturer specifications or organisational procedures to identify defects and maintenance requirements

6.2 Identified problems are reported in accordance with organisational procedures

6.3 Post-operating service schedules are conducted in accordance with organisational procedures

6.4 Required documentation is completed in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Emergency procedures
- Hazards that may exist during start up and shut down of medium/heavy self-propelled track vehicles and ways of controlling the risks involved
- Network owner rules and regulations applicable to the job role
- Organisational procedures for starting up and shutting down medium/heavy self-propelled track vehicles
- Problems that may occur during preparing and stabling medium/heavy self-propelled track vehicles and action that can be taken to report or resolve problems
- Relevant rail safety occupational health and safety (OH&S) and environmental procedures and regulations

**Required skills:**

- Communicate effectively with others when preparing and stabling medium/heavy self-propelled track vehicles
- Complete documentation related to preparing and stabling medium/heavy self-propelled track vehicles
- Follow operational instructions
- Modify activities depending on operational contingencies, risk situations and environments
- Report and/or rectify any identified problems, faults or malfunctions when preparing and stabling medium/heavy self-propelled track vehicles in accordance with regulatory requirements and workplace procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others when preparing and stabling medium/heavy self-propelled track vehicles
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying correct start up procedures
  - identifying correct shut down procedures
  - correctly securing vehicles when stabling on-track equipment

Context of and specific resources for assessment

- Performance is demonstrated by consistently meeting the requirements of the critical aspects for assessment over a period of time by means of evidence of work performed in a log book or similar documentation.

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Medium/heavy self-propelled track vehicles may include:
- rail crane
- spot tamper
- ballast regulator
- inserter/remover (TR10)
- track recorder
- tamper
- dynamic stabiliser
- rail grinder
- ballast cleaner
- track layer

Consumables may include:
- fuel
- oils
- water
- coolant
- sand

Auxiliary and emergency equipment may include:
- fire extinguishers
- tool box
- first aid kit
- emergency chain
- railway track signals (audible track warning devices)
- spill kits
- hydraulic/manual jacks
- spare brake blocks
- spare knuckles
- chocks
- flags

Liaison may include:
- protection officer
- person in charge of work (PICOW)
- fellow workers

Communication systems may include:
- two-way radios
- radio headsets
- telephones/mobile phones
- agreed audible or hand signals

Appropriate person may include:
- network control officer
- traffic officer
- possession officer
- PICOW
Safety and protective equipment may include:
- track protection officer
- high visibility clothing
- hearing protection
- gloves
- safety eyewear
- safety headwear
- safety footwear
- portable radios/mobile phone
- hand lamps
- flags

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information/documents may include:
- relevant legislated rail safety requirements including acts and regulations from each applicable state and/or territory
- operational instructions
- organisational policies and procedures
- relevant logbook and/or record book
- maintenance notices, records and requests
- local authority regulations and procedures
- technical instructions
- manufacturer or workplace equipment instructions and operation manuals
- emergency procedure manuals
- two-way radio/mobile phone operation procedures

Applicable legislation, regulations and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)
Not applicable.
Competency Field

C – Vehicle Operation
TLIC2081A Pilot rail traffic within work on track authority limits

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to pilot rail traffic within Work on Track Authority limits in accordance with Access Provider, legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines. The unit includes the application of Access Provider rules, procedures and protocols for rail safety. All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Enter Work on Track Authority limits

1.1 Protection Officers (PO)/Possession Protection Officers (PPO) are informed that rail traffic has arrived at the Work on Track Authority limits and confirmation that it is safe to enter is sought and obtained

1.2 Permission to enter Work on Track Authority limits is documented in accordance with access provider and/or organisational requirements

1.3 Authority to enter track protection is provided to rail traffic driver

1.4 Rail traffic is piloted into the Work on Track Authority limit

1.5 Advice regarding any operating restrictions and conditions is given to rail traffic crew

2 Exit Work on Track Authority limits

2.1 Rail traffic is piloted to limit of the Work on Track Authority limits

2.2 Permission is obtained from network control officer for rail traffic to exit the Work on Track Authority limits
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider and organisational policies, procedures and protocols
- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures for working around electrical infrastructure
- Audible warning equipment, use and when applicable
- Rail terminology as defined by the applicable access provider
- Operational communication protocols and systems
- Worksite protection plan

Required skills:

- Apply procedures for the use of railway track signals, when applicable
- Communicate effectively with individuals and work groups
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Use required personal protective equipment conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - explaining procedures for granting permission for rail traffic to enter Work on Track Authority limit
  - piloting rail traffic within the Work on Track Authority limit

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology used will be:
- as defined by the Access Provider

Work may occur:
- under varied visibility conditions

Safety assessment will be:
- as defined within workplace procedures
- as defined in the safety assessment work including:
  - view - line of sight
  - direction of approaching rail traffic
  - speed of approaching rail traffic
  - position of safety
  - changed local conditions

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communications equipment and systems may include:
- hand and audible signals
- two-way radio
- telephone/mobile phone
- signage

Communication protocols may include:
- general safety
- transmitting and receiving messages:
  - identification
  - standard radio terms
  - phonetic alphabet
  - testing communications equipment
  - emergency messages

Network control officer may be:
- network controller
- train controller
- area controller
Safety clothing and equipment may include:
- signaller
- high visibility clothing
- protective footwear
- hearing protection

Where applicable, worksite protection equipment may include:
- warning devices, whistles and sirens
- railway track signals
- demarcation barriers
- lights and flags
- electronic devices
- signage

Information and documents may include:
- workplace procedures, policies and work instructions
- emergency plan
- pre-work briefing
- worksite protection plan

Unsafe situations may include:
- risks to the individual
- risks to the public
- risks to rail traffic
- risks to the physical assets of the network

Worksite protection plan may include:
- defining the limits of the worksite
- identifying safe places
- identifying positions for inner/outer handsignaller
- identifying positions for lookouts
- identifying level and pedestrian crossings
- identifying fixed rail infrastructure including:
  - signals
  - overhead structures
  - bridges/tunnels
  - turn outs
  - minimum sighting distances
  - parallel lines

Piloting may include:
- verbal instructions to rail traffic crew
- verbal communication with PO/PPO

**Unit Sector(s)**
Not applicable.
Competency Field

C – Vehicle Operation
TLIC3003A Drive medium rigid vehicle

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to drive a medium rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to medium rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial medium rigid vehicle across a variety of driving contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Drive the medium rigid vehicle | 1.1 The medium rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage  
1.3 Engine operation is maintained within the manufacturer's specified torque range and temperature through effective transmission use  
1.4 Braking system of medium rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions  
1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving  
1.6 The medium rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning  
1.7 The medium rigid vehicle is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures  
1.8 Appropriate procedures are followed in the event of a driving emergency |
| 2 Monitor traffic and road conditions | 2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations  
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities |
| 3 Monitor and maintain vehicle performance | 3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle  
3.2 Performance and efficiency of vehicle operation is monitored during use  
3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority  
3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Medium rigid vehicle controls, instruments and indicators and their use
- Medium rigid vehicle handling procedures
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Principles of stress management when driving a vehicle
- Map reading and road navigation techniques including the use of a GPS device where applicable
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a medium rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a medium rigid vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a medium rigid vehicle in accordance with regulatory requirements and
Required skills:

- workplace procedures
- Implement contingency plans for unexpected events when driving a medium rigid vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Monitor and anticipate traffic hazards and take appropriate action
- Carry out pre-operational checks on a medium rigid vehicle
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,
EVIDENCE GUIDE

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:

- all medium rigid vehicles, for example any 2-axle rigid vehicle, including truck and bus greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
RANGE STATEMENT

- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory medium rigid vehicle driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to medium rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to drive a heavy rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial heavy rigid vehicle across a variety of driving contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Drive the heavy rigid vehicle | 1.1 The heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage  
1.3 Engine operation is maintained within the manufacturer's specified torque range and temperature through effective gear selection and smooth transition in gear changes  
1.4 Braking system of heavy rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions  
1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving  
1.6 The heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning.  
1.7 The heavy rigid vehicle is parked, shut down and secured in accordance with manufacturers specifications, traffic regulations and workplace procedures  
1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements  
1.9 Appropriate procedures are followed in the event of a driving emergency |
| 2 Monitor traffic and road conditions | 2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations  
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities |
| 3 Monitor and maintain vehicle performance | 3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle  
3.2 Performance and efficiency of vehicle operation is monitored during use  
3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority  
3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Heavy rigid vehicle controls, instruments and indicators and their use
- Heavy rigid vehicle handling procedures
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on heavy rigid vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Principles of stress management when driving a vehicle
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies and on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

**Required skills:**
- Communicate effectively with others when driving a commercial heavy rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to when the driving of a commercial heavy rigid vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a commercial heavy rigid vehicle
- Work collaboratively with others when driving a commercial heavy rigid vehicle
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a commercial heavy rigid vehicle in accordance with regulatory requirements and workplace procedures
Required skills:

- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a commercial heavy rigid vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of the vehicle and its equipment and take appropriate action where required
- Carry out pre-operational checks in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:

- all heavy rigid vehicles, for example any rigid vehicle with 3 or more axles, including trucks or buses, greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client’s workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
RANGE STATEMENT

- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- work site hazards including power and service lines, buildings, structures, facilities, underground services, uneven or unstable ground and recently filled trenches, stationary and moving machinery and equipment, hazardous or dangerous materials, noise, light, energy sources, and obstructions

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
RANGE STATEMENT

- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory heavy rigid vehicle driving licence and permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
- relevant standards and certification requirements
- quality assurance procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to heavy rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

</table>
| 1 Prepare for pilot or escort operation | 1.1 Maintenance needs of pilot and/or escort vehicles and associated equipment are identified according to maintenance schedule or reports of faults  
1.2 Pilot and/or escort vehicles and associated equipment are prepared for operation to manufacturers specifications, workplace procedures and government regulations  
1.3 Minor maintenance on vehicles is carried out in accordance with workplace policies and to manufacturers specifications  
1.4 Post-maintenance inspections and tests of pilot and/or escort vehicles and associated equipment are completed  
1.5 The outcomes of inspections, identified faults and repairs are recorded in accordance with workplace procedures |
| 2 Carry out communications regarding pilot or escort operation | 2.1 Transport companies whose vehicles are scheduled for escort are consulted to confirm requirements for escort operation  
2.2 The escort permit is verified for completeness and accuracy and convoy is checked to ensure compliance with the permit in accordance with government rules and regulations and government policy  
2.3 The permit holder is advised of the results of the check  
2.4 Convoy is briefed and given instructions and directions on the escort operation |
| 3 Conduct pilot and/or escort operation | 3.1 Required vehicle positioning, traffic warning and directional signalling procedures are implemented to enable safe passage of the load  
3.2 Safety equipment is operated and roadside obstacles are positioned to ensure safe passage of the load in accordance with government rules and regulations and workplace procedures  
3.3 Precautions are taken to ensure that convoy personnel are aware of road and other conditions that may impact on load and vehicle security  
3.4 All required liaison with relevant authorities is undertaken  
3.5 Documentation is completed in accordance with government rules and regulations and workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads
- Relevant OH&S and environmental procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Vehicle handling procedures
- Procedures to be followed in the event of a driving/piloting/escort emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Driving hazards and related defensive driving techniques
- Principles of stress management when carrying out pilot/escort functions
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Workplace driving and operational instructions
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management techniques
- Lifestyles which promote the effective long-term management of fatigue
- Documentation requirements for piloting and escorting oversized/overmassed loads

Required skills:

- Communicate effectively with others when piloting and escorting vehicles with oversized and overmassed loads
- Read and interpret instructions, procedures, information and signs relevant to the piloting and escorting of vehicles with oversized and overmassed loads
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the piloting and escorting of vehicles with oversized and overmassed loads
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when piloting and escorting vehicles with oversized and overmassed loads
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when piloting and escorting vehicles with oversized and overmassed loads in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when piloting and escorting vehicles with oversized and overmassed loads
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations include:

- all pilot and escort vehicle operations

Pilot and escort operations may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance
- visual check of vehicle

Pre-operational checks may
RANGE STATEMENT

include:

- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators including warning indicators
- checks of brakes

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Unit Descriptor

This unit involves the skills and knowledge required to operate vehicles used for the transport of people with disabilities including pre-operational checks of the vehicle and its ancillary equipment; assistance to passengers in the use of restraints and ancillary equipment; provision of appropriate support to passengers during their journey; and manoeuvring the vehicle with due consideration of passengers' disabilities and the requirements of relevant government regulations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Transporting of passengers with disabilities must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle conveying persons with disabilities across a variety of driving contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1  | Carry out pre-operational checks on vehicles | 1.1 The pre-operational checks for the vehicle and its associated ancillary equipment are carried out in accordance with manufacturers requirements, government regulations and workplace policies and procedures  
1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures |
| 2  | Drive a vehicle used by passengers with disabilities | 2.1 Passengers are assisted in a courteous manner, sensitive to the disability  
2.2 Passengers are assisted to use restraints, and the ancillary equipment which accompanies them, where appropriate  
2.3 Ongoing support is provided to the passenger to maximise their travelling comfort  
2.4 Ancillary equipment is stowed safely in vehicle following relevant regulations, where appropriate  
2.5 The vehicle is manoeuvred in accordance with the regulations for the class of vehicle involved  
2.6 The vehicle is manoeuvred with due consideration to any required precautions related to the disability of the passengers or relevant government regulations pertaining to the special load  
2.7 Signs or indicators are fixed to the vehicle if required |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant anti-discrimination legislation
- Duty of care responsibilities when driving vehicles used by passengers with disabilities
- Vehicle and ancillary equipment controls, instruments and indicators and their use
- Vehicle handling procedures and procedures for operating ancillary equipment
- Techniques for driving vehicles used by passengers with disabilities
- Pre-operational checks carried out on vehicle and ancillary equipment and related action
REQUIRED KNOWLEDGE AND SKILLS

- Driving hazards and related defensive driving techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Workplace driving and operational instructions

Required skills:

- Communicate effectively with others when transporting passengers with disabilities
- Read and interpret instructions, procedures, information and signs relevant to the transporting of passengers with disabilities
- Interpret and follow operational instructions and prioritise work
- Interact with passengers with disabilities
- Complete documentation related to the transporting of passengers with disabilities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when transporting passengers with disabilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when transporting passengers with disabilities in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
- cars and vehicles designed to transport passengers with disabilities
RANGE STATEMENT

Transporting of passengers may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or worksite

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating the controls, instruments and indicators of the vehicle and ancillary equipment
- using defensive driving techniques
- managing engine performance

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Pre-operational checks may include:
- visual check of vehicle and ancillary equipment
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
RANGE STATEMENT

Factors that can cause traffic delays and diversions may include (examples only):
- replacement of broken coolant hose
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- state/territory driving licence requirements
- state/territory road rules
- workplace instructions and procedures for the transport of passengers with disabilities
- manufacturers instructions, specifications and recommended operating procedures for both vehicle and ancillary equipment, including pre-operational checks
- emergency procedures
- vehicle log book or record book (where required)
- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to the class of vehicle
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant anti-discrimination legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to safely shunt rolling stock in accordance with safeworking and regulatory requirements and workplace procedures, including controlling and directing the physical movement of rolling stock and operating relevant equipment to carry out a developed shunting strategy. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to carry out shunting activities as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and prepare for shunting operation | 1.1 Shunting requirements are interpreted and clarified and vehicles and equipment are obtained and prepared in accordance with shunting strategy  
1.2 Rolling stock movements, availability and locations are established in order to determine appropriate siding and/or track locations for vehicle placement  
1.3 Relevant OH&S legislation, codes of practice, organisational policies and procedures and safeworking systems and requirements related to shunting are identified |
| 2 Carry out shunting control procedures | 2.1 Points, levers, switches, signals and line of sight communications are used to assist the control of rolling stock movement  
2.2 Hand, light and radio shunting commands used are uniform and conform with operational and statutory requirements  
2.3 Relevant OH&S requirements are followed to prevent injury and damage  
2.4 Wagon cards are checked and wagons are obtained and sorted to comply with shunting requirements  
2.5 Shunting control techniques are applied to prevent damage of rolling stock and loads/contents |
| 3 Shunt rolling stock | 3.1 Workplace procedures for shunting are identified and applied  
3.2 Rolling stock is positioned to meet shunting requirements  
3.3 Coupling systems are identified and applied to attach and detach rolling stock  
3.4 Connecting brake hoses, electrical couplings and hand brakes are connected/disconnected and applied/released in accordance with operational and OH&S requirements  
3.5 Shunting occurs with the minimum of necessary moves within governing safety requirements and limitations |
| 4 Finalise train consist | 4.1 Train consists are made up according to operational procedures within timetabling requirements  
4.2 Irregularities and defects with equipment rolling stock are reported in accordance with operational requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Dangerous Goods Codes and regulations
- Shunting plan and instructions
- Procedures for prioritising work
- Loading and unloading procedures
- Procedures for getting on and off rolling stock in an appropriate manner
- Procedures for coupling and uncoupling rolling stock
- Procedures for operating points and signals
- Procedures for solving problems associated with shunting operations
- Procedures for identifying and reporting hazards
- Radio communication protocol
- Procedures for completing relevant documentation
- Wagon mechanisms
- Yard features
- Characteristics and features of wagons and other rolling stock
- Principles of operation of protective devices, air brakes, handbrakes, derailers
- Location and operation of signals and points
- Local track and signal layouts
- Draw gear capacities and related operating procedures
- Safeworking systems and requirements
- Shunting signals and commands and line of sight communication systems
- Procedures to be followed in the event of an emergency
- Defects that can occur on a shunting gear and equipment and related action that should be taken
- Procedures for identifying equipment defects and assessing for appropriate action
- Local procedures and operating requirements
- Procedures for operating mechanical, electronic and other line of sight communications equipment with required protocols

**Required skills:**
Required skills:

- Communicate effectively with others when shunting rolling stock
- Read and interpret instructions, procedures, information and signs relevant to the shunting of rolling stock
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the shunting of rolling stock
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when shunting rolling stock
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when shunting rolling stock in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when shunting rolling stock
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor condition and performance of equipment and take appropriate action if required
- Check gear and equipment in terms of service schedule and standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
EVIDENCE GUIDE

unit
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:

  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rolling stock may include:
- all rolling stock in service within Australian rail systems

Operations may be conducted:
- by day or night
- in all relevant weather conditions

Equipment may include:
- draw gear
RANGE STATEMENT

- air brake system components and handbrakes
- rail tractors
- rolling stock
- communication equipment
- switching equipment
- turntables
- motor vehicles
- fixed signals

OH&S requirements are those necessary to meet applicable workplace, state/territory and national policies and procedures and may include the use of:

- gloves
- sunscreen, sunglasses and safety glasses
- hearing protection
- insect repellent
- safety headwear and footwear
- portable radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- breakdown equipment
- emergency containers
- end-of-train unit or marker
- equipment for handling electrical cables
- emergency warning devices
- portable signs and markers

Contingencies may include:

- derailments
- collisions
- breakdowns
- injuries and fatalities
- hazardous materials spills
- fires and leaks
- track damage
- powerline damage

Contingency plans and contingencies may involve:

- emergency procedures manuals
- ADG Code and other relevant dangerous goods regulations
- safeworking systems and requirements

Depending on the type of
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may include:

Information/documents may include:

- enterprise procedures
- organisational procedures
- established procedures
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where shunting operations are carried out on that network
- order books
- cards/deck sheets
- noticeboards
- special train notices
- yard orders
- periodical circulars
- transport authority rules and operating procedures
- computer-based data systems
- timetables
- train consist
- incident reports
- drivers advice
- train register book
- safeworking forms
- dangerous goods manifest
- marshalling plan and shunting lists
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where shunting operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- Railways of Australia Code of Practice and Conditions for the Carriage of Dangerous Goods

Applicable procedures and codes may include:

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- On-train remote control unit controls, instruments and indicators and their purpose, location and use
- Positioning procedures
- Shut-down procedures
- Braking and safety system procedures
REQUIRED KNOWLEDGE AND SKILLS

- Procedures for the control of motive power units
- Procedures for the operation of remote control units
- Motive power operating techniques
- Procedures for managing hazardous situations involving on-line remote control systems
- Operational instructions
- Shunting and marshalling procedures
- Procedures for identifying equipment defects in remote control units and assessing for appropriate action including compatible coupling, braking and drive equipment, ancillary systems and signalling systems
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others when operating on-train remote control system
- Read and interpret instructions, procedures, information and signs relevant to the operation of on-train remote control system
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of on-train remote control system
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating on-train remote control system
- Promptly report and/or rectify any identified problems, faults or malfunctions when operating on-train remote control system in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when operating on-train remote control system
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Judge train speeds and movements
- Monitor performance of equipment and take appropriate action if required
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - operating remote control system in a range of configurations and/or trains
  - identifying possible operating difficulties that may occur during the operation using remote control
  - shutting down remote control system correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

On-train remote control equipment is:
- that using any mechanism and operating system to allow the control of one motive power unit which is part of a train from another unit which is part of the same train

Motive power units include all motive power units in service within Australian rail systems and may include:
- diesel locomotives
- electric locomotives
- railcars
- multiple units including electric
- non-operational units

Remote control operation may be used:
- within a yard for the purpose of marshalling
- shunting
- on running lines

Action taken as a result of identified faults, defects or deficiencies may include:
- carrying out repairs or adjustments, depending on the level and extent of work required
- reporting to appropriate personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and protective equipment may include:
- high visibility clothing
- end of train markers
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
RANGE STATEMENT

- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- hearing protection

Information/documents may include:
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- equipment operation manuals
- operational instructions, policies and procedures
- emergency procedure manuals
- two-way radio operation procedures
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

</thead>
</table>
| 1 Determine stabling location | 1.1 Contact is made with appropriate personnel to determine planned location for stabling the train and/or motive power unit  
1.2 Location is identified and confirmed with appropriate personnel  
1.3 Directions of appropriate personnel are interpreted and followed |
| 2 Stable motive power unit | 2.1 Train is shunted and secured to prevent roll away in accordance with directions, workplace procedures and relevant rail regulations  
2.2 Motive power unit is stabled as directed  
2.3 Motive power unit is secured to prevent roll away in accordance with directions, workplace procedures and relevant rail regulations  
2.4 Motive power unit is shut down as per manufacturers instructions and workplace procedures  
2.5 Cab is secured as per workplace procedures  
2.6 If required, derailers are set in place as per workplace procedures and rail regulations |
| 3 Carry out post-operational checks | 3.1 If appropriate, fuel and fluid levels are checked and any required action is taken to replenish them  
3.2 Inspection is made of motive power unit as per workplace procedures  
3.3 Any identified faults and defects are fixed and/or reported and recorded as per workplace procedures  
3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged as per workplace procedures and rail regulations  
3.5 Outcomes of post-operational checks are recorded as per workplace procedures  
3.6 All equipment is returned and stowed as per workplace requirements |
| 4 Complete post-operational paperwork | 4.1 All required safeworking documentation is completed as per workplace procedures and rail regulations |

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Procedures for stabling a motive power unit
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop a motive power unit
- Speed and load limits compliance requirements
- Procedures for managing hazardous situations when operating and stabling a motive power unit
- Procedures for operating and shutting down auxiliary systems
- Procedure for completing relevant documentation when stabling a motive power unit
- Procedures to be followed in the event of an emergency
- Procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit
- Procedures for identifying equipment defects and assessing for appropriate action
- Motive power unit knowledge may include: monitoring devices, braking and power equipment, ancillary systems, and signalling systems
- Local procedures and operating requirements
- Typical defects that can occur on a motive power unit and related action that should be taken
- Procedures for securing a motive power unit to prevent roll away
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others when stabling a motive power unit
- Read and interpret instructions, procedures and information relevant to the stabling of a motive power unit
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the stabling of a motive power unit
- Operate electronic communications equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist
Required skills:

- Recognise problems that may arise when stabling a motive power unit and take appropriate action
- Check and replenish fuel and fluids and carry out lubrication requirements on a motive power unit (if appropriate)
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in motive power units and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Conduct a visual inspection of a motive power unit
- Document outcomes of an inspection of a motive power unit
- Shut down a motive power unit after service

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying a number of different locations where motive power units may be stabled (including in emergencies)
  - identifying typical faults or defects that may be identified during post operational checks
  - carrying out post-operational checks in accordance with workplace procedures on a range of motive power units
EVIDENCE GUIDE

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Motive power units may include all motive power units in service within Australian rail systems and may include:
- diesel locomotives
- electric locomotives
- railcars
- multiple units (including electric multiple units)

Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
RANGE STATEMENT

- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a motive power unit may include:

