Competency Field
Competency Field C - Vehicle Operation
TLIC4026A Operate and monitor a motive power unit

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a motive power unit in accordance with relevant workplace practices, rail regulations and codes of practice. It includes operating the controls of the motive power unit, and monitoring its performance and maintaining its operational condition during a journey. It also includes working collaboratively with other train crew and relevant personnel. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed without supervision, generally within a team environment. It involves the application of routine operational principles and procedures to maintain the safety and operation of a motive power unit across a variety of operational contexts in the Australian rail system.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

<tbody>
<tr>
<td>1 Operate motive power unit</td>
<td>1.1 Motive power unit handling techniques and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load &lt;br&gt;1.2 Acceleration and braking techniques are applied safely within track and road and weather conditions &lt;br&gt;1.3 Movement of motive power unit between sections ensures that all rolling stock is positioned safely in accordance with relevant codes of practice, safeworking systems, and related requirements</td>
</tr>
<tr>
<td>2 Operate and monitor on-board equipment</td>
<td>2.1 Motive power unit equipment is monitored and operated to maintain optimum running conditions and identify faults, defects and deficiencies &lt;br&gt;2.2 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit, including communications with operations controller where necessary &lt;br&gt;2.3 Faults, defects and deficiencies are assessed to determine risk of damage to equipment or injury to personnel</td>
</tr>
<tr>
<td>3 Respond effectively to external operating factors</td>
<td>3.1 Instructions are verified, when required, interpreted and followed, in accordance with relevant codes of practice, rail regulatory requirements and organisational policies and procedures, to ensure that actions taken are appropriate and safe &lt;br&gt;3.2 Fixed and hand signals and verbal movement commands are interpreted and followed, in accordance with relevant codes of practice, safeworking systems and organisational policies and procedures, to ensure that actions taken are appropriate and safe &lt;br&gt;3.3 Hazardous situations are recognised and interpreted and appropriate initiatives and action are taken to minimise risk to personnel and equipment as per workplace procedures and applicable regulatory requirements</td>
</tr>
<tr>
<td>4 Work collaboratively with relevant personnel</td>
<td>4.1 Safe operation and monitoring of the motive power unit is maintained in collaboration with relevant personnel as per workplace procedures and applicable regulatory requirements &lt;br&gt;4.2 Any potential or actual conflicts or grievances with other members of the train crew, train controllers and other relevant personnel during the operation of the motive power unit are recognised and resolved in accordance with workplace procedures &lt;br&gt;4.3 Where implemented, the principles of rail resource management are applied in all rail operations involving the motive power unit as per workplace procedures</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
---|---
5 Communicate with personnel | 5.1 Regular communication is maintained with train crew, train controllers, drivers of other trains and other relevant personnel in the course of operation of the motive power unit as per workplace procedures and regulatory requirements
 | 5.2 Train crew, train controllers, drivers of other trains and other relevant personnel are advised of operational problems, delays, and safety incident and emergency situations that may arise in the course of operation of the motive power unit
 | 5.3 Information provided by train crew, train controllers, drivers of other trains and other relevant personnel relevant to the ongoing operation of the motive power unit is interpreted and applied to driving activities as per workplace procedures and applicable regulatory requirements
6 Follow all applicable rail regulatory requirements | 6.1 Rail regulatory requirements applicable to the operation of the motive power unit and the train and track or road concerned are accessed, understood and interpreted
 | 6.2 Relevant rail regulatory requirements are applied and followed in the course of operation of the motive power unit
 | 16.3 Principles of rail resource management are applied in all rail operations involving the motive power unit as per workplace procedures and applicable rail regulatory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental procedures and regulations
- Motive power unit controls, instruments and indicators and their purpose, location and use
- Procedures for operating and monitoring the motive power unit
- Motive power unit knowledge including: monitoring devices, braking and drive equipment, ancillary systems, and signalling systems
- Track and road knowledge including: track/bridge limitations, speed limitations, gauge limitations, curves and gradients, curfews, location of signals and crossings, emergency cross-overs, stations platforms and operation of a turntable
- Braking and safety system procedures

© Commonwealth of Australia, 2014

Transport & Logistics Industry Skills Council
REQUIRED KNOWLEDGE AND SKILLS

- Operating controls to start, accelerate, decelerate and stop the motive power unit
- Speed and load limits for the motive power unit
- Procedures for adjusting controls to maximise efficient and safe running
- Procedures for managing safety incidents and hazardous situations that may arise when operating and monitoring a motive power unit
- Procedures for operating and monitoring ancillary equipment on the motive power unit
- Procedures for checking the battery and fluid levels and lubricating a diesel motive power unit (where applicable)
- Procedures for checking the battery and fluid levels and lubricating an electric motive power unit (where applicable)
- Procedures for identifying equipment defects and assessing them for appropriate action
- Procedures for minor maintenance, cleaning, lubricating and servicing of a motive power unit
- Typical faults that can occur on a motive power unit and related action that should be taken for repair, isolation, replacement, reporting and recording of the faulty equipment
- Procedures for raising and lowering the pantograph on an electric motive power unit (where applicable)
- Requirements for completing relevant documentation during and after operation and monitoring of a motive power unit
- Train schedules, motive power unit allocation and operational instructions
- Requirements for communicating and working collaboratively with relevant personnel
- Procedures to be followed in the event of an emergency when operating a motive power unit
- Personal protective equipment required when operating a motive power unit and procedures for its use
- Local procedures and operating requirements
- Procedures for operating electronic communications equipment with required protocol

Required skills:

- Communicate effectively with others when operating and monitoring a motive power unit
- Read and interpret instructions, procedures, information and signs relevant to the operation and monitoring of a motive power unit
- Complete documentation related to the operation and monitoring of a motive power unit
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment as per workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist
Required skills:

- Recognise problems that may arise when operating and monitoring a motive power unit, and take appropriate action
- Check and replenish fuel and fluids and carry out lubrication processes on a motive power unit (where applicable)
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in motive power units and associated equipment and procedures
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Operate a motive power unit
- Monitor the performance of a motive power unit

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - applying handling techniques and track and road knowledge correctly
  - identifying and responding to all types of signals, including fixed and hand signals and verbal commands
  - maintaining appropriate levels of communication with appropriate personnel

Context of and specific resources

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in all weather conditions

Motive power units may include:
- diesel motive power units (MPU)
- electric motive power units (MPU)
- railcars

Motive power equipment may include:
- auxiliary systems
- automatic control systems
- braking systems
- drive systems
- instrumentation
- manual controls
- remote train and signal control systems
RANGE STATEMENT

- communication systems
- warning equipment
- power source
- vigilance systems
- traction systems
- head and marker lights

Risk minimisation may require differentiating between faults, defects and deficiencies that:

- do not present a hazard and could be attended to under running maintenance or in a normal maintenance schedule
- present a potential hazard and need to be attended to under running maintenance or at the next most practical opportunity
- present an immediate hazard and require immediate attention

Relevant personnel may include:

- train crew
- train controllers and signallers
- rostering supervisors and staff
- other train drivers and crews
- depot coordinators
- yard masters, supervisors and other operational personnel
- service delivery supervisors
- electric train service supervisor
- station yard staff
- maintenance and cleaning personnel
- immediate internal or external customers

Action taken upon the identification of faults, defects or deficiencies may include:

- reporting the problem and carrying out repairs (depending on the level and extent of work required), or isolating and tagging the faulty equipment and advising appropriate personnel of the fault and need for repair or replacement

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety and personal protective equipment may include:

- gloves
- sunscreen and sunglasses
- safety glasses
- insect repellent
- safety headwear and footwear
- two-way radios/mobile phones/satellite phone hand lamps
- flags
- safety devices
RANGE STATEMENT

- audible indicators
- breathing equipment
- fire extinguishers
- high visibility clothing
- hearing protection
- motive power unit operational records and user log books
- maintenance notices, records and requests
- preparation sheets, certificates and service dockets
- train running sheets
- time sheets
- roadworthy certificate
- train wire (MPU status list, dangerous goods list, consist information, etc.)
- automatic train protection parameters
- operational instructions, policies and procedures, including: those related to preventing motive power units from moving; track speed, length and load limitations; monitoring and complying with signals; and procedures for operating in accordance with specific track conditions
- documented details of the train including length and weight
- emergency procedures manual
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Applicable legislation, regulations and codes may include:

Unit Sector(s)
Not Applicable

Competency Field

Competency Field C - Vehicle Operation
TLIC4065A Operate chemical tanker

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to operate a chemical tanker.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
A chemical tanker vehicle must be operated in compliance with the Dangerous Goods Act and vehicle licence requirements and regulations pertaining to heavy vehicles relative to the relevant state and territory and traffic authorities.
A chemical tanker is operated with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not Applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

1. Identify the properties and hazards of the chemicals being transported and the features of the chemical tankers that transport chemicals

1.1 UN number, product class, its packing group and any sub-risks of the fuel being transported are identified in accordance with emergency response documentation

1.2 Approved handler and approved filler requirements for the chemicals being transported are identified in accordance with the regulatory requirements

1.3 Properties of the chemicals being transported are identified in accordance with emergency response documentation

1.4 Hazards associated with the chemicals being transported are identified in accordance with emergency response documentation

1.5 Hazardous atmosphere zones are identified in accordance with organisational requirements

1.6 Circumstances in which a chemical tanker may be left unattended are described in accordance with the current Australian Dangerous Goods (ADG) Code and company procedures

1.7 Functions of equipment fitted to a chemical tanker are identified in relation to the safe transfer and transport of chemicals

1.8 Factors that cause static electricity and ways of minimising the risks associated with it are identified in accordance with organisational requirements
2. **Carry out a pre-trip inspection**

2.1 Vehicle is inspected to confirm that the tanker 5-yearly hydrostatic test is current, that it is tagged and compliant with the ADG Code, and meets company procedures; and non-compliant vehicles or trailers are repaired or reported in accordance with company procedures.

2.2 Vehicle load transfer equipment is inspected to confirm security and state of repair, and that all hoses are tested and tagged according to the ADG Code; and non-compliant equipment is repaired or reported in accordance with company procedures.

2.3 Safety equipment is inspected to confirm that it meets organisational and ADG Code requirements, is accessible and properly maintained, stowed and secured; and unserviceable items, or items with expired test dates, are replaced or reported in accordance with company procedures.

2.4 Personal protective equipment (PPE) is inspected to confirm that it is available, ready for use, and meets ADG Code requirements.

2.5 Dangerous goods placards are inspected to confirm that they are correct for the load being carried and are displayed in accordance with the current ADG Code.

3. **Position the chemical tanker and prepare to load**

3.1 Vehicle is driven into the loading site in accordance with site procedures and using PPE that complies with organisational and regulatory requirements.

3.2 Vehicle is positioned without injury to people or damage to property and in a position that enables loading to be carried out in accordance with site procedures.

3.3 Park brake is applied, engine turned off and, where applicable, battery is isolated.

3.4 Locations of emergency equipment and emergency procedures are identified before loading commences.

3.5 Product type and quantity to be loaded are checked to confirm that they are in accordance with delivery documentation and are within the safe carrying capacity and gross weight limitations of the vehicle, and any discrepancies are rectified in accordance with company procedures.
3.6 Product transfer equipment is connected in accordance with organisational requirements
4. **Load a chemical tanker with chemicals**

4.1 Site procedures are followed for commencement of the loading process

4.2 Products to be loaded are checked for compatibility and correct segregation, also taking account of product sub-risks

4.3 Products to be loaded are checked to ensure that they are compatible with the tanker and that tanker is fit for purpose

4.4 Loading process and fill levels are monitored by the driver in accordance with company and site procedures

4.5 Vehicle is safely loaded with chemicals using only approved equipment and in accordance with organisational and regulatory requirements

4.6 At completion of the loading process, all valves on the vehicle and load-out facility are closed and where site procedures specify, then all transfer equipment is vented and/or depressurised before being disconnected and stowed, with all equipment secured in accordance with site and company procedures

4.7 Loaded vehicle is confirmed as being within legal weight limitations and complying with company and regulatory procedures

4.8 Loaded vehicle is inspected pre-departure to ensure all hoses, pipes and cables are disconnected and secure, brake interlock is deactivated if fitted, and any obstacles cleared in accordance with company and site procedures

4.9 Site is restored to a clean and tidy condition in accordance with site procedures

4.10 Vehicle is moved from the loading area without damage to property or injury to people and in accordance with site procedures

4.11 Delivery documentation is completed, checked, and secured in the vehicle in accordance with regulatory requirements

4.12 Vehicle and tanker are checked to ensure correct placarding
5. **Transport a load safely and efficiently to a customer site**

5.1 Tanker is driven and manoeuvred in accordance with legal requirements, taking into consideration eco-driving techniques.

5.2 Any prescribed routes are followed in accordance with organisational requirements, exhibiting courtesy and professionalism toward other road users.

6. **Deliver a load of chemicals to a customer site**

6.1 Pre-delivery assessment is made before entering the delivery site, and site features that constitute a hazard and/or prevent delivery are rectified or reported in accordance with organisational and site requirements.

6.2 Any site instructions and/or restrictions are complied with.

6.3 Vehicle is manoeuvred and positioned in such a way that the product can be delivered efficiently and safely, with the park brake applied and engine, unless required for pumping, turned off.

6.4 PPE is used in accordance with organisational and regulatory requirements and steps are taken to apply personal safety measures.

6.5 Worksite is marked with signs and/or cones and driver remains with the vehicle and manages the delivery, managing potential hazards in accordance with organisational and site requirements.

6.6 Receiving vessel and components are checked for damage, and contents are checked to ensure sufficient ullage exists for the delivery, with any deficiencies reported or actioned in accordance with company and site procedures.

6.7 Preparation for delivery is consistent with organisational and site requirements.

6.8 Product type and quantity are confirmed against delivery documents.

6.9 Delivery is undertaken in line with the product being delivered, company and site procedures, and special delivery instructions.

6.10 Pressure gauges if fitted are checked, valves opened and closed in the correct sequence, and hoses and connections checked for leaks.

6.11 At the completion of delivery, product transfer equipment is disconnected in accordance with the product type, and company and site procedures.
6.12 Site is secured and restored to a clean and tidy condition in accordance with site procedures

6.13 Delivery documentation is completed to reflect changes in vehicle load and receiving vessel, and distributed in accordance with organisational and regulatory requirements

6.14 Vehicle is inspected pre-departure in accordance with organisational requirements

6.15 Vehicle is driven from the site safely and in accordance with site and organisational procedures

7. Apply driver emergency procedures in the event of an emergency

7.1 Procedures for emergencies that may occur during loading and unloading are followed in accordance with emergency response documentation and organisational transport emergency response plan (TERP)

7.2 Procedures for emergencies that may occur in transit are identified in accordance with emergency response documentation and organisational TERP

7.3 Emergency response documentation and organisational requirements are followed in initial responses to a person exposed to the chemicals being transported
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills required at the completion of this unit.

Required knowledge:  
- Relevant road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations relating to chemical tanker operations
- Relevant dangerous goods information pertaining to operating chemical tankers
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency and in response to a TERP
- Efficient driving techniques and eco-driving considerations
- Safe delivery of chemicals to a customer site
- Factors that may cause traffic delays and diversions
- Loading and unloading procedures for chemical tankers
- Factors involved in trip preparation
- Workplace documentation

Required skills:  
- Current dangerous goods licence
- Identify a product and placard the tanker accordingly
- Read and interpret instructions, procedures, information and signs relevant to operating chemical tankers
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to operating chemical tankers
- Work collaboratively with others when operating a chemical tanker
- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Implement contingency plans for unexpected events when operating a chemical tanker
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating a chemical tanker
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required PPE, conforming to industry and OH&S standards
• Monitor performance of chemical tanker, its trailers and equipment, and take appropriate action where required
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying techniques for loading and unloading a chemical tanker
  - identifying the properties of the chemicals to be carried
  - applying the correct placarding required for the product being loaded
  - identifying the PPE required for the product being transported
  - applying eco-driving techniques when operating chemical tankers
  - understanding relevant legislation and workplace procedures for transporting chemicals
  - understanding customer requirements when delivering fuel to a customer’s site
  - planning routes to avoid congested areas, tunnels or areas where people may congregate

**Context of and specific resources for assessment**

- Access is required to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Practical assessment must occur:
  - in three different aspects of the job function in the workplace
  - ensuring written and verbal understanding of all classes to identify compatibility, e.g. tanker with product
  - A simulator is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Properties and hazards of chemicals include understanding:
- effect of heat and pressure on the chemical when stored in a container
- characteristics of the fuel in a leak, fire situation, or in the presence of static electricity
- density
- odour
- expansion rates
- segregation requirements

Equipment fitted to a chemical tanker may include:
- eyewash kit
- fire extinguishers
- emergency shutdown controls
- emergency information holder

Chemical tanker vehicle includes:
- all vehicle configurations

Loading and unloading site may include:
- refinery
- customer site
- depot

Personal safety measures may include:
- manual-lifting techniques
- three points of contact when using ladders
- correct use of safety rails and walkways
- safety footwear
- high visibility clothing
- hearing protection
- PPE required for the product class being transported

Product transfer equipment may include:
- delivery hoses
- scully systems
- external piping and fittings
- bonding devices
- pressure vessels
- master switch
- valves
- warning devices
- brake interlock
- pressure and ullage gauges

Eco driving includes:
- observing speed limits
- ensuring transmission control
Factors that can cause traffic delays and diversions may include:

- using auxiliary braking systems
- traffic accidents
- flooded sections of road
- road damage
- bridge or tunnel damage
- road works
- building construction
- emergency situations, such as bushfires
- livestock movement
- holiday traffic
- road closures for utility works, such as electricity, water, sewerage and telecommunications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- regulatory procedures

Documentation and records may include:

- dangerous goods paperwork
- emergency procedure guides or HB76 Handbook
- dangerous goods licence
- site inductions
- state and territory heavy vehicle driving licence or permit requirements
- state and territory road rules
- workplace driving instructions and procedures
- vehicle manufacturer instructions, specifications and recommended driving procedures, including pre-operational checks of vehicle
- emergency procedures
- TERP
- vehicle work diaries or record books

Applicable procedures and codes may include:

- Australian code for the transport of dangerous goods by road or rail: the current ADG Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
• fatigue management regulations

Unit Sector(s)

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Recognise the characteristics of fuel and fuel tankers to ensure safe transfer and transport of fuel** | 1.1 Properties of the fuel being transported are determined in accordance with emergency response documentation  
1.2 Hazards associated with the transport of fuel are clarified in accordance with emergency response documentation  
1.3 Hazardous atmosphere zones are identified in accordance with organisational requirements  
1.4 Functions of equipment fitted to a fuel tanker are identified  
1.5 Factors that cause static electricity are interpreted  
1.6 Switch loading is identified in accordance with industry procedures |
| **2. Comply with legislative and organisational requirements for safe transfer and transport of fuel** | 2.1 UN number, product class, its packaging group and any sub-risks of the fuel being transported are identified in accordance with emergency response documentation  
2.2 Approved handler and approved filler requirements for the fuel being transported are identified in accordance with the current Australian Dangerous Goods (ADG) Code and Australian Institute of Petroleum (AIP) site requirements |
| **3. Conduct pre-trip inspection** | 3.1 Tanker is checked for current terminal entry compliance  
3.2 Tanker is checked to ensure DG compliance plate is attached to the tanker in accordance with current ADG Code requirements  
3.3 Tanker load transfer equipment is checked to confirm security and state of repair, and that all hoses are tested and tagged in accordance with current ADG Code requirements  
3.4 Tanker is checked to ensure safety equipment is accessible, properly maintained, and stowed and secured in accordance with current ADG Code requirements  
3.5 Tanker is checked to ensure personal protective equipment (PPE) is available, ready for use and meets current ADG Code requirements  
3.6 Tanker is checked to ensure dangerous goods placards are correct for the load and displayed in accordance with |
current ADG Code requirements

3.7 Fire extinguisher is checked for current date and pressure gauge

3.8 Shipping documentation is checked for accuracy and carried with emergency information in accordance with current ADG Code requirements

3.9 Non-compliant vehicles and equipment are reported in accordance with organisational procedures

4. Perform tanker loading tests

4.1 Tanker is driven into the loading site in accordance with site procedures

4.2 Tanker is positioned to enable loading to be carried out in accordance with site procedures without injury to people or damage to property

4.3 Park brake is applied, engine turned off and, where applicable, battery is isolated

4.4 PPE is used in accordance with site and organisational procedures

4.5 Transfer equipment is checked for compatibility

4.6 Loading activities are controlled within level of responsibility, company regulations and legislative requirements

4.7 Emergency procedures are followed in the event of a spill or leak during loading

4.8 Static control measures are applied

5. Transport load to customer site

5.1 Routes are planned to avoid congested areas, tunnels or areas where people may congregate and to maximise efficiency between delivery sites

5.2 Any prescribed routes are followed in accordance with regulatory and organisational requirements

5.3 Tanker is driven and manoeuvred in accordance with legal requirements, taking into consideration eco-driving techniques and exhibiting courtesy and professionalism toward other road users

5.4 Action is taken to deal with traffic delays and diversions

5.5 Legislative and organisational procedures are adhered to in driving, parking and leaving the tanker standing, or in the event of the tanker breaking down or stopping on a road
6. Prepare site to accept delivery

6.1 Pre-delivery assessment is made before entering the delivery site
6.2 Site features that present a hazard and/or prevent delivery are rectified or reported in accordance with organisational requirements
6.3 Any site instructions and/or restrictions are complied with
6.4 Tanker is manoeuvred and positioned to ensure product can be delivered safely and efficiently
6.5 Park brake is applied, engine turned off and, where applicable, battery is isolated
6.6 PPE is used in accordance with site and organisational procedures and steps are taken to apply personal safety measures and manage potential hazards
6.7 Delivery site is marked with signs and/or cones

7. Manage the delivery

7.1 Static control measures are applied
7.2 Receiving vessel and components are checked for damage
7.3 Contents are checked to ensure sufficient ullage exists for delivery
7.4 Product type and quantity are confirmed against delivery documents
7.5 Pressure gauges, valves, hoses and connections are checked for serviceability and leaks
7.6 Quick shut emergency stop is checked as required
7.7 Product is delivered in accordance with organisational and site procedures and special delivery instructions are observed
7.8 Emergency procedures are followed in the event of a spill or leak during delivery
7.9 After-dip of tank is conducted to ensure product is in correct tanks and load has been fully delivered

8. Complete post-delivery activities

8.1 Product transfer equipment is disconnected in accordance with product type and organisational procedures
8.2 Site is secured and restored to a clean and tidy condition
in accordance with site procedures
8.3 Delivery documentation is completed in accordance with organisational procedures
8.4 Shipping documentation is amended to reflect changes in vehicle load
8.5 Pre-departure inspection of tanker is conducted in accordance with organisational procedures
8.6 Tanker is driven safely from site in accordance with site procedures

9. Follow procedures in emergencies

9.1 Incident is reported to police or fire services as soon as possible
9.2 Incident is reported to nominated person as soon as practicable in accordance with emergency plan
9.3 Reasonable assistance is provided as required by an authorised officer or officer of the emergency services to deal with the situation
9.4 Warnings are provided to other vehicles and persons in the vicinity who may be at risk
9.5 Escape of fuel is prevented or minimised
9.6 Incident is reported in accordance with legislative requirements or as nominated in emergency plan
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills required at the completion of this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authorities
- Relevant OH&S and environmental procedures and regulations relating to fuel tanker operations
- Relevant dangerous goods information pertaining to the use of fuel tankers
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency and response to an emergency using a company transport emergency response plan (TERP)
- Efficient driving techniques and eco-driving considerations
- Techniques for safe delivery of fuel to a customer site
- Factors that may cause traffic delays and diversions and related action that can be taken
- Techniques and procedures for loading and unloading a fuel tanker safely
- Factors involved in trip preparation
- Workplace documentation

Required skills:

- Correctly identify the product, and placard the fuel tanker accordingly
- Communicate effectively with others in the workplace
- Read and interpret instructions, procedures, information and signs relevant to operating a fuel tanker
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to operating a fuel tanker
- Work collaboratively with others when operating fuel tankers
- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Implement contingency plans for unexpected events when operating a fuel tanker
- Apply precautions and required actions to minimise, control or eliminate hazards that may exist when operating a fuel tanker
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or
damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required PPE, conforming to industry and OH&S standards
- Monitor performance of tanker, its trailers and its equipment and take appropriate action where required
- Service tanker ancillary equipment in terms of maintenance schedule and standard operating procedures
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the elements and performance criteria. The evidence required is specified as performance evidence and knowledge evidence.
  - Performance evidence:
    - Undertaking a pre-trip inspection of a fuel tanker
    - Correctly positioning a fuel tanker when loading and unloading
    - Correctly placarding a fuel tanker for the product being loaded
    - Using the required PPE for the product being transported
    - Preparing a route to maximise safety and efficiency and meet organisational route requirements
    - Using eco-driving techniques when operating a fuel tanker
    - Meeting customer requirements when delivering fuel to customer’s site
    - Safely unloading fuel at a customer site
    - Completing post-delivery activities
  - Knowledge evidence:
    - Techniques for loading and unloading a fuel tanker
    - Properties of the fuel to be carried
    - Relevant legislation and workplace procedures for transporting fuel
    - Procedures for dealing with an emergency

Context of and specific resources for assessment

- Access is required to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Practical assessment must occur:
  - in three different aspects of the job function in the workplace
- with a fuel tanker that has current terminal entry compliance
- ensuring written and verbal understanding of all classes to identify compatibility, e.g. tanker with product
- A simulator is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Properties and hazards of fuel include:
• effect of heat and pressure on the fuel when stored in a container
• characteristics of fuel in a leak, fire situation or in the presence of static electricity
• density
• odour
• expansion rates
• upper and lower explosive limits

OH&S equipment fitted to a fuel tanker includes:
• eyewash kit
• fire extinguishers
• emergency shutdown controls
• emergency information holder

Fuel tanker vehicle includes:
• any bulk road transport vehicle authorised to carry Class 3 combustible fuel

Loading and unloading sites include:
• refinery
• customer site
• depot

Personal safety measures may include:
• manual-lifting techniques
• three points of contact when using ladders
• correct use of safety rails and walkways
• safety glasses
• safety footwear
• high visibility clothing
• hearing protection
• PPE required for the product class being transported

Product transfer equipment may include:
• delivery hoses
• scully systems
• external piping and fittings
• bonding devices
• pressure vessels
• master switch
• valves
• warning devices
• brake interlock

Safety equipment includes:
• fire extinguisher
Eco driving includes:

- spill kit
- observing speed limits
- ensuring transmission control
- using auxiliary braking systems

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge or tunnel damage
- road works
- building construction
- emergency situations, such as bushfires
- livestock movement
- holiday traffic
- road closures for utility works, such as electricity, water, sewerage and telecommunications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- regulatory procedures

Documentation and records may include:

- dangerous goods paperwork
- emergency procedure guides or HB76 Handbook
- dangerous goods licence
- site inductions
- state and territory heavy vehicle driving licence or permit requirements
- state and territory road rules
- workplace driving instructions and procedures
- vehicle manufacturer instructions, specifications and recommended driving procedures, including pre-operational checks of vehicle
- emergency procedures
- transport emergency response plan (TERP)
- vehicle work diaries or record books

Applicable procedures and codes may include:

- Australian code for the transport of dangerous goods by road or rail: the current ADG Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy
vehicles on unsealed roads
• road rules
• OH&S legislation
• fatigue management regulations
• relevant terminal entry compliance regulations

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC4067A Operate LP gas tanker

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to operate an LP gas tanker.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
An LP gas tanker must be operated in compliance with the licence requirements and regulations of the relevant state and territory roads and traffic authority pertaining to heavy vehicles.
An LP gas tanker is operated with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Prerequisite Unit TLILIC3013A Preparation to transport dangerous goods by road

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| Recognise the characteristics of LP gas and LP gas tankers to ensure the safe transfer and transport of LP gas | 1.1 Properties of the LP gas being transported are identified in accordance with emergency response documentation  
1.2 Hazards associated with the transport of LP gas are clarified in accordance with emergency response documentation  
1.3 Hazardous atmosphere zones are determined in accordance with organisational requirements  
1.4 Functions of equipment fitted to an LP gas tanker are identified  
1.5 Factors that cause static electricity are identified |
| Comply with legislative and organisational requirements for safe transfer and transport of LP gas | 2.1 UN number, product class, its packaging group and any sub-risks of the LP gas being transported are identified in accordance with emergency response documentation  
2.2 Requirements for the LP gas being transported are identified in accordance with the current Australian Dangerous Goods (ADG) Code and legislative requirements |
| Conduct pre-trip inspection | 3.1 Tanker is checked to ensure Dangerous Goods (DG) compliance plate is attached to the tanker in accordance with current ADG Code requirements  
3.2 Tanker load transfer equipment is checked to confirm security and state of repair, and that all hoses are tested and tagged in accordance with current ADG Code requirements  
3.3 Tanker is checked to ensure safety equipment is accessible, properly maintained, and stowed and secured in accordance with current ADG Code requirements  
3.4 Tanker is checked to ensure personal protective equipment (PPE) is available, ready for use and meets current ADG Code requirements  
3.5 Tanker is checked to ensure dangerous goods placards are correct for the load and displayed in accordance with current ADG Code requirements  
3.6 Fire extinguisher is checked for current date and pressure gauge  
3.7 Shipping documentation is checked for accuracy and carried with emergency information in accordance with current ADG Code requirements  
3.8 Non-compliant vehicles and equipment are reported in accordance with organisational procedures |
**Supervise loading**

4.1 Tanker is driven into the loading site in accordance with site procedures

4.2 Tanker is positioned to enable loading to be carried out in accordance with site procedures without injury to people or damage to property

4.3 Park brake is applied, engine turned off and, where applicable, battery is isolated

4.4 PPE is used in accordance with site and organisational procedures

4.5 Transfer equipment is checked for compatibility

4.6 Loading activities are controlled within level of responsibility

4.7 Emergency procedures are followed in the event of a spill or leak during loading

4.8 Strategies to minimise risks associated with static electricity are employed in accordance with organisational requirements

**Transport load to a customer site**

5.1 Routes are planned to maximise efficiency between delivery sites

5.2 Any planned or prescribed routes are followed in accordance with regulatory and organisational requirements

5.3 Tanker is driven and manoeuvred in accordance with legal requirements, taking into consideration eco-driving techniques and exhibiting courtesy and professionalism toward other road users

5.4 Action is taken to deal with traffic delays and diversions

5.5 Legislative and organisational procedures are adhered to in driving, parking and leaving the tanker standing, or in the event of the tanker breaking down or stopping on a road

**Prepare site to accept delivery**

6.1 Pre-delivery assessment is made before entering the delivery site

6.2 Site features that present a hazard and/or prevent delivery are rectified or reported in accordance with organisational requirements

6.3 Any site instructions and/or restrictions are complied with

6.4 Tanker is manoeuvred and positioned to ensure product can be delivered safely and efficiently

6.5 Park brake is applied, engine turned off and, where applicable, battery is isolated

6.6 PPE is used in accordance with site and organisational procedures and steps are taken to apply personal safety measures and manage
6.7 Delivery site is marked with signs and/or cones

**Manage the delivery**

7.1 Receiving vessel and components are checked for damage
7.2 Contents are checked to ensure sufficient ullage exists for delivery
7.3 Product type and quantity are confirmed against delivery documents
7.4 Pressure gauges, valves, hoses and connections are checked for serviceability and leaks
7.5 Product is delivered in accordance with organisational and site procedures and special delivery instructions are observed
7.6 Emergency procedures are followed in the event of a leak during delivery
7.7 Strategies to minimise risks associated with static electricity are employed in accordance with organisational requirements

**Complete post-delivery operations**

8.1 Product transfer equipment is disconnected in accordance with product type and organisational procedures
8.2 Site is secured and restored to a clean and tidy condition in accordance with site procedures
8.3 Delivery documentation is completed in accordance with organisational procedures
8.4 Shipping documentation is amended to reflect changes in vehicle load
8.5 Pre-departure inspection of tanker is conducted in accordance with organisational procedures
8.6 Tanker is driven safely from site in accordance with site procedures
Follow procedures in emergencies

9.1 Incident is reported to police or fire services as soon as possible
9.2 Incident is reported to nominated person as soon as practicable in accordance with emergency plan
9.3 Reasonable assistance with load content is provided to authorised officer and emergency management supervisor (EMS)
9.4 Warnings are provided to other vehicles and persons in the vicinity who may be at risk
9.5 Escape of gas is prevented or minimised
9.6 Incident is reported in accordance within legislative requirements or as nominated in emergency plan
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills required at the completion of this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations relating to LP gas tanker operations
- Relevant dangerous goods information pertaining to the operation of an LP gas tanker
- Procedures to be followed in the event of a driving emergency and in response to an emergency using a company transport emergency response plan (TERP)
- Workplace driving and operational instructions
- Efficient driving techniques and eco-driving considerations
- Safe delivery of LP gas to a customer site
- Factors that may cause traffic delays and diversions and related action that can be taken
- Techniques and procedures for loading and unloading an LP gas tanker safely
- Factors involved in trip preparation
- Workplace documentation

Required skills:

- Communicate effectively with others operating an LP gas tanker
- Read and interpret instructions, procedures, information and signs relevant to operating an LP gas tanker
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to operating an LP gas tanker
- Work collaboratively with others when operating an LP gas tanker
- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Implement contingency plans for unexpected events when operating an LP gas tanker
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating an LP gas tanker
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
• Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required PPE, conforming to industry and OH&S standards
• Monitor performance of vehicle, its trailers and its equipment, and take appropriate action where required
• Service tanker ancillary equipment in terms of maintenance schedule and standard operating procedures
• Identify volume of goods
• Make accurate estimates in a range of situations
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying techniques for loading and unloading an LP gas tanker
  - applying correct placarding for the product being loaded
  - identifying the required PPE for the product being transported
  - identifying eco-driving techniques when operating an LP gas tanker
  - understanding relevant legislation and workplace procedures for transporting LP gas
  - understanding customer requirements when delivering LP gas to a customer’s site

Context of and specific resources for assessment

- Access is required to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Practical assessment must occur:
  - in three different aspects of the job function in the workplace or as it would apply in the workplace.
  - A simulator is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Properties and hazards of LP gas include:
- effect of heat and pressure on the LP gas when stored in a container
- causes of a boiling liquid expanding vapour explosion (BLEVE)
- characteristics of the LP gas in a leak, fire situation, or in the presence of static electricity
- density
- odour
- expansion rates
- upper and lower explosive limits

Equipment fitted to an LP gas tanker includes:
- emergency information holder
- eyewash facility
- fire extinguishers
- emergency shutdown controls
- fire alarm
- deluge system
- evacuation procedures

LP gas tanker vehicle includes:
- B-Double
- B-Triple
- AAB-Quad

Loading and unloading site may include:
- refinery
- customer site
- depot

Personal safety measures include:
- manual-lifting techniques
- three points of contact when using ladders
- correct use of walkways
- safety glasses
- safety footwear
- high visibility clothing
- hearing protection

Product transfer equipment includes:
- external piping and fittings
- bonding devices
- pressure vessels
- master switch
- valves
- warning devices
Eco driving includes:

- brake interlock
- pressure and ullage gauges
- observing speed limits
- ensuring transmission control
- using auxiliary braking systems

Factors that can cause traffic delays and diversions may include:

- traffic accidents
- flooded sections of road
- road damage
- bridge or tunnel damage
- road works
- building construction
- emergency situations, such as bushfires
- livestock movement
- holiday traffic
- road closures for utility works, such as electricity, water, sewerage, telecommunications and LP gas

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:

- state and territory heavy vehicle driving licence or permit requirements
- state and territory road rules
- workplace driving instructions and procedures
- vehicle manufacturer instructions, specifications and recommended driving procedures, including pre-operational checks of vehicle
- emergency procedures
- TERP
- vehicle work diaries or record books

Applicable procedures and codes may include:

- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations
  - environmental protection legislation
Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC4068A Operate heavy recovery ancillary equipment

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to operate the range of heavy recovery ancillary equipment used in the towing and recovery process. Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<tr>
<td></td>
<td>3.5 Processing outputs are monitored and adjustments to equipment operation are made to meet job requirements</td>
</tr>
</tbody>
</table>
4 Shut down heavy recovery ancillary equipment

4.1 Shut-down procedures for equipment are completed in accordance with organisational requirements and manufacturer specifications

4.2 Routine maintenance of equipment is carried out in accordance with organisational requirements and manufacturer specifications

4.3 Equipment is stored and secured in accordance with organisational requirements

4.4 Malfunctions, faults, irregular performance and damage to equipment are detailed and reported in accordance with organisational requirements
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations relating to the ancillary equipment operations
- Relevant dangerous goods information pertaining to operating ancillary equipment
- Workplace driving and operational instructions
- Procedures to be followed in the event of a driving emergency and in response to a transport emergency response plan (TERP)
- Efficient driving techniques and eco-driving considerations
- Factors that may cause traffic delays and diversions
- Factors involved in trip preparation
- Workplace documentation

**Required skills:**

- Communicate effectively with others operating ancillary equipment
- Read and interpret instructions, procedures, information and signs relevant to operating ancillary equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to operating ancillary equipment
- Work collaboratively with others when operating ancillary equipment
- Adapt appropriately to cultural differences in the workplace and customer sites, including modes of behaviour and interaction with others
- Implement contingency plans for unexpected events when operating ancillary equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying three different types of ancillary recovery equipment and their users
  - demonstrating safe operation of two types of heavy recovery ancillary equipment

Context of and specific resources for assessment

- Assessment must ensure access to:
  - recovery ancillary equipment, which when used is to be current equipment used in the recovery industry
  - tools, equipment and PPE currently used in the recovery industry
  - relevant regulatory and equipment documentation that impacts on work activities

Method of assessment

- Practical assessment must occur:
  - through activities in an appropriately simulated environment consistent with current industry practice, and/or
  - in an appropriate range of situations in the workplace
  - In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
  - Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
  - Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
  - Performance is demonstrated consistently over a period of time and in a range of contexts expected as part of the job function
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Ancillary equipment includes:

- fire extinguisher
- hand tools
- socket sets
- shovel
- crow bar
- sledge hammer
- wood saw
- hacksaw
- hydraulic jack
- forklift
- road train dolly
- air bags and cushions
- catch equipment
- bog mat
- track mat
- pumps
- snatch block
- cribbing
- chains
- lifting slings and strops
- cutting equipment
- chain saw

Personal safety measures may include:

- manual-lifting techniques
- three points of contact when using ladders
- correct use of safety rails and walkways
- safety footwear
- high visibility clothing
- hearing protection
- PPE required for the product class being transported

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- regulatory procedures
Documentation and records may include:

- dangerous goods paperwork
- emergency procedure guides or HB76 Handbook
- dangerous goods licence
- site inductions
- state and territory heavy vehicle driving licence or permit requirements
- state and territory road rules
- workplace driving instructions and procedures
- vehicle manufacturer’s instructions, specifications and recommended driving procedures, including pre-operational checks of vehicle
- emergency procedures
- TERP
- vehicle work diaries or record books

Applicable procedures and codes may include:

- Australian code for the transport of dangerous goods by road or rail: the current Australian Dangerous Goods (ADG) Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations

Unit Sector(s)

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Conduct pre-trip check of vehicle and equipment | 1.1 Fuel level is checked to ensure that it is appropriate for the driving task  
1.2 Vehicle is inspected visually to ensure it is serviceable  
1.3 Condensation is drained from air tanks  
1.4 Recovery/towing equipment and fittings are checked to ensure they are not damaged or misplaced and are clean and serviceable  
1.5 Chains, shackles and fittings are checked to ensure they are not damaged or misplaced and are clean and serviceable  
1.6 Necessary licences, log books and mass permits are checked for currency and that they are located in the vehicle  
1.7 Personal protective equipment (PPE) is checked to ensure that it is available, ready for use, and meets regulatory requirements |
| 2 Travel to recovery scene | 2.1 Route is planned in accordance with regulatory and organisational requirements  
2.2 Recovery vehicle is driven and manoeuvred in accordance with legal requirements, taking into consideration eco-driving techniques and exhibiting courtesy and professionalism toward other road users  
2.3 Situational awareness is maintained in following the planned route  
2.4 When the recovery vehicle is legally authorised to drive on the hard shoulder and there are stationery queues, extreme care is taken and speed is reduced to minimise danger to vehicles and pedestrians |
| 3 Assess the recovery scene | 3.1 Directions of enforcement officers and ambulance officers are obeyed  
3.2 Recovery vehicle is parked in a position to avoid obstruction to authorities, traffic flow and hazard warning lights or beacons  
3.3 Recovery vehicle is parked in a safe position having regard to the size of the recovery unit and the ability to protect the scene  
3.4 PPE is used in accordance with regulatory and organisational procedures  
3.5 Scene reconnaissance is promptly conducted and results are reported |
3.6 Hazards and environmental conditions are assessed and minimised or controlled
3.7 Communication with others is maintained using appropriate techniques and terminology
3.8 Health, safety and security procedures are followed in accordance with organisational policy and relevant legislation

4 Select a recovery method appropriate to the desired outcome

4.1 Recovery method is determined based on the requirements of the situation and consideration of mass and dimension
4.2 Resources required and their availability are determined
4.3 Recovery method selected is communicated and forthrightly justified to person with responsibility
4.4 Approval is gained to start work
4.5 Exclusion zone is set up with permission of the person with responsibility
4.6 Communication with others is maintained to explain progress in recovery

5 Tow disabled vehicle to delivery point

5.1 Disabled vehicle is hooked up and checked to ensure conformity with regulatory requirements
5.2 Conditions of heavy towing permit are applied to plan a route to ensure the most efficient, safe, secure and legal transport operation
5.3 Driving techniques appropriate to heavy towing and the driver’s legal responsibility for damage and loss to towed vehicles, fitted equipment, and personal possessions are applied
5.4 Recovery vehicle is driven within the special speed limits for heavy towing
5.5 Situational awareness is maintained for potential problems with the disabled vehicle
5.6 Disabled vehicle is safely manoeuvred into position and unhooked in accordance with organisational and customer requirements

6 Conclude recovery operations

6.1 Documentation for the heavy vehicle recovery is completed in accordance with regulatory and workplace requirements
6.2 Recovery vehicle and equipment are cleaned and serviced in accordance with organisational procedures and manufacturer’s
guidelines prior to standing down from the operation
Required Skills and Knowledge

REQUwED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations relating to operating heavy recovery vehicle
- Vehicle pre-trip checks and preparation
- Trip planning requirements
- Fatigue management regulations
- Workplace driving and operational instructions
- Procedures for using communications systems effectively
- Efficient driving techniques and eco-driving considerations
- Workplace documentation
- Manufacturers’ manuals
- Guidelines pertaining to incidents and hazards
- Factors that may cause traffic delays and diversions, and related action that can be taken

Required skills:

- Work collaboratively with others when operating heavy recovery vehicle
- Implement contingency plans for unexpected events when operating a heavy recovery vehicle
- Apply precautions and required actions to minimise, control or eliminate hazards that may exist when operating a heavy recovery vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required PPE, conforming to industry and OH&S standards
- Service heavy recovery vehicle equipment in terms of maintenance schedule and standard operating procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - knowledge of regulatory requirements of heavy recovery
  - conducting a pre-trip check of a heavy recovery vehicle
  - visually checking recovery equipment as per standard, and stowing appropriately
  - preparing a route to maximise safety and efficiency and meeting organisational requirements
  - using eco-driving techniques when operating a heavy recovery vehicle
  - planning trips as required by legislation to a recovery scene
  - using communication equipment in a recovery situation
  - correctly positioning vehicle at an incident
  - using PPE when operating a recovery vehicle
  - recognising and producing appropriate licences and permits used within the recovery industry
  - fundamental understanding of mass and dimension legislation and effects on recovery operations
  - recognising and producing appropriate manufacturer’s handbooks

Context of and specific resources for assessment

- Assessment must ensure access to:
  - tools, equipment and PPE currently used in the recovery industry
  - relevant regulatory and equipment documentation that impacts on work activities

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will
be combined with targeted questioning to assess required knowledge

- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed

- Simulation is not suitable for final assessment of this unit
Range Statement
RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Heavy recovery vehicle would include:
- appropriate licences and permits

Personal safety measures include:
- manual-lifting techniques
- three points of contact when using ladders
- observing pinch-points on heavy recovery vehicle
- high visibility clothing, long sleeves and trousers
- PPE, including:
  - hearing protection
  - gloves
  - hard hat
  - harness
  - particle masks
  - safety glasses
  - safety footwear

Safety equipment includes:
- fire extinguisher
- first aid kit
- spill kit
- isolation switches
- mechanical lockouts

Eco driving includes:
- observing speed limits
- ensuring transmission control
- using auxiliary braking systems

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge or tunnel damage
- road works
- building construction
- emergency situations, such as bushfires
- livestock movement
- holiday traffic
- road closures for utility works, such as electricity, water, sewerage and
Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- regulatory procedures
- pre-trip records
- daily vehicle inspection, repair requests and service record logs
- incident and hazard log
- tow authority permits
- job safety analysis (JSA) and work method statements
- site inductions
- vehicle inductions
- state and territory heavy vehicle driving licence or permit requirements
- state and territory towing licences
- state and territory road rules
- workplace driving instructions and procedures
- vehicle manufacturer's instructions, specifications and recommended driving procedures, including pre-operational checks of vehicle
- emergency procedures
- vehicle work diaries or record books
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy recovery vehicles
  - road rules
  - OH&S legislation
  - fatigue management regulations
  - relevant site entry compliance regulations
  - heavy recovery vehicle industry guidelines

### Unit Sector(s)

Not applicable.
Competency Field

C – Vehicle Operation
TLIC4070A Tow a disabled heavy vehicle

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to hook up and unhook a damaged or disabled heavy vehicle.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1 Prepare and respond to call</strong></td>
<td></td>
</tr>
<tr>
<td>1.1 Equipment is checked, serviced and operationally ready for use</td>
<td></td>
</tr>
<tr>
<td>1.2 Tow task information is obtained and the type of heavy vehicle and event is determined</td>
<td></td>
</tr>
<tr>
<td>1.3 Personal protective equipment (PPE) is selected relevant to the nature of the towing operation</td>
<td></td>
</tr>
<tr>
<td>1.4 Any further details of the event are received en route</td>
<td></td>
</tr>
<tr>
<td><strong>2 Implement road safety procedures to commence hook-up</strong></td>
<td></td>
</tr>
<tr>
<td>2.1 Disabled vehicle is approached and recovery vehicle is parked in accordance with safe roadside working procedures</td>
<td></td>
</tr>
<tr>
<td>2.2 Appropriate action is taken to ensure the safety of all occupants of the disabled vehicle</td>
<td></td>
</tr>
<tr>
<td>2.3 Occupants are moved to the safety of the recovery vehicle, away from the road and recovery vehicle equipment</td>
<td></td>
</tr>
<tr>
<td>2.4 Beacons are placed at the immediate approach to the breakdown scene</td>
<td></td>
</tr>
<tr>
<td>2.5 Authorities are notified if there is likelihood of danger or undue delays</td>
<td></td>
</tr>
<tr>
<td>2.6 All movements between vehicles are confined to the nearside if possible</td>
<td></td>
</tr>
</tbody>
</table>
3 Hook up disabled vehicle

3.1 Exact nature of the problem is correctly diagnosed to decide on correct method of towing

3.2 Driver is informed of the recovery procedures that will be undertaken

3.3 Recovery vehicle is safely manoeuvred into position to facilitate recovery and to minimise inconvenience to traffic flow

3.4 Towing hook-up procedures are used to connect up disabled vehicle for recovery, ensuring safety standards adequate for the weight of the tow

3.5 Brake control system of the disabled vehicle is interconnected so the brakes can be operated from the recovery vehicle

3.6 Driveline is disconnected in accordance with manufacturer’s guidelines and secured

3.7 Under lift boom is retracted to the shortest position suitable for towing and lock and check turning clearance

3.8 Warning lights and signs are attached in accordance with regulatory requirements

3.9 Final checks are undertaken and hook-up of disabled vehicle is completed in accordance with organisational and regulatory requirements

3.10 Disabled vehicle is safely towed using appropriate defensive driving techniques and procedures

4 Unhook disabled vehicle

4.1 Disabled vehicle is safely manoeuvred into position in accordance with job requirements

4.2 Brakes of disabled vehicle are engaged and vehicle is chocked

4.3 Unhook procedures are used correctly to safely disconnect disabled vehicle

4.4 Removed driveline components that were disconnected are placed near disabled vehicle

4.5 Disabled vehicle is placed in accordance with organisational and customer requirements

5 Conclude towing operations

5.1 Recovery vehicle and equipment are cleaned and serviced in accordance with organisational procedures and manufacturer’s guidelines prior to standing down from the operation

5.2 Operational documentation is completed in accordance with organisational procedures
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:
- Road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Distinguishing features of different types of registrable heavy transport vehicles
- Major components of modern heavy vehicles, including engine, transmission, differential and braking systems
- Occupational health and safety obligations
- Relevant persons of authority and their roles
- Risk assessment procedures to identify hazards and potential hazards
- Appropriate hook-up and unhook processes when towing disabled vehicles
- Manufacturer guidelines for operating towing equipment
- Techniques for driving safely when towing with regard to mass and dimension and other road users
- Fatigue management regulations
- Manufacturer guidelines for recovering vehicles and equipment
- Vehicle pre-trip equipment checks and preparation
- Procedures for using communication systems effectively

Required skills:
- Check equipment is ready for use
- Communicate effectively
- Work collaboratively with others when operating heavy recovery vehicles
- Implement contingency plans for unexpected events when operating a heavy recovery vehicle
- Apply precautions and required actions to minimise, control or eliminate hazards that may exist when towing a disabled heavy vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required PPE, conforming to industry and OH&S standards
- Service heavy recovery vehicle equipment in terms of maintenance schedule and standard operating procedures
Evidence Guide

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - conducting an equipment check of heavy recovery ancillary equipment
  - visually checking recovery equipment as per standard, and stowing appropriately
  - preparing a route to maximise safety and efficiency and meet organisational requirements
  - using eco-driving techniques when towing a disabled heavy vehicle
  - planning trip as required by legislation with a towed vehicle
  - using communication equipment in a recovery situation
  - correctly positioning vehicle at an incident
  - using PPE when towing a vehicle
  - isolating fault to componentry engine, differential, gearbox, chassis, etc.
  - interconnecting brakes and lights from recovery vehicle to disabled vehicle as per legislative requirements
  - applying signage as per legislative requirements
  - driving and operating recovery vehicle as per legislative requirements

Context of and specific resources for assessment

- Assessment must ensure access to:
  - a recovery vehicle that is consistent with current industry standards of a heavy recovery vehicle
  - a vehicle that can be used as a disabled vehicle for the purposes of assessment
  - tools, equipment and PPE currently used in industry
  - relevant regulatory and equipment documentation that impacts on work activities
Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
- Simulation is not suitable for final assessment of this unit
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Authorities include: • police • fire • ambulance • relevant road authority

Disabled vehicles include: • any road registered vehicle with a mechanical failure • any registrable vehicle with a mechanical failure • any vehicle as described in legislation

Classes of heavy vehicle include: • light rigid • medium rigid • heavy rigid • heavy combination • multi combination • special circumstance vehicle

Personal safety measures include: • gloves • safety headwear and footwear • safety glasses • two-way radios • protective clothing • high visibility clothing • eye wash kit

Emergency equipment includes: • emergency shutdown controls • evacuation controls • spill equipment

Documentation and records include: • transport regulations as they apply to the enterprise, including local authority regulations and procedures • workplace policies and procedures • relevant Australian standards and certification requirements • relevant internal data entry books, including log books, data sheets and load sheets • transport emergency response plan (TERP)

Applicable legislative procedures and codes include: • relevant state and territory:
  • roads and traffic authority driving regulations and licence or permit requirements pertaining to operating
heavy vehicles on unsealed roads
- road rules
- OH&S legislation
- fatigue management regulations
- environmental protection legislation and regulations

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
**TLIC4071A Establish and operate train braking system**

**Modification History**
Release 1. This is the first release of this unit.

**Unit Descriptor**
This unit involves the skills and knowledge required to identify, establish and operate a train braking system after it has been marshalled and deals with brake system faults and failures. Licensing or certification requirements are not applicable to this unit.

**Application of the Unit**
This unit covers activities carried out in a rail yard or on a main line.

**Licensing/Regulatory Information**
Refer to Unit Descriptor.

**Pre-Requisites**
Nil

**Employability Skills Information**
This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Identify and establish train braking system</td>
<td>1.1 Brake system and type to be used are identified</td>
</tr>
<tr>
<td></td>
<td>1.2 Confirmation is made that motive power unit is appropriate for braking system to be used</td>
</tr>
</tbody>
</table>
1.3 Correct coupling of braking system to motive power unit is established and/or confirmed in accordance with organisational policies and requirements

1.4 Air brake system is charged to required pressures in accordance with manufacturer requirements and tolerances

2 Operate and monitor train braking system

2.1 Relevant brake system tests are conducted in accordance with organisational policies and requirements

2.2 Train brakes are applied and released under normal operational conditions in accordance with correct train handling and organisational policies and procedures

2.3 Train brake system is monitored in accordance with organisational and/or operational requirements

3 Identify and rectify train braking system faults in during operation

3.1 Train braking system faults are identified during operation

3.2 Safe location to bring train to a stand is identified in accordance with train handling and organisational policies and procedures

3.3 Train brake system fault is located and rectified or isolated in accordance with manufacturer and/or organisational procedures

3.4 Relevant brake system tests are conducted in accordance with organisational policies and requirements

3.5 Train is operated in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applying train brakes under emergency conditions in accordance with correct train handling and organisational policies and procedures
- Brake systems, their components and their operation
- Capabilities and characteristics of train braking systems
- Diagnostic techniques
- Pneumatic systems and their operations
- Releasing train brakes after emergency application in accordance with organisational policies and procedures
- Relevant information/documents such as:
  - brake inspection and testing documentation
  - brake test certification
  - conditions of service, legislation and industrial agreements including workplace agreements and awards
  - equipment operations manuals
  - manufacturer specifications and standards
  - organisational procedures and instructions and job specifications
  - safeworking documentation
- Relevant Australian Standards
- Relevant environmental protection legislation, regulations, codes, policies and procedures
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes of practice, policies and procedures
- Tools and equipment applications
- Types of brake tests and their purpose

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Apply rail safety practices and regulations
- Assess brake system defects
- Interpret and follow operational instructions and prioritise work
- Interpret capabilities of train braking systems
- Modify activities depending on operational contingencies, risk situations and environments
- Modify driving according to brake capabilities and characteristics
- Operate and adapt to differences in brakes and related equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to the operation of a train braking system
- Report any identified problems, faults or malfunctions when operating a train braking system in accordance with regulatory requirements and organisational procedures
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Brake system types may include:
- air brake
- dual air/vacuum brake
- electronically controlled pneumatic (ECP) braking
- vacuum

Brake system tests may include:
- air continuity test
- brake leakage test
- hose and pipe components repair or replacement
- modified brake test
- train brake test

Brake system faults may include:
- brake equipment fault/failure
- burst hose pipe/hose bag
- collapsed vacuum hose
- excessive leakage
- external tampering
- minor leakage
- train separation

Safety and protective equipment may include:
- communication equipment
- end of train markers
- flags
- gloves
- hand lamps
- hearing protection
- high visibility clothing
- insect repellent
- safety:
  - devices
  - footwear
  - glasses
  - headwear
  - sunscreen

Organisational procedures may include:
- company procedures
- enterprise procedures
- established procedures
- workplace procedures
Unit Sector(s)
Not applicable.