- lights
- hoses
- couplings
- destination boards
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel (regional diesel train services)
- pantographs
- electrical cables
- glass windows and doors
- compressor oil levels
- automatic power cut out sensors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

Post operation checks may include:

- lubrication system
- checking for fluid leaks
- brake testing
- checking of fluid levels

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
RANGE STATEMENT

- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required)
- isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- mobile/satellite phones
- hand lamps
- flags
- safety devices
- audible indicators
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:

- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- safe working documentation
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units
RANGE STATEMENT

- from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- emergency procedures manual
- legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable legislation, regulations and codes may include:

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a heritage motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes operating the controls of the motive power unit; and monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to maintain the safety and operation of a motive power unit across a variety of operational contexts in the Australian heritage rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Operate motive power unit | 1.1 Motive power unit handling techniques and track and road knowledge are interpreted and applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load  
1.2 Acceleration and braking techniques are applied safely within track and road and weather conditions  
1.3 Movement of motive power unit between sections ensures that all rolling stock is positioned safely in accordance with relevant codes of practice, safeworking systems, and related requirements |
| 2 Operate and monitor on-board equipment | 2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and identify faults, defects and deficiencies  
2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with operations controller where necessary  
2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel |
| 3 Respond effectively to external operating factors | 3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment as per workplace procedures and applicable regulatory requirements |
| 4 Work collaboratively with other train crew and relevant personnel | 4.1 Safe operation and monitoring of the motive power unit is maintained in collaboration with other members of the train crew, train controllers and other relevant personnel as per workplace requirements and the principles of rail resource management  
4.2 Any potential or actual conflicts or grievances with other members of the train crew, train controllers and other relevant personnel during the operation of the motive power unit are recognised and resolved in accordance with workplace procedures and the principles of rail resource management |
| 5 Communicate with | 5.1 Regular communication is maintained with train crew, train |
**ELEMENT**

train crew, train controllers and other personnel

**PERFORMANCE CRITERIA**

controllers, drivers of other trains and other relevant personnel in the course of operation of the motive power unit as per workplace procedures and regulatory requirements

5.2 Train crew, train controllers, drivers of other trains and other relevant personnel are advised of operational problems, delays, safety incident and emergency situations that may arise in the course of operation of the motive power unit

5.3 Information provided by train crew, train controllers, drivers of other trains and other relevant personnel relevant to the ongoing operation of the motive power unit is interpreted and applied to driving activities as per workplace procedures and applicable regulatory requirements

6 Follow all applicable rail regulatory requirements

6.1 Rail regulatory requirements applicable to the operation of the motive power unit and the train and track or road concerned are accessed, understood and interpreted

6.2 Relevant rail regulatory requirement are applied and followed in the course of operation of the motive power unit

6.3 Principles of rail resource management are applied in all rail operations involving the motive power unit as per workplace procedures and applicable rail regulatory requirements

---

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Relevant OH&S and environmental procedures and regulations
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Procedures for operating and monitoring the motive power unit
- Motive power unit knowledge including: monitoring devices, braking and drive equipment, ancillary systems, and signalling systems
- Track and road knowledge including: track/bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency cross Overs, and operation of a turntable
- Braking and safety system procedures
REQUIRED KNOWLEDGE AND SKILLS

- Operating controls to start, accelerate, decelerate and stop the motive power unit
- Speed and load limits for the motive power unit
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a motive power unit
- Procedures for operating and monitoring ancillary equipment on the motive power unit
- Procedures for checking the battery and fluid levels and lubricating a diesel motive power unit (where applicable)
- Procedures for checking the battery and fluid levels and lubricating on an electric motive power unit (where applicable)
- Procedures for identifying equipment defects and assessing them for appropriate action
- Procedures for minor maintenance, cleaning, lubricating and servicing of a motive power unit
- Typical faults that can occur on a motive power unit and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- Procedures for raising and lowering the pantograph on an electric motive power unit (where applicable)
- Requirements for completing relevant documentation during and after operation and monitoring of a motive power unit
- Train schedules, motive power unit allocation and operational instructions
- Requirements for communicating and working collaboratively with other members of the train crew, train controllers and other relevant personnel
- Procedures to be followed in the event of an emergency when operating a motive power unit
- Personal protective equipment required when operating a motive power unit and procedures for its use
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others in the course of operating and monitoring a motive power unit
- Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a motive power unit
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation and monitoring of a motive power unit
- Operate electronic communication equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace
Required skills:

- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a motive power unit
- Recognise problems that may arise when operating and monitoring a motive power unit and take appropriate action
- Check and replenish fuel and fluids and carry out lubrication processes on a motive power unit
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in motive power units and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate a motive power unit
- Monitor the performance of a motive power unit

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night in all relevant weather conditions

Heritage motive power units may include all heritage motive power units in service within Australian rail systems and may include:
- diesel MPUs
- electric MPUs
- railcars

Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
- communication systems
- warning equipment
- power source
- vigilance systems
RANGE STATEMENT

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
RANGE STATEMENT

Information and documents may include:

- high visibility clothing
- hearing protection
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (MPU status list, dangerous goods list, consist information, etc.)
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

| 1 Determine stabling location | 1.1 Contact is made with train controller and yard staff to determine planned location for stabling the motive power unit  
1.2 Directions of train controller and yard staff are interpreted and followed  
1.3 Care is taken to keep clear of other roads |
| 2 Stable motive power unit | 2.1 Train is shunted and secured in accordance with directions, workplace procedures and rail regulations  
2.2 Motive power unit is stabled as directed  
2.3 Derailers are set in place as per workplace procedures and rail regulations  
2.4 Handbrakes are applied  
2.5 Power brakes are applied  
2.6 Motive power unit is shut down as per manufacturers instructions and workplace procedures  
2.7 Cab is secured as per workplace procedures |
| 3 Carry out post-operational checks | 3.1 Fuel and fluid levels are checked and any required action is taken to replenish them  
3.2 Inspection is made of motive power unit as per workplace procedures  
3.3 Any identified faults and defects are fixed or reported and recorded as per workplace procedures  
3.4 Faulty and defective equipment that presents a safety risk is isolated and tagged as per workplace procedures and rail regulations  
3.5 Outcomes of post-operational checks are recorded as per workplace procedures |
| 4 Complete post-operational paperwork | 4.1 All required safeworking documentation is completed as per workplace procedures and rail regulations  
4.2 All equipment is returned and stowed as per workplace requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
REQUIRED KNOWLEDGE AND SKILLS

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations

6.1 Rail regulatory requirements applicable to the operation of the steam locomotive and the train and track or road concerned are accessed, understood and interpreted

6.2 Relevant rail regulatory requirement are applied and followed in the course of operation of the steam locomotive

6.3 Principles of rail resource management are applied in all rail operations involving the steam locomotive as per workplace procedures and applicable rail regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Principles of rail resource management as they apply to the operation and monitoring of the performance of a steam locomotive
- Relevant OH&S and environmental procedures and regulations
- Steam locomotive controls, instruments and indicators and their purpose, location and use
- Procedures for operating and monitoring the steam locomotive
- Steam locomotive knowledge including: basic principles of steam engine operation, monitoring devices, braking equipment, ancillary systems, and signalling systems
- Track and road knowledge including: track and bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency
REQUIRED KNOWLEDGE AND SKILLS

cross-overs, and operation of a turntable

- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop a steam locomotive
- Speed and load limits for the steam locomotive
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring the performance of a steam locomotive
- Procedures for operating and monitoring the performance of ancillary equipment on the steam locomotive
- Procedures for identifying equipment defects and assessing them for appropriate action
- Procedures for minor maintenance, cleaning, lubricating and servicing of a steam locomotive
- Typical faults that can occur on a steam locomotive and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- Requirements for completing relevant documentation during and after operation and monitoring of the performance of a steam locomotive
- Train schedules, steam locomotive allocation and operational instructions
- Requirements for communicating and working collaboratively with other members of the train crew, train controllers and other relevant personnel
- Procedures to be followed in the event of an emergency when operating a steam locomotive
- Personal protective equipment required when operating a steam locomotive and procedures for its use
- Local procedures and operating requirements
- Procedures for operating communications equipment with required protocol

Required skills:

- Communicate effectively with others in the course of operating and monitoring the performance of a steam locomotive
- Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a steam locomotive
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation and monitoring the performance of a steam locomotive
- Operate electronic communication equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess steam locomotive defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
**Required skills:**

- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a steam locomotive
- Recognise problems that may arise when operating and monitoring a steam locomotive and take appropriate action
- Check and replenish fluids and carry out lubrication processes on a steam locomotive
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in steam locomotives and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate a steam locomotive
- Monitor the performance of a steam locomotive

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment,
EVIDENCE GUIDE

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night in all relevant weather conditions

Heritage steam locomotives may include:

- any heritage steam locomotives in service within Australia

Equipment on a steam locomotive may include:

- steam locomotive instrumentation (gauges)
- feed water controls
- boiler controls and safety devices
- braking systems
- driving and other operational controls
- communication systems
- warning equipment
- ancillary systems
- vigilance systems
- traction systems
- head and marker lights

Communications equipment may include:

- portable and fixed two way radio
- mobile phone

Auxiliary equipment may include:

- steam regulator
- cab sprinkler
RANGE STATEMENT

- gauges
- generator
- sandboxes
- whistle
- steam turbine generator
- all ancillary valves
- hand brake
- injectors
- lubricators
- gauge glasses
- blower
- damper
- cylinder cocks
- mechanical stoker
- oil burning apparatus

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- station yard staff
- maintenance personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Safety and personal protective equipment may include:
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- steam locomotive operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (status list, dangerous goods list, consist information, etc.)
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing steam locomotives from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual

Applicable legislation, regulations and codes may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to stable a heritage steam locomotive in accordance with relevant workplace practices, rail regulations and codes of practice. It includes determining the required stabling location, shunting and securing the train, stabling and securing the heritage steam locomotive, carrying out all required post-operational checks and completing post-operational paperwork. This unit replaces part of the previous unit TDTC1401A Prepare, operate, monitor and stable heritage steam locomotive. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of heritage railway systems.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the stabling and securing a steam locomotive across a variety of operational contexts in the Australian heritage rail system.

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they relate to heritage railway operations
- Relevant OH&S and environmental procedures and regulations
- Steam locomotive controls, instruments and indicators and their purpose, location and use
- Procedures for operating and stabling a steam locomotive
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop a steam locomotive
- Speed and load limits
- Procedures for managing hazardous situations when operating and stabling a steam locomotive
- Procedures for operating and shutting down ancillary systems
- Procedure for completing relevant documentation when stabling a steam locomotive
- Procedures to be followed in the event of an emergency
- Procedures for minor maintenance, cleaning, lubricating and servicing of steam locomotives
- Procedures for identifying equipment defects, assessing and reporting for appropriate action
- Monitoring devices; braking and power equipment, auxiliary systems, and signalling systems
- Local procedures and operating requirements
- Typical defects that can occur on a steam locomotive and related action that should be taken
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others when stabling a heritage steam locomotive
- Read and interpret instructions, procedures and information relevant to the stabling of a steam locomotive
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the stabling of a steam locomotive
- Operate electronic communications equipment to required protocol
- Work collaboratively with others when stabling a steam locomotive
- Identify and assess steam locomotive defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Satisfactorily manage unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when stabling a steam locomotive
Required skills:

- Recognise problems that may arise when stabling a steam locomotive and take appropriate action
- Check and replenish fluids and fuel and carry out lubrication requirements on a steam locomotive
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in steam locomotives and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Conduct an inspection of a steam locomotive
- Document outcomes of inspection of a steam locomotive
- Stable a steam locomotive after service

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and

Method of assessment

- Applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night in all relevant weather conditions

Heritage steam locomotives may include:
- any heritage steam locomotives in service within Australia

Equipment on a steam locomotive may include:
- steam locomotive instrumentation (gauges)
- feed water controls
- boiler controls and safety devices
- braking systems
- driving and other operational controls
- communication systems
- warning equipment
- ancillary systems
- vigilance systems
- traction systems
- head and marker lights

Inspection of a heritage steam locomotive may include:
- lights and power systems
- hoses
- couplings
- head boards
- doors and door locks
RANGE STATEMENT

- suspension
- brake equipment
- wheels
- seals
- sand and fuel
- boiler and mountings
- cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air or steam)
- visible faults (e.g. oil leaks, tears and cracks)

Communications equipment may include:
- portable and fixed two way radio
- mobile phone

Auxiliary equipment may include:
- steam regulator
- cab sprinkler
- gauges
- generator
- sandboxes
- whistle
- steam turbine generator
- all ancillary valves
- hand brake
- injectors
- lubricators
- gauge glasses
- blower
- damper
- cylinder cocks
- mechanical stoker
- oil burning apparatus

Post operation checks may include:
- lubrication system
- checking for fluid leaks
- brake testing
- checking of fluid and fuel levels

Risk minimisation may require differentiating between faults, defects and deficiencies that:
- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention
RANGE STATEMENT

- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Positioning of heritage motive power unit may involve:

- operation of manual points
- operation of turntable
- coupling/uncoupling to other rolling stock

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
RANGE STATEMENT

- steam locomotive operational records and user log books
- maintenance notices, records and requests
- preparation sheets certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (status list, dangerous goods list, consist information, etc.)
- operational instructions, policies and procedures, including: those related to preventing steam locomotives from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- emergency procedures manual
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

Competency Field

Competency Field C - Vehicle Operation
TLIC3032A Operate and monitor a passenger electric tram

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to operate and monitor a passenger electric tram in accordance with relevant workplace practices, tramway regulations and codes of practice. This includes planning and preparing the tram for passenger service, operating the tram, operating the revenue collection system (where applicable), monitoring the tram's performance during service, and communicating effectively with other personnel. This unit replaces the unit TDTC2201A Operate a passenger tram. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to operate and monitor a passenger electric tram across a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and identify a passenger electric tram for operations | 1.1 Driving requirement is identified and confirmed from roster, shift-card or other authorised documentation  
1.2 Sign-on/log-on procedures at the depot are completed and the tram to be driven is correctly identified and located  
1.3 Resources are identified and obtained, including documentation  
1.4 Procedures for reporting incidents and the cancellation and non-operation of services are identified and followed |
| 2 Operate a passenger electric tram | 2.1 Tram is operated within specifications and organisational requirements to meet required schedules, routes, timetables and special services  
2.2 On-board equipment is confirmed as being serviceable, and is operated in accordance with specifications and organisation's requirements  
2.3 Warning devices and gauges are monitored and responded to in accordance with organisation's requirements  
2.4 Operational restrictions established by the organisation and relevant legislation are observed  
2.5 Tram is stopped in designated and approved locations and within limitations, to permit safe embarkation and alighting of all kinds of passengers  
2.6 Destination signs are adjusted in accordance with work schedules  
2.7 Wheelchair equipment where provided is operated when required in accordance with workplace procedures |
| 3 Respond effectively to external operating factors | 3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
3.2 Fixed traffic and hand signals and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment  
3.4 Defensive driving practices are employed at all times |
| 4 Operate revenue collection systems (where applicable) | 4.1 Start-up check is completed in accordance with workplace procedures  
4.2 Ticketing system is activated, operated and updated in accordance with workplace procedures  
4.3 Ticketing system defects are reported in accordance with

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant road rules of the relevant state/territory roads and traffic authority, where applicable
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Relevant OH&S and environmental procedures and regulations
- Relevant driver identification procedures, licences and authorities required to drive an electric tram
- Passenger electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the tram
- Passenger electric tram operating characteristics, capabilities and limitations
- Procedures for operating and monitoring the passenger electric tram
- Procedures for adjusting controls to maximise efficient and safe running
- Speed and load limits for the tram
- Operational instructions
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a passenger electric tram
- Procedures for operating and monitoring ancillary equipment on the tram
- Functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on a passenger electric tram
- Passenger electric tram knowledge may include monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- Track, road and route knowledge including: track limitations, speed limitations, curves and gradients and location of any signals, indicators and points
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on a passenger electric tram and related action that should be taken
- Principles of defensive driving
- Procedures to be followed in the event of an emergency when operating a passenger electric tram
- Procedures for operating any electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term management of fatigue
Required skills:

- Communicate effectively with others when operating and monitoring a passenger electric tram
- Operate any electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a passenger electric tram
- Interpret and follow instructions and prioritise work
- Complete documentation related to the operation and monitoring of a passenger electric tram
- Work collaboratively with others when operating and monitoring a passenger electric tram
- Identify and assess tram defects and deficiencies and take appropriate action to report any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a passenger electric tram
- Recognise problems that may arise when operating and monitoring a passenger electric tram and take appropriate action
- Check and refill sand boxes where provided and carry out sand system testing processes on a passenger electric tram
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in trams and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate a passenger electric tram and monitor its performance to facilitate optimum safe operation
- Apply track and road knowledge when driving a passenger electric tram
- Monitor journey schedule
- Apply fatigue management knowledge and techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit:

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
EVIDENCE GUIDE

Unit

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night in all relevant weather conditions

Passenger electric trams include all passenger electric trams in service within Australian transport

- hand-operated or foot pedal control systems or both
RANGE STATEMENT

systems and may include:

Passenger electric tram equipment may include:

- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Relevant personnel may include:

- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers
- internal and external suppliers

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Operate tram efficiently and effectively  | 1.1 Electric tram is operated in accordance with the relevant codes of practice, workplace procedures and instructions  
1.2 Electric tram is operated safely in accordance with traffic regulations  
1.3 Electric tram is operated with due care of the vehicle  
1.4 Movements are within limits of vehicle and road dimensions and in line with specifications  
1.5 Movements are smooth and controlled  
1.6 Performance of the electric tram is monitored to maintain optimum running condition and identify faults, defects and efficiencies in accordance with organisation's requirements |
| 2 Drive tram                                  | 2.1 Traffic flows are anticipated and appropriate defensive action is taken to maintain the efficiency of tram operation  
2.2 Electric tram is constantly monitored for any malfunctions or factors which may affect tram performance |
| 3 Complete tram journey                      | 3.1 Tram documentation is received, interpreted and followed  
3.2 Electric tram is operated and manoeuvred in accordance with tram documentation and procedures  
3.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route  
3.4 Tram control and other instructions are received, interpreted and applied to ensure safe and effective control of the tram  
3.5 Communications are maintained with tram controllers during the tram journey in accordance with the relevant organisational requirements  
3.6 Instructions concerning tram operation are given to relevant personnel to ensure safe and efficient running |
| 4 Respond effectively to external operating factors | 4.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
4.2 Fixed traffic and hand signals and verbal movement commands are interpreted and followed, in accordance with regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
4.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Where relevant, road rules of the relevant state/territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant driver identification procedures, licences and authorities required to drive an electric tram
- Electric tram controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the tram
- Electric tram operating characteristics, capabilities and limitations
- Procedures for operating and monitoring the electric tram
- Procedures for adjusting controls to maximise efficient and safe running
- Braking and safety system procedures
- Speed limits for the tram
- Operational instructions
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring an electric tram
- Functions of sand as used on an electric tram and the procedures for checking and refilling sand levels and carrying out sand system testing processes on an electric tram
- Electric tram knowledge may include monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- Track, road and route knowledge may include: tram routes, tramway limitations, speed limitations, curves and gradients and location of any signals, indicators and points
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on an electric tram and related action that should be taken
- Principles of defensive driving
- Procedures to be followed in the event of an emergency when operating an electric tram
- Procedures for operating any electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long term-management of fatigue

Required skills:
Required skills:

- Communicate effectively with others when driving an electric tram to operational requirements
- Operate any electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to driving an electric tram
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of an electric tram to operational requirements
- Work collaboratively with others as when operating and monitoring an electric tram
- Identify and assess tram defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Drive defensively, apply precautions and required action to minimise, control or eliminate hazards that may exist when driving an electric tram to operational requirements
- Recognise problems that may arise when driving an electric tram and take appropriate action
- Check and refill sand boxes where provided and carrying out sand system testing processes on a tram
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in trams, associated trams and ancillary equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Operate an electric tram and monitor its performance to facilitate optimum safe operation
- Apply track and road knowledge when driving an electric tram
- Monitor journey schedule
- Apply fatigue management knowledge and techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:
- hand-operated or foot pedal control systems or both
RANGE STATEMENT

Electric tram equipment may include:
- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Action taken upon the identification of faults, defects or deficiencies may include:
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Relevant personnel may include:
- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers
- internal and external suppliers

Risk minimisation may require differentiating between faults, defects and deficiencies that:
- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- relevant national and state or territory transport regulations and codes of practice
- notices in drivers' notice board/box
- reference cards
- tram driver roster sheet and/or table card
RANGE STATEMENT

- operational instructions, policies and procedures:
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Competency Field

Competency Field C - Vehicle Operation
TLIC3034A Berth and shut down an electric tram

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to berth and shut down an electric tram including determining the required berthing location; berthing, shutting down and securing the tram; carrying out all required post-operational activities; and completing post-operational paperwork. This unit replaces part of the previous unit TDTC2101A Drive tram. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to berth and shut down an electric tram as part of workplace activities across a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 <strong>Determine berthing location</strong></td>
<td>1.1 Contact is made with tram controller and depot staff, or information is obtained from an information board, to determine planned location for berthing the tram&lt;br&gt;1.2 Directions of tram controller and depot staff are interpreted and followed</td>
</tr>
<tr>
<td>2 <strong>Berth and shut down an electric tram</strong></td>
<td>2.1 Electric tram is berthed in accordance with organisation's and site requirements&lt;br&gt;2.2 Shut-down procedures are carried out in accordance with specifications and organisation's requirements</td>
</tr>
<tr>
<td>3 <strong>Carry out post-operational checks</strong></td>
<td>3.1 Visual and other checks are made of tram as per workplace procedures&lt;br&gt;3.2 Any identified faults and defects are fixed or reported and recorded as per workplace procedures&lt;br&gt;3.3 Faulty and defective equipment that presents a safety risk is reported as per workplace procedures and relevant regulations&lt;br&gt;3.4 Outcomes of post-operational checks are recorded as per workplace procedures</td>
</tr>
<tr>
<td>4 <strong>Secure an electric tram</strong></td>
<td>4.1 Brakes are applied as per workplace procedures&lt;br&gt;4.2 Electric tram is secured in accordance with depot requirements</td>
</tr>
<tr>
<td>5 <strong>Complete post-operational paperwork</strong></td>
<td>5.1 Timesheet or other work record is completed&lt;br&gt;5.2 Roster is checked for future work allocation&lt;br&gt;5.3 Issues and variations are discussed and resolved with roster clerk&lt;br&gt;5.4 All required documentation is completed as per workplace procedures&lt;br&gt;5.5 All equipment is returned and stowed as per workplace requirements&lt;br&gt;5.6 Records of the electric tram are completed in accordance with workplace procedures and regulatory requirements</td>
</tr>

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state
REQUIRED KNOWLEDGE AND SKILLS

and territory together with any nationally approved compliance codes and/or guidelines

- Relevant state/territory roads and traffic authority and tramway operating procedures
- Relevant OH&S and environmental procedures and regulations
- Electric tram controls, instruments and indicators and their purpose, location and use
- Monitoring devices; braking and power equipment; safety systems, ancillary systems; and signalling systems
- Procedures for operating, berthing and shutting down an electric tram
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop an electric tram
- Speed and load limits compliance requirements
- Procedures for managing hazardous situations when berthing and shutting down an electric tram
- Procedures for operating and shutting down ancillary systems
- Procedure for completing relevant documentation when berthing and shutting down an electric tram
- Procedures to be followed in the event of an emergency
- Procedures for any other work necessary to berth and shut down a tram
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on an electric tram and related action that should be taken
- Procedures for operating any electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when berthing and shutting down an electric tram
- Read and interpret instructions, procedures and information relevant to the berthing and shutting down of an electric tram
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the berthing and shutting down of an electric tram
- Operate electronic communications equipment to required protocol
- Work collaboratively with others when berthing and shutting down an electric tram
- Identify and assess tram defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when berthing and shutting down an electric tram
Required skills:

- Recognise problems that may arise when berthing and shutting down an electric tram and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in trams and associated equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Conduct a visual inspection of an electric tram
- Document outcomes of visual inspection of an electric tram
- Shut down an electric tram after service
- Apply fatigue management knowledge and techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:  
- by day or night in all relevant weather conditions

Electric trams include all electric trams in service within Australian transport systems and may include:

- hand-operated or foot pedal control systems or both

Electric tram equipment may include:

- ancillary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems

Visual inspection of an electric tram may include:

- lights
- hoses
- couplings
- destination indicators or signs
RANGE STATEMENT

- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand
- pantographs or trolley poles
- electrical cables
- glass windows and doors
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

Post operation checks may include:
- sand levels
- brake testing
- internal and external lights
- air systems
- interlocks and door controls

Risk minimisation may require differentiating between faults, defects and deficiencies that:
- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:
- tram crew
- tram controllers
- rostering supervisors and staff
- other tram drivers and crews
- depot coordinators
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers
- internal and external suppliers

Action taken upon the identification of faults, defects or deficiencies may include:
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Information and documents may include:

- relevant national and state or territory transport regulations and codes of practice
- notices in drivers’ notice board/box
- reference cards
- tram driver roster sheet and/or table card
- operational instructions, policies and procedures:
  - emergency procedures manual
  - conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Competency Field

Competency Field C - Vehicle Operation
TLIC3035A Manage the operation of a tow truck

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to manage tow truck operations including carrying out pre-operational checks on a tow truck; driving a tow truck carrying/towing a load; operating ancillary equipment; and completing documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislation and relevant regulations covering the operation of the tow truck and related equipment, including tow truck regulations, road rules, load restraint regulations, OH&S regulations and environmental protection requirements.