Competency Fields
C – Vehicle Operation
TLIC4072A Operate and monitor a motive power unit on a main line

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate and monitor a motive power unit on a main line in accordance with safeworking requirements, network owner and/or organisational policies and procedures. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit can be applied to single motive power units or multiple consist freight, heavy haul or passenger trains.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Drive and monitor train | 1.1 Motive power unit is operated in accordance with manufacturer instructions and organisational policies and procedures  
1.2 Motive power unit is operated safely with consideration of train consist and loading to minimise wear and fuel use, and to avoid damage  
1.3 Motive power unit handling techniques, and track and road knowledge are applied to eliminate or minimise risk of injury to personnel or damage to equipment, rolling stock and load  
1.4 Equipment and rolling stock are monitored to maintain optimum running conditions and identify faults, defects and inefficiencies  
1.5 Appropriate action is taken in response to identified faults, defects and deficiencies to ensure safe operation of motive power unit |
| 2 Control and monitor train running | 2.1 Events and circumstances affecting planned running schedule are communicated to relevant personnel in accordance with organisational policies and procedures  
2.2 Instructions received from network control officer, are interpreted and applied to ensure safe and effective control of train  
2.3 Communications are maintained with relevant personnel during train journey in accordance with the relevant safeworking systems, network requirements and organisational policies and procedures  
2.4 Instructions concerning train operation are given to relevant personnel to ensure safe and efficient running |
| 3 Respond to changed operating factors | 3.1 Instructions regarding changed operating factors are confirmed, interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational policies and procedures  
3.2 Temporary signs and/or signals, hand signals and verbal movement commands are interpreted and followed, in accordance with safeworking systems, network owner requirements and organisational policies and procedures  
3.3 Hazardous situations are recognised and appropriate action is taken to minimise risk to passengers/freight and equipment  
3.4 Emergency situations are recognised and actions are taken in accordance with safeworking systems, network owner requirements and organisational policies and procedures |

</table>
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Appropriate motive power unit and rolling stock systems
- Completing required documentation
- Emergency procedures
- Problems that can occur when assisting with train operations and action that should be taken
- Procedures for fixed and hand signalling, and voice communication
- Relevant information and documents such as:
  - emergency procedure manuals
  - equipment operation manuals and maintenance specifications
  - maintenance notices, records and requests
  - motive power unit logbook
  - train running sheets
  - two-way radio operation procedures
- Relevant Australian Standards and related requirements
- Relevant legislated rail safety requirements including state and territory Acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations and procedures
- Relevant environmental protection legislation, regulations and procedures
- Safeworking systems and requirements
- Use of electronic communications equipment

Required skills:

- Communicate effectively with others when assisting with train operations
- Complete documentation related to train operations
- Identify and assess motive power unit defects and deficiencies and take appropriate action to report, isolate, repair or replace any identified defective equipment in accordance with organisational procedures
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures and information relevant to train operations
- Select and use relevant equipment and materials when assisting in train operations
- Select and use required personal protective equipment conforming to industry and WHS/OHS
standards
- Work collaboratively with others when assisting with train operations
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the organisation.

In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur in an appropriate range of situations on a main line railway.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Motive power units may include all motive power units in service within Australian rail systems and may include:
- diesel motive power units
- electric motive power units
- multiple units
- railcars

Track and road characteristics may include:
- curfews
- curves and gradients
- emergency crossovers
- gauge limitation
- location of signals and crossings
- speed limitations
- track and bridge limitations

Motive power unit handling techniques may include:
- automatic brake application and release
- dynamic brake operation
- independent brake application and release
- use of tractive effort

Relevant personnel may include:
- maintenance personnel
- network control officer
- passengers
- station staff
- train crews
- yard and other operational personnel

Network control officer may include:
- hand signaller
- network controller
- operational supervisor
- signaller
- train controller
- yard supervisor

Temporary signs and/or signals may include:
- audible warning devices
- crossing protection
- flags
- flashing lights
- perway signs
- speed restrictions
- strobe lights
- warning signs
Hazardous situations may include:

- adverse weather conditions
- animals on track
- crossings
- fire beside track
- obstructions beside track
- rubbish/refuse on track
- signal failures
- track defects
- unauthorised people on track

Organisational procedures may include:

- company procedures
- enterprise procedures
- established procedures
- site procedures
- standard operating procedures
- workplace procedures

Safety and personal protective equipment may include:

- audible indicators
- breathing equipment
- fire extinguishers
- flags
- gloves
- hearing protection
- high visibility clothing
- insect repellent
- safety:
  - devices
  - footwear
  - glasses
  - headwear
- sunscreen and sunglasses
- two-way radios/mobile phones/satellite phone hand lamps

Unit Sector(s)

Not applicable.
Competency Field

C – Vehicle Operation
TLIC4073A Set up, operate and shut down a distributed power system

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to set up, operate and shut down a distributed power system in accordance with organisational procedures and the requirements of relevant codes of practice. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit covers setting up the remote control system, setting up the lead control system, operating, monitoring and shutting down the distribute power system.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare train for set up of distributed power system
   1.1 Distributed motive power units are positioned as required in train consist
   1.2 Train sections are marshalled to form one train as required

2 Set up remote distributed motive power units
   2.1 Distributed power is set up on all remote units
   2.2 Distributed power system is tested in accordance with manufacturer instructions and/or organisational policies and procedures ready for linking with lead control unit
   2.3 Start-up procedures for remote distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures

3 Set up lead distributed motive power units
   3.1 Distributed power system is set up by conditioning/activation of required systems
   3.2 Distributed power system is tested in accordance with manufacturer instructions and/or organisational policies and procedures
   3.3 Start-up procedures for lead distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures
   3.4 Full control of distributed motive power units is established after linking process has been completed and required function tests have been conducted

4 Operate and monitor distributed power train
   4.1 Distributed power system is operated and monitored during train operation to ensure safe train handling and control in accordance with operational requirements
   4.2 Operational difficulties/faults are identified and rectified ensuring operational safety and efficiency
   4.3 Shut-down procedures for distributed motive power units are followed in accordance with manufacturer’s instructions and/or organisational policies and procedures

5 Shut down distributed power systems
   5.1 Distributed power train is secured against movement as required prior to system shut down
   5.2 Shut-down procedures for distributed motive power units are followed in accordance with manufacturer instructions and/or organisational policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Controls, instruments and indicators of a distributed power system and their purpose, location and use
- Critical distributed power system control information including compatible coupling, braking, drive equipment and ancillary systems
- Procedures for managing hazardous situations involving distributed power system
- Procedures for identifying equipment defects in distributed power system and assessing any identified defective units for appropriate action
- Relevant environmental protection legislation, regulations, codes, policies and procedures
- Information/documents such as:
  - equipment operation manuals
  - operational instructions, policies and procedures
  - organisational procedures and instructions, and job specifications
  - relevant logbooks
- Relevant Australian Standards
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, codes, policies and procedures

Required skills:

- Monitor performance of equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Read and interpret instructions, procedures, information and signs relevant to the setting up and shutting down of a distributed power system
- Report and/or rectify any identified problems, faults or malfunctions when setting up and shutting down a distributed power system in accordance with regulatory requirements and organisational procedures
- Select and use required personal protective equipment conforming to industry and WHS/OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Distributed power may include:
- Locotrol
- Siemens
- Wabtec

Function tests may include:
- brake flow/continuity test
- direction test
- electromagnetic valve
- emergency
- flow test for motive power unit sequence
- leakage test

Safety and protective equipment may include:
- flags
- gloves
- hand lamps
- hearing protection
- high visibility clothing
- insect repellent
- portable radios/mobile phones
- safety:
  - devices
  - footwear
  - glasses
  - headwear
  - sunglasses
  - sunscreen

Unit Sector(s)
Not applicable.

Competency Field
C – Vehicle Operation
TLIC4074A Shunt, couple and uncouple rail vehicles

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to safely shunt rail vehicles in accordance with safeworking and organisational, policies and procedures. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Rail vehicles are shunted for loading/unloading, making up or breaking up trains and placing vehicles for operational and/or maintenance purposes. This activity also includes coupling, uncoupling and securing rail vehicles.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare to shunt rail vehicles

1.1 Shunting instructions are interpreted and confirmed

1.2 Location of rail vehicles and required movements are identified

1.3 Allocated motive power unit is confirmed as appropriate for intended activities

2 Shunt rail vehicles

2.1 Where required, points, levers, switches and signals are operated in accordance with organisational policies and procedures for the control of rail vehicle movement

2.2 Uniform line of sight and radio shunting commands are used in accordance with organisational policies, procedures and requirements

2.3 Rail vehicles are positioned in accordance with operational requirements

2.4 Relevant work health and safety (WHS)/occupational health and safety (OHS) requirements are followed to prevent injury and to avoid damage to equipment

2.5 Where required, defect/fault cards are checked and appropriate action is taken in accordance with organisational policies and procedures

2.6 Rail vehicle movements are controlled to prevent damage of rail vehicles and loads/contents in accordance with organisational policies and procedures

3 Couple, uncouple and secure rail vehicles

3.1 Rail vehicles are positioned to meet coupling requirements in accordance with organisational policies and procedures

3.2 Coupling systems are identified and applied appropriately to couple and/or uncouple rail vehicles in accordance with manufacturer and organisational requirements

3.3 Handbrakes and other securing devices are applied/released attached/removed in accordance with organisational policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Characteristics and features of wagons and other rail vehicles
- Communication protocols
- Emergency procedures
- Identifying equipment defects and assessing for appropriate action
- Identifying and reporting hazards
- Operation of signals and points
- Principles of operation for protective devices, air and electrical couplings, handbrakes, deraillers and coupling equipment
- Procedures for getting on and off rail vehicles in an appropriate manner
- Relevant information/documents such as:
  - cards
  - conditions of service, legislation and industrial agreements including workplace agreements and awards
  - emergency procedures manual
  - incident reports
  - noticeboards
  - periodical circulars
  - special train notices
  - yard orders
  - timetables
  - train consist
- Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
- Relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures
- Safe working systems and requirements

Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when shunting rail vehicles, in accordance with organisational protocols
- Modify activities depending on operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to shunting rail vehicles
- Report and/or rectify any identified problems, faults or malfunctions when shunting rail vehicles in accordance with regulatory requirements and organisational procedures
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rail vehicles may include:

- carriages
- diesel or electric motive power units
- diesel or electric railcars
- electric passenger trains
- road/rail vehicles
- shunting tractors
- track machines
- wagons

Line of sight communication includes:

- fixed signals
- flags
- hand signals
- light signals
- verbal

Personal protective equipment may include:

- gloves
- hearing protection
- high visibility clothing
- insect repellent
- sunglasses
- sunscreen
- safety:
  - devices
  - footwear
  - glasses
  - headwear

Organisational procedures may include:

- company procedures
- enterprise procedures
- established procedures
- workplace procedures

Unit Sector(s)

Competency Field
C – Vehicle Operation
TLID1001A Shift materials safely using manual handling methods

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to shift loads using manual handling methods, including assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant OH&S regulations concerning the manual handling and movement of loads.

Work is performed under some supervision generally within a team environment.

Work involves the application of the basic principles for the safe manual handling techniques and movement of loads when shifting materials using manual handling methods as part of day-to-day work.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Not Applicable
Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT | PERFORMANCE CRITERIA**

1 **Assess risks associated with the relocation of the load**
   1.1 Products, goods or materials to be relocated are identified and assessed for the appropriate method of relocation
   1.2 Locations for storage are determined and potential routes to be followed are identified
   1.3 Effect of load relocation on original load base is predicted
   1.4 Points of balance are estimated
   1.5 Required clearances are compared to available space and adjustments are made
   1.6 Effects of moving contents which may be loose, liquid, dangerous or hazardous are considered
   1.7 Potential risks in route(s) which may be followed are considered
   1.8 Risks to self are identified arising from the required lifting, load carrying, set down or movement of the goods
   1.9 Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
   1.10 Team lifting processes are considered for application
   1.11 Appropriate personal protective equipment is worn
   1.12 Size to weight ratio of items to be manually handled are identified

2 **Plan load relocation**
   2.1 Relocation of the load is planned consistent with the code of practice for manual handling
   2.2 Process for relocating load is proposed including predicting and planning for potential difficulties
   2.3 Proposed process is checked against code of practice and workplace procedures for compliance

3 **Relocate load**
   3.1 Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and OH&S requirements
   3.2 Applications appropriate for team relocation of load are identified
   3.3 Team lifting tasks are coordinated
   3.4 Planned process and route are followed
   3.5 Relocated materials are set down without damage to goods, personnel or equipment and checked for stability
   3.6 Relocation is checked to see that it meets work requirements, with any variance(s) reported
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines concerning the manual lifting and movement of loads
- Risks when manually lifting and handling materials and goods and related precautions to control the risk, including: the load on the spine during lifting; controlled actions on a movement during lifting; rotation and side movement of the spine during lifting; postures and positions during lifting; work layout; the type, weight and position of the load; frequency of shifting operations; distance over which load is to be shifted; and time allowed for the shifting of the load
- Workplace procedures and policies for manual handling
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when manually lifting and handling materials and goods
- Read and interpret instructions, procedures and information relevant to the manual lifting and handling of materials and goods
- Interpret and follow operational instructions and prioritise work
- Work collaboratively with others when manually lifting and handling materials and goods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when manually lifting and handling materials and goods in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may occur when manually lifting and handling materials and goods
- Apply precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling materials and goods
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in loads and materials in accordance with standard operating
Required skills:

- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - interpreting manual handling risks
  - using correct manual handling practices
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated
EVIDENCE GUIDE

- environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The shifting operations may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Materials to be shifted may include:
- goods
- large luggage items
- baggage items
- equipment and tools
- cleaning materials
- components and parts of vehicles and equipment such as tyres, batteries, lifting gear, etc.
- materials used in the course of work such as drums of fuel, raw materials, packaging, etc.

Loads to be shifted may be:
- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- weight of items being handled

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives
RANGE STATEMENT

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- licence, patent or copyright arrangements
- dangerous goods and air freight regulations
- export/import/quarantine/bond requirements
- marine orders

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to shift loads using manually-operated mechanical equipment. It includes assessing the risks associated with relocating the load, planning the relocation process, carrying out the relocation with the aid of the equipment in accordance with the plan, and refurbishing equipment and worksite. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations concerning the shifting and movement of loads using manually-operated equipment.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles for the safe shifting of loads using manually-operated equipment.

</tr>
<tr>
<td>3.4</td>
<td>Safe working limits for lifting equipment are identified and maintained</td>
</tr>
<tr>
<td>3.5</td>
<td>Planned process and route are followed using equipment within necessary range of limitations</td>
</tr>
</tbody>
</table>
ELEMENT PERFORMANCE CRITERIA

3.6 Relocated materials are set down without damage to goods, personnel or equipment and checked for stability
3.7 Relocation is checked to see that it meets work requirements, and any variances are reported

4 Refurbish equipment and worksite

4.1 Site is cleaned and cleared of debris and unwanted material
4.2 Field machines, tools and equipment are cleaned, inspected, serviced, maintained and stored in accordance with standard procedures
4.3 Documentation is completed in accordance with standard procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines concerning the use of manually-operated equipment to shift loads
- Risks when using manually-operated equipment to shift loads, and related precautions to control the risk
- Workplace procedures and policies for the shifting of goods and materials using manually-operated equipment
- Problems that may arise when using manually-operated equipment to shift loads, and actions that should be taken to prevent or solve them
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Relevant knots and lashings to use
- Method for splicing and maintaining cordage and SWR
- Relevant slings and securing devices to use

Required skills:

- Communicate effectively with others when using manually-operated equipment to shift loads
- Read and interpret instructions, procedures, information and signs relevant to the shifting of loads using manually-operated equipment
- Interpret and follow operational instructions and prioritise work
Required skills:

- Complete documentation related to work activities
- Work collaboratively with others when using manually-operated equipment to shift loads
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when using manually-operated equipment to shift loads in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using manually-operated equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - identifying load limits for lifting
  - relocating a load safely
  - identifying manual operating equipment and their capabilities
  - identifying faults and deficiencies and taking action to rectify problems

Context of and specific resources

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The shifting operations may be conducted:
- in a range of work environments
- by day or night
- under all weather conditions
- in a range of terrain, soil, vegetation

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Materials to be shifted may
- goods
- equipment and tools
RANGE STATEMENT

include:
- cleaning materials
- components and parts of vehicles and equipment such as tyres, batteries, lifting gear, etc.
- materials used in the course of work such as drums of fuel, raw materials, packaging, etc.

Loads to be shifted may be:
- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Manually-operated equipment may include:
- pallet jack
- hand trolley
- electric manual handling equipment
- straps
- slings
- chain blocks
- gins
- derricks
- incline planes
- chain blocks
- sheers

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment
- gloves
- safety headwear and footwear
RANGE STATEMENT

may include:

- safety glasses
- two-way radios
- high visibility clothing

Measuring aids and field machines may include:

- mechanical strapping equipment
- gins, sheers, and derricks
- block and tackle, pulleys
- hand operated winches
- jacks
- improvised methods such as Spanish windlass and par buckles
- use of expedient materials such as materials obtained on the job from resources available in the local environment

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers instructions concerning the use and servicing of manually-operated load shifting equipment
- workplace procedures and policies
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- licence, patent or copyright arrangements
- dangerous goods and air freight regulations
- export/import/quarantine/bond requirements
- marine orders

Unit Sector(s)

Not Applicable
Competency Field

D - Load Handling
TLID2003A Handle dangerous goods/hazardous substances

Modification History

Release 2. This is the second release of this unit in the TLI10 Transport and Logistics Training Package Version 4.0.
Minor change to Range Statement ‘Requirements for work’.
This release is equivalent to the previous release.

Unit Descriptor

This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances, including identifying requirements for working with dangerous goods and/or hazardous substances; confirming site incident procedures; and selecting handling techniques. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

This unit covers anyone working in the transport, warehousing, distribution and storage industries who may handle dangerous goods and/or hazardous substances.
Work must be carried out in compliance with the relevant OH&S regulations concerning the safe handling of dangerous goods and hazardous substances.
Work is performed under general supervision. It involves the application of the codes of practice and established procedures for the safe handling of dangerous goods and hazardous substances.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil.

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify requirements for working with dangerous goods and/or hazardous substances
   1.1 Dangerous goods and/or hazardous substances are identified from information including class labels, manifests and other documentation
   1.2 Storage requirements for hazardous substances and/or dangerous goods are identified and applied
   1.3 Legislative requirements for hazardous substances and/or dangerous goods are known and used to plan work activities
   1.4 Handling procedures for different classes and characteristics of goods are observed
   1.5 Confirmation is sought from relevant personnel where dangerous goods or hazardous materials do not appear to be appropriately marked

2 Confirm site incident procedures
   2.1 Incident reporting processes are identified
   2.2 Emergency equipment is located and checked according to workplace procedures and statutory regulations
   2.3 Emergency procedures are identified and confirmed

3 Select handling techniques
   3.1 Load handling and shifting procedures are selected in accordance with identified requirements for particular goods
   3.2 Handling equipment is checked for conformity with workplace requirements and manufacturers guidelines
   3.3 Where relevant, suitable signage is checked for compliance with workplace procedures
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- All relevant regulations and codes concerning the handling of dangerous goods and hazardous substances
- Application of relevant aspects of current Australian Dangerous Goods Code and relevant Australian Standards
- Permit and licence requirements
- Workplace procedures for handling and storing dangerous goods/hazardous substances
- Problems that may arise during the handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve them
- Risks when handling dangerous goods and hazardous substances and related precautions to control the risk
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when handling dangerous goods and hazardous substances
- Read and interpret instructions, procedures, regulations, information and signs relevant to the handling of dangerous goods and hazardous substances
- Identify containers and goods coding, markings and, where applicable, emergency information panels for the mode of transport storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when handling dangerous goods and hazardous substances
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when handling dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when handling dangerous goods and hazardous substances
- Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during the handling of dangerous goods and hazardous substances
Required skills:
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- identifying dangerous goods/hazardous substances (from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria)
- identifying and selecting the safety requirements for handling dangerous goods/hazardous substances
- maintaining workplace records and documentation
- determining (any) required permits
- identifying job and site hazards and planning work to minimise risks
- selecting appropriate equipment and work systems including personal protection equipment
- estimating weight and dimensions of load and any special requirements
- identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts.

Resources for assessment include:
- a range of relevant exercises, case studies and/or other
simulated practical and knowledge assessment, and/or

- access to an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The dangerous goods may be handled in a range of work environments by day or night and may be:

- for short-term storage
- for long-term storage
- in transit

Customers may be:

- internal or external

Workplace environment may include:

- movement of equipment
- movement of goods
- materials and vehicular traffic

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- authorities and permits
- hours of operations
- noise restrictions
- additional gear and equipment
- segregation procedures
- emergency procedures, including response to spillage/leaks, evacuation and firefighting

Hazards may include:

- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- fire or ignition
- dust/vapours

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
RANGE STATEMENT

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- representatives of regulatory authorities with jurisdiction over OH&S, dangerous goods and hazardous substances
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Identification of goods may be from:

- material safety data sheets
- packaging labels
- manifests
- stock lists
- HAZCHEM interpretative advice

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- mask and respirator
- protective clothing
- breathing apparatus

Information/documents may include:

- goods identification numbers and codes
- manifests, stock lists, packaging labels, bar codes, stock lists
- goods and container identification
- workplace procedures and policies concerning the handling of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets (MSDS)
- current Australian Dangerous Goods Code
- HAZCHEM interpretative advice
- relevant legislation, codes, regulations and related documentation concerning the handling of dangerous goods and hazardous substances
- award, enterprise bargaining agreement, other industrial
RANGE STATEMENT

arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures pertaining to dangerous goods and hazardous substances

Applicable regulations and legislation may include:
- relevant Australian and state/territory regulations relating to the handling of dangerous goods and hazardous substances
- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- all relevant Australian Standards
- relevant state/territory OH&S legislation
- workplace relations regulations
- equal employment opportunity and affirmative action legislation
- equal opportunity legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to load and unload goods and cargo, including loading and unloading goods, securing and protecting the load and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the relevant regulations/permit requirements including those of the relevant state/territory roads and traffic authority concerning the loading of goods/cargo.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles, routine procedures and regulatory/permit requirements to the loading and unloading of goods/cargo.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Load and unload goods/cargo | 1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading procedures  
1.2 Dangerous or hazardous goods are identified and handled in accordance with the Australian Dangerous Goods (ADG) Code and other relevant regulations/permit requirements  
1.3 Load is packed/unpacked to make safe and effective use of available spaces  
1.4 Goods/cargo are loaded in accordance with relevant mass and loading regulations and workplace procedures  
1.5 Lifting aids and appliances are selected and used to aid loading procedures in compliance with workplace procedures and safety legislation  
1.6 Unloading activities are conducted in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and the balance of the remaining load  
1.7 Goods requiring special handling and/or documentation are identified and appropriate procedures followed  
1.8 Relocated material is restacked appropriate for the transport method, safe height, weight loading, size and crushability of the goods |
| 2 Secure and protect load | 2.1 The distribution of the load is checked to ensure that it is even, legal and within safe working capacity  
2.2 Load is checked to ensure that dangerous goods and hazardous substances are appropriately segregated in accordance with the ADG Code  
2.3 Load is secured using the correct load restraint and protection equipment for different loads, carrying and storage conditions  
2.4 The load is protected in accordance with legal and workplace safety requirements |
| 3 Complete documentation | 3.1 The load is inspected and checked for security to travel in accordance with relevant regulations/permit requirements and the ADG Code where applicable  
3.2 All required documentation for the goods is completed in accordance with workplace requirements including the ADG Code where applicable |

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian standards and regulations including state/territory mass and loading regulations
- National Load Restraint Guide
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks when loading and unloading goods/cargo and related precautions to control the risk
- Security awareness requirements when loading and unloading vehicles and in particular the recognition, isolation and reporting of suspicious cargo and goods
- Workplace procedures and policies for the loading and unloading of goods/cargo
- Housekeeping standards procedures required in the workplace
- Methods of securing a load
- Site layout and obstacles
- Problems that may arise when loading and unloading goods and cargo and actions that should be taken to prevent or solve them

Required skills:

- Communicate effectively with others when loading and unloading goods and cargo
- Read and interpret instructions, procedures, information, signs and labels relevant to the loading and unloading of goods and cargo
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels and take appropriate action
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading and unloading of goods and cargo
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads and take appropriate action
- Work collaboratively with others when loading and unloading goods and cargo
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when loading and unloading goods and cargo in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may occur when loading and unloading goods and cargo
- Apply precautions and required action to minimise, control or eliminate hazards that may exist
Required skills:

- during the loading and unloading of goods and cargo
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in cargo and equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Context of and specific resources for assessment

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces • exposed conditions • controlled or open environments

Goods/cargo to be loaded or unloaded may: • require special precautions

Loads to be shifted may be: • irregularly shaped • packaged or unpackaged • labelled or unlabelled • palleted or unpackaged

Hazards in the work area may include exposure to: • chemicals • dangerous or hazardous substances • movements of equipment, goods and materials

Personnel in the work area may include: • workplace personnel • site visitors • contractors
RANGE STATEMENT

Communication in the work area may include:
- official representatives
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Loading operations may be carried out:
- manually
- with the aid of lifting equipment and/or appliances

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the loading and unloading of goods/cargo
- ADG Code and associated regulations
- supplier and/or client instructions
- material safety data sheets
- EPGs and Initial Response Guide (HB76:1998 or equivalent)
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- Load Restraint Guide

Applicable regulations and
- relevant Australian standards and regulations including

© Commonwealth of Australia, 2014
Transport & Logistics Industry Skills Council
RANGE STATEMENT

legislation may include state/territory mass and loading regulations

- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - relevant state/territory environmental protection legislation
  - relevant state/territory OH&S legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to operate a forklift, including checking forklift condition, driving the forklift to fulfil operational requirements, monitoring site conditions, and monitoring and maintaining forklift performance. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority.

Operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of routine equipment operation principles and procedures to maintain the safety and operation of a forklift in a variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Check forklift condition | 1.1 Condition of forklift is checked for compliance with OH&S and workplace requirements for warning devices, manufacturers specifications and the nature of the load shifting task  
1.2 Attachments are checked to ensure appropriate adjustment and operation  
1.3 Mirrors and seats are adjusted for safe operation by the driver  
1.4 Log books are checked and appropriate workplace documentation is completed in accordance with workplace requirements |
| 2 Drive the forklift | 2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturers instructions  
2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage  
2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques  
2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning  
2.5 The forklift is parked, shut down and secured in accordance with manufacturers specifications, regulations and workplace procedures |
| 3 Operate a forklift to handle loads | 3.1 The lifting task to be undertaken is appropriately planned and the correct lifting truck and attachments are selected  
3.2 The load is lifted, carried, lowered and set down in accordance with OH&S legislation, manufacturers specifications and company procedures |
| 4 Monitor site conditions | 4.1 When selecting the most efficient route, hazards and traffic flow are identified and appropriate adjustments are made  
4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs |
| 5 Monitor and maintain forklift performance | 5.1 Performance and efficiency of vehicle operation is monitored during use  
5.2 Defective/irregular performance and malfunctions reported to relevant personnel  
5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements pertaining to the operation of a forklift
- Relevant OH&S and environmental procedures and regulations
- Workplace operating procedures
- Forklift controls, instruments and indicators and their use
- Forklift handling procedures
- Procedures to be followed in the event of an operational emergency
- Engine power management and safe operating strategies
- Efficient driving techniques
- Operating hazards and related defensive driving and hazard control techniques
- Pre-operational checks carried out on forklift and related action
- Principles of stress management when driving a forklift
- Site layout and obstacles

Required skills:

- Communicate effectively with others when operating a forklift
- Read and interpret instructions, procedures, information and signs relevant to the operation of a forklift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a forklift
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a forklift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when operating a forklift
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a forklift
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- Monitor performance of forklift and its equipment and take appropriate action where required
- Ensure that a forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment,
EVIDENCE GUIDE

applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation
As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
Practical assessment must occur:
through activities in an appropriately simulated environment at the registered training organisation, and/or
in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include:
- counterbalance trucks
- reach trucks
- pallet trucks

Operations may be carried out in typical forklift operational situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road or worksite
- while at a workplace

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may require:
- special precautions

Loads to be shifted may be:
- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted
RANGE STATEMENT

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Forklift handling procedures may include:
- starting a forklift
- steering and manoeuvring a forklift
- accelerating and braking
- positioning and stopping a forklift
- reversing a forklift
- operating forklift controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of forklift
- checking and topping up of fluid levels
- checks of tyres
- checks of operation of forklift lights and indicators
- checks of brakes

Hazards may include (examples only):
- wet and iced operating surfaces
- oil on operating surface
- faulty brakes
- workplace obstacles and other operational equipment and vehicles
- damaged loads and pallets
- other personnel in work area

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protection equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification
RANGE STATEMENT

- Australian Standard 2359 - Industrial Truck Code
- manufacturers specifications for forklift and associated equipment
- operations and service record book or log
- workplace procedures and policies for the operation of forklifts
- supplier and/or client instructions
- ADG Code and material safety data sheets
- regulatory requirements concerning the use of forklifts
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant state/territory regulations pertaining to the operation of forklifts
- relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Applicable procedures and codes may include:

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to operate specialised load shifting equipment in accordance with workplace requirements and relevant regulatory requirements, including planning work for the current working conditions; using controls and equipment operating systems to manage movement of the unit and accessory operations; locating load and identifying load characteristics; moving materials and loads; monitoring and operating controls; and stopping, parking and securing equipment after operation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with codes, regulations, licence and/or permit and workplace requirements relevant to operation of the specialised load shifting equipment concerned. Safety checks and equipment tests are performed under limited supervision.

Work involves the application of regulatory requirements and workplace procedures to the operation of specialised load shifting equipment in the stevedoring, transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan work for the current working conditions | 1.1 Traffic flow and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities  
1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments are used to transport the load  
1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel |
| 2 Use controls and equipment operating systems to manage movement of the unit and accessory operations | 2.1 Equipment is prepared and any appropriate attachment fitted  
2.2 Gear and operational levers are checked to ensure that they are in the neutral position prior to inserting ignition key and starting engine  
2.3 Engine is started in accordance with manufacturers guidelines to bring the engine to speed  
2.4 Instruments and gauges are monitored during start-up and operations to ensure that operation is within manufacturers specifications and enterprise safety requirements  
2.5 Engine power is managed for efficiency of equipment movement and economy of equipment operations  
2.6 Equipment operations are conducted within the manufacturer's specified torque range  
2.7 Any faults or damage to equipment are immediately reported to the appropriate personnel |
| 3 Locate load and identify load characteristics | 3.1 Load is located and identified according to instructions  
3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations  
3.3 Characteristics of the load are taken into account to ensure that appropriate loading and unloading procedures are followed  
3.4 Hazardous goods are identified and relevant procedures are taken into account when planning and conducting the work  
3.5 Load weight and dimensions are within the capacity of the equipment |
| 4 Move materials and loads | 4.1 Equipment is manoeuvred and positioned using smooth and controlled movements  
4.2 Manoeuvres are within the limits of the equipment and in line with manufacturers specifications  
4.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods |
| 5 Monitor and operate | 5.1 Equipment controls are monitored and operated in accordance |
ELEMENT
controls

PERFORMANCE CRITERIA

5.2 Control systems are understood and acted upon in accordance with statutory authority regulations, manufacturers guidelines and site operating procedures

5.3 Control faults are identified and reported in accordance with manufacturers instructions and workplace guidelines

6 Stop, park and secure equipment

6.1 Equipment is brought to a controlled halt within manufacturers guidelines

6.2 Equipment is parked without injury to personnel or damage to equipment, loads or facilities in accordance with company procedures

6.3 Equipment is secured on a flat, even surface and not close to doorways, aisles, access-ways or blind corners and in accordance with securing procedures for the appropriate equipment

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the operation of specialised load shifting equipment, including, where relevant, the ADG Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of the specialised load shifting equipment
- Focus of operation of work systems, equipment, management and site operating systems for the operation of the specialised load shifting equipment
- The purpose, characteristics, capabilities, requirements and limitations of the specialised load shifting equipment
- Conveyed materials’ potential for toxicity, reactivity, material grade, type and purpose including information from relevant material safety data sheets and ADG Code documentation (where applicable)
- Problems that may occur when operating specialised load shifting equipment and appropriate action that can be taken to resolve the problems
- Operational safety requirements and precautions for the specialised load shifting equipment concerned
- Documentation and record requirements
REQUIRED KNOWLEDGE AND SKILLS

- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Relevant permit and licence requirements

Required skills:

- Communicate effectively with others when operating specialised load shifting equipment
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of specialised load shifting equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating specialised load shifting equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when operating specialised load shifting equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when operating specialised load shifting equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of specialised load shifting equipment
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant gear and accessories when operating specialised load shifting equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of specialised load shifting equipment and take appropriate action where required
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

| Work may be conducted: | • in a range of work environments  |
| Work may be conducted in: | • by day or night  |

| Customers may be: | • internal or external  |

| Workplaces may comprise: | • large, medium or small worksites  |

| Work may be conducted in: | • limited or restricted spaces  |
| Work may be conducted in: | • holds on ships  |
| Work may be conducted in: | • exposed conditions  |
| Work may be conducted in: | • controlled or open environments  |
| Work may be conducted in: | • even or uneven surfaces  |
| Work may be conducted in: | • wet or dry surfaces  |

| Equipment may include: | • reach stackers  |
| Equipment may include: | • straddle trucks  |
| Equipment may include: | • excavators  |
| Equipment may include: | • front-end loaders (over 10 tonne)  |
| Equipment may include: | • bulldozers (both in transport and shipping terminals and in the holds of ships)  |
| Equipment may include: | • straddle carriers  |

| Requirements for work may include: | • site restrictions and procedures  |
| Requirements for work may include: | • use of safety and personal protective equipment  |
| Requirements for work may include: | • communications equipment  |
| Requirements for work may include: | • specialised lifting and/or handling equipment  |
| Requirements for work may include: | • additional gear and equipment  |
| Requirements for work may include: | • noise restrictions  |
| Requirements for work may include: | • hours of operations  |
| Requirements for work may include: | • authorities and permits  |

| Hazards in the work area may include exposure to: | • chemicals and fumes  |
| Hazards in the work area may include exposure to: | • dangerous or hazardous substances  |
| Hazards in the work area may include exposure to: | • stationary and moving machinery, goods, materials and vehicular traffic  |
| Hazards in the work area may include exposure to: | • contamination of, or from, materials being handled  |
| Hazards in the work area may include exposure to: | • service lines  |
| Hazards in the work area may include exposure to: | • spills, leakages and ruptures  |
| Hazards in the work area may include exposure to: | • dust/vapours  |
| Hazards in the work area may include exposure to: | • faulty gear/equipment/tools  |

| Consultative processes may | • workplace personnel including supervisors and managers  |
RANGE STATEMENT

involve:

• equipment manufacturers and suppliers
• site visitors and contractors
• union representatives, industrial relations and OH&S specialists
• other professional or technical staff

Communication in the work area may include:

• phone
• fax
• email
• internet
• electronic data interchange (EDI)
• RF communications
• bar code readers
• oral, aural or signed communications

Personal protective equipment may include:

• gloves
• safety headwear and footwear
• safety glasses
• two-way radios
• respirators and fume masks
• protective clothing
• high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information/documents may include:

• workplace procedures and policies for the operation of the specialised load shifting equipment concerned
• goods identification numbers and codes
• manifests, picking slips, merchandise transfers, stock requisitions and bar codes
• manufacturers specifications for equipment/tools
• equipment identification labels, bar codes and serial numbers
• supplier and/or client instructions
• relevant OH&S requirements and policies
• relevant Australian standards and certification requirements
• material safety data sheets where applicable
• codes of practice including the National Standards for Manual Handling and the Industry Safety Code
• relevant legislation, regulations and related documentation including the ADG Code
RANGE STATEMENT

- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures
- relevant codes, regulations and licence/permit requirements pertaining to the operation of the specialised load shifting equipment concerned including the ADG Code (where applicable)
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to move materials mechanically using automated equipment such as automatic guided vehicles, tow motors, high level order pickers, conveyor systems, and mechanised pallet movers. This includes selecting appropriate mechanical moving equipment (where relevant), moving materials/goods in accordance with operational requirements, checking condition of materials/goods and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations concerning the movement of materials mechanically using automated equipment.

Work is performed under limited or minimum supervision. It involves the application of the basic principles and routine procedures for the safe movement of materials mechanically using automated equipment.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Select load moving equipment | 1.1 The mechanised handling equipment, the route to be taken and procedures to be used are selected appropriate to the characteristics of the goods
1.2 Dangerous goods and hazardous materials are identified and handled in accordance with codes of practice, OH&S requirements and workplace procedures
2 Move goods | 2.1 Goods are moved using the selected materials handling equipment in accordance with occupational health and safety regulations, manufacturers instructions and company procedures
2.2 Problems in the movement of goods and materials using the automated equipment are identified and are reported in accordance with workplace procedures
3 Check goods and complete documentation | 3.1 Moved goods are inspected for possible damage during transit/movement and appropriate action is taken
3.2 All required documentation is completed for the tracking of the moved goods in accordance with company requirements

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations relevant to the use of automated equipment to move materials mechanically
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use of automated equipment to move materials mechanically
- Focus of operation of work systems, equipment, management and site operating systems for the use of automated equipment to move materials mechanically
- The purpose, characteristics, capabilities, requirements and limitations of the automated materials moving equipment
- Problems that may occur during the use of automated equipment to move materials mechanically and appropriate action that can be taken to resolve the problems
- Risks when using automated equipment to move materials and related precautions to control the risks
- Documentation and record requirements
REQUIRED KNOWLEDGE AND SKILLS

- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when using automated equipment to move materials mechanically
- Read and interpret instructions, procedures, information and signs relevant to the use of automated equipment to move materials mechanically
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the use of automated equipment to move materials mechanically
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when using automated equipment to move materials mechanically
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when using automated equipment to move materials mechanically in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of automated equipment and take appropriate action where required
- Ensure servicing of automated equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids (where applicable) and carry out lubrication processes in the course of work activities
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:

- in a range of work environments
- by day or night
- in a range of typical weather conditions

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Mechanised equipment may include a range of goods and materials handling equipment such as:

- automatic guided vehicle
- tow motors
- high level order picker
- conveyor system
- mechanised pallet mover

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Hazards in the work area may include exposure to:

- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials
- moving and rotating equipment and vehicles

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace

- company procedures
- enterprise procedures
- organisational procedures
RANGE STATEMENT

procedures may include:

- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers instructions concerning the use and servicing of automated mechanical equipment
- workplace procedures and policies
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- ADG Code and regulations

Unit Sector(s)
Not Applicable

Competency Field

Competency Field D - Load Handling
TLID2016A Load and unload explosives and dangerous goods

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to load and unload explosives and dangerous goods, including identifying explosives/dangerous goods; loading and unloading explosives/dangerous goods using appropriate equipment; securing and protecting the vehicle load; and checking the vehicle to ensure the load is secure and the vehicle is marked in accordance with regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant Australian and state/territory regulations including the current Australian Dangerous Goods (ADG) Code, the current Australian Explosives Code, and mass and loading regulations.

Work is performed under limited or minimum supervision. It involves the application of the basic principles, routine procedures and specific regulatory requirements to the loading and unloading of explosives and dangerous goods in a range of operational situations.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare to load and unload vehicle** | 1.1 Explosives and/or dangerous goods are identified and their characteristics taken into account when determining appropriate handling, loading and storage procedures including confirmation that the relevant emergency procedures are being carried out.  
1.2 Compatibility of explosives and/or dangerous goods is taken into account when assembling and segregating cargo for loading.  
1.3 Vehicle and/or loading equipment is checked to ensure it is suitable to handle/carry load. |
| **2 Load/unload vehicle** | 2.1 Vehicle is loaded/unloaded in accordance with workplace procedures and the current ADG/Australian Explosives Code as applicable.  
2.2 The load is segregated according to class and subsidiary risk, and the distribution of the load is checked in accordance with workplace procedures, relevant mass and loading regulations and the current ADG/Australian Explosives Code as applicable.  
2.3 Personal protective equipment is used during the loading/unloading operations as required for the type of dangerous goods/explosive concerned.  
2.4 Emergency procedures are followed in the event of an incident or accident when loading or unloading explosives and/or dangerous goods. |
| **3 Secure and protect vehicle load** | 3.1 The vehicle load is secured using the correct load restraint and protection equipment for different loads, vehicles and carriage conditions concerned.  
3.2 The load is protected in accordance with legal and workplace safety requirements.  
3.3 The distribution of the load is checked to ensure that it is even, legal and within the safe working capacity of the vehicle.  
3.4 Vehicle is clearly marked/placarded to indicate the carriage of explosives and/or dangerous goods, in accordance with government regulations and company procedures. |
| **4 Check the vehicle** | 4.1 The loaded vehicle is inspected and checked to ensure that it is suitable to carry explosives and/or dangerous goods and the load weight and dimensions are within the vehicle's safe carrying capacity and equipment capability.  
4.2 The loaded vehicle is checked to ensure that it can be safely parked and secured.  
4.3 Dangerous goods declaration and all required transportation documentation for the cargo is completed in accordance with workplace requirements. |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and state/territory regulations and codes pertaining to the identification, handling and marking of explosives and dangerous goods
- Relevant state/territory mass and loading regulations
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risk
- Workplace procedures and policies for the loading and unloading of explosives and dangerous goods
- Characteristics of various classes of explosives and dangerous goods relevant to handling and transport
- Compatibility of various types of explosives and dangerous goods
- Housekeeping standards procedures required in the workplace
- Manual handling techniques and manually-operated load shifting equipment required for the loading, unloading and handling of explosives and dangerous goods
- Methods of securing a load on a vehicle
- Methods of placarding or marking a vehicle carrying explosives/dangerous goods

Required skills:

- Communicate effectively with others when loading, unloading and handling explosives and dangerous goods
- Read and interpret instructions, procedures, information and signs relevant to the loading, unloading and handling of explosives and dangerous goods
- Identify and interpret containers and goods coding, markings and, where applicable, emergency information panels for the mode of transport/storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when loading, unloading and handling explosives and dangerous goods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and
Required skills:

- Interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when loading, unloading and handling explosives and dangerous goods
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading, unloading and handling of explosives and dangerous goods
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Use manual handling techniques and operate manually-operated load shifting equipment when loading, unloading and handling explosives and dangerous goods
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - Identifying load characteristics, loading equipment and related practices
  - Identifying load label in accordance with identified classification and subsidiary risk information
  - Identifying markings/placards for vehicle in accordance with relevant regulatory requirements
  - Segregating, distributing and securing load for safe transport in accordance with regulations and current ADG/AEG Code requirements
EVIDENCE GUIDE

- safely loading and unloading explosives and dangerous goods in accordance with workplace procedures and current ADG/AEG Code requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external
RANGE STATEMENT

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited and restricted spaces  
- exposed conditions  
- controlled or open environments  
- a workplace, warehouse or depot  
- in a vehicle on the road  
- at a client's workplace

Goods/cargo to be loaded and unloaded may require:
- special precautions for handling and stacking

Classes of dangerous goods and explosives are:
- as defined in the respective Australian codes

Standard placarding, marking and signage for identified explosives and dangerous goods are:
- as required in the respective Australian codes, including HAZCHEM Codes

Personnel in the work area may include:
- workplace personnel  
- site visitors  
- contractors  
- official representatives

Communication in the work area may include:
- phone  
- electronic data interchange  
- fax  
- email  
- internet  
- radio  
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures  
- enterprise procedures  
- organisational procedures  
- established procedures

Loading operations may be carried out:
- manually  
- with the aid of lifting equipment and/or appliances

Load restraint procedures and equipment are:
- as specified in mass and loading regulations and guidelines and current ADG Code/Australian Explosives Code as applicable

Personal protective equipment may include:
- gloves  
- safety headwear and footwear  
- safety glasses
RANGE STATEMENT

Information/documents may include:

- two-way radios
- high visibility clothing
- goods identification numbers and codes, including current ADG Code and IMDG markings and HAZCHEM signs
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Industry Safety Code, and National Standards for Manual Handling
- manifests, bar codes, goods and container identification/serial number
- material safety data sheets
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the loading and unloading of vehicles
- supplier and/or client instructions
- National Load Restraint Guide
- Australian Truck Drivers Manual
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- Australian and state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - Code of Practice for the Safe Transport of Radioactive Substances
  - state/territory legislation covering the safe handling of infectious substances
  - relevant state/territory environmental protection legislation
  - workplace relations regulations
  - equal opportunity legislation
  - equal employment opportunity and affirmative action legislation
  - relevant state/territory OH&S legislation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks when handling furniture and effects during a removal and related precautions to control the risk
- Workplace procedures and policies for the handling of furniture and effects
REQUIRED KNOWLEDGE AND SKILLS

- Specialised lifting equipment and procedures for its use
- Insurance rights and responsibilities
- Housekeeping standards and procedures during a removal
- Methods of securing a load on a removal vehicle

Required skills:

- Communicate effectively with others when handling furniture and effects during removal operations
- Read and interpret instructions, procedures, information and signs relevant to the handling of furniture and effects during removal operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the handling of furniture and effects during removal operations
- Work collaboratively with others when handling furniture and effects during removal operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when handling furniture and effects during removal operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when handling furniture and effects during removal operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to furniture or equipment
- Operate and adapt to differences in furniture, equipment and operating environment in accordance with standard operating procedures
- Identify and correctly use equipment required to handle furniture and effects
- Identify dangerous goods and other items that are prohibited carriage during a removal and take appropriate action as per regulatory requirements and standard operating procedures
- Service equipment in terms of maintenance schedule and standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Removal load may include: • any household and workplace furniture and effects including fridges, freezers, washing machines, bed ends, mattresses and bases, lamp shades, pendulum clocks, carpets, tables and chairs, television sets, stereo and audio equipment

Customers may be: • internal or external

Operations may be conducted: • in a range of work environments and weather conditions • by day or night

Work may be conducted in: • restricted spaces • exposed conditions • controlled or open environments • a workplace, warehouse or depot • in a vehicle on the road • at a client's home/workplace

Furniture and effects to be handled may: • require special precautions

Principles of loading a removal vehicle include: • light over heavy • glass turned inside • handles covered • proper use of hessians and pads on all items • tightly pack and secure all items

Hazards during the handling of furniture and effects may include: • lifting injuries • fire • vehicle movement during furniture loading/unloading operations • accident in use of equipment • being run over by load shifting equipment • broken glass • protruding features of furniture • dangerous goods

Handling operations may be carried out: • manually • with the aid of lifting equipment and/or appliance

Depending on the type of organisation concerned and the local terminology used, workplace • company procedures • enterprise procedures • organisational procedures
RANGE STATEMENT

procedures may include:
- established procedures

Personal protective equipment may include:
- gloves
- safety footwear
- safety glasses

Information/documents may include:
- industry codes for furniture removal operations
- removals documentation
- client instructions
- workplace procedures and policies for the handling of furniture and effects during a removal
- manufacturers specifications for equipment/tools
- material safety data sheets where relevant
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- state/territory mass and loading regulations
- Australian Dangerous Goods Code and associated regulations
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- OH&S procedures and guidelines concerning packing and unpacking of furniture and effects
- Risks when packing and unpacking furniture and effects during a removal and related precautions to control the risk
- Workplace procedures and policies for the packing and unpacking of furniture and effects
- Packing techniques for various types of furniture and effects
- Packing materials and tools
REQUIRED KNOWLEDGE AND SKILLS

- Insurance rights and responsibilities
- Housekeeping standards and procedures during a removal
- Methods of securing a load on a removal vehicle

Required skills:

- Communicate effectively with others when packing and unpacking furniture and effects during a removal
- Read and interpret instructions, procedures and information relevant to the packing and unpacking of furniture and effects during a removal
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the packing and unpacking of furniture and effects during a removal including the completion of labels and packing lists
- Work collaboratively with others when packing and unpacking furniture and effects during a removal
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when packing and unpacking furniture and effects during a removal in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may arise when packing and unpacking furniture and effects during a removal
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the packing and unpacking of furniture and effects during a removal
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in furniture and effects in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Items to be packed/unpacked during a removal may include, for example:
- crockery
- books
- household effects and furniture
- office effects and furniture
- glassware
- electrical/electronic equipment

Customers may be:
- internal or external

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
- a workplace, warehouse or depot
- in a vehicle on the road
- at a client’s home/workplace

Furniture and effects to be packed/unpacked may require:
- special precautions

Hazards during the packing and unpacking of cartons may include:
- heavy items
- fragile items
- broken glass/crockery
- dangerous goods

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety footwear
- safety glasses

Information/documents may include:
- industry codes for furniture removal operations
- removals documentation
- client instructions
- workplace procedures and policies for packing and unpacking of cartons, including identifying, handling, wrapping and packing various types of items
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
RANGE STATEMENT

- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Competency Field

Competency Field      D - Load Handling
TLID2021A Use specialised bulk transfer equipment (dry)

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to use specialised bulk transfer equipment for dry materials, including planning the work, transferring the material according to regulatory and operational requirements, monitoring and operating controls, and completing all operations, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant state/territory regulations concerning the use of specialised equipment for the transfer of dry bulk product.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the use of specialised bulk transfer equipment to load and unload dry bulk products.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan work** | 1.1 Dangerous or hazardous (including regulated waste), or other materials requiring specialised handling are identified and relevant procedures are taken into account when planning the work.  
1.2 Traffic flow and work area conditions are assessed and anticipated to ensure safe operation and no injury to people, or damage to equipment, loads, facilities or environment.  
1.3 Characteristics of the load are taken into account when selecting method, equipment and, where applicable, appropriate attachments to transfer the load.  
1.4 Any potential occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel.  
1.5 Bulk transfer of dry materials is planned, taking into account the requirements of the load, transfer method, storage facility and transport mode, load weight and dimensions and the capacity of the equipment.  
1.6 Required personal safety equipment, signage, barriers and special precautions are identified in the plan and utilised.  
1.7 Procedures to deal with spills, leakages and ruptures are identified.  
1.8 Customer requests for variation to agreed operations are actioned within scope of authority or referred to appropriate personnel. |
| **2 Transfer material** | 2.1 Equipment is prepared and any appropriate attachment fitted.  
2.2 Equipment controls are checked for correct operational status before commencing transfer.  
2.3 Adjustments are made to process to accommodate special requirements such as temperature control, combustion etc.  
2.4 Instruments and gauges are monitored during operations to ensure that operation is consistent with workplace procedures, manufacturers specifications and enterprise schedule and safety requirements.  
2.5 Speed of operation is managed for safety and efficiency of materials movement and equipment operations.  
2.6 Any faults or damage to equipment are immediately reported to the appropriate personnel. |
| **3 Monitor and operate controls** | 3.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions.  
3.2 Control systems are monitored to ensure that operation is consistent with workplace procedures, manufacturers. |
ELEMENT PERFORMANCE CRITERIA

specifications, workplace schedule, safety requirements and statutory regulations

3.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods

3.4 Faults are identified and reported in accordance with enterprise guidelines

4 Complete operations

4.1 Equipment is shut down within manufacturers guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with enterprise procedures

4.2 Clean up methods for transfer equipment are completed following workplace procedures

4.3 Equipment is secured in accordance with securing procedures for the appropriate equipment

4.4 Workplace documentation is completed and filed following workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting dry bulk product
- OH&S procedures and guidelines concerning the use of specialised bulk transfer equipment
- Risks when transferring dry bulk product and related precautions to control the risk
- Workplace procedures and policies for the efficient use of specialised equipment to transfer dry bulk loads
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following transfer of dry bulk product
- Relevant regulatory, permit and licence requirements including ADG Code

Required skills:

- Communicate effectively with others when using specialised equipment to transfer dry bulk product
- Read and interpret instructions, procedures, information and signs relevant to the transfer of dry bulk product using specialised equipment
Required skills:

- Identify goods coding, IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the transfer of dry bulk product using specialised equipment
- Operate electronic communication equipment to required protocol
- Estimate the mass, volume and special requirements of dry bulk products
- Work collaboratively with others when using specialised equipment to transfer dry bulk product
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using specialised equipment to transfer dry bulk product in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events when using specialised equipment to transfer dry bulk product
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the transfer of dry bulk product using specialised equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to product or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment required to transfer dry bulk product
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
EVIDENCE GUIDE

and evidence required to demonstrate competency in this unit

this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments
- by day or night
RANGE STATEMENT

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces • exposed conditions • controlled or open environments

Dry bulk product to be transferred may require: • special precautions

Hazards in the work area may include exposure to: • hazardous or dangerous materials • contamination of, or from, materials being handled • noise, light, energy sources • stationary and moving machinery, parts or components • service lines • spills, leakages, ruptures • dust/vapours

Personal protective equipment may include: • gloves • safety headwear and footwear • safety glasses • mask or respirator • high visibility clothing

Hazard management is: • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Exposure during work operations may be to: • corrosive chemicals • solvents and adhesives • toxic, explosive and other harmful substances • movement of equipment, goods, vehicles

Regulatory controls and enterprise procedures may govern requirements for: • transport • storage • volume • mass • required controls

Relevant transfer systems may include: • ducted • conveyor • mobile plant • pipelines • elevators • augers
RANGE STATEMENT

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Information/documents may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of dry bulk product
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- state/territory mass and loading regulations
- Australian regulations relevant to the transfer of dry bulk product
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field D - Load Handling
TLID2022A Conduct weighbridge operations

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to conduct weighbridge operations in accordance with regulatory requirements and workplace procedures, including setting up for weighbridge operations, weighing loaded vehicles, weighing unloaded vehicles, finalising weighbridge operations, and completing required records and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with regulations and workplace requirements relevant to weighbridge operations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when conducting weighbridge operations in the transport, warehousing, distribution and/or storage industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Set up for weighbridge operations | 1.1 Weighbridge systems, including equipment, computer and recording arrangements are checked for operational status  
1.2 Tests to confirm accuracy of weighbridge operation and related functions are conducted in accordance with workplace procedures, manufacturers instructions and relevant legislation  
1.3 Accurate reporting of the results of the inspection and testing is kept in accordance with statutory requirements, workplace policy and industry guidelines  
1.4 Faults/discrepancies in weighbridge operation are identified and action is undertaken in accordance with workplace procedures |
| 2 Weigh loaded vehicles | 2.1 Vehicles likely to exceed weighbridge weight limit are turned away  
2.2 Vehicles are directed onto platform to obtain accurate weight  
2.3 Weight of loaded stationary vehicle is registered against vehicle and load identification  
2.4 Vehicle and load information is entered into workplace recording system and driver is issued with receipt and/or statement  
2.5 Areas of dispute are resolved or forwarded for further action undertaken in accordance with workplace procedures |
| 3 Weigh unloaded vehicles | 3.1 Vehicles are directed onto platform to obtain accurate weight  
3.2 Weight of unloaded stationary vehicle is registered against vehicle  
3.3 Proposed load weight is assessed for conformance to statutory requirements  
3.4 Where appropriate, loading operations are commenced in accordance with legal loading weight, customer requirements and workplace procedures with vehicle re-weighed to establish final load weight  
3.5 Vehicle and load information is entered into workplace recording system and invoice is issued to driver where appropriate  
3.6 Driver signatures on weighbridge documents, invoices or receipts are obtained in accordance with statutory and workplace requirements  
3.7 Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures |
| 4 Complete weighbridge operations | 4.1 Weighbridge systems, including equipment, computer and recording arrangements are secured or made ready for next shift  
4.2 Record of operations is maintained and filed in accordance with |
ELEMENT PERFORMANCE CRITERIA
workplace procedures and statutory requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the conduct of weighbridge operations including Australian Dangerous Goods Code where applicable
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of weighbridge operations
- Problems that may occur when conducting weighbridge operations and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Records and documentation requirements for weighbridge operations
- Classification procedures
- Despatch procedures
- Calculation method and approaches for both metric and imperial systems
- Correct weighing procedures including statutory and workplace requirements
- Emergency response procedures
- Site layout

Required skills:

- Communicate effectively with others when conducting weighbridge operations
- Read and interpret instructions, procedures and information relevant to the conduct of weighbridge operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of weighbridge operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting weighbridge operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, errors or malfunctions that may occur when conducting weighbridge operations in accordance with regulatory requirements and workplace procedures
Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of weighbridge operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Set up and maintain weighbridge equipment
- Identify, select and efficiently and effectively use weighbridge equipment
- Monitor performance of weighbridge equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include:
- movement of equipment, goods, products, materials and vehicular traffic

Weighbridge operations may be:
- inclusive of a single operation involving the loading of vehicles and despatch functions

Weighbridge operation may be:
- electro/mechanical
- electronic
- computerised

Vehicles may include:
- trucks
- articulated road vehicles
- trailers
- wagons

Calibration and/or testing of:
- required prior to and during operations
RANGE STATEMENT

equipment may be:

Hazards in the work area may include exposure to:
- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- breakdown procedures
- emergency procedures

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- drivers
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures
RANGE STATEMENT

Information/documents may include:

- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications and instructions for the operation of weighbridge equipment
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to weighbridge operations
- traffic acts and road transport mass and loading regulations
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Check and organise articles for delivery | 1.1 Articles are inspected to ensure that they meet all specified criteria  
1.2 Articles for delivery are sorted into groups according to specified sorting criteria  
1.3 Articles which cannot be delivered due to defects or other mitigating factors are sorted and dealt with in accordance with workplace procedures  
1.4 Processing of articles is monitored to ensure a secure and effective workflow |
| 2 Store articles for delivery | 2.1 Appropriate manual handling practices are used to shift and sort articles  
2.2 Groups of articles for delivery are stored in appropriate areas and clearly identified for delivery type and run  
2.3 Security requirements and activities to ensure appropriate access to stored articles are followed in accordance with workplace procedures |
| 3 Maintain records | 3.1 Required records and/or notices for registered mail, classified mail, parcels and defective mail articles are completed in accordance with workplace procedures  
3.2 Records are stored in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state/territory mass and loading regulations
- OH&S procedures and guidelines concerning the preparation of articles for mail delivery
- Risks when preparing articles for delivery and related precautions to control the risk
- Workplace procedures and policies for the preparation of articles for the sorting and storing of mail
- Problems that may arise when preparing articles for delivery and actions that should be taken to prevent or solve them
- Housekeeping standards procedures required in the workplace
- Methods of securing mail articles
Required skills:

- Communicate effectively with others when preparing articles for delivery
- Read and interpret instructions, procedures, information and signs relevant to the preparation of articles for delivery
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of articles for delivery
- Estimate the size, shape and special delivery requirements of mail articles
- Work collaboratively with others when preparing articles for delivery
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing articles for delivery in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of articles for delivery
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment required to sort and store mail
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

</thead>
</table>
| 1 Plan work for the current working conditions | 1.1 Traffic flow and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities.  
1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments are used to transport the load.  
1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel. |
| 2 Use controls and equipment operating systems to manage movement of the unit and accessory operations | 2.1 Light load shifting equipment is prepared and any appropriate attachment fitted.  
2.2 Gear and operational levers are checked to ensure that they are in the neutral position prior to inserting ignition key and starting the engine.  
2.3 Engine is started in accordance with manufacturers guidelines to bring the engine to speed.  
2.4 Instruments and gauges are monitored during start-up and operations to ensure that operation is within manufacturers specifications and enterprise safety requirements.  
2.5 Engine power is managed for efficiency of equipment movement and economy of equipment operations.  
2.6 Equipment operations are conducted within manufacturers specified torque range.  
2.7 Any faults or damage to equipment are immediately reported to the appropriate personnel. |
| 3 Locate load and identify load characteristics | 3.1 Load is located and identified according to instructions.  
3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations.  
3.3 Characteristics of the load are taken into account to ensure that appropriate loading and unloading procedures are followed.  
3.4 Hazardous goods are identified and relevant procedures are taken into account when planning and conducting the work.  
3.5 Load weight and dimensions are within the capacity of the equipment. |
| 4 Move materials and loads | 4.1 Light load shifting equipment is manoeuvred and positioned using smooth and controlled movements.  
4.2 Manoeuvres are within the limits of the equipment and in line with manufacturers specifications.  
4.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods. |
<table>
<thead>
<tr>

| 5 Monitor and operate controls | 5.1 Light load shifting equipment controls are monitored and operated in accordance with manufacturers operating instructions  
5.2 Control systems are understood and acted upon in accordance with statutory authority regulations, manufacturers guidelines and site operating procedures  
5.3 Control faults are identified and reported in accordance with manufacturers instructions and workplace guidelines |
| 6 Stop, park and secure light load shifting equipment | 6.1 Light load shifting equipment is brought to a controlled halt within manufacturers guidelines  
6.2 Light load shifting equipment is parked without injury to personnel or damage to equipment, loads or facilities in accordance with company procedures  
6.3 Light load shifting equipment is secured on a flat, even surface and not close to doorways, aisles, access-ways or blind corners and in accordance with securing procedures for the appropriate equipment |

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations relevant to the operation of specialised light load shifting equipment, including, where relevant, the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the operation of the specialised light load shifting equipment
- Focus of operation of work systems, equipment, management and site operating systems for the operation of the specialised light load shifting equipment
- The purpose, characteristics, capabilities, requirements and limitations of the specialised light load shifting equipment
- Conveyed materials' potential for toxicity, reactivity, material grade, type and purpose including information from relevant material safety data sheets and Australian Dangerous Goods Code documentation (where applicable)
- Problems that may occur when operating the specialised light load shifting equipment and appropriate action that can be taken to resolve the problems
REQUIRED KNOWLEDGE AND SKILLS

- Operational safety requirements and precautions for the specialised light load shifting equipment concerned
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles
- Relevant permit and licence requirements

Required skills:

- Communicate effectively with others when operating specialised light load shifting equipment
- Read and interpret instructions, procedures, information and signs relevant to the operation of specialised light load shifting equipment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of specialised light load shifting equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating specialised light load shifting equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating specialised light load shifting equipment in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when operating specialised light load shifting equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of specialised light load shifting equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant gear and accessories when operating specialised light load shifting equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment and take appropriate action where required
Required skills:

- Service equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- holds on ships
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Equipment may include:
- skid steer loaders
- light internal transfer vehicles
- front-end loaders (up to 10 tonne)
- elevated work platforms

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits

Hazards in the work area may include exposure to:
- chemicals and fumes
- dangerous or hazardous substances
- stationary and moving machinery, goods, materials and vehicular traffic
- contamination of, or from, materials being handled
- service lines
- spills, leakages and ruptures
RANGE STATEMENT

Consultative processes may involve:
- dust/vapours
- faulty gear/equipment/tools
- workplace personnel including supervisors and managers
- equipment manufacturers and suppliers
- site visitors and contractors
- union representatives, industrial relations and OH&S specialists
- other professional or technical staff

Communication in the work area may include:
- phone
- fax
- email
- internet
- electronic data interchange (EDI)
- RF communications
- bar code readers
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- respirators and fume masks
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies for the operation of the specialised light load shifting equipment concerned
- goods identification numbers and codes
- manifests, picking slips, merchandise transfers, stock requisitions and bar codes
- manufacturers specifications for equipment/tools
- equipment identification labels, bar codes and serial numbers
- supplier and/or client instructions
- relevant OH&S requirements and policies
- relevant Australian standards and certification requirements
- material safety data sheets where applicable
RANGE STATEMENT

- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant legislation, regulations and related documentation including the ADG Code
- award, enterprise bargaining agreement and other industrial arrangements
- quality assurance procedures
- emergency procedures
- relevant codes, regulations and licence/permit requirements pertaining to the operation of the specialised light load shifting equipment concerned including the ADG Code (where applicable)
- state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

Competency Field
Competency Field  D - Load Handling
TLID2047A Prepare cargo for transfer with slings

Modification History
Not applicable.

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to prepare cargo for transfer with slings in accordance with workplace requirements and relevant regulatory requirements, including preparing for transfer of cargo, calculating Safe Working Load (SWL) or Working Load Limit (WLL) of slings and loads, slinging cargo and unslinging cargo, and strapping and unstrapping goods. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with codes/regulations and workplace requirements relevant to the preparation of cargo for transfer with slings.
Safety checks and equipment tests are performed under limited supervision.
Work involves the application of regulatory requirements and workplace procedures to the preparation of cargo for transfer with slings in the stevedoring, transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Prepare for transfer of cargo | 1.1 Working area is prepared and maintained in accordance with national standards and safety codes and site operating procedures  
                               | 1.2 Unsafe work practices and/or faulty equipment is reported in accordance with enterprise procedures  
                               | 1.3 Correct protective equipment is identified and worn  
| 2 Calculate Safe Working Load or Working Load Limit of slings and loads | 2.1 Safe Working Load (SWL) or Working Load Limit (WLL) is calculated using standardised formulae for different types of lifting cables  
                               | 2.2 Lifting equipment is checked to determine the safe working load  
                               | 2.3 Slinging gear is checked for conformity with safety equipment  
| 3 Sling cargo and unsling cargo | 3.1 Cargo is slung/unslung in accordance with national standards, safety codes and site operating procedures  
                               | 3.2 Correct securing devices are identified and used  
                               | 3.3 Load is steadied by tag lines as required  
                               | 3.4 Damaged cargo is identified and reported in accordance with enterprise procedures  
                               | 3.5 Slinging attachments are released from load ensuring no injury to personnel or damage to machinery or cargo  
| 4 Strap and unstrap goods      | 4.1 Cargo is strapped and unstrapped in accordance with national standards, safety codes and site operating procedures  
                               | 4.2 Mechanical strapping equipment is used in accordance with manufacturers instructions  
                               | 4.3 Damaged cargo is identified and reported in accordance with enterprise reporting procedures  
                               | 4.4 Strapping arrangements are secured/released to/from load ensuring no injury to personnel or damage to machinery or cargo  

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the transfer of cargo with slings, including, where relevant, the
REQUIRED KNOWLEDGE AND SKILLS

Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the transfer of cargo with slings
- Focus of operation of work systems, equipment, management and site operating procedures for the transfer of cargo with slings
- Cargo's potential for toxicity, reactivity, material grade, type and purpose including information from relevant material safety data sheets and Australian Dangerous Goods Code documentation (where applicable)
- Gear and equipment used during the transfer of cargo with slings and the precautions and procedures that should be followed in their use
- Problems that may occur when preparing cargo for transfer with slings and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when preparing cargo for transfer with slings
- Read and interpret instructions, procedures, information and signs relevant to the preparation of cargo for transfer with slings
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of cargo for transfer with slings
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when preparing cargo for transfer with slings
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when preparing cargo for transfer with slings in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when preparing cargo for transfer with slings
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of cargo for transfer with slings
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or
Required skills:

- Select and use relevant gear and equipment when preparing cargo for transfer with slings
- Use balance points and estimate weights in setting up loads to be shifted
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments

Not Applicable

Competency Field

Competency Field D - Load Handling
TLID3011A Conduct specialised forklift operations

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to operate a forklift with specialised attachments or all-terrain equipment, including checking attachments and worksite for suitability, selecting the type of forklift and accessories for required load shifting tasks, and shifting load and completing work in accordance with operational requirements. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Specialised operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority.

Specialised operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of equipment operation principles and procedures to maintain the safety and specialised operation of a forklift in a wide variety of operational contexts.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Check attachments and work site for suitability | 1.1 Suitable work site is selected for operations  
1.2 Work area is checked for overhead obstructions and proximity to service delivery lines  
1.3 Barriers or warning signs are erected in areas subject to passing traffic  
1.4 Attachments and platforms are securely fixed to carriage or tines  
1.5 Personnel support platforms are inspected to ensure compliance with the relevant Australian Standard |
| 2 Select type of forklift and accessories for the required workplace task | 2.1 Special equipment, accessories or attachments are identified to match load characteristics and work requirements  
2.2 Appropriate specialised equipment is selected  
2.3 Existing attachments are removed and stored according to workplace procedures  
2.4 Specialised equipment is fitted according to manufacturers instructions and workplace procedures  
2.5 Designated staff are notified regarding specialist operations |
| 3 Shift load and complete work | 3.1 Equipment is operated within safe working limits and to maximise efficiency of operations  
3.2 Load is lifted, carried and set down in accordance with workplace and manufacturers procedures and regulatory requirements  
3.3 Documentation is completed reporting any damage or faults to goods or equipment  
3.4 Specialist equipment and forklift are returned to appropriate storage/parking area |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements pertaining to the specialised operation of a forklift
- Relevant OH&S and environmental procedures and regulations
- Workplace operating procedures
REQUIRED KNOWLEDGE AND SKILLS

- Forklift controls, instruments and indicators and their use
- Types of forklift accessories and ancillary equipment, their purposes and procedures for their use
- Handling procedures for forklifts involved in specialised operations
- Procedures to be followed in the event of an operational emergency
- Operating hazards and related defensive driving and hazard control techniques
- Engine power management and safe operating strategies
- Efficient driving techniques
- Pre-operational checks carried out on forklift and accessories and related action
- Site layout and obstacles
- Principles of stress management when driving a forklift

Required skills:

- Communicate effectively with others when conducting specialised forklift operations
- Read and interpret instructions, procedures, information and signs relevant to specialised forklift operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to specialised forklift operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting specialised forklift operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when conducting specialised forklift operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when conducting specialised forklift operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during specialised forklift operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:

- Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
EVIDENCE GUIDE

conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include:
• counterbalance trucks
• reach trucks
• pallet trucks
• container-handling heavy forklifts
• vacuum
• top frame

Specialised forklift operations may be carried out in typical forklift operational situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road or worksite
• while at a workplace
• internal or external

Customers may be:

Workplaces may comprise:
• large, medium or small worksites

Specialised forklift may be used to assist in a range of workplace tasks, including:
• stock/goods/container handling
• loading and unloading vehicles
• stacking stock and goods
• lifting and moving equipment
• transporting materials and goods in a workplace

Work may be conducted in:
• restricted spaces
• exposed conditions
• controlled or open environments

Loads to be shifted may require:
• special precautions

Specialised forklift operations
• spikes
RANGE STATEMENT

may involve the use of a range of attachments and accessories, including:

- drum carriers
- bale carriers
- tines
- personnel carriers
- high reaching
- pantograph
- jibs
- paper clamps
- hooks
- side lifters

Loads to be shifted may be:

- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted
- containerised

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Forklift operational procedures may include:

- starting a forklift (including pre-start checks)
- steering and manoeuvring a forklift
- accelerating and braking
- positioning and stopping a forklift
- reversing a forklift
- operating forklift controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include but are not limited to:

- visual checking of forklift and its associated accessories and equipment
- checking and topping up of fluid levels
- checks of tyres
- checks of operation of forklift lights and indicators
- checks of brakes

Post-operational checks may include but are not limited to:

- parking in a safe place
- shutting down forklift
- lowering all equipment
- visually checking for faults or damage

Hazards may include (examples only):

- wet and iced operating surfaces
- oil on operating surface
- faulty brakes
RANGE STATEMENT

- workplace obstacles and other operational equipment and vehicles
- damaged loads and pallets
- other personnel in work area
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification
- Australian Standard 2359 - Industrial Truck Code
- manufacturers specifications for forklift and associated accessories and equipment
- operations and service record book or log
- workplace procedures and policies for the operation of forklifts
- supplier and/or client instructions
- material safety data sheets
- regulatory requirements concerning the use of forklifts
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant state/territory regulations pertaining to the operation of forklifts
- relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Personal protective equipment may include:

Information/documents may include:

Applicable procedures and codes may include:

Competency Field

Competency Field D - Load Handling
TLID3014A Load and unload vehicles carrying special loads

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to load and unload vehicles carrying special loads. It includes loading and unloading the special load onto and from the vehicle, securing and protecting the vehicle and the load, and completing all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the licence and permit requirements and regulations of the relevant state/territory roads and traffic authority as well as the specific code, regulatory and permit requirements pertaining to the special load being carried.

Work is performed under some supervision generally within a team environment. It involves the application of the basic principles, routine procedures and regulatory requirements to the loading and unloading of vehicles designed to carry special loads.

Licensing/Regulatory Information

Pre-Requisites
Not Applicable
Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT | PERFORMANCE CRITERIA
--- | ---
1 Load and unload vehicle | 1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading procedures  
1.2 Hazardous cargo is identified and handled in accordance with required procedures for hazardous and dangerous cargo  
1.3 Vehicle is loaded demonstrating compliance with vehicle loading regulations and workplace safety requirements  
1.4 Lifting aids and appliances are selected and used to aid loading procedures in compliance with workplace procedures and safety legislation  
1.5 Vehicle is unloaded or partially unloaded in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and the balance of the remaining load  
1.6 Ancillary equipment is operated in accordance with company procedures and manufacturers instructions during loading and unloading operations

2 Secure and protect vehicle and load | 2.1 The vehicle load is secured using the correct load restraint and protection equipment for different loads, vehicles and carriage conditions  
2.2 The load is protected in accordance with legal and workplace safety requirements  
2.3 The distribution of the load is checked to ensure that it is even, legal and within the safe working capacity of the vehicle

3 Complete documentation | 3.1 The loaded vehicle is inspected and checked for security to travel  
3.2 All required transportation documentation for the cargo is completed in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state/territory mass and loading regulations and regulations pertaining to the various types of special loads, including Australian Dangerous Goods (ADG) and Australian Explosives Code, where applicable
- OH&S procedures and guidelines concerning the lifting and movement of loads
REQUIRED KNOWLEDGE AND SKILLS

- Characteristics of various types of special loads
- Risks and hazards when loading and unloading various types of special loads, and related precautions to control the risk
- Workplace procedures and policies for the loading and unloading of vehicles designed to carry special loads
- Containers and goods coding, IMDG markings and, where applicable, emergency information panels, including their meaning and implications for loading and unloading processes
- Housekeeping standards procedures required in the workplace
- Methods of securing various types of special loads
- Site layout and obstacles

Required skills:

- Communicate effectively with others when loading and unloading special loads from vehicles
- Read and interpret instructions, procedures, information and signs relevant to the loading and unloading of special loads from vehicles
- Identify and interpret containers and goods coding, IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading and unloading of special loads from vehicles
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when loading and unloading special loads from vehicles
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when loading and unloading special loads from vehicles in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when loading and unloading special loads from vehicles
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading and unloading of special loads from vehicles
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating
Required skills:

- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and correctly use equipment required to load and unload the various types of special loads
- Safely use manual handling techniques to operate manually

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating the safe loading and unloading of a load
  - applying techniques for the security of loads
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include all vehicles designed to carry special loads, for example:

- concrete agitator
- livestock transporter
- armoured car
- tanker
- refrigerated vehicle
- waste vehicle
- fresh produce vehicle
- car carrier
- container carrier
- recovery vehicle
- vehicle carrying dangerous goods or explosives
- vehicle carry over dimensional load

Loading and unloading operations may be conducted:

- in a range of work environments and weather conditions
- by day or night

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may be:

- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted
### RANGE STATEMENT

- liquid loads
- motor vehicles
- motor bikes

**Hazards in the work area may include exposure to:**
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

**Personnel in the work area may include:**
- workplace personnel
- site visitors
- contractors
- official representatives

**Communication in the work area may include:**
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

**Loading operations may be carried out:**
- manually
- with the aid of lifting equipment and/or appliances

**Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:**
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

**Personal protective equipment may include:**
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

**Information/documents may include:**
- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets
- codes of practice including the National Standards for
RANGE STATEMENT

- National Load Restraint Guide
- Australian Truck Drivers Manual
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures
- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - Code of Practice for the Safe Transport of Radioactive Substances
  - state/territory legislation covering the safe handling of infectious substances
  - relevant state/territory environmental protection legislation
  - relevant state/territory OH&S legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to identify and label explosives and dangerous goods, including assessing explosives/dangerous goods; handling explosives/dangerous goods in accordance with regulatory requirements; labelling explosives/dangerous goods in accordance with regulatory requirements; and complying with all required documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the regulatory requirements of the relevant Australian state/territory authorities concerned with the carriage of explosives and dangerous goods including the current Australian Dangerous Goods and Australian Explosives Codes.

Work is performed under limited or minimum supervision. It involves the application of standard procedures and regulatory requirements for the identification and labelling of explosives and dangerous goods.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Assess explosives/dangerous goods** | 1.1 Load is checked for explosives/dangerous goods in accordance with the relevant codes and government regulations  
1.2 Types of explosives/dangerous goods are identified from labels, DG declarations and placarding in accordance with workplace procedures, and all required action is taken to ensure compliance with relevant government regulations and ADG/Australian Explosives Codes as applicable  
1.3 Hazards posed by load are identified from labels and material safety data sheets (MSDS) |
| **2 Handle explosives/dangerous goods** | 2.1 Identified explosives/dangerous goods are handled and loaded/unloaded in accordance with regulatory requirements, codes, National Load Restraint Guide, and employer policy  
2.2 Appropriate personal protective equipment is used when handling explosives/dangerous goods in accordance with class, subsidiary risk and MSDS information  
2.3 Handling of different types of load takes into account the identified hazards posed by the explosives/dangerous goods concerned  
2.4 When loading/storing explosives/dangerous goods, segregation procedures are followed according to the class and subsidiary risk information |
| **3 Label explosives/dangerous goods** | 3.1 All packages/containers are labelled with the class and subsidiary risk in accordance with current ADG/Australian Explosives Codes as applicable  
3.2 A dangerous goods declaration is included with manifest and other shipping documents  
3.3 Vehicles carrying explosives and/or dangerous goods are placarded in accordance with current ADG/Australian Explosives Codes as applicable |
| **4 Complete documentation**         | 4.1 All required transport documents are completed in accordance with current ADG/Australian Explosives Codes as applicable |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
REQUIRED KNOWLEDGE AND SKILLS

- Relevant Australian and state/territory regulations and codes pertaining to the identification and labelling of explosives and dangerous goods including the current ADG and Australian Explosives Codes
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risk
- Workplace procedures and policies for the identification and labelling of explosives and dangerous goods
- Characteristics of explosives and dangerous goods relevant to handling and transport
- Compatibility of various types of explosives and dangerous goods
- Site layout and obstacles
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when loading, unloading and handling explosives and dangerous goods
- Read and interpret instructions, procedures, information and signs relevant to the loading, unloading and handling of explosives and dangerous goods
- Interpret material safety data sheets, containers and goods coding, markings and other information describing explosives and dangerous goods including, where applicable, emergency information panels for the mode of transport/storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the loading, unloading and handling of explosives and dangerous goods
- Correctly mark/label explosives and dangerous goods
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when loading, unloading and handling explosives and dangerous goods
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when loading, unloading and handling explosives and dangerous goods in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when loading, unloading and handling explosives and dangerous goods
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the loading, unloading and handling of explosives and dangerous goods
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying explosives and dangerous goods from labels in accordance with regulatory requirements and practices
  - handling explosives and dangerous goods according to regulatory requirements, codes, National Load Restraint Guide and employer policy as appropriate
  - locating, interpreting and applying relevant codes and regulations
  - indentifying the hazards from labels of explosives and dangerous goods
  - identifying the personal protective equipment required when handling explosives and dangerous goods
  - maintaining workplace records for the explosives and dangerous goods

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment,
EVIDENCE GUIDE

and/or

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
- a workplace, warehouse or depot
- in a vehicle on the road
- at a client's workplace

Goods/cargo to be identified and
- require special precautions for handling and storage
RANGE STATEMENT

classified may:

Classes of dangerous goods and explosives are:

- as defined in the respective Australian codes

Standard marking and signage for identified explosives and dangerous goods is:

- as required in the respective Australian codes

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers, codes, markings and signs
- codes of practice including the Australian/International Dangerous Goods Codes and the Australian/International Explosives Codes
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the loading and unloading of vehicles
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
RANGE STATEMENT

Applicable regulations and legislation may include:
- quality assurance procedures
- emergency procedures
- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant state/territory environmental protection legislation
- equal opportunity legislation
- workplace relations regulations
- equal employment and affirmative action legislation
- relevant state/territory OH&S legislation

TLID3020A Care for livestock in transit

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to prepare and care for livestock in transit, including making preparations to transport livestock, caring for and controlling livestock in transit, and using appropriate animal husbandry techniques, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the relevant regulations and industry codes of practice for the care of livestock in transit.

Work is performed under limited or minimum supervision generally within a team environment. It involves the application of the basic principles and routine procedures to the care of livestock during transit.

Licensing/Regulatory Information
Refer to Unit Descriptor

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations concerning the care for livestock in transit
- OH&S procedures and guidelines concerning the lifting and movement of loads
- Risks when caring for livestock during transit and related precautions to control the risk
- Workplace procedures and policies for the caring for livestock during transit
REQUIRED KNOWLEDGE AND SKILLS

- Specialised livestock handling equipment and procedures for its use
- Insurance rights and responsibilities
- Housekeeping standards and procedures when caring for livestock during transit
- Methods of securing livestock during transit

Required skills:

- Communicate effectively with others when caring for livestock in transit
- Read and interpret instructions, procedures and information relevant to the care of livestock in transit
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the care of livestock in transit
- Work collaboratively with others when caring for livestock in transit
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when caring for livestock in transit in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events during the care of livestock in transit
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to animals or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment required to care for livestock during transit
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment
EVIDENCE GUIDE

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Livestock being cared for in transit may include any livestock able to be transported, such as:
- sheep
- cattle
- horses
- goats
- pigs
- chickens

Customers may be:
- internal or external

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
- a workplace, warehouse or depot
- in a vehicle on the road
- at a client’s workplace

Handling operations may be carried out both manually and with the aid of working dogs and livestock handling equipment, including:
- cattle prods
- restraining devices
- portable cattle yards

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear
- safety footwear

Information/documents may include:
- industry codes and government regulations for the care of livestock during transit
- workplace documentation
- client instructions
- workplace procedures and policies for the care of livestock during transit
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- guidelines on livestock husbandry relevant to the care of livestock during transit
RANGE STATEMENT

- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- state/territory mass and loading regulations
- Australian and state/territory regulations relevant to the care of livestock during transit
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Use specialised liquid bulk gas transfer equipment

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to use specialised bulk gas transfer equipment including planning the work; transferring the gas according to regulatory and operational requirements; monitoring and operating controls; and completing all operations, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the ADG Code and relevant state/territory regulations concerning the use of specialised equipment for the transfer of liquid bulk gas.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the use of specialised bulk transfer equipment to load and unload liquid bulk gas.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan work** | 1.1 Gas transfer method is identified for loading and unloading as liquefied or gaseous state  
1.2 Precautions are undertaken to eliminate all ignition sources  
1.3 Specialised handling requirements for the particular gas are identified and relevant procedures are taken into account when planning the work  
1.4 Traffic flow, vehicle positioning and work area conditions are assessed to ensure safe operation and no injury to people, or damage to equipment, loads or facilities  
1.5 Characteristics of the gas, transfer and holding method are taken into account when evaluating procedural requirements, special precautions for method, equipment and, where applicable, appropriate attachments to transfer the load  
1.6 Any potential occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel  
1.7 Gas transfer is planned, taking into account the requirements of the load, transfer method, storage facility and transport mode, load weight, volume and viscosity and the capacity of the equipment  
1.8 Load is checked prior to and at the completion of transfer to ensure ullage and/or maximum permitted capacity complies with ADG Code  
1.9 Adjustments are made to process to accommodate special requirements such as temperature control, combustion, etc.  
1.10 Required personal protective equipment, signage, barriers and special precautions are identified in the plan and utilised  
1.11 Procedures to deal with leakages and ruptures are identified |
| **2 Transfer material** | 2.1 Equipment is prepared and any appropriate attachment fitted  
2.2 Equipment controls are checked for correct operational status before commencing transfer  
2.3 Instruments and gauges are monitored during operations to ensure that operation is within manufacturers specifications and enterprise schedule and safety requirements  
2.4 Speed of operation is managed for safety and efficiency of materials movement and equipment operations  
2.5 Any faults or damage to equipment are immediately reported to the appropriate personnel |
| **3 Monitor and operate controls** | 3.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions  
3.2 Control systems are monitored in accordance with statutory |

</tbody>
</table>

### 4 Complete operations

| 4.1 Equipment is shut down within manufacturers guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with enterprise procedures |
| 4.2 Clean up methods for transfer equipment are completed following workplace procedures |
| 4.3 Equipment is secured in accordance with securing procedures for the appropriate equipment |
| 4.4 Workplace documentation is completed and filed following enterprise procedures |

### Required Skills and Knowledge

#### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting liquid bulk gas
- OH&S procedures and guidelines concerning the use of specialised bulk transfer equipment
- Risks when transferring liquid bulk gas and related precautions to control the risk
- Workplace procedures and policies for the efficient use of specialised equipment to transfer liquid bulk gas
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following transfer of liquid bulk gas
- Relevant permit and licence requirements

**Required skills:**

- Communicate effectively with others when using specialised equipment to transfer liquid bulk gas
- Read and interpret instructions, procedures, information and signs relevant to the transfer of liquid bulk gas using specialised equipment
Required skills:

- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the transfer of liquid bulk gas using specialised equipment
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when using specialised equipment to transfer liquid bulk gas
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using specialised equipment to transfer liquid bulk gas in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when using specialised equipment to transfer liquid bulk gas
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the transfer of liquid bulk gas using specialised equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to product or equipment
- Operate and adapt to differences in transfer equipment in accordance with standard operating procedures
- Monitor performance of transfer equipment
- Service transfer equipment in terms of maintenance schedule and standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

Context of and specific resources for assessment

- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites
RANGE STATEMENT

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Liquid bulk gas to be transferred may:
- require special precautions

Hazards in the work area may include exposure to:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- dust/vapours

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask or respirator
- high visibility clothing

Exposure during work operations may be to:
- corrosive chemicals
- solvents and adhesives
- toxic, explosive and other harmful substances
- movement of equipment, goods, vehicles

Regulatory controls and enterprise procedures may govern requirements for:
- transport
- storage
- volume
- mass
- required controls

Ignition sources include:
- naked flames and static sources

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
RANGE STATEMENT

Consultative processes may involve:

- authorities and permits
- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Information/documents may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of liquid bulk gas
- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- supplier and/or client instructions
- codes of practice including the Australian Dangerous Goods Code, relevant Australian Standards and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures
- material safety data sheets

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
RANGE STATEMENT

- Australian Marine Orders and the International Maritime Dangerous Goods Code
- IATA Dangerous Goods by Air regulations
- Australian and International Explosives Codes
- Australian and state/territory regulations related to the transfer of liquid bulk gas
- relevant Australian Standards, including AS 2809.1, AS 2809.3, AS 2931, AS 2430.1, AS 2430.3.4, AS 2430.3.7
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Unit Sector(s)
Not Applicable

Competency Field
Competency Field D - Load Handling
TLID3024A Use specialised liquid bulk transfer equipment (gravity/pressurised)

**Modification History**

Not Applicable

**Unit Descriptor**

This unit involves the skills and knowledge required to use specialised gravity and pressurised liquid bulk transfer equipment including planning the work; transferring the bulk according to regulatory and operational requirements; monitoring and operating controls; and completing all operations, as required. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

**Application of the Unit**

Work must be carried out in compliance with the ADG Code and relevant state/territory regulations concerning the use of specialised gravity and pressurised equipment for the transfer of liquid bulk product.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the use of specialised gravity and pressurised bulk transfer equipment to load and unload liquid bulk product.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan work** | 1.1 Liquid transfer method is identified for loading and unloading as gravity or pressure  
1.2 Dangerous or hazardous (including regulated waste) or other materials requiring specialised handling are identified and relevant procedures are taken into account when planning the work  
1.3 Precautions are undertaken to eliminate all ignition sources  
1.4 Traffic flow, vehicle positioning and work area conditions are assessed to ensure safe operation and no injury to people, or damage to equipment, loads or facilities  
1.5 Characteristics of the liquid, transfer and holding method are taken into account when evaluating procedural requirements, special precautions for method, equipment and, where applicable, appropriate attachments to transfer the load  
1.6 Potential occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel  
1.7 Liquid transfer is planned, taking into account the requirements of the load, transfer method, storage facility and transport mode, load weight, volume and viscosity and the capacity of the equipment  
1.8 Load is checked prior to and at the completion of transfer to ensure ullage and/or maximum permitted capacity complies with ADG Code  
1.9 Adjustments are made to process to accommodate special requirements such as temperature control, combustion, etc.  
1.10 Required personal protective equipment, signage, barriers and special precautions are identified in the plan and utilised  
1.11 Procedures to deal with spills, leakages and ruptures are identified |
| **2 Transfer material** | 2.1 Equipment is prepared and any appropriate attachments fitted  
2.2 Equipment controls are checked for correct operational status before commencing transfer  
2.3 Instruments and gauges are monitored during operations to ensure that operation is within manufacturers specifications and workplace schedule and safety requirements  
2.4 Speed of operation is managed for safety and efficiency of materials movement and equipment operations  
2.5 Faults or damage to equipment are immediately reported to the appropriate personnel |
| **3 Monitor and operate** | 3.1 Equipment controls are monitored and operated in accordance |
ELEMENT
controls

PERFORMANCE CRITERIA

3.2 Control systems are monitored in accordance with statutory authority regulations, manufacturers guidelines and site operating procedures

3.3 Materials are moved ensuring no injury to personnel or damage to equipment or goods

3.4 Faults are identified and reported in accordance with workplace procedures

4 Complete operations

4.1 Equipment is shut down within manufacturers guidelines without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures

4.2 Clean up methods for transfer equipment are completed following workplace procedures

4.3 Equipment is secured in accordance with securing procedures for the appropriate equipment

4.4 Workplace documentation is completed and filed following workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting liquid bulk product
- OH&S procedures and guidelines concerning the use of specialised liquid bulk transfer equipment
- Risks when transferring liquid bulk product and related precautions to control the risk
- Workplace procedures and policies for the efficient use of specialised gravity and pressurised equipment to transfer liquid bulk product
- Problems, faults or malfunctions that may occur when transferring liquid bulk product using specialised equipment and action that should be taken to prevent or resolve them
- Hazards involved in transferring liquid bulk product using specialised equipment when transferring liquid bulk product and ways and means of controlling the risks involved
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following transfer of liquid bulk product
- Relevant permit and health and safety requirements
Required skills:

- Communicate effectively with others when transferring liquid bulk product using specialised equipment
- Read and interpret instructions, procedures, information and signs relevant to the transfer of liquid bulk product using specialised equipment
- Identify goods coding, IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the transfer of liquid bulk product using specialised equipment
- Operate electronic communication equipment to required protocol
- Estimate the mass, volume and special requirements of liquid bulk product
- Work collaboratively with others when transferring liquid bulk product using specialised equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when transferring liquid bulk product using specialised equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when transferring liquid bulk product using specialised equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the transfer of liquid bulk product using specialised equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in transfer equipment in accordance with standard operating procedures
- Identify and correctly use equipment required to transfer liquid bulk product
- Monitor performance of transfer equipment
- Service transfer equipment in terms of maintenance schedule and standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in a range of work environments and weather conditions
• by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • restricted spaces
• exposed conditions
• controlled or open environments

Liquid bulk product to be transferred may require: • special precautions

Hazards in the work area may include exposure to: • hazardous or dangerous materials
• contamination of, or from, materials being handled
• noise, light, energy sources
• stationary and moving machinery, parts or components
• service lines
• spills, leakages, ruptures
• dust/vapours

Hazard management is: • consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include: • gloves
• safety headwear and footwear
• safety glasses
• mask or respirator
• high visibility clothing

Exposure during work operations may be to: • corrosive chemicals
• solvents and adhesives
• toxic, explosive and other harmful substances
• movement of equipment, goods, vehicles

Regulatory controls and enterprise procedures may govern requirements for: • transport
• storage
• volume
• mass
• required controls

Ignition sources include: • naked flames and static sources
RANGE STATEMENT

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Information/documents may include:
- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of liquid bulk product
- goods identification numbers and codes, including ADG and IMDG markings and HAZCHEM signs
- supplier and/or client instructions
- codes of practice including the Australian Dangerous Goods Code, relevant Australian Standards and the Industry Safety Code
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
RANGE STATEMENT

- quality assurance procedures
- emergency procedures
- material safety data sheets
- state/territory mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and state/territory regulations related to the transfer of liquid bulk product
- relevant Australian Standards, including AS 2809.1, AS 2809.2, AS 2931, AS 2430
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Unit Descriptor
This unit involves the skills and knowledge required to prepare for the transport of dangerous goods, including checking the dangerous goods load; assessing vehicle suitability to transport the intended load; checking emergency procedures and equipment; evaluating documented route plan; and completing required assessment process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant state/territory regulations concerning the transport of dangerous goods, including the current ADG Code.

Work is performed under general supervision. It involves the application of basic principles, routine procedures and regulatory requirements to the preparation of dangerous goods for transport.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Check dangerous goods load** | 1.1 Load is compared against transport documentation and discrepancies are noted  
1.2 Load is checked to ensure that dangerous goods labels are clearly visible and legible, and that packaged goods are correctly labelled  
1.3 Load is checked to ensure containers are not damaged  
1.4 Vehicle load is checked for compatibility or, where not compatible, is checked for appropriate segregation in accordance with regulatory requirements  
1.5 Load is assessed to ensure that it is stowed and secured in or on vehicles in accordance with the current ADG Code and the National Load Restraint Guide  
1.6 Shipping documentation and other relevant documents are located in the cabin in accordance with regulatory requirements |
| **2 Assess vehicle suitability to transport intended load** | 2.1 Vehicle is assessed for suitability and appropriateness to carry designated dangerous goods including classification, mass and configuration  
2.2 Licence and insurance requirements (where relevant) are checked for conformity with the current Australian Code for the Transport of Dangerous Goods by Road and Rail and/or other applicable regulatory requirements  
2.3 Load restraint system(s) is/are checked for serviceability and appropriateness to secure intended load  
2.4 Vehicle is checked to ensure that it is correctly and clearly marked/placarded for the load being carried |
| **3 Check emergency procedures and equipment** | 3.1 Emergency information for each type of transported dangerous good is noted  
3.2 Regulatory and workplace procedures for an incident are noted including notification of relevant personnel and authorities and, where appropriate, use of equipment for containment, clean up or recovery  
3.3 Personal protective equipment and safety equipment are checked for operational capability and appropriateness to the proposed load  
3.4 Emergency information is located in the cabin in accordance with current ADG Code requirements |
| **4 Evaluate documented route plan** | 4.1 Selected route plan and potential difficulties including regulatory restrictions, traffic flow and conditions, obstacles, road standards and construction activities are assessed  
4.2 Regulatory and workplace procedures for driving, parking, loading and unloading are identified including actions for |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
5 Complete documentation | disengaging and/or securing the vehicle

5.1 The load is inspected and checked for security to travel in accordance with relevant regulations/permit requirements and the current ADG Code

5.2 All required documentation for the dangerous goods is completed in accordance with regulatory and workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Current Australian Dangerous Goods Code and relevant state/territory mass and loading regulations as they apply to vehicles transporting dangerous goods
- OH&S procedures and guidelines concerning the transport of dangerous goods
- Risks when transporting dangerous goods and related precautions to control the risk
- Workplace procedures and policies for the preparation of dangerous goods
- Problems that may occur when preparing for the transport of dangerous goods and action that should be taken to prevent or solve them
- Housekeeping standards procedures required in the workplace
- Methods of securing a vehicle following loading of dangerous goods
- Relevant permit and licence requirements

Required skills:

- Communicate effectively with others when preparing for the transport dangerous goods
- Read and interpret instructions, procedures, information and signs relevant to the preparation of dangerous goods for transport
- Identify goods coding, markings and, where applicable, emergency information panels for the mode of transport/storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation of dangerous goods for transport
- Operate electronic communication equipment to required protocol
- Estimate the mass, volume and special requirements of a load
- Work collaboratively with others when preparing for the transport of dangerous goods
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when preparing for the transport of dangerous goods in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may arise when preparing for the transport of dangerous goods
- Recognise the hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during the preparation of dangerous goods for transport
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment required to load dangerous goods
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - assessing operational suitability of equipment and vehicles pertinent to dangerous goods transportation
  - estimating weight and dimensions of load and any special requirements
  - applying hierarchy of hazard control
  - maintaining workplace records and documentation including completion of dangerous goods declaration
EVIDENCE GUIDE

- determining (any) required permits
- identifying hazards and planning work to minimise risks when transporting dangerous goods
- selecting appropriate equipment and work systems to enable safe, efficient work

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external
RANGE STATEMENT

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Vehicle refers to:
- all applicable transportation modes

Hazards in the work area may include exposure to:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- dust/vapours

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- mask or respirator
- breathing apparatus
- high visibility clothing

Load restraint systems are:
- as detailed in the National Load Restraint Guide

Preparation of packaged dangerous goods for transport may:
- require special precautions as specified by the manufacturer

Transport documentation may include:
- Initial Emergency Response Guide
- Emergency Procedure Guide
- Material Safety Data Sheet (MSDS)
- descriptions for dangerous goods (i.e. proper shipping name, class and division number, packing group, subsidiary risk(s) if any)
- UN or ID number

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident breakdown procedures
RANGE STATEMENT

- additional gear and equipment
- noise restrictions
- hours of operation
- authorities and permits

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- management and union representatives
- industrial relations, OH&S specialists, and other maintenance, professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Safety equipment on vehicle may include:

- fire extinguishers
- portable warning devices
- eye wash kit

Information/documents may include:

- current Australian Dangerous Goods Code, relevant Australian Standards and International Standards
- Safe Working Load (SWL) and Working Load Limit (WLL)
- manifests, bar codes, goods and product identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the transfer of product
- goods identification numbers, codes and signs
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant standards and certification requirements
- quality assurance procedures
- emergency procedures
- manufacturers specifications, instructions and labelling advice for the packaged dangerous goods, including
RANGE STATEMENT

Applicable regulations and legislation may include:

- state/territory mass and loading regulations
- current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - International Air Transport Association (IATA) Dangerous Goods by Air regulations
  - Australian and state/territory regulations related to the carriage of dangerous goods
  - workplace relations regulations
  - equal opportunity legislation
  - equal employment opportunity and affirmative action legislation
  - relevant Australian and International Standards
  - relevant state/territory environmental protection legislation
  - relevant state/territory OH&S legislation

Unit Descriptor
This unit involves the skills and knowledge required to prepare and rig all types of loads in preparation for lifting by a crane, including preparing for the transfer of a load, assessing lifting requirements, securing a load, and detaching a load. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to the rigging of loads during mobile crane operations.

Work is performed with general supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the rigging of loads during mobile crane operations in a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for transfer of load** | 1.1 Working area is prepared and maintained in accordance with national standards and safety codes and workplace operating procedures  
1.2 Unsafe work practices and/or faulty equipment are reported in accordance with workplace procedures  
1.3 Correct personal protective equipment is identified and worn |
| **2 Assess lifting requirements** | 2.1 Work operations plan is examined and requirements for the lift identified including job method and sequence, control measures and safety procedures  
2.2 Coordination requirements with other site personnel are confirmed  
2.3 The mass, dimensions and centre of gravity of the load are determined  
2.4 Appropriate lifting gear/equipment/packing, including slings, ropes, shackles, eye bolts, spreaders etc. is selected (from safety charts and SWL/WLL tags), assembled and checked for serviceability  
2.5 Damaged or worn items are tagged, rejected and reported to appropriate personnel for follow-up action |
| **3 Secure load** | 3.1 Lifting/anchorage points are correctly identified  
3.2 Lifting gear/equipment/packing is connected to the load, and load is secured to lifting device in accordance with workplace and manufacturers specifications, guidelines and regulatory requirements  
3.3 Load is lifted and suspended off the lifting plane and checked to ensure it is appropriately rigged and secured  
3.4 Corrective action is undertaken where preliminary lift assessment reveals unacceptable operational situation  
3.5 Tag lines are fixed to load in accordance with work operation plan and/or, in consultation with other personnel, where required due to wind conditions and site hazards/obstacles |
| **4 Detach load** | 4.1 Slinging attachments are released from load ensuring no injury to personnel or damage to workplace operating procedures  
4.2 Damage to load/site is identified and reported in accordance with workplace procedures  
4.3 Lifting gear/equipment/packing is maintained and stored in accordance with workplace and manufacturers specifications, guidelines and regulatory requirements |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to rigging of loads during mobile crane operations
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Requirements for Safe Working Load (SWL) or Working Load Limit (WLL)
- Prioritising and multi-tasking work
- Workplace procedures concerning the rigging of loads during mobile crane operations
- Problems that may arise when rigging a load during mobile crane operations and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when rigging a load during mobile crane operations
- Read and interpret instructions, procedures, information and signs relevant to the rigging of a load during mobile crane operations
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when rigging a load during mobile crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when rigging a load during mobile crane operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected situations that may arise when rigging a load during mobile crane operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the rigging of a load as part of mobile crane operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or
Required skills:

- damage to goods or equipment
- Identify and correctly use equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition and performance of gear and equipment and take appropriate action where required
- Service gear and equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic
- internal or external

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
RANGE STATEMENT

- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Loads to be shifted are:
- rigged and secured in accordance with workplace and regulatory standards/codes of practice

Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:
- operations manuals including load charts and crane and rigging manuals
RANGE STATEMENT

- Safe Working Load (SWL) and Working Load Limit (WLL)
- lifting gear safety charts
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- material safety data sheets
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

| **1 Position and stabilise crane** | **1.1 Crane is driven to position as per job plan to ensure safe operation in accordance with applicable Australian standards, codes of practice, manufacturers specifications and, where applicable, regulatory and local government requirements**  
1.2 Where appropriate, barriers, fencing, temporary boundaries, signage and the like are used to isolate working area in accordance with safe working practice and lift requirements  
1.3 Ground is checked to ensure it is firm enough to bear the load  
1.4 Appropriate plates or packing are correctly used to adequately distribute the load  
1.5 Any outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturers instructions and the appropriate Australian standard and other relevant statutory regulations or local authority requirements  
1.6 Outrigger packing is checked for adequacy prior to and after load is taken |
| **2 Operate vehicle-mounted crane** | **2.1 Planned hazard control strategies are implemented**  
2.2 Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards  
2.3 Load mass is assessed and correlated with lifting capacity of crane throughout proposed radii of operation  
2.4 Appropriate lifting gear is selected and load secured  
2.5 Load is hoisted and lowered into position using crane movements in accordance with the appropriate Australian standard  
2.6 Crane controls are operated smoothly  
2.7 Crane is shut down and secured during periods of non-operation according to manufacturers specifications and workplace procedures |
| **3 Monitor lift conditions** | **3.1 Load is constantly monitored to ensure load and structural stability**  
3.2 Conditions which may affect the continuing stability of the crane are identified and monitored  
3.3 Unplanned situations are responded to in line with workplace procedures in a manner that minimises risk to personnel and equipment  
3.4 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions, or conflict with customer request  
3.5 Supervisor/allocator is advised of any concern about completing the job within timeframe |
ELEMENT PERFORMACE CRITERIA

3.6 Shut-down procedures are implemented in accordance with manufacturers instructions in the event of an emergency
3.7 The relevant motion locks and brakes are applied
3.8 Crane is shut down using the correct sequence of procedures in accordance with manufacturers specifications and workplace procedures
3.9 Routine post-operational equipment checks are carried out in accordance with manufacturers specifications

4 Pack up crane

4.1 All lifting equipment and crane components are checked for any signs of deterioration or damage in accordance with the appropriate Australian standard
4.2 Damaged or worn equipment is segregated and reported to an authorised person for testing/repair/destruction
4.3 Crane equipment is correctly stowed and secured in accordance with manufacturers instructions and the appropriate Australian standard
4.4 Crane is immobilised and secured for travel in accordance with manufacturers instructions, workplace guidelines and regulatory requirements

5 Complete job records

5.1 Customer feedback is sought regarding satisfaction with the completed job and any areas of concern reported according to workplace procedures
5.2 Customer's signature on job completion documentation is obtained
5.3 Required workplace records are updated accurately and promptly and processed according to workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
REQUIRED KNOWLEDGE AND SKILLS

- Company work procedures concerning the setting up and rigging of a mobile crane at a work site
- Problems that may arise when operating a vehicle-mounted loading crane and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:

- Communicate effectively with others when operating a vehicle-mounted loading crane
- Read and interpret instructions, procedures, information and signs relevant to the operation of a vehicle-mounted loading crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of a vehicle-mounted loading crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a vehicle-mounted loading crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a vehicle-mounted loading crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when operating a vehicle-mounted loading crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a vehicle-mounted loading crane
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of crane and its equipment and take appropriate action where required
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
RANGE STATEMENT

Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:
- operations manuals for vehicle-mounted loading cranes
- Safe Working Load (SWL) and Working Load Limit (WLL)
- material safety data sheets
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications for vehicle-mounted loading cranes
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
RANGE STATEMENT

Applicable procedures and codes may include:

- quality assurance procedures
- emergency procedures
- relevant state/territory regulations and licence/permit requirements pertaining to vehicle-mounted loading cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to operate a boom type elevating work platform, including inspecting and testing the elevating work platform, assessing job requirements and work, planning work and setting up for lift, carrying out the elevation, implementing planned hazard control and strategies, and packing up the work platform after operations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to boom type elevating work platform operations.

Work is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the operation of a boom type elevating work platform in a variety of operational contexts.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Inspect and test elevating work platform | 1.1 Work platform is visually inspected prior to operation for any evidence of damage, structural weakness or interference according to pre-operational safety check procedures  
1.2 Routine pre-operational equipment checks are carried out in accordance with available checklists  
1.3 Work platform log book is checked, service requirements are noted and maintenance personnel advised of any requirements  
1.4 Elevating work platform is started in accordance with manufacturers guidelines and start-up procedures for operations and any abnormal noise or movement reported to an authorised person for corrective action  
1.5 Start-up checks are conducted according to manufacturers specifications and company procedures to ensure work platform and equipment are operating correctly  
1.6 Faults are corrected or are reported to an authorised person for corrective action according to company procedures  
1.7 The operating and emergency controls are checked for correct operation in accordance with manufacturers specifications including use of the emergency decent device  
1.8 Boom is lowered under simulated emergency conditions to check for operational effectiveness  
1.9 Gear and accessories are checked and damaged or worn gear is segregated and reported to an authorised person for testing/repair/destuction  
1.10 Results of inspections are recorded and reported according to company procedures |
| 2 Assess job requirements and work | 2.1 Briefing, hand-over details, authorisations and clearances are received, interpreted and clarified in accordance with company and site procedures and legislative requirements  
2.2 Work area is inspected and potential hazards are identified and appropriate elimination or control measures selected  
2.3 Weight of load including personnel and equipment is correctly estimated to ensure job is within limits of work platform capacity |
| 3 Plan work and set up for lift | 3.1 A work plan is developed and agreed with relevant workplace personnel to include hazard prevention/control measures and safety and emergency procedures in line with applicable Australian standards  
3.2 A suitable firm and level standing is chosen and prepared for the location of the elevating work platform  
3.3 Outriggers and stabilisers are correctly deployed and positioned |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
in accordance with manufacturers instructions and appropriate Australian standards
3.4 Appropriate plates or packing are correctly used under the footplates as required to adequately distribute the loading
3.5 Ground is checked before and after packing is installed to ensure it is firm enough to bear the load
3.6 The job plan is developed to include hazard prevention/control measures and safety procedures in line with applicable Australian standards and to equipment manufacturers specifications
3.7 Work platform load chart is located and information on permissible loads, radii and heights taken into account in planning the job
3.8 The job plan takes into account job requirements and workplace rules and procedures
3.9 Job plan is discussed and confirmed with relevant personnel
3.10 Work gear and tools are properly stowed in the elevating work platform in accordance with Australian standards, company procedures and guides

4 Carry out elevation
4.1 Configuration and operation of elevating work platform are checked as necessary to ensure safe lift
4.2 Operation of work platform is carried out in accordance with the job plan, the appropriate Australian standard and manufacturers specifications

5 Planned hazard control and strategies are implemented
5.1 Load is constantly monitored to ensure safety of personnel, load and structural stability
5.2 Unplanned situations are responded to in line with company procedures in a manner that minimises risk to personnel and equipment
5.3 Required signals are correctly given, interpreted and followed in accordance with appropriate Australian standards

6 Pack up work platform
6.1 The elevating work platform is shut down using the correct sequence of procedures in accordance with manufacturers instructions
6.2 Routine post-operational equipment checks are carried out in accordance with manufacturers instructions and available checklists and defects recorded and reported in line with company procedures
6.3 The elevating work platform is dismantled in accordance with the job plan, manufacturers instructions and relevant statutory regulations
6.4 The outriggers and stabilisers are secured and stowed in
ELEMENT PERFORMANCE CRITERIA

accordance with manufacturers instructions

6.5 The elevating work platform is correctly stowed and secured in accordance with manufacturers instructions and company procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to boom type elevating work platform operation
- Relevant OH&S and environmental procedures and regulations
- Boom type elevating work platform applications, capacities, configurations, safety hazards and control mechanisms
- Workplace procedures concerning the operation of a boom type elevating work platform at a worksite
- Problems that may arise when operating a boom type elevating work platform and actions that should be taken to prevent or solve them
- Risks and hazards involved in the operation of a boom type elevating work platform and the associated action that can be taken to eliminate or minimise the risk/hazards concerned
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when operating a boom type elevating work platform
- Read and interpret instructions, procedures, regulations, codes of practice and manuals relevant to the operation of a boom type elevating work platform
- Interpret and follow operational instructions
- Complete documentation related to the operation of a boom type elevating work platform
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating a boom type elevating work platform
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating a boom type elevating work platform in accordance with regulatory requirements and workplace procedures
Required skills:

- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Implement contingency plans for unanticipated situations that may arise when operating a boom type elevating work platform
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of a boom type elevating work platform
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Identify and correctly use equipment, processes and procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
EVIDENCE GUIDE

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in a variety of weather conditions

Environment may include movement of:

Unit Descriptor
This unit involves the skills and knowledge required to lift and move a load using a non-slewing mobile crane or a slewing mobile crane. It includes operating the mobile crane to complete job requirements, monitoring lift conditions, implementing shut-down procedures, packing up crane after operations, and completing all required job records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles, procedures and regulations to lift and move loads using slewing and non-slewing mobile cranes in a variety of operational contexts.