Work is performed with minimum supervision. It involves the application of application of driving principles and procedures for safe tow truck operations.

Licensing/Regulatory Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Carry out **pre-operational checks on the tow truck** | 1.1 The pre-operational checks for the tow truck are carried out as per government regulations, manufacturers requirements, and workplace policies and procedures  
1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures  
1.3 Checks are made to ensure that the vehicle or load being towed or carried is secured as per tow truck operational practice and regulatory requirements |
| 2 Drive a tow truck **carrying or towing a vehicle or other load** | 2.1 The tow truck is manoeuvred in accordance with the established towing practice, regulations/permit requirements for the class of vehicle involved and the vehicle being towed or the load being carried  
2.2 Appropriate defensive driving techniques are applied for the prevailing road, traffic and weather conditions  
2.3 The tow truck is driven along appropriate routes in accordance with the relevant codes, relevant government regulations and workplace policies  
2.4 The vehicle or load is transported and the vehicle manoeuvred in accordance with any required precautions relating to unusual/special characteristics of the load and/or relevant government regulations pertaining to the special load  
2.5 Signs or indicators are fixed to the vehicle if required  
2.6 In the event of a driving emergency, appropriate procedures are followed taking into account the vehicle being towed or the load being carried  
2.7 Symptoms of fatigue are recognised and appropriate fatigue management strategies are applied during towing operations |
| 3 Operate ancillary equipment on the tow truck | 3.1 A visual check of the internal and external condition of the ancillary equipment on the tow truck is carried out in accordance with workplace procedures  
3.2 Towing equipment is tested to ensure it functions correctly to manufacturers specifications  
3.3 Towing equipment is operated in accordance with manufacturers specifications and regulatory requirements  
3.4 Attachment points used in the towing operation and the weight of the vehicle being towed or load being carried are checked to ensure that they are consistent with established towing practice, regulatory requirements and the permissible safe working loads for the tow truck and its associated towing equipment |
| 4 Complete **documentation** | 4.1 Records of tow truck operations and related maintenance of the tow truck and ancillary equipment are kept in accordance with |
ELEMENT PERFORMANCE CRITERIA

workplace procedures

4.2 All forms and official record requirements related to towing operations are completed in accordance with regulatory requirements and company procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant towing permit and licence requirements of the state/territory road traffic authority concerned
- Relevant road rules and related regulations of the state/territory road traffic authority concerned
- Relevant OH&S and environmental procedures and regulations
- Tow truck controls, instruments and indicators and their use
- Tow truck handling procedures both with and without a tow or load
- Driving hazards and related defensive driving techniques
- Workplace driving and operational instructions
- Procedures to be followed in the event of an emergency when operating a tow truck including the use of portable fire extinguishers
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on a tow truck and its towing equipment and related action that should be taken
- Differences between transmission types on various types of tow trucks and the implications for driving techniques
- Map reading and road navigation techniques relevant for the area of tow truck operations
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a tow truck
- Factors which increase fatigue-related accidents
- Causes and effects of fatigue on drivers
- Strategies and techniques to manage on-road fatigue
- Lifestyles which promote the effective long-term management of fatigue
- Records and documentation requirements for tow truck operations and procedures for their
REQUIRED KNOWLEDGE AND SKILLS

completion

Required skills:

- Communicate effectively with others when carrying out tow truck operations
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, regulations, signs, charts, maps, and labels relevant to tow truck operations and apply them to towing activities
- Complete documentation required when carrying out tow truck operations
- Work safely and collaboratively with others when carrying out tow truck operations
- Modify activities and take appropriate initiatives depending on differing towing contexts, risk situations and environments
- Recognise symptoms of fatigue that may occur during tow truck operations and take appropriate action
- Recognise problems that may occur in the course of tow truck operations and take appropriate action
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when carrying out tow truck operations
- Adapt to changes in equipment and standard operating procedures required for tow truck operations
- Plan own work including predicting consequences and identifying improvements
- Participate in identifying and meeting own learning needs
- Provide information on towing services and their features
- Correctly use required personal protective equipment required for tow truck operations including the operation of portable fire extinguishers
- Identify, select and use equipment, processes and procedures relevant to required tow truck operations

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of
EVIDENCE GUIDE

unit

this unit and include demonstration of applying:

• the underpinning knowledge and skills
• relevant legislation and workplace procedures
• other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

• in a range of towing situations
• by day or night
• in a range of weather conditions

Required towing vehicle may

• tilt tray tow truck with winch (5 tonne, 7.5 tonne and 10
RANGE STATEMENT

include:

- tow truck with crane and cradle
- towing vehicle with a detachable self loading table top
- articulated drop-deck low loader
- trailer

Customers may be:

- vehicle owners
- operators of expressways, freeways, tollways or tunnels
- police and other emergency services personnel
- local government authorities
- car park operators
- road traffic authorities
- owners and operators of equipment elevating work platforms, forklifts, small load shifting equipment, etc.

Towing situations may include:

- vehicle accidents
- vehicle breakdowns
- expressway breakdowns and accidents
- tunnel breakdowns and accidents
- stolen cars
- vehicles illegally parked on clearways
- vehicles illegally parked in car parks
- abandoned vehicles
- carriage of equipment such as elevating work platforms, forklifts, small load shifting equipment, etc.

Purpose of equipment checking and inspection is to ensure:

- it is free from damage and faults that may prejudice safety or limit operational capability
- any identified faults or problems are rectified and/or reported as per company procedures prior to towing operations

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose
- repair or replacement of faulty towing equipment

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
RANGE STATEMENT

- fire in tow truck
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on tow truck
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Potential hazards that may occur in various towing situations may include:
- vehicular traffic at the scene
- live electrical wires
- contaminated blood at scene
- weather conditions
- oil on vehicle trays (slippery surfaces)
- unsafe or damaged equipment
- unsafe procedures in the use of towing equipment
- fire at the scene
- spilt or leaking fuel or dangerous or hazardous goods or substances
- unsafe manual lifting procedures
- sharps that may be contaminated with transmittable diseases

Hazard control strategies may include:
- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:
- use of flashing lights on vehicles
- deployment of safety equipment such as warning signs or witch's hats
RANGE STATEMENT

- strategic positioning of towing vehicle
- use of appropriate personal protective equipment and clothing
- use of safe procedures in the use of towing equipment
- checking equipment and isolating, rectifying or reporting any defective equipment
- following correct safety procedures in the event of live fallen electrical wires at an accident scene
- following correct procedures in the event of spilt or leaking fuel or dangerous or hazardous goods or substances as per the Australian Dangerous Goods Code
- using correct portable firefighting equipment to control a fire at the scene
- use of personal protective equipment
- use of reflective raincoats and vests
- correct manual lifting strategies
- cleaning of vehicles (including removal of oil from vehicle trays)

Depending on the organisation concerned, operating procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing (raincoats and vests)
- portable fire extinguishers

Communication at towing sites and in the work area may include:

- mobile phone
- fax
- email
- internet
- RF communications
- oral, aural or signed communications

Information and documents may include:

- state/territory tow truck driver licence certification requirements
- state/territory road rules
- workplace driving instructions and procedures for drivers of tow trucks
- tow truck manufacturers instructions, specifications and
RANGE STATEMENT

recommended operating procedures, including preoperational checks of the tow truck and its equipment
• standard procedures and policies for the operating a tow truck
• manufacturers specifications for towing vehicle, equipment and tools
• workplace and client instructions
• relevant OH&S requirements and policies
• relevant Australian standards and certification requirements
• material safety data sheets where applicable
• quality assurance standards
• emergency procedures

Applicable legislation, regulations and codes may include:

• relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to the tow truck operations
• relevant state/territory load restraint regulations
• relevant state/territory OH&S legislation
• relevant state/territory fatigue management regulations
• relevant state/territory environmental protection legislation

Unit Sector(s)

Unit Descriptor

Unit Descriptor
This unit involves the high-level safe driving skills and knowledge required by car drivers to enable them to apply safe driving behaviours. This includes higher order skills, such as hazard perception, risk control and safe driving judgement, decision making and multi-tasking. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
This unit is required by car driving instructors and covers higher order car driving skills and knowledge that build upon basic driver licence requirements.

Safe car driving behaviours must be able to be applied without supervision. This involves the application of higher order car driving skills, such as hazard perception, judgement, decision making, multi-tasking, risk control and safe driving attitudes across a range of vehicles and driving situations.

Definition of a vehicle (car class C) in this context is 'vehicle equal to or less than 4.5 tonnes GVM and seating up to 12 adults, including driver'.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Define and apply safe car behaviours** | 1.1 Requirements for safe car driving are acknowledged, interpreted and applied  
1.2 Importance of attitude in abiding by the road rules in relation to level of risk faced by a driver is understood and taken into account in car driving activities  
1.3 Importance of cooperation with other road users in order to drive safely is understood and taken into account in car driving activities  
1.4 Motivation to drive safely is interpreted and described, including values, emotions and personal needs  
1.5 Principles of proactive driving, also known as low-risk driving, that keep the driver at a low-level risk are interpreted and applied  
1.6 Specific factors that constitute an actual risk of a collision are understood and applied, including options for avoiding a collision; crash avoidance space; variables affecting minimum space; effects of observation, perception and response time; and consequences related to crash avoidance spaces |
| **2 Interpret and apply low-risk driving strategies** | 2.1 Risk factors contributing to the formation of opinions and beliefs about low-risk driving are understood and applied  
2.2 Road safety information that reflects the changing road environment is clarified and taken into account in car driving activities  
2.3 Human psychological and physiological aspects that can influence low-risk driving are acknowledged and taken into account in car driving activities  
2.4 Low-risk driving strategies are understood, interpreted and applied consistently |
| **3 Interpret and apply road rules applicable to safe car driving** | 3.1 Relevant rules and regulations are identified, interpreted correctly and consistently applied  
3.2 Road signs, signals and markings are identified and taken into account in car driving activities  
3.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow is understood and taken into account in car driving activities |
| **4 Manage collision when driving a car** | 4.1 Common contributing collision factors, including age, experience, speed, drugs, alcohol, road conditions, fatigue and time of day are recognised, and appropriate actions are managed  
4.2 External factors that could lead to collisions, including speed, space, vision, road conditions, vehicle condition and environmental conditions are understood and managed |
ELEMENT       PERFORMANCE CRITERIA

4.3 Internal factors that could lead to collisions, including emotional factors, driver's own behaviours and driver's operation at high levels of risk are acknowledged and managed.

4.4 Consequences of collisions in relation to relevant traffic laws and physical, financial and psychological costs to the individual and society are understood and managed.

4.5 Functions of vehicle controls and how to recover control of the vehicle are understood and demonstrated.

4.6 Corrective actions to be taken after a collision are understood and applied if required.

5 Demonstrate and maintain a high level of competence in car control skills

5.1 Appropriate action is taken to respond to various types of adverse conditions.

5.2 Principles of braking are applied at a high level of competence.

5.3 Principles of steering are applied at a high level of competence.

5.4 Slow speed manoeuvres are carried out at a high level of competence.

5.5 Vehicle is guided and controlled at a high level of competence.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian road law enforcement methodology.
- Common external risk factors in collisions or crashes, such as speed, space, vision, road conditions, vehicle conditions and environmental conditions.
- Common internal risk factors in collisions or crashes, such as age, experience, speed, drugs, alcohol, fatigue, time of driving (day or night), attitude, motivation, and beliefs or values.
- Consequences of collisions or crashes in relation to physical, financial and psychological costs to individuals and to society.
- Critical factors underpinning high-level driving competence.
- Low-risk driving principles.
- Driving hazards and related low-risk driving techniques.
- Established and reviewed laws and penalties in relation to demerit point offences, such as driving while disqualified or under the influence of drugs and alcohol.
- Importance of attitude in abiding by the road rules.
- Importance of cooperation with other road users.
REQUIRED KNOWLEDGE AND SKILLS

- Importance of space and speed management to avoid a collision
- Importance of vision to avoid collision
- Processes for identifying and responding to hazards
- Purpose and benefits of road rules enforcement for safe car driving
- Rationale for ongoing development of traffic regulations to meet changing traffic conditions
- Risk management and low-risk driving
- Road safety issues, including fatigue management and effects of drugs, alcohol and medication on driving performance
- Road signs, signals and markings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. driver licensing, vehicle registration, alcohol and drugs, and vehicle standards)
- Rules of braking
- Rules of observation
- Rules of steering
- Safe, proactive and responsible car driving behaviours
- Types of adverse driving conditions commonly encountered during driving activities

Required skills:

- Adapt appropriately to differences in vehicles, including their controls and safety devices, and the driving environment
- Apply basic and high-level road skills when driving a car
- Apply fatigue, attitude, motivation, concentration and anger management knowledge and techniques
- Apply observation skills in the course of vehicle operations
- Apply precautions and act to minimise, control or eliminate hazards that may exist while driving a vehicle
- Apply road positioning skills
- Apply safe car driving strategies
- Apply traffic management skills
- Carry out pre-operational checks and related action on vehicles
- Communicate effectively with others when applying safe car driving behaviours
- Deal effectively with adverse conditions while driving a vehicle
- Evaluate risk and behave accordingly
- Guide and control vehicles
- Implement contingency plans for unexpected events that may occur while driving a vehicle
- Interpret and follow operational instructions when applying safe car driving behaviours
Required skills:

- Manage speed and space while driving a vehicle
- Manoeuvre a vehicle at slow speed
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and take appropriate action where required
- Monitor traffic and road conditions and react appropriately
- Negotiate complex traffic and road conditions and make appropriate decisions
- Promptly report and/or rectify identified problems, faults or malfunctions that may arise when applying safe car driving behaviours
- Read and interpret instructions, road rules, procedures, jurisdictional requirements, information and signs relevant to safe car driving behaviours
- Work collaboratively with other road users when driving a vehicle
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements while driving a vehicle
  - identification of risk factors which might impact on driving behaviours and implementing appropriate low-risk driving response measures
  - selection and use of vehicle controls and safety devices to enable safe car driving

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,
EVIDENCE GUIDE

and/or

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:

- road transport law, for example:
  - legislation and related regulations applicable to driving and using motor vehicles in relevant state or territory
  - motor vehicle driver learner permit, driver licence requirements and issue procedures applicable in relevant state or territory
  - occupational health and safety legislation in relevant state or territory
  - equal opportunity legislation in relevant state or territory
  - workplace relations legislation in relevant state or territory

Characteristics of car driving

- gender
**RANGE STATEMENT**

Instructors may include information in relation to:

- age (within regulatory guidelines)
- driving experience
- fluency in English
- educational background and general knowledge
- diverse social and economic backgrounds and attitudes
- effects of prior and current learning
- individual learning styles

High level of driving competence is defined as:

- ability to consistently carry out car driving tasks across a wide range of simple and complex situations and conditions, including different types of vehicles, weather conditions, road conditions and diverse potential hazards. This also includes the management of attitude, motivation, fatigue, anger and concentration.

Road positioning skills are:

- those required to maintain a safe legal position on the road when driving a vehicle. This includes observation, speed management, decision making, hazard perception and response to hazards, buffering from other vehicles, maintaining space when making turns at intersections, maintaining space from other vehicles when stopped, or reducing speed and maintaining space requirements during manoeuvres, such as kerb-side stopping, hill starts, u-turns, three-point turns and reverse parking.

Communication may include:

- oral and aural
- written communication
- reading and interpreting maps, street directories and GPS navigation devices
- using own vehicle horn, indicators, brake lights and road positioning
- recognising and responding to signals from other vehicles
- recognising and responding to road signs, traffic signals and other authorised signalling systems
- non-verbal communication with other drivers and motorcycle riders e.g. gestures and nods

Factors that affect learning progress may include:

- effects of previous and current learning
- decision making skills in a range of driving situations
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of driving ability; and underestimation of accident risk)
- causal attribution (explains that driver's actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)
RANGE STATEMENT

- learner characteristics and attitudes
- resources, e.g. time, location, space, people and costs
- vehicle type

Resources may include:
- training materials and publications
- location
- personnel
- dual control vehicle
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:
- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles

Specific needs may relate to:
- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training

Driving may be undertaken in/at:
- a range of vehicle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- time of day

Learning activities may include:
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while driving
- self-paced learning
- assessment with feedback
- combinations of the above

Workplace documents and procedures may include:
- company/enterprise/organisational procedures and policies
- record of driving skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures
- emergency procedures
Unit Sector(s)
Not Applicable

Competency Field
Competency Field  C - Vehicle Operation
TLIC3037A Apply safe heavy vehicle driving behaviours

Modification History
Not Applicable

Unit Descriptor

This unit involves the high-level safe driving skills and knowledge required by heavy vehicle drivers to enable them to apply safe driving behaviours. This includes higher order skills, such as hazard perception, risk control and safe driving judgment, decision making and multi-tasking. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

This unit is required by heavy vehicle driving instructors and covers higher order heavy vehicle driving skills and knowledge that build upon basic driver licence requirements.

Safe heavy vehicle driving behaviours must be able to be applied without supervision. This involves the application of higher order heavy vehicle driving skills, such as hazard perception, judgement, decision making, multi-tasking, risk control and safe driving attitudes across a range of vehicles and driving situations.

Definition of a heavy vehicle (class LR, MR, HR, HC, and MC) in this context is a 'vehicle greater than 4.5 tonnes GVM and also includes a vehicle seating more than 12 adults, including the driver'.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Define and apply safe heavy vehicle driving behaviours | 1.1 Requirements for safe heavy vehicle driving are acknowledged, interpreted and applied  
1.2 Importance of attitude in abiding by the road rules in relation to level of risk faced by a driver is understood and taken into account in heavy vehicle driving activities  
1.3 Importance of cooperation with other road users in order to drive safely is understood and taken into account in heavy vehicle driving activities  
1.4 Motivation to drive safely is interpreted and described, including values, emotions and personal needs  
1.5 Principles of proactive driving, also known as low-risk driving, that keep the driver at a low-level risk are interpreted and applied  
1.6 Specific factors that constitute an actual risk of a collision are understood and applied, including options for avoiding a collision; crash avoidance space; variables affecting minimum space; effects of observation, perception and response time; and consequences related to crash avoidance spaces |
| 2 Interpret and apply low-risk driving strategies | 2.1 Risk factors contributing to the formation of opinions and beliefs about low-risk driving are understood and applied  
2.2 Road safety information that reflects the changing road environment is clarified and taken into account in heavy vehicle driving activities  
2.3 Human psychological and physiological aspects that can influence low-risk driving are acknowledged and taken into account in heavy vehicle driving activities  
2.4 Low-risk driving strategies are understood, interpreted and applied consistently |
| 3 Interpret and apply road rules applicable to safe heavy vehicle driving | 3.1 Relevant rules and regulations are identified, interpreted correctly and consistently applied  
3.2 Road signs, signals and markings are identified and taken into account in heavy vehicle driving activities  
3.3 Purpose of road rules and traffic safety laws in ensuring safe and efficient regulation of traffic flow is understood and taken into account in heavy vehicle driving activities |
| 4 Manage collision when driving a heavy vehicle | 4.1 Common contributing collision factors, including age, experience, speed, drugs, alcohol, road conditions, fatigue and time of day are recognised, and appropriate actions are managed  
4.2 External factors that could lead to collisions, including speed, space, vision, road conditions, vehicle condition and environmental conditions are understood and managed |
ELEMENT | PERFORMANCE CRITERIA
---|---
4.3 | Internal factors that could lead to collisions, including emotional factors, driver's own behaviours and driver's operation at high levels of risk are acknowledged and managed
4.4 | Consequences of collisions in relation to relevant traffic laws and physical, financial and psychological costs to the individual and society are understood and managed
4.5 | Functions of vehicle controls and how to recover control of the vehicle are understood and demonstrated
4.6 | Corrective actions to be taken after a collision are understood and applied if required

5 | Demonstrate and maintain a high level of competence in heavy vehicle control skills

5.1 | Appropriate action is taken to respond to various types of adverse conditions
5.2 | Principles of braking are applied at a high level of competence
5.3 | Principles of steering are applied at a high level of competence
5.4 | Slow speed manoeuvres are carried out at a high level of competence
5.5 | Vehicle is guided and controlled at a high level of competence

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian road law enforcement methodology
- Common external risk factors in collisions or crashes, such as speed, space, vision, road conditions, vehicle conditions and environmental conditions
- Common internal risk factors in collisions or crashes, such as age, experience, speed, drugs, alcohol, fatigue, time of driving (day or night), attitude, motivation, and beliefs or values
- Consequences of collisions or crashes in relation to physical, financial and psychological costs to individuals and to society
- Critical factors underpinning high-level driving competence
- Low-risk driving principles
- Driving hazards and related low-risk driving techniques
- Established and reviewed laws and penalties in relation to demerit point offences, such as driving while disqualified or under the influence of drugs and alcohol
- Importance of attitude in abiding by the road rules
- Importance of cooperation with other road users
REQUIRED KNOWLEDGE AND SKILLS

- Importance of space and speed management to avoid a collision
- Importance of vision to avoid collision
- Processes for identifying and responding to hazards
- Purpose and benefits of road rules enforcement for safe heavy vehicle driving
- Rationale for ongoing development of traffic regulations to meet changing traffic conditions
- Risk management and low-risk driving
- Road safety issues, including fatigue management and effects of drugs, alcohol and medication on driving performance
- Road signs, signals and markings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. driver licensing, vehicle registration, alcohol and drugs, and vehicle standards)
- Rules of braking
- Rules of observation
- Rules of steering
- Safe, proactive and responsible heavy vehicle driving behaviours
- Types of adverse driving conditions commonly encountered during driving activities

Required skills:

- Adapt appropriately to differences in vehicles including their controls, safety devices, and the driving environment
- Apply basic and high-level road skills when driving a heavy vehicle
- Apply fatigue, attitude, motivation, concentration and anger management knowledge and techniques
- Apply observation skills in the course of vehicle operations
- Apply precautions and act to minimise, control or eliminate hazards that may exist while driving a vehicle
- Apply road positioning skills
- Apply safe heavy vehicle driving strategies
- Apply traffic management skills
- Carry out pre-operational checks and related action on vehicles
- Communicate effectively with others when applying safe heavy vehicle driving behaviours
- Deal effectively with adverse conditions while driving a vehicle
- Evaluate risk and behave accordingly
- Guide and control vehicles
- Implement contingency plans for unexpected events that may occur while driving a vehicle
- Interpret and follow operational instructions when applying safe heavy vehicle driving behaviours
Required skills:

- Manage speed and space while driving a vehicle
- Manoeuvre a vehicle at slow speed
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and take appropriate action where required
- Monitor traffic and road conditions and react appropriately
- Negotiate complex traffic and road conditions and make appropriate decisions
- Promptly report and/or rectify identified problems, faults or malfunctions that may arise when applying safe heavy vehicle driving behaviours
- Read and interpret instructions, road rules, procedures, jurisdictional requirements, information and signs relevant to safe heavy vehicle driving behaviours
- Work collaboratively with other road users when driving a vehicle
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements while driving a heavy vehicle
  - identification of risk factors which might impact on heavy vehicle driving behaviours and implementing appropriate low-risk driving response measures
  - selection and use of vehicle controls and safety devices to enable safe heavy vehicle driving

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or
EVIDENCE GUIDE

other simulated practical and knowledge assessment, and/or

- access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:

- Road transport law, for example:
  - legislation and related regulations applicable to driving and using heavy vehicles in relevant state or territory
  - heavy vehicle driver learner permit, driver licence requirements and issue procedures applicable in relevant state or territory
  - occupational health and safety legislation in relevant state or territory
  - equal opportunity legislation in relevant state or territory
  - workplace relations legislation in relevant state or territory
RANGE STATEMENT

Characteristics of heavy vehicle driving instructors may include information in relation to:

- gender
- age (within regulatory guidelines)
- driving experience
- fluency in English
- educational background and general knowledge
- diverse social and economic backgrounds and attitudes
- effects of prior and current learning
- individual learning styles

High level of heavy vehicle driving competence is defined as:

- ability to consistently carry out heavy vehicle driving tasks across a wide range of simple and complex situations and conditions, including different types of vehicles, weather conditions, road conditions and diverse potential hazards. This also includes the management of attitude, motivation, fatigue, anger and concentration

Road positioning skills are:

- those required to maintain a safe legal position on the road when driving a vehicle. This includes observation, speed management, decision making, hazard perception and response to hazards, buffering from other vehicles, maintaining space when making turns at intersections, maintaining space from other vehicles when stopped, or reducing speed and maintaining space requirements during manoeuvres, such as kerb-side stopping, hill starts, and reversing

Communication may include:

- oral and aural
- written communication
- reading and interpreting maps, street directories and GPS navigation devices
- using own vehicle horn, indicators, brake lights and road positioning
- recognising and responding to signals from other vehicles
- recognising and responding to road signs, traffic signals and other authorised signalling systems
- non-verbal communication with other drivers and motorcycle riders e.g. gestures and nods

Factors that affect learning progress may include:

- effects of previous and current learning
- decision making skills in a range of driving situations
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of driving ability; and underestimation of accident risk)
- causal attribution (explains that a driver's actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and

resulting in a tendency to blame external causes)
- learner characteristics and attitudes
- resources, e.g. time, location, space, people and costs
- vehicle type

Resources may include:
- training materials and publications
- location
- personnel
- dual control vehicle
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:
- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles

Specific needs may relate to:
- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training

Driving may be undertaken in/at:
- a range of heavy vehicle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- time of day

Learning activities may include:
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while driving
- self-paced learning
- assessment with feedback
- combinations of the above

Workplace documents and procedures may include:
- company/enterprise/organisational procedures and policies
- record of driving skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures
- emergency procedures

5.6 Principles of body weight transfer are applied at a high level of competence

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian road law enforcement methodology
- Common external risk factors in collisions or crashes, such as speed, space, vision, road conditions, motorcycle conditions and environmental conditions
- Common internal risk factors in collisions or crashes, such as age, experience, speed, drugs, alcohol, fatigue, time of riding (day or night), attitude, motivation, and beliefs or values
- Consequences of collisions or crashes in relation to physical, financial and psychological costs to individuals and to society
- Critical factors underpinning high-level riding competence
- Low-risk riding principles
REQUIRED KNOWLEDGE AND SKILLS

- Riding hazards and related low-risk riding techniques
- Established and reviewed laws and penalties in relation to demerit point offences, such as riding while disqualified or under the influence of drugs and alcohol
- Importance of attitude in abiding by the road rules
- Importance of cooperation with other road users
- Importance of space and speed management to avoid a collision
- Importance of vision to avoid collision
- Processes for identifying and responding to hazards
- Purpose and benefits of road rules enforcement for safe motorcycle riding
- Rationale for ongoing development of traffic regulations to meet changing traffic conditions
- Risk management and low-risk riding
- Road safety issues, including fatigue management and effects of drugs, alcohol and medication on riding performance
- Road signs, signals and markings
- Road transport law (state or territory road rules and traffic safety legislation, e.g. rider licensing, motorcycle registration, alcohol and drugs, and motorcycle standards)
- Rules of braking
- Rules of observation
- Rules of steering and counter-steering
- Rules of body weight transfer
- Safe, proactive and responsible motorcycle riding behaviours
- Types of adverse riding conditions commonly encountered during riding activities
- Features and benefits of protective riding apparel
- Legal requirements of protective riding apparel

Required skills:

- Adapt appropriately to differences in motorcycles, including their controls and safety devices, and the riding environment
- Apply basic and high-level road skills when riding a motorcycle
- Apply fatigue, attitude, motivation, concentration and anger management knowledge and techniques
- Apply observation skills in the course of motorcycle operations
- Apply precautions and act to minimise, control or eliminate hazards that may exist while riding a motorcycle
- Apply road positioning skills
- Apply safe motorcycle riding strategies
- Apply traffic management skills
Required skills:

- Carry out pre-operational checks and related action on motorcycles
- Communicate effectively with others when applying safe motorcycle riding behaviours
- Deal effectively with adverse conditions while riding a motorcycle
- Evaluate risk and behave accordingly
- Guide and control motorcycles
- Implement contingency plans for unexpected events that may occur while riding a motorcycle
- Interpret and follow operational instructions when applying safe riding behaviours
- Manage speed and space while riding a motorcycle
- Manoeuvre a motorcycle at slow speed
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of motorcycle and take appropriate action where required
- Monitor traffic and road conditions and react appropriately
- Negotiate complex traffic and road conditions and make appropriate decisions
- Promptly report and/or rectify identified problems, faults or malfunctions that may arise when applying safe motorcycle riding behaviours
- Read and interpret instructions, road rules, procedures, jurisdictional requirements, information and signs relevant to safe motorcycle riding behaviours
- Work collaboratively with other road users when riding a motorcycle
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - compliance with appropriate legislative, regulatory and procedural requirements while riding a motorcycle
EVIDENCE GUIDE

- identification of risk factors which might impact on riding behaviours and implementing appropriate low-risk riding response measures
- selection and use of motorcycle controls and safety devices to ensure safe riding

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Applicable regulations and legislation may include:
- road transport law, for example:
  - legislation and related regulations applicable to driving and using motorcycles in relevant state or territory
  - motorcycle rider learner permit, rider licence
RANGE STATEMENT

requirements and issue procedures applicable in relevant state or territory

- ability to consistently carry out motorcycle riding tasks across a wide range of simple and complex situations and conditions, including different types of motorcycles, weather conditions, road conditions and diverse potential hazards. This also includes the management of attitude, motivation, fatigue, anger and concentration

Road positioning skills are:
- those required to maintain a safe legal position on the road when riding a motorcycle. This includes observation, speed management, decision making, hazard perception and response to hazards, buffering from other vehicles, maintaining space when making turns at intersections, maintaining space from other vehicles when stopped, or reducing speed and maintaining space requirements during manoeuvres, such as kerb-side stopping, hill starts, u-turns and reverse parking

Communication may include:
- oral and aural
- written communication
- reading and interpreting maps, street directories and GPS navigation devices
- using own motorcycle horn, indicators, brake lights and road positioning
- recognising and responding to signals from other vehicles
- recognising and responding to road signs, traffic signals and other authorised signalling systems
- non-verbal communication with other riders/drivers e.g. gestures and nods
RANGE STATEMENT

Factors that affect learning progress may include:
- effects of previous and current learning
- decision making skills in a range of riding situations
- optimism bias (tendency to view negative incidents such as road accidents as unlikely to happen to them; overestimation of riding ability; and underestimation of accident risk)
- causal attribution (explains that rider's actions often depend upon their interpretation of the cause of events, limiting the ability to make objective risk assessments and resulting in a tendency to blame external causes)
- learner characteristics and attitudes
- resources, e.g. time, location, space, people and costs
- motorcycle type

Resources may include:
- training materials and publications
- location
- personnel
- OH&S and other workplace resource requirements
- enterprise/industry standard operating procedures
- funding for training facilities, resources and staff

Road users may include:
- pedestrians
- cyclists
- drivers or riders of trams and trains, and motor vehicles, including motorcycles, light vehicles and heavy vehicles

Specific needs may relate to:
- age (within regulatory guidelines)
- disability (within regulatory guidelines)
- language, literacy and numeracy needs
- those requiring refresher training

Riding may be undertaken in/at:
- a range of motorcycle types
- restricted spaces
- open roads, e.g. freeways, main and busy roads, country roads and suburban roads
- controlled or open environments
- a simulated environment
- a range of weather conditions
- time of day

Learning activities may include:
- demonstrations
- explanations
- problem solving
- mentoring
- coaching while riding
- self-paced learning
RANGE STATEMENT

- assessment with feedback
- combinations of the above
- company/enterprise/organisational procedures and policies
- record of riding skills, knowledge and abilities
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Unit Sector(s)

Competency Field

Competency Field  C - Vehicle Operation
TLIC3039A Operate and monitor a monorail train

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to operate and monitor a monorail train in accordance with relevant workplace practices, regulations and codes of practice. This includes planning and identifying the monorail train for operations, operating the train, monitoring the train's performance during service, and communicating effectively with the Controller and other personnel. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to operate and monitor a monorail train across a variety of operational contexts.

Licensing/Regulatory Information

### Required Skills and Knowledge

#### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant safety, OH&S and environmental procedures and regulations
- Monorail train controls, instruments and indicators and their purpose, location and use including controls to start, accelerate, decelerate and stop the train
- Monorail train operating characteristics, capabilities and limitations including all modes of operation
- Procedures for operating and monitoring the monorail train
- Procedures for adjusting controls to maximise efficient and safe running
- Operational instructions
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a monorail train
- Procedures for operating and monitoring ancillary equipment on the train
- Monorail train knowledge may include monitoring devices, braking and drive equipment and ancillary systems
- Track knowledge including track limitations, speed limitations, curves and gradients and location of any indicators
- Procedures for identifying equipment defects and assessing for appropriate action
- Typical defects that can occur on a monorail train and related action that should be taken
- Procedures to be followed in the event of an emergency when operating a monorail train
- Procedures for operating communications equipment with required protocol
-Fatigue management knowledge and techniques including causes and effects of fatigue, strategies to manage fatigue, factors which increase fatigue-related accidents, and lifestyles which promote the effective long-term management of fatigue
Required skills:

- Communicate effectively with the Controller when operating and monitoring a monorail train
- Operate communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a monorail train
- Interpret and follow instructions
- Complete documentation related to the operation and monitoring of a monorail train
- Work collaboratively with others when operating and monitoring a monorail train
- Identify and assess train defects and deficiencies and take appropriate action to report any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating and monitoring a monorail train
- Recognise problems that may arise when operating and monitoring a monorail train and take appropriate action
- Select and use required personal protective equipment
- Operate a monorail train and monitor its performance to facilitate optimum safe operation
- Apply track and road knowledge when driving a monorail train
- Apply fatigue management knowledge and techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - driving monorail train in manual mode to organisational standards
EVIDENCE GUIDE

- operating monorail train in automatic and semi-automatic modes correctly
- communicating appropriately and effectively with the Controller

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all normal weather conditions

Modes of operation include:
- fully automatic
- semi-automatic
RANGE STATEMENT

Essential equipment includes:
- manual
- monorail procedures and announcements folder
- hand microphone
- keys
- pre-service sheet
- alarm sheet
- portable radio
- hold at station dial
- operator's chair
- 'no entry' signs
- vigilance systems
- traction systems
- fire extinguisher

Abnormal situations may include:
- stoppage between stations
- computer failure
- mechanical failure
- electrical failure

Relevant personnel may include:
- controllers
- rostering supervisors and staff
- other monorail train drivers/supervisors
- supervisors and other operational personnel
- maintenance personnel
- immediate internal or external customers

Depending on the organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- relevant national and state or territory transport regulations and codes of practice
- notices in drivers' notice board/box
- train driver roster sheet
- operational instructions, policies and procedures
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
RANGE STATEMENT

- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Competency Field

Competency Field C - Vehicle Operation
TLIC3042A Operate coach/bus

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to operate a passenger coach/bus safely. It includes maintaining systematic and efficient control of all coach/bus functions; monitoring traffic and road conditions; managing coach/bus condition and performance; and effectively managing hazardous situations. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
Application of the Unit
Operation of a passenger coach/bus is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial coach/bus across a variety of contexts.

The entry requirement for this unit is the attainment of applicable licence from the state regulatory authority to operate a bus/coach.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Operate the coach/bus | 1.1 The coach/bus is started, steered, manoeuvred, positioned and stopped in accordance with manufacturers instructions  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage  
1.3 Engine operation is maintained within the manufacturers specified torque range and temperature through effective transmission use  
1.4 Braking system of coach/bus is managed and operated to ensure effective control of the coach/bus under all conditions  
1.5 Hazards are identified and/or anticipated and avoided or controlled through defensive driving techniques  
1.6 The coach/bus is driven in reverse, maintaining visibility and achieving accurate positioning in accordance with workplace procedures  
1.7 The coach/bus is parked, shut down and secured in accordance with manufacturers specifications and workplace procedures  
1.8 The behaviours displayed by operators towards other road users is appropriately aligned with workplace procedures |
| 2 Monitor and respond to traffic and road conditions | 2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations  
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment, loads and facilities |
| 3 Monitor and maintain coach/bus performance | 3.1 Coach/bus performance is maintained through pre-operational inspections and checks of the coach/bus and ancillary equipment  
3.2 Performance and efficiency of coach/bus operation is monitored during use  
3.3 Defective or irregular performance or malfunctions are repaired or reported to the appropriate authority in accordance with workplace procedures  
3.4 Coach/bus records are maintained/updated and information is processed in accordance with workplace procedures  
3.5 Vehicle monitoring devices (such as tachographs) are operated in accordance with workplace procedures |
| 4 Operate the coach/bus safely | 4.1 Passenger positioning and dispersion is in accordance with manufacturers instructions and workplace procedures  
4.2 Bus/coach doors are operated safely for entry and exit from coach/bus in accordance with manufacturers and workplace instructions |
ELEMENT PERFORMANCE CRITERIA

4.3 Visual checks are conducted on entry to and exit from bus stops in accordance with workplace instructions.

4.4 Vehicle positioning and movement are convenient and safe for passengers embarking and disembarking in accordance with regulatory and workplace instructions.

5 Operate bus/coach associated equipment

5.1 All bus/coach associated equipment is operated in accordance with manufacturers and workplace instructions.

5.2 Faults with all bus/coach associated equipment are reported according to manufacturers and workplace instructions.

5.3 Route destination is clearly displayed on the vehicle as required by workplace instructions.

6 Provide customer service to passengers on coach/bus

6.1 Comfort and wellbeing of passengers are in accordance with workplace instructions.

6.2 Lost property processing is in accordance with organisational procedures.

6.3 Assistance is provided for identified special needs and/or any luggage and ancillary equipment requirements in accordance with workplace instructions.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Relevant state and territory regulations and procedures in relation to bus stops
- Coach/bus controls, instruments and indicators and their use
- Coach/bus handling procedures
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on coaches/buses and related action
REQUIRED KNOWLEDGE AND SKILLS

- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a commercial coach or bus
- Read and interpret instructions, procedures, information and signs relevant to the operation of a commercial coach or bus
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a commercial coach or bus
- Operate electronic communication equipment to required protocol including on-board intercom and communications equipment
- Work collaboratively with others when operating a commercial coach or bus
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when operating a commercial coach or bus in accordance with workplace procedures
- Implement contingency plans for unexpected events that may occur when operating a commercial coach or bus
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a commercial coach or bus
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of coach or bus and its equipment and take appropriate action where
Required skills:

- Service coach or bus and its equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - undertaking pre-operational checks and vehicle handling procedures
  - implementing responses to changing road conditions
  - applying knowledge of relevant legislation and workplace procedures
  - applying customer service skills in accordance with industry requirements and organisational procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
EVIDENCE GUIDE

registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
- all coaches and buses relevant to specific licence classifications

Operate a passenger coach/bus may be carried out in typical road transport situations pertaining to a coach/bus, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site
- kerb side bus stops
- within shopping centres
- within railway complexes
- within tourist attractions car parks

Special needs may include:
- temporarily physically impaired persons
- visually and hearing impaired persons
- mentally impaired persons
- frail and elderly persons
- school children

Bus/coach associated equipment may include:
- ticket machines
- electronic doors
- manual doors
- toilet units

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
RANGE STATEMENT

- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- operating door opening and closing equipment
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- exterior vehicle checks
- internal vehicle checks
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- microphone operational
- equipment such as jack, wheel brace, spare tyre
- trailers such as jockey wheel, coupling of trailer

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
RANGE STATEMENT

- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- state/territory coach/bus driving licence requirements
- state/territory road rules
- workplace driving instructions and procedures
- coach/bus manufacturers instructions, specifications and recommended driving procedures, including pre-operational checks of coach/bus
- emergency procedures
- vehicle log book or record book (where required)
- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to coaches/buses
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 **Perform pre-operational equipment checks** | 1.1 Basic pre-operational equipment checks are conducted as per manufacturers specifications or local maintenance schedules  
1.2 Log books are checked and completed accurately as required  
1.3 Deficiencies with equipment are identified and rectified in accordance with workplace procedures  
1.4 Relevant persons are notified of problems and/or documentation completed |
| 2 **On track and operate road/rail vehicle** | 2.1 On-tracking location is identified and appropriate on-track permission/authority is obtained  
2.2 Vehicle is placed on track and set up to operate in accordance with manufacturers specifications and organisational requirements  
2.3 Vehicle is operated in a safe and efficient manner in accordance with the relevant codes of practice, safeworking systems and manufacturers and local working instructions  
2.4 Vehicle is operated with due regard for prevailing operating conditions to ensure safe working and minimise/eliminate potential hazards or accidents  
2.5 Warning systems are monitored and responded to appropriately during operation to maintain correct functionality of vehicle |
| 3 **Off track road/rail vehicle** | 3.1 Off-track location is identified and, if required, appropriate permissions to off track vehicle is obtained  
3.2 Front/rear rail wheels are retracted in accordance with manufacturer specifications  
3.3 Vehicle is driven not less than 3 metres from running rails, and safety locks to rail wheels are applied  
3.4 That vehicle is clear of all running lines is confirmed with train control/network |
| 4 **Perform post-operational equipment procedures** | 4.1 Vehicle is left stored in appropriate manner and location to ensure security and protection of equipment  
4.2 Post-operational vehicle checks are conducted as per manufacturers specifications or local maintenance schedules to identify defects and maintenance requirements  
4.3 Deficiencies with equipment are identified and rectified in an appropriate manner to maintain equipment in correct functionality of equipment  
4.4 Relevant persons are notified of problems and/or documentation is completed in accordance with instructions and the relevant codes of practice |
| 5 **Complete** | 5.1 Log books are checked and completed accurately |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Workplace procedures for the operation of road/rail vehicles
- Problems that may occur during the on tracking and off tracking of road/rail vehicles, and action that can be taken to report or resolve the problems
- Problems that may occur during the operation of road/rail vehicles, and action that can be taken to report or resolve the problems
- Hazards that may exist when operating road/rail vehicles, and ways of controlling the risks involved
- Types of road/rail vehicles and their applications
- Road rules for road/rail vehicle management and use
- Technical specifications and manuals
- Track structure and geometry
- Defects that can occur on road/rail vehicles and related action that should be taken
- Emergency procedures
- Local authority procedures

Required skills:

- Communicate effectively with others when operating road/rail vehicles
- Read and interpret instructions, procedures, information and signs relevant to the operation of road/rail vehicles
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating road/rail vehicles
- Promptly report and/or rectify any identified problems, faults or malfunctions when operating road/rail vehicles in accordance with regulatory requirements and workplace procedures
- Plan and organise work
Required skills:

- Implement contingency plans for unexpected events when operating road/rail vehicles
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management strategies
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment
- Identify, select and use tools and equipment
- Access and interpret train movement information
- Operate road/rail vehicles (for which certificated, licensed or approved)

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - performing pre- and post-operational checks
  - on railing and off railing vehicles correctly
  - operating road/rail vehicles on-rail
  - communicating effectively with relevant personnel whilst operating road/rail vehicle
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriate activities in a simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- in all weather conditions

Road/rail vehicles may include but are not limited to:

- weed sprayer
- light-medium rigid vehicles
- excavators
- pettibone
- tractors
- four-wheel drives
- public level crossings

Suitable on-track and off-track
RANGE STATEMENT

locations include:

- stations and yards
- private and occupational crossings

Liaison may include:

- internal or external personnel from other work areas

Communication equipment may include:

- two-way radios, and/or
- telephones/mobile phones/satellite phones
- flags
- signals
- air horn

Information may be provided:

- electronically
- in writing, via forms/documents
- orally, via face-to-face communications

Safety and protective equipment may include:

- high visibility clothing
- hearing protection
- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios
- hand lamps
- flags
- safety devices
- detonators (audible warning devices)
- personal locator beacon (PLB)

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operational instructions, policies and workplace procedures
- relevant log or record book
- maintenance notices, records and requests
- local authority regulations and procedures
- technical instructions
- manufacturers or workplace equipment operation manuals
- emergency procedure manuals
- two-way radio operation procedures
RANGE STATEMENT

- emergency procedures manual
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations, legislation and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to drive and operate an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements and workplace procedures. This includes applying train management techniques to manage the movement of a train, conducting all movements and related activities required to meet operational requirements, changing ends, and handing over a train to a relief crew. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures to drive electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Drive train efficiently and effectively** | 1.1 Train is operated in accordance with the relevant codes of practice, workplace procedures and instructions  
1.2 Train is operated safely within track/road characteristics and route conditions  
1.3 Train operations are controlled to minimise wear, maximise efficiency and avoid damage  
1.4 Train is operated with due care for passenger comfort and quality of ride  
1.5 Train is safely operated to specified timetable and schedule in accordance with on-time running standards  
1.6 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and identify faults, defects and efficiencies  
1.7 Relevant codes of practice, OH&S and environmental requirements are followed to prevent injury and damage |
| **2 Operate train according to standard operating procedures** | 2.1 Train documentation is received, interpreted and followed  
2.2 Relevant codes of practice, safeworking and signalling requirements are adhered to throughout train operations  
2.3 Train control instructions and other instructions are received, interpreted and applied to ensure safe and effective control of the train  
2.4 Communications are maintained with relevant personnel during the train journey in accordance with the relevant codes of practice and safeworking systems  
2.5 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running |
| **3 Maintain/manage communications** | 3.1 Where applicable, passengers are advised of station identification, emergency situations and other critical information, using the train communications system  
3.2 Train control and other instructions are received, interpreted and applied to ensure safe and effective control of the train  
3.3 Communications are maintained with train control and other relevant personnel during the train journey in accordance with the workplace procedures, relevant codes of practice and safeworking systems  
3.4 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient on-time running  
3.5 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements and organisational policies and procedures, to ensure that actions taken are |
### ELEMENT | PERFORMANCE CRITERIA
---|---
| 4 Change ends | 3.6 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe
| 4 Change ends | 4.1 Arrival procedures are carried according to organisational policies and procedures
| 4 Change ends | 4.2 Checks and terminus inspections are carried out according to organisational policies and procedures
| 4 Change ends | 4.3 Departure procedures are carried out according to organisational policies and procedures
| 5 Carry out in-service inspections | 5.1 Train checks are made in accordance with workplace procedures
| 5 Carry out in-service inspections | 5.2 Problems and defects are identified and reported/rectified in accordance with workplace procedures, other regulatory requirements and manufacturers instructions
| 5 Carry out in-service inspections | 5.3 Incidents or unusual occurrences are reported to relevant personnel in accordance with established policies and procedures
| 6 Hand over train to relieving driver | 6.1 If required, identity of relieving driver is checked and confirmed
| 6 Hand over train to relieving driver | 6.2 Relieving driver is advised of condition and, if applicable, location of the train
| 6 Hand over train to relieving driver | 6.3 Relieving driver is updated and, where applicable, is made aware of any relevant documentation
| 7 Accept train hand-over as relief driver | 7.1 Relieving driver is positioned at correct time and location as per organisational requirements
| 7 Accept train hand-over as relief driver | 7.2 If required, present identification to train driver being relieved
| 7 Accept train hand-over as relief driver | 7.3 If required, relevant documentation is identified and referred to as per organisational requirements

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Legislated rail safety requirements including acts and regulations from the applicable state and territory together with any nationally approved compliance codes and/or guidelines
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental procedures and regulations
- Operational instructions
- Train controls, instruments and indicators and their purpose, location and use
- Train operating procedures
- Procedures for carrying out in-service checks
- Requirements for completing relevant documentation
- Train characteristics including: track and train dynamics, and monitoring principles and procedures
- Train equipment and systems including: monitoring devices, braking and drive equipment, ancillary systems, and signalling systems
- Track and road characteristics including: track limitations, speed limitations, gauge limitation, curves and gradients, location of signals and crossings, cross-overs, and yard and siding layouts
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue, strategies to manage fatigue, factors which increase fatigue-related accidents, and lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving and operating an electric passenger train to operational requirements
- Read and interpret instructions, procedures, information and signs relevant to driving and operating an electric passenger train
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving and operating of an electric passenger train to operational requirements
- Operate electronic communication equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess train defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving and operating an electric passenger train to operational requirements
- Recognise problems that may arise when driving and operating an electric passenger train, and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to vehicles or equipment
- Adapt to differences in trains, associated trains and ancillary equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor train performance to facilitate optimum safe operation
- Apply information about the track or road to train operations
- Secure a train
- Maintain on-time running
- Apply fatigue management knowledge and techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - correctly operating the electric passenger train in accordance with operational requirements
  - appropriately using communication equipment including use of correct protocols
  - carrying out correct train hand over
  - changing ends correctly