5 | Complete job records
5.1 Customer feedback is sought regarding satisfaction with the completed job, and any areas of concern are reported according to workplace procedures
5.2 Customer's signature on job completion documentation is obtained
5.3 Required workplace records are updated accurately and promptly and processed according to workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Risks and hazards involved in mobile crane operation, and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures concerning the operation of a mobile crane at a worksite
- Problems that may occur during a lift, and associated action that can be taken to address the problems concerned
- Communication systems used during a lift
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when lifting and moving a load using a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to the lifting and moving of a load using a mobile crane
Required skills:

- Complete documentation related to the lifting and moving of a load using a mobile crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when lifting and moving a load using a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when lifting and moving a load using a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when lifting and moving a load using a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the lifting and moving of a load using a mobile crane
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Provide lift instructions | 1.1 Load movement is performed in accordance with planned hazard prevention and control measures in line with appropriate Australian standards, codes of practice, guides and manufacturers specifications  
1.2 Agreed communication and signal methods are used to coordinate the load movement with safety  
1.3 Verbal communication and signals are clear, precise and concise so that they can be understood  
1.4 Instructions take into account all relevant parameters to ensure safe, stable and smooth lift |
| 2 Monitor lift | 2.1 Load is constantly monitored to ensure it remains stable  
2.2 Load conditions which may affect the continuing stability are identified and monitored  
2.3 Any temporary bracing and/or load support is maintained until continuing stability is ensured  
2.4 Unplanned situations are responded to according to workplace procedures in a manner that minimises risk to personnel and equipment  
2.5 Site emergency procedures are followed |
| 3 Place and secure load | 3.1 Appropriate materials for fixing and anchoring the load are checked and selected in line with manufacturers specifications  
3.2 Appropriate fixing methods are used to secure the load in line with manufacturers specifications and guides  
3.3 Temporary securing is installed where hazards and weather conditions may vary during the load movement |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation  
- Relevant OH&S and environmental procedures and regulations  
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms  
- Risks and hazards involved in mobile crane operation and associated action that can be taken
REQUIRED KNOWLEDGE AND SKILLS

to eliminate or minimise the risk

- Workplace procedures concerning the controlling of the lift and movement of a mobile crane
- Problems that may occur during a lift and associated action that can be taken to address the problems concerned
- Communication systems used during a lift
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when directing and controlling the lift and movement of a mobile crane
- Read and interpret instructions, procedures, information, technical data, manuals and signs relevant to the control of the lift and movement of a mobile crane
- Complete documentation related to the lift and movement of a mobile crane
- Operate electronic communication equipment to required protocol
- Work collaboratively with others during the control of the lift and movement of a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when directing and controlling the lift and movement of a mobile crane in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when directing and controlling the lift and movement of a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the control of the lift and movement of a mobile crane
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be any slewing and non-slewing mobile crane involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Consultative processes may include:
- other employees and supervisors
RANGE STATEMENT

involve:

- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Load movements may include:

- luffing
- slewing
- hoisting
- telescoping boom

Documentation/records may include:

- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
RANGE STATEMENT

- workplace agreements and awards
- occupational health and safety procedures
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant Australian standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Sector(s)

Unit Descriptor

This unit involves the skills and knowledge required to shift loads using gantry equipment in accordance with workplace and regulatory requirements, including planning the work for the prevailing working conditions; using the controls and operating systems to manage the operation of the equipment; locating the load and identifying the load characteristics; safely moving the load; monitoring the controls; and stopping, shutting down and securing the equipment after the completion of operations.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the shifting of loads using gantry equipment.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when shifting loads using gantry equipment as part of work activities in the stevedoring, transport, distribution and allied industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Plan work for the prevailing working conditions | 1.1 Traffic flow, weather and work area conditions are constantly assessed and anticipated to allow safe operation to ensure no injury to people, or damage to equipment, loads or facilities  
1.2 Characteristics of the load are taken into account to ensure that, where applicable, appropriate attachments/gear are used to move the load  
1.3 Any occurrences in the work area that may affect the safety and efficiency of operations are reported to the appropriate personnel |
| **2** Use controls and operating systems to manage the operation of the equipment | 2.1 Equipment is prepared and appropriate attachments fitted (where applicable)  
2.2 Gear and operational levers are checked to ensure that they are in the neutral position prior to inserting ignition key and starting engine  
2.3 Engine is started in accordance with manufacturers guidelines to bring the engine to speed  
2.4 Instruments and gauges are monitored during start-up and operations to ensure that operation is within manufacturers specifications and workplace and regulatory safety requirements  
2.5 Engine power is managed for efficiency of equipment movement and economy of equipment operations  
2.6 Equipment operations are conducted within manufacturers specified torque range  
2.7 Any faults or damage to equipment are immediately reported to the appropriate personnel |
| **3** Locate load and identify load characteristics | 3.1 Load is located and identified according to instructions  
3.2 Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of the gantry equipment are identified  
3.3 Load weight and dimensions are checked to ensure they fall within the capacity of the equipment  
3.4 Loading and unloading plans are followed to ensure efficiency and safety of operations  
3.5 Characteristics of the load are taken into account to ensure that appropriate loading and unloading procedures are followed  
3.6 Hazardous cargo is identified and relevant procedures are taken into account when planning and conducting the work |
| **4** Safely move load | 4.1 Equipment is operated and positioned using smooth and controlled movements  
4.2 Manoeuvres are within the limits of the equipment and in line with manufacturers specifications |
ELEMENT  PERFORMANCE CRITERIA

4.3 Load is moved ensuring no injury to personnel or damage to equipment or cargo

4.4 Continuous communication is maintained with personnel assisting the operator in the load movement operations using appropriate communications technology and procedures

4.5 In the event of a safety incident or emergency, the equipment is immediately stopped and workplace emergency procedures followed

4.6 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements

5 Monitor and operate controls

5.1 Equipment controls are monitored and operated in accordance with manufacturers operating instructions

5.2 Control systems are understood and acted upon in accordance with regulatory requirements, manufacturers guidelines and workplace operating procedures

5.3 Control faults are identified and reported in accordance with enterprise guidelines

5.4 Hazards in the work area are identified and appropriate measures are adopted to control the risks in accordance with regulatory requirements and workplace procedures

6 Stop, shut down and secure equipment

6.1 Equipment is brought to a controlled halt and shut down without injury to personnel or damage to equipment, loads or facilities in accordance with manufacturers guidelines and workplace procedures

6.2 Equipment is secured in accordance with manufacturers instructions and workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes, regulations, licence/permit requirements relevant to the use of gantry equipment to shift loads
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use of gantry equipment to shift loads
- Focus of operation of work systems, equipment, management and site operating systems for the use of gantry equipment to shift loads
REQUIRED KNOWLEDGE AND SKILLS

- Problems that may occur when using gantry equipment to shift loads and appropriate action that can be taken to resolve the problems
- Relevant safety codes and emergency procedures
- Types of gantry equipment used to shift loads in terminals/wharves, their applications and procedures and precautions for their use
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of gantry equipment
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when shifting loads using gantry equipment
- Read and interpret instructions, procedures, information and labels relevant to the shifting of loads using gantry equipment
- Identify cargo, container and goods, coding, ADG and IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the shifting of loads using gantry equipment
- Receive, acknowledge and send messages with appropriate communications equipment
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when shifting loads using gantry equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when shifting loads using gantry equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when shifting loads using gantry equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using gantry equipment
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when using gantry equipment to shift loads
Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Apply effective eye-hand coordination to operational tasks
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Cargo/freight may include:
- goods/containers with specialist requirements, including temperature controlled goods and dangerous goods

Range of equipment may include:
- various types of bridge and gantry cranes

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
### RANGE STATEMENT

**Communication in the work area may include:**
- high visibility clothing
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

**Personnel in work area may include:**
- workplace personnel
- site visitors
- contractors
- official representatives

**Consultative processes may involve:**
- staff members
- management
- union representatives
- industrial relations, OH&S specialists
- other professional or technical staff

**Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:**
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

**Information/documents may include:**
- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the shifting of loads using gantry equipment
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
RANGE STATEMENT

Applicable regulations and legislation may include:

- quality assurance procedures
- emergency procedures
- relevant codes and regulations for the shifting of cargo/containers using gantry equipment
- Australian and international regulations and codes of practice for the handling of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- relevant Australian Standards including AS 1418 and AS 2550
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

4.3 Load is moved ensuring no injury to personnel or damage to crane or cargo  
4.4 Continuous communication is maintained with personnel assisting the operator in the load movement operations using appropriate communications technology and procedures |
ELEMENT PERFORMANCE CRITERIA

4.5 In the event of a safety incident or emergency, the crane is immediately stopped and workplace emergency procedures followed

4.6 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements

5 Monitor controls

5.1 Crane controls are monitored and operated in accordance with manufacturers operating instructions

5.2 Control systems are understood and acted upon in accordance with regulatory requirements, manufacturers guidelines and workplace procedures

5.3 Control faults are identified and reported in accordance with workplace guidelines

6 Stop, shut down and secure equipment

6.1 Crane is brought to a controlled halt within manufacturers guidelines and shut down without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures

6.2 Crane is secured after operations in accordance with manufacturers instructions and workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the use of cranes to shift loads, including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use of cranes to shift loads
- Focus of operation of work systems, equipment, management and site operating systems for the use of boom cranes to shift loads
- Problems that may occur when using cranes to shift loads and appropriate action that can be taken to resolve the problems
- Relevant safety codes and emergency procedures
- Types of boom cranes used to shift loads in terminals/wharves, their applications and procedures and precautions for their use
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of cranes
- Relevant bond, quarantine or other legislative requirements
Required skills:

- Communicate effectively with others when shifting loads using cranes
- Read and interpret instructions, procedures, information and labels relevant to the shifting of loads using cranes
- Identify cargo, container and goods, coding, ADG and IMDG markings and, where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the shifting of loads using cranes
- Receive, acknowledge and send messages with appropriate communications equipment
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when shifting loads using cranes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when shifting loads using cranes in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when shifting loads using cranes
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the shifting of loads using cranes
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when using cranes to shift loads
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of crane and its equipment and take appropriate action where required
- Apply effective eye-hand coordination to operational tasks
- Service equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

Competency Field

Competency Field  D - Load Handling
TLID3046A Operate container side lifter

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to operate a container side lifter (swing lifter, side loader), to load a container from the ground onto a vehicle, unload a container from vehicle to ground, and transfer a container from one vehicle to another. It also includes systematic and efficient control of all functions, management of side lifter condition and performance, and effective management of hazardous situations whilst operating a container side lifter. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Operation of a container side lifter must be carried out in compliance with the licence requirements and regulations of the relevant state/territory worksafe authority pertaining to operation of a truck mounted side lifter.

Operation of a container side lifter is performed with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Check a container side lifter and ancillary equipment | 1.1 Load lifting capacity for side lifter and ancillary equipment (if fitted) is identified in terms of maximum rated capacity  
1.2 Pre-operational checks are conducted on the side lifter, lifting assemblies, specialist lifting equipment, and ancillary equipment (if fitted) for serviceability and suitability for the task and readiness for operation |
| 2 Ensure site safety | 2.1 Ground conditions are checked to ensure stability  
2.2 Site safety is managed in accordance with workplace policy and procedures  
2.3 Exclusion zones are identified and implemented |
| 3 Load a loaded container from the ground onto a side lifter vehicle | 3.1 The container weight is checked to ensure it is within the specified maximum lifting capacity of the side lifter vehicle  
3.2 The side lifter is positioned, the lifter engine is started, and side lifter readiness for lift, including deployment of stabiliser legs, is completed in accordance with manufacturers specifications and organisational requirements  
3.3 Lifting equipment is attached to the container, checked, and adjusted if required, in accordance with manufacturers specifications and organisational requirements  
3.4 Pre-lift physical check is performed to ensure side lifter is capable of lifting container safely  
3.5 The container is lifted and placed onto the side lifter twist locks in accordance with organisational requirements  
3.6 The loaded container is secured and the vehicle is made ready for on-road travel in accordance with regulatory requirements, manufacturers specifications and workplace procedures |
| 4 Unload a loaded container from a side lifter vehicle onto the ground | 4.1 The container weight is checked to ensure it is within the specified maximum lifting capacity of the side lifter vehicle  
4.2 The side lifter is positioned, the lifter engine is started, and side lifter made ready to for lift, including deployment of stabiliser legs, is completed in accordance with manufacturers specifications and/or organisational requirements  
4.3 Load securing devices are unlocked or removed and lifting equipment is attached to the container, checked, and adjusted if required, in accordance with manufacturers specifications and/or organisational requirements  
4.4 Pre-lift physical check is performed to ensure side lifter is capable of lifting container safely  
4.5 The container is lifted and placed on the ground, in accordance with organisational requirements, allowing access to the... |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
container doors and surroundings
4.6 The lifting equipment is removed from the container and the side lifter vehicle is made ready for on-road travel in accordance with manufacturers specifications and regulatory requirements

5 Transfer a loaded container from one vehicle to another

5.1 Receiving vehicle and container is checked to ensure they are compatible and that the receiving vehicle's load capacity is adequate for the intended load
5.2 Positioning of all vehicles meets intended transfer requirements
5.3 The lifter engine is started, and side lifter made ready for lift
5.4 Load securing devices are unlocked or removed and lifting equipment is attached to the container, checked, and adjusted if required, in accordance with manufacturers specifications and/or organisational requirements
5.5 Pre-lift physical check is performed to ensure side lifter is capable of lifting container safely
5.6 The container is transferred to the receiving vehicle in accordance with manufacturers and organisational requirements
5.7 The lifting equipment is removed from the container and both vehicles are made ready for on-road travel in accordance with regulatory requirements and manufacturers specifications and workplace procedures
5.8 The loaded container is secured in accordance with regulatory requirements and manufacturers specifications

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant PPE for side lifter operations
- Relevant OH&S and environmental procedures and regulations
- Side lifter vehicle handling procedures
- Workplace driving and operational instructions
- Engine power management and safe driving strategies
- Efficient driving techniques
REQUIRED KNOWLEDGE AND SKILLS

- Pre-operational checks carried out on side lifter and ancillary equipment

Required skills:

- Communicate effectively with others when operating side lifter vehicle
- Read and interpret instructions, procedures, information and signs relevant to the operation of a side lifter vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operating of a side lifter vehicle
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when operating side lifter vehicle
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unexpected events when operating side lifter vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when operating a side lifter vehicle
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of vehicle, its trailers and its equipment and take appropriate action where required
- Service vehicle and its equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - relocating a container using a side lifter from ground to vehicle
  - relocating a container using a side lifter from vehicle to ground
  - relocating a container from one vehicle to the other

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - as a minimum, with a container loaded with at least 60% of its maximum rated capacity
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
- A simulator is not suitable for final assessment of this unit of competency

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

A side lifter can be described as:
- truck mounted
- trailer mounted

A container can be described as:
- flat packs
- dry shipping containers
- refrigerated shipping containers
- reefers
- bulk tank shipping containers
- open top shipping containers
- collapsible shipping containers
- general shipping containers

Shipping container length/height can be described as:
- various single unit sizes from 20 foot (6 metres) through to 50 foot (15 metres)
- 8'6" standard height or 9'6" high cube units
- 2 x 20 foot (6 metres) units coupled together for simultaneous loading/unloading
- 2 containers double stacked for simultaneous loading/unloading

Ancillary equipment can be described as:
- independently powered hydraulic equipment
- spreader bars and locks
- container locks
- remote control units
- warning devices and equipment
- stabiliser leg blocks

Lifting equipment could be:
- lifting chains
- lifting frames

Operation of a side lifter vehicle may be carried out in typical road logistic situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- in remote areas
- while at a client's workplace or work site

Pre-operational checks include:
- visual check of vehicle and ancillary equipment
- checking and topping up of fluid levels
- checks of operation of vehicle lights and indicators
- checks of all levers and operational gauges on ancillary equipment

Depending on the type of
- company procedures
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures include:

- enterprise procedures
- organisational procedures
- established procedures

Documentation/records include:

- state/territory side lifter vehicle licence/permit requirements
- state/territory regulation pertaining to securing a container
- state/territory road rules
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Industry Safety Code, and National Standards for Manual Handling
- workplace instructions and procedures
- vehicle manufacturers instructions, specifications and recommended procedures including pre-operational checks of vehicle
- emergency procedures

Applicable procedures and codes include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to side lifter vehicles
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field D - Load Handling
TLID3047A Shift loads using ship mounted crane

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to shift loads using ships cranes in accordance with workplace and regulatory requirements. It includes planning the work for the prevailing working conditions; using the controls and operating systems to manage the operation of the crane; locating the load and identifying load characteristics; safely moving the load; monitoring the controls; and stopping, shutting down and securing the crane after the completion of operations.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the shifting of loads using ships cranes.
Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when shifting loads using cranes as part of work activities in the stevedoring, transport, distribution and allied industries.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan work for current working conditions

1.1 Crane movement areas are assessed to ensure they are clear of personnel and other obstructions and hazards

1.2 Traffic flow and work area conditions in proximity of load landing area are assessed to ensure safety of personnel and to ensure there is no damage to equipment, loads and facilities

1.3 Characteristics of load are taken into account to ensure that where applicable, appropriate attachments/gear are used to move load

1.4 Occurrences in work area that may impact on safety and efficiency of operations are reported to appropriate personnel

2 Check controls and crane operating systems

2.1 Crane is prepared for operation in accordance with workplace procedures

2.2 Relevant aspects of Marine Orders are explained and applied

2.3 Crane is started in accordance with manufacturer guidelines and workplace procedures

2.4 Radio communication is confirmed with personnel assisting operator in load shifting

2.5 Instruments and gauges are monitored during start up and operations to ensure operation is within manufacturer specifications and workplace/regulatory safety requirements

2.6 Movements of crane are tested in a trial run, over water if possible

2.7 Faults or damage to crane are immediately reported to appropriate personnel

3 Identify load characteristics

3.1 Load weight and dimensions are confirmed to ensure they fall within crane capacity

3.2 Loading and unloading plans are followed to ensure efficiency and safety of operations
3.3 Load characteristics are taken into account to ensure appropriate loading and unloading procedures are followed

3.4 Hazardous cargo is identified and relevant procedures are taken into account when planning and conducting work

3.5 Non routine cargo lifts are identified and appropriate lifting methods and equipment are arranged

4 Safely move load

4.1 Crane is operated using smooth and controlled movements, and allowances are made for any vessel trim or list movements during load transfer

4.2 Crane movements are efficiently managed to control block or load swing

4.3 In the event of sudden ship’s movement or excessive trim or list, warnings are immediately communicated to personnel

4.4 Manoeuvres are made within limits of the crane in accordance with manufacturer specifications

4.5 Load is moved ensuring no injury to personnel or damage to crane or cargo

4.6 Where required, simultaneous crane operations are planned and controlled appropriately in accordance with relevant procedures

4.7 Continuous communication is maintained with personnel assisting operator with load movement operations using appropriate communications technology and procedures

4.8 Wharf and vessel work area conditions are constantly assessed and anticipated to ensure crane movement areas are clear of personnel and other obstructions

4.9 In the event of a safety incident or emergency, crane is immediately stopped and workplace emergency procedures are followed

4.10 Safety incidents and emergencies are reported in accordance with workplace procedures and regulatory requirements

5 Monitor controls

5.1 Crane controls are monitored and operated in accordance with operating instructions

5.2 Control systems are explained and acted upon in accordance with regulatory requirements, manufacturer guidelines and workplace procedures
5.3 Control faults are identified and reported in accordance with workplace guidelines

6. Stop, shut down and secure equipment

6.1 Crane is brought to a controlled halt within operating guidelines and shut down without injury to personnel or damage to equipment, loads or facilities in accordance with workplace procedures

6.2 Crane is secured after operations in accordance with operating instructions and workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the use of cranes to shift loads, including Australian and International Dangerous Goods Codes and Marine Orders
- Focus of operation of work systems, equipment, management and site operating systems for using boom cranes to shift loads
- Problems that may occur when using cranes to shift loads and appropriate action that can be taken to resolve these problems
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- Relevant safety codes and emergency procedures
- Requirements for safe working load (SWL) and working load limit (WLL) of cranes
- Service and maintenance schedule requirements for lifting equipment
- Types of boom cranes used to shift loads in terminals/wharves, their applications and procedures and precautions for their use
- Workplace procedures and policies for using cranes to shift loads
- Workplace procedures for multiple crane, dual crane and heavy lift operations

Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Apply effective eye-hand coordination to operational tasks
- Apply fatigue management knowledge and techniques
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when shifting loads using cranes
- Communicate effectively with others when shifting loads using cranes
- Complete documentation related to shifting loads using cranes
- Estimate size, shape and special requirements of loads
- Identify cargo, container and goods, coding, Australian Dangerous Goods (ADG)/International Maritime Dangerous Goods Code (IMDG) markings and, where applicable, emergency information panels
- Identify, select and use relevant equipment, processes and procedures when using cranes to shift loads
- Implement contingency plans for unanticipated situations that may arise when shifting loads using cranes
- Interpret and follow operational instructions and prioritise work
- Monitor performance of crane and its equipment, and take appropriate action where required
- Monitor work activities in terms of planned schedule
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Promptly report and/or rectify identified problems, faults or malfunctions that may occur when shifting loads using cranes in accordance with regulatory requirements and workplace procedures
- Read and interpret instructions, procedures, information and labels relevant to shifting loads using cranes
- Receive, acknowledge and send messages using appropriate communications equipment
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
- Work collaboratively with others when shifting loads using cranes
- Modify activities depending on operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge.

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- by day or night
- in a range of work environments

Customers may be:
- external
- internal

Workplaces may comprise:
- large
- medium
- small worksites

Work may be conducted in:
- controlled or open environments
- exposed conditions
- limited or restricted spaces

Cargo/freight may include:
- dangerous goods
- goods/containers with specialist requirements
- temperature controlled goods

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include:
- gloves
- high visibility clothing
- protective clothing
- safety glasses
- safety headwear and footwear
- two-way radios

Communication in the work area may include:
- electronic data transfer (EDI)
- email
- fax
- oral, aural or signed communications
- phone
- radio
- radio frequency (RF) systems

Personnel in work area may include:
- contractors
- official representatives
- site visitors
- workplace personnel

Consultative processes may involve:
- management
- industrial relations, WHS/OHS specialists
- staff members
Workplace procedures may include:
- union representatives
- other professional or technical staff
- company procedures
- enterprise procedures
- established procedures
- organisational procedures

Information/documents may include:
- Australian and international codes of practice and regulations relevant to shifting loads using cranes
- Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances
- award, enterprise bargaining agreement, other industrial arrangements
- dangerous goods declarations and safety data sheets (SDS)/material safety data sheets (MSDS)
- emergency procedures
- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- manufacturer specifications for equipment
- operations manuals, job specifications and induction documentation
- quality assurance procedures
- relevant Australian Standards and certification requirements
- supplier and/or client instructions
- workplace procedures and policies

Applicable regulations and legislation may include:
- Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - Australian and International Explosives Codes
- export/import/quarantine/bond requirements
- licence, patent or copyright arrangements
- marine orders
- relevant Australian Standards, including AS 2550
- relevant codes and regulations for shifting cargo/containers using cranes
- relevant state/territory WHS/OHS and environmental protection legislation
- water and road use and licence arrangements
Simultaneous crane operations include:

- operation of multiple cranes in close proximity of each other

Dual crane operations include:

- operation of two separate cranes undertaking same cargo lift

Non routine crane lifts may include:

- heavy lifts
- lifts requiring specialised rigging requirements
- out of gauge lifts

Unit Sector(s)

Not applicable.

Competency Field

D - Load Handling
TLID3048A Pack and unpack furniture and effects

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to pack and unpack cartons during a removal, including preparing for packing, packing and unpacking cartons, dismantling and reassembling items of furniture and completing packing/unpacking process. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant industry codes of practice for the packing and unpacking of cartons, and dismantling and reassembly of furniture during a removal.
Work is performed under limited or minimum supervision generally within a team environment. It involves the application of the basic principles and routine procedures for handling furniture and effects in a range of furniture removal contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1 **Prepare for packing and dismantling**

1.1 Removels documentation is checked to identify items of furniture and effects for removal

1.2 Appropriate materials, tools and equipment are selected to dismantle, reassemble, pack, wrap and protect identified furniture and effects for removal, in accordance with workplace procedures

1.3 Convenient, suitable and unrestricted work area is selected and prepared in consultation with client for packing, unpacking, dismantling or reassembling

1.4 Items for removal are identified and packing order is determined in accordance with removals documentation

1.5 Cartons, protective and other materials are selected and located in an accessible area

1.6 Items ineligible for removal are identified in accordance with industry standards and workplace procedures, and appropriate action is taken in consultation with client

1.7 Confirm items are appropriately prepared for travel in accordance with workplace procedures

2 **Pack cartons**

2.1 Items for removal are wrapped and packed in accordance with industry standards and workplace procedures

2.2 Fragile or valuable items are specially wrapped and positioned in accordance with workplace procedures and industry standards

2.3 Cartons are sealed and labelled in accordance with removals documentation and workplace procedures

2.4 Hazardous items are identified in accordance with removals documentation and workplace procedures, and appropriate action is taken in consultation with client

3 **Dismantle and reassemble furniture items**

3.1 Identified removal items are dismantled in accordance with industry standards, workplace procedures and manufacturer requirements

3.2 Dismantled items of furniture are packed, wrapped and stored in accordance with removals documentation and workplace procedures

3.3 Dismantled items of furniture are reassembled in accordance with industry standards, workplace procedures and manufacturer requirements

3.4 Client is advised of potential furniture reassembly restrictions at the
4 Complete unpacking

4.1 Cartons are unpacked and items are stowed in accordance with removals documentation, workplace procedures, and in consultation with client.

4.2 Used cartons are folded and removed, and rubbish is disposed of in accordance with workplace procedures.

4.3 All required removals documentation is completed in accordance with workplace requirements.
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable regulations and legislation such as:
  - relevant state/territory environmental protection legislation
  - relevant state/territory WHS/OHS legislation
- Appropriate labelling of items in regard to loading techniques
- Appropriate use of materials and tools
- Client service requirements including language, courtesy, behaviour and problem solving
- Different locations where work may be conducted:
  - client’s home/workplace
  - controlled or open environments
  - exposed conditions
  - restricted spaces
  - vehicle on the road
  - workplace, warehouse or depot
- Furniture dismantling and reassembly techniques
- Housekeeping standards and procedures during a removal
- Methods of securing a load on a removal vehicle
- Packing techniques for various types of furniture and effects
- Relevant information/documents such as:
  - award, enterprise bargaining agreement and other industrial arrangements
  - client instructions
  - codes of practice including the National Standards for Manual Handling and the industry safety code
  - emergency procedures
  - industry codes for furniture removal operations
  - manufacturer instructions
  - quality assurance procedures
  - removals documentation
  - standards and certification requirements
  - workplace procedures and policies for packing and unpacking cartons
- Risks when packing, unpacking, dismantling and reassembling furniture and effects during a removal and related precautions to control these risks
- Special precautions required for some furniture and effects
- Work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines concerning packing, unpacking, disassembling and reassembling furniture and effects
• Workplace procedures and policies for packing, unpacking, dismantling and reassembling furniture and effects

Required skills:

• Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
• Apply precautions and required action to minimise, control or eliminate hazards that may exist during packing and unpacking furniture and effects during a removal
• Communicate effectively with others when packing and unpacking furniture and effects during a removal
• Complete documentation related to packing and unpacking furniture and effects during a removal including the completion of labels and packing lists
• Implement contingency plans for unexpected situations that may arise when packing and unpacking furniture and effects during a removal
• Interpret and follow operational instructions and prioritise work
• Modify activities depending on operational contingencies, risk situations and environments
• Monitor work activities in terms of planned schedule
• Operate and adapt to differences in furniture and effects in accordance with standard operating procedures
• Promptly report and/or rectify identified problems that may occur when packing and unpacking furniture and effects during a removal in accordance with regulatory requirements and workplace procedures
• Read and interpret instructions, procedures and information relevant to packing and unpacking furniture and effects during a removal
• Select and use required personal protective equipment (PPE) conforming to industry and WHS/OHS standards:
  • gloves
  • high visibility vests
  • safety footwear
  • safety glasses
• Work collaboratively with others when packing and unpacking furniture and effects during a removal
• Work systematically with required attention to detail without injury to self or others or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- required knowledge and skills
- relevant legislation, workplace procedures and industry standards
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Resources for assessment include access to:

- range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate packing and unpacking cartons, and dismantling and reassembling furniture and effects
- direct observation of the candidate applying relevant WHS/OHS requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Items to be handled during a removal may include:
- books
- crockery
- electrical/electronic equipment
- glassware
- household effects and furniture
- office effects and furniture

Clients may be:
- external
- internal

Operations may be conducted:
- by day or night
- in a range of work environments and weather conditions

Hazardous items may include:
- broken glass/crockery
- dangerous goods
- fragile items
- heavy items

Workplace procedures may include:
- company procedures
- enterprise procedures
- established procedures
- organisational procedures

Unit Sector(s)

Not applicable.

Competency Field

D – Load Handling
TLID3049A Pack and wrap furniture and effects for international removals

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to wrap and pack furniture and effects during an international removal, including preparing for packing and wrapping, packing and wrapping, completing packing process and completing all applicable documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant industry codes of practice for packing and wrapping furniture and effects during an international removal. Work is performed under limited or minimum supervision generally within a team environment. It involves the application of the principles and procedures for handling furniture and effects in a range of international furniture removal contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for packing and wrapping

1.1 All documents required to prepare for international removal are completed in accordance with workplace requirements

1.2 International removals documentation is checked to identify items of furniture and effects for removal

1.3 Appropriate materials, tools and equipment are selected to dismantle, pack, wrap and protect identified furniture and effects for international removal, in accordance with workplace procedures

2 Confirm onsite packing and wrapping requirements

2.1 Items of furniture and effects for removal are identified, and packing and wrapping needs are determined in accordance with international removal documentation

2.2 Additional packing and wrapping needs are identified, and where required, arrangements are made to access additional materials, tools and equipment

2.3 Furniture and effects requiring offsite packing are identified and segregated, and appropriate personnel are advised in accordance with workplace procedures

2.4 Special requirements are identified in consultation with client and documented, in accordance with workplace procedures

2.5 Items ineligible for international removal are identified in accordance with applicable regulations, industry standards and company policy, and appropriate action is taken in consultation with client and appropriate personnel

2.6 Client is advised of any pre-damaged or damage-risked items and appropriate documentation is completed

2.7 Confirmed items are appropriately prepared for travel in accordance with workplace procedures

3 Pack, wrap and label furniture and effects

3.1 Convenieent, suitable and unrestricted work areas are selected and prepared for packing and wrapping in consultation with client

3.2 Items for international removal are packed, wrapped and labelled in accordance with industry standards and company procedures

3.3 Identified items for international removal are dismantled in accordance with industry standards, workplace procedures and manufacturer requirements

3.4 Dismantled items of furniture are packed, wrapped, labelled and stored in accordance with removals documentation and workplace procedures
4 Complete packing and wrapping process

4.1 Tools, equipment and unused packing and wrapping materials are removed, and rubbish is disposed of in accordance with workplace procedures

4.2 All required international removals documentation is completed in accordance with workplace requirements

4.3 All furniture and effects for international removal are fully prepared for uplift in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Applicable customs and quarantine regulations
- Client service requirements including language, courtesy, behaviour and problem solving
- Efficient use of resources when packing and wrapping furniture and effects for international removal
- Furniture dismantling techniques
- Housekeeping standards and procedures during a removal
- Industry standards and workplace procedures and policies for packing and wrapping furniture and effects for international removal
- Packing and wrapping techniques for various types of furniture and effects for international removal to prevent damage during the removal process
- Packing and wrapping techniques to optimise load space during shipping international furniture and effects
- Restrictions on hazardous items applicable to international removal of furniture and effects
- Risks when packing and wrapping furniture and effects during a removal and related precautions to control these risks
- Various modes of shipping international furniture and effects
- Work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines concerning wrapping and packing furniture and effects

Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during packing and wrapping furniture and effects for international removal
- Communicate effectively with others when packing and wrapping furniture and effects for international removal
- Complete documentation related to packing and wrapping furniture and effects for international removal including legibly completing labels and packing lists
- Implement contingency plans for unexpected situations that may arise when packing and wrapping furniture and effects for international removal
- Interpret and follow operational instructions and prioritise work
- Monitor work activities in terms of planned schedule
- Promptly report and/or rectify identified problems that may occur when packing and wrapping furniture and effects for international removal, in accordance with regulatory requirements and workplace procedures
- Read and interpret instructions, procedures and information relevant to packing and wrapping
furniture and effects for international removal

- Select and use required personal protective equipment (PPE) conforming to industry and WHS/OHS standards
- Work collaboratively with others when packing and wrapping furniture and effects for international removal
- Work systematically with required attention to detail without injury to self or others or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:
- required knowledge and skills
- relevant legislation, workplace procedures and industry standards
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:
- range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment
- applicable documentation including workplace procedures, regulations, industry standards, codes of practice and operation manuals.

Method of assessment

Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:
- direct observation of the candidate packing and wrapping, and dismantling and furniture and effects for international removals
- direct observation of the candidate applying relevant WHS/OHS requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Items to be packed and wrapped for international removal may include:
- artworks
- books
- crockery
- electrical/electronic equipment
- glassware
- household effects and furniture
- office effects and furniture

Clients may be:
- external
- internal

Operations may be conducted:
- by day or night
- in a range of work environments and weather conditions

Materials may include:
- bubble wrap
- corrugated cardboard
- multi layered paper wadding
- papers of various thickness grades
- tar paper
- wax paper

Personal protective equipment may include:
- gloves
- high visibility vests
- safety footwear
- safety glasses

Equipment and tools may include:
- Allen keys
- hammer
- nails
- screwdrivers
- spanners

Work may be conducted in:
- client’s home/workplace
- controlled or open environments
- exposed conditions
- restricted spaces
- vehicle on the road
- workplace, warehouse or depot

Furniture and effects to be packed and wrapped may require:
- crating of items
- dismantling
- dismantling items for packing into cartons
- packing items into cartons
- special precautions
- wrapping dismantled items individually or collectively

Documentation may include:
- consultant inventory
- customer inventory
- manifests

Hazards during packing and wrapping furniture and effects may include:
- broken glass/crockery
- fragile items
- hazardous items
- heavy items

Appropriate personnel may include:
- consultant
- operations manager/supervisor

**Unit Sector(s)**
Not applicable.

**Competency Field**
D - Load Handling
TLID3050A Coordinate furniture removal

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to coordinate the removal of furniture and effects, including the correct parking of a removal vehicle, determining access arrangements, identifying potential hazards, developing, communicating and monitoring an appropriate removal plan prior to uplift, and completing all relevant records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with workplace procedures, relevant standards and certification requirements.
Work is performed under some supervision, generally in a team environment. Defined accountability and responsibility for self and others in achieving the required outcomes is involved.
This unit involves the application of standard furniture removal procedures by removal crew members when coordinating removals across a variety of removal contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Park vehicle
1.1 Vehicle is parked with due consideration of critical factors
1.2 Need for use of visual safety equipment is determined and where applicable this equipment is positioned in accordance with workplace procedures, local authority requirements and state/territory requirements
1.3 Access to vehicle is planned to ensure minimisation of traffic wear on gardens and lawns, and avoidance of obstructions
1.4 Potential external hazards are identified and appropriate action is planned to minimise risk of injury and/or damage to items and equipment during removal activities

2 Define job requirements
2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion based on removal consultant appraisal
2.2 In consultation with customer, consultant/client inventory is checked for accuracy and any discrepancies are made known to appropriate workplace personnel in accordance with workplace procedures
2.3 Initial inspection of total job is undertaken with customer and an appropriate loading sequence is ascertained
2.4 Potential internal hazards are identified and appropriate action is planned to minimise risk or injury and/or damage to items, equipment or structure
2.5 Special requirements are identified and negotiated with customer
2.6 Customer is appropriately advised of any pre-damaged or damage-risked items and appropriate documentation is completed
2.7 Dangerous or hazardous items that are unacceptable for removal are identified and customer is appropriately informed
2.8 Confirmation is made that items are appropriately prepared for travel, in accordance with workplace procedures

3 Plan and monitor loading
3.1 Loading plan is confirmed in consultation with appropriate onsite removal team members
3.2 Confirmed loading plan is communicated to all onsite removal team members
3.3 Relevant information regarding loading plan is communicated to dispatch staff or other appropriate personnel in accordance with
workplace procedures

3.4 Removal team performance is monitored to ensure requirements of loading plan are met

4 Complete records

4.1 Required records are updated accurately, legibly and promptly according to company procedures

4.2 Records are checked to ensure they include all required information relevant to the job
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Company work procedures
- Customer service requirements including language, courtesy, behaviour and problem solving
- Furniture removal procedures and codes of practice
- Hazards that may be experienced on a removal job and related hazard control measures
- Items unsuitable for removal and associated reasons
- Records and signed agreements that are completed during an initial removal survey and related procedures
- Relevant agreements and legislation applicable to furniture removal
- Relevant state/territory road traffic authority license and traffic regulations
- Relevant vehicle parking safety requirements
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection legislation and policies
- Special requirements that may need to be addressed in a removal and related procedures to be adopted

**Required skills:**

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Communicate effectively with others when coordinating a removal
- Complete required documentation
- Identify hazardous or dangerous items unacceptable for removal
- Implement contingency plans for unanticipated situations that may occur
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor work activities in terms of removal/loading plan
- Operate electronic communication equipment to required protocol
- Promptly report and/or rectify any identified problems that may arise in accordance with regulatory requirements and workplace procedures
- Provide leadership and encouragement to team members
- Read and interpret relevant instructions, procedures, information and signs
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
- Work collaboratively with others
- Work systematically with required attention to detail without injury to self or others or damage
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- required knowledge and skills
- relevant legislation, workplace procedures and industry standards
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including workplace procedures, regulations, industry standards, codes of practice and operation manuals.

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Removal sites may include:
- commercial premises
- domestic premises
- industrial premises

Customers may be:
- external
- internal

Operations may be conducted:
- by day or night
- in a variety of weather conditions

Critical factors when parking a removal vehicle may include:
- obstructions and hazards
- parking and traffic restrictions
- positioning of vehicle
- required permissions (customer, body corporate)
- suitability of driveway (e.g. to support vehicle weight)

Personal protective equipment may include:
- gloves
- high visibility vests
- safety footwear
- safety glasses

Hazards may include:
- door and passageway widths and tight internal corners
- driveway length and surface
- lawn sprinklers on automatic timers
- low hanging light fittings and other fixture obstructions
- obstructions
- parking restrictions
- power and telephone lines, trees and landscaping
- stairs and steps
- uneven or unstable ground
- unfriendly pets

Requirements for access may include:
- additional gear and equipment
- authorities and permits
- communications equipment
- hours of operation
- personal protective equipment
- removal duration
- site restrictions and procedures
Loading plan may include:
- site security arrangements
- estimated time to complete loading
- loading sequence of furniture and effects
- positioning of load on vehicle

Consultative processes may involve:
- customers
- management and other office personnel
- occupational health and safety specialists
- other employees and supervisors
- other professional and technical staff and trades people
- union representatives

Special requirements may include:
- dismantling items
- temporary removal of doors and fittings on site
- using of tradespersons such as electricians, carpenters, cabinet makers

Communications may include:
- fixed and mobile phones, radio, fax, laptop computer/Internet
- oral/aural communications
- written communications, including completing and signing documents

Workplace procedures may include:
- company procedures
- enterprise procedures
- established procedures
- organisational procedures

Calculations may involve the basic use of a range of technology including:
- calculator
- computer
- manual techniques

Documentation may include:
- consultant appraisal report
- customer instructions
- emergency procedures
- incident reports
- job dockets
- job safety analysis
- job specifications and procedures
- manufacturer specifications
- quality assurance procedures
- risk assessment procedures
- site plan
- standards and certification requirements
- workplace operating procedures and policies

Applicable procedures and codes may include:
- local council regulations and requirements
include:

- relevant state/territory:
  - environmental protection legislation and regulations
  - roads and traffic authority vehicle driver licence requirements
  - traffic Act and related regulations
  - WHS/OHS legislation and regulations

Visual safety equipment may include:

- barriers
- bollards
- safety cones
- safety tape
- warning and advisory signs

Appropriate workplace personnel may include:

- customer service supervisor/manager
- operations supervisor/manager

**Unit Sector(s)**

Not applicable.

**Competency Field**

D - Load Handling
TLID3051A Segregate waste according to waste types

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to segregate waste according to waste type in an on-the-job environment. This unit of competency specifies the outcomes required to identify and segregate waste at a range of plant sites. It requires the ability to apply safe work practices while working with all types of waste. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit of competency supports individuals with responsibility for identifying and segregating waste while working in a waste plant environment. It includes contributing to the implementation of workplace policies and procedures, systems and plans, as well as recognising potential hazards and controlling risks.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

#### 1 Organise for work

1.1 Waste segregation plan is established in accordance with workplace policies and procedures and regulatory requirements

1.2 Job requirement hazards are identified, risks are assessed and risk controls are implemented in accordance with workplace policies and procedures, and state/territory regulations and legislation

1.3 Emergency and personal protective equipment (PPE) is selected, correctly fitted and worn in accordance with job requirements, manufacturer specifications, workplace requirements and relevant regulatory requirements

1.4 Segregation receptacles/areas are set up to ensure safe and effective segregation of waste in accordance with workplace requirements and relevant regulatory requirements

1.5 Equipment used for segregation is operated in accordance with manufacturer specifications, workplace policies and procedures and external licensing authorities

#### 2 Conduct identification and segregation activity

2.1 Waste is identified and appropriate handling process is implemented in accordance with waste type, workplace requirements and relevant state/territory regulatory requirements

2.2 Waste is segregated into categories and labelled in accordance with waste type, workplace policies and procedures and regulatory requirements

2.3 Sorted waste is placed into correct waste category receptacles/areas in accordance with workplace policies and procedures, and legislative environmental practices

2.4 Storage capacity of waste receptacles/areas is monitored in accordance with workplace policies and procedures and environmental licence requirements

2.5 Waste receptacles/areas are emptied in accordance with environmental practices and/or replaced according to workplace policies and procedures and with minimal disruption to work processes

#### 3 Conduct quality control inspection

3.1 Quality control inspections are undertaken to ensure compliance with segregation requirements in accordance with workplace policies and procedures, and environmental licence requirements

3.2 Quality control inspection details are documented in accordance with workplace policies and procedures, and environmental authority
regulations

4 Clean up area

4.1 Sorting site and equipment are cleaned in accordance with workplace policies and procedures

4.3 Waste products from cleaning process are disposed of in accordance with environmental licence requirements

4.2 PPE is checked and stored, and damaged or faulty PPE is reported and replaced in accordance with workplace policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Equipment and materials knowledge to facilitate:
  - application of emergency spill kits
  - cleaning and maintenance of plant and equipment
  - identification of plant and equipment
  - operation of plant and equipment
  - recycling activity
- waste management provision, including:
  - chemicals used in industry
  - client requirements
  - coding systems
  - duty of care
  - organisational requirements
  - reporting requirements
  - waste storage requirements
  - waste management hierarchy
  - waste containment and disposal techniques
- identification of:
  - hazardous and dangerous goods
  - procedures for containing segregated waste types, including containment and isolation of hazardous waste
  - segregation methods for dangerous goods and chemical substances
  - waste containment
  - waste disposal and recovery routes
  - waste non-conformance procedures
  - waste non-conformances
  - waste types, streams and characteristics
- measurement and calculation methods for:
  - volumes
  - weights
- Potential hazards and risks relating to:
  - emergency response procedures
  - waste containment and segregation techniques
- Resource recovery options relating to:
  - environmental issues
  - environmental regulations
• industry standards and legislation
• potential resources to be recovered
• timeframe to recover resources
• valuable resources within materials
• Work health and safety (WHS)/occupational health and safety (OHS) hierarchy of control
  • WHS/OHS requirements relating to:
    • chemical storage and segregation requirements
    • dangerous goods and hazardous substances
    • first aid

**Required skills:**

• Ask questions
• Conduct work practices safely and efficiently
• Consult
• Facilitate:
  • cleaning and maintenance of equipment
  • operation of plant and equipment
  • selection of equipment
• Handle waste non-conformances
• Identify hazards and risks
• Identify waste types and waste non-conformances
• Label waste
• Listen actively
• Organise work methodically
• Provide information
• Read and interpret:
  • job sheets
  • work requirements and safety data sheets (SDS)/material safety data sheets (MSDS)
  • safe systems of work
  • job safety and environmental analysis
  • work method statements
• Report on waste segregation outcomes
• Segregate valuable resources in composite materials
• Segregate waste types, including potentially hazardous waste
• Use emergency and personal protective equipment
• Work in a team environment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- organise sorting receptacles/areas in designated areas
- select emergency and personal protective equipment
- identify potential risks and hazards to waste sorting and waste non-conformances
- observe WHS/OHS requirements.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Assessment of essential required knowledge may be conducted in an off-site context and is to comply with relevant regulatory or Australian Standards requirements.

Resource implications for assessment include:

- work plans and approved specifications
- results of sampling.

Method of assessment

The process of identifying and segregating waste must comply with industry expectations in the particular client environment.

If the environment is narrowly defined or is not representative of industry needs, it may be necessary to refer to portfolio case studies to assess competency in the identification and segregation of waste.

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the TLI10 Transport and Logistics Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Waste collection requirements typically include:
- acceptable waste types
- collection times and schedule
- observing contamination requirements
- pick-up locations
- WHS/OHS requirements

Client may include:
- all forms of business enterprises in this context, including:
  - government agencies
  - internal customers
  - local governments and councils
  - private and public companies
  - residents and ratepayers

Segregation categories may include:
- asbestos
- clinical/cytotoxic waste such as medical waste, dressings, sharps, pharmaceutical products, anatomical waste
- commercial and industrial waste
- construction and demolition waste such as broken bricks, concrete, plasterboard, glass, metals, soils, tiles, timbers
- general household waste/hard rubbish
- hazardous waste such as acid, caustic, grease trap waste, oily rags, filters, coolants, oily sludges, septic waste, solvents, trade waste, paints, batteries, triple interception
- manufactured products such as clothing and footwear
- organic and green waste such as fruit, vegetables, food, all garden waste
- processed food and beverage waste such as food, beverages, tobacco and liquor, used cooking oil
- quarantine waste such as airport and seaport amnesty bin waste, wash water waste from international vessels and from cleaning of heavy vehicles
- recyclable materials such as cardboard, plastic wrap, polystyrene, glass, metals, plastics, newspapers, magazines, phone books, boxes, cartons and packaging
- sanitary waste

Job requirement hazards and risks may include:
- clinical/cytotoxic waste
- compaction equipment
- confined spaces
- contamination
- dust
- fire
• gases and fumes
• hazardous waste
• injuries resulting from manual handling and repetitive work
• narrow driveways
• other vehicles and equipment
• overhanging signs
• pedestrians
• projectiles
• spark-producing equipment
• traffic
• unguarded conveyor belts
• weather

Equipment may include:
• barriers and warning signs
• compactors
• conveyors
• generators
• hand tools
• hoses
• load shifting equipment
• pumps
• sorting tables
• vacuums
• waste receptacles/areas

Organisational requirements may include information found in:
• briefing papers
• job sheets
• letters
• memos
• operations manuals
• quality assurance documents
• tender and contract documents
• verbal or written instructions
• work procedures

Emergency and personal protective equipment must include:
• communications equipment
• eye protection such as goggles and protective glasses
• eyewash kit
• fire extinguishers
• first aid kit
• footwear
• gloves
• overalls and protective clothing

Emergency and personal protective equipment may include:
• breathing apparatus
• emergency procedure guides
include:

- face shields or masks
- hard hats
- hearing protection
- safety data sheets (SDS)/material safety data sheets (MSDS)
- spill kit

Personal protective equipment must be:

- cleaned and fitted according to organisational requirements, manufacturer specifications and regulatory requirements
- stored according to workplace policies
- used when required according to workplace policies

Hazards associated with waste may include:

- all waste depending on the condition, environment and personal exposure
- clinical/cytotoxic products
- chemicals
- contamination
- electrical wiring
- gases and fumes
- glass
- leaking receptacles
- oil, diesel and petrol
- sharp objects

Non-conforming waste may include:

- hazardous or dangerous waste
- inferior quality and unacceptable waste streams

Waste characteristics may include:

- amount of waste
- density
- level of contamination
- quality
- shape
- size
- volume
- weight

Labels may include:

- date
- location
- sign-off by sorter
- type of waste
- waste source

Quality control may include:

- checklist
- environmental compliance
- inspection details such as date, time, location and process compliance level
- non-conformances
TLID3051A Segregate waste according to waste types

- quality grading
- recycling compliance
- regulatory compliance
- sign-off by inspector

Sorting site may be located within:
- composting facility
- landfill site
- materials recovery facility
- transfer station
- treatment site
- waste generator site

Cleaning may include:
- cleaning using products
- decontamination using products
- shovelling
- sweeping
- vacuuming
- water-hosing

Unit Sector(s)

Competency Field
D – Load Handling
TLID4008A Monitor crane operations

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to monitor crane operations in accordance with workplace procedures and regulatory requirements, including monitoring work performance and progress, monitoring personnel working in operational area, solving problems concerning crane operations and making decisions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant regulations and workplace requirements concerning crane operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when monitoring crane operations as part of work activities in the stevedoring, transport, distribution and allied industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Monitor work performance and progress | 1.1 Work is performed in line with workplace requirements and objectives, ensuring safe work practices are maintained in accordance with statutory authority regulations, national and industry safety codes and workplace procedures  
1.2 Crane operations and compliance with operational procedures are monitored regularly and refined in consultation with supervisor, crane drivers and other employees  
1.3 Work performance rates are maintained with delays being minimised to ensure work program objectives are met  
1.4 Safety in the work area is continually monitored during crane operations and required action is taken to identify and control hazards and risks |
| 2 Monitor personnel working in operational area | 2.1 Vigilance is maintained when personnel are working in the cranes operational area in accordance with statutory requirements, national standards and safety codes  
2.2 Personnel are checked out of operational area before securing operational area/storage location/ships hold after completion of shift and when task is completed, ensuring all personnel are safely out of the area/hold  
2.3 Personnel working in the operational area/storage location/ships hold are warned of any danger in accordance with workplace procedures and regulatory requirements  
2.4 Personnel working in the operational area/storage location/ships hold are alerted when required and emergency responses are initiated to provide assistance to personnel in hold |
| 3 Solve problems and make decisions | 3.1 Problems are solved and decisions are made to ensure optimum efficiency of operations having regard to management and client objectives  
3.2 Employees are encouraged to contribute their opinions to facilitate effective decisions and resolution of problems |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to crane operations, including the
REQUIRED KNOWLEDGE AND SKILLS

- Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the monitoring of crane operations
- Focus of operation of work systems, equipment, management and site operating systems for crane operations
- Problems that may occur during crane operations and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their applications, and the regulations, procedures and precautions for their operation
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of cranes
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when monitoring crane operations
- Read and interpret instructions, procedures, information, labels and signs relevant to the monitoring of crane operations
- Identify cargo, container and goods, coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the monitoring of crane operations
- Receive, acknowledge, send messages and give signals using required communications equipment and protocols while monitoring crane operations
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when monitoring crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions when monitoring crane operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may arise when monitoring crane operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the monitoring of crane operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when monitoring crane operations
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Cargo/freight may include:
- goods with specialist requirements, including temperature controlled goods and dangerous goods

Cranes may include:
- cranes in use at transport, rail or shipping terminals or wharves

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
RANGE STATEMENT

Communication in the work area may include:

- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Personnel in work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to crane operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for crane and associated equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes, regulations, and licence/permit requirements for the operation of relevant categories of cranes
- Australian and international regulations and codes of
RANGE STATEMENT

practice for the handling and transport of dangerous goods and hazardous substances, including:

- Australian and International Dangerous Goods Codes
- Australian Marine Orders and the International Maritime Dangerous Goods Code
- IATA Dangerous Goods by Air regulations
- Australian and International Explosives Codes
- relevant Australian Standards, including AS 2550
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Unit Descriptor
This unit involves the skills and knowledge required to direct crane operations in accordance with workplace and regulatory requirements including performing checks of the work area, performing checks of cargo, receiving and interpreting directions, anticipating cargo transfer sequence, and directing crane operators and transferring loads in accordance with job requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace requirements concerning crane operations.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements when directing crane drivers as part of work activities in the stevedoring, transport, distribution and allied industries.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to crane operations, including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the direction of crane operations
- Focus of operation of work systems, equipment, management and site operating systems for crane operations
- Problems that may occur during crane operations and appropriate action that can be taken to resolve the problems
REQUIRED KNOWLEDGE AND SKILLS

- Relevant handling and safety codes
- Types of cranes used to transfer loads at transport, rail or shipping terminals or wharves, their applications, and the regulations, procedures and precautions for their operation
- Requirements for Safe Working Load (SWL) and Working Load Limit (WLL) of cranes
- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when directing crane operations
- Read and interpret instructions, procedures, information, labels and signs relevant to the direction of crane operations
- Identify cargo, container and goods, coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the direction of crane operations
- Receive, acknowledge, send messages and give signals using required communications equipment and protocols while directing crane operations
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when directing crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when directing crane operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when directing crane operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the direction of crane operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant equipment, processes and procedures when directing crane operations
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Workplace procedures when directing crane operations include:
- the following of the job plan and prepared work priorities
- specific site operating procedures
- requirements for safe and efficient operations
- effective communications with crane operators ensuring directions are promptly and accurately understood

Cranes may include:
- cranes in use at transport, rail or shipping terminals or wharves

Account may be taken of the following conditions in relation to operational safety (depending on the context of crane operations concerned):
- organisational and statutory operating requirements
- surface condition of the work area
- stacking area
- degree of visibility
- weather conditions
- other traffic
- obstacles
- site and nature of loads
- ship/vehicle/ rail movements
- tidal movement

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Communication in the work area
- phone
RANGE STATEMENT

may include:

- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- hand signals
- oral, aural or signed communications

Personnel in work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to crane operations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for crane and associated equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
RANGE STATEMENT

Applicable regulations and legislation may include:

- quality assurance procedures
- emergency procedures
- relevant codes, regulations, and licence/permit requirements for the operation of relevant categories of cranes
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - relevant Australian Standards, including AS 2550
  - licence, patent or copyright arrangements
  - water and road use and licence arrangements
  - export/import/quarantine/bond requirements
  - marine orders
  - relevant state/territory OH&S and environmental protection legislation
  - workplace relations regulations
  - workers compensation regulations

Unit Descriptor

This unit involves the skills and knowledge required to supervise mobile crane operations, including implementing the operational plan for a mobile crane lift, directing operations, supporting crane personnel in their work, and negotiating and resolving site problems on request. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures to the supervision of mobile crane operations.