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or
EVIDENCE GUIDE

other simulated practical and knowledge assessment, and
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may be:
- any electric passenger train operated in the Australian rail system

Operations may be conducted:
- by day or night
- in all weather conditions

Train may be secured by:
- power brakes
- hand/park brakes

Track/road characteristics may include:
- track limitations
- speed limitations
- gauge limitation
- curves and gradients
- location of signals and crossings
- cross-overs

Relevant personnel may include:
- train controllers
- those providing operational assistance
- signals staff
RANGE STATEMENT

- passengers
- station staff
- train crew

Communication protocols may include but are not limited to:
- general safety
- emergency messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include but is not limited to:
- train intercom
- hand-held or portable radio equipment
- fixed radio equipment
- computer-based communications equipment
- mobile phones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- operational instructions, protocols, policies and procedures, including:
  - train operation procedures
  - procedures to prevent trains from moving unintentionally or against safeworking rules
  - track speed
  - procedures for monitoring and complying with signals
  - procedures for operating in accordance with track/route conditions
  - train log or record book
  - train timetables
  - procedures/instructions for dealing with emergencies or abnormal situations
  - quality and customer service standards, policies and procedures
  - maintenance notices, records and requests
  - communication equipment procedures
  - equipment operation manuals and maintenance specifications
  - conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations, legislation
- legislated rail safety requirements including acts and
RANGE STATEMENT

and codes may include:

- regulations from the applicable state/territory together with any nationally approved compliance codes and/or guidelines
- relevant state codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements including AS 4292 Part 1
- relevant state OH&S legislation
- relevant state environmental protection legislation

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Relevant safety, OH&S and environmental procedures and regulations
- Operational instructions including shut-down procedures
- Procedures for operating electronic communications equipment with required protocol
- Procedures for pre- and post-stabling operational checks
- Procedures for carrying out terminus checks
- Procedures to be followed in the event of an emergency
- Train controls, instruments and indicators and their purpose, location and use
- Yard or siding information including layout, entry and exit requirements and emergency
REQUIRED KNOWLEDGE AND SKILLS

procedures

Required skills:

- Communicate effectively with others when stabling an electric passenger train
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to stabling an electric passenger train, if required
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when stabling an electric passenger train
- Promptly report and/or rectify any identified problems, faults or malfunctions when stabling an electric passenger train in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when stabling an electric passenger train
- Respond appropriately to abnormal situations, safety incidents and emergencies
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor and anticipate operational hazards and take appropriate action
- Modify activities to cater for variations in workplace contexts and environment
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Carry out required pre-stabling, stabling and post-stabling checks of train

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

- relevant legislation and workplace procedures
- other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - carrying out pre-stabling checks correctly
  - stabling in a number of locations including sidings and depots/yards

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions
RANGE STATEMENT

Safety devices may include:
- hand/park brakes
- chocks
- deraillers

Stabling locations and characteristics may include:
- yards/depots
- sidings
- platforms
- workshops

Relevant personnel may include:
- train controllers
- train examiners
- maintenance personnel
- those providing operational assistance
- train crews
- cleaners
- contractors

Communication protocols may include but are not limited to:
- general safety
- emergency messages
- sending and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include but is not limited to:
- hand-held or portable radio equipment
- fixed radio equipment
- mobile phones

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Competency Field

Competency Field C - Vehicle Operation
TLIC3048B Shunt couple and uncouple electric passenger trains

Modification History
New release. This unit replaces and is equivalent to TLIC3048A.

Unit Descriptor
This unit involves the skills and knowledge required to shunt, couple and uncouple an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements, and workplace procedures. This includes planning and preparing for shunting operations, shunting the train, coupling and uncoupling the train, and using a coupling adaptor. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including state and territory acts and regulations together with any nationally approved compliance codes and/or guidelines. Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures to shunting, coupling and uncoupling electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

Licensing/Regulatory Information

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1  | Plan and prepare for shunting operation | 1.1 | Shunting requirements are confirmed through workplace documents and/or relevant personnel |
|    |                                          | 1.2 | Local safety requirements are identified and performed in accordance with workplace procedures |
|    |                                          | 1.3 | Relevant occupational health and safety (OH&S) requirements are followed to prevent injury and damage |
| 2  | Shunt trains                             | 2.1 | Where required, points, levers and/or switches are operated in accordance with workplace requirements |
|    |                                          | 2.2 | Audible signals, hand signals and other line of sight communications are used to assist the control of train movements |
|    |                                          | 2.3 | Hand, light and radio shunting commands used are responded to in accordance with workplace requirements |
|    |                                          | 2.4 | Pre-movement inspection/tests are carried out prior to moving trains |
|    |                                          | 2.5 | Train is shunted and positioned in accordance with operational/workplace requirements |
|    |                                          | 2.6 | Following shunt movement train is secured in accordance with workplace requirements |
| 3  | Couple trains                            | 3.1 | Type of connections required are identified prior to coupling |
|    |                                          | 3.2 | Trains to be coupled are positioned in accordance with operating procedures and workplace requirements |
|    |                                          | 3.3 | Trains to be coupled are fully secured |
|    |                                          | 3.4 | Alignment of couplers in the appropriate position for type of connection required is ensured |
|    |                                          | 3.5 | Prior to coupling trains, safety requirements are ensured |
|    |                                          | 3.6 | Trains are coupled in accordance with operational/workplace requirements |
|    |                                          | 3.7 | Post-coupling inspection/tests are carried out in accordance with operating procedures and workplace requirements |
| 4  | Uncouple trains                          | 4.1 | Trains to be uncoupled are identified and pre-uncoupling checks and, where required, procedures are conducted in accordance with operating procedures and workplace requirements |
|    |                                          | 4.2 | Prior to uncoupling trains safety requirements are ensured |
|    |                                          | 4.3 | Train that will remain after uncoupling is fully secured |
|    |                                          | 4.4 | Trains are uncoupled in accordance with operating procedures and workplace requirements |
4.5 Post-uncoupling inspection/tests are carried out in accordance with operating procedures and workplace requirements

5 Use coupling adaptor

5.1 Situations requiring the use of a coupling adaptor are identified in accordance with workplace procedures

5.2 Coupling adaptor is accessed and transported to required location for use

5.3 Prior to fitting coupling adaptor, safety requirements are ensured

5.4 Coupling adaptor is attached to one of the trains prior to coupling in accordance with workplace procedures

5.5 Trains are coupled in accordance with workplace procedures and coupling adaptor is secured in place

5.6 Post-coupling inspection/tests and/or procedures are carried out in accordance with operating procedures and workplace requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable minimum standards and approved compliance codes and/or guidelines
- Communication protocols
- Coupling systems, their components and their operation
- Diagnostic techniques relating to shunting, coupling and uncoupling electric passenger trains
- Procedures to be followed in an emergency
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Shunting procedures and requirements
- Types of couplers and their purpose
- Types of coupling adaptors and their purpose (where used)

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Apply rail safety practices and regulations
- Assess shunting, coupling and uncoupling defects
- Communicate effectively with others when shunting, coupling and uncoupling electric passenger trains
- Identify and assess electric passenger train defects and deficiencies, and take appropriate action to report, isolate, repair or replace any identified defective equipment in accordance with workplace procedures
- Implement contingency plans for unplanned events
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Operate and adapt to differences in trains and related equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocol
- Promptly report and/or rectify any identified problems, faults or malfunctions when shunting, coupling and uncoupling electric passenger trains in accordance with regulatory requirements and workplace procedures
- Read and interpret instructions, procedures, information and signs relevant to shunting, coupling and uncoupling electric passenger trains
- Select and use required personal protective equipment conforming to industry and OH&S standards
• Work collaboratively with others when shunting, coupling and uncoupling electric passenger trains
• Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - carrying out pre-shunting checks correctly
  - shunting in a number of locations including sidings and depots/yards
  - coupling an electric passenger train,

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment may include:
- electric passenger train
- transition coupler
- emergency coupler
- coupling adaptor

OH&S requirements may include the use of:
- gloves
- sunscreen, sunglasses and safety glasses
- insect repellent
- safety footwear
- portable radios
- hand lamps
- flags
- high visibility clothing
- emergency warning devices
- portable signs and markers

Contingencies may include:
- derailments
- collisions
- breakdowns
- injuries and fatalities
- fires
- track damage
- powerline damage
- broken/missing equipment

Contingency plans and contingencies may involve:
- emergency procedures manuals
- safeworking systems and requirements

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- applicable legislated rail safety requirements including state and territory acts and regulations together with any nationally approved compliance codes and/or guidelines
- noticeboards
- special train notices
- periodical circulars
- rules and operating procedures
- computer-based data systems
Applicable regulations, legislation and codes may include:

- timetables
- train consist
- incident reports
- train register book
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant state/territory codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to assist a train driver to shunt, couple and uncouple an electric passenger train to operational requirements in accordance with safeworking and regulatory requirements and workplace procedures. This includes assisting with planning and preparing for shunting operations, shunting the train, coupling and uncoupling the train, and using a coupling adaptor. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including state and territory acts and regulations together with any nationally approved compliance codes and/or guidelines.

Work is performed with minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to shunting, coupling and uncoupling electric passenger trains to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan and prepare for shunting operation** | 1.1 Shunting requirements are confirmed through workplace documents and/or relevant personnel  
1.2 Local safety requirements are identified and performed according to workplace procedures  
1.3 Relevant OH&S requirements are followed to prevent injury and damage |
| **2 Assist with shunting of trains** | 2.1 Where required, points, levers, and/or switches are operated in accordance with workplace requirements  
2.2 Audible signals, hand signals and other line of sight communications are used to assist the control of train movements  
2.3 Hand, light and radio shunting commands used are responded to in accordance with workplace requirements  
2.4 Pre-movement inspection/tests are carried out prior to moving trains |
| **3 Assist with coupling of trains** | 3.1 Type of connections required are identified prior to coupling  
3.2 When trains to be coupled are positioned according to operating procedures and workplace requirements, ensure couplers are aligned and in the appropriate position for type of connection required  
3.3 Ensure all safety requirements are met prior to coupling trains  
3.4 After trains are coupled, post-coupling inspection/tests are carried out according to operating procedures and workplace requirements |
| **4 Assist with uncoupling of trains** | 4.1 Train to be uncoupled is identified and checks are made to ensure all safety requirements are met prior to uncoupling  
4.2 Train is uncoupled according to operating procedures and workplace requirements  
4.3 Post-uncoupling inspection/tests are carried out according to operating procedures and workplace requirements |
| **5 Use coupling adaptor** | 5.1 Situations requiring the use of a coupling adaptor are identified as per workplace procedures  
5.2 Coupling adaptor is accessed and transported to required location for use  
5.3 Ensure all safety requirements are met prior to fitting coupling adaptor  
5.4 Coupling adaptor is attached to one of the trains prior to coupling according to workplace procedures  
5.5 Trains are coupled in accordance with workplace procedures and coupling adaptor is secured in place |
ELEMENT PERFORMANCE CRITERIA
5.6 Post-coupling inspection/tests and/or procedures are carried out according to operating procedures and workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislated rail safety requirements including acts and regulations from the applicable state together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Shunting procedures and requirements
- Coupling systems, their components and their operation
- Types of couplers and their purpose
- Types of coupling adaptors and their purpose
- Diagnostic techniques relating to shunting, coupling and uncoupling electric passenger trains
- Communication protocols
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when shunting, coupling and uncoupling electric passenger trains
- Read and interpret instructions, procedures, information and signs relevant to shunting, coupling and uncoupling electric passenger trains
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when shunting, coupling and uncoupling electric passenger trains
- Identify and assess electric passenger train defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Promptly report and/or rectify any identified problems, faults or malfunctions when shunting, coupling and uncoupling electric passenger trains in accordance with regulatory requirements and workplace procedures
Required skills:

- Apply rail safety practices and regulations
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Assess shunting, coupling and uncoupling defects
- Operate and adapt to differences in trains and related equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - carrying out pre-shunting checks correctly
  - assisting appropriately with the shunting of trains in a number of locations including sidings and depots/yards
  - assisting with coupling activities, including using coupling adaptor correctly
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night
- in all weather conditions

Equipment may include:

- electric passenger train
- transition coupler
- emergency coupler
- coupling adaptor

OH&S requirements may include the use of:

- gloves
- sunscreen, sunglasses and safety glasses
- insect repellent
RANGE STATEMENT

- safety footwear
- portable radios
- hand lamps
- flags
- high visibility clothing
- emergency warning devices
- portable signs and markers

Contingencies may include:

- derailments
- collisions
- breakdowns
- injuries and fatalities
- fires
- track damage
- powerline damage
- broken/missing equipment

Contingency plans and contingencies may involve:

- emergency procedures manuals
- safeworking systems and requirements

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- noticeboards
- special train notices
- periodical circulars
- rules and operating procedures
- computer-based data systems
- timetables
- train consist
- incident reports
- train register book
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations, legislation and codes may include:

- relevant state/territory codes of practice and safeworking system requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards

Unit Descriptor

This unit involves the skills and knowledge required to perform guard duties as part of electric passenger train operations in accordance with safeworking and regulatory requirements and workplace procedures as the guard of an electric passenger train. It includes assisting in all movements and related activities required to achieve operational requirements, changing work locations, handing over a train to a relief crew, providing customer service and maintaining customer safety. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated state rail safety requirements including acts and regulations together with any nationally approved compliance codes and/or guidelines.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the performance of train guard duties in traffic for an electric passenger train to operational requirements as part of workplace activities across a variety of operational contexts within the Australian rail system.

</thead>
</table>
| **1 Perform on train role/duties efficiently and effectively** | 1.1 On train duties are performed in accordance with the relevant codes of practice, workplace procedures and instructions  
1.2 Right of way activities are performed to ensure train is operated safely within the confines of platform or station limits  
1.3 On train duties are performed in a manner that provides optimal customer safety and comfort  
1.4 On train duties are performed to meet specified timetable and schedule in accordance with on-time running standards  
1.5 Train carriages and the performance and operation of equipment are monitored to optimise running conditions by identifying any faults, defects and deficiencies  
1.6 Relevant workplace procedures, OH&S and environmental requirements are followed to prevent injury and damage |
| **2 Complete train journey** | 2.1 Train documentation is received, interpreted and applied in accordance with relevant workplace procedures and safeworking systems  
2.2 Relevant workplace procedures, safeworking and signalling requirements are followed throughout train operations  
2.3 Communications are maintained with relevant personnel during the train journey in accordance with the relevant workplace procedures and safeworking systems  
2.4 Assistance is provided to customers with or without special needs in accordance with workplace requirements  
2.5 Correspondence and/or cash and/or valuables are carried in cooperation with relevant personnel  
2.6 Platform duties are performed in accordance with workplace procedures |
| **3 Maintain/manage communications** | 3.1 Passengers are advised of station identification, emergency situations and other critical information, using the train communications system in accordance with workplace procedures  
3.2 Instructions from network control and other relevant personnel are received, interpreted and applied to ensure safe and effective control of the train  
3.3 Communications are maintained with network control and other relevant personnel during the train journey in accordance with the workplace rules and procedures, and safeworking systems  
3.4 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient on-time running  
3.5 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Legislated rail safety requirements including state and territory acts and regulations together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Train operational instructions
- On-train controls, instruments and indicators and their purpose, location and use
- Train operating procedures
- Procedures for carrying out in-service checks
- Requirements for completing relevant documentation
- Train characteristics including: track and train dynamics, monitoring principles and procedures, and signalling systems
- Train equipment and systems including: monitoring devices, braking and drive equipment, ancillary systems, and signalling systems
- Track and road characteristics including: track limitations, speed limitations, gauge limitation, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, and yard and siding layouts
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue, strategies to manage fatigue, factors which increase fatigue-related accidents, and lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when performing guard duties as part of electric passenger train operations
- Read and interpret instructions, procedures, information and signs relevant to performing guard duties on an electric passenger train
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the guard duties on an electric passenger train to operational requirements
- Operate electronic communication equipment to required protocol
- Work collaboratively with others as part of a train crew
- Identify and assess on-train defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when performing guard duties on an electric passenger train to operational requirements
- Recognise problems that may arise when performing guard duties on an electric passenger
Required skills:

- Train and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, vehicles or equipment
- Adapt to differences in trains and ancillary equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor train performance and security to facilitate optimum safe operation
- Apply information about the track or road to train operations
- Monitor journey schedule
- Apply fatigue management knowledge and techniques

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - performing on-train guard duties correctly
  - carrying out inspections in accordance with workplace requirements
  - performing hand-over and relief activities correctly
  - monitoring the performance of the train including passenger safety and comfort during service

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Rolling stock includes:
- any electric passenger rolling stock in service within Australian rail systems

Safety devices may include:
- power brakes
- hand brakes
- chocks
- lock-out equipment to prevent train from moving
- emergency and safety equipment

Track and road characteristics:
- track and bridge limitations
- speed limitations
RANGE STATEMENT

include:
- gauge limitation
- curves and gradients
- curfews
- location of signals and crossings
- emergency cross-overs

Relevant personnel can include:
- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include:
- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include:
- oral, aural or signed communications
- hand-held or portable two-way radio equipment
- fixed and mobile telephone equipment

Depending on the type of organisation concerned, workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Information and documents may include:
- train running sheets
- time sheets
- equipment operation manuals and maintenance specifications
- emergency procedure manuals
- relevant maintenance specifications
- two-way radio operation procedures
- maintenance notices, records and requests
- isolation and lock-out procedures
RANGE STATEMENT

- procedures for using protective clothing and equipment
- local instructions
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- applicable legislated state/territory rail safety requirements together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation

Competency Field

Competency Field C - Vehicle Operation
TLIC3063A Operate vehicle carrying special loads

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to drive a vehicle carrying a special load safely including compliance with road traffic authority and other relevant government regulations and company policies; and effective management of hazardous situations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence and permit requirements and regulations of the relevant state/territory roads and traffic authority as well as the specific regulatory and permit requirements pertaining to the special load being carried.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial vehicle carrying a special load across a variety of driving contexts.

| 1 Carry out pre-operational checks | 1.1 The pre-operational checks for the special purpose vehicle and its associated ancillary equipment are carried out in accordance with manufacturers requirements, government regulations and workplace policies and procedures  
1.2 All faults and defects identified during checks are repaired or reported in accordance with workplace procedures |
| 2 Drive a vehicle carrying special loads | 2.1 The vehicle is manoeuvred in accordance with the regulations/permit requirements for the class of vehicle involved and the load being carried  
2.2 Vehicles carrying explosives or dangerous goods are driven along designated routes in accordance with the relevant codes, relevant government regulations and workplace policies  
2.3 The load is transported and the vehicle manoeuvred in accordance with any required precautions relating to unusual/special characteristics of the load and/or relevant government regulations pertaining to the special load including the Australian Dangerous Goods Code and the Australian Explosives Code  
2.4 Signs or indicators are fixed to the vehicle if required  
2.5 Appropriate procedures are followed for the load concerned in the event of a driving emergency |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Where applicable, Australian regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including the Australian Dangerous Goods Code and the Australian Explosives Code
- Relevant OH&S and environmental procedures and regulations
- Vehicle controls, instruments and indicators and their use
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency
REQUIRED KNOWLEDGE AND SKILLS

- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on vehicle and related action
- Differences between transmission types
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a vehicle designed to carry special loads
- Read and interpret instructions, procedures, information and signs relevant to the driving of a vehicle designed to carry special loads
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a vehicle designed to carry special loads
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a vehicle designed to carry special loads
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when driving a vehicle designed to carry special loads in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when driving a vehicle designed to carry special loads
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a vehicle designed to carry special loads
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating
Required skills:

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of vehicle and its equipment and load and take appropriate action if required
- Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:

- all vehicles designed to carry special loads, for example concrete agitator, livestock transporter, armoured car, tanker, refrigerated vehicle, waste vehicle, fresh produce vehicle, car carrier, container carrier, recovery vehicle

Driving may be carried out in typical road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may include:

- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
RANGE STATEMENT

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Designated routes are:

- those that are determined by permit/regulatory requirements for a specific class of load such as explosives or dangerous goods

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc
- road closures for special events such as marches, parades, etc
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory driving licence requirements
RANGE STATEMENT

include:

- state/territory road rules
- workplace driving instructions and procedures for drivers of vehicles carrying the specific load concerned
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- procedures/designated routes prescribed by the relevant authority for vehicles carrying the specific loads concerned

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to the class of vehicle
- relevant regulations/permit requirements specific to the load being carried
- Australian regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including the Australian Dangerous Goods Code and the Australian Explosives Code
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant State/Territory environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for a trip** | 1.1 Inventory of equipment is completed in accordance with organisational requirements  
1.2 Driver’s clothing is selected in accordance with organisational and customer requirements  
1.3 Vehicles assessed as unsuitable for the car carrier are excluded from loading in accordance with organisational requirements  
1.4 Inspection documentation for vehicles to be loaded is completed in accordance with organisational and customer requirements  
1.5 Delivery instructions, including oral instructions for pick-up points and destinations, are checked to ensure they are consistent with manifest and inconsistencies are remedied in accordance with organisational requirements  
1.6 Suitable route is selected to ensure the most efficient, safe and secure route and in consideration of load |
| **2 Load the car carrier vehicle** | 2.1 Car carrier vehicle is loaded without damage to the vehicles in the correct order and in accordance with organisational requirements  
2.2 Vehicles are loaded on to car carrier vehicle in line with regulatory requirements, and organisational safety and operating procedures; with adjustments made as required when loading commercial vehicles  
2.3 Vehicles are parked in gear and with brakes applied  
2.4 Load is secured with correct tie down methods for transporting vehicles in accordance with organisational requirements  
2.5 Checks are made to ensure loaded car carrier complies with legal requirements for height, weight, width and axle loading  
2.6 Ancillary equipment attached to car carrier is operated in accordance with operating instructions |
| **3 Transport load** | 3.1 Driving techniques used when operating car carrier minimise the risk of damage to the loaded vehicles and are in line with eco-driving considerations  
3.2 Load is conveyed to meet customer requirements for delivery times while complying with traffic laws  
3.3 Loaded vehicle car keys are secured in accordance with organisational requirements |
| **4 Unload the car carrier vehicle** | 4.1 Identity of persons taking delivery of vehicles is confirmed in accordance with delivery instructions |
4.2 Vehicle unloading procedures are followed in line with organisational and customer requirements for safety and in a manner that minimises inconvenience to other road users

4.3 Unloaded vehicles are inspected and documentation of their condition is completed

4.4 Any differences between initial vehicle inspection are reported, in accordance with organisational and customer requirements
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills required at the completion of this unit.

Required knowledge:

- Heavy vehicle handling procedures
- Workplace driving and operational instructions
- Engine power management and safe driving strategies
- Efficient driving techniques and eco-driving considerations
- Driving hazards and related defensive driving techniques
- Factors that may cause traffic delays and diversions and related action that can be taken
- Loading and unloading techniques for car carrying
- Factors involved in trip preparation
- Workplace documentation

Required skills:

- Communicate effectively with others while operating a car carrier vehicle
- Read and interpret procedures, information and signs relevant to operating car carrier vehicles
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to operating car carrier vehicles
- Work collaboratively with others when operating car carrier vehicles
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interaction with others
- Implement contingency plans for unexpected events when operating car carrier vehicles
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating car carrier vehicles
- Monitor and anticipate traffic hazards and take appropriate action
- Make accurate estimates in a range of situations
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment (PPE) conforming to industry and OH&S standards
• Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required
• Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures
• Check and replenish fluids and carry out lubrication processes in the course of work activities
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying correct techniques and methods for loading and unloading a car carrier
  - identifying requirements for accepting the correct vehicle for cartage
  - applying eco-driving techniques when operating a car carrier vehicle
  - understanding relevant legislation and workplace procedures
  - understanding customer requirements when delivering cars

Context of and specific resources for assessment

- Access is required to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Practical assessment must occur:
  - in three different activities of the job function in the workplace
  - if in a simulated work environment, using industry-standard equipment
  - A simulator is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up fluid levels
- checking:
  - tyre pressures
  - operation of vehicle lights and indicators
  - brakes
  - coupling equipment

Hazards may include:
- working from heights
- wet and iced roads
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- slow moving vehicles

Loading must ensure:
- vehicles do not overhang more than 1.2 meters at the front or rear of vehicle
- vehicles do not touch each other during transit
- vehicles are loaded in reverse sequence of the planned unloading sequence
- adjustments are made when loading commercial vehicles

Factors that can cause traffic:
- traffic accidents
delays and diversions may include:
- flooded sections of road
- road damage
- bridge or tunnel damage
- road works
- building construction
- emergency situations, such as bushfires
- livestock movement
- holiday traffic
- road closures for utility works, such as electricity, water, sewerage, telecommunications and gas

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:
- state and territory heavy vehicle driving licence or permit requirements
- state and territory road rules
- workplace driving instructions and procedures
- vehicle manufacturer’s instructions, specifications and recommended driving procedures, including pre-operational checks of vehicle
- emergency procedures
- vehicle work diaries or record books, where required

Applicable procedures and codes may include:
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations
  - environmental protection legislation

Unit Sector(s)
Not applicable.
Competency Field
C – Vehicle Operation
TLIC3071A Operate an agitator

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to operate an agitator safely, including systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, and managing vehicle condition and performance.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state and territory roads and traffic authority pertaining to an agitator.