Licensing/Regulatory Information

Refer to Unit Descriptor

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Workplace procedures concerning the supervision of mobile crane operations at a work site
- Problems that may arise when supervising mobile crane operations and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment

Required skills:

- Communicate effectively with others when supervising mobile crane operations
- Read and interpret instructions, procedures, information and signs relevant to the supervision of mobile crane operations
- Interpret and follow operational instructions and prioritise work
- Discuss and negotiate with clients and crew on issues related to the access to the site, setting up of the crane and the lift
- Complete documentation related to the supervision of mobile crane operations
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when supervising mobile crane operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when supervising mobile crane operations in accordance with regulatory requirements and workplace procedures
- Plan and guide the work of others, including predicting consequences and identifying improvements
- Implement contingency plans for unexpected situations that may occur when supervising mobile crane operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the supervision of mobile crane operations
- Monitor work activities in terms of planned schedule
Required skills:

- Modify activities depending on differing operational contingencies, risk situations and environments
- Ensure the application of fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and direct the use of equipment, processes and procedures
- Operate and adapt to differences in equipment and operating environment in accordance with standard operating procedures
- Ensure the use of required personal protective equipment conforming to industry and OH&S standards
- Ensure the servicing of mobile crane equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
EVIDENCE GUIDE

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic
- internal or external

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
RANGE STATEMENT

- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Mobile crane operations being supervised may include:

- set-up
- access requirements
- lift requirements of customer

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Documentation/records may include:

- site procedures
- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health and safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation
- equal opportunity, equal employment opportunity and affirmative action legislation
- Workplace Relations Act(s)

Unit Sector(s)

Not Applicable
Competency Field

D - Load Handling
TLID4032A Plan and conduct specialised lift

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to plan and conduct a specialised lift by a mobile crane (excluding demolition work). It involves a lift which may be specialised in terms of job and equipment requirements, the qualities of the load, or the critical aspects of the location(s) of the lift. It includes inspecting the site, planning the lift, setting up the lift, working effectively in a team, lifting and moving the load, and following up on the job. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to specialised mobile crane operations.

Work is performed under general supervision. It involves the application of some judgement and routine principles and procedures to the planning and conduct of specialised lifts in a variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

**Employability Skills Information**

**Employability Skills**
This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**  **PERFORMANCE CRITERIA**

1 **Inspect site**

1.1 Site is inspected as required with other relevant personnel to assess job requirements

1.2 All necessary parameters are measured to ensure accuracy of calculations

1.3 Hazards are identified through inspection of site and load

1.4 Additional information regarding load and possible hazards is sought from customer and expert personnel

1.5 Special site requirements are identified

2 **Plan the lift**

2.1 Operation plan is developed in consultation with other relevant personnel to include hazard prevention/control measures in line with workplace procedures, applicable Australian standards and codes of practice

2.2 Where required, approval to carry out lift is obtained from the appropriate statutory authority

2.3 Multiple crane lifts are planned (as applicable) to encompass the determination of the types of cranes suitable for use and an assessment of the share of the load to be carried by each crane

2.4 Cranes load chart is interpreted and information on permissible loads, radii, weights, boom and jib taken into account in planning the job

2.5 Safe Working Load (SWL) or Working Load Limit (WLL) is calculated

2.6 Appropriate drawings and simulations are created to check feasibility of planned operations

2.7 Information from previous lifts is used in developing the operational plan

2.8 A range of different alternatives is considered to ensure effective and safe lift

2.9 Unsolicited, irrelevant information is disregarded to focus on the task at hand

2.10 Need for additional/specialised equipment is ascertained and arrangements made for collection/delivery to site

2.11 Communication system is determined and all team members are briefed on its use in conducting lift

3 **Set up lift**

3.1 Site measurements are checked to verify accuracy

3.2 Operating and emergency controls are checked to ensure the crane is in safe working order

3.3 Appropriate personal protective equipment is selected and worn in accordance with manufacturers specifications and site requirements
### ELEMENTS

<table>

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Prioritising and multi-tasking work
- Company work procedures concerning the setting up and rigging of a mobile crane at a work site
- Problems that may arise when planning and supervising a specialised lift using a mobile crane and actions that should be taken to prevent or solve them
- Focus of operation of work systems and equipment
- Relevant agreements, codes of practice or other legislative requirements

Required skills:

- Communicate effectively with others when planning and supervising a specialised lift using a mobile crane
- Read and interpret instructions, procedures, information, technical data, manuals and signs relevant to the planning and supervision of a specialised lift using a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and supervision of a specialised lift using a mobile crane
- Operate electronic communication equipment to required protocol
- Provide leadership and work collaboratively with others when planning and supervising a specialised lift using a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems identified when planning and supervising a specialised lift using a mobile crane in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Develop contingency plans for possible unanticipated situations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the planning and supervision of a specialised lift using a mobile crane
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Ensure the use of required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- day or night
- in a variety of weather conditions

Environment may include movement of:

- equipment
- goods
- materials
- vehicular traffic
- internal or external

Customers may be:

- internal or external

Mobile crane may be involved in work in a range of industry sectors including:

- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Specialised lifts may include:

- large surface areas-pools
- tilt-up panels
- drive-in movie screens
- tree removal and replacement
- bridge beams
- multiple crane lifts
- passing loads to other cranes
- tailing out of loads
RANGE STATEMENT

- turning loads over
- lifting high value goods
- recovery work
- specialised operations-drag lines
- clam shell
- pile driving
- barge work
- work involving work box duties

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management

- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment

- gloves
RANGE STATEMENT

may include:

- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
  - operations manuals including load charts and crane and rigging manuals
  - induction documentation
  - competency standards and training materials
  - job specifications and procedures
  - manufacturers specifications
  - workplace operating procedures and policies
  - supplier and/or client instructions
  - communications technology equipment, oral, aural or signed communications
  - personal and work area work procedures and practices
  - conditions of service, legislation and industrial agreements including:
    - workplace agreements and awards
    - occupational health and safety procedures
    - standards and certification requirements
    - quality assurance procedures
    - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to specialised mobile crane operations
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Competency Field
Competency Field   D - Load Handling
TLID4048A Top load a dangerous goods tanker

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to top load a tanker carrying liquid dangerous goods.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the road transport industry who transport petroleum products.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Prerequisite Unit TLIC4065A Operate chemical tanker (or)
TLIC4066A Operate fuel tanker (or)
TLIC4067A Operate LP gas tanker

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

1 Top load vehicle

1.1 Determine prior load and follow prescribed switch load procedures

1.2 Product type and quantity to be loaded are checked to determine whether they are in accordance with delivery documentation and are within the safe carrying capacity and gross weight limitations of the vehicle

1.3 Discrepancies are rectified in accordance with company procedures

1.4 Locations of emergency equipment and emergency procedures are identified before loading commences

1.5 Personal protective equipment (PPE) is identified and worn according to regulatory and site requirements

1.6 Vehicle is checked to ensure it is correctly placarded for the product to be loaded

1.7 Product transfer equipment is connected and bonded in accordance with organisational and site procedures

1.8 Site procedures are followed for commencement of the loading process

1.9 Vehicle is safely loaded with product using only approved equipment and in accordance with organisational requirements and site procedures

1.10 Loading process and fill levels are monitored by the driver in accordance with company and site procedures

1.11 At the completion of the loading process, all valves on the vehicle and load-out facility are closed, and all transfer equipment is secured in accordance with site procedures

1.12 Loaded vehicle is checked to be within legal weight limitations and compliant with regulatory requirements and company procedures

1.13 Pre-departure inspection of the loaded vehicle is undertaken to ensure hoses, pipes and cables are disconnected and secure, brake interlock is deactivated, and any obstacles cleared in accordance with company procedures

1.14 Site is restored to a clean and tidy condition in accordance with site procedures

1.15 Vehicle is moved from the loading area without damage to property or injury to people and in accordance with site procedures
2 Work at heights on a dangerous goods tanker

2.1 Prior to ascending or descending the vehicle ladders, required fall restraint safety equipment is connected to the vehicle in accordance with safety regulations and site procedures

2.2 When operating on top of vehicle, all fall restraint safety equipment is connected in accordance with site and safety regulations

3 Complete load documentation

3.1 Pre-load documentation is submitted prior to loading and checked for accuracy of expected load

3.2 Shipping documentation is completed, checked and secured in the vehicle in accordance with organisational and legislative requirements at the completion of the load

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:

- Potential hazards
- Safe loading procedures
- Placarding requirements for dangerous goods carrying vehicles
- Preparation methods for tanker equipment
- Static electricity control practices
- Working at heights controls and safe methods
- Switch loading procedures

Required skills:

- Identify product and volume of goods
- Identify dangerous goods and hazardous materials
- Coupling and de-coupling methods for top loading a bulk liquid tanker
- Identify and prepare tanker equipment
- Apply manual handling practices
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - safely top loading a dangerous goods tanker and completing documentation
  - demonstrating knowledge of control operation
  - applying correct methods for ascending and descending a tanker ladder
  - completing the documentation required for top loading a dangerous goods tanker

Context of and specific resources for assessment

- Assessment must ensure access to:
  - tools, equipment and PPE currently used in industry
  - relevant regulatory and equipment
  - documentation that impacts on work activities

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
- Online assessment is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Integrity of dangerous goods is checked by:
- valves
- caps
- hatches

Gross weight limitation of a tanker complies with:
- state and territory legislation
- National Heavy Vehicle Accreditation Scheme (NHVAS) requirements
- manufacturer’s safe fill levels and vehicle mass limits

Product transfer equipment includes:
- delivery hoses
- overfill protection systems
- external piping and fittings
- bonding devices
- valves
- warning devices
- brake interlock

Tanker classes include:
- rigid vehicle
- truck and dog combinations
- semi combinations
- B-Double combinations
- road train combinations

PPE and safety measures include:
- chemical resistant gloves
- safety headwear and footwear
- safety glasses
- intrinsically safe, full cover protective clothing
- high visibility clothing and safety vest
- evacuation controls

Emergency equipment includes:
- emergency shutdown controls
- spill control equipment
- eye wash equipment and safety showers
- fire extinguishers

Documentation and records include:
- dangerous goods shipping documentation, as per the current Australian Dangerous Goods (ADG) Code
- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- relevant Australian standards and certification requirements
• workplace policies and procedures
• relevant internal data entry books, including log books, data sheets and load sheets
• transport emergency response plan (TERP)
• Australian code for the transport of dangerous goods by road or rail: the ADG Code
• relevant state and territory:
  • roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  • road rules
  • OH&S legislation
  • fatigue management regulations
  • environmental protection legislation and regulations

Unit Sector(s)
Not applicable.

Competency Field
D – Load Handling
TLID4049A Bottom load a dangerous goods tanker

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to bottom load a dangerous goods tanker. Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the complex road transport fuel/gas industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Prerequisite Unit  TLIC4065A Operate chemical tanker (or)
TLIC4066A Operate fuel tanker (or)
TLIC4067A Operate LP gas tanker

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

1 Conduct pre-loading activities

1.1 Documentation is submitted prior to loading and checked for accuracy of expected load
1.2 Loading area is checked for hazards
1.3 HAZCHEM signage and product tumblers are checked or changed in accordance with regulatory requirements, and site and organisational procedures
1.4 Integrity of dangerous goods is checked prior to loading in accordance with workplace procedures

2 Prepare for loading

2.1 Loading console instructions are followed and authorisation is gained
2.2 Tanker equipment is prepared for loading in accordance with organisational and facility procedures
2.3 Product and volume to be loaded are selected in accordance with loading documents
2.4 Final check of product type and quantity to be loaded is made for compliance with delivery documentation, safe carrying capacity, and gross weight limitations of the tanker
2.5 Any discrepancies are rectified in accordance with organisational procedures

3 Bottom load tanker

3.1 Locations of emergency equipment and emergency procedures are identified before loading commences
3.2 Vapour recovery product transfer equipment is connected in accordance with organisational requirements
3.3 Site procedures are followed for commencement of the loading process
3.4 Tanker is safely loaded with product using only approved equipment and in accordance with organisational requirements and site procedures
3.5 Loading process is manoeuvred at console in accordance with organisational and site procedures
3.6 Valves on the tanker and load-out facility are closed and all transfer equipment is secured at the completion of the loading process in accordance with site procedures
4 Leave the loading rack

4.1 Loaded tanker is checked to ensure it is within legal weight limitations and complies with regulatory and organisational procedures

4.2 Pre-departure inspection of loaded tanker is undertaken to ensure all hoses, pipes and cables are disconnected and secured, brake interlock is deactivated, and any obstacles are cleared in accordance with organisational procedures

4.3 Tanker is slowly moved from the loading area without damage to property or injury to people and in accordance with site procedures

4.4 Tanker is parked in the designated area and checked to ensure correct placarding

4.5 Load documentation is completed, checked and secured in the tanker in accordance with regulatory requirements

4.6 Tanker is driven safely from site in accordance with site procedures
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:

- Road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations
- Potential hazards
- Safe loading procedures
- Placarding requirements for parking procedures
- Preparation methods for tanker equipment

Required skills:

- Identify volume of goods
- Make accurate estimates in a range of situations
- Identify dangerous goods and hazardous materials
- Reading complex legislative and regulatory requirements
- Apply de-coupling method for bottom loader tanker
- Identify and prepare tanker equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - knowledge of control operations
  - bottom loading a dangerous goods tanker
  - coupling and de-coupling a dangerous goods tanker

Context of and specific resources for assessment

- Assessment must ensure access to:
  - tools, equipment and personal protective equipment (PPE) currently used in industry
  - relevant regulatory and equipment documentation that impacts on work activities

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
- Online assessment is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Integrity of dangerous goods involves checking:
- valves
- caps
- hatches

Gross weight limitation of a tanker complies with:
- National Heavy Vehicle Accreditation Scheme (NHVAS)
- manufacturer’s safe load limit

Product transfer equipment includes:
- delivery hoses
- scull systems
- external piping and fittings
- bonding devices
- pressure vessels
- master switch
- valves
- warning devices
- brake interlock
- pressure and ullage gauges

Tanker classes include:
- B-Double
- B-Triple
- AB-Quad

Personal safety measures include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
- eye wash kit

Emergency equipment includes:
- emergency shutdown controls
- evacuation controls

Documentation and records include:
- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- workplace policies and procedures
- relevant Australian standards and certification requirements
- relevant internal data entry books, including log books, data sheets and load sheets
Applicable legislative procedures and codes include:

- transport emergency response plan (TERP)
- Australian code for the transport of dangerous goods by road or rail: the current Australian Dangerous Goods (ADG) Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations
  - environmental protection legislation and regulations

Unit Sector(s)

Not applicable.

Competency Field

D – Load Handling
TLID4050A Discharge a dangerous goods tanker

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to pump discharge a dangerous goods tanker.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the road transport fuel/gas industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Conduct pre-discharge activities | 1.1 Delivery location is checked against site plan and delivery job sheet  
1.2 Tanker is positioned to enable discharging to be carried out in accordance with site procedures without injury to people or damage to property  
1.3 Park brake is applied, engine turned off and, where applicable, battery is isolated  
1.4 Personal protective equipment (PPE) is used in accordance with site and organisational procedures |
| 2 Prepare for discharging | 2.1 Delivery location is checked for hazards and set up in accordance with regulatory requirements and company procedures  
2.2 Lids on the spillbox are lifted and spillbox is drained of any liquid  
2.3 ID markers and tumblers are checked against the safe discharge unload plan to verify that the load will fit  
2.4 Hoses are removed from tanker and test date is checked |
| 3 Follow discharge requirements and procedures | 3.1 Product type and quantity to be discharged are checked to determine whether the receiving vessel can accept to load, and any discrepancies are rectified in accordance with organisational procedures  
3.2 Locations of emergency equipment and emergency procedures are identified before discharging commences  
3.3 Product transfer equipment is connected in accordance with regulatory and organisational requirements  
3.4 Internal valve is opened  
3.5 Checks are completed prior to commencing discharge in accordance with organisational procedures  
3.6 Valve is fully opened and product is discharged safely in accordance with regulatory and organisational requirements and site procedures  
3.7 Discharging process is monitored in accordance with regulatory requirements, and company and site procedures  
3.8 Tanks and compartments are changed in accordance with regulatory and organisational requirements and site procedures |
4 Work at heights on a dangerous tanker

4.1 Safety equipment is connected to the tanker prior to ascending the tanker ladders in accordance with safety regulations and site procedures.

4.2 Safety equipment is connected when operating on top of the tanker in accordance with site and safety regulations.

4.3 Work is completed in accordance with regulatory and organisational requirements and site procedures.

5 Finish unloading

5.1 All valves on the tanker and receiving facility are closed and transfer equipment is secured in accordance with site procedures.

5.2 Site is re-dipped and readings are recorded on delivery documentation.

5.3 Site is restored to a clean and tidy condition in accordance with site procedures and any site defects are reported.

5.4 Final safety inspection of tanker and site is conducted.

5.5 Tanker is moved from the unloading area without damage to property or injury to people and in accordance with site procedures.

5.6 Delivery documentation is completed, checked and adjusted and secured in the tanker in accordance with regulatory and organisational requirements at the completion of the discharge.

5.7 Truck and tanker are checked to ensure correct placarding before departure.

5.8 Site plan is followed for exiting the site.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:

- Road rules, regulations, permit and licence requirements of the relevant state and territory roads and traffic authority
- Relevant OH&S and environmental procedures and regulations
- Compatibility of various types of explosives and dangerous goods
- Characteristics of various classes of explosives and dangerous goods relevant to handling
- Workplace procedures and policies for loading and unloading explosives and dangerous goods
- Risks and hazards when loading, unloading and handling explosives and dangerous goods, and related precautions to control the risks

Required skills:

- Read and interpret instructions, procedures, information and signs relevant to the loading, unloading and handling of explosives and dangerous goods
- Identify and interpret containers and goods coding, markings and, where applicable, emergency information panels for the mode of transport/storage selected
- Communicate effectively with others when loading, unloading and handling explosives and dangerous goods
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - safely discharging a dangerous goods tanker
  - knowledge of control operation
  - connecting transfer equipment
  - applying correct methods for ascending and descending a tanker ladder
  - completing the documentation required for discharging a dangerous goods tanker

Context of and specific resources for assessment

- Assessment must ensure access to:
  - tools, equipment and PPE currently used in industry
  - relevant regulatory and equipment documentation that impacts on work activities

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Tanker classes include:
- B-Double
- B-Triple
- AB-Quad

Checks may include:
- tumbler
- sight glass
- hose to tank
- fill point
- leaks
- tumbler to sight glass
- hydrant sight glass for correct product colour
- fittings
- hoses
- vent area

Hazards may include:
- ignition sources
- static electricity
- slips, trips and falls
- product contact

Personal safety measures include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
- eye wash kit

Emergency equipment includes:
- emergency shutdown controls
- evacuation controls
- fire extinguishers
- eye wash bottles
- spill kits

Documentation and records include:
- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- workplace policies and procedures
- relevant Australian standards and certification requirements
• relevant internal data entry books, including log books, data sheets and load sheets
• transport emergency response plan (TERP)
• Australian code for the transport of dangerous goods by road or rail: the current Australian Dangerous Goods (ADG) Code
• relevant state and territory:
  • roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  • road rules
  • OH&S legislation
  • fatigue management regulations
  • environmental protection legislation and regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to participate effectively in basic workplace communication including communicating information about routine tasks, processes, events or skills, participating in group discussions to achieve appropriate work outcomes, and representing views of a group to others. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Communication is carried out as an integral part of routine work in the context of the workplace concerned.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established communication principles and practice and the use of local technical and colloquial language and vocabulary in day-to-day communications.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Communicate information about routine tasks, processes, events or skills | 1.1 An appropriate form of communication is selected and used to meet the purpose required  
1.2 Effective listening skills are demonstrated  
1.3 Questions are used to gain additional information and to clarify understanding  
1.4 Sources of information relevant to the communication are identified  
1.5 Information is selected and sequenced correctly  
1.6 Verbal and written reporting is undertaken where required  
1.7 Communication is undertaken in both familiar and unfamiliar situations and with familiar and unfamiliar individuals and groups |
| 2 Participate in group discussions to achieve appropriate work outcomes | 2.1 Responses are sought and provided to others in the group  
2.2 Constructive contributions are made in terms of the process involved  
2.3 Goals or outcomes are communicated and/or recorded |
| 3 Represent views of the group to others | 3.1 Views and opinions of others are interpreted, understood and accurately reflected |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Basic communication techniques including barriers to effective communication and how to overcome them
- Basic principles of effective communication
- Protocols and procedures for communicating with others using relevant workplace technology
- Techniques for communicating effectively with a multilingual persons or persons with a limited ability to speak or understand English
- Typical communication problems and appropriate action and solutions
Required skills:

- Communicate effectively with others when completing basic work activities
- Read and interpret instructions, procedures and information relevant to basic work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to basic work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others in the course of communication
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems in communication in accordance with workplace procedures
- Modify communication activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication will be that involved in:

- in basic routine work functions
- may occur by day or night
- in a variety of work contexts

Communication modes may include:

- active listening
- group interaction
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting
- routine written reporting
- participation in routine meetings in the workplace
- basic recording of discussions

Communications may involve:

- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English

Communication problems may include:

- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communication channels
- illegible writing or print
RANGE STATEMENT

- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood

Personnel in work area may include:
- managers
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication may involve the basic use of a range of communication technology including:
- phone
- electronic data interchange
- fax
- email
- internet
- radio

Information/documentation may include:
- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
RANGE STATEMENT

- environmental protection regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to carry out basic routine workplace calculations, including carrying out required mathematical operations; preparing basic estimates of mass, size and volume; and interpreting basic graphical representations of mathematical information. It includes calculations for routine industry-related tasks using manual and electronic processes. It specifically includes the skills and knowledge needed to estimate/calculate manual load shifting requirements. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
Application of the Unit
Calculations are carried out as an integral part of routine work in the context of the workplace concerned.
Work is performed under some supervision, generally within a team environment.
Work involves the application of established mathematical principles and techniques in day-to-day work activities.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT | PERFORMANCE CRITERIA
---|---
1 Carry out calculations | 1.1 Items are counted singly and in batches and sorted numerically, as required in workplace tasks
| 1.2 Calculations needed to complete work tasks are performed using the four basic processes of addition, subtraction, multiplication and division
| 1.3 Calculations involving fractions, percentages and mixed numbers, and using the four basic processes, are performed as required to complete workplace tasks
| 1.4 The functions of a calculator, numeric keypad or computer are used to perform workplace tasks
| 1.5 Numerical information is self-checked and corrected for accuracy
2 Prepare estimates | 2.1 Quantities of materials and resources required to complete a work task are estimated
| 2.2 The time needed to complete a work activity is estimated
| 2.3 Accurate estimates for work completion are made
3 Interpret graphical representations of mathematical information | 3.1 Information represented in symbols, diagrams and pictorial representations is recognised, interpreted and acted upon in workplace tasks

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Basic mathematical operations and techniques
- Ways of representing basic mathematical information
- Procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- Typical mathematical problems, and appropriate action and solutions

Required skills:
Required skills:

- Communicate effectively with others when carrying out basic workplace calculations
- Read and interpret instructions, procedures and information relevant to basic workplace calculations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out basic workplace calculations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when carrying out basic workplace calculations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - carrying out basic calculations as they relate to the job role
  - identifying the most common forms of calculations as they relate to the job role

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
EVIDENCE GUIDE

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Calculations:  
- will be those involved in basic routine work functions  
- may occur by day or night and in a variety of work contexts

Calculations may involve:  
- money  
- volume  
- weight  
- time  
- length and distance  
- area  
- perimeter

Mathematical operations may include:  
- multiplication  
- division  
- addition
RANGE STATEMENT

Consultative processes may include:
- staff members
- management
- union representatives
- industrial relations, occupational health and safety specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Calculations may involve the basic use of a range of technology including:
- manual techniques
- calculator
- computer

Information/documentation may include:
- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to present routine workplace information in accordance with workplace requirements including preparing and presenting routine workplace documents and preparing and delivering oral presentations as part of routine work. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with workplace requirements concerning the preparation and presentation of routine workplace information.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and relevant regulatory requirements when preparing and presenting routine workplace information as part of work activities in the stevedoring, transport, distribution and allied industries.

Licensing/Regulatory Information

| 2 Prepare and deliver oral presentation | 2.1 Purpose of oral presentation is established |
| | 2.2 Target audience is identified |
| | 2.3 Information is gathered and sorted |
| | 2.4 Visual, audio and physical support media are identified or developed, if required, in accordance with workplace procedures |
| | 2.5 Presentation is trialled and adjusted to suit target audience |
| | 2.6 Information is presented in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for preparing and presenting routine workplace information
- Focus of operation of work systems, equipment, management and site operating systems for the preparation and presentation of routine workplace information
- Documents, forms, and oral presentations required as part of routine workplace activities
- Problems that may occur when preparing and presenting routine workplace information and appropriate action that can be taken to resolve the problems
Required skills:

- Communicate effectively with others when preparing and presenting routine workplace information
- Read and interpret instructions, procedures and information relevant to the preparation and presentation of routine workplace information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the preparation and presentation of routine workplace information
- Receive, acknowledge and send messages with available communications equipment
- Work collaboratively with others when preparing and presenting routine workplace information
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing and presenting routine workplace information in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Identify, select and use relevant equipment, processes and procedures when preparing and presenting routine workplace information
- Use presentation packages for slides, overhead projector, computer presentations
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
EVIDENCE GUIDE

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
## RANGE STATEMENT

**Workplace information to be prepared and presented may include:**
- controlled or open environments
- routine reports, documentation and forms that are required to be completed to instructions, or pro-formas as part of routine job requirements

**Reports/forms may be presented:**
- orally, in writing or via a computer

**Hazards in the work area may include exposure to:**
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

**Personal protective equipment needed in the work area may include:**
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

**Communication in the work area may include:**
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

**Consultative processes may involve**
- staff members
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff

**Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:**
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

**Information/documents may include:**
- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to workplace activities
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods
RANGE STATEMENT

and hazardous substances (where applicable)

- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for the transfer of cargo/freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances (where applicable)
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify system features | 1.1 System features and control functions are identified  
1.2 Where relevant, battery and signal levels are monitored  
1.3 Mobile equipment is set up to optimise communication  
1.4 Where relevant, channels are selected appropriate to the communication |
| 2 Communicate using communications technology | 2.1 System checks are carried out to confirm communication system is operational in accordance with manufacturers instructions and workplace procedures  
2.2 Communication system is operated safely in accordance with manufacturers instructions, workplace procedures and (any) regulatory requirements  
2.3 Telephone and radio security is maintained in accordance with workplace procedures  
2.4 Where relevant, channel selection is appropriate for the location and type of communication  
2.5 Messages are transmitted clearly and precisely with due observation of ethics and protocols required of users  
2.6 Where applicable, public address (PA) system is used to communicate with passengers and crew as per standard operating procedures  
2.7 Where applicable, incoming messages are received and answered promptly and courteously within operating procedures and (any) regulatory requirements  
2.8 Appropriate protocols and procedures are followed when using communications systems during emergencies  
2.9 Received messages are interpreted and recorded, where required, in accordance with workplace procedures  
2.10 Vocal communication is clear, unambiguous and uses appropriate procedures, language and codes |
| 3 Maintain communication equipment operational status | 3.1 Equipment is checked and maintained in working order in accordance with workplace procedures  
3.2 Minor faults in the communications systems are promptly identified, diagnosed, and repaired or reported in accordance with workplace procedures |
| 4 Complete documentation | 4.1 Appropriate records of communications are maintained in accordance with workplace procedures |

### Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Protocols and procedures for communicating with others using relevant communication technology including the use of PA systems on passenger vehicles and trains
- Procedures and protocols for the use of communication systems during an emergency
- Features of various communications systems
- Basic communication techniques including barriers to effective communication and how to overcome them
- Basic principles of effective communication
- Techniques for communicating effectively with a multilingual person or persons with a limited ability to speak or understand English
- Pre-operational checks for communications systems and equipment
- Minor routine maintenance procedures for communications equipment
- Typical problems that may occur when using communications systems, and appropriate action and solutions

Required skills:

- Communicate effectively with others using available communications systems
- Read and interpret instructions and procedures relevant to the use of communications systems
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities when using communications systems
- Identify and use required communication technology
- Work collaboratively with others when using communications systems
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using communications systems in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when using communications systems
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the use of communications systems
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures
- Monitor performance of communication equipment, and take appropriate action if required

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating use of communication equipment
  - demonstrating an understanding of communication security
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments.
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Use of communication systems will include that required in routine operations and may occur by day or night and in a variety of work contexts, including:

- in confined spaces, exposed conditions and controlled or open environments
- in a workplace, terminal, warehouse or depot
- in a vehicle
- on a vessel
- on a train
- on a worksite
- at a client's workplace
- ship-to-shore/vehicle-to-base communications

Communication systems may include:

- fixed phone systems
- mobile phone, both on person or hands-free
- radios including personal, hand-held or vehicle-mounted, CB, UHF, VHF, SSB, marine
- PA systems on passenger vehicles, trains and aircraft
- signed communication using established industry protocols, such as when hearing protection in use

Worksite communication may include:

- active listening
- two-way conversation
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting

Communications may involve:

- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English
RANGE STATEMENT

Communication problems may include:

- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communications channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood
- not following correct communication protocols and procedures

Communication may be with:

- base personnel
- other drivers and workplace personnel
- passengers (where applicable)
- managers
- supervisors/team leaders
- suppliers and clients
- private and/or public sector security personnel
- police and other emergency services personnel
- security consultants
- other professional or technical staff
- local government authorities

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- workplace communication procedures, protocols, checklists and instructions including safety management systems/plans
- manufacturers specifications for communications equipment
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- communication records
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to process workplace documentation including planning the documentation to fulfil the identified purpose and completing the documentation in accordance with requirements. Documentation may include forms, logs, diaries and basic hand-written or typed reports. It may also include entry of information into computer-based documents and forms. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Processing of workplace documentation is carried out as an integral part of work operations in the context of the workplace concerned. Work may be performed in team and autonomous working situations. It involves the application of established procedures in the completion of workplace documentation in the course of day-to-day operations.

| 2 Complete documentation | 2.1 Required documentation is prepared, or forms completed, in accordance with workplace policies and procedures  
| | 2.2 Information is entered into computer-based documents, where required  
| | 2.3 Logs or diaries are maintained accurately and in a timely manner in accordance with workplace requirements. |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant procedures and duty of care requirements  
- Relevant OH&S responsibilities  
- Protocols and procedures for processing workplace documentation using relevant workplace technology  
- Requirements for workplace documentation, forms, logs or diaries  
- Sources of information for the completion of workplace documentation, forms, logs or diaries  
- Purpose of workplace documentation, forms, logs or diaries  
- Typical problems in processing of workplace documentation and appropriate action and solutions

Required skills:

- Communicate effectively with others when completing and processing workplace documentation, forms, logs or diaries  
- Read, interpret and organise information needed for the completion and processing of workplace documentation, forms, logs or diaries  
- Interpret and follow operational instructions and prioritise work  
- Complete workplace documentation, forms, logs or diaries  
- Write and/or enter information into computer based documentation systems
Required skills:

- Work collaboratively with others when completing and processing workplace documentation, forms, logs or diaries
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when completing and processing workplace documentation, forms, logs or diaries in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the completion and processing of workplace documentation, forms, logs or diaries
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in computing equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Assess cargo for transport | 1.1 Cargo for export is assessed in terms of commodity type and size, fair market value, shipping method, classification and conformity to domestic and foreign export/import requirements  
1.2 Customer is advised of discrepancies/anomalies and procedures for rectification in accordance with workplace procedures
2 Prepare regulatory and commercial documentation | 2.1 Export packing lists are prepared from shipper's instructions including information regarding identifying marks and numbers, weights and measurements and package details  
2.2 Commercial documents, including invoices, banking and insurance requirements, are processed/prepared in accordance with regulatory and workplace procedures  
2.3 Lodgement instructions, where applicable, are prepared for forwarding to banking institutions  
2.4 Regulatory requirements are generated as required
3 Prepare transport documentation | 3.1 Interim receipt/forwarding instructions are processed in accordance with shipping line requirements and workplace procedures  
3.2 Bill of lading/airway bills are obtained from shipping agent/company and processed in accordance with workplace procedures  
3.3 Additional transport documentation for export is generated/processed as required
4 Coordinate documentation requirements | 4.1 Documentation is collated and checked to ensure it is complete and accurate  
4.2 Procedures for the lodgement of documents, including destination points and required timeframes, are recorded  
4.3 Export documentation is forwarded in accordance with workplace procedures and export schedule  
4.4 Documents are filed/stored in accordance with workplace procedures

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
REQUIRED KNOWLEDGE AND SKILLS

- Relevant agreements, codes of practice and legislative requirements including Australian Dangerous Goods Code and local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures for the compilation and processing of export documentation
- Contacts and sources of information/documentation needed when compiling and processing export documentation
- Customer service policies and procedures
- Documentation requirements of banking institutions, governments and insurance companies

Required skills:

- Communicate effectively with others when compiling and processing export documentation
- Read and interpret instructions, procedures, information and labels relevant to the compilation and processing of export documentation
- Identify, read and interpret the various types of export documentation and their appropriate usage
- Interpret and follow operational instructions and prioritise work
- Complete and process export documentation
- Use relevant communications equipment when organising the international transport of freight
- Use relevant computerised systems for communication and document generation
- Work collaboratively with others when compiling and processing export documentation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when compiling and processing export documentation in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when compiling and processing export documentation
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Organisational activities may cover:

- movement of equipment, goods, materials and various forms of freight transport
- may be conducted by day or night

Customers may be:

- internal or external

Requirements for work may include:

- site restrictions and procedures
- relevant domestic and international regulations
- specified loading operations
- communications equipment
- hours of operation
- authorities and permits
- incident/accident breakdown procedures

Transport documentation for export may include:

- bill of lading
- airway bills
- export wharfage
- quarantine documentation
- parcel post receipt
- commerce markings

Regulatory requirements may involve:

- export permits and clearances
- goods certificates
- financial duties

Forms of transport may include:

- road
- rail
- sea
- air
- multi-modal

Forms of documentation include:

- packing specifications and lists
- manifests
- invoices
- drafts
- instructions
- letters

Consultative processes may involve:

- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities
- shipping lines
- banking institutions

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Organisational procedures and policies for preparing and presenting workplace information briefings
- Documents, forms and presentations required as part of workplace information briefings
- Problems that may occur when preparing and presenting workplace information briefings, and action that can be taken to resolve them
- Effective communication techniques, such as open and closed questioning, active listening and body language
- Communication barriers and how to deal with them

**Required skills:**

- Communicate effectively with others when preparing and presenting workplace information briefings
- Read and interpret instructions, procedures and information relating to preparing and presenting workplace information briefings
- Complete documentation relating to preparing and presenting workplace information briefings
- Work collaboratively with others when preparing and presenting routine workplace information
- Promptly report and rectify within limits of own role problems that may arise when preparing and presenting routine workplace information in accordance with regulatory requirements and organisational procedures
- Modify activities depending on differing operational contingencies and environments
- Use appropriate numeric functions when preparing and presenting workplace information briefings
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace briefings and documents may include:

- safety, quality and environmental alerts
- safe work method statements
- safe work instructions
- pre-start briefs
- toolbox talks
- ‘take 5’ talks
- start card
- worksite protection briefs

Reports may be presented:

- orally
- in writing

Unit Sector(s)

Not applicable.

Competency Field

E – Communication and Calculation
TLIE2031A Use communication systems for on-track vehicle operations

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to use communication systems for on-track vehicle operations. Licensing, legislative, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
This unit involves the application of established communication principles and practice, and the use of local technical and colloquial language and vocabulary in accordance with organisational/network owner communication protocols.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1 Identify system features | 1.1 Available communication systems are identified  |
|                           | 1.2 Features and control functions of each system are identified  |
|                           | 1.3 Where relevant, battery and signal levels are monitored  |
|                           | 1.4 Where relevant, channels are selected appropriate to the types of communication to be made  |

| 2 Communicate using communications technology | 2.1 System checks are carried out to confirm communication system is operational in accordance with manufacturer instructions and organisational/network owner procedures  |
|                                              | 2.2 Communication system is operated safely in accordance with manufacturer instructions, workplace procedures and any regulatory requirements  |
|                                              | 2.3 Where relevant, channel selection is made appropriate for the location and type of communication  |
|                                              | 2.4 Appropriate protocols and procedures are followed when using communication systems  |
|                                              | 2.5 Received messages are interpreted and recorded, where required, in accordance with organisational/network owners procedures  |

| 3 Maintain communications equipment | 3.1 Equipment is checked and maintained in working order in accordance with workplace procedures  |
|                                    | 3.2 Minor faults in communication systems are identified, diagnosed and repaired or reported in accordance with workplace procedures  |

| 4 Complete documentation | 4.1 Appropriate records of communication are maintained in accordance with workplace procedures  |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Basic principles of effective communication
- Hazards that may exist when using communication systems for on-track vehicle operation and ways of controlling the risks involved
- Organisational procedures for using communication systems for on-track vehicle operation
- Problems that may occur during the use of communication systems for on-track vehicle operation and action that can be taken to report or resolve the problems
- Relevant rail safety, occupational health and safety (OH&S) and environmental procedures and regulations
- Techniques for communicating effectively with a multilingual person/s with a limited ability to speak or understand English

**Required skills:**

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when using communication systems
- Communicate effectively with others using available communication systems
- Identify and use required communications technology
- Monitor performance of communications equipment and take appropriate action if required
- Operate and adapt to differences in communications equipment in accordance with standard operating procedures
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using communication systems in accordance with workplace procedures
- Read and interpret instructions and procedures relevant to using communication systems
- Work collaboratively with others when using communication systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - demonstrating use of communications equipment
  - demonstrating an understanding of communications security
  - applying relevant organisational/network procedures
  - demonstrating appropriate communication protocols

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including organisational procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments.

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication systems may include:
- fixed phone systems
- mobile phone, both on person or hands-free
- radios including personal, hand-held or vehicle-mounted

Communication may include:
- active listening
- two-way conversation
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting

Communication problems may include:
- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communication channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood
- not following correct communication protocols and procedures

Information/documentation may include:
- workplace communication procedures, protocols, checklists and instructions including safety management systems/plans
- manufacturer specifications for communications equipment
- communication records

Unit Sector(s)

Not applicable.

Competency Field

E – Communication and Calculation
TLIE2032A Assess removal

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to assess a removal load for pre-packing. It includes selecting packing materials and equipment, identifying potential hazards, identifying discrepancies against the inventory, ensuring all pre-packed items are ready for uplift, and completing of all relevant records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with workplace procedures, relevant standards and certification requirements. Work is normally performed under general supervision. Defined accountability and responsibility for self and others in achieving the required outcomes is involved. This unit involves the application of standard furniture removal procedures by removal crew members when carrying out assessment of removal needs across a variety of removal contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Check removal requirements

1.1 Potential internal hazards are identified and appropriate action is planned to minimise risk or injury and/or damage to items, equipment or structure

1.2 In consultation with client, consultant/client inventory is checked for accuracy and discrepancies are made known to appropriate personnel in accordance with workplace procedures

1.3 Special requirements are identified in consultation with client and documented in accordance with workplace procedures

1.4 Client is advised of any pre-damaged or damage-risked items and appropriate documentation is completed

1.5 Items unacceptable for removal are identified and client is appropriately informed

2 Complete uplift preparations

2.1 Pre-packed items of furniture and effects are stored appropriately at client premises to ensure orderly and efficient uplift

2.2 Required records are updated accurately, legibly and promptly in accordance with workplace procedures

2.3 Records are checked to ensure they include all required information relevant to the job

2.4 Changes to consultant appraisal are confirmed with office in accordance with workplace procedures

2.5 Confirmed items are appropriately prepared for travel in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Client service requirements including language, courtesy, behaviour and problem solving
- Company work procedures
- Furniture removal procedures and codes of practice
- Hazards that may be experienced on a removal job and related hazard control measures
- Items unsuitable for removal and associated reasons
- Records and signed agreements that are completed during a removal load assessment and related procedures
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection legislation and policies
- Relevant state/territory procedures and codes:
  - environmental protection legislation and regulations
  - roads and traffic authority vehicle driver licence requirements
  - traffic Act and related regulations
  - WHS/OHS legislation and regulations
- Relevant agreements and legislation applicable to furniture removal
- Special requirements that may need to be addressed in a removal and related procedures to be adopted
- Uplift requirements

**Required skills:**

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Communicate effectively with others
- Complete relevant documentation
- Implement contingency plans for unanticipated situations that may occur
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocol
- Promptly report and/or rectify any identified problems that may arise in accordance with regulatory requirements and workplace procedures
- Read and interpret relevant instructions, procedures, information and signs
• Select and use required personal protective equipment conforming to industry and WHS/OHS standards
• Work collaboratively with others
• Work systematically with required attention to detail without injury to self or others or damage to furniture or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate checking requirements against the inventory, ensuring items are ready for uplift and completing records
- direct observation of the candidate applying relevant WHS/OHS requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Removal sites may include:

- commercial premises
- domestic premises
- industrial premises

Clients may be:

- external
- internal

Operations may be conducted:

- by day or night
- in a variety of weather conditions

Personal protective equipment may include:

- gloves
- high visibility vests
- safety footwear
- safety glasses

Hazards may include:

- door and passageway widths and tight internal corners
- driveway length and surface
- lawn sprinklers on automatic timers
- low hanging light fittings and other fixture obstructions
- obstructions
- parking restrictions
- power and telephone lines, trees and landscaping
- stairs and steps
- uneven or unstable ground
- unfriendly pets

Requirements for access may include:

- additional gear and equipment
- authorities and permits
- communications equipment
- hours of operation
- personal protective equipment
- removal duration
- security arrangements at the site
- site restrictions and procedures

Consultative processes may involve:

- clients
- management and other office personnel
- other employees and supervisors
- other professional and technical staff and trades people
- union representatives
Special requirements may include:
- WHS/OHS specialists
- considering items important to the client
- dismantling items
- items that are not to be removed
- temporary removal of doors and fittings on site
- using tradespersons such as electricians, carpenters, cabinet makers

Communications may include:
- fixed and mobile phones, radio, fax, laptop
computer/Internet
- oral/aural communications
- written communications, including
completing and signing documents

Workplace procedures may include:
- company procedures
- enterprise procedures
- established procedures
- organisational procedures

Calculations may involve the basic use of a
range of technology including:
- calculator
- computer
- manual techniques

Documentation may include:
- client instructions
- consultant appraisal report
- emergency procedures
- job safety analysis
- job specifications and procedures
- manufacturer specifications
- quality assurance procedures
- site plan
- standards and certification requirements
- workplace operating procedures and
policies

Unit Sector(s)
Not applicable.

Competency Field
E – Communication and calculation
TLIE3002A Estimate/calculate mass, area and quantify dimensions

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to estimate and calculate mass and area and quantify dimensions of loads as part of work functions in the transport, stevedoring, warehousing, and/or storage sectors. This includes estimating loads to be transported or placed in storage, identifying mass, area and volume limitations of available transport/storage systems and carrying out calculations required to organise load(s) to match identified transport/storage limitations. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with workplace requirements and any relevant regulations related to the estimation and/or calculation of mass and area and the quantification of dimensions as part of workplace tasks.

Work is performed under some supervision generally within a team environment. It involves the application of basic mathematical principles and operations to the estimation and/or calculation of mass and area and the quantification of dimensions as part of workplace activities in the transport, stevedoring, warehousing, distributing.

Licensing/Regulatory Information

| 1 Estimate loads for transport or storage | 1.1 Order forms/work orders are read and requirements are noted  
1.2 Shape, balance characteristics, dimensions and mass of the load(s) are identified  
1.3 Area/volume required for storage is estimated  
1.4 Weights and volumes are totalled to calculate load requirements of transport or storage system |
| 2 Estimate load limits of transport and/or storage | 2.1 Allowable load limits for storage and/or transport systems are identified in accordance with workplace procedures  
2.2 Capacity of transport and storage systems in terms of mass, area and volume are calculated |
| 3 Organise load | 3.1 Load(s) is restricted to allowable range(s)  
3.2 Load(s) is spread to ensure safe weighting on pallets, trucks, platforms or other storage or transport systems  
3.3 Appropriate workplace documentation is completed |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to workplace activities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the estimation and/or calculation of mass, area and volumes of loads and transport and storage facilities including the quantification of dimensions
- Basic mathematical operations required when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities including addition, subtraction, multiplication and division
- Focus of operation of work systems, equipment, management and site operating systems for the transport and/or storage of goods and stock
- Problems that may occur when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities and appropriate action that can be taken to resolve the problems
- Documentation requirements for the workplace activities concerned

Required skills:
Required skills:

- Communicate effectively with others when estimating and/or calculating mass, area and volumes of loads and transport and storage facilities
- Read and interpret instructions, procedures, information and labels relevant to the estimation and/or calculation of mass, area and volumes of loads and transport and storage facilities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when estimating and/or calculating mass, area and volumes of loads and transport and storage facilities in accordance with workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use relevant calculators, computing and office equipment when estimating and/or calculating mass, area and volumes of loads and transport/storage facilities
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
**EVIDENCE GUIDE**

- relevant legislation and workplace procedures
- other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Work may be conducted:**
- in a range of work environments
- by day or night

**Customers may be:**
- internal or external

**Workplaces may comprise:**
- large, medium or small worksites
RANGE STATEMENT

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Estimating/calculation tasks may include:
- estimating loads to be transported or placed in storage
- identifying mass, area and volume limitations of available transport/storage systems
- carrying out calculations required to organise load(s) to match identified transport/storage limitations
- calculations and estimations of weights and dimensions of cargo and containers to be shifted, stored or lifted

Calculations may include mathematical operations of addition, subtraction, multiplication and division and may be carried out:
- manually
- with the aid of a calculator
- with the aid of a computer
- using appropriate tables and/or charts

Consultative processes may involve:
- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- RF systems
- oral, aural or signed communications

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies
- operations manuals, job specifications and induction documentation
- goods identification numbers and codes
RANGE STATEMENT

- manifests, picking slips, merchandise transfers, stock requisitions and bar codes, goods and container identification/serial number
- Australian and international codes of practice and regulations relevant to workplace activities including mass and loading regulations
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- manufacturers specifications for equipment
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant codes and regulations relevant to workplace activities
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Applicable regulations and legislation may include:

Competency Field

Competency Field E - Communication and Calculation
TLIE3004A Prepare workplace documents

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to prepare workplace documents and forms in accordance with workplace requirements and any applicable regulations/codes including planning and preparing a simple workplace document such as a letter or report, and gathering relevant information enabling the completion of a workplace form. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with the workplace requirements concerning the preparation of workplace documents/forms.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and the basic principles of report writing to the preparation of workplace documents/forms as part of work activities in the transport, stevedoring, warehousing, distribution and/or storage industries.

1.3 Relevant information is identified and selected for inclusion in the document |
| 2 Prepare workplace document                 | 2.1 A draft of the document is prepared in accordance with workplace procedures and conventions for sentence construction, grammar, spelling, style, punctuation and vocabulary that are appropriate for the reader(s)  
2.2 Document is edited and presented in a final version appropriate to the task |
| 3 Complete workplace forms                   | 3.1 Work related form(s) is interpreted to identify information required for its completion  
3.2 Required information for completion of form is gathered from relevant sources in accordance with workplace procedures  
3.3 Form(s) is completed in accordance with workplace policy and procedures and any applicable regulations and codes |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the documents and/or forms being prepared
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the completion of documents/forms
- Problems that may occur when preparing and completing workplace documents and forms and appropriate action that can be taken to resolve the problems
- Equipment and materials required for the completion of documents and forms and instructions and precautions for their use
- Conventions for sentence construction, grammar, spelling, style and punctuation
- Format and layout of various documents and forms used in workplace activities

Required skills:
Required skills:

- Communicate effectively with others when preparing and completing workplace documents and forms
- Read, write and comprehend simple statements in English
- Read and interpret instructions, procedures, information and labels relevant to the preparation and completion of workplace documents and forms
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Work collaboratively with others when preparing and completing workplace documents and forms
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing and completing workplace documents and forms in accordance with applicable regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments

- controlled or open environments

Documents and forms may
- routine written reports on workplace activities, incidents, meeting outcomes, etc. It may also include the gathering
RANGE STATEMENT

include:

of relevant information and the subsequent completion of the various forms and records falling within the occupational responsibility of the person concerned

Communication in the work area may include:

• written, oral, aural or signed communications
• phone
• electronic data interchange (EDI)
• fax
• email
• internet
• radio

Hazards in the work area may include:

• exposure to chemicals
• exposure to dangerous or hazardous substances
• movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:

• other employees and supervisors
• suppliers, customers and clients
• relevant authorities and institutions
• management and union representatives
• industrial relations and OH&S specialists
• other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information/documents may include:

• goods identification numbers and codes
• manifests, picking slips, merchandise transfers, stock requisitions and bar codes
• Australian and international codes of practice and regulations relevant to workplace activities
• Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
• operations manuals, job specifications and induction documentation
• manufacturers specifications for equipment
• workplace procedures and policies
• supplier and/or client instructions
• dangerous goods declarations and material safety data sheets (where applicable)
• award, enterprise bargaining agreement, other industrial arrangements
RANGE STATEMENT

- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- codes and regulations relevant to workplace documents/forms being prepared
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances (where applicable)
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Unit Descriptor
This unit involves the skills and knowledge required to use pilot and escort communication equipment and resources including deploying/operating the equipment to communicate with drivers of oversized/overmassed vehicles during pilot and escort duties and other relevant personnel, and maintaining all required records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures using pilot and escort communications in a variety of operational contexts.

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements of the relevant state or territory roads and traffic authority pertaining to the piloting and escorting of oversized and overmassed loads
- Relevant OH&S and environmental procedures and regulations
- Types of communication equipment, signage and other communication resources required in escort and piloting operations, and their use
- Procedures for communication during escort and piloting operations
- Procedures to be followed in the event of an escort or piloting emergency
- Available backup communication strategies
- Pre-operational checks required for communication equipment, signage and other communication resources needed in escort and piloting operations, and related action
- Permit and licence requirements applicable when piloting and escorting oversized and overmassed loads
- Documentation requirements for piloting and escorting oversized and overmassed loads
Required skills:

- Communicate effectively with others using pilot and escort communication equipment and resources
- Read and interpret instructions, procedures, information and signs relevant to the use of pilot and escort communication equipment and resources
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the use of pilot and escort communication equipment and resources
- Work collaboratively with others when using pilot and escort communication equipment and resources
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using pilot and escort communication equipment and resources in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when using pilot and escort communication equipment and resources
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate communication equipment, signage and other communication resources required during escort and piloting operations
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of communication equipment and resources and take appropriate action where required
- Service communication equipment in terms of maintenance schedule and standard operating procedures

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may include:
- all pilot and escort vehicle operations

Pilot and escort operations may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- in confined spaces, exposed conditions and controlled or open environment
- on the open road
- on a private road
- in the workplace, warehouse or depot
- at a client's workplace

Communication equipment may include:
- vehicle signage
- light battens
- white gloves
- directional display boards
- radio
- satellite phone
- flashing lights
- headlights
- hazard lights

Operational hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Personnel to whom communication is directed include:
- driver of overmassed and/or oversized vehicle
- other drivers on the road
- management/supervisors
- base personnel
- emergency services
- regulatory authorities
- company procedures

Depending on the type of
RANGE STATEMENT

organisation concerned and the local terminology used, workplace procedures may include:

- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory pilot/escort permit/regulatory requirements
- state/territory road rules
- workplace procedures and policies
- workplace communication instructions and procedures
- vehicle manufacturers instructions and specifications
- emergency procedures
- communication log book or record book (where required)

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence requirements pertaining to piloting and escort functions
- relevant state/territory road rules
- relevant state/territory oversized and overmassed permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

TLIE3010A Estimate furniture removal jobs

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to estimate furniture removal jobs including estimating requirements of removal jobs, interacting with customers regarding removals, and preparing documentation for removals job. Estimates may include estimates of the volume of a furniture removals job and calculations of expenses, time and resources. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in accordance with company procedures, the Operations Furniture Removalist Manual and relevant standards and certification requirements.

Work is normally performed under limited supervision or unsupervised. It involves the application of standard furniture removal procedures when carrying out estimation of furniture removal jobs.