Work is performed with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT PERFORMANCE CRITERIA**

1 Prepare the vehicle
   1.1 Pre-operational check of the agitator is completed in line with organisational requirements
   1.2 Concrete is charged to the agitator and slump is adjusted in line with customer requirements and organisational procedures
   1.3 Vehicle exterior is cleaned to meet organisational policy and regulatory requirements
   1.4 Most efficient route of travel is determined to achieve customer and regulatory requirements
   1.5 Traffic and road conditions are constantly monitored and acted upon to enable safe operation
   1.6 Appropriate procedures are followed in the event of a driving emergency

2 Monitor and maintain vehicle performance
   2.1 Performance position and efficiency of vehicle operation are monitored during use
   2.2 Defective or irregular performance and malfunctions are reported to the appropriate authority
   2.3 Vehicle records are updated and maintained, and information is processed in accordance with workplace procedures

3 Deliver concrete to site
   3.1 Pre-site check is completed before entry on to worksite in line with regulatory and company requirements
   3.2 Personal protective equipment (PPE) is worn in accordance with workplace policy
   3.3 Vehicle is parked and secured in accordance with manufacturer specifications, traffic regulations and workplace procedures
   3.4 Ancillary equipment is attached and operated in accordance with company procedures and regulatory requirements.
   3.5 Concrete is discharged in line with customer requirements and company policy and procedure

4 Finalise concrete delivery
   4.1 Relevant documentation is completed on delivery of concrete, in line with customer requirements and company policy and procedure
   4.2 Vehicle is cleaned to meet organisational policy
and regulatory requirements
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations
- Procedures to be followed in the event of a driving emergency
- Pre-operational checks carried out on vehicle and related action
- Procedures for measuring mass to ensure axle weight compliance
- Driving hazards and related defensive driving techniques
- Map reading and navigation of the vehicle
- Factors that may cause traffic delays and diversions and related action that can be taken
- Pre-site check procedures
- Procedures to be followed when concrete is charged and discharged
- Effect of different slumps on vehicle stability

Required skills:

- Communicate effectively during all aspects of operating an agitator
- Read and interpret instructions, procedures, information and signs relevant to driving an agitator
- Follow operational instructions
- Complete documentation relating to driving an agitator
- Check and adjust slump of concrete
- Operate electronic communication equipment in line with required protocols
- Work collaboratively with others when driving an agitator
- Report and rectify within limits of own role identified problems, faults and malfunctions that may occur when driving an agitator vehicle in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when driving an agitator
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Use ancillary equipment
- Apply map reading and road navigation techniques to the operation of an agitator
- Select and use required PPE, conforming to industry and OH&S standards
- Monitor performance of vehicle and take appropriate action where required
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - knowledge of relevant regulations and workplace procedures
  - correct positioning and charging of agitator
  - operating an agitator and ancillary equipment
  - adjusting slump of concrete to meet customer requirements
  - conducting pre-site checks of worksites
  - using PPE
  - discharging the concrete using the following four methods: concrete pump, wheelbarrow, kibble and chutes
  - cleaning vehicle to required company and regulatory standard

Context of and specific resources for assessment

- Assessment must ensure access to:
  - agitator vehicle that is consistent with current industry standards
  - tools, equipment and PPE currently used in the concrete industry
  - regulatory requirements and equipment documentation that impact on work activities currently used in the concrete industry

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
- Simulation and online assessment are not suitable for final assessment of this unit
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up fluid levels
- checking:
  - tyre pressures
  - operation of vehicle lights and indicators
  - brakes
  - wheel nuts
  - barrel functions
  - emergency stops
  - radio functions

Communication includes:
- constant communication with:
  - relevant authority on site
  - customers
  - batcher

Personal safety measures include:
- manual-lifting techniques
- three points of contact when using ladders
- correct use of safety rails and walkways
- safety glasses
- safety footwear
- hard hats
- high visibility clothing
- hearing protection

Concrete discharge methods include:
- concrete pump
- wheelbarrow
- kibble

Ancillary equipment includes:
- hoses
- chutes
- remote control
- ladders
- chute locks

Minor routine repairs may include:
- replacing:
  - blown globes in vehicle lights
  - broken fanbelts
  - blown fuses
  - door mirrors
- broken coolant hoses
- repairs to rear tail-light lens
- changing tyres
- repairing tyre punctures
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- worksite hazards, including:
  - power and service lines
  - buildings, structures and facilities
  - underground services
  - uneven or unstable ground and recently filled trenches
  - stationary and moving machinery and equipment
  - hazardous or dangerous materials
  - noise and light
  - energy sources
  - people on worksite
  - obstructions

Driving hazards may include:

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge or tunnel damage
- road works
- building construction
- emergency situations, such as bushfires or building fires
- road closures for special events, such as for marches, parades and sporting events
- holiday traffic
- road closures for utility works, such as electricity, water, sewerage,
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Documentation and records may include:

Applicable procedures and codes may include:

**Unit Sector(s)**
Not applicable.

**Competency Field**

C – Vehicle Operation
TLIC3072A Conduct the duties of an assistant on a heritage locomotive

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to conduct the duties of an assistant on a heritage locomotive in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.
It includes carrying out or assisting with the following activities on a heritage locomotive in accordance with organisational requirements: checking, preparing and starting up prior to operation; coupling, uncoupling and shunting; assisting with operations and stabling.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of railway systems.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1. Prepare to operate a heritage locomotive
   1.1 Roster is checked and interpreted for day's operational activities
   1.2 Allocation of locomotive is checked and confirmed
   1.3 Train schedules/notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures
   1.4 Required personal protective equipment is obtained for use while operating the locomotive
   1.5 Trackside safety and basic electrification awareness procedures are followed while locating the allocated heritage locomotive

2. Assist with preparing and starting a heritage locomotive
   2.1 Logbook is checked to confirm serviceability of heritage locomotive
   2.2 Locomotive is confirmed as being securely stabled prior to commencing preparation and safety checks
   2.3 Preparation and safety checks are conducted in accordance with occupational health and safety (OH&S) and other workplace policies and procedures
   2.4 Fluid levels and mechanical equipment are checked and appropriate action is taken if required
   2.5 Locomotive is started in accordance with manufacturer and/or organisational instructions
   2.6 For critical or serious equipment faults that cannot be readily rectified, locomotive is shut down, faulty equipment is isolated and tagged, and problem reported for rectification
   2.7 All instruments and gauges are observed, readings are interpreted to confirm effective air and electrical operation, and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation
   2.8 Fluid levels are rechecked after starting and appropriate action is taken as required
   2.9 Assistance is provided with pre-departure checks
   2.10 Logbook and other service records on the locomotive are completed in accordance with organisational requirements

3. Assist with coupling, uncoupling and securing rail vehicles
   3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
   3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles
3.4 Connecting hoses and electrical couplings are connected/disconnected in accordance with organisational policies and procedures

3.5 Hand brakes and other securing devices are applied/released attached/removed in accordance with organisational policies and procedures

4 Assist with operating a heritage locomotive

4.1 Safeworking activities are undertaken in accordance with organisational and/or network owner policies and procedures

4.2 Supervisory controls and indicators are monitored and operated in accordance with organisational policies and procedures

4.3 Assistance is provided with communications for network control officers and ground staff

4.4 Observation of all aspects of the rail corridor and environs is maintained and communicated to driver in accordance with organisational and/or network owner policies and procedures

4.5 When driver is incapacitated train is stopped, network control is informed and instructions are followed in accordance with organisational policies and procedures

4.6 Assistance with locomotive operation is provided as requested by driver

5 Assist with stabling a heritage locomotive

5.1 Locomotive is secured in accordance with directions, organisational procedures and rail regulations

5.2 Locomotive is shut down in accordance with manufacturer and/or operator instructions

5.3 Logbook and other service records on the locomotive are completed in accordance with organisational requirements

5.4 Cab is secured in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Braking and safety system procedures for heritage locomotives
- Communication equipment checks
- External features of a heritage locomotive that must be checked during a pre-operational visual inspection
- Functions of auxiliary systems on a motive power unit and related checks for correct operation
- In-cab pre-operational checks for a heritage locomotive
- Local procedures and operating requirements
- Lubrication requirements for a motive power unit
- Operating controls to start, accelerate, decelerate and stop a heritage locomotive
- Operating procedures for heritage locomotives
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- Procedures for checking fuel and fluid levels, and carrying out lubrication processes on a heritage locomotive
- Procedures for identifying equipment defects and assessing for appropriate action
- Procedures for managing and controlling hazardous situations when preparing and starting up a heritage locomotive
- Procedures for starting and operating auxiliary systems on a heritage locomotive
- Procedures to be followed in an emergency
- Relevant safety, OH&S and environmental procedures and regulations
- Requirements for completing relevant documentation when inspecting and preparing a heritage locomotive
- Start-up procedures for heritage locomotives
- Visual inspection procedures for a heritage locomotive

**Required skills:**

- Check and replenish fluids and carry out lubrication requirements on a heritage locomotive
- Communicate effectively with others when inspecting and preparing a heritage locomotive
- Complete documentation related to operating a heritage locomotive
- Conduct a visual inspection of a heritage locomotive and associated equipment
- Document outcomes of visual inspection of a heritage locomotive
- Interpret and follow instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Prepare a heritage locomotive prior to service
- Read and interpret instructions, procedures, information and signs relevant to operating a
heritage locomotive

- Work collaboratively with others as part of a train crew

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - assisting with pre-operational activities
  - coupling and uncoupling a heritage locomotive
  - stabling a heritage locomotive

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Inspection of a heritage locomotive may include:
- lights
- hoses
- couplings
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel
- electrical cables
- glass windows and doors
- compressor oil levels
- audible faults (e.g. hiss of escaping air)
- visible faults (e.g. oil leaks, tears and cracks)

In-cab pre-operational checks will include:
- brake checks
- vigilance control test
- functionality checks of supervisory controls and indicators
- radio communication check
- seat
- windows and blinds
- air conditioners and heaters
- door locks
- fire extinguishers
- emergency toolbox

Relevant personnel may include:
- train crew
- train controllers and signallers
- maintenance personnel
Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:

- notices in driver notice board/box
- train driver roster sheet and/or table card
- operational instructions, policies and procedures
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not applicable.

Competency Field

C – Vehicle Operation
TLIC3073A Fire a steam locomotive

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to conduct the duties of an assistant on a steam locomotive in accordance with workplace procedures and the requirements of relevant rail regulations and codes of practice.
It includes preparing for operations; preparing and starting the locomotive; assisting with un/coupling and securing the steam locomotive; assisting in operating and stabling the locomotive in accordance with organisational requirements.
Licensing, legislative, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines and local rail regulations and codes of practice as they apply to the operation of railway systems.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Prepare to operate a steam locomotive

1.1 Roster is checked and interpreted for day's operational activities

1.2 Allocation of locomotive is checked

1.3 Train schedules/notices and other operational and regulatory documentation is accessed and interpreted in accordance with workplace procedures

1.4 Required personal protective equipment is obtained for use while operating the locomotive

1.5 Trackside safety and basic electrification awareness procedures are followed while locating the allocated locomotive

### 2 Prepare and start a steam locomotive

2.1 Logbook is checked to confirm serviceability of locomotive

2.2 Locomotive is confirmed as being securely stabled prior to commencing preparation and safety checks

2.3 Preparation and safety checks are conducted in accordance with occupational health and safety (OH&S) and other organisational policies and procedures

2.4 Water levels and fuels are checked and replenished as required

2.5 Mechanical equipment is checked and appropriate action taken as required

2.6 Fire is lit and steam is raised in accordance with organisational instructions, with consideration for thermal expansion and environmental considerations

2.7 For critical or serious equipment faults that cannot be readily rectified, fire is dropped, faulty equipment is isolated and problem is reported for rectification

2.8 All indicators and gauges are continuously monitored and readings are interpreted to confirm effective pressure, water level and air operation and where a problem is indicated, action is taken to determine the cause and to rectify or report the situation

2.9 Operation of locomotive equipment is established and verified

2.10 Lubrication, cleaning, preparation, and provisioning of the locomotive is undertaken in accordance with organisational requirements

2.11 Logbook and other service records on the locomotive are completed in accordance with organisational requirements

### 3 Assist with coupling, uncoupling and

3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures
## securing rail vehicles

3.3 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles

3.4 Connecting hoses and electrical couplings are connected/disconnected in accordance with organisational policies and procedures

3.5 Hand brakes and other securing devices are applied/released attached/removed in accordance with organisational policies and procedures

## 4 Assist with operating a steam locomotive

4.1 Safeworking activities are undertaken in accordance with organisational and/or network owner policies and procedures

4.2 Gauges and indicators are monitored and operated in accordance with organisational policies and procedures

4.3 Boiler is fired to meet load requirements and environmental considerations

4.4 Water level is maintained to ensure safe boiler operation meets load requirements and track characteristics

4.5 Assistance is provided with communications with network control officers and ground staff

4.6 Observation of all aspects of the rail corridor and environs is maintained and communicated to driver in accordance with organisational and/or network owner policies and procedures

4.7 In case of driver being incapacitated train is stopped and network control informed and instructions are followed in accordance with organisational policies and procedures

4.8 Assistance with locomotive operation is provided as requested by driver

## 5 Assist with stabling a steam locomotive

5.1 Locomotive is secured in accordance with directions, workplace procedures and rail regulations

5.2 Boiler water levels are checked and replenished as required

5.3 Locomotive is shut down in accordance with operators instructions

5.4 Ash is disposed of responsibly in accordance with network owner and operators policies

5.5 Assistance is provided to conduct a post-operational inspection

5.6 Logbook and other service records on the locomotive are completed in accordance with organisational requirements

5.7 Controls are secured in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Braking and safety system procedures for steam locomotives
- Communication equipment checks
- External features of a steam locomotive that must be checked during a pre-operational visual inspection
- Functions of auxiliary systems on a motive power unit and related checks for correct operation
- In-cab pre-operational checks for a steam locomotive
- Local procedures and operating requirements
- Lubrication requirements for a motive power unit
- Operating controls to start, accelerate, decelerate and stop a steam locomotive
- Operating procedures for steam locomotives
- Principles, purpose and location of controls, monitoring devices, braking, power source and traction systems
- Procedures for checking fuel and fluid levels and carrying out lubrication processes on a steam locomotive
- Procedures for identifying equipment defects and assessing appropriate action
- Procedures for managing and controlling hazardous situations when preparing and starting up a steam locomotive
- Procedures for starting and operating auxiliary systems on a steam locomotive
- Procedures to be followed in an emergency
- Relevant safety, OH&S and environmental procedures and regulations
- Requirements for completing relevant documentation when inspecting and preparing a steam locomotive
- Start-up procedures for steam locomotives
- Visual inspection procedures for a steam locomotive

Required skills:

- Check and replenish fluids and carry out lubrication requirements on a steam locomotive
- Communicate effectively with others when inspecting and preparing a steam locomotive
- Complete documentation related to operating a steam locomotive
- Conduct a visual inspection of a steam locomotive and associated equipment
- Document outcomes of visual inspection of a steam locomotive
- Interpret and follow instructions and prioritise work
- Maintain steam and water levels commensurate with operating requirements
- Operate electronic communication equipment to required protocol
- Prepare a steam locomotive prior to service
- Read and interpret instructions, procedures, information and signs relevant to operating a steam locomotive
- Work collaboratively with others as part of a train crew
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - assisting with pre-operational activities
  - firing a steam locomotive
  - coupling and uncoupling a steam locomotive
  - stabling a steam locomotive

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Gauges and instruments may include:
- steam pressure
- sight glasses
- brake gauges
- drivers assistance gauges
- firing gauges

Locomotive equipment may include:
- boiler systems
- feed water systems
- firing systems
- braking systems
- gauges and instrumentation
- communication systems
- whistle
- head and marker lights
- ancillary equipment

Inspection of a steam locomotive may include:
- lights
- motion and valve gear
- boiler integrity and fittings
- running gear and tender
- hoses
- couplings
- doors and door locks
- springs
- brake equipment
- wheels
- seals
- sand and fuel
- glass windows and doors
- compressor oil levels
- audible faults (e.g. hiss of escaping air and/or steam)
- visible faults (e.g. oil leaks, tears and cracks)
- safety appliances

Relevant personnel may include:
- train crew
- train controllers and signallers
- maintenance personnel

Safety and personal protective equipment may include:
- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection

Information and documents may include:
- notices in driver notice board/box
- train driver roster sheet and/or table card
- operational instructions, policies and procedures
- emergency procedures manual

Applicable legislation, regulations and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC3082A Operate a locomotive by portable remote control

Modification History
Release 1 - New unit of competency
This unit replaces and is equivalent to TLIC3044A Operate power motive by portable radio remote control.

Unit Descriptor
This unit involves the skills and knowledge required to operate a motive power system by a portable remote control unit in accordance with safeworking and manufacturer instructions, and organisational procedures. It includes preparing the locomotive, setting up the portable remote control equipment, operating the system after the set-up is complete and shutting it down after operation.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This equipment is used to control a locomotive remotely when loading, unloading, and/or shunting trains within defined limits, terminals, yards or sidings.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Set up locomotive for portable remote operation

   1.1  Locomotive is set up for portable remote control operation in accordance with manufacturer instructions and/or organisational policies and procedures

   1.2  Where necessary, portable remote control equipment is installed in accordance with manufacturer instructions and/or organisational policies and procedures

   1.3  Remote control system is tested and operation is confirmed in accordance with manufacturer instructions and/or organisational policies and procedures

   1.4  Relevant occupational health and safety (OH&S) requirements are followed to prevent injury and damage to equipment

2  Operate locomotive using portable remote control equipment

   2.1  Where applicable, relevant warning signage is placed in accordance with organisational policies and procedures

   2.2  Portable remote control equipment is operated and monitored in accordance with operational requirements during train movements to provide safe train handling and control

   2.3  Portable remote control equipment is operated with an awareness that not all persons in the vicinity of the work area may know that the locomotive is being operated remotely

   2.4  Any operational difficulties encountered are addressed by re-establishing control of the locomotive with minimum risk to personnel and equipment

3  Shut down portable remote control equipment

   3.1  Locomotive is secured against unintentional movement in a safe location in accordance with organisational procedures

   3.2  Portable remote control equipment is shut down in accordance with manufacturer instructions and/or organisational policies and procedures

   3.3  When required, portable remote control equipment is removed from the locomotive in accordance with manufacturer instructions and/or organisational policies and procedures

   3.4  Relevant OH&S requirements are followed to prevent injury and damage to equipment
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Braking and safety system procedures
- Locomotive operating techniques
- Operational instructions
- Procedures for identifying defects in portable remote control units, and assessing appropriate action to be taken
- Procedures for managing hazardous situations involving portable remote control systems
- Procedures for operating electronic communications equipment with required protocol
- Relevant rail safety, OH&S and environmental procedures and regulations
- Shunting and marshalling procedures

**Required skills:**

- Communicate effectively with others when setting up and operating a portable remote control system
- Implement contingency plans for unexpected events when operating a portable remote control system
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures, and information relevant to operating a portable remote control system
- Report and/or rectify any identified problems, faults or malfunctions when operating a portable remote control system in accordance with regulatory requirements and workplace procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Work collaboratively with others when operating a portable remote control system
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - setting up portable remote control equipment correctly
  - operating the locomotive using the remote control equipment
  - shutting down the remote control equipment

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Locomotives may include:
- diesel locomotives
- electric locomotives
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information/documents may include:
- relevant log or record book
- maintenance notices, records and requests
- local instructions
- equipment operation manuals
- operational instructions, policies and procedures
- emergency procedure manuals
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations, legislation and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not applicable.

Competency Field

C – Vehicle Operation
TLIC3083A Operate a front lift mobile compaction/collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a front lift mobile compaction/collection vehicle (the ‘vehicle’).
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Vehicle must be operated in compliance with vehicle licence requirements and regulations pertaining to the relevant state or territory and traffic authorities.
Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

4.3 Unloading equipment is operated in accordance with organisational/manufacturer and legislative requirements

4.4 Return of equipment used to transit position is ensured

4.5 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**
- Efficient driving techniques and eco-driving considerations
- Factors involved in trip preparation
- Factors that may cause traffic delays and diversions
- Relevant dangerous goods (DG) information pertaining to vehicle operations
- Relevant state/territory roads and traffic authority road rules, regulations, permits and licence requirements
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations relating to vehicle operations
- Safe pickup and delivery of product to and from site
- Vehicle loading and unloading procedures
- Workplace documentation
- Workplace driving and operational instructions

**Required skills:**
- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Apply fatigue management knowledge and techniques
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating the vehicle
- Complete vehicle documentation
- Identify, load and transport product streams in accordance with organisational/manufacturer and legislative requirements
- Implement contingency plans for unexpected events when operating the vehicle
- Interpret and follow operational instructions and prioritise work
- Manually position product bins
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and equipment and take appropriate action where required
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to the vehicle
- Select and use required personal protective equipment (PPE), conforming to organisational, industry and WHS/OHS standards
- Work collaboratively with others when operating vehicle
- Work systematically with required attention to detail, without injury to self or others or damage to infrastructure or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying techniques for loading and unloading vehicle
- applying correct operation of vehicle cabin functions
- using correct manual handling techniques when operating vehicle and/or product containers
- identifying and using the PPE required for the product being loaded/transported
- applying eco-driving techniques when operating the vehicle
- knowledge of relevant legislation and organisational/manufacturer procedures for transporting product in the vehicle
- knowledge of customer requirements when picking up product or delivering product to a product collection facility.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant and appropriate materials and equipment to meet performance criteria
- applicable documentation, including workplace procedures, regulations, codes of practice and operating manuals.

Method of assessment

Practical assessment must:

- occur in three different aspects of the job function in the workplace
- ensure written and verbal understanding of all types of product to identify compatibility.

A range of assessment methods should be used to assess practical skills and knowledge.

Use of a simulator is not suitable for final assessment of this unit of competency.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Equipment fitted to vehicle may include:**
- emergency information holder
- emergency shutdown controls
- eyewash kit
- fire extinguishers
- first aid kit
- spill kit
- vehicle emergency equipment

**Loading and unloading sites may include:**
- council sites
- customer site
- depot
- private sites
- waste, transfer or recycling sites

**Personal safety measures may include:**
- conflict management techniques
- correct use of safety rails and walkways
- fitness for duty
- hearing protection
- high visibility clothing
- location of pinch points
- manual handling techniques
- PPE required for the product class being transported
- safety footwear
- three points of contact when accessing/egressing vehicle/body

**Eco driving includes:**
- braking efficiently
- ensuring transmission control
- not over-revving engine
- observing speed limits
- using auxiliary braking controls
- vehicle sympathy

**Factors that may cause traffic delays and diversions include:**
- bridge or tunnel damage
- building construction
- emergency situations such as bushfires, flooding, changes to weather
- holiday traffic
- inefficient run planning
- livestock movement
- road closures for utility works such as electricity,
water, sewerage or telecommunications
- road damage/road works
- traffic accidents
- vehicle breakdowns

Workplace procedures may include:
- established
- manufacturer
- organisational
- regulatory/codes of practice

Documentation and records may include:
- daily driver run sheet
- environmental documents relating to state of operation
- fatigue documentation
- mass/work diary
- vehicle reporting documentation

Applicable procedures and codes may include:
- Relevant state/territory procedures and codes for the vehicle including:
  - fatigue management regulations
  - licensing rules
  - mass management regulations
  - permit requirements
  - road and traffic rules
  - WHS/OHS and environmental legislation

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC3084A Operate a lift on/lift off collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a lift on/lift off (skip/marel) collection vehicle (the ‘vehicle’). Licensing, legislative, regulatory and certification requirements may be applicable to this unit.