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant procedures and duty of care requirements
- Relevant OH&S and environmental protection legislation and policies
- Furniture removal estimation procedures and related codes of practice
- Relevant agreements and legislation applicable to furniture removal
- Customer service requirements including language, courtesy, behaviour and problem solving
REQUIRED KNOWLEDGE AND SKILLS

- Hazards that may be experienced on a removal job and related hazard control measures
- Items unsuitable for removal and the associated reasons
- Special requirements that may need to be addressed in a removal and the related procedures to be adopted
- Documentation that is completed during an estimation of a removal job

Required skills:

- Communicate effectively with others when estimating a furniture removal job
- Read and interpret instructions, procedures and information relevant to estimating a furniture removal job
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to estimating a furniture removal job
- Operate electronic communication equipment to required protocol
- Estimate mass, volume and area and to quantify dimensions
- Carry out calculations required when estimating removal jobs
- Work collaboratively with others when estimating a furniture removal job
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when estimating a furniture removal job in accordance with workplace procedures
- Plan own work, including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify equipment used in removals and understand its application and the procedures involved
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment

  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Removal sites may include:
- domestic premises
- industrial premises
- commercial premises
- local suburban, country, interstate, overseas

Customers may be:
- internal and external

Operations may be conducted:
- by day or night
- in a variety of weather conditions

Hazards may include:
- power and telephone lines, trees and landscaping
- driveway length and surface
- parking restrictions
- stairs and steps
- lawn sprinklers on automatic timers
- obstructions
- uneven or unstable ground
- door and passageway widths and tight internal corners
- low hanging light fittings and other fixture obstructions
- unfriendly pets

Requirements for access may include:
- site restrictions and procedures
- personal protective equipment
- authorities and permits
- security arrangements at the site
- hours of operation
- removal duration
- additional gear and equipment
- communications equipment

Consultative processes may involve:
- customers
- other employees and supervisors
- management and other office personnel
- union representatives
- Occupational Health and Safety specialists
- other professional and technical staff and tradespeople

Special requirements may include:
- dismantling of items
- temporary removal of doors and fittings on site
- the use of tradespersons such as electricians, carpenters, cabinet makers, etc.

Communications may include:
- fixed and mobile phones, radio, fax, laptop computer/Internet
- oral/aural communications
- written communications, including completing and signing
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Calculations may involve the basic use of a range of technology including:

- manual techniques
- calculator
- computer

Information/documentation may include:

- job estimate
- Operations Furniture Removalist Manual
- job specifications and procedures
- OH&S procedures and regulations
- manufacturers specifications
- workplace operating procedures and policies
- customer instructions
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- job safety analysis
- site plan

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority vehicle driver licence requirements
- relevant state/territory traffic act and related regulations
- relevant state/territory OH&S legislation and regulations
- relevant state/territory environmental protection legislation and regulations

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
---|---
1 Identify required documentation | 1.1 Relevant documentation is collated and checked to ensure all appropriate information has been entered
   | 1.2 Omissions/discrepancies are noted and reported in accordance with workplace procedures
   | 1.3 Identification codes, manifest codes, details of dangerous goods declarations and pertinent data are entered into record system in accordance with workplace procedures and, where required, statutory requirements
   | 1.4 Relevant clearances for the movement of goods/freight are checked and, where appropriate, actions to rectify deficiencies are followed in accordance with workplace procedures
2 Process documentation | 2.1 Files/system are amended including the appending of all relevant data/information
   | 2.2 Tracking/monitoring processes are completed and documentation is forwarded in accordance with workplace procedures and, where required, statutory requirements

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant codes of practice and legislative requirements including Australian Dangerous Goods Code and relevant freight regulations
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures to be followed in the consolidation of manifests
- Operational procedures for document control
- Sources of information/documentation needed when consolidating manifests
- Customer service policies and procedures

**Required skills:**
- Communicate effectively with others when consolidating manifest documentation
- Read and interpret instructions, procedures, information and labels relevant to the consolidation of manifest documentation
- Interpret and follow operational instructions and prioritise work
Required skills:

- Complete documentation related to the consolidation process
- Work collaboratively with others when consolidating manifest documentation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when consolidating manifest documentation in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when consolidating manifest documentation
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Consolidation of manifest documentation may be undertaken in:
• the bulk handling, dangerous goods and freight forwarding sectors of the transport and distribution industry

Requirements for work may include:
• freight forwarding protocols and procedures
• communications equipment
• workplace operations
• authorities and permits
• hours of operation
• relevant regulations

Documentation may include:
• type, capacity and compatibility of cargo
• weigh bridge tickets
• loading dockets
• orders
• invoices

Consultative processes may involve:
• other employees and supervisors
• agents, suppliers, clients
• relevant authorities and institutions
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- management
- OH&S specialists
- other professional or technical staff
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- operations manuals, job specifications and procedures and induction documentation
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- supplier and/or client instructions
- relevant Australian standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:

- regulations relevant to the transport of freight
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- Australian and international standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Risks and hazards involved in mobile crane operation and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures and statutory regulations concerning the communications between a rigger/dogger and a mobile crane driver before and during a lift
- Problems that may occur in communications during a lift and associated action that can be taken to address the problems concerned
- Methods used to signal movement of the load during a lift
REQUIRED KNOWLEDGE AND SKILLS

- Communication systems used during a lift

Required skills:

- Communicate effectively with others when conducting a lift
- Read and interpret instructions, procedures, regulations, information and signals relevant to communication between the rigger or dogger and the crane driver
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting a lift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise in the course of communication between a crane driver and the rigger or dogger in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur in the course of communication between a crane driver and the rigger or dogger
- Apply precautions and required action to minimise, control or eliminate hazards that may exist in the course of communication between a crane driver and the rigger or dogger
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Prioritise and multi-task work
- Identify and correctly use equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment
EVIDENCE GUIDE

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:

    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Operations may be conducted:
- by day or night
- in a variety of weather conditions

Environment may include:
- equipment
- goods
- materials
- vehicular traffic

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic

Customers may be:
- internal or external

Mobile crane may be any slewing and non-slewing crane and may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water
- arboricultural
- swimming pool
- quarrying

Agreed signals/communications conforming to Australian Standards and codes of practice for load moving include signals for:
- stop
- raise
- lower
- slew-left or right
- luff-boom up and down
- extend boom
- retract boom

Methods used to signal movement of the load may include:
- verbal
- hand signals in accordance with standards and codes of practice
- whistles/hooters in accordance with standards and codes of practice
- two-way radios/telephones in accordance with standards and codes of practice
- light signals in accordance with standards and codes of practice

Consultative processes may involve:
- driver/rigger
- other employees and supervisors
- other professional or technical staff

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
### RANGE STATEMENT

- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is consistent with:

- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

#### Personal protective equipment

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

#### Requirements for access and/or lift

- a range of mobile cranes
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site procedures

Documentation/records may include:

- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
RANGE STATEMENT

- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile crane operations including dogging and rigging requirements
- relevant Australian Standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Competency Field  E - Communication and Calculation
TLIE3016A Estimate/calculate load shifting requirements for a mobile crane

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to estimate/calculate load shifting requirements including carrying out required calculations, preparing estimates of loads, and interpreting graphical representations of mathematical information. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to operations of mobile cranes.

Work is performed with limited or minimum supervision. It involves the application of routine principles, procedures and regulations to estimate/calculate load shifting requirements for a mobile crane.

Licensing/Regulatory Information

Refer to Unit Descriptor

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations, permit and licence requirements pertaining to mobile crane operation
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and limitations
- Risks and hazards involved in mobile crane operation and associated action that can be taken to eliminate or minimise the risk
- Workplace procedures concerning the estimation/calculation of load shifting requirements for a mobile crane
- Workplace procedures concerning the estimation/calculation of load shifting requirements for a mobile crane
- Problems that may occur during a lift and associated action that can be taken to address the problems concerned
- Focus of operation of work systems and equipment
- Metric and, where required, imperial measurement systems

Required skills:

- Communicate effectively with others when estimating and calculating load shifting requirements for a mobile crane
- Read and interpret mathematical scales, digital readouts, specifications and customer or workplace instructions
- Interpret permit or licence requirements in terms of height, weight and type of lift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to estimating and calculating load shifting requirements for a mobile crane
- Operate electronic communication equipment to required protocol
- Apply mathematical procedures including addition, subtraction, multiplication, division, percentages and fractions to the estimation of load shifting requirements
- Work collaboratively with others when estimating and calculating load shifting requirements for a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when estimating and calculating load shifting requirements for a mobile crane in accordance with workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment, processes and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in a variety of weather conditions

Environment may include movement of:
- equipment
- goods
- materials
- vehicular traffic
- internal or external

Customers may be:
- internal or external

Mobile crane may be any slewing and non-slewing crane up to and including 20 tonne capacity and may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Calculations and estimations may relate to:
- aspects of the lift as well as weights and dimensions of specific loads, cargo, containers to be shifted, stored or lifted. They may involve units of measurement for weight, linear measurement, number, mass, pressure, speed, volume and/or time

Calculations may be undertaken with:
- use of calculators, computers or other mathematical aids
RANGE STATEMENT

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Documentation/records may include:

- site procedures
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - OH&S procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant Australian Standards and certification requirements
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to maintain freight records in accordance with workplace requirements including the recording of all freight receipts and freight despatch documentation in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant regulations and workplace requirements concerning the maintenance of freight records.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the maintenance of freight records as part of work activities in the transport, distribution and/or allied industries.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the maintenance of freight records, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the international codes and regulations relevant to the maintenance of freight records
- Focus of operation of work systems, equipment, management and site operating systems for the maintenance of freight records
- Problems that may occur when maintaining freight records and appropriate action that can be taken to resolve the problems
- Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- Documentation requirements for the maintenance of freight records including workplace freight tracking system
- Housekeeping standards procedures required in the workplace
REQUIRED KNOWLEDGE AND SKILLS

- Freight transport timetables, yard/terminal facilities, and site layout

Required skills:

- Communicate effectively with others when maintaining freight records
- Read and interpret instructions, procedures, information and labels relevant to the maintenance of freight records
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of freight records
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when maintaining freight records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when maintaining freight records in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the maintenance of freight records
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer, communication and office equipment when maintaining freight records
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
EVIDENCE GUIDE

demonstrate competency in this unit

- requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night
RANGE STATEMENT

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Freight includes all forms of freight. Some freight may involve:
- special handling and storage requirements, including temperature controlled goods, dangerous goods, explosives and hazardous substances

Freight documentation may include a range of data provided on paper and in electronic form relating to freight movement, including:
- cartnotes
- delivery noted
- internal documentation used for freight tracking
- special clearances
- consignment notes
- dangerous goods certificates and declarations
- authorised weighbridge certificates
- list of contents

Freight tracking system includes:
- manual and computer-based tracking systems

Hazards in the work area may include:
- exposure to chemicals
- exposure to dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:
- other employees and supervisors
- suppliers, customers and clients
- drivers and agents
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace
- company procedures
- enterprise procedures
- organisational procedures
RANGE STATEMENT

procedures may include:

- established procedures

Personal protective equipment
may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may
include:

- goods identification numbers and codes
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for freight tracking
- codes of practice and regulations relevant to the receiving of goods
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant codes and regulations for the maintenance of freight records

Applicable regulations and
legislation may include:

- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- privacy legislation
- water and road use and licence arrangements
RANGE STATEMENT

- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Unit Sector(s)

Unit Descriptor

This unit involves the skills and knowledge required to work with travel agencies and sales outlets in accordance with workplace requirements including establishing and maintaining a network of travel agencies and sales outlets; developing and negotiating the sales of tour packages; monitoring and reporting tour package sales; reviewing and negotiating agency and outlet agreements; and communicating and promoting products and services to agencies and sales outlets. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with workplace requirements and relevant trade practices regulations.

Work is performed individually, and skills are required to work within a team environment. It involves the application of regulatory requirements and workplace procedures when working with travel agencies and sales outlets in the transport and allied industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Establish and maintain network of travel agencies and sales outlets | 1.1 Agency and outlet requests for the transport system services and tourist information are addressed  
1.2 Agency and outlet sales of tickets and services are promoted  
1.3 Agency and outlet concerns and complaints are investigated and addressed to achieve a satisfactory resolution |
| 2 Develop and negotiate the sales of tour packages | 2.1 Travel industry personnel within the workplace are consulted in the development of tour packages to be distributed through agencies and sales outlets  
2.2 Distribution rights are negotiated with wholesale and retail travel industry agencies for tour packages developed |
| 3 Monitor and report tour packages sales | 3.1 Travel agency and outlet sales of products are managed and controlled to ensure maximum sales and efficiency  
3.2 Tour packages are evaluated for popularity and profitability and appropriate recommendations for change prepared |
| 4 Review and negotiate agency and outlet agreements | 4.1 Existing agency and outlet agreements are monitored and reviewed for effectiveness and appropriate new agreements are recommended where necessary  
4.2 Distribution of tour packages is negotiated with wholesalers according to workplace policy and procedures |
| 5 Communicate and promote products and services to agencies and sales outlets | 5.1 Products for travel shelf packages are recommended according to workplace product suitability  
5.2 Sales outlets and agents are informed of changes to passenger services as quickly as possible  
5.3 Travel agency and outlet sales of products are promoted to ensure maximum exposure and sales  
5.4 Advertising and promotional activities to develop new businesses are established in accordance with workplace budgets and timeframes  
5.5 Promotional material is distributed to travel agencies and outlets |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations and codes of practice relevant when working with travel agencies and sales outlets
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S procedures and guidelines
- Workplace procedures and policies for working with travel agencies and sales outlets
- Overview of the Australian tourism industry and franchising arrangements
- Australian and international transport industry guidelines relevant to working with travel agencies and sales outlets
- Workplace products and services
- Insurance and public liability relevant to working with travel agencies and sales outlets
- Consumer laws and trade practice requirements relevant to working with travel agencies and sales outlets
- Transport system fare structure and schedules
- Advertising policies relevant to working with travel agencies and sales outlets
- Equipment, and materials used when working with travel agencies and sales outlets, and procedures that should be followed in their use
- Problems that may occur when working with travel agencies and sales outlets and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when working with travel agencies and sales outlets

Required skills:

- Communicate effectively with others when working with travel agencies and sales outlets
- Read and interpret instructions, procedures and information relevant to work with travel agencies and sales outlets
- Interpret and follow operational instructions and prioritise work
- Complete documentation when working with travel agencies and sales outlets
- Carry out research activities required when working with travel agencies and sales outlets
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when working with travel agencies and sales outlets
- Network with others in travel agencies and sales outlets
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when working with travel agencies and sales outlets in accordance with workplace procedures
- Implement contingency plans for unplanned events
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Market and promote products and services
- Create promotional layouts
- Select and use relevant office and communications equipment and materials when working with travel agencies and sales outlets
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment and service requirements in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments

Travel agencies and sales outlets could include:
- individual agencies and outlets
- agency and outlet franchise groups
- agency and outlet networks
- wholesalers
- specific product retailers
- general travel retailers

Office equipment may include:
- relevant communications equipment and computer software and hardware

Information used when working with travel agencies and sales outlets may include:
- market trend information
- customer requirements regarding tour packages
- agency and outlet agreements
- workplace budget and business objectives information
- governed by contractual agreement

Agency involvement with products and services may be:

Transport system services can include:
- air
- bus
- ferry
- coach
- tram
- rail

Contingency processes may involve:
- plans for unforeseen changes to travel arrangements
- providing services and tour packages for passengers with...
RANGE STATEMENT

Consultative processes may involve:
- other workplace personnel
- supervisors and managers
- representatives of travel agencies and sales outlets
- official representatives

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies for working with travel agencies and sales outlets
- work instructions, job description and induction materials
- requests directly from agency or sales outlet
- agency, outlet or client concerns or complaints
- information related to advertising and promotional activities within the industry
- agency and outlet agreements
- manufacturers specifications for office and communications equipment and materials
- relevant OH&S requirements and policies
- relevant codes of practice and regulations
- award, enterprise bargaining agreement and other industrial arrangements
- customer service and quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to work with travel agencies and sales outlets, including trade practices requirements
- relevant state/territory OH&S legislation
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor

This unit involves the skills and knowledge required to work and communicate effectively with others in accordance with relevant regulations and workplace procedures. It includes communicating effectively to achieve required outcomes; working with others; communicating using technology; operating a communication system effectively; using appropriate communication protocols when using a system; and maintaining operational status of communication equipment. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Work is carried out in accordance with relevant regulations and workplace procedures.

Work is performed under some supervision, generally within a team environment. It involves the application of established communication principles and practice and the use of local technical and colloquial language and vocabulary in day-to-day communications.

status of communications equipment accordance with workplace procedures
5.2 Minor communications equipment faults are promptly identified, diagnosed, and repaired or reported in accordance with workplace procedures
5.3 Faulty communications equipment is reported and/or recorded in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S responsibilities
- Protocols and procedures for communicating with others using relevant communication technology including the use of public address (PA) systems on electric passenger trains
- Features of various communications systems
- Pre-operational checks for communications systems and equipment
- Minor routine maintenance procedures for communications equipment
- Typical problems that may occur when using communications systems, and appropriate action and solutions
- Basic communication techniques including barriers to effective communication, and how to overcome them
- Techniques for communicating effectively with customers with special needs
- Instructions, procedures, information and signs relevant to working with others as a team
- Procedures for promptly reporting and/or rectifying any identified misunderstandings and problems that can occur in the workplace, and appropriate ways of dealing with them in accordance with regulatory requirements and workplace procedures

Required skills:

- Communicate effectively with others using available communications equipment
- Read and interpret instructions and procedures relevant to the use of communications equipment
- Interpret and follow operational instructions and prioritise work
- Identify and use required communication technology
- Work collaboratively with others when using communications equipment
Required skills:

- Promptly report and/or record and/or rectify any identified problems, faults or malfunctions that may occur when using communications equipment in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when using communications equipment
- Plan own communication construction including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without damage to equipment
- Operate and adapt to differences in communication equipment in accordance with standard operating procedures
- Monitor performance of communication equipment and take appropriate action if required
- Operate electronic communication equipment to required protocol when communicating with others in the workplace
- Work collaboratively with others

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - communicating effectively in different workplace situations
  - actively contributing to achieving workplace outcomes
EVIDENCE GUIDE

- using communication systems correctly while employing appropriate protocols

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communications may occur:
- in a workplace, terminal or depot
- on a train
- on a station/platform

Communication systems may include:
- fixed phone systems
- mobile phone, both on person or hands-free
- radios including personal, hand-held or vehicle-mounted
- communication systems on electric passenger trains
RANGE STATEMENT

Workplace communication may include:

- active listening
- two-way conversation
- questioning to obtain information and/or clarify information and understanding
- routine oral and/or written reporting

Communication problems may include:

- interpretation of special needs of customers
- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communications channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that message has been received and/or correctly understood
- not following correct communication protocols and procedures
- inability to use required technology to organisational requirements

Communication may be with:

- workplace personnel
- passengers
- managers
- supervisors/team leaders
- private and/or public sector security personnel
- police and other emergency services personnel
- English-speaking persons
- people from non-English speaking backgrounds
- people with special needs

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- workplace communication procedures, protocols, checklists and instructions
- manufacturers specifications for communications equipment
- communication records
- relevant codes of practice including the industry safety code
- legislation, regulations and related documentation
- standards and certification requirements
- quality assurance procedures
- emergency procedures
RANGE STATEMENT

Applicable regulations and legislation may include:
- relevant Australian and state/territory OH&S legislation
- relevant anti-discrimination legislation

Competency Field

Competency Field E - Communication and Calculation
TLIE3022A Complete workplace documents

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to collect, prepare, analyse and process workplace documents in accordance with workplace requirements. It includes collecting, preparing, analysing and interpreting information, and completing documents.
Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
Documents are completed as an integral part of routine work in the context of the workplace concerned.
Work is performed under minimal supervision, generally in a team environment.
Work involves the application of established communication principles and practices and may include the use of local technical language and vocabulary within documents.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

</table>
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Communication techniques, including active listening and effective questioning
- Organisational procedures and policies for the completion of documents and forms
- Issues that may occur when preparing and completing workplace documents, and action that can be taken to resolve them
- Format and layout of documents and forms used in workplace activities
- Methods used to analyse and interpret information to be included in workplace documents and forms

Required skills:

- Literacy and numeracy levels appropriate to the documents to be completed
- Read and interpret instructions, procedures and information relating to the completion of workplace documents
- Report and rectify within limits of own role identified problems when preparing and completing workplace documents
- Work systematically with required attention to detail
- Apply methods of analysis and interpretation for workplace documents
- Use appropriate numeric functions when interpreting and analysing information
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication techniques may include:
- active listening
- questioning to obtain information and clarify information and understanding, including:
  - open and closed questions
  - direct and indirect questions
  - probing questions

Communication problems may include:
- misunderstanding
- misinterpretation
- noisy environments or communication channels
- illegible writing or print
- use of non-standard vocabulary (jargon, acronyms, etc.)
- incorrect assumption that message has been received and/or correctly understood
- outdated information sources
- language barriers

Personnel communicated with may include:
- train drivers
- train crews
- train controllers
- signallers
- other workplace personnel and rail safety workers
- station/customer service staff
- passengers
- customers
- security personnel
- police and other emergency services personnel
- other professional or technical staff
- local government authorities

Documents and forms may include:
- routine written reports on workplace activities, including:
  - incident or accident reports
  - safeworking forms
  - train control diagrams
  - train graphs
  - log books
  - train register books
Information and
documentation may include:

- train notices
- workplace procedures, checklists and instructions
- workplace policies
- legislation, regulations and related documentation
- working timetables

Unit Sector(s)

Not applicable.

Competency Field

E – Communication and Calculation
TLIE3023A Use electronic communication systems

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to use electronic communication systems. It includes identifying system features, operating a communication system effectively, using appropriate communication protocols when using a system, ensuring equipment is operational, identifying any system access requirements (log in) and completing documentation.

Licensing, legislative, or certification requirements may be applicable to this unit.

Application of the Unit
Work is carried out in accordance with relevant regulations and workplace procedures.
Work is performed under some supervision, generally in a team environment. It involves the application of established communication principles and practices and the use of local technical and colloquial language and vocabulary in day-to-day communication.

This unit covers activities where a number of different communication systems are used concurrently, including radios, fixed-line and mobile telephones and computers.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Apply OH&S principles | 1.1 Information on OH&S requirements when using electronic communication equipment is accessed and interpreted  
2.1 Posture and ergonomic settings of chair and workstation are adjusted following OH&S guidelines  
1.3 OH&S and organisational guidelines on the use of periods of rest and exercise are followed when using electronic communications equipment |
| 2 Identify electronic communication equipment and systems | 2.1 Types of electronic communication equipment, component parts and accessories used in the work area are identified  
2.2 Applications for workplace activities of the different electronic communication systems and, where applicable, related software are interpreted  
2.3 Routine faults in operating systems, software applications and operator errors are identified and reported, where necessary |
| 3 Identify communication equipment features | 3.1 Electronic communication system features and control functions are identified  
3.2 Electronic communication equipment is set up to optimise communication  
3.3 Where relevant, appropriate communication system is selected |
| 4 Enter data | 4.1 Where required, text and numeric data are entered into a communication system using appropriate technology  
4.2 Entered information is checked and corrected |
### 5 Use communications equipment

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- OH&S risks and hazards when using communication systems
- Procedures for the use of communication systems in the workplace
- Problems that can occur when using communication systems and associated corrective actions
- Protocols and procedures for communicating with others using relevant communication technology
- Procedures and protocols for the use of communication systems during an emergency
- Features of various communications systems
- Basic communication techniques, including barriers to effective communication and how to overcome them (e.g. with linguistically diverse people)

Required skills:

- Communicate effectively with others using available communications equipment
- Complete documentation related to work activities when using communications equipment
- Identify and use required communication technology
- Use appropriate numeric functions when entering data into a computer system
- Identify and report problems, faults and malfunctions that may occur when using communications equipment in accordance with workplace procedures
- Apply precautions and required action to minimise, control or eliminate potential OH&S hazards during the use of communications equipment
- Prioritise communication activities depending on differing operational contingencies, risk situations and environments
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communication systems may include:
- fixed telephone systems
- mobile telephone, both on person or hands-free
- fax machines
- radios
- ACOMS
- computer applications

Interpersonal communication may include:
- active listening
- two-way conversation
- questioning to obtain information and clarify information and understanding
- routine oral reporting

Communication difficulties may include:
- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communication channels
- illegible writing or print
- use of non-standard vocabulary
- assumption that message has been received and/or correctly understood
- not following correct communication protocols and procedures

Communication may be with:
- train drivers and crews
- other workplace personnel and rail safety workers
- passengers
- customers
- security personnel
- police and other emergency services personnel
- other professional or technical staff
- local government authorities

Organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures
- standard operating procedures

Information and documentation may include:
- workplace communication procedures, protocols, checklists and instructions
- manufacturer specifications for communications
equipment
- communication records, including voice logs
- client instructions
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice
- Rail Safety Act
- dangerous goods and freight regulations and codes
- relevant federal, state and territory OH&S legislation
- environmental protection regulations

Unit Sector(s)

Competency Field
E – Communication and Calculation
TLIE3026A Carry out advanced calculations in the transport logistics industry

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to carry out advanced calculations. Licensing, legislative, regulatory and certification requirements are not applicable to this unit.

Application of the Unit
This unit applies to those working in the transport and logistics industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify required calculations | 1.1 Nature of calculation required and items involved are determined  
1.2 Tools required to perform calculations are identified and sourced |
| 2 Apply advanced calculations in workplace tasks | 2.1 Calculations involving fractions, percentages and mixed numbers, using the four basic processes, are performed as required to complete workplace tasks  
2.2 Numerical information is checked and corrected for accuracy |
| 3 Prepare estimates | 3.1 Quantities of materials and resources required to complete a work task are estimated and calculated accurately using fractions, percentages and mixed numbers  
3.2 Accurate estimates for work completion are made using fractions, percentages and mixed numbers  
3.3 Working load limits of workplace equipment are calculated using advanced calculations |
| 4 Interpret graphical representations of mathematical information | 4.1 Information represented in symbols, diagrams and pictorial representations is analysed, calculated and interpreted as relevant to the job role and function |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:
- Relevant OH&S responsibilities
- Advanced mathematical operations and techniques
- Ways of representing advanced and complex mathematical information
- Procedures for identifying and using relevant workplace technology when carrying out workplace calculations
- Advanced mathematical problems, and appropriate action and solutions

Required skills:
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to work activities
- Work collaboratively with others when carrying out advanced workplace calculations
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Estimate working load limits
- Make accurate estimates in a range of situations in the transport and logistics and heavy recovery industry
- Complex numeracy around job functions within transport and logistics
- Reading complex legislative and regulatory requirements
- using ratios and proportion and applying rates
- using multiple pieces of mathematical information to perform complex mathematical processes
- reading complex dials and indicators, non standard units of measurement, metric and imperial unit conversion, more advanced time estimates
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - calculate the mass and dimension of work function pertaining to the job role using fractions, percentages and mixed numbers
  - demonstrate the calculation of a load limit
  - interpret and analyse a workplace mathematical symbol

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written, practical and oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment consistent with current industry practice, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Calculations may involve:
- volume
- weight
- time
- length and distance
- area
- perimeter

Tools required may include:
- calculator
- numeric keypad
- computer

Four basic processes are:
- addition
- subtraction
- division
- multiplication

Symbols, diagrams and pictorial representations include:
- graphic representation within transport and logistics operations
- spreadsheets
- pie charts
- horizontal winch pull
- vertical winch pull
- air cushion
- rolling recovery
- gradients

Working load limits include:
- horizontal winch pull
- vertical winch pull
- winch pull (leverage) required for recovery
- air cushion force (leverage) required for rollover recovery

Accurate estimates include:
- potential snapping path
- resistance
- rolling
- damage
- gradient
- mechanical advantage
Mathematical operations may include:
- included angles
- multiplication
- division
- addition
- subtraction
- percentages
- fractions
- estimation

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Calculations may involve the basic use of a range of technology, including:
- manual techniques
- calculator
- computer

Information and documentation may include:
- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturer specifications
- workplace policies
- supplier and client instructions
- material safety data sheets
- relevant codes of practice, including the National Standard for Manual Handling and the industry safety code
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- dangerous goods and freight regulations and codes
- relevant federal, state and territory OH&S legislation

Applicable regulations and legislation may include:

Unit Sector(s)
Not applicable.
Competency Field

E – Communication and Calculation
TLIE3028A Complete a work diary in the road transport industry

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to compile the information required for a work diary used in the road transport industry and complete the diary according to regulatory and legislative requirements.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
A work diary is completed as an integral part of day-to-day work operations in the road transport industry.

Work is usually completed with little or no support.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Protocols and procedures for processing work diaries using relevant workplace policy
- Requirements for work diaries
- Sources of information for the completion of diaries
- Purpose of work diaries
- Typical problems in completing work diaries, and appropriate action and solutions

**Required skills:**

- Read, interpret and organise information needed for the completion and processing of work diaries
- Interpret and follow operational instructions and prioritise work
- Complete all required sections of work diary
- Report and rectify within limits of own role identified problems that may arise when completing and processing workplace documentation, forms, logs or diaries in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying an understanding of associated state or territory regulations for completion of a work diary
  - applying relevant workplace policy and procedures
  - applying an understanding of procedures for non-completion of a work diary
  - correctly completing a work diary to regulator regulations

Context of and specific resources for assessment

- Assessment must ensure access to:
  - work diary that is consistent with current industry standards
  - tools and equipment currently used in the road transport industry
  - regulatory requirements and equipment documentation that impact on work activities currently used in the road transport industry

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
- Simulation and online assessment are not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Processing of work diaries will be that involved in routine work functions and may occur by day or night and in a variety of work contexts, including:

- in confined spaces, exposed conditions and controlled or open environments
- in a workplace, warehouse or depot
- in a vehicle on the road
- at a customer’s workplace
- as defined within workplace procedures

Documentation and reporting systems will be:

Time periods include:

- records of the last 28 days of work and rest
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- relevant regulations, standards and codes of practice, including the National Standard for Manual Handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant federal, state and territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

Unit Sector(s)

Not applicable.

Required Skills and Knowledge

REQUISITED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant procedures and duty of care requirements
- Relevant OH&S responsibilities
- Sources of information and data and procedures for processing the information for workplace use
- Protocols and procedures for the collection, analysis and presentation of workplace information and data using relevant technology
- Presentation and communication techniques including an understanding of barriers to effective communication and how to overcome them
- Basic principles of effective presentation and communication of information
- Techniques for communicating effectively with a multilingual persons or persons with a limited ability to speak or understand English
- Typical presentation and communication problems and appropriate action and solutions
Required skills:

- Communicate effectively with others when collecting, analysing and presenting workplace data and information
- Read and interpret instructions and procedures relevant to the collection, analysis and presentation of workplace data and information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the collection, analysis and presentation of workplace data and information
- Identify and use required communication and presentation technology
- Work collaboratively with others when collecting, analysing and presenting workplace data and information
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when collecting, analysing and presenting workplace data and information in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may arise when collecting, analysing and presenting workplace data and information
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Data collection, analysis and presentation will be:

- that required for workplace operations
- may occur by day or night and in a variety of work contexts

Customers may be:

- internal or external

Presentation modes may include:

- written documentation
RANGE STATEMENT

- oral reports
- group presentations using appropriate technology
- completion of standard forms and checklists
- routine written reporting
- entry of collected/processed information into a computer
- participation in workplace discussions

Presentations/communications may involve:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English

Presentation/communication problems may include:
- misunderstanding
- limited ability of others to communicate in English
- noisy environments or communications channels
- illegible writing or print
- use of non-standard vocabulary
- incorrect assumption that information has been received and/or correctly understood

Depending on workplace context, consultative processes may involve:
- managers
- supervisors/team leaders
- workplace personnel
- clients
- private and/or public sector security personnel
- police
- security consultants
- visitors
- contractors
- official representatives
- union representatives
- industrial relations
- OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Presentation/communication may involve the use of a range of technology, including:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
RANGE STATEMENT

- overhead or computer controlled projector
- plain or electronic white board
- flip charts
- microphone and amplifier
- video player and monitor

Information/documentation may include:

- workplace procedures, checklists and instructions
- operations manuals
- induction documentation
- competency standards and training materials
- job specifications
- manufacturers specifications
- HAZCHEM and dangerous/hazardous goods codes
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory standards and certification requirements
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

Unit Sector(s)

Competency Field

Competency Field E - Communication and Calculation
TLIE4013A Apply workplace statistics

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to apply statistical data in the workplace including identifying situations where statistics are used in the workplace, collecting numerical data, processing and presenting data, and interpreting trends and patterns from numerical data. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
The application of workplace statistics is carried out as an integral part of work operations in the context of the workplace concerned.

Work is performed under general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures. This includes the application of established statistical principle

A range of opportunities may be used to develop the work area and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisation's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

</thead>
</table>
| 1 Identify situations where statistics are used in the workplace | 1.1 Types of statistical representations of data are identified  
1.2 Users of statistical data in the workplace are identified  
1.3 Statistical data representations are matched for appropriate workplace applications |
| 2 Collect numerical data | 2.1 Purpose of data collection is identified  
2.2 Sources of information are established  
2.3 Data collection methods are used  
2.4 Mathematical processes are used to arrange data  
2.5 Data collected is checked for accuracy  
2.6 Potential for inaccurate results arising from variables is estimated and described |
| 3 Process and present data | 3.1 Data collected is represented in graphs, tables, averages and percentages as required  
3.2 Spreadsheets and flowcharts are used to present data |
| 4 Interpret trends and patterns from numerical data | 4.1 Non-conforming results outside of the predicted outcome are noted and reasons identified  
4.2 Trends or patterns in data are noted  
4.3 Possible reasons for trends or patterns are generated  
4.4 Potential solutions are identified  
4.5 Appropriate techniques are used to encourage participation of team/group members to interpret and use statistical data |
| 5 Apply outcomes of statistical analysis to workplace operations | 5.1 Interpreted data is used to identify possible improvements in work processes and organisation  
5.2 Appropriate action is initiated to implement identified strategies for the improvement of processes or work organisation in accordance with workplace procedures  
5.3 Improvements are statistically monitored and evaluated in accordance with workplace procedures |

### Required Skills and Knowledge

#### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant procedures and duty of care requirements
REQUIRED KNOWLEDGE AND SKILLS

- Relevant OH&S responsibilities
- Workplace protocols and procedures for applying workplace statistics within work activities
- Focus of operation of recording, reporting and statistical analysis systems and resources
- Resource availability including the processing capacity of equipment and software systems for statistical analysis of data
- Coaching and mentoring approaches to support team members to develop knowledge and skills in statistical collection, collation and analysis
- Workplace business policies and plans including procedures for reporting performance

Required skills:

- Communicate effectively with others when applying workplace statistics
- Read and interpret instructions, procedures, and technical data relevant to the application of workplace statistics
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to workplace statistics
- Work collaboratively with others when applying workplace statistics
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems related to the application of workplace statistics in accordance with workplace procedures
- Select and appropriately apply technology, information systems and procedures to workplace tasks
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi-site location
- large, medium and/or small companies

Services, products, risks, work systems and requirements may vary across different sections of the workplace
RANGE STATEMENT

potentially:

Customer and supplier contact and coordination is:

- a requirement of these operations

The key requirement of this unit is to:

- interpret the data and provide appropriate, timely information on the outcomes of data analysis to appropriate personnel

Workplace applications of statistical data representations may include (examples only):

- monitoring work flow
- inventory and stock levels
- customer surveys
- supplier and market analysis
- fleet control

Statistics may be generated from:

- raw data
- machine generated information
- complex, dedicated computerised facilities

Personnel in work area may include:

- other employees and supervisors
- customers and suppliers
- external authorities and agencies
- management and union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff, contractors and maintenance personnel

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:

- workplace procedures, policies and instructions
- guidelines relating to minimising risks to the environment and occupational health and safety requirements
- relevant agreements, codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- reports of accidents and incidents within regulatory requirements and enterprise procedures
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- quality assurance procedures
- relevant regulations, standards and codes of practice
RANGE STATEMENT

legislation may include:

- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

Competency Field

Competency Field E - Communication and Calculation
TLIE4025A Prepare and process transport documentation for dangerous goods

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to prepare and process transport documentation relating to dangerous goods.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the heavy recovery industry. It does not include salvage operations.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

 Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Prepare regulatory documentation for dangerous goods | 1.1 Reasons and requirements for reporting and recording are identified  
1.2 Statutory documentation for dangerous goods is used in accordance with regulatory and organisational procedures  
1.3 Information is collected and checked with a range of personnel to confirm its accuracy, relevance and status  
1.4 Need for additional information is established  
1.5 Conclusions drawn and actions taken are checked to ensure that they match the information available  
1.6 Information is recorded and reported in the required format, style, structure and timeframe  
1.7 Documentation is checked to ensure its compliance with regulatory requirements |
| **2** Complete despatch and receival documentation for dangerous goods | 2.1 Order request information is analysed to identify work requirements to fill order  
2.2 Products are noted and site locations are identified  
2.3 Required schedules for order movement are identified  
2.4 Documentation is completed in accordance with organisational procedures and regulatory requirements  
2.5 Order is checked against schedule and order form  
2.6 Records are completed and appropriate documentation is attached in accordance with organisational procedures and regulatory requirements |
3 Complete organisational forms for dangerous goods

3.1 Correct form for the purpose is identified
3.2 Information for completion of the form is collected
3.3 Relevant sections of the form are completed
3.4 Other sections of the form to be completed by relevant persons are organised
3.5 Supporting documentation or information is gathered
3.6 Signatory requirements are determined and completed

4 Process documentation

4.1 Documentation is submitted to relevant persons
4.2 Documentation is adjusted, in response to feedback and comments received
4.3 Documentation is copied and stored in accordance with regulatory and organisational procedures
Required Skills and Knowledge

REQUISITE SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:

- Workplace procedures pertaining to preparing and processing dangerous goods documentation
- Appropriate regulatory requirements pertaining to preparing and processing dangerous goods documentation
- Relevant sources of information when preparing and processing dangerous goods documentation
- Relevant procedures and duty of care requirements relating to preparing and processing dangerous goods documentation
- Relevant OH&S responsibilities relating to preparing and processing dangerous goods documentation
- Workplace requirements relating to format, style, structure and timeframe
- Protocols and procedures for preparing and processing dangerous goods documentation
- Typical problems in processing workplace documentation, and appropriate action and solutions

Required skills:

- Communicate effectively with others when completing and processing dangerous goods documentation
- Read, interpret and organise information needed for the completion and processing of dangerous goods documentation
- Interpret and follow operational instructions and prioritise work in processing dangerous goods documentation
- Complete dangerous goods documentation accurately
- Write and/or enter information into computer-based documentation systems
- Work collaboratively with others when preparing and processing workplace documentation
- Operate and adapt to differences in technology in accordance with standard operating procedures
- Promptly report and rectify within limits of own role identified problems that may arise when preparing and processing dangerous goods documentation in accordance with regulatory requirements and workplace procedures
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessors should ensure that candidates can demonstrate the knowledge and skills to:
  - accurately prepare current dangerous goods documentation
  - identify the regulatory requirements for completing dangerous goods documentation
  - process dangerous goods documentation according to workplace procedures

Context of and specific resources for assessment

- Assessment must ensure access to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals pertaining to dangerous goods documentation
  - current industry-standard dangerous goods documentation

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Processing workplace documentation will be that involved in routine work functions and may occur by day or night and in a variety of work contexts, including:

- in a vehicle on the road
- at a client’s workplace
- in a workplace, refinery or depot
- in confined spaces, exposed conditions and controlled or open environments

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- regulatory requirements

Documentation and records include:

- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- workplace policies and procedures
- relevant Australian standards and certification requirements
- relevant internal data entry books, including log books, data sheets and load sheets
- transport emergency response plan (TERP)

Applicable legislative procedures and codes include:

- Australian code for the transport of dangerous goods by road or rail: the current Australian Dangerous Goods (ADG) Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations
  - environmental protection legislation and regulations
Unit Sector(s)
Not applicable.

Competency Field
E – Communication and Calculation
TLIE4030A Prepare rail safety reports

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to prepare safety reports to meet legislative, regulatory and organisational requirements. It includes collecting, interpreting and evaluating information, composing the rail safety report and editing it prior to submission. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Rail safety reports may be required to meet legislative, regulatory and organisational requirements. They would typically include safety performance reports, regulatory reporting, incident reports, and safety system audit reports.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify needs of the rail safety report

1.1 Reasons for and requirements of the rail safety report are identified and set procedures for specific types of report are followed

1.2 Target audience for the report is identified and the appropriate style of recording and reporting is chosen to meet their needs

1.3 Timeframe for delivery of the report is identified and met

2 Collect and analyse information

2.1 Information is sourced from inside and outside the organisation in accordance with organisational and legislative requirements

2.2 Information is validated to ensure accuracy, relevance, sufficiency and currency

2.3 Collected information is analysed and recorded in accordance with organisational requirements and type of report required

3 Record information

3.1 Collected information is recorded and reported in the required format, style, structure and timeframe

3.2 Technology available in the workplace is used to store and retrieve data

3.3 Appropriate measures are taken to ensure all written material complies with legislative requirements and organisational policies and procedures

4 Compose rail safety reports

4.1 Rail safety report purpose, objectives and format are determined in accordance with organisational and regulatory requirements

4.2 Sourced information is collated in a logical manner and assessed for relevance and inclusion

4.3 Content, structure and sequencing of materials are determined in line with the purpose and intended audience

4.4 Actions and/or recommendations are included where appropriate

4.5 Rail safety report is compiled and reviewed to confirm objectives and organisational and legislative requirements

4.6 Rail safety report is completed within agreed timeframes

5 Edit final report

5.1 Content of the final report is checked and proofread for grammar, spelling and punctuation

5.2 Information is amended as required, and the rail safety report is authorised in accordance with organisational policy and procedures prior to submission
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Barriers to effective communication
- Industry terminology used in rail safety sectors
- Legislative requirements and obligations of safety reporting in each applicable state/territory, including legal requirements of own role and responsibilities
- Organisational policies, procedures, guidelines and requirements for report writing
- Protocols and procedures for communicating in writing with others
- Security, freedom and confidentiality of information

Required skills:

- Adjust written communication to suit audience and situation
- Apply appropriate written communication techniques
- Check and confirm accuracy and validity of information
- Handle and store information securely and safely, with an awareness of environmental and sustainable practices
- Make conclusions that are clearly based on the information
- Present written material in the range of media used in the workplace
- Read, analyse and interpret documents containing the required information
- Record complete, accurate, clear and objective information
- Sort information into a logical pattern
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - collecting and analysing data
  - writing a rail safety report
  - editing a rail safety report

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Collect information from a range of different sources and strategies may include:

- organisational information recording and storage system
- paper and computer sources of data and information
- interviews
- incident reports
- case notes
- colleagues

Legislative requirements may include:

- notifiable occurrences
- annual safety performance report
- private siding activity statements
- event reports
- periodical reports
- compliance reports
- regulatory responses

Applicable legislation, regulations and codes may include:

- relevant commonwealth and state/territory regulations and codes
- relevant rail industry standards, codes of practice and regulations
- relevant state/territory occupational health and safety (OH&S) legislation
- Privacy Act

Unit Sector(s)

Not applicable.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Data management systems
- Organisational systems available for information communication and dissemination
- Relevant legislation, regulations, permit and licence requirements related to rail safety management
- Requirements of organisational systems including safety management system and risk management plans, risk registers, etc.

Required skills:

- Communicate effectively with others verbally and in writing
- Read and interpret instructions, procedures and information relevant to activities
- Use appropriate media to disseminate information
- Work collaboratively with others
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying rail industry regulatory compliance requirements
  - identifying and using media available for dissemination of information
  - identifying storage methods for regulatory compliance information

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Regulatory compliance information may include:
- notices
- safety alerts
- policy changes
- feedback to stakeholders
- safety reports

Relevant personnel may be:
- supervisors and/or managers
- customers
- official representatives
- contractors
- relevant authorities
- employees

Communication methods may include:
- electronic media
- verbal briefings
- presentations
- notices
- noticeboards
- toolbox talks
- workplace meetings

Organisational systems may include:
- rail safety management system
- interface agreements
- risk management system

Unit Sector(s)

Not applicable.

Competency Field

E – Communication and Calculation
TLIE4033A Use communications systems to control tram/light rail operations

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to use radio systems to control tram/light rail operations. It includes identifying equipment types, and features, using the communications equipment and responding to requests. Licensing, legislative, or certification requirements are not applicable to this unit.

Application of the Unit
This unit covers activities where a number of different communications systems are used concurrently, including radios, fixed-line and mobile telephones and computers.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

3.6 Request is referred in line with situation presented and in accordance with organisational procedures

3.7 Requests are answered promptly in accordance with organisational procedures

3.8 Requests are dealt with in a professional manner at all times

3.9 Appropriate follow-up action is taken, in accordance with needs of the situation and organisational procedures

4 Identify communications system faults

4.1 Communications system technical faults are identified and appropriate action is taken

4.2 Back-up or alternative systems are utilised when primary system fails or as required
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Communications systems features
- Effective communication techniques including barriers to communication and how to overcome them
- Manufacturer specifications for communications equipment
- Problems that can occur when using communications systems and corrective actions
- Procedures and protocols for using communications systems during an emergency
- Procedures for using communications systems in the workplace
- Protocols and procedures for communicating with others
- Quality assurance procedures
- Relevant safety, work health and safety (WHS)/occupational health and safety (OHS), and environmental procedures and regulations
- Relevant sections of legislated rail safety requirements including state and territory Acts and regulations, and nationally approved compliance codes and/or guidelines
- WHS/OHS risks and hazards when using communications systems
- Workplace communication procedures, protocols, checklists and instructions
- Workplace communication records (including voice logs)

Required skills:

- Apply precautions and required action to minimise, control or eliminate WHS/OHS hazards that may exist during the use of communications equipment
- Communicate effectively with others using available communications equipment
- Complete documentation related to work activities
- Identify and report problems, faults or malfunctions that may occur when using communications equipment
- Identify and use required communications technology
- Prioritise communication activities depending on differing operational contingencies, risk situations and environments
- Terminate calls in accordance with organisational procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Communications systems may include:
- ACOMS
- computer applications
- facsimiles
- fixed phone systems
- mobile phone, both on person or hands-free
- radios

Communication skills may include:
- active listening
- questioning to obtain information and/or clarify information and understanding
- routine oral reporting
- two-way conversation

Communication difficulties may include:
- assumption that message has been received and/or correctly understood
- illegible writing or print
- limited ability of others to communicate in English
- misunderstanding
- noisy environments or communications channels
- not following correct communication protocols and procedures
- use of non-standard vocabulary

Communication may be with:
- local government authorities
- police and other emergency services personnel
- security personnel
- supervisors/managers
- tram/rail drivers
- other professional or technical staff
- other workplace personnel

Appropriate follow-up action may include:
- dealing with identified faults within own area of responsibility
- identifying technical faults
- referring identified faults to supervisor or appropriate personnel

Back-up or alternative systems may include:
- alternative frequencies and spectrums
- alternative networks
- landline network
- mobile phone network
- relay systems
Unit Sector(s)
Not applicable.

Competency Field
E – Communication and Calculation
TLIE5020A Apply knowledge of freight forwarding documentation and permits

Modification History

Not Applicable
Unit Descriptor

This unit covers the competency required to develop, maintain and apply an in-depth understanding of required documentation, forms and permits to advanced freight forwarding activities. This includes the demonstration of the required knowledge of documentation, forms and permits; the consistent interpretation and application of that knowledge to the freight forwarding role and functions; and undertaking sufficient appropriate continuous professional development activities to maintain the currency of the required knowledge and understanding. International freight forwarding covers the importing, exporting and transiting of freight. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

This unit was developed for persons applying knowledge of freight forwarding documentation and permits as part of advanced international freight forwarding functions.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

All activities are carried out in accordance with relevant organisational policy and procedures, as well as national and global codes of practice and regulations applicable to international freight forwarding.

Licensing/Regulatory Information

Refer to Unit Descriptor

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Access and interpret information on freight forwarding documentation and permits | 1.1 Information on the requirements for freight forwarding documentation and permits is regularly accessed from appropriate sources
 | 1.2 Information on the requirements for freight forwarding documentation and permits is interpreted and applied when working on freight forwarding projects
 | 1.3 Continuous professional development is undertaken to ensure a current knowledge of the requirements for freight forwarding documentation and permits as per industry practice and company standard procedures
2 Demonstrate the required knowledge of freight forwarding documentation and permits | 2.1 Knowledge of the requirements for freight forwarding documentation and permits needed to perform effectively as an international freight forwarder is demonstrated through the successful completion of a range of assignments and both real and simulated freight forwarding projects
3 Apply information knowledge of freight forwarding documentation and permits to the freight forwarding functions | 3.1 Current information on the requirements for freight forwarding documentation and permits is consistently applied when carrying out the international freight forwarding role and functions

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and international conventions, codes of practice and regulatory requirements for the completion of documentation, forms and permits in international freight forwarding (including those applicable to the importing, exporting and transiting of goods)
- Documents, forms and permits required in freight forwarding
- Procedures and protocols for the preparation and processing of documentation, forms and permits in international freight forwarding
- Responsibilities and liabilities of the freight forwarder in ensuring that all required documentation, forms and permits are accurately and correctly prepared
- Definitions, purpose and use of Incoterms and Combiterms
- International sales contracts - principles, conditions and specifications, consequences of poor
REQUIRED KNOWLEDGE AND SKILLS

- Preparation or mistakes
- Documentation requirements for billing and accounts
- Systems and processes for the on-line completion of documentation and forms
- Australian Customs and Border Protection requirements including:
  - General information on the Australian Customs administration
  - Australian Customs and Border Protection tariffs
  - Australian Customs and Border Protection procedures
  - International conventions
  - GST (applicable rate and taxable value)
  - Control of import and export consignments
  - Import licences e.g. for certain types of dangerous goods
  - Veterinarian control and live plant control (phytosanitary control)
  - Intellectual property, counterfeit, artifacts, boycott issues
- Sources of information on the documentation, forms and permits required when providing international freight forwarding services
- Principles and techniques of closed-loop communication in which checks are made to confirm that messages and responses being given or received are unambiguous and are correctly and clearly understood
- Understanding of the principles of quality assurance and customer service standards, policies and procedures as they apply in the international freight forwarding industry
- Typical problems that can occur when preparing and processing required documentation, forms and permits in international freight forwarding and related appropriate action that can be taken to prevent or resolve them

Required skills:

- Communicate effectively with others when preparing and processing required documentation, forms and permits, including unambiguous closed-loop communication in which checks are made to confirm that messages and responses are correctly and clearly understood (particularly in situations where communication is with a person for whom English is not the native language)
- Read and interpret instructions, procedures and other information relevant to the preparation and processing of documentation, forms and permits needed in international freight transport
- Interpret and follow operational instructions and prioritise work
- Complete the preparation and processing of documentation, forms and permits required in international freight forwarding, including data entry to a computer system
- Operate applicable information and communication technology to required protocol
- Work collaboratively with others when preparing and processing required documentation,
Required skills:

forms and permits

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when preparing and processing required documentation, forms and permits in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when preparing and processing required documentation, forms and permits
- Monitor work activities in terms of planned schedule
- Apply relevant national and international codes of practice, regulations and legislative requirements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply information and communication systems and procedures to complete workplace tasks
- Operate and adapt to differences in information and communication equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - maintaining a current knowledge of the documentation, forms and permits required in international freight forwarding through appropriate continuous professional development activities
  - interpreting and applying a current knowledge of the required documentation, forms and permits to the international freight forwarding role and functions

Context of and specific resources

- Performance is demonstrated consistently over a period
EVIDENCE GUIDE

for assessment

of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

International freight forwarding includes services related to:

- the importing of goods
- the exporting of goods
- the transiting of goods
- the mode of transport
- the nature of the goods
- the routing and country of destination
- the requirements for import quarantine, health and customs controls in applicable countries
- the sales contract

The range of documentation, forms and permits required for international freight forwarding is dependent upon a variety of factors including:
RANGE STATEMENT

International freight forwarding documentation and permits may include but are not limited to:

- the terms of documentary credits
- the relationship and arrangements of the seller and buyer
- standard FIATA forms and documentation such as:
  - a Negotiable Multimodal Transport Bill of Lading (FB/L)
  - a Non-negotiable Multimodal Transport Waybill (FWB)
  - a Forwarders Certificate of Receipt (FCR)
  - a Forwarders Certificate of Transport (FCT)
  - a Forwarders Warehouse Receipt (FWR)
  - a Forwarders Forwarding Instructions (FFI)
  - a Shippers Declaration for the Transport of Dangerous Goods (SDT)
  - a Shippers Intermodal Weight Certification (SIWC)
  - an Original Bill of Lading (OB/L)
  - a Master Air Waybill (MAWB)
  - a House Bill of Lading (HBL)
  - a House Air Waybill (HAWB)
  - Multimodal Transport Bill of Lading (MTB/L)
- sales contracts
- bills of lading, waybills or consignment notes
- commercial invoices with an Incoterm and extra details to ensure proper passage and clearance
- packing lists
- origin certificates
- packing declarations regarding wood and other materials of plant origin
- fumigation or other treatment certificates for shipments containing wood or other materials of plant origin
- delivery notes
- container lists
- insurance policies
- insurance certificates
- insurance claim forms
- cargo manifests
- pre-advice and pre-alert documents
- veterinary certificates for materials of biological origin which are for human consumption
- health and phytosanitary certificates
- quality analysis or weight/measurement certificates
RANGE STATEMENT

Information and communication technology systems may include but are not limited to:

- consular documents
- inspection certificates and SGS reports
- data storage and management systems
- Electronic Freight Forwarding Management Systems (FFMS)
- Electronic Warehouse Management Systems (WMS)
- Electronic Transportation Management System (TMS)
- Internet and web based technology
- Electronic Data Interchange (EDI)
- EDI for Administration of Commerce (EDIFACT)
- Value-added Network (VAN)
- IP-based telecommunications systems
- Local Area Networks (LANS)
- Wireless Area Networks (WANS)
- broadband internet systems including ADSL, dedicated broadband lines and wireless systems
- barcoding systems
- Radio Frequency Identification (RFID) systems used in warehouses and logistics facilities
- E-commerce security systems

Communications systems may involve:

- face-to-face conversation
- telephone including fixed, mobile and IP phones
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:

- customers
- a global network of international and domestic agents, regulatory authorities, carriers, suppliers, and other freight forwarding contacts
- relevant regulatory authorities and institutions
- freight forwarding specialists in areas such as dangerous goods, special cargoes etc.
- management
- other employees and supervisors
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
RANGE STATEMENT

Sources of information required to perform international freight forwarding functions may include:

- websites of key international and Australian organisations such as FIATA, IMO, ICAO, IATA, CASA, AMSA, Australian Customs and Border Protection Service, AQIS, government agencies responsible for transport security etc.
- key reference publications such as Incoterms, FIATA forms and documents, ICC publications, and other manuals, texts and handbooks on freight forwarding, international trade and related topics etc.

Operational information / documents may include but are not limited to:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- summaries and definitions of Incoterms and Combiterms
- workplace standard operating procedures and policies
- customers' instructions and transport requirements
- applicable standard international freight forwarding forms and documents
- operations manuals, job specifications and procedures and induction documentation
- Australian and international standards, criteria and certification requirements
- data obtained through information and communications technology equipment and oral, aural or signed communications
- freight forwarding competency standards and training materials
- freight forwarder company's quality assurance standards and procedures
- manifests, bar codes, goods and container identification
- emergency procedures

Applicable regulations and legislation may include:

- Australian and international regulations, conventions and codes of practice for the international forwarding of freight
- relevant regulations for the import and export of cargo
- Australian and international standards and certification requirements
- relevant regulations pertaining to international trading and financial transactions
- relevant Australian and international transport security and safety legislation
- relevant Australian and international environmental protection legislation

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT | PERFORMANCE CRITERIA
--- | ---
1 Identify road users | 1.1 Different road users groups are recognised
| 1.2 Interaction between road users groups, both positive and negative, is observed
| 1.3 Strategies are suggested to assist in the positive interaction of road users
2 Identify potential risk consequences of interaction of road users | 2.1 Potential risks for each road user group are recognised
| 2.2 Potential consequences for each road user group are appreciated
| 2.3 Potential risk and consequences when road user groups interact are identified
3 Identify the use and reason for road rules | 3.1 Road rules and their purpose are described
| 3.2 The sources of road rules and regulations are identified
| 3.3 Rules and regulations for all road users are identified
| 3.4 Rules and regulations governing road use are described

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Knowledge of English
- Knowledge of what regulations/rules are
- Knowledge of what a strategy is
- Difference between positive and negative
- Knowledge of what a risk is and how it affects performance

Required skills:

- Communicate effectively with others
- Read and interpret instructions, procedures and information
- Interpret and follow instructions
- Complete basic documentation
- Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- Recognise limitations and ask for help
Required skills:
- Be able to assimilate instruction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - identifying other road users
  - showing an understanding of rules and regulations as they apply to road users
  - demonstrating an understanding of the purpose of road rules

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including, regulations, codes of practice and operation manuals

Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
EVIDENCE GUIDE

- in an appropriate range of situations
- Simulators are not suitable for final assessment of this unit of competency
- Driving a vehicle is not part of the assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Other road users may include:
- pedestrians
- cyclists and skaters
- passengers
- other drivers
- farm vehicles
- mobility scooters
- segways
- heavy commercial vehicles

Applicable regulations and legislation may include:
- relevant state/territory road law
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Potential risks may include:
- physical injury
- social repercussions
- emotional reaction
- financial effect
- economic impact
- legal repercussions

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Other road users may include:
- pedestrians
- cyclists and skaters
- passengers
- other drivers
- farm vehicles
- mobility scooters
- segways
- heavy commercial vehicles

Motor vehicle may include:
- cars
- trucks
- motorcycle
- electric pedal cycle

Road markings may include:
- on-road markings e.g. lines

Traffic control devices may include:
- regulatory (black and white):
  - traffic lights/signals
  - temporary traffic lights
  - road signs
  - speed signs
  - variable message boards
  - variable speed signs
  - police/traffic control person
- advisory:
  - speed signs
  - road condition alerts
RANGE STATEMENT

- warning (yellow):
  - pedestrian signs
  - yellow and black signs

Environmental factors may include:
- rain
- snow
- ice
- water on road
- dust
- sand
- mud
- rocks

Passive safety features of the road network may include:
- safety rails/barriers
- frangible poles
- breakaway poles
- separated dual carriage lanes
- culvert (1m sealed)
- water barriers
- decoy road work vehicles

Active safety features of the road network may include:
- road surface
- lane markings
- audible run-off road strip
- traffic lights
- guide posts
- roundabouts
- electronic speed signs
- electronic lane advice
- radio announcements

- Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- Recognise limitations and ask for help
- Be able to assimilate instruction
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - identifying high risk behaviour
  - identifying regulatory bodies
  - identifying ways to reduce high risk behaviours within peer group and self

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment
  - in an appropriate range of situations
- Simulators are not suitable for final assessment of this unit of competency
- Driving a vehicle is not part of the assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Other road users may include:
- pedestrians
- cyclists and skaters
- passengers
- other drivers
- farm vehicles
- mobility scooters
- segways
- heavy commercial vehicles

High risk behaviours may include:
- fatigue
- drugs
- alcohol
- speed (high speed or inappropriate for circumstances)
- inattention
- distraction
- hoon behaviour

Potential risk may include:
- physical injury
- social repercussions
- emotional reaction
- financial effect
- economic impact
- legal repercussions

Regulatory bodies may include:
- relevant state/territory roads and traffic authority

Regulation and legislation may include:
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the knowledge required to understand and recognise motor vehicle road crash risks. It includes identifying types of crashes, reason for these crashes, and post crash actions. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit
Work is performed under supervision, generally within a team environment. It involves the application of routine operational principles and procedures to demonstrate recognition of motor vehicle road crash risks and post crash actions as part of driving activities across a variety of operational contexts within Australia.

Licensing/Regulatory Information
Refer to Unit Descriptor

| 1 Identify the types of motor vehicle crashes | 1.1 Common types of motor vehicle crashes are identified and described  
  1.2 Possible risk factors that contribute to motor vehicle crashes are identified |
| 2 Identify risks and causes of motor vehicle crashes | 2.1 The common causes of motor vehicle crashes are described  
  2.2 The human, environmental and vehicular factors that contribute to motor vehicle crashes are identified and described  
  2.3 Measures to prevent the most common road crashes are identified |
| 3 Identify the actions to be taken post crash by drivers and others | 3.1 The legal obligations of drivers and others after a motor vehicle crash are described  
  3.2 Practical strategies that can be applied to a crash scene to decrease further risk are identified |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Knowledge of English
- Knowledge of what regulations/rules are
- Knowledge of what a strategy is
- Difference between positive and negative
- Knowledge of what a risk is and how it affects performance

Required skills:

- Communicate effectively with others
- Read and interpret instructions, procedures and information
- Interpret and follow instructions
- Complete basic documentation
- Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- Recognise limitations and ask for help
Required skills:

- Be able to assimilate instruction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - identifying the major road crashes causes and post crash action
  - applying relevant legislation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations
- Simulators are not suitable for final assessment of this
EVIDENCE GUIDE

unit of competency

- Driving a vehicle is not part of the assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Common types of motor vehicle crashes may include:

- rear end collision
- side impact collision/adjacent direction collision
- right turn in front of oncoming traffic
- run off road on straight collision
- run off road on curve collision
- head on collision
- pedestrian collision

Common causes of motor vehicle crashes may include:

- rear end collision:
  - travelling too fast
  - not leaving enough distance between vehicles
- side impact collision/adjacent direction collision:
  - poor or insufficient scanning of the driving environment
  - not sufficiently judging the gap in the traffic
  - overconfidence in driving ability
- head on collision:
  - not judging speed or distance correctly when overtaking
  - not detecting hazards early enough
  - impatience
- run off road on straight collision:
  - travelling too fast for the conditions
  - inexperience resulting in over steering or misjudging distances
- pedestrian collision:
  - pedestrians not judging the amount of time it takes a vehicle to stop
  - encountering intoxicated or unpredictable pedestrians
RANGE STATEMENT

- right turn in front of oncoming traffic:
  - not judging speed accurately
- human:
  - fatigue
  - drugs
  - alcohol
  - speed
  - inattention
  - distraction
- environmental:
  - road surface (gravel/sealed)
  - animals
  - road debris
  - geographical obstacle
  - architectural obstacle
- vehicular factors - mechanical failure/vehicle defects:
  - tyres
  - brakes

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Knowledge of English language
- Knowledge of what regulations/rules are
- Knowledge of what a strategy is
- Difference between positive and negative
- Knowledge of what a risk is and how it affects performance

**Required skills:**

- Communicate effectively with others
- Read and interpret instructions, procedures and information
Required skills:

- Interpret and follow instructions
- Complete basic documentation
- Use basic interpersonal and communication skills (including listening and questioning, receiving feedback)
- Recognise limitations and ask for help
- Be able to assimilate instruction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating selection of safe motor vehicle
  - identifying reasons for selection of a safe motor vehicle

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using
EVIDENCE GUIDE

written/practical/oral assessments

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations
- Simulators are not suitable for final assessment of this unit of competency
- Driving a vehicle is not part of the assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Other road users may include:
- pedestrians
- cyclists and skaters
- passengers
- other drivers
- farm vehicles
- mobility scooters
- segways
- heavy commercial vehicles

Safety features may include:
- lighting:
  - headlights on warning/auto
  - daytime running lights
  - hazard light activate in severe crash
  - driving lights
  - fog lamps
- vehicle:
  - top speed limiter
  - seat belt interlock
  - seat belt load limiters front
  - speed alarm
  - high transmittance glazing
  - knee bolster/padding
  - laminated or shatter-proof glazing for all windows
RANGE STATEMENT

- seat belt webbing grabbers front
- seat belt pre-tensioner front
- anti-submarining seat design
- helmets/head bands for occupants
- seat belt buckle mounted on seat
- pedestrian friendly vehicle front
- ABS brakes
- side airbag - front seat thorax
- driver airbag
- conspicuous vehicle body colour
- load restraint devices (tethers)
- intelligent speed adaption
- improved foot protection
- speed sensitive intermittent wipers
- automatic wipers
- adjustable head restraint
- head protection padding
- cargo barrier
- external mirrors electrically adjustment
- bonnet airbag for pedestrian protection
- smart airbag
- crash recorder
- mobile phone available in event of accident
- seat belt load limiters rear
- alcohol/drug interlock
- seat belt d-ring height adjustable
- mayday distress call in severe crash
- cruise control
- engine immobiliser
- automatic transmission
- adjustable lumbar support
- adjustable steering column
- adjustable driver's seat (multifunction)
- cooled/heated driver's seat
- side airbag - front head-protecting (curtain)
- headway radar for closing speeds
- front passenger airbag
- fuel and engine cut-off (severe crash)
RANGE STATEMENT

- seat belt centre rear-point
- head rest for rear outboard seats
- power steering
- seat belt webbing grabbers rear
- seat belt pre-tensioners rear
- head restraints for all rear seats
- side airbag rear thorax
- inflatable seat belt
- independent rear suspension
- auto dimming rear view mirror
- child seat integrated
- harness seat belt for adults
- side airbag rear head-protecting
- navigation system (GPS)
- traction control
- run flat tyres
- anti fogging (heated) ext mirrors
- tyre pressure monitoring
- air conditioning/climate control

Vehicle fluid may include:

- engine
- windscreen water
- radiator coolant
- brake fluid
- transmission fluid
- radiator/cooling system
- battery
- air conditioner
- fuel

Passive safety features of motor vehicles may include:

- airbags (front(side/curtain)
- air conditioning
- automatic transmission
- cargo barrier
- cruise control
- daytime running lights
- head restraints
- mirrors
- over-speed warning devices
- seats
- seat belts
RANGE STATEMENT

Active safety features of motor vehicles may include:

- steering wheel
- frontal impact protection
- Anti-lock Braking System (ABS)
- Electronic Stability Control (ESC)
- tyres
- Electronic Brake Assist (EBA)
- Electronic Brake force Distribution (EBD)

Competency Field

Competency Field  F - Safety Management
TLIF0098A Apply personal and equipment lockouts for rolling stock

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to apply personal and equipment lockouts to rolling stock in accordance with regulatory requirements. It includes following policies, procedures and protocols of the access provider. Licensing, legislative or certification requirements are not applicable to this unit.

Application of the Unit
This unit is for people required to apply lockouts to defined areas, rolling stock and specific equipment in order to carry out maintenance activities.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

#### 1 Identify personal and equipment lockout requirements

1.1 Area and rolling stock to be locked out is identified

1.2 Appropriate lockouts are determined in accordance with activities to be undertaken and organisational policies and procedures

1.3 Appropriate documentation is completed in accordance with organisational procedures

1.4 Where applicable, appropriate personnel are informed in accordance with organisational procedures

#### 2 Apply and remove area lockout

2.1 Danger zone is safely accessed in accordance with organisational procedures

2.2 If existing lockouts are identified appropriate personnel are contacted in accordance with organisational procedures

2.3 Area lockouts are applied as required in accordance with organisational policies and procedures

2.4 Once all work has been completed and all sub lockouts have been removed, area lockout is removed

#### 3 Apply and remove rolling stock lockout

3.1 Confirmation is made that area is locked out in accordance with organisational procedures

3.2 If existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures

3.3 Rolling stock lockouts are applied as required in accordance with organisational policies and procedures

3.4 Once all work has been completed and all sub lockouts have been removed, rolling stock lockout is removed

#### 4 Apply and remove personal lockouts

4.1 Confirmation is made that area and rolling stock are locked out in accordance with organisational procedures

4.2 If existing lockouts are identified, appropriate personnel are contacted in accordance with organisational procedures

4.3 Personal lockouts are applied as required in accordance with tasks to be performed and organisational policies and procedures

4.4 Once work has been completed all personal lockouts are removed

#### 5 Maintain lockout equipment

5.1 Any damaged or unserviceable equipment is labelled and reported in accordance with organisational procedures

5.2 Missing or damaged equipment is replaced in accordance with organisational procedures
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required knowledge:
- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Organisational policies, procedures and protocols

Required skills:
- Communicate effectively with individuals and work groups
- Conduct a situational awareness assessment
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Operate electronic communication equipment to required protocol
- Use required personal protective equipment conforming to organisational standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
  - the timeframes typically expected for the work function and industrial environment
  - Compliance with site safety plans, OH&S regulations and other regulatory requirements
  - Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
    - identifying procedures for locking out rolling stock
    - correctly applying rolling stock lockouts
    - correctly removing rolling stock lockouts

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- danger zone:
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology used will be:
- as defined by the applicable track safeworking system and operating procedures

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Personal and equipment lockout equipment may include:
- locks
- tags
- seals
- flags
- chocks
- isolation device

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF1001A Follow occupational health and safety procedures

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to follow and apply occupational health and safety (OH&S) procedures when carrying out work activities. It includes identifying and following workplace procedures for hazard identification and risk control, contributing to arrangements for the management of occupational health and safety, and completing occupational health and safety records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant OH&S regulations and procedures.

Work is performed under some supervision generally within a team environment. It involves the application of the established OH&S and hazard minimisation principles and procedures to the conduct of workplace activities.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
**Employability Skills Information**

**Employability Skills**

This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 **Follow workplace procedures for hazard identification and risk control** | 1.1 Workplace procedures for dealing with accidents, fire and emergencies are known and followed  
1.2 Workplace procedures for OH&S and related work instructions for controlling risks in a workplace are accurately followed  
1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment  
1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities  
1.5 Where relevant, procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed  
1.6 Personal protection clothing and equipment is correctly used in accordance with established safety practices and procedures  
1.7 Established emergency and contingency plans are followed in the event of an emergency

2 **Contribute to arrangements for the management of occupational health and safety** | 2.1 OH&S issues and identified safety hazards are raised with designated personnel in accordance with workplace procedures and relevant OH&S legislation  
2.2 Contributions to OH&S management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation  
2.3 OH&S issues are raised with designated personnel in accordance with workplace procedures and relevant OH&S legislation  
2.4 Participative arrangements for OH&S management in the workplace are contributed to within workplace procedures and scope of responsibilities and competencies

3 **Complete occupational health and safety records** | 3.1 OH&S records for self are completed in accordance with workplace requirements  
3.2 OH&S records and legal requirements for the maintenance of records of occupational injury and diseases are followed

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:
- Relevant OH&S procedures and guidelines
- Risks when using manually-operated equipment to shift loads and related precautions to control the risk
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms, manifests, emergency shut-off systems, emergency communication systems
- Signs and signals used for OH&S warnings
- Terms used in material safety data sheets (where relevant)
- HAZCHEM symbols and implications for safe work and storage
- Storage and use of hazardous substances
- Handling of broken or damaged equipment
- Manual and mechanically assisted lifting and load shifting procedures
- Transport requirements for goods within workplace
- Emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when following OH&S procedures
- Read and comprehend simple statements in English
- Read and interpret relevant safety-related information including safety labels, instructions for safe work, relevant material safety data sheets, workplace procedures and codes of practice
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to OH&S in the workplace
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when following OH&S procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following OH&S procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when following
Required skills:

OH&S procedures

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - demonstrating an understanding of workplace procedures and how they apply to OH&S
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

 RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The shifting operations may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Workplace hazards may include:
- chemicals and other harmful substances
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
RANGE STATEMENT

- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- a range of storage areas

Personnel in the work area may include:
- workplace personnel
- site visitors
- OH&S specialists
- union representatives
- contractors
- official representatives

Participative arrangements may include:
- formal and informal meetings which deal with OH&S issues
- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio

Designated personnel may include:
- workplace personnel
- supervisors
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- OH&S regulations
RANGE STATEMENT

include:

- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- ADG Code and material safety data sheets (where relevant)
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

Unit Sector(s)

Competency Field

Competency Field  F - Safety Management
TLIF1002B Conduct housekeeping activities

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to conduct housekeeping activities in the workplace, including identifying required housekeeping requirements, procedures and resources for different areas of the workplace; monitoring and maintaining cleanliness and tidiness in the workplace; and completing assigned housekeeping tasks.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with workplace housekeeping procedures.

Work is performed under some supervision generally in a team environment. It involves the application of basic safety principles to the completion of housekeeping tasks as part of workplace operations.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify the housekeeping requirements, procedures and resources of different areas of the workplace

1.1 Workplace procedures for housekeeping are identified
1.2 Equipment and consumables are selected in accordance with work area requirements
1.3 Specific requirements for housekeeping activities in different parts of the work area are identified and followed

2 Monitor and maintain cleanliness and tidiness in the workplace

2.1 Initiative is used to continuously monitor the cleanliness and tidiness of the worksites
2.2 Housekeeping issues are raised with designated personnel in accordance with workplace procedures
2.3 Housekeeping equipment is operated in accordance with manufacturer instructions and company policy
2.4 Housekeeping equipment and supplies are maintained and stored

3 Complete assigned housekeeping duties

3.1 Assigned housekeeping duties are conducted following workplace procedures and ensuring that waste is removed
3.2 Maintenance requirements of any damaged items are notified to appropriate personnel
3.3 Schedules and records for housekeeping duties are maintained
3.4 Work areas are checked and meet required workplace standards
3.5 Work is carried out following enterprise practices and safe work procedures
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Workplace procedures and policies for carrying out housekeeping tasks in the workplace
- Risks when carrying out housekeeping tasks and related precautions to control them
- Housekeeping standards required in the workplace
- Purpose of housekeeping within the workplace
- Site layout and obstacles
- Servicing procedures for housekeeping equipment
- Relevant enterprise practices and safe work procedures for the job role

Required skills:

- Communicate effectively with others when carrying out housekeeping tasks
- Interpret and follow operational instructions and prioritise work
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when carrying out housekeeping tasks
- Report and rectify within limits of own role problems, faults and malfunctions identified when carrying out housekeeping tasks in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during housekeeping activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor condition and performance of housekeeping tools and equipment
- Service housekeeping tools and equipment in terms of servicing schedule and standard operating procedures
- Select and use required personal protective equipment (PPE), conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying workplace housekeeping requirements
  - undertaking housekeeping in the workplace

Context of and specific resources for assessment

- Access is required to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Practical assessment must occur:
  - in three different activities of the job role in the workplace
  - if in a simulated work environment, using industry-standard equipment
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Housekeeping tasks may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- tight or restricted spaces
- exposed conditions
- controlled or open environments

Housekeeping duties may include:
- cleaning
- returning goods or equipment to storage
- repacking
- waste removal
- maintenance

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movement of equipment, goods and materials

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on workplace context, PPE may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- eye wash

Information and documents may include:
- OH&S and environmental protection regulations
- workplace housekeeping procedures and policies
- codes of practice, including the National Standard for Manual Handling and the industry safety code
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturer instructions concerning the use and servicing of equipment
- supplier and customer instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- relevant state and territory:
  - OH&S legislation
  - environmental protection legislation
  - workplace relations regulations
  - dangerous goods and air freight regulations

Applicable regulations and legislation may include:

Unit Sector(s)

Competency Field
Competency Field | F - Safety Management
TLIF1009A Conduct cleaning operations in enclosed spaces

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to conduct cleaning operations in enclosed spaces, including identifying cleaning risks, planning cleaning operations, and cleaning the required enclosed space in accordance with operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with regulations and procedures for conducting cleaning operations in enclosed spaces. Work is performed under some supervision generally within a team environment. It involves the application of established safety procedures and regulatory requirements to the conduct of cleaning operations in enclosed spaces.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Identify risks and plan operation | 1.1 Requirements for the cleaning operation are assessed
| 1.2 Potential risks or hazards to self, the environment or others are identified
| 1.3 Relevant information including workplace procedures and safety codes are identified and read
| 1.4 Cleaning and personal protective equipment and consumables are identified
| 1.5 Requirements are assembled in accordance with national standards, safety codes and workplace procedures
| 1.6 Work is planned identifying critical parameters of the work

2 Clean required enclosed space | 2.1 Unauthorised persons are removed from the work area
| 2.2 Engineering and personal safety equipment is used
| 2.3 Unwanted labels are removed
| 2.4 Cleaning products, where used, are mixed in accordance with manufacturers and workplace instructions
| 2.5 Containers are swept out and washed so that mud, grime and any residue from products stored in the containers are removed
| 2.6 Security of chemicals and equipment is maintained
| 2.7 Run-off is contained and wastes are disposed of in accordance with local laws and workplace procedures
| 2.8 Relevant documentation is completed
| 2.9 Equipment used for the process is checked and stored
| 2.10 Worksite is checked and returned to operational status

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant OH&S regulations, codes and guidelines concerning cleaning operations in enclosed spaces including Australian Standard AS 2865 - Safe Working in a Confined Space Code
- Workplace procedures and policies for carrying out cleaning operations in enclosed spaces
- Risks when carrying out cleaning operations in enclosed spaces and related precautions to control the risk
- Procedures for carrying out tests for contaminant gases in enclosed spaces prior to performing
REQUIRED KNOWLEDGE AND SKILLS

cleaning operations
- Site layout and obstacles
- Application of relevant industrial regulations and requirements
- Maintenance procedures for cleaning equipment

Required skills:
- Communicate effectively with others when conducting cleaning procedures in enclosed spaces
- Read and interpret instructions, procedures, information and signs relevant to cleaning procedures in enclosed spaces
- Identify container and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to cleaning procedures in enclosed spaces
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting cleaning procedures in enclosed spaces
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when conducting cleaning procedures in enclosed spaces in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may arise when conducting cleaning procedures in enclosed spaces
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during cleaning procedures in enclosed spaces
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment, cleaning materials, processes and procedures for carrying out cleaning operations in enclosed spaces
- Identify, select and use emergency equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Follow routine servicing procedures for cleaning tools and equipment
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The housekeeping tasks may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted:
- in confined restricted enclosed spaces

Focus of cleaning operations may include:
- containers
- tanks
- other enclosed spaces

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- toxic gas
- movements of equipment, goods and materials

Critical parameters for cleaning operations in enclosed spaces include:
- workplace personnel
- sequence of operations
- precautions for self, others and work area
- relevant workplace procedures to be followed
- emergency precautions, tests and procedures
- evacuation and rescue procedures

Personnel in the work area may include:
- other workplace personnel and managers
- site visitors
- contractors
- official representatives including OH&S specialists

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Depending on workplace context, personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- breathing apparatus

Information documents may include:
- workplace procedures and policies for cleaning operations
RANGE STATEMENT

include:

- OH&S and environmental protection regulations
- relevant codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements, specifically Australian Standard AS 2865 - Safe Working in a Confined Space
- quality assurance procedures
- relevant state/territory OH&S legislation and regulations pertaining to cleaning operations and working in confined spaces
- relevant state/territory environmental protection legislation
- relevant Australian standards and certification including Australian Standard AS 2865 - Safe Working in a Confined Space Code
- workplace relations regulations
- dangerous and hazardous goods regulations

Applicable regulations and legislation may include:

- relevant state/territory environmental protection legislation
- relevant Australian standards and certification including Australian Standard AS 2865 - Safe Working in a Confined Space Code

| 1 Respond to the incident | 1.1 Response to the incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements  
1.2 Details of the cause(s) and effects of the incident are identified and reported  
1.3 Assistance requirements for accidents and emergencies are clarified and reported immediately to the appropriate parties  
1.4 Requests for assistance are made to relevant personnel and emergency services  |
| 2 Control and assist at accident or emergency site | 2.1 Site is controlled and protected until the arrival of authorised personnel  
2.2 Assistance is provided to injured persons, within the limitations of duty of care and workplace procedures  
2.3 Relevant authorities at the site are cooperated with and assisted within workplace policies  |
| 3 Finalise accident - emergency process and complete records | 3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures  
3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements  |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory and code requirements applicable in accident/emergency situations
- Relevant OH&S and environmental protection policies and procedures
- Workplace procedures for accident-emergency response
- Workplace emergency, fire and accident procedures
- Site layout
- Focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- Typical problems that can occur during a safety incident, accident or emergency and related action that can be taken
Required skills:

- Communicate effectively with others when responding to an accident or an emergency
- Read and interpret instructions, procedures and information relevant to a response to an accident or an emergency
- Interpret and follow operational instructions and prioritise work
- Negotiate and resolve issues when responding to an accident or an emergency
- Complete documentation related to a response to an accident or an emergency
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to an accident or an emergency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when responding to an accident or an emergency
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S control procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when responding to an accident or an emergency
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and policies during a safety incident, accident or emergency
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:

- in a range of work environments
RANGE STATEMENT

Customers may be:
- by day or night
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Workplace hazards may include but are not restricted to:
- moving heavy loads in an unsafe work environment
- unsecured machinery, components or repaired equipment
- slippery floors
- welding equipment
- sharp tools and implements
- power tools
- moving and rotating machinery
- flammable liquids, vapours and fuel
- faulty machinery equipment handling equipment and lifting gear
- using equipment beyond safe working limits
- poor housekeeping procedures
- non-compliance with safe working procedures
- electrical wiring and systems, including exposed electrical circuits
- working at heights and in confined spaces
- toxic gases and substances
- chemicals and other harmful substances
- damaged goods, pallets and containers
- dangerous/hazardous goods

Consultative processes may involve:
- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the
- company plans/procedures
- enterprise plans/procedures
RANGE STATEMENT

local terminology used, workplace plans/procedures may include:

• organisational plans/procedures
• established plans/procedures

Information/documentation may include:

• workplace accident-emergency procedures and policies
• workplace OH&S management system including hazard/safety risk control strategies
• OH&S training notes and materials
• journals and work related literature concerning OH&S
• competency standards
• customer/client instructions
• customer service standards and procedures
• workplace products and services information
• quality assurance standards and procedures
• relevant agreements, codes of practice including the national standards for services and operations
• manufacturers/suppliers’ specifications, advice, recommended procedures, policies and instructions
• workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
• regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
• emergency procedures
• relevant regulations, standards and codes of practice
• hazardous substances and dangerous goods codes
• relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:
  • general duty of care under OH&S legislation and common law
  • requirements for the maintenance and confidentiality of records of occupational injury and disease
  • requirements for provision of OH&S information and training
  • provisions relating to health and safety representatives and/or OH&S committees
  • provisions relating to OH&S issue resolution
• environmental protection regulations
• relevant Australian standards and certification requirements including Australian Standard AS 1885.1

Competency Field
Competency Field F - Safety Management
TLIF2010A Apply fatigue management strategies

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to apply fatigue management strategies, including identifying and acting upon signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in accordance with legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable federal and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under some supervision generally within a team environment. It involves the application of the relevant regulations, codes and guidelines of the federal government and state/territory authorities concerning fatigue management during work activities and in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

| 1 Identify and act upon signs of fatigue | 1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures  
1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures to ensure that effective work capability and alertness are maintained |
| 2 Implement strategies to minimise fatigue | 2.1 Workplace procedures are assessed to minimise fatigue  
2.2 Factors which increase the risk of fatigue-related accidents and safety incidents are understood and minimised  
2.3 Strategies to manage fatigue are implemented in accordance with company policy  
2.4 Lifestyle choices are made which promote the effective long-term management of fatigue  
2.5 Effective practices in combating fatigue are adopted and applied  
2.6 Personal fatigue management strategies are communicated to other relevant people  
2.7 Appropriate counter measures are planned to combat fatigue |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Sources of information on fatigue
- The risks and hazards created by fatigue in the workplace
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Causes and effects of fatigue on workers/drivers
- Factors which increase fatigue-related accidents
REQUIRED KNOWLEDGE AND SKILLS

- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when applying fatigue management strategies
- Read and interpret instructions, procedures, regulations and signs related to fatigue management and apply them to work activities
- Recognise symptoms of fatigue and take appropriate action in accordance with fatigue management regulations and workplace procedures
- Work collaboratively with others to manage and minimise the effects of fatigue during work activities
- Adjust lifestyle patterns to ensure effective fatigue management during work activities
- Modify activities and take appropriate initiatives to manage fatigue in the workplace depending on differing work contexts, risk situations and environments
- Apply precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- Adapt to changes in rosters and standard operating procedures as they may relate to fatigue management
- Participate in identifying and meeting own learning needs on matters related to fatigue management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:
- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

The need for fatigue management in a range of industry situations including:
- operations conducted at all times but particularly at night
- typical weather conditions
- while working and/or driving at a workplace, depot, base or warehouse
- while working and/or driving at a client's workplace or worksite
- driving a motor vehicle on the open road
- driving a motor vehicle on a private road
- driving a train, locomotive or motive power unit
- operating a marine vessel in coastal or international waters
RANGE STATEMENT

Work-related factors that may contribute to fatigue include:
- operating an aircraft
- operating load shifting equipment
- operating safety critical industrial plant and equipment
- work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (such as working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Worker/operator-related factors that may contribute to fatigue include:
- lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms

Responsibilities of individual for fatigue risk management may include:
- following the organisation's fatigue management policy and procedures
- using time away from work appropriately to rest and recover
- checking and ensuring fitness for work
- reporting symptoms of fatigue
- taking action to minimise risk when symptoms of fatigue are recognised

Schedules may include:
- rosters
- vehicle schedules
- timetabling
- workplans

Depending on the organisation, operating procedures may include:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- federal and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- workplace instructions and procedures on fatigue management
RANGE STATEMENT

- relevant OH&S regulations and procedures
- work schedules and shift rosters
- emergency procedures
- log book or record book (where required)
- records and reports of fatigue-related errors and safety incidents
- relevant standards and certification requirements
- quality assurance procedures
- relevant regulations and codes of the federal government and the state/territory regulatory authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

Applicable legislation, regulations and codes may include:

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant Australian and state/territory regulations and codes pertaining to the identification, handling and marking of dangerous goods, explosives or hazardous substances including the current Australian Dangerous Goods Code
- OH&S procedures and guidelines concerning the lifting and movement of loads
- The company's incident reporting system, and the responsibility of the employer to report incidents to the relevant State or Government authority
- Risks and hazards when handling and conveying dangerous goods, explosives or hazardous
REQUIRED KNOWLEDGE AND SKILLS

- Substances, and related precautions to control the risk
- Workplace procedures and policies for the handling and transport of dangerous goods, explosives or hazardous substances
- Characteristics of various dangerous goods, explosives or hazardous substances and their implications for handling and transport
- Compatibility of various types of dangerous goods, explosives or hazardous substances
- Housekeeping standards procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when handling or transporting dangerous goods or explosives
- Read and interpret instructions, procedures, information and signs relevant to the handling or transporting of dangerous goods or explosives
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the handling or transporting of dangerous goods or explosives
- Operate electronic communication equipment to required protocol
- Work collaboratively with others handling or transporting dangerous goods or explosives
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when handling or transporting dangerous or hazardous goods or explosives in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise during the handling or transporting of dangerous goods or explosives
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the handling or transporting of dangerous goods or explosives
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in handling and transportation equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying characteristics and hazards of the dangerous goods/explosives/hazardous substances being handled
  - interpreting relevant signs, labels and codes
  - locating, interpreting and applying relevant information
  - safely handling/transporting dangerous goods/explosives/hazardous substances in accordance with workplace procedures and regulatory requirements
  - identifying, selecting and using appropriate handling/transport equipment, vehicles, personal protection equipment and related procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
EVIDENCE GUIDE

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- internal or external

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments
- a workplace, warehouse or depot
- a vehicle on the road
- client's workplace
- convoy of a group of vehicles
- special precautions for handling, stacking and transport

Goods/cargo being handled/conveyed may require:

Classes of dangerous goods/explosives/hazardous substances are:
- as defined in the respective Australian Codes

Standard marking and signage for identified explosives and dangerous goods is as required:
- in the respective Australian Codes

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
RANGE STATEMENT

Communication in the work area may include:
- official representatives
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Handling operations may be carried out:
- both manually and with the aid of lifting equipment and/or appliances

Load restraint procedures and equipment are:
- as specified in mass and loading regulations and guidelines

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- protective clothing

Information/documents may include:
- goods/materials identification numbers, codes and signs
- manifests, bar codes, goods and container identification
- manufacturers specifications for equipment/tools
- workplace procedures and policies for the handling of dangerous goods, explosives and radioactive and other hazardous substances, and incident reporting
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Code of Practice for the Safe Transport of Radioactive Substances, the Industry Safety Code, and National Standards for Manual Handling
- National Load Restraint Guide
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- Australian and state/territory regulations pertaining to the handling of dangerous goods/explosives/hazardous substances
- Australian and international regulations and codes of practice for the handling and transport of explosives, dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
  - Code of Practice for the Safe Transport of Radioactive Substances
  - state/territory legislation covering the safe handling of infectious substances
  - relevant state/territory environmental protection legislation
  - equal opportunity
  - workplace relations regulations
  - equal employment opportunity and affirmative action legislation
  - relevant state/territory OH&S legislation

Unit Descriptor

This unit involves the skills and knowledge required to operate and check firefighting equipment in accordance with manufacturers instructions and workplace emergency procedures, including identifying and selecting the appropriate equipment, using the firefighting equipment to fight a fire, and checking that the firefighting equipment is operational. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant codes of practice, regulations and workplace requirements concerning the operation and checking of firefighting equipment.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and regulatory requirements to the operation and maintenance of firefighting equipment as part of work activities in the transport, distribution and/or allied industries.

<tbody>
<tr>
<td>1 Check firefighting equipment</td>
<td>1.1 Firefighting equipment is checked for serviceability as per manufacturers specifications and regulatory requirements&lt;br&gt;1.2 Non-functioning equipment or equipment which is past its service date is identified and reported to designated personnel for replacement or service</td>
</tr>
<tr>
<td>2 Use firefighting equipment</td>
<td>2.1 Equipment and personal safety equipment used for fighting fires are correctly selected for type of fire in accordance with manufacturers instructions&lt;br&gt;2.2 Fire is controlled using firefighting equipment according to manufacturers instructions and workplace emergency procedures&lt;br&gt;2.3 Equipment is stored safely according to manufacturers instructions and workplace procedures</td>
</tr>
</tbody>
</table>

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian codes of practice, regulations and safeworking systems relevant to the use and checking of firefighting equipment
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the use and checking of firefighting equipment
- The chemistry of fire, the effects of different types of material in a fire and the principles underlying the spread of fire and its extinguishment
- The different classes of fire, their characteristics and strategies and equipment needed for their extinguishment
- Types of firefighting appliances, equipment and systems, their identifying features, principles of operation and the procedures for their use and basic checking of serviceability
- Fixed fire prevention and extinguishing installations and their principles of operation
- Firefighting techniques, agents and precautions applicable to different classes of fire
- Typical problems that can occur with firefighting equipment and operations and appropriate action and solutions
- Manufacturers instructions for the checking of firefighting equipment
Required skills:

- Communicate effectively with others when fighting fires using firefighting equipment
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, regulations, signs and labels relevant to the use of firefighting equipment and apply them to work activities
- Interpret and follow operational instructions and prioritise work
- Work safely and collaboratively with others when fighting fires using firefighting equipment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when using firefighting equipment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when using firefighting equipment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify firefighting activities and take appropriate initiatives depending on limits of responsibility, differing workplace contexts, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly select, use and carry out basic checks on firefighting equipment relevant to own work functions
- Operate and adapt to differences in firefighting equipment and emergency procedures in the workplace
- Monitor performance of firefighting equipment and take appropriate action is required
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of
EVIDENCE GUIDE

this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external
RANGE STATEMENT

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Types of fires which may occur include:
- Classes A, B, C and F in the standard classification of fires

Firefighting equipment, appliances and systems may include:
- portable fire extinguishers including foam, water, CO2, dry chemical and wet foam
- sprinkler systems
- fire hoses and hydrants
- fire blankets

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- live electrical circuits
- movements of equipment, goods, materials, trains and vehicular traffic

Consultative processes may involve:
- other employees and supervisors
- current and potential customers
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Dependent of the type of organisation concerned and the local terminology used, workplace procedures may include:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
RANGE STATEMENT

Information documents may include:

- high visibility clothing
- workplace fire emergency procedures and policies
- relevant OH&S and environmental protection regulations
- codes of practice and regulations relevant to fire emergencies, including safeworking regulations and local authority regulations and procedures
- Australian regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for firefighting equipment
- technical instructions
- electrified territory regulations
- dangerous goods declarations and material safety data sheets (where applicable)
- goods manifest
- award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant codes, regulations and safeworking systems for the use and checking of firefighting equipment
- the Code of Practice for the Defined Interstate Rail Network in situations where fire emergencies occur on that network
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

Applicable regulations and legislation may include:

</table>
| 1 Perform checks and inspections | 1.1 All non-compliances are identified in accordance with OH&S procedures and statutory requirements  
1.2 Actual and potential hazards are accurately identified |
| 2 Rectify and report work hazards and non-compliances | 2.1 Hazards and non-compliances are reported in accordance with workplace instructions  
2.2 Appropriate action to minimise or eliminate identified hazards is taken in accordance with workplace procedures and OH&S regulations |
| 3 Complete documentation | 3.1 Records, reports and other documentation concerning inspections, identified safety hazards and action taken are completed in accordance with workplace and OH&S regulatory requirements |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Regulations and codes of practice relevant to work activities including the Australian Dangerous Goods Code
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies related to ensuring a safe workplace
- The location of safety equipment and procedures for its use
- Manual handling procedures
- Emergency procedures
- First aid procedures
- Personal protective equipment and procedures for its use
- Equipment, and materials used during work activities and precautions and procedures that should be followed in their use
- Hazards that may occur in the workplace and action that can be taken to control and minimise the risks involved
- Communication and negotiation requirements
- Documentation and record requirements
Required skills:

- Communicate effectively with others when taking action to ensure a safe on-board passenger and working environment
- Read and interpret instructions, procedures, information and signs relevant to ensuring a safe on-board passenger and working environment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to ensuring a safe on-board passenger and working environment
- Write and prepare safety incident reports and other documents required within workplace activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when taking action to ensure a safe on-board passenger and working environment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when taking action to ensure a safe on-board passenger and working environment in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when taking action to ensure a safe on-board passenger and working environment
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and safely use relevant equipment and materials during work activities
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Make appropriate judgements regarding the relative urgency of hazard reports
- Use correct manual handling procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

Work may be conducted:
- in a range of work environments
- by day or night

Work is carried out in accordance with:
- relevant codes of practice
- OH&S regulatory requirements
- insurance requirements
- workplace policies and procedures

Work may be carried out in an range of long-distance passenger vehicles including:
- sleeping cars
- sit-up cars
- dining cars
- lounge and/or entertainment cars
- brake vans and staff cars

Hazards may include:
- slippery floors
- broken glass
- self-closing doors
- hot food and beverages
- faulty equipment
- moving trains and vehicles
- contaminated or spoilt food or beverages
- stairways
- sudden and unexpected movement
- infectious and contagious diseases
- sharp objects
- syringes and drugs
- human and biological waste

Consultative processes may involve:
- customers
- other workplace personnel
- supervisors and managers
- official representatives

Competency Field
Competency Field F - Safety Management
TLIF2062A Apply awareness of safeworking rules and regulations

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to apply a basic awareness of applicable safeworking rules and regulations to work functions in the rail industry. It includes interpreting and applying the applicable safeworking rules and protocols; recognising and reporting unsafe situations; following safeworking instructions and procedures; and taking appropriate safety precautions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of responsibility of the worker concerned.

It involves the application of a basic awareness of applicable legislated rail safety requirements to the work activities of the rail occupation concerned.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Interpret applicable safeworking rules and regulations | 1.1 Relevant procedures for the applicable safeworking rules and regulations are identified, accessed and interpreted when carrying out basic work activities as part of rail operation

2 Apply a basic awareness of applicable safeworking rules and regulations | 2.1 A basic awareness of relevant safeworking regulations is applied to all work activities applicable to the rail functions concerned
2.2 Communications are conducted in accordance with the applicable safeworking system requirements
2.3 Appropriate records of communications are maintained as required within the applicable safeworking system rules and regulations

3 Recognise and report unsafe situations | 3.1 Unsafe situations are identified consistent with a basic awareness of the applicable safeworking rules and regulations
3.2 Situations in the work environment identified as unsafe are reported to appropriate personnel as per the applicable safeworking rules and regulations

4 Follow safeworking instructions and procedures | 4.1 Where applicable, relevant protocols are followed as specified in the applicable safeworking system rules and regulations
4.2 Appropriate records and documentation pertinent to safeworking protocols are completed in accordance with the requirements of the applicable safeworking system rules and regulations

5 Take appropriate safety precautions | 5.1 Appropriate safety precautions are interpreted and followed during work activities as per the applicable safeworking rules and regulations

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- A basic awareness of applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection legislation and policies
- A basic understanding of systems and occupancy authorities
REQUIRED KNOWLEDGE AND SKILLS

- An overview of system requirements
- A basic understanding of safeworking system types
- A basic awareness of system limitations
- A basic understanding of the applicable safeworking system
- An understanding of route integrity requirements including: general requirements, position of points and route occupancy requirements
- Communication protocols as they relate to the functions of the occupation concerned
- Safeworking rules and protocols as they relate to the functions of the occupation concerned
- Rail terminology as defined in the applicable safeworking system
- Action to be taken in the event of identified unsafe situations and emergencies within the limits of responsibility the occupation concerned

Required skills:

- Communicate effectively with others applicable to the rail operations concerned
- Read and interpret relevant rules, regulations and instructions applicable to the rail operations concerned
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to safeworking requirements applicable to the rail functions concerned
- Operate electronic communication equipment to required protocol
- Work collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Recognise problems and hazards that may arise during rail operations and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in equipment and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may include:
- basic rail operations carried out on the rail network concerned and covered by the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines

Terminology and related meanings will be:
- as defined within the applicable safeworking system

Work may occur:
- by day or night, in both normal and emergency situations and under any conditions of weather

Where applicable, work site safety plans will be:
- as defined within the applicable safeworking system

Occupancy authorities will be:
- as defined within the applicable safeworking system

Rules related to the use and operation of track vehicles and equipment will be:
- as defined within applicable safeworking system

Communication protocols will be as specified within applicable safeworking system and may include:
- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include:
- hand-held or portable equipment
- fixed equipment
- specialised testing facilities

Track work protocols will be:
- as defined within the applicable safeworking system

Safety clothing and equipment may include:
- high visibility clothing
- sunscreen and sunglasses
- insect repellent
- safety glasses, headwear, mask, footwear and gloves
- hearing protection
- safety devices
- lighting including strobe lighting
- hand tools
RANGE STATEMENT

Where applicable, worksite protection equipment may include:

- joint occupancy rules
- blocking facilities (manual and electronic)
- trackside signs
- audible warning signs
- warning devices, whistles and sirens
- partitioning materials and structures
- barriers, lights and flags
- fixed and mobile communications equipment

Information and documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- relevant occupancy authorities (where applicable)
- train authorities (where applicable)
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- train notices
- train register books
- failure reports
- local instructions
- operating and maintenance instructions of relevant equipment manufacturers
- voice communications log
- safeworking forms

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national and state/territory dangerous goods legislation

3.7 Working at height emergency procedures are interpreted and implemented when required  
3.8 Working at height rescue kit is inspected and appropriate action is taken to rectify or replace defective components  
3.9 Working at height rescue kit is used as per regulatory requirements and standard operating procedures  
3.10 Working at height procedures are followed during a rescue operation |

# Required Skills and Knowledge

## REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian Standards, codes and regulations relevant to 'working at height'
- Relevant sections of Marine Orders Part 32 - Cargo Handling Equipment (as promulgated by AMSA)
- Relevant OH&S procedures and guidelines
- Working at height safe work instructions and procedures
- Risk assessment policies and procedures
- Working at height equipment checklist
- Working at height rescue procedures
- Procedures for using portable ladders when working at height
- Risks and hazards of working at height and related precautions to control these risks and hazards
- Manual handling methods for working at height

Required skills:

- Communicate effectively with others when working at height
- Read and interpret information relevant to working at height including instructions for safe work at height, workplace procedures, and applicable standards and codes of practice
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to working at height
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when working at height
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when working at height in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when working at height
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when working at height
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or
Required skills:

- damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify, select and use relevant 'working at height equipment'
- Inspect 'working at height equipment'
- Use ancillary 'working at height equipment'
- Work from a workcage when working at height
- Employ correct manual handling techniques
- Assist in the conduct of a Vessel Exception Risk Assessment (VERA) and ensure vessel inspection checklist has been completed prior to commencing work on a vessel
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - complying with applicable legislative and procedural requirements while working at height
  - identifying risk factors which might impact on working at height and implementing appropriate response measures
  - selecting and using appropriate equipment to enable safe and efficient work

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operational context may include:
- by day or night
- in a range of work environments
- in ships' holds
- on top of containers
- in limited or restricted spaces
- in all weather conditions
- in a workbox or workcage

'Working at height equipment' may include:
- full body harness
- self retracting lanyard
- fall arrestor
- vertical safety line
- horizontal safety line
- double lanyards
- corner anchor posts
- beam clamps
- rescue equipment (gotcha kit)
RANGE STATEMENT

- karabiner
- scaffold hook
- portable ladder
- foot step
- workcage

Hazards in the work area may include but are not limited to:
- dangerous or hazardous substances
- movements of equipment, and/or cargo
- inadequate lighting
- vessel movement

Use of ‘working at height equipment’ may include:
- correctly fitting a full body harness
- correctly wearing a full body harness
- selecting a suitable anchorage point
- setting up and using vertical and horizontal static lines
- setting up and using container anchor posts
- setting up and using beam clamps

Communication in the work area may include:
- radio
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
- full arrest safety harness

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- OH&S regulations
- relevant sections of Marine Orders Part 32 - Cargo Handling Equipment (as promulgated by AMSA)
- workplace OH&S procedures and policies
- policies and procedures for working at height
- manufacturers instructions concerning the use and servicing of equipment
- emergency procedures
- goods identification numbers and codes
- relevant legislation, regulations and related documentation

Applicable regulations and legislation may include:
- relevant sections of Marine Orders Part 32 - Cargo Handling Equipment (as promulgated by AMSA)
RANGE STATEMENT

- relevant state/territory OH&S legislation and safety codes, including manual handling and working at height requirements
- dangerous goods regulations
- relevant sections of AS/NZS Standard 1891 parts 1 to 4
- OH&S Prevention of Falls Regulation 2003
- OH&S manual handling guidelines
- relevant state/territory equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

Unit Descriptor
This unit involves the skills and knowledge required to follow and apply occupational health and safety (OH&S) procedures when carrying out taxi work activities. It includes identifying and following workplace procedures for safety/security and accident/emergency situations; and identifying, minimising and managing fatigue. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations and procedures.

Work is performed under some supervision, generally within a team environment. It involves the application of the established OH&S and hazard minimisation principles and procedures to the conduct of workplace activities.

This unit involves the development of basic skills and knowledge to work safely in the taxi industry.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Follow procedures for safety and security | 1.1 Procedures for OH&S and security are identified and followed  
1.2 Safe work practices are identified and followed  
1.3 Breaches of safety and security are identified and appropriate action is taken to minimise or eliminate risk to self, others, vehicle and vehicle equipment  
1.4 The features and functions of the taxi security system are identified |
| 2 Follow procedures for accident/emergency situations | 2.1 Emergency and potential emergency situations are recognised promptly and required actions are determined and/or taken within the scope of individual responsibility  
2.2 Procedures for dealing with accidents, fire and emergencies are identified and followed  
2.3 Assistance from taxi network and/or other authorities is sought where appropriate  
2.4 Details of emergency situations are reported in accordance with workplace, industry and regulatory policies and procedures  
2.5 Support services are identified following an incident or accident |
| 3 Deal with threats of physical violence | 3.1 Security equipment is operated within legal and workplace parameters (if required by state/territory regulators)  
3.2 Potential circumstances for difficult customer or other road user behaviour are accurately assessed and conflict resolution strategies used  
3.3 Procedures are followed to minimise escalation of conflict, manage the situation and ensure personal safety  
3.4 Assistance is sought from others including external support staff where necessary  
3.5 Incidents are reported using the appropriate document format in accordance with workplace policies and procedures  
3.6 Any follow-up action is implemented according to the appropriate workplace rules, regulations and guidelines |
| 4 Identify and implement strategies to minimise and manage fatigue | 4.1 Potential causes of fatigue and its effects on driver and family are identified  
4.2 Personal warning signs of fatigue are recognised and steps are identified to manage fatigue |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant codes of practice and legislative requirements
- Relevant OH&S procedures and guidelines
- Procedures and protocols for safety and security procedures
- Sources of information and documentation needed when complying with safety and security procedures
- Typical problems that can occur when complying with safety and security procedures and related appropriate action that can be taken to prevent or solve them
- Safe work practices relevant to individual work roles
- Location and use of safety alarms, emergency shutoff systems, and emergency communication systems
- Potentially difficult situations, such as poorly lit pick-up areas, fare evasion, intoxication, over crowding
- Cultural sensitivities that lead to angry responses
- Culturally appropriate responses to potential problem situations
- Emergency response procedures
- Appropriate reporting procedures including emergency, fire and accident procedures
- Codes and systems for breaches of security
- Manual lifting and manual assisted lifting
- The risks and hazards created by fatigue
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Ways of managing fatigue
- Causes and effects of fatigue on drivers
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when following safety and security procedures
- Read and comprehend simple statements in English
- Work collaboratively with others when driving a taxicab
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to safety and security in the workplace
- Operate electronic communication equipment to required protocol
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following safety and security procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when following safety and security procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - locating and interpreting workplace information
  - following established procedures for occupational health and safety, security, hazard identification and risk controls
EVIDENCE GUIDE

- applying information about accident-emergency policies and procedures and duty of care responsibilities
- demonstrating safe work practices
- monitoring passenger and road user behaviour
- recognising and adapting to cultural differences including modes of behaviour and communication
- identifying difficult customer or road user situations and applying conflict resolution or avoidance behaviour
- using effective communication skills
- diffusing threats of physical violence
- selecting and using self protective behaviour
- seeking assistance, as required, from external emergency support services
- following correct fatigue management precautions and procedures
- completing OH&S and accident-emergency records/reports as required
- demonstrating the correct use of a duress alarm (if required by state/territory regulators)
- demonstrating how to conduct a security camera check to ensure it is operational (if required by state/territory regulators)
- completing security camera download request (if required by state/territory regulators)

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
- Assessment of duress alarm and security cameras is to be conducted on actual equipment used in the taxi industry

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Procedures may cover:

- operation of security cameras and other on-board security devices
- safe posture for sitting, standing and bending
- manual handling including lifting, transferring
- safe handling of vehicle fuels including petrol and LPG
- emergencies, fires and accidents
- security of cash, documents and equipment
- duress alarm and mobile phone
- OH&S regulations
- GPS operations
- emergency procedures
- industry standard publications
- incident reporting forms
- documentation relating to rest time and other contributing factors to fatigue

Applicable regulations and legislation may include:

- relevant national/state/territory legislation, standards, codes of practice including manual handling, noise, smoking, fatigue management
- relevant national/state/territory OH&S legislation, workplace instructions, industry and regulatory procedures on safety, security, accidents and emergencies and fatigue management
RANGE STATEMENT

Communication method may include:
- phone
- radio
- on-board communication system

Emergency situations may include:
- road accidents
- passenger illness
- arguments and verbal abuse
- drunken behaviour
- vehicle fuels e.g. petrol and LPG
- road rage
- manual handling
- extremes of weather conditions
- deployment of vehicle SRS air bags if not wearing a seatbelt

Threats of physical violence may include:
- verbal threats
- menacing physical behaviour
- threats with a weapon
- intimidation by a group of people
- road rage from the drivers of other vehicles
- threats from pedestrians
- fare evasion leading to confrontation
- needles and syringes/body fluids

Security equipment may include:
- computer dispatch
- vehicle mounted radio
- duress alarm (if required by state/territory regulators)
- security camera (if required by state/territory regulators)
- driver security shields (if required by state/territory regulators)

The methods used to minimise escalation of incidents may include:
- using colloquial or culturally appropriate language and actions
- negotiation
- explaining the operation of the safety equipment on board the taxicab
- seeking assistance from external support services

External support staff may include:
- other taxicab drivers
- police
- fire brigade personnel
- ambulance personnel

Levels of fatigue can be affected
- night driving
RANGE STATEMENT

by:

- frequency and duration of breaks
- work duration
- type of work
- lifestyle factors
- alcohol and drug abuse
- quantity and timing of food and drinks
- sleep patterns
- opportunities for relaxation with family and friends
- personal biological factors
- state of mental and/or physical health
- circadian rhythms
- diet

Unit Sector(s)

Not Applicable

Competency Field

Competency Field F - Safety Management
TLIF2080C Safely access the rail corridor

Modification History
New release. This unit replaces and is equivalent to TLIF2080B.