Application of the Unit
Operation of the vehicle must be carried out in compliance with vehicle licence requirements and regulations relating to the relevant state/territory and traffic authorities. Work is performed with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Follow safety requirements

1.1 Operator and third party safety is observed in accordance with organisational/manufacturer and legislative requirements

1.2 Vehicle controls are checked and operated in accordance with organisational/manufacturer requirements

1.3 Vehicle cleaning and non-technical maintenance is undertaken in accordance with organisational/manufacturer requirements

1.4 Safety items are used and stored in accordance with organisational/manufacturer requirements

1.5 Defective equipment is reported in accordance with organisational/manufacturer requirements

2 Load product bin onto vehicle

2.1 Vehicle is made ready to operate in accordance with organisational/manufacturer requirements.

2.2 Product streams to be collected are identified

2.3 Documentation provided is used to determine locations to collect product

2.4 Prior to (manual tarping) or after (automated tarping) loading product bin onto vehicle, covering of load is determined

2.5 Product bin is loaded onto vehicle in accordance with organisational/manufacturer and legislative requirements.

2.6 Product bin is secured to vehicle in accordance with organisational/manufacturer and legislative requirements

2.7 Product is removed from ground and no product is left on lifting equipment, vehicle or body

2.8 Prior to travel, load covers are tied down in accordance with organisational/manufacturer and legislative requirements

3 Unload product from vehicle and complete relevant documentation

3.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading

3.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements

3.3 Load covers (tarps) are removed in accordance with organisational/manufacturer and legislative requirements

3.4 Unloading equipment is operated in accordance with
organisational/manufacturer and legislative requirements

3.5 Return of equipment used to transit position is ensured

3.6 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements

4 Unload product bin from vehicle

4.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading

4.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements

4.3 Unloading equipment is operated in accordance with organisational/manufacturer and legislative requirements

4.4 Return of equipment used to transit position is ensured

4.5 Documentation for unloaded product bin is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Efficient driving techniques and eco-driving considerations
- Factors involved in trip preparation
- Factors that may cause traffic delays and diversions
- Relevant dangerous goods (DG) information relating to operating the vehicle
- Relevant state/territory roads and traffic authority road rules, regulations, permits and licence requirements
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations relating to vehicle operations
- Safe pickup and delivery of product to and from site
- Vehicle loading and unloading procedures
- Workplace documentation
- Workplace driving and operational instructions

Required skills:

- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Apply fatigue management knowledge and techniques
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating the vehicle
- Complete documentation relating to the vehicle
- Identify, load and transport product streams in accordance with organisational/manufacturer and legislative requirements
- Implement contingency plans for unexpected events when operating the vehicle
- Interpret and follow operational instructions and prioritise work
- Manually position product containers/bins
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and equipment and take appropriate action where required
- Operate and adapt to differences in equipment in accordance with standard operating procedures.
- Read and interpret instructions, procedures, information and signs relevant to the vehicle
- Select and use required personal protective equipment (PPE), conforming to organisational, industry and WHS/OHS standards
- Work collaboratively with others when operating the vehicle
• Work systematically with required attention to detail, without injury to self or others or damage to infrastructure or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying techniques for loading and unloading of the vehicle
- applying correct operation of vehicle cabin functions
- applying correct manual handling techniques when operating vehicle and/or product containers
- identifying and using the PPE required for the product being loaded/transported
- applying eco-driving techniques when operating the vehicle
- ensuring currency of relevant legislative and regulatory knowledge
- ensuring currency of knowledge of organisational and manufacturer procedures for transporting product in the vehicle
- ensuring currency of knowledge of customer requirements when picking up product or delivering product to a product collection facility.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

- Resources for assessment include access to:
  - workplace where individual or small group work can be conducted
  - tools, equipment and personal protective equipment currently used in industry
  - relevant regulatory and equipment documentation that impacts on work activities
  - range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
  - appropriate range of relevant operational situations in the workplace.

In both real (within safe means) and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including workplace procedures,
regulations, codes of practice and operations manuals.

**Method of assessment**

Practical assessment must occur in:

- appropriately simulated workplace environment and/or
- safe and appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate individually or as a part of a small group
- direct observation of the candidate applying relevant WHS/OHS requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment fitted to the vehicle may include:
- emergency information holder
- emergency shutdown controls
- eyewash kit
- fire extinguishers
- first aid kit
- spill kit
- vehicle emergency equipment

Loading and unloading sites may include:
- council sites
- customer site
- depot
- private sites
- waste, transfer or recycling sites

Personal safety measures may include:
- conflict management techniques
- correct use of safety rails and walkways
- fitness for duty
- hearing protection
- high visibility clothing
- location of pinch points
- manual handling techniques
- PPE required for the product class being transported
- safety footwear
- three points of contact when accessing/egressing vehicle/body

Eco driving includes:
- braking efficiently
- ensuring transmission control
- not over-revving engine
- observing speed limits
- using auxiliary braking controls
- vehicle sympathy

Factors that may cause traffic delays and diversions include:
- bridge or tunnel damage
- building construction
- emergency situations such as bushfires, flooding, changes to weather
- holiday traffic
- inefficient run planning
- livestock movement
- road closures for utility works such as electricity,
Workplace procedures may include:
- established
- manufacturer
- organisational
- regulatory/codes of practice

Documentation and records may include:
- daily driver run sheet
- environmental documents relating to state of operation
- fatigue documentation
- mass/work diary
- vehicle reporting documentation

Applicable procedures and codes may include:
- Relevant state/territory procedures and codes for the vehicle including:
  - fatigue management regulations
  - licensing rules
  - mass management regulations
  - permit requirements
  - road and traffic rules
  - WHS/OHS and environmental legislation

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC3085A Operate a liquid waste collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a liquid waste collection tanker (the ‘vehicle’).
These vehicles can be used to collect septic waste, grease trap waste and industrial liquid wastes.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Vehicle must be operated in compliance with vehicle licence requirements and regulations relating to the relevant state/territory and traffic authorities.
Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to the Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Follow safety requirements

1.1 Operator and third party safety is observed in accordance with organisational/manufacturer and legislative requirements

1.2 Safe work area controls are implemented in accordance with organisational/waste generator requirements

1.3 Vehicle is positioned on stable ground to ensure vehicle safety and stability for loading in accordance with organisational/manufacturer requirements

1.4 Vehicle controls are checked and operated in accordance with organisational/manufacturer requirements

1.5 Appropriate safety items are selected, used and re-stowed in accordance with organisational/manufacturer requirements

1.6 Defective equipment is reported in accordance with organisational/manufacturer requirements

2 Load product into vehicle

2.1 Pit and trap lids/hatches are opened and removed in accordance with organisational/waste generator requirements

2.2 Vehicle is checked for readiness to operate in accordance with organisational/manufacturer requirements

2.3 Provided documentation is used to determine collection location

2.4 Product streams are checked before loading, any incorrect product streams are identified and appropriate action is taken in accordance with organisational requirements

2.5 Product stream is transferred into vehicle tank via hoses in accordance with organisational/manufacturer and legislative requirements

2.6 Blockages and non-compliant product are cleared in accordance with organisational/manufacturer and legislative requirements

2.7 Load volumes are monitored to ensure the gross vehicle mass (GVM) is not exceeded, and where required, excess product is unloaded to an approved point

2.7 Hoses and surrounding areas are cleaned and cleared in accordance with organisational/manufacturer requirements

2.8 Hoses are returned to transit position, pit and trap lids/hatches at waste generators premises are put back in place and secured, and vehicle hatches and vents are closed
2.9 Available load capacity is confirmed and appropriate action is taken in accordance with organisational requirements

3 Unload product and complete documentation

3.1 Vehicle is positioned for unloading on level, stable ground to ensure vehicle safety and stability in accordance with site, organisational/manufacturer and legislative requirements

3.2 Waste liquid is discharged via vacuum, pressure or gravity feed in accordance with organisational/manufacturer and legislative requirements

3.3 Tanker is cleaned in accordance with organisational/manufacturer requirements

3.4 Return of equipment used to transit position is ensured

3.5 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Concepts of vacuum and pressure in relation to collecting liquid waste
- Efficient driving techniques and eco-driving considerations
- Factors involved in trip preparation
- Factors that may cause traffic delays and diversions
- GVM of liquid waste collection vehicle
- Initial spill response procedures
- Relevant dangerous goods (DG) information relating to operating the vehicle
- Relevant state/territory road rules, regulations, permits and licence requirements
- Relevant work health and safety (WHS)/occupational health and safety (OHS), environmental procedures and regulations relating to vehicle operations and proper disposal of liquid waste
- Safe pickup and delivery of product to and from site
- Vehicle loading and unloading procedures
- Workplace driving and operational instructions

Required skills:

- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Apply fatigue management knowledge and techniques
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating the vehicle
- Complete workplace documentation
- Identify, load and transport product streams in accordance with organisational/manufacturer and legislative requirements
- Implement contingency plans for unexpected events
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and equipment and take appropriate action where required
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to the vehicle
- Select and use required personal protective equipment (PPE), conforming to organisational, industry and WHS/OHS standards
- Work collaboratively with others
• Work systematically with required attention to detail, without injury to self or others or damage to infrastructure or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying techniques for loading and unloading of the vehicle
- applying correct operation of all vehicle functions including in cabin, pump and tank controls whether fixed or remote
- using correct manual handling techniques when operating vehicle and/or product containers
- identifying and using PPE required for the product being loaded/transported
- applying eco-driving techniques when operating the vehicle
- knowledge of relevant legislation and organisational/manufacturer procedures for transporting product in the vehicle
- knowledge of customer requirements when picking up product or delivering product to a product collection facility.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant and appropriate materials and equipment to meet performance criteria
- applicable documentation, including workplace procedures, regulations, codes of practice and operating manuals.

Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge.

Practical assessment must:

- occur in three different aspects of the job function in the workplace
- ensure written and verbal understanding of all types of product to identify compatibility.
Use of a simulator is not suitable for final assessment of this unit of competency.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment fitted to the vehicle may include:
- emergency information holder
- emergency shutdown controls
- eyewash kit
- fire extinguishers
- first aid kit
- placarding (for dangerous goods)
- portable bunding
- spill kit
- vehicle emergency equipment

Equipment used to load/unload may include:
- couplings e.g. camlocks
- flexible or rigid hoses
- gravity fed lines
- pressure pumps (fitted to vehicle or remotely)
- vacuum pumps (fitted to vehicle or remotely)

Loading and unloading sites may include:
- council sites
- customer site
- depot
- private sites

Personal safety measures may include:
- conflict management techniques
- correct use of safety rails and walkways
- fitness for duty
- gloves suitable for the product/task
- hearing protection
- high visibility clothing
- location of pinch points
- manual handling techniques
- PPE required for the product class being transported
- safety footwear
- three points of contact when accessing/egressing vehicle/body

Eco driving includes:
- braking efficiently
- ensuring transmission control
- not over-revving engine
- observing speed limits
- using auxiliary braking controls
- vehicle sympathy

Factors that may cause traffic
- bridge or tunnel damage
- building construction
delays and diversions include:
- emergency situations such as bushfires, flooding, changes to weather
- holiday traffic
- inefficient run planning
- livestock movement
- road closures for utility works such as electricity, water, sewerage or telecommunications
- road damage/road works
- traffic accidents
- vehicle breakdowns

Workplace procedures may include:
- established
- manufacturer
- organisational
- regulatory/codes of practice

Documentation and records may include:
- daily driver run sheet
- environmental documents pertaining to state of operation
- fatigue documentation
- mass/work diary
- vehicle reporting documentation

Applicable procedures and codes may include:
- Relevant state/territory procedures and codes for the vehicle including:
  - fatigue management regulations
  - licensing rules
  - mass management regulations
  - permit requirements
  - road and traffic rules
  - water/sewerage authorities
  - WHS/OHS and environmental legislation

Approved unload point may include:
- collection vessel
- intermediate bulk container (IBC)
- other liquid waste tanker

**Unit Sector(s)**
Not applicable.
Competency Field

C – Vehicle Operation
TLIC3086A Operate a multi-lift collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a multi-lift collection vehicle (the ‘vehicle’). Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Vehicle must be operated in compliance with vehicle licence requirements and regulations relating to the relevant state/territory and traffic authorities. Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

organisational/manufacturer and legislative requirements

3.5 Return of equipment used to transit position is ensured

3.6 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements

4 Unload product bin from vehicle

4.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading

4.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements

4.3 Unloading equipment is operated in accordance with organisational/manufacturer and legislative requirements

4.4 Return of equipment used to transit position is ensured

4.5 Documentation for unloaded product bin is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Efficient driving techniques and eco-driving considerations
- Factors that may cause traffic delays and diversions
- Factors involved in trip preparation
- Relevant dangerous goods (DG) information relating to operating the vehicle
- Relevant state and territory roads and traffic authority road rules, regulations, permits and licence requirements
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations relating to vehicle operations
- Safe pickup and delivery of product to and from site
- Vehicle loading and unloading procedures
- Workplace documentation
- Workplace driving and operational instructions

Required skills:

- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Apply fatigue management knowledge and techniques
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating the vehicle
- Complete vehicle documentation
- Identify, load and transport product streams in accordance with organisational/manufacturer and legislative requirements
- Implement contingency plans for unexpected events when operating vehicle
- Interpret and follow operational instructions and prioritise work
- Manually cover/tarp product bins
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and equipment and take appropriate action where required
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to the vehicle
- Select and use required PPE, conforming to organisational, industry and WHS/OHS standards
- Work collaboratively with others when operating the vehicle
- Work systematically with required attention to detail, without injury to self or others or
damage to infrastructure or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying techniques for loading and unloading of the vehicle
- applying correct operation of vehicle cabin functions
- using correct manual handling techniques when operating the vehicle and/or product containers
- identifying and using the PPE required for the product being loaded/transported
- applying eco-driving techniques when operating the vehicle
- knowledge of relevant legislation and organisational/manufacturer procedures for transporting product in the vehicle
- knowledge of customer requirements when picking up product or delivering product to a product collection facility.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant and appropriate materials and equipment to meet performance criteria
- applicable documentation, including workplace procedures, regulations, codes of practice and operating manuals.

Method of assessment

Practical assessment must:

- occur in three different aspects of the job function in the workplace
- ensure written and verbal understanding of all types of product to identify compatibility.

A range of assessment methods should be used to assess practical skills and knowledge.

Use of a simulator is not suitable for final assessment of this unit of competency.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment fitted to the vehicle may include:
- emergency information holder
- emergency shutdown controls
- eyewash kit
- fire extinguishers
- first aid kit
- spill kit
- vehicle emergency equipment

Loading and unloading sites may include:
- council sites
- customer site
- depot
- private sites
- waste, transfer or recycling sites

Personal safety measures may include:
- conflict management techniques
- correct use of safety rails and walkways
- fitness for duty
- hearing protection
- high visibility clothing
- location of pinch points
- manual handling techniques
- PPE required for the product class being transported
- safety footwear
- three points of contact when accessing/egressing vehicle/body

Eco driving includes:
- braking efficiently
- ensuring transmission control
- not over-revving engine
- observing speed limits
- using auxiliary braking controls
- vehicle sympathy

Factors that may cause traffic delays and diversions include:
- bridge or tunnel damage
- building construction
- emergency situations such as bushfires, flooding, changes to weather
- holiday traffic
- inefficient run planning
- livestock movement
- road closures for utility works such as electricity,
water, sewerage or telecommunications
• road damage/road works
• traffic accidents
• vehicle breakdowns

Workplace procedures may include:
• established
• manufacturer
• organisational
• regulatory/codes of practice

Documentation and records may include:
• daily driver run sheet
• environmental documents pertaining to state of operation
• fatigue documentation
• mass/work diary
• vehicle reporting documentation

Applicable procedures and codes may include:
• Relevant state/territory procedures and codes for the vehicle including:
  • fatigue management regulations
  • licensing rules
  • mass management regulations
  • permit requirements
  • road and traffic rules
  • WHS/OHS and environmental legislation

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC3087A Operate a rear loading mobile compaction/collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a rear loading mobile compaction/collection vehicle (the ‘vehicle’).
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Vehicle must be operated in compliance with vehicle licence requirements and regulations relating to the relevant state/territory and traffic authorities.
Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

| 1 Follow safety requirements | 1.1 Operator and third party safety is observed in accordance with organisational/manufacturer and legislative requirements |
| 1.2 Vehicle controls are checked and operated in accordance with organisational/manufacturer requirements |
| 1.3 Vehicle cleaning and non-technical maintenance is undertaken in accordance with organisational/manufacturer requirements |
| 1.4 Safety items are used and stored in accordance with organisational/manufacturer requirements |
| 1.5 Defective equipment is reported in accordance with organisational/manufacturer requirements |

| 2 Load product onto vehicle | 2.1 Vehicle is made ready to operate in accordance with organisational/manufacturer requirements |
| 2.2 Product streams to be collected are identified |
| 2.3 Documentation provided is used to determine locations to collect product |
| 2.4 Product is deposited into vehicle collection area (hopper) in accordance with organisational/manufacturer and legislative requirements |
| 2.5 Blockages and non-compliant product are cleared in accordance with organisational/manufacturer and legislative requirements |
| 2.6 Prior to travel, product is removed from ground and no product is left on lifting equipment, vehicle or body |

| 3 Compact product in vehicle | 3.1 Loading of product within the body of the vehicle is monitored |
| 3.2 Compaction equipment is operated in accordance with organisational/manufacturer requirements |
| 3.3 Once vehicle reaches gross vehicle mass (GVM) compaction/loading is ceased in accordance with relevant organisational/manufacturer and legislative requirements |

| 4 Unload product from vehicle and complete relevant | 4.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading |
| 4.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements |
4.3 Unloading equipment is operated in accordance with organisational/manufacturer and legislative requirements

4.4 Return of equipment used to transit position is ensured

4.5 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Competency Field
C – Vehicle Operation
TLIC3088A Operate a roll on/roll off collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a roll on/roll off or RoRo, also known as dino or hook lift, collection vehicle (the ‘vehicle’). Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Vehicle must be operated in compliance with vehicle licence requirements and regulations relating to the relevant state/territory and traffic authorities.
Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
**Elements and Performance Criteria**

1. **Follow safety requirements**
   - 1.1 Operator and third party safety is observed in accordance with organisational/manufacturer and legislative requirements
   - 1.2 Vehicle controls are checked and operated in accordance with organisational/manufacturer requirements
   - 1.3 Vehicle cleaning and non-technical maintenance is undertaken in accordance with organisational/manufacturer requirements
   - 1.4 Safety items are used and stored in accordance with organisational/manufacturer requirements
   - 1.5 Defective equipment is reported in accordance with organisational/manufacturer requirements

2. **Load product bin onto vehicle**
   - 2.1 Vehicle is made ready to operate in accordance with organisational/manufacturer requirements
   - 2.2 Product streams to be collected are identified
   - 2.3 Documentation provided is used to determine locations to collect product
   - 2.4 Prior to (manual tarping) or after (automated tarping) loading product bin onto vehicle, load cover is determined
   - 2.5 Product bin is loaded onto vehicle in accordance with organisational/manufacturer and legislative requirements
   - 2.6 Product bin is secured to vehicle in accordance with organisational/manufacturer and legislative requirements
   - 2.7 Product is removed from ground and no product is left on lifting equipment, vehicle or body
   - 2.8 Prior to travel, load covers are tied down in accordance with organisational/manufacturer and legislative requirements

3. **Unload product from vehicle and complete relevant documentation**
   - 3.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading
   - 3.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements
   - 3.3 Load covers (tarps) are removed in accordance with organisational/manufacturer and legislative requirements
   - 3.4 Unloading equipment is operated in accordance with
3.5 Return of equipment used to transit position is ensured

3.6 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements

4 Unload product bin from vehicle

4.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading

4.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements

4.3 Unloading equipment is operated in accordance with organisational/manufacturer and legislative requirements

4.4 Return of equipment used to transit position is ensured

4.5 Documentation for unloaded product bin is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Efficient driving techniques and eco-driving considerations
- Factors involved in trip preparation

C – Vehicle Operation
TLIC3089A Operate a side loading mobile compaction/collection vehicle

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate a side loading mobile compaction/collection vehicle (the ‘vehicle’). Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Vehicle must be operated in compliance with vehicle licence requirements and regulations relating to the relevant state/territory and traffic authorities. Vehicle is operated with limited or no supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Follow safety requirements

1.1 Operator and third party safety is observed in accordance with organisational/manufacturer and legislative requirements

1.2 Vehicle controls are checked and operated in accordance with organisational/manufacturer requirements

1.3 Vehicle cleaning and non-technical maintenance is undertaken in accordance with organisational/manufacturer requirements

1.4 Safety items are used and stored in accordance with organisational/manufacturer requirements

1.5 Defective equipment is reported in accordance with organisational/manufacturer requirements

### 2 Load product into vehicle

2.1 Vehicle is made ready to operate in accordance with organisational/manufacturer requirements

2.2 Product streams to be collected are identified

2.3 Documentation (paper or electronic) provided is used to determine locations to collect product

2.4 Product is deposited into vehicle collection area (hopper) in accordance with organisational/manufacturer and legislative requirements

2.5 Blockages and non-compliant product are cleared in accordance with organisational/manufacturer and legislative requirements

2.6 Prior to travel, product is removed from ground and no product is left on lifting equipment, vehicle or body

### 3 Compact product in vehicle

3.1 Loading of product within vehicle body is monitored

3.2 Compaction equipment is operated in accordance with organisational/manufacturer requirements

3.3 Once vehicle reaches gross vehicle mass (GVM), compaction/loading is ceased in accordance with relevant organisational/manufacturer and relevant state/territory legislation

### 4 Unload product from vehicle and complete relevant

4.1 Vehicle is positioned on level, stable ground to ensure vehicle safety and stability when unloading

4.2 Vehicle is positioned to allow unloading, in accordance with site, organisational/manufacturer and legislative requirements
4.3 Unloading equipment is operated in accordance with organisational/manufacturer and legislative requirements

4.4 Return of equipment used to transit position is ensured

4.5 Documentation for unloaded product is completed in accordance with organisational/manufacturer and legislative requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Efficient driving techniques and eco-driving considerations
- Factors involved in trip preparation
- Factors that may cause traffic delays and diversions
- Relevant dangerous goods (DG) information relating to operating the vehicle
- Relevant state/territory roads and traffic authority road rules, regulations, permits and licence requirements
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations relating to vehicle operations
- Safe pickup and delivery of product to and from site
- Vehicle loading and unloading procedures
- Workplace documentation
- Workplace driving and operational instructions

Required skills:

- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Apply fatigue management knowledge and techniques
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating the vehicle
- Complete vehicle documentation
- Identify, load and transport product streams in accordance with organisational/manufacturer and legislative requirements
- Implement contingency plans for unexpected events when operating the vehicle
- Interpret and follow operational instructions and prioritise work
- Manually position product bins
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor and anticipate traffic hazards and take appropriate action
- Monitor performance of vehicle and equipment and take appropriate action where required
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to the vehicle
- Select and use required personal protective equipment (PPE), conforming to organisational, industry and WHS/OHS standards
- Work collaboratively with others when operating vehicle
• Work systematically with required attention to detail, without injury to self or others or damage to infrastructure or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- applying techniques for loading and unloading vehicle
- applying correct operation of vehicle cabin functions
- using correct manual handling techniques when operating vehicle and/or product containers
- identifying and using the PPE required for the product being loaded/transported
- applying eco-driving techniques when operating the vehicle
- knowledge of relevant legislation and organisational/manufacturer procedures for transporting product in the vehicle
- knowledge of customer requirements when picking up product or delivering product to a product collection facility.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- relevant and appropriate materials and equipment to meet performance criteria
- applicable documentation, including workplace procedures, regulations, codes of practice and operating manuals.

Method of assessment

Practical assessment must:

- occur in three different aspects of the job function in the workplace
- ensure written and verbal understanding of all types of product to identify compatibility.

A range of assessment methods should be used to assess practical skills and knowledge.

Use of a simulator is not suitable for final assessment of this unit of competency.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Equipment fitted to the vehicle may include:
- emergency information holder
- emergency shutdown controls
- eyewash kit
- fire extinguishers
- first aid kit
- spill kit

TLIC4006A Drive multi-combination vehicle

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to drive a multi-combination vehicle safely, including systematic and efficient control of all vehicle functions, coupling and uncoupling of dollies, monitoring of traffic and road conditions, management of vehicle condition and performance, and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to multi-combination vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial multi-combination vehicle across a variety of driving contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1  Drive the multi-combination vehicle** | 1.1 The multi-combination vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and transmission damage  
1.3 Braking system of multi-combination vehicle is managed and operated to ensure effective control of the vehicle under all conditions  
1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving  
1.5 The multi-combination vehicle is driven in reverse, maintaining visibility and achieving accurate positioning  
1.6 The multi-combination vehicle is parked, shut down, uncoupled and secured according to manufacturers specifications, traffic regulations and workplace procedures  
1.7 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations  
1.8 Appropriate procedures are followed in the event of a driving emergency |
| **2  Monitor traffic and road conditions** | 2.1 The most efficient and permissible route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations  
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities |
| **3  Monitor and maintain vehicle performance** | 3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle  
3.2 Prime mover, dollies and trailer are aligned and coupled in proper sequence in accordance with manufacturers instructions and workplace procedures  
3.3 Coupled vehicle is checked and tested to ensure it is correctly secured and to confirm that it is fully operational  
3.4 Performance and efficiency of vehicle operation is monitored during use  
3.5 Defective or irregular performance or malfunctions are reported to the appropriate authority  
3.6 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Multi-combination vehicle controls, instruments and indicators and their use
- Multi-combination vehicle handling procedures
- Workplace driving and operational instructions
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on multi-combination vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Driving hazards and related defensive driving techniques
- Map reading and road navigation techniques
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Principles of stress management when driving a vehicle
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies including on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a multi-combination vehicle
- Read and interpret instructions, procedures, information and signs relevant to the driving of a multi-combination vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a multi-combination vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when driving a multi-combination vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and
Required skills:

- Interactions with others

- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a multi-combination vehicle in accordance with regulatory requirements and workplace procedures

- Implement contingency plans for unexpected events when driving a multi-combination vehicle

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the driving of a multi-combination vehicle

- Monitor and anticipate traffic hazards and take appropriate action

- Modify activities depending on differing operational contingencies, risk situations and environments

- Apply fatigue management knowledge and techniques

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

- Operate and adapt to differences in equipment in accordance with standard operating procedures

- Select and use required personal protective equipment conforming to industry and OH&S standards

- Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required

- Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures

- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources

- Performance is demonstrated consistently over a period
EVIDENCE GUIDE

for assessment

of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
- all multi-combination vehicles that may be driven on public and private roads and work sites

Driving may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Vehicle handling procedures may
- starting a vehicle
RANGE STATEMENT

include:

- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:

- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes
- checks of coupling equipment

Minor routine repairs may include:

- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):

- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include (examples only):

- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
RANGE STATEMENT

- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory multi-combination vehicle driving licence/permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to multi-combination vehicles
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to conduct marshalling operations in accordance with safeworking and regulatory requirements and workplace procedures including the planning and organisation of the efficient movement and positioning of rolling stock to make up a train, break up a train, load or unload. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision, generally within a team environment.

It involves the application of routine operational principles and procedures to carry out marshalling across a variety of operational contexts.

en route, to achieve operational requirements

### Required Skills and Knowledge

#### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations including codes of practice for manual handling
- Dangerous Goods Codes and regulations
- Marshalling plan and instructions
- Loading and unloading procedures
- Procedures for getting on and off rolling stock in an appropriate manner
- Procedures for coupling and uncoupling rolling stock
- Procedures for operating points and signals
- Procedures for managing hazardous situations when marshalling rolling stock
- Radio communication protocol
- Procedures for completing relevant documentation
- Yard features
- Characteristics and features of wagons and other rolling stock
- Principles of operation of protective devices, air brakes, handbrakes, derailers
- Local track and signal layouts
- Draw gear capacities and related operating procedures
- Safeworking systems and requirements
- Shunting signals and commands and line of sight communication systems
- Relevant documentation
- Procedures to be followed in the event of an emergency
- Procedures for identifying equipment defects and assessing for appropriate action
- Local procedures and operating requirements
- Defects that can occur on marshalling gear and equipment and related action that should be taken
- Procedures for operating mechanical, electronic and other line of sight communications equipment within required protocols
Required skills:

- Communicate effectively with others when conducting marshalling activities
- Read and interpret instructions, plans, procedures, information and signs relevant to the conduct of marshalling activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of marshalling activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting marshalling activities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when conducting marshalling activities in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when conducting marshalling activities
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques when conducting marshalling activities
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

• relevant legislation and workplace procedures
• other relevant aspects of the range statement

Context of and specific resources for assessment

• Performance is demonstrated consistently over a period of time and in a suitable range of contexts
• Resources for assessment include:
  • a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  • access to an appropriate range of relevant operational situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rolling stock includes:
• all rolling stock in service within Australian rail systems

Operations may be conducted:
• by day or night
• in all relevant weather conditions

Equipment may include:
• draw gear
• air brake system components and handbrakes
RANGE STATEMENT

- rail tractors
- rolling stock
- communication equipment
- switching equipment
- turntables
- motor vehicles
- fixed signals

OH&S requirements are those necessary to meet applicable organisational, state/territory and national policies and procedures and may include the use of:

- gloves
- sunscreen, sunglasses and safety glasses
- hearing protection
- insect repellent
- safety headwear and footwear
- portable radios
- hand lamps
- flags
- safety devices
- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- breakdown equipment
- emergency containers
- end-of-train unit or marker
- equipment for handling electrical cables
- emergency warning devices
- portable signs and markers

Contingencies may include:

- derailments
- collisions
- breakdowns
- injuries and fatalities
- hazardous materials spills
- fires and leaks
- track damage
- powerline damage

Contingency plans and contingencies may involve:

- emergency procedures manuals
- ADG Code and other regulations pertaining to the carriage of dangerous goods
- safeworking systems and requirements

Depending on the type of organisation concerned and the
RANGE STATEMENT

local terminology used, workplace procedures may include:
- organisational procedures
- established procedures
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- order books
- cards/deck sheets
- noticeboards
- special train notices
- yard orders
- periodical circulars
- transport authority rules and operating procedures
- computer-based data systems
- timetables
- train consist
- incident reports
- drivers advice
- train register book
- safeworking forms
- dangerous goods manifest
- marshalling plan
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant state/territory codes of practice and safeworking system requirements
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- relevant Australian Standards
- Railways of Australia Code of Practice and Conditions for the Carriage of Dangerous Goods

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- the Code of Practice for the Defined Interstate Rail Network in situations where marshalling operations are carried out on that network

Unit Descriptor
This unit involves the skills and knowledge required to drive a train to operational requirements in accordance with safeworking and regulatory requirements and workplace procedures. This includes applying train management techniques to manage the movement of a train and, as the driver of a motive power unit, to conduct all movements and related activities required to achieve operational requirements. It also includes responding effectively to external factors and emergencies, handing over a train to a relief crew and stabling it at the end of a journey. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures to the driving of trains as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Drive train efficiently and effectively | 1.1 Motive power unit is operated in accordance with the relevant codes of practice, workplace procedures and instructions  
1.2 Motive power unit is operated safely within track/road characteristics and conditions and to minimise wear and fuel use and avoid damage  
1.3 Train is driven with due care for passenger comfort and/or condition of freight  
1.4 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and identify faults, defects and inefficiencies  
1.5 Relevant codes of practice, OH&S and environmental requirements are followed to prevent injury and damage |
| 2 Complete train journey in accordance with operational requirements | 2.1 Train documentation is received, interpreted and followed  
2.2 Train is operated in accordance with documentation and procedures  
2.3 Events and circumstances affecting planned running schedule are communicated to relevant personnel en route  
2.4 Relevant codes of practice, safeworking and signalling requirements are followed throughout train operations  
2.5 Train control other instructions are received, interpreted and applied to ensure safe and effective control of the train  
2.6 Communications are maintained with train control and other relevant personnel during the train journey in accordance with the relevant codes of practice and safeworking systems  
2.7 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running |
| 3 Respond to changed external operating factors | 3.1 Instructions regarding changed external operating factors are verified, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe  
3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems & organisational policies & procedures, to ensure that actions taken are appropriate & safe  
3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to passengers/freight and equipment  
3.4 Emergency situations are recognised and actions are taken that are appropriate and safe |
| 4 Prepare train for crew | 4.1 Relevant personnel are advised of condition and location of the |

hand-over

PERFORMANCE CRITERIA

train

4.2 Documentation is updated and faults identified en route are reported to relevant personnel in accordance with established policies and procedures

4.3 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with workplace policies and procedures

5 Stable train

5.1 Location for stabling of the train is confirmed with relevant personnel

5.2 Train is shunted and secured in accordance with directions, workplace procedures and relevant rail regulations

5.3 Safety devices are activated or put in position to ensure the safety of personnel and equipment

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Operational instructions
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Starting-up and shutting-down procedures
- Train driving procedures
- Braking and safety system procedures
- Operating controls to start, accelerate, decelerate and stop
- Techniques and procedures for complying with speed and load limits
- Processes for adjusting controls to maximise efficient and safe running
- Procedures for responding to hazardous situations and emergencies
- Procedures for operating and monitoring the performance of ancillary systems on a train
- Procedures for refuelling and lubricating a motive power unit (as applicable for various types of MPUs)
- Procedures for minor maintenance, cleaning, lubricating and servicing of motive power unit (as applicable)
REQUIRED KNOWLEDGE AND SKILLS

- Procedures for identifying equipment faults and defects and assessing for appropriate action
- Requirements for completing relevant documentation
- Train operating characteristics including: track and train dynamics, monitoring principles and procedures, load types and security, and signalling systems
- Motive power unit equipment and systems including: monitoring devices, braking and drive equipment, and ancillary systems
- Track and road characteristics including: track and bridge limitations, speed limitations, gauge limitation, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, and yard and siding layouts
- Local procedures and operating requirements
- Typical defects that can occur on a motive power unit and related action that should be taken
- Procedures for operating electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue, strategies to manage fatigue, factors which increase fatigue-related accidents, and lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when driving a train to operational requirements
- Read and interpret instructions, procedures, information and signs relevant to driving a train
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a train to operational requirements
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a train to operational requirements
- Recognise problems that may arise when driving a train, and take appropriate action
- Check and replenish fluids and carry out lubrication processes in the course of train operations as per workplace requirements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods, vehicles or equipment
- Adapt to differences in trains, associated motive power units and ancillary equipment
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:
- Monitor train performance and security of load to facilitate optimum safe operation
- Apply information about the track or road to train operations
- Stable and secure a train
- Monitor journey schedule as per train documentation
- Apply fatigue management knowledge and techniques

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - driving train according to equipment and track/road characteristics
  - identifying typical faults/defects that may occur
  - monitoring equipment in accordance with organisational requirements

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Motive power units may include:
- diesel locomotives
- electric locomotives
- railcars
- multiple units
- electric multiple units

Rolling stock includes:
- any rolling stock in service within Australian rail systems

Safety devices can include:
- power brakes
- hand brakes
- chocks
- lock-out equipment to prevent train from moving
- emergency and safety equipment such as vigilance control and deadman relays

Track and road characteristics include:
- track and bridge limitations
- speed limitations
- gauge limitation
- curves and gradients
- curfews
- location of signals and crossings
RANGE STATEMENT

Relevant personnel can include:
- emergency cross-overs
- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include:
- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include:
- oral, aural or signed communications
- hand-held or portable two-way radio equipment
- fixed and mobile telephone equipment
- Direct Traffic Control (DTC) communications

Depending on the type of organisation concerned workplace procedures may be called:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Information and documents may include:
- motive power unit log book
- train running sheets
- time sheets
- roadworthy certificate
- equipment operation manuals and maintenance specifications
- emergency procedure manuals relevant maintenance specifications
- two-way radio operation procedures
- maintenance notices, records and requests
- isolation and lock-out procedures
- procedures for using protective clothing and equipment
RANGE STATEMENT

- specified operating limits for motive power units
- local instructions
- emergency procedures manual

Applicable legislation, regulations and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to operate a train with due consideration of route conditions in accordance with safeworking and regulatory requirements and workplace procedures. This includes identifying route requirements, applying route knowledge to the planning of a train journey, and using route knowledge during a train journey in accordance with workplace requirements and standards. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines.

Work is generally performed without supervision and within a team environment. It involves the application of routine operational principles and procedures to operate a train with due consideration of route conditions as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify and interpret route information | 1.1 Information on anything likely to affect critical aspects of a train route is accessed in accordance with workplace procedures  
1.2 Information on critical aspects of a train route is interpreted and analysed for use when planning a train journey and operating a train during a journey |
| 2 Apply route knowledge when planning a train journey | 2.1 Route information is applied to the planning of a train journey in accordance with workplace procedures and safeworking codes of practice and regulations  
2.2 Events and circumstances likely to affect planned running schedule are communicated to relevant personnel  
2.3 Relevant codes of practice, safeworking and signalling requirements are applied when planning train operations  
2.4 Instructions concerning planned train operation are communicated to relevant personnel to ensure safe and efficient on-time running |
| 3 Use route knowledge during a train journey | 3.1 Route information is evaluated and applied to the management of train operations during a train journey in accordance with workplace procedures and safeworking codes of practice and regulations  
3.2 Hazardous situations along the train route are recognised and appropriate action is taken to minimise risk to personnel and equipment  
3.3 Communications are maintained with traffic control and other relevant personnel during the train journey in accordance with the relevant codes of practice, safeworking systems and workplace procedures  
3.4 Train control and other instructions are received, interpreted and applied to ensure safe and effective operation of the train |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Route information including track/bridge limitations, speed limitations, gauge limitation, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, end of safeworking system locations, stations and platforms, abnormal weather conditions along the route, track work along the route, reports of accidents or breakdowns along the route, yard and siding layouts and typical problems that can occur along a train route
- Procedures for identifying and/or anticipating route problems and related action that can be taken
- Operational instructions
- Local procedures and operating requirements
- Safe operational procedures and techniques for optimising efficiency, minimising wear and tear on rolling stock and motive power units, using route knowledge and terrain for advantage and optimising the quality of ride for passengers
- Procedures for operating electronic communications equipment with required protocol
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Driving procedures
- Braking and safety system procedures
- Procedures for operating controls to start, accelerate, decelerate and stop
- Procedures for complying with speed and load limits
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing hazardous situations
- Procedures for operating ancillary systems
- Motive power unit systems and equipment including monitoring devices, braking and drive equipment, ancillary systems and signalling systems

Required skills:

- Communicate effectively with others when operating a train with due consideration of route conditions including fixed and hand signals and the use of train communications equipment
- Read and interpret instructions, procedures, route information and signs relevant to the operation of a train with due consideration of route conditions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a train with due consideration of route conditions
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a train with due consideration of route conditions
- Promptly report and/or rectify any identified problems that may occur when operating a train with due consideration of route conditions in accordance with regulatory requirements and workplace procedures
Required skills:

- Implement contingency plans for unexpected events when operating a train with due consideration of route conditions
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Apply route knowledge to train operations
- Monitor train performance and its security to facilitate optimum safe operation and quality of ride to passengers (where applicable)
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying and interpreting information relevant to a number of routes
  - applying identified information to route planning
  - maintaining effective communications with
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may be operated:

- over tracks owned and maintained by different organisations

Motive power units include any motive power units in service within Australian rail systems and may include:

- diesel locomotives
- electric locomotives
- railcars
- multiple units
- electric multiple units
RANGE STATEMENT

Rolling stock includes:

- any rolling stock in service within Australian rail systems

Operations may be conducted:

- by day or night
- in all weather conditions

Critical route information may include but is not limited to:

- track/bridge limitations
- speed limitations
- gauge limitation
- curves and gradients
- curfews
- location of signals and crossings
- stations and platforms
- emergency cross-overs
- abnormal weather conditions along the route
- track work along the route
- reports of accidents or breakdowns along the route

Depending on context, train management considerations to which route information may be applied may include but are not limited to:

- safety of the train and passengers/freight
- comfort and quality of ride of passengers
- use of track terrain for the advantage of train operations
- optimisation of the efficiency of operations
- on-time running
- wear and tear on rolling stock and motive power units
- security of freight in the case of a freight train
- size and dimensions of a freight train and its load

Relevant personnel may include:

- train controllers
- train examiners
- maintenance personnel
- train crews
- yard and other operational personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include but are not limited to:

- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures
RANGE STATEMENT

Communications equipment may include but is not limited to:
- train intercom
- hand-held or portable radio equipment
- fixed radio equipment
- computer-based communications equipment
- mobile/satellite phone
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- motive power unit log book
- train running sheets
- route information
- local instructions
- track speed, length and load limitations
- train notices, records and requests
- weather information and alerts
- specified operating limits and optimum efficiency running speeds for motive power units
- operational instructions, protocols, policies and procedures, including:
  - those related to preventing trains from moving
  - track speed, length and load limitations
  - monitoring and complying with signals
  - operating in accordance with track condition
- equipment operation manuals and maintenance specifications
- emergency procedure manuals
- two-way radio operation procedures
- procedures for using protective clothing and equipment
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Information/documents may include:
- track speed, length and load limitations
- train notices, records and requests
- weather information and alerts
- specified operating limits and optimum efficiency running speeds for motive power units
- operational instructions, protocols, policies and procedures, including:
  - those related to preventing trains from moving
  - track speed, length and load limitations
  - monitoring and complying with signals
  - operating in accordance with track condition
- equipment operation manuals and maintenance specifications
- emergency procedure manuals
- two-way radio operation procedures
- procedures for using protective clothing and equipment
- emergency procedures manual
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable regulations, legislation and codes may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory codes of practice and safeworking system requirements
- relevant Australian standards and related requirements
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant state/territory environmental protection legislation

Unit Descriptor
This unit involves the skills and knowledge required to operate an urban passenger train in accordance with safeworking and regulatory requirements and workplace procedures. This includes driving an urban train efficiently and effectively; assisting passengers as required; carrying out pre- and post-operation checks and terminus inspections; responding effectively to abnormal situations, incidents and external operating factors; and stabling an urban train in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is generally performed without direct supervision. It involves the application of routine operational principles and procedures to operate urban trains as part of workplace activities across a variety of operational contexts within the Australian rail system.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Drive urban train efficiently and effectively | 1.1 Train is operated in accordance with the relevant codes of practice, workplace procedures and instructions  
1.2 Train is operated safely within track/road characteristics and route conditions  
1.3 Train operations are controlled to minimise wear and fuel use and avoid damage  
1.4 Train is operated with due care for passenger comfort and quality of ride  
1.5 Train is safely operated to specified timetable and schedule in accordance with on-time running standards  
1.6 Performance of equipment and rolling stock is monitored to maintain optimum running conditions and identify faults, defects and efficiencies  
1.7 Relevant codes of practice, OH&S and environmental requirements are followed to prevent injury and damage |
| **2** Assist passengers | 2.1 Passenger needs when boarding the train are monitored and identified in accordance with workplace procedures and customer service standards  
2.2 Passengers are given appropriate assistance in accordance with workplace procedures  
2.3 Passengers with disabilities and/or difficulties are identified and given appropriate assistance when embarking/disembarking to/from the train  
2.4 Where applicable, passengers are advised of station identification, emergency situations and other critical information, using the train communications system  
2.5 Train control and other instructions are received, interpreted and applied to ensure safe and effective control of the train  
2.6 Communications are maintained with traffic control and other relevant officers during the train journey in accordance with the workplace procedures, relevant codes of practice and safeworking systems  
2.7 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient on-time running |
| **3** Carry out train inspections | 3.1 Pre- and post-operation checks and terminus inspections are carried out in accordance with workplace procedures  
3.2 Train visual checks are made in accordance with workplace procedures  
3.3 Problems and defects are identified and reported/rectified in accordance with workplace procedures, other regulatory requirements and manufacturers instructions |
ELEMENT PERFORMANCE CRITERIA

3.4 Cleanliness and tidiness of train are checked, if required, and appropriate action is taken to maintain quality standards in accordance with workplace procedures

3.5 Incidents or unusual occurrences are recorded and reported to relevant personnel in accordance with established policies and procedures

4 Respond effectively to abnormal situations and external operating factors

4.1 Abnormal operating situations are identified and appropriate action is taken to report and/or respond to the situations in accordance with workplace procedures and regulatory requirements

4.2 Hazardous situations are recognised and appropriate action is taken to minimise risk to personnel and equipment in accordance with workplace procedures and OH&S and regulatory requirements

4.3 Safety and other incidents are identified and dealt with in accordance with workplace procedures and OH&S and regulatory requirements

4.4 Appropriate communications are maintained with relevant personnel during safety and other incidents in accordance with workplace procedures and OH&S and regulatory requirements

4.5 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, safeworking systems and requirements and workplace policies and procedures, to ensure that actions taken are appropriate and safe

4.6 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and workplace policies and procedures, to ensure that actions taken are appropriate and safe

4.7 Reports on safety and other incidents are completed and referred to appropriate personnel in accordance with workplace procedures and regulatory requirements

5 Stable urban train

5.1 Urban train is stabled in accordance with workplace instructions and procedures

5.2 Post-operative checks of the train are conducted in accordance with workplace procedures

5.3 If required, problems and defects are identified and reported/rectified in accordance with workplace procedures, regulatory requirements and manufacturers instructions

5.4 Safety devices are activated or put in position to ensure the safety of personnel and equipment

5.5 Required documentation on train operations is completed in accordance with workplace procedures
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Operational instructions including start-up and shut-down procedures
- Urban train operating procedures including driving procedures, braking and safety system procedures, operating controls to start, accelerate, decelerate and stop, complying with speed and load limits, adjusting controls to maximise efficient and safe running, managing hazardous situations and ancillary system procedures
- Procedures for operating electronic communications equipment with required protocol
- Procedures for pre-and post-operational checks
- Procedures for carrying out terminus checks
- Procedures for fuelling (where relevant) and lubrication of motive power units
- Procedures to be followed in the event of an emergency
- Train controls, instruments and indicators and their purpose, location and use
- Safe operational procedures and techniques for optimising efficiency, minimising wear and tear on rolling stock and motive power units, using route knowledge and terrain for advantage and optimising the quality of ride for passengers
- Route information including track/bridge limitations, speed limitations, gauge limitation, curves and gradients, location of signals and crossings, emergency cross-overs, track work along the route, reports of accidents or breakdowns along the route, typical problems that can occur along an urban train route and procedures for identifying and/or anticipating route problems and related action that can be taken
- Urban train operating equipment and systems including monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- Customer services policies, standards and procedures

Required skills:

- Communicate effectively with others when operating an urban passenger train including the use of train communications equipment
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
Required skills:

- Complete documentation related to urban passenger train operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating an urban passenger train
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when operating an urban passenger train in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when operating an urban passenger train
- Respond appropriately to abnormal situations, safety incidents and emergencies
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor and anticipate operational hazards and take appropriate action
- Modify activities to cater for variations in workplace contexts, route conditions and environment
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor train performance to facilitate optimum safe operation and quality of ride to passengers (where applicable)
- Carry out required pre-operational, terminus and post-operational checks of train
- Apply route information to train operations
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
EVIDENCE GUIDE

unit

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may be:

- any urban train operated in the Australian rail system

Operations may be conducted:

- by day or night in all relevant weather conditions

Safety devices may include:

- power brakes
- hand brakes
RANGE STATEMENT

- chocks
- lock-out equipment to prevent train from moving
- emergency and safety equipment such as vigilance control and deadman relays

Track/road characteristics include:
- track/bridge limitations
- speed limitations
- gauge limitation
- curves and gradients
- curfews
- location of signals and crossings
- emergency cross-overs

Abnormal situations may include but are not limited to:
- technology failure
- illness
- signals in stop mode
- assault
- brawls
- false alarm
- passenger initiated alarm
- track obstructions
- passenger caught in self-closing doors
- pedestrians crossing the track
- suicide on the track
- level crossing accidents
- incorrect information or failure in communications
- overhead wiring failure

Relevant personnel can include:
- train controllers
- train examiners
- maintenance personnel
- those providing operational assistance
- signals staff
- passengers
- station staff

Communication protocols may include but are not limited to:
- general safety
- emergency messages
- testing communications equipment
- sending and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures
RANGE STATEMENT

Communications equipment may include but is not limited to:
- train intercom
- hand-held or portable radio equipment
- fixed radio equipment
- computer-based communications equipment
- specialised testing facilities
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Information/documents may include:
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- operational instructions, protocols, policies and procedures, including:
  - train operation procedures
  - pre- and post-operation and terminus inspection procedures
  - procedures to prevent trains from moving unintentionally or against safeworking rules
  - track speed, length and limitations
  - procedures for monitoring and complying with signals
  - procedures for operating in accordance with track/route conditions
  - train log or record book
  - train running sheets
  - procedures/instructions for dealing with emergencies or abnormal situations
  - quality and customer service standards, policies and procedures