Unit Descriptor
This unit involves the skills and knowledge required to enter the rail corridor under supervision in accordance with Access Provider, legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines.
This unit involves the application of Access Provider rules, procedures and protocols for rail safety.
All activities are performed under established rules and procedures.
This unit applies to all people accessing the rail corridor.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Take appropriate safety precautions to access the rail corridor

| 1.1 | Authority to enter the rail corridor is obtained from Protection Officer/Possession Protection Officer (PO/PPO) |
| 1.2 | Appropriate personal protective equipment (PPE) is worn conforming to Access Provider requirements |
| 1.3 | Rail corridor is entered and a visual assessment is maintained to identify potential risks |

2  Take appropriate safety precautions to access the danger zone

| 2.1 | Direction of approaching trains and maximum speed is recognised |
| 2.2 | Safe place is identified |
| 2.3 | Types of warning provided are recognised and confirmed |
| 2.4 | Changed local conditions are identified |
| 2.5 | Communications with other personnel are maintained in accordance with workplace procedures |
| 2.7 | Unsafe situations and/or emergencies are identified and appropriate action is taken in accordance with workplace procedures |

3  Take appropriate action in an emergency situation

| 3.1 | Emergencies are identified and an ‘emergency’ or ‘danger’ signal is given |
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider defined entry requirements and limitations
- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within the limits of the role being undertaken
- Access Provider rules and procedures for working around electrical infrastructure
- Basic rail terminology as defined by the applicable network
- Extent of rail corridor

Required skills:

- Communicate effectively with individuals and/or groups
- Follow workplace policies, procedures and protocols
- Recognise hazards that may arise and take appropriate action
- Use PPE conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - safely accessing the rail corridor
  - recognising the danger zone
  - identifying a safe place
  - identifying unsafe situations within the rail corridor

Context of and specific resources for assessment

- Performance is demonstrated in a suitable context
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the rail corridor
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in a rail corridor
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rail corridor may include:
- danger zone
- running line
- adjacent networks
- adjacent lines
- sidings/yards
- platforms/buildings
- structures
- safe place

Access may occur:
- by day or night
- under varied weather conditions and situations

Safety assessment will be:
- as defined within the workplace procedures/instructions
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching trains
  - maximum speed of trains
  - safe place
  - changed local conditions

Communications may include:
- giving or receiving verbal messages/information
- reporting unsafe situations
- responding to emergencies
- emergency messages
- general safety messages

Communications equipment and systems may include:
- hand signals
- audible signals

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection
- eye protection
- gloves
- head protection

Information and documents may include:
- workplace procedures, policies and work instructions
- worksite protection plan
- emergency plan
- safety briefing
- emergency contact details
- access contact details
Unsafe situations may include:

- risks to the individual
- risks to the public
- risks to rail traffic
- risks to the physical assets of the network

**Unit Sector(s)**
Not applicable.

**Competency Field**
F – Safety Management
TLIF2081B Perform lookout duties

Modification History
New release. This unit replaces and is equivalent to TLIF2081A.

Unit Descriptor
This unit involves the skills and knowledge required to perform lookout duties on a rail network in accordance with Access Provider, legislative and regulatory requirements. Licensing or certification requirements are applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines. The unit includes the application of Access Provider rules, procedures and protocols for rail safety. All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1. Take up lookout position

1.1 Danger zone is safely accessed in accordance with workplace procedures

1.2 Location of lookout position is confirmed in accordance with workplace procedures

1.3 Sighting distance of rail traffic is calculated in accordance with workplace procedures

1.4 Unsafe and/or ineffective lookout positions are identified and reported in accordance with workplace procedures

1.5 Audible warning equipment is tested if utilised

1.6 Changed local conditions are identified

1.7 Effectiveness of lookout placement and method of communicating rail traffic movements is tested and confirmed

### 2. Conduct lookout duties

2.1 Vigilance is maintained at all times

2.2 Approach of rail traffic is communicated using agreed methodology in accordance with workplace procedures

2.3 Hand signals are used in accordance with workplace procedures to confirm safe conditions to rail traffic

### 3. Take action in unsafe situations or emergencies

3.1 Unsafe situations and/or emergencies are identified, and appropriate action is taken to minimise risk in accordance with workplace procedures

3.2 Emergencies and incidents are recorded and reported to relevant personnel in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules, procedures and protocols
- Access Provider rules and procedures for working around electrical infrastructure
- Audible warning equipment and its use
- Rail terminology as defined by the applicable Access Provider

Required skills:

- Apply fatigue management skills as they relate to the work role
- Communicate effectively with individuals and work groups
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Use personal protective equipment conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
  - other relevant aspects of the range statement
  - Compliance with worksite protection plan
  - Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
    - identifying unsafe and ineffective lookout positions
    - taking up lookout position that enables effective communication of rail traffic movements
    - appropriate use of audible warning devices
    - appropriate use of hand signals to communicate with rail traffic crew
    - taking appropriate action in an unsafe situation and/or emergency

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology used will be:
- as defined by the Access Provider

Work may occur:
- under varied visibility conditions

Worksite protection plan will be:
- as defined by workplace procedures

Safety assessment will be:
- as defined within the workplace procedures
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching trains
  - speed of approaching trains
  - position of safety
  - changed local conditions

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communications equipment and systems may include:
- hand signals
- audible signals

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Where applicable, worksite protection equipment may include:
- warning devices, whistles and sirens
- demarcation barriers
- lights and flags
- other devices

Information and documents may include:
- workplace procedures, policies and work instructions
- worksite safety plan
- emergency plan
Unsafe situations may include:

- pre-work briefing and worksite protection plan
- risks to the individual
- risks to other workers
- risks to the public
- risks to trains
- risks to the physical assets of the network

Audible warning equipment may include:

- horn
- whistle

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF2082B Perform handsignal duties

Modification History
NEw release. This unit replaces and is equivalent to TLIF2082A.

Unit Descriptor
This unit involves the skills and knowledge required to perform handsignal duties in accordance with Access Provider, legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines. The unit includes the application of Access Provider rules, procedures and protocols for rail safety. All activities are performed under established rules and procedures.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify site protection requirements
   1.1 Worksite protection plan briefing conducted by relevant personnel is attended
   1.2 Responsibilities as handsignaller for protection are identified and clarified as necessary
   1.3 Tools and equipment required for handsignalling duties are identified, obtained and checked for functional condition
   1.4 Communication equipment to be used is tested and verified

2 Take up handsignaller position
   2.1 Danger zone is safely accessed in accordance with workplace procedures
   2.2 Handsignalling position is in accordance with worksite protection plan and workplace procedures
   2.3 Unsafe and/or ineffective signalling positions are identified and reported in accordance with workplace procedures
   2.4 Situational awareness is conducted to identify potential risks
   2.5 When applicable, audible track warning devices are applied in accordance with workplace procedures
   2.6 Effectiveness of handsignalling position and communication protocols are confirmed

3 Use hand signal commands to manage rail traffic
   3.1 Vigilance is maintained at all times
   3.2 Protection Officer is alerted to approaching rail traffic in accordance with workplace procedures
   3.3 Correct hand signal is displayed to rail traffic in accordance with Protection Officer instructions
   3.4 When required, verbal instructions are provided to train driver
   3.5 When applicable, railway track signals are replaced

4 Take action in unsafe situations or emergencies
   4.1 Unsafe situations and/or emergencies are identified, and appropriate action is taken to minimise risk in accordance with workplace procedures
   4.2 Emergencies and/or incidents are recorded and reported to relevant personnel in accordance with workplace procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider and organisational policies, procedures and protocols
- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures for working around electrical infrastructure
- Hand, light and flag signals used during the day and at night
- Operational communication protocols and systems
- Positioning requirements for handsignallers
- Rail terminology as defined by the applicable Access Provider
- Railway track signals and their use, if applicable
- Worksite protection plan

Required skills:

- Apply fatigue management skills as they relate to the work role
- Apply hand, light and flag signals during the day and at night
- Apply procedures for using railway track signals
- Communicate effectively with individuals and work groups
- Ensure effectiveness of handsignalling placement
- Follow workplace policies, procedures and protocols
- Identify unsafe situations and emergencies
- Operate electronic communication equipment to required protocol
- Use required personal protective equipment conforming to Access Provider requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying responsibilities of handsignaller from explanation of site safety plan
  - identifying and selecting correct equipment and ensures functional condition
  - identifying potential risks
  - identifying unsafe and ineffective handsignalling positions
  - taking up handsignalling position that enables effective communication with rail traffic crew
  - using hand signal commands to instruct a rail traffic crew
  - applying procedures for the use of railway track signals
  - explaining appropriate action in the event of an unsafe situation and/or emergency

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through
appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology used will be:
- as defined by the Access Provider

Work may occur:
- under varied visibility conditions

Safety assessment will be:
- as defined within the workplace procedures
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching trains
  - speed of approaching trains
  - position of safety
  - changed local conditions

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Where applicable, worksite protection equipment may include:
- warning devices, whistles and sirens
- railway track signals demarcation barriers
- lights and flags
- electronic devices

Information and documents may include:
- workplace procedures, policies and work instructions
- worksite protection plan
- emergency plan
- pre-work briefing and worksite protection plan

Unsafe situations may include:
- risks to the individual
- risks to other workers
- risks to the public
Communication protocols may include:

- risks to trains
- risks to the physical assets of the network
- general safety
- transmitting and receiving messages:
  - identification
  - standard radio terms
  - phonetic alphabet
  - testing communications equipment
- emergency messages

**Unit Sector(s)**

Not applicable.

**Competency Field**

F – Safety Management
TLIF2092A Demonstrate awareness of chain of responsibility regulations

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to identify, apply and follow chain of responsibility regulations that are applicable to the individual’s job role.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Work involves the application of chain of responsibility regulations and workplace procedures.
Associated units relating to chain of responsibility can be found in TLI10 Transport and Logistics Training Package.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable knowledge of state and territory regulations
- Applicable knowledge of workplace procedures
- Knowledge of what constitutes a duty, a breach and a penalty
- Chain of responsibility regulations as they apply to the job role or function
- Company policy and procedure around chain of responsibility for the relevant job role
- Correct reporting procedures for examples of non-compliance of chain of responsibility
- Consequences of non-compliance of chain of responsibility
- Basic understanding of company structure
- Where to locate current chain of responsibility information
- Action required when possible breaches are identified
- Knowledge of what is classified as a reasonable step within chain of responsibility
- What areas of the regulation apply to the job role
- Required workplace documentation

Required skills:

- Apply strategies to prevent breaches of chain of responsibility
- Implement action required to prevent possible breach of chain of responsibility regulations
- Review updates to the chain of responsibility regulations as they occur
- Communication strategies within the organisation for chain of responsibility
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - an understanding of chain of responsibility
  - an understanding of associated state or territory regulations in which the job is, relative to chain of responsibility
  - applying relevant workplace policy and procedures
  - an understanding of procedures for non-compliance of chain of responsibility

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written, practical and oral assessments
- Practical assessment must occur:
  - through appropriately simulated activities at the training organisation, and/or
  - in an appropriate range of situations in the workplace
- Online assessment is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Parties and responsible persons within the chain include:
- consigner
- consignee
- packer
- loader
- scheduler
- driver
- receiver
- carrier
- manufacturer
- employee
- employer
- owner
- board of directors
- senior official
- dispatch officer
- operator
- person in charge or apparently in charge of a vehicle
- agent
- subcontractor
- authorised officer
- elected councillor

Customers may include:
- external customer
- receiver
- forwarder
- dispatcher
- yard foreman
- safety regulator
- police or enforcement official
- public
- subcontractor

Communication in the work area may include:
- telephone
- electronic data interchange (EDI)
- fax
- email
- internet
- oral, aural or signed communications
Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation and records may include:

- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- relevant OH&S regulations
- workplace policies and procedures relating to chain of responsibility regulations
- relevant Australian standards and certification requirements
- relevant internal data entry books, including work diaries, data sheets and load sheets

Applicable legislation and regulations may include:

- relevant transport regulations for the enterprise, including Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state and territory OH&S and environmental protection legislation
- workplace relations regulations

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF2097A Use audible track warning devices

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to access, place and remove audible track warning devices (ATWDs) in accordance with legislative and regulatory requirements.
Licensing or certification requirements may be applicable to this unit.

Application of the Unit
This unit involves the application of legislative requirements, organisational and/or network owner’s policies and procedures for the use of ATWDs in the rail corridor.
Activities are performed following established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of responsibility of the person concerned.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Access and transport ATWDs | 1.1 Required ATWDs are obtained in accordance with organisational procedures  
 1.2 ATWDs are checked to ensure that they are ‘in date’, in accordance with legislative requirements, organisational and/or network owner’s policies and procedures  
 1.3 ATWDs are stored and transported in accordance with legislative requirements, organisational and/or network owner’s policies and procedures |
| 2 Place ATWDs | 2.1 Advice is confirmed as to where the ATWDs are to be placed  
 2.2 ATWDs are placed in accordance with organisational and/or network owner’s policies and procedures  
 2.3 Safe distances from ATWDs are maintained for self and others in accordance with organisational and/or network owner’s policies and procedures |
| 3 Remove ATWDs | 3.1 When advised, ATWDs are removed in accordance with organisational and/or network owner’s policies and procedures  
 3.2 Unused ATWDs are stored and returned in accordance with organisational and/or network owner’s policies and procedures |
| 4 Dispose of ATWDs | 4.1 Out of date ATWDs are removed from service and returned in accordance with organisational and/or network owner’s policies and procedures  
 4.2 Defective ATWDs are removed from service, reported and returned in accordance with organisational and/or network owner’s policies and procedures |
| 5 Complete documentation | 5.1 Documentation is completed in accordance with organisational and/or network owner’s policies and procedures |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Organisational procedures for:
  - placing and removing ATWDs
  - lost and stolen ATWDs
- Relevant safety, OH&S and environmental procedures and regulations

Required skills:

- Read and interpret organisational procedures for placing and removing ATWDs
- Communicate effectively with individuals and groups
- Recognise hazards that may arise and take appropriate action
- Use personal protective equipment conforming to required standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
  - the timeframes typically expected for the work function and industrial environment
  - compliance with site safety plans, OH&S regulations and other regulatory requirements

Context of and specific resources for assessment
- Performance is demonstrated in a suitable context
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessments, and/or
  - access to an appropriate relevant location in the rail corridor
- In both real and simulated environments, access is required to:
  - applicable documentation, including procedures, regulations and codes of practice

Method of assessment
- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in a rail corridor
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

**Applicable regulations and legislation may include**

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant sections of the ADG Code
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

**Audible track warning devices may be known as:**

- railway track signals
- detonators
- crackers
- fog signals

**Personal protective equipment may include:**

- high visibility clothing
- protective footwear
- hearing protection
- eye protection
- gloves
- head protection

**Information and documents may include:**

- workplace procedures, policies and work instructions
- worksite protection plans
- safety briefings
- stores issue and return documents
- ATWD register
- incident reports

Unit Sector(s)

Competency Field

F – Safety Management
TLIF2106A Respond to emergencies and abnormal situations when driving medium/heavy on-track vehicles

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving a medium/heavy on-track vehicle in accordance with regulatory requirements, relevant codes of practice and workplace procedures. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
It involves the application of workplace procedures and regulatory requirements when responding to emergencies and abnormal situations as part of work activities in a range of contexts across the Australian rail system.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify emergency or abnormal situation

1.1 Emergency, potential emergency or abnormal situations are identified and assessed, and needs are prioritised in accordance with organisational and/or network emergency response plans and procedures

1.2 Implications of the emergency, potential emergency or abnormal situation are evaluated in accordance with organisational and/or network requirements and procedures

2 Respond to emergency or abnormal situations

2.1 Actions are considered in accordance with organisational and/or network procedures and regulatory requirements

2.2 Relevant personnel are alerted to the emergency, potential emergency or abnormal situation in accordance with organisational and/or network emergency procedures and plans

2.3 Communications are maintained with relevant personnel to determine appropriate course of action

2.4 Response is taken in accordance with organisational and/or network procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan where relevant

2.5 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care

2.6 If requested, information is provided to relevant emergency service personnel in accordance with regulatory and organisational and/or network procedures

3 Complete incident reports

3.1 Incident reports are completed accurately in accordance with regulatory requirements and organisational and/or network procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Basic principles of effective communication
- Hazards that may exist when responding to emergencies and abnormal situations when driving medium/heavy on-track vehicle and ways of controlling the risks involved
- Organisational procedures for using communication systems for on-track vehicle operation
- Relevant rail safety, occupational health and safety (OH&S) and environmental procedures and regulations

Required skills:

- Communicate effectively with others when responding to emergencies and abnormal situations
- Implement contingency plans for unanticipated developments when responding to emergencies and abnormal situations
- Operate communications equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to emergencies and abnormal situations
- Work collaboratively with others when responding to emergencies and abnormal situations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying typical emergencies or abnormal situations that may occur
  - explaining possible responses to identified emergency or abnormal situations
  - communicating effectively with relevant personnel when responding to an emergency or abnormal situation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including organisational/network procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Emergency situations may include:
- suicide on the track
- derailments
- collision
- customer emergency
- chemical spills
- fire and explosion

Abnormal situations may include:
- technology failure
- wheel slip and uncontrolled slide
- signals in stop mode
- false alarm
- track obstructions
- pedestrians crossing the track
- illness
- incorrect information or failure in communications

Relevant personnel may include:
- train controllers
- maintenance personnel
- those providing operational assistance
- signals staff
- station staff

Communication in the work area may include:
- radio
- phone

Emergency services may include:
- fire brigade
- police
- ambulance
- medical services
- rescue services
- state emergency services
- security services

Information/documents may include:
- organisational and/or network procedures and policies for managing emergencies and abnormal situations, including the relevant emergency response plan where applicable
- material safety data sheets (where applicable)
- communications equipment procedures and protocols
- equipment operation manuals and maintenance specifications

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF3003A Implement and monitor occupational health and safety procedures

Modification History
Release 2. This is the second release of this unit in the TLI10 Transport and Logistics Training Package Version 4.0.
Minor changes to the Required Knowledge three dot points removed as not relevant.
Release 2 is equivalent to the previous release.

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor OH&S procedures, including accessing information about OH&S and the workplace policies and procedures, implementing and monitoring procedures for identifying and assessing hazards, implementing and monitoring/auditing procedures for controlling risks, planning and supervising housekeeping arrangements, and implementing and monitoring procedures for dealing with hazardous events. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant OH&S regulations and procedures. Work is performed under some supervision generally within a team environment. It involves the implementation and monitoring of established OH&S and hazard minimisation policies and procedures in workplace activities.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil.

Employability Skills Information
This unit contains employability skills
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Access information about OH&S and the workplace policies and procedures

   1.1 Relevant provisions of occupational health and safety legislation and codes of practice are accurately followed

   1.2 Information on workplace occupational health and safety policies, procedures and programs is stored in a readily accessible location and manner

   1.3 Information is accurately and clearly explained to the work team

   1.4 Information about the outcomes of risk identification and control procedures is provided to appropriate personnel

2 Implement and monitor procedures for identifying and assessing hazards

   2.1 Existing and potential hazards in the work area are identified and reported

   2.2 Identified hazards are assessed in relation to relative risk

   2.3 Appropriate action is initiated to minimise and control the risks/hazards

3 Implement and monitor procedures for controlling risks

   3.1 Existing risk control measures are implemented, monitored and reviewed

   3.2 Work procedures to control risks are implemented and adherence to them by the work group is monitored

   3.3 Required improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel

   3.4 Procedures for monitoring and controlling risks provide for a hierarchy of control

4 Plan and supervise housekeeping arrangements

   4.1 Housekeeping tasks are identified and incorporated in enterprise work roles

   4.2 Housekeeping equipment is maintained

   4.3 Team members are allocated housekeeping tasks and supervised
4.4 Housekeeping procedures and practices are planned to conform with environmental and occupational health and safety requirements

5 Implement and monitor procedures for dealing with hazardous events

5.1 Workplace procedures for dealing with hazardous events are implemented whenever necessary to ensure that prompt control action is taken

5.2 Hazardous events are investigated to identify causes

5.3 Control measures are implemented to prevent recurrence and minimise risks of hazardous events or issues and are referred to designated personnel for implementation
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:
- Relevant OH&S procedures and guidelines
- Risks when using manually-operated equipment to shift loads and related precautions to control the risk
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms, manifests, emergency shut-off systems, emergency communication systems
- Signs and signals used for OH&S warnings
- Terms used in material safety data sheets
- HAZCHEM symbols and implications for safe work and storage
- Procedures for the storage and use of hazardous substances
- Procedures for the storage and use of flammable materials
- Manual and mechanically assisted lifting and load shifting procedures
- Transport requirements for goods within workplace
- Emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when implementing and monitoring compliance with OH&S procedure and policies
- Read and interpret instructions, procedures, information and signs relevant to the implementation and monitoring of compliance with OH&S procedure and policies
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation and monitoring of compliance with OH&S procedure and policies
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when implementing and monitoring compliance with OH&S procedure and policies
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise
when implementing and monitoring compliance with OH&S procedure and policies in accordance with regulatory requirements and workplace procedures

- Implement contingency plans for unanticipated situations that may occur when implementing and monitoring compliance with OH&S procedure and policies
- Ensure that precautions and required action are taken to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

Assessment of this unit must be undertaken by a registered training organisation

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The implementation and monitoring of OH&S within work operations may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Workplace hazards may include:
- chemicals and other harmful substances
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- dangerous storage areas
- violent incidents such as armed robberies
- provision of OH&S information to staff
- consultation and participation in meetings on OH&S matters
- emergency procedures and response
- housekeeping
- identifying and minimising workplace hazards
- assessing and controlling OH&S risks
- OH&S training and assessment
- use of personal protective equipment
- keeping of OH&S records
- reporting of OH&S issues and incidents
- resolution of OH&S issues
- checking work area and/or equipment before and during work
- participation in OH&S audits and workplace inspections

### Controlling OH&S risks may include

- measures to remove the cause of a risk at its source
- consultation with workers and their representatives
- application of the hierarchy of control, namely:
  - elimination of the risk
  - engineering controls
  - administrative controls
  - personal protective equipment

### Procedures for dealing with hazardous events may include:

- evacuation
- chemical containment
- first aid
- accident/safety incident reporting and investigation.

### OH&S training may include:

- induction training
- specific hazard training
- specific task or equipment training
- emergency and evacuation training
- training as part of broader programs, for example equipment operation

### OH&S records may include:

- OH&S audits and inspection reports
- health surveillance and workplace environmental monitoring records
- records of instruction and training
- manufacturers and suppliers information, including material safety data sheets and dangerous goods storage lists
- hazardous substances registers
- maintenance and testing reports
- workers compensation and rehabilitation records
- first aid/medical post records.

### Personnel in the work area may include:

- workplace personnel and management
- site visitors
- OH&S specialists
- union representatives
- contractors
Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Participative arrangements may include:
- formal and informal meetings which deal with OH&S issues
- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

Designated personnel may include:
- workplace personnel
- supervisors
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- OH&S regulations, responsibilities and obligations
- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- material safety data sheets
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container
Applicable regulations and legislation may include:

- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

**Unit Sector(s)**

Not Applicable.

**Competency Field**

Unit Descriptor

This unit involves the skills and knowledge required to organise OH&S procedures in the workplace, including interpreting and applying information about OH&S policies and procedures and duty of care responsibilities, identifying and assessing hazards and risks in the workplace, negotiating to control workplace hazards and risks, resolving complaints about OH&S, and instituting appropriate risk management strategies. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with OH&S codes/regulations and workplace requirements.

Safety checks and equipment tests are performed under limited supervision.

Work involves the application of OH&S regulatory requirements and workplace procedures to the organisation of OH&S procedures in the workplace in the stevedoring, transport, warehousing, distribution and/or storage industries.

Licensing/Regulatory Information

Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Use information about OH&S policies and procedures | 1.1 Relevant provisions of OH&S legislation and codes of practice are accurately followed  
1.2 Workplace OH&S policies, procedures and programs are promoted to employees in the relevant workgroup  
1.3 Implications of risks and requirements for safe work are accurately and clearly explained to the work group  
1.4 Information about the outcomes of risk identification and control procedures is used in the design/redesign of work procedures |
| 2 Identify and assess hazards | 2.1 Existing and potential hazards in the work area are identified through audit, monitoring of processes, equipment and products used, and in response to employee complaints and questions  
2.2 Identified hazards are assessed in relation to relative risk and impact on workplace operations and employee health, safety and welfare  
2.3 Priorities for hazard resolution are established and reported to appropriate personnel |
| 3 Negotiate to control risks and resolve complaints about OH&S | 3.1 Existing risk control measures are implemented, monitored and possible improvements identified  
3.2 Required improvements to existing risk control measures are implemented and identified  
3.3 Required resources for implementation are established and reported to appropriate personnel  
3.4 Negotiations with management and employees to revise work procedures are conducted within workplace issue resolution procedures |
| 4 Institute risk management strategies | 4.1 Workplace procedures for hazard, accident and incident reporting are used  
4.2 Cooperative working relationships with other employees and external authorities involved in OH&S procedures are established and maintained  
4.3 Legislative provisions for improvement notices and inspections are followed |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the management of personal work priorities and professional development
- The systems of risk control recognising the significance of OH&S for effective workplace operation
- The significance of other management systems and procedures for OH&S
- Hazards and associated safety risks that exist in the workplace, including: the range of control measures available for safety risks; considerations for choosing between different control measures; and how to identify when expert advice is needed
- Principles and practices of effective OH&S organisation, including: elements of an effective OH&S system; hazard control and risk management; the hierarchy of hazard and risk control measures; arrangements for participation and consultation over OH&S; and incident and accident investigation arrangements
- Training, coaching and mentoring approaches appropriate for use in OH&S training programs
- Typical problems that can occur when organising OH&S procedures and related action that can be taken

Required skills:
- Communicate effectively with others when organising OH&S procedures in the workplace
- Read and interpret instructions, procedures, information and signs relevant to the organisation of OH&S procedures in the workplace
- Interpret and follow operational instructions and prioritise work
- Negotiate and resolve issues related to the organisation of OH&S procedures in the workplace
- Complete documentation related to the organisation of OH&S procedures in the workplace
- Provide leadership and work collaboratively with others when organising OH&S procedures in the workplace
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when organising OH&S procedures in the workplace in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when organising OH&S procedures in the workplace
- Develop policies for precautions and required action to minimise, control or eliminate hazards that may exist during work activities
Required skills:

- Plan work activities, including predicting consequences and identifying improvements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Ensure the application of fatigue management knowledge and techniques in the workplace
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S management systems
- Select and appropriately apply technology, information systems and policies to organise OH&S compliance and reporting procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Ensure the systematic use of required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
EVIDENCE GUIDE

- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Workplace hazards may include but are not restricted to:
- moving heavy loads in an unsafe work environment
- unsecured machinery, components or repaired equipment
- slippery floors
- welding equipment
- sharp tools and implements
- power tools
- moving and rotating machinery
- flammable liquids, vapours and fuel
- faulty machinery equipment handling equipment and
RANGE STATEMENT

- lifting gear
- using equipment beyond safe working limits
- poor housekeeping procedures
- non-compliance with safe working procedures
- electrical wiring and systems, including exposed electrical circuits
- working at heights and in confined spaces
- toxic gases and substances
- chemicals and other harmful substances
- damaged goods, pallets and containers
- dangerous/hazardous goods

Consultative processes may involve:

- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:

- workplace OH&S procedures and policies
- workplace OH&S management system including hazard/safety risk control strategies
- OH&S training notes and materials
- journals and work related literature concerning OH&S
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
RANGE STATEMENT

- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures
- relevant regulations, standards and codes of practice
- hazardous substances and dangerous goods codes
- relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:
  - general duty of care under OH&S legislation and common law
  - requirements for the maintenance and confidentiality of records of occupational injury and disease
  - requirements for provision of OH&S information and training
  - provisions relating to health and safety representatives and/or OH&S committees
  - provisions relating to OH&S issue resolution
- environmental protection regulations
- relevant Australian standards and certification requirements

Applicable regulations and legislation may include:

Unit Descriptor
This unit involves the skills and knowledge required to coordinate breakdowns and emergencies, including evaluating the breakdown/emergency situation, consulting with relevant personnel/emergency authorities, coordinating activities at the breakdown/emergency site, and completing all required reports and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to the coordination of breakdowns and emergencies.

Work is performed with limited or minimum supervision. It involves judgement and discretion in the coordination of breakdowns and emergencies that may occur when driving a commercial vehicle.

Licensing/Regulatory Information

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Duty of care requirements in a breakdown and/or emergency situation
- Types of breakdowns and emergencies that can occur when driving a vehicle and appropriate action that can be taken in each case
- Types of emergency equipment, their purpose, and the procedures for their use
- Procedures to be followed in the event of a breakdown and/or emergency
- Risks and hazards that can exist in breakdown/emergency situations and related precautions to control the risks
- Characteristics of various dangerous goods/explosives/hazardous substances and their implications in breakdown/emergency situations

Required skills:

- Communicate effectively with others when coordinating a response to a breakdown or emergency
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures, information and signs relevant to the coordination of a response to a breakdown or emergency
- Identify containers and goods coding, IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the coordination of a response to a breakdown or emergency
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when coordinating a response to a breakdown or emergency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when coordinating a response to a breakdown or emergency in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated events that may occur when coordinating a response to a breakdown or emergency
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
Required skills:

- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Control traffic at the site of a breakdown or emergency
- Identify and correctly use emergency equipment at the site of a breakdown or emergency
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle may include:

- any commercial transport vehicle

Breakdowns and emergencies may occur in a range of road transport situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Type of breakdowns/emergencies may include

- collision
- spillage of fuel or dangerous load
- tyre blow-outs
- fire or explosion
- engine failure
- broken axle
- boggd vehicle
- load shifts
- electrical failure,
- breakdown
- overturned vehicle
- accident involving another vehicle

Emergency equipment may

- first aid kit
RANGE STATEMENT

include:

- fire extinguishers
- warning signs and indicators
- mobile phone or radio

Depending on the type and extent of the breakdown/emergency, the action to be taken to coordinate a breakdown/emergency may include:

- identifying and following established breakdown/emergency procedures
- evaluating the cause and effects of the breakdown/emergency
- coordinating emergency procedures and rendering assistance and first aid if required
- contacting and cooperating with relevant emergency authorities as required
- controlling traffic at the site of a breakdown or emergency
- taking appropriate action to secure the breakdown/emergency situation
- obtaining and recording information about the incident
- reporting on breakdown/emergency situation in accordance with regulatory and workplace requirements

Consultative processes may include:

- workplace personnel and management
- designated breakdown/emergency officers
- emergency services personnel including ambulance, police, fire services, etc.
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information documents may include:

- workplace instructions and procedures concerning breakdowns and emergencies
- state/territory licence and permit requirements as they relate to breakdowns/emergencies
- state/territory road rules
- vehicle manufacturers instructions, specifications and recommended procedures
- goods/materials identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, goods and container identification
- relevant codes of practice, including the Australian Dangerous Goods Code, the Australian Explosives Code, the Code of Practice for the Safe Transport of Radioactive Substances
RANGE STATEMENT

- workplace procedures and policies for the handling of dangerous goods, explosives and radioactive and other hazardous substances
- vehicle log book or record book (where required)
- relevant standards and certification requirements
- quality assurance procedures
- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to class of vehicle involved
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- Australian Dangerous Goods Code
- Australian Explosives Code
- relevant state/territory environmental protection legislation
- Code of Practice for the Safe Transport of Radioactive Substances
- state/territory legislation covering the safe handling of infectious substances

Applicable procedures and codes may include:

Competency Field

Competency Field F - Safety Management
TLIF3014A Operate as an off-sider in the waste management industry

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to operate as an off-sider on a waste collection vehicle, which involves getting in and out of the vehicle or on or off the vehicle at frequent intervals. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit applies to new and experienced workers who take on the role of off-sider in the waste management industry.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access, equity and human rights issues in relation to own area of work
- Correct use of equipment and any other processes and procedures appropriate for loading
- Cultural, historical and current issues impacting on Aboriginal and Torres Strait Islander peoples and their communities
- Ethical handling of performance issues
- Identification of evidence of competency
- Intended outcome
- Job/role environment skills
- Job role methodologies and strategies
- Planning own work including predicting consequences and identifying improvements
- Relevant legislation, regulations, codes of practice, standards, policies and procedures such as:
  - equal employment opportunity (EEO)
  - work health and safety (WHS)/occupational health and safety (OHS)
- Relevant workplace tasks, skills and knowledge
- Workplace application of relevant competencies
- Workplace training plan for competency development

Required skills:

- Build trust with team mates
- Communicate effectively verbally and in writing using a range of strategies:
  - ensure language used suits target audience
  - give and receive feedback
  - listen
  - question
- Complete and maintain required documentation and records
- Maintain confidentiality
- Make recommendations for further improvement opportunities
- Plan and manage time effectively
- Plan for and manage contingencies
- Transfer and apply skills and knowledge to new contexts
- Work in a culturally diverse environment
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- sequencing activity in a way that facilitates the development of competence
- ensuring currency of relevant state/territory legislative and regulatory knowledge
- developing effective planning documents.

#### Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- workplace where individual or small group work can be conducted
- tools, equipment and personal protective equipment currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities
- range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
- appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

#### Method of assessment

Practical assessment must occur in an:

- appropriately simulated workplace environment and/or
- appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate undertaking their role as
individuals or as part of a team
direct observation of the candidate applying relevant
WHS/OHS requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace needs may include:

- ensuring that a suitable workplace induction has taken place
- industry/enterprise or other performance competency standards
- industry/workplace mentoring processes and practices
- organisational business plans that identify skill development requirements
- results of training needs analyses
- standard operating and/or other workplace procedures

Appropriate personnel may include:

- assessors
- association representatives
- consultative committees
- managers/employers
- other workplace participant/s
- representative government regulatory bodies
- team leaders/supervisors/technical experts
- training and assessment coordinators
- union/employee representatives

Training delivery methods and practise opportunities may include:

- demonstrations
- experiential learning
- explanations
- group work
- job rotations
- on-the-job problem solving and decision making
- peer mentoring
- presentations
- problem solving
- toolbox talks
- combination of the above

Participant needs may include:

- age
- cultural, language and educational background
- gender
- language, literacy and numeracy needs
- level of confidence and self-esteem
- previous learning, training, coaching, mentoring or assessment experience
Resources may include:

- physical ability
- work organisation or roster
- enterprise/industry standard operating procedures
- finances/costs
- location
- materials and equipment
- personnel
- time
- WHS/OHS and other workplace requirements

Strategies and techniques may include:

- active listening
- group discussion
- points of clarification
- targeted questioning

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to work safely near electrical assets as a non-electrical licensed worker. Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to workers whose role requires them to work within the vicinity of electrical assets.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**Prepare to work safely near electrical assets**

1.1 Relevant state/territory safe work legislative requirements are identified.

1.2 Unsafe distances (clearance zones, no go zones or exclusion zones) near low and high voltage power lines are confirmed and applied to safe work planning.

1.3 Safe work practices and procedures are planned in accordance with state/territory regulatory requirements, codes of practice and workplace policies.

1.4 Safe approach distances are identified and confirmed in accordance with state/territory legislation.

1.5 Potential hazards are identified, risks are assessed and risk control options are prioritised and documented in accordance with workplace operating procedures and state/territory regulatory requirements.

1.6 Incident response plans are developed in accordance with safe systems of work, job safety, environmental analysis, work method statements and state/territory regulatory requirements.

**Carry out work near electrical assets safely**

2.1 Appropriate work health and safety (WHS)/occupational health and safety (OHS) principles and practices are applied.

2.2 Identified hazards are monitored during work tasks.

2.3 Changes to assessed risks are monitored.

2.4 Risk control options are implemented, monitored and amended as necessary to ensure safe work operations.

2.5 Potential risks and hazards are recorded and reported in accordance with workplace policies and state/territory regulatory requirements.

2.6 Emergency procedures and incident response plans are appropriately prepared for all tasks and implemented if an emergency incident arises.

2.7 All personnel on the specific task or job site are made aware of the location of emergency procedures and response plans.

2.8 Content of emergency procedures and response plans is explained.
### Cease work near electrical assets when safety is compromised

1. Operation of vehicle is stopped immediately contact with electrical assets is made, in accordance with workplace policies and procedures and state/territory regulatory requirements

2. Nature of electrical event or potential threat is assessed and communicated to relevant personnel in accordance with workplace policies and procedures and regulatory requirements

3. Request for emergency services to be contacted is made in accordance with workplace policies and procedures

### Evaluate additional potential threats

1. While remaining in the vehicle additional threats are evaluated and a suitable plan of action to address these additional threats is determined in accordance with workplace policies and procedures, and state/territory regulatory requirements

2. Location of fallen wires and other threats are determined and all parts of vehicle are treated as live and/or dangerous unless otherwise determined, in accordance with workplace policies and procedures, and state/territory regulatory requirements

3. People in close proximity are directed to stay clear until area is electrically safe and situation is resolved, in accordance with workplace policies and procedures, and state/territory regulatory requirements

4. Vehicle is exited according to workplace policies and procedures or as directed by emergency services personnel

### Complete relevant documentation

1. Work schedules and authorisations including safe systems of work, job safety and environmental analysis, work method statements and work permits are documented in accordance with workplace procedures and state/territory regulatory requirements

2. Incident reports are recorded in accordance with workplace policies and procedures, and state/territory regulatory requirements

3. Relevant reports, records and data sheets are accurately recorded and lodged in accordance with workplace policies and procedures, and state/territory regulatory requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Correct use of equipment and any other processes and procedures appropriate for work tasks
- Emergency procedures
- Hazard identification process
- Identification of electrical asset types
- Job/role and related environment skills
- Planning own work including predicting consequences and identifying improvements
- Relevant company policies and procedures
- Relevant legislation, regulations, codes of practice, standards, policies and procedures
- Relevant workplace tasks, skills and knowledge including knowledge of safe approach distances (clearance zones, no go zones and exclusion zones) and reasons for being declared as such
- Risk assessment processes and controls relevant to work site
- Safe work methodologies and strategies
- Safe work practices in relation to local areas of work

Required skills:

- Communicate effectively verbally and in writing using a range of strategies:
  - ensure language used suits target audience
  - give and receive feedback
  - listen
  - question
- Complete and maintain required documentation and records
- Make recommendations for further risk mitigation
- Maintain situational awareness
- Plan and manage time effectively
- Plan for and manage contingencies
- Transfer and apply skills and knowledge to new contexts
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- sequencing activities in a way that facilitates the development of competence
- ensuring currency of relevant legislative and regulatory knowledge
- developing effective planning, risk mitigation and problem-solving documents.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

- Resources for assessment include access to:
  - workplace where individual or small group work can be conducted
  - tools, equipment and personal protective equipment currently used in industry
  - relevant regulatory and equipment documentation that impacts on work activities
  - range of relevant exercises, case studies and/or other simulated practical and knowledge assessments
  - appropriate range of relevant operational situations in the workplace.

In both real (within safe means) and simulated environments, access is required to:

- relevant and appropriate materials and equipment
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

Practical assessment must occur in:

- an appropriately simulated workplace environment and/or
- a safe and appropriate range of situations in the workplace.

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate to this unit:

- direct observation of the candidate individually or as part of a small group
- direct observation of the candidate applying relevant
WHS/OHS requirements and work practices.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:
- industry/enterprise or other performance locations
- internal or external to vehicle
- standard operating and/or other workplace procedures

Electrical assets may include:
- electrical power lines
- power poles
- satellite disks
- telecommunications lines
- transformers
- transmitters

Appropriate personnel may include:
- emergency services personnel including fire, police, state/territory emergency services, ambulance
- first aid officers
- fire wardens
- representative government regulatory bodies
- managers
- team leaders/supervisors/technical experts
- union/employee representatives

Training delivery methods and practise opportunities may include:
- demonstrations
- explanations
- group work
- on-the-job problem-solving and decision-making
- peer mentoring
- presentations
- problem-solving videos and discussions
- scenarios
- combinations of the above

Participant needs may include:
- age
- cultural, language and educational background
- language, literacy and numeracy needs
- level of confidence and self-esteem
- physical ability
- previous learning, training, coaching, mentoring or assessment experience
- work organisation or roster

Resources may include:
- codes of practice
- emergency services personnel
- enterprise/industry standard operating procedures
- guideline documents
• materials and equipment
• regulations
• WHS/OHS and other workplace processes or documentation requirements

Strategies and techniques may include:
• active listening
• group discussion
• points of clarification
• targeted questioning

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF3022A Implement/monitor procedures when warehousing/storing dangerous goods and/or hazardous substances

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor OH&S policies, safe work procedures and programs for the warehousing or storage of dangerous goods and or hazardous substances in accordance with regulatory requirements. This includes accessing and providing information; implementing and monitoring procedures for identifying and assessing hazards; and implementing and monitoring procedures for controlling risks. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit covers anyone working in the transport, warehousing, distribution and storage industries who may be involved in storing dangerous goods and/or hazardous substances.

Licensing/Regulatory Information
Refer to Unit Descriptor
Pre-Requisites
Not Applicable

Employability Skills Information
Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Access/provide information on legislative requirements, workplace policies and procedures  | 1.1 Legislative requirements for hazardous substances and/or dangerous goods are identified, stored and retrieved as required  
1.2 Information on workplace occupational health and safety policies and safe work procedures relating to the storage of hazardous substances and/or dangerous goods is stored in a readily accessible location and manner  
1.3 Information on legislative requirements, workplace policies and safe work procedures relating to the storage of hazardous substances and/or dangerous goods is accurately and clearly explained to the work group  
1.4 Information on the outcome of hazard identification, risk assessment and application of control measures is accurately and clearly explained to the work group  
2 Implement and monitor procedures for identifying and assessing hazards  | 2.1 Dangerous goods and/or hazardous substances are identified from information provided, including class labels, manifests, material safety data sheets and other documentation  
2.2 Confirmation is sought from relevant personnel where potentially hazardous substances or dangerous goods do not appear to be appropriately marked  
2.3 Risks associated with the storage of identified hazardous substances or dangerous goods are assessed, reported/recorded in accordance with workplace policy  
3 Implement and monitor procedures for controlling risks  | 3.1 Established risk control measures for the safe storage of hazardous substances and/or dangerous goods are implemented, monitored and reviewed in accordance with workplace procedures  
3.2 Work procedures to control risks are implemented  
3.3 Adherence to risk control procedures by the work group is monitored in accordance with workplace procedures  
3.4 Required improvements to existing risk control measures are identified, including required resources for implementation, and reported to appropriate personnel  
3.5 Procedures for monitoring and controlling risks provide for a hierarchy of risk control

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations and codes concerning the storage of dangerous goods and hazardous substances
- Permit and licence requirements
- Workplace procedures for handling and storing dangerous goods and hazardous substances
- Risks when storing dangerous goods and hazardous substances and related precautions to control the risk
- Problems that may occur when storing or warehousing dangerous goods and hazardous substances and action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when storing or warehousing dangerous goods and hazardous substances
- Read and interpret instructions, procedures, information and signs relevant to the storing or warehousing of dangerous goods and hazardous substances
- Identify containers and goods coding, markings, labels and, where applicable, emergency information panels for the mode of transport/storage selected
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the storing or warehousing of dangerous goods and hazardous substances
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when storing or warehousing dangerous goods and hazardous substances
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when storing or warehousing dangerous goods and hazardous substances in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Implement contingency plans for unanticipated situations that may occur when storing or warehousing dangerous goods and hazardous substances
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the storing or warehousing of dangerous goods and hazardous substances
- Monitor work activities in terms of planned schedule
Required skills:

- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying dangerous goods/hazardous substances (from labels, IMDG markings, HAZCHEM signs and other relevant identification criteria)
  - safely storing dangerous goods/hazardous substances
  - determining (any) required permits
  - identifying job and site hazards and planning work to minimise risks
  - identifying any special requirements for the dangerous goods/hazardous substances
  - assessing the handling and storage precautions and requirements for dangerous goods/hazardous substances

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
EVIDENCE GUIDE

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The dangerous goods may be stored in a range of work environments by day or night and may be:

- for short-term storage
- for long-term storage
- in transit

Customers may be:

- internal or external

Workplace environment may include:

- movement of equipment
- movement of goods
- materials and vehicular traffic

Requirements for work may include:

- site restrictions and procedures
- use of safety and personal protective equipment
- communications equipment
- specialised lifting and/or handling equipment
- incident/accident procedures
- authorities and permits
- hours of operations
RANGE STATEMENT

- noise restrictions
- additional gear and equipment
- segmentation procedures
- emergency procedures, including response to spillage/leaks, evacuation and firefighting

Hazards may include:
- hazardous or dangerous materials
- contamination of, or from, materials being handled
- noise, light, energy sources
- stationary and moving machinery, parts or components
- service lines
- spills, leakages, ruptures
- fire or ignition
- dust/vapours

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- representatives of regulatory authorities with jurisdiction over OH&S, dangerous goods and hazardous substances
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Identification of goods may be:
- from material safety data sheets
- packaging labels
- manifests
- stock lists
- HAZCHEM interpretative advice

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
RANGE STATEMENT

Information/documents may include:
- mask and respirator
- protective clothing
- breathing apparatus
- goods identification numbers and codes
- manifests, stock lists, packaging labels, bar codes
- goods and container identification
- workplace procedures and policies concerning the storage of dangerous goods and hazardous substances
- supplier and/or client instructions
- material safety data sheets
- current Australian Dangerous Goods Code
- HAZCHEM interpretative advice
- relevant legislation, codes, regulations and related documentation concerning the storage of dangerous goods and hazardous substances
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures pertaining to dangerous goods and hazardous substances

Applicable regulations and legislation may include:
- relevant Australian and state/territory regulations relating to the storage of dangerous goods and hazardous substances
- Australian and international regulations and codes of practice for the storage and transport of dangerous goods and hazardous substances, including:
  - current Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - current Australian and International Explosives Codes
- all relevant Australian Standards
- relevant state/territory OH&S legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment and affirmative action legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to apply applicable safeworking rules and regulations to rail functions carried out on rail networks. It includes the correct use of communication protocols; interpreting and responding to radio, hand signal and light commands; interpreting and following relevant safeworking rules and protocols; and taking appropriate action in the event of safety incidents, unsafe situations or emergencies. Licensing or certification requirements are not applicable to this unit.

Application of the Unit

Application of the Unit
Work involves the application of the relevant principles, protocols, rules and requirements of the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines to the work activities of the rail occupation concerned.

Work is performed under established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes within the limits of responsibility of the worker concerned.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Apply safeworking rules and regulations | 1.1 Relevant safeworking system for the area where work activities are to be carried out is identified prior to commencing work  
1.2 Relevant rules for the applicable safeworking system are followed when carrying out activities as part of rail operation  
1.3 All work activities are conducted in compliance with the relevant state/territory safeworking regulations pertaining to the activities concerned |
| **2** Apply communication protocols | 2.1 Communication protocols are followed in accordance with the applicable safeworking system requirements  
2.2 Appropriate records of communications are maintained as required within the applicable safeworking system rules and procedures |
| **3** Use and interpret radio, hand, light and flag commands | 3.1 The applicable safeworking system rules and procedures are applied in the use and interpretation of radio, hand, light and flag commands  
3.2 Hand signals are only used in conditions of good visibility  
3.3 Any command not clearly understood is regarded as a 'STOP' command in accordance with applicable safeworking system rules and regulations |
| **4** Follow safeworking protocols | 4.1 Where applicable, relevant protocols are followed as specified in the safeworking system rules and procedures  
4.2 Appropriate records and documentation are completed in accordance with the requirements of the applicable safeworking system rules and procedures |
| **5** Take action in the event of unsafe situations or emergencies | 5.1 Unsafe situations are identified in accordance with the requirements of the applicable safeworking system rules and procedures  
5.2 Where a safety incident, unsafe situation or emergency has been identified, appropriate action is taken to report and/or control the incident or situation in accordance with the limits of responsibility of the worker concerned and the requirements of the applicable safeworking system rules and procedures |
| **6** Record unsafe situations or emergencies | 6.1 Appropriate records and documentation of an identified unsafe situation, an emergency, or a safety incident are completed in accordance with the requirements of the applicable safeworking system rules and procedures  
6.2 Records of identified unsafe situations, emergencies, or safety incidents are maintained in accordance with the requirements of the applicable safeworking system rules and procedures |
**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection legislation and policies
- Basic understanding of applicable safeworking systems, requirements and limitations
- Rail terminology as defined in the applicable safeworking system
- Action to be taken in the event of safety incidents, identified unsafe situations and emergencies within the limits of responsibility under the applicable safeworking systems

**Required skills:**

- Communicate effectively with others when applying safeworking rules and regulations to rail functions
- Read and interpret relevant safeworking rules, regulations and instructions applicable to the rail operations concerned
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to safeworking requirements applicable to the rail operations concerned
- Operate electronic communication equipment to required protocol
- Work collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Recognise problems and hazards that may arise during rail operations and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Check compliance between work and safeworking rules and regulations and take appropriate action as per standard operating procedures when non-compliance is identified
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying all applicable safeworking systems for their applicable occupation
  - using and responding appropriately to a range of radio, hand, light and flag signals as used for their applicable occupation
  - identifying unsafe or emergency situations that could occur in their workplace and appropriate responses

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may include:
- rail operations carried out in the state/territory concerned and covered by the legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines

Terminology and related meanings will be:
- as defined within the applicable safeworking system

Work may occur:
- by day or night
- in both normal and emergency situations
- in all weather conditions

Communication protocols will be as specified within applicable safeworking system and may include:
- general safety
- emergency messages
- testing communications equipment
- transmitting and receiving messages
- identification
- standard radio terms
- phonetic alphabet
- spoken figures

Communications equipment may include:
- hand-held or portable equipment
- fixed equipment
- mobile/satellite phones
- specialised testing facilities

Radio, hand, light and flag commands will be:
- as defined within the applicable safeworking system

Track work protocols will be:
- as defined within the applicable safeworking system

Safety clothing and equipment
- high visibility clothing
- end of train markers
RANGE STATEMENT

may include:

- gloves
- sunscreen
- sunglasses
- safety glasses
- insect repellent
- safety headwear
- safety footwear
- portable radios/mobile phones
- hand lamps
- flags
- safety devices
- hearing protection

Information and documents may include:

- instructions of relevant rail authorities concerning rail safety and operations
- workplace procedures, policies and work instructions
- relevant occupancy authorities (where applicable)
- train authorities (where applicable)
- worksite safety plan (where applicable)
- Emergency Response Plan (ER Plan) and emergency procedure manuals
- train running information (TRI)
- train notices
- train register books
- failure reports
- local instructions
- take-off location documents
- level crossing location documents
- track and infrastructure drawings and diagrams
- plant, equipment, track vehicle and communications equipment registers
- operating and maintenance instructions of relevant equipment manufacturers
- repair cards and books
- voice communications log
- safeworking forms

Applicable legislation, regulations and codes may include:

- legislated rail safety requirements including acts and regulations from each applicable state and territory together with any nationally approved compliance codes and/or guidelines
- relevant Australian Standards and related requirements including AS 4292
RANGE STATEMENT

- relevant state/territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards

Competency Field
Competency Field F - Safety Management
TLIF3060A Control traffic as a pilot vehicle operator

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required by pilot vehicle operators to control traffic in the vicinity of an oversized vehicle. It includes using prescribed traffic control stop/slow bats and communicating effectively with persons involved. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work involves applying basic principles, routine procedures and regulatory requirements to control traffic as a pilot vehicle operator.

Work is performed independently with minimum supervision.

This unit of competency may be assessed in conjunction with the unit TLIC3010A Pilot or escort oversized and/or overmassed loads.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Apply control procedures | 1.1 Legislative responsibilities and requirements are identified, interpreted and applied  
1.2 Occupational health and safety (OH&S) requirements are identified, interpreted and applied  
1.3 Company procedures and requirements are identified, interpreted and applied  
1.4 Appropriate personal protective equipment is selected and used in accordance with standard operating procedures  
1.5 Traffic control equipment is selected in accordance with the requirements of the task and standard operating procedures |
| 2 Coordinate traffic | 2.1 Vehicles and pedestrians are monitored to ensure safety of persons and property  
2.2 Adjustments are made for changing conditions and to ensure best traffic flow  
2.3 Hand-held signs (bats) are positioned in accordance with standard operating procedures and to provide maximum visibility  
2.4 Mishaps or accidents are managed in accordance with standard operating procedures where they exist and relevant legislation |
| 3 Maintain effective communication | 3.1 Effective communication is maintained between all parties  
3.2 Appropriate language and protocols are used during communication  
3.3 Messages are transmitted concisely and in accordance with standard operating procedures where they exist  
3.4 Electronic communication power supply is maintained in accordance with the manufacturers recommendation  
3.5 After a period of non-contact, radio or other electronic contact is checked to ensure effective operation in accordance with standard operating procedures |
| 4 Maintain equipment | 4.1 Equipment is cleaned, maintained and stored or stowed in accordance with manufacturers specifications and standard operating procedures and to ensure operational effectiveness |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:
- Standard operating procedures for controlling traffic in the course of piloting duties
- Workplace and equipment safety requirements and relevant OH&S legislation
- Verbal and non-verbal communication techniques
- Electronic communications operating procedures
- Purpose of required personal protective equipment and instructions for its use

Required skills:
- Communicate effectively with others when controlling traffic as a pilot vehicle operator
- Read, interpret and follow instructions and standard operating procedures relevant to the control of traffic as a pilot vehicle operator
- Work safely in accordance with instructions
- Select and correctly use signage
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly rectify and/or report any identified problems when controlling traffic in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Use personal protective clothing as per OH&S requirements
- Work systematically with required attention to detail without injury to self or others, or damage to goods, vehicles or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
EVIDENCE GUIDE

and evidence required to
demonstrate competency in this
unit

requirements of the elements and performance criteria of this unit and include demonstration of:

- applying the underpinning knowledge and skills
- applying relevant legislation and workplace procedures
- demonstrating an understanding of legislation and regulatory requirements
- demonstrating use of hand-held signs
- demonstrating an understanding of the requirements of traffic control during mishaps or accidents

Context of and specific resources
for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
  - a simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work
RANGE STATEMENT

environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments, spaces and weather conditions
- by day or night

Traffic control applies to:
- safe and efficient movement of all vehicular and pedestrian traffic
- assisting movement of oversized or overmassed (OSOM) vehicle being escorted

Communication methods may include:
- verbal
- electronic
- the use of hand-held (stop/slow bats) signs

Electronic communication may be used by:
- a single operator
- two operators

Documentation/records may include:
- standard operating procedures for controlling traffic in the course of piloting duties
- AS 1742-3 2002 Manual for uniform traffic control devices
- relevant state or territory legislation, manuals and codes of practice
- relevant local government documents

Applicable legislation, regulations and codes may include:
- OH&S legislation and regulations
- relevant state or territory road and rail legislation
- relevant telecommunication legislation and regulations
- relevant local government legislation and regulations

Unit Sector(s)

Not Applicable

Competency Field

Competency Field F - Safety Management
TLIF3063A Administer the implementation of fatigue management strategies

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to administer the implementation of fatigue management strategies, including monitoring the implementation of fatigue management strategies; and recognising breaches of fatigue management policies, procedures and regulations. It also includes developing and assessing staff competence in fatigue management; providing feedback to staff on any shortcomings in their fatigue management skills and knowledge; and reporting to management on the implementation of fatigue management policy. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the requirements of the applicable Commonwealth and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under limited supervision generally as a team leader or supervisor. It involves the application of relevant regulations and the principles of fatigue management when administering the implementation of an organisation's fatigue management strategies during work operations in a defined workplace.

Licensing/Regulatory Information

Refer to Unit Descriptor
Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Monitor the implementation of fatigue management strategies | 1.1 Work activities of employees, subcontractors and suppliers in the supply chain of products and services are monitored in accordance with the organisation's fatigue risk management implementation plan  
1.2 Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and to rectify the situation |
| **2** Recognise breaches of fatigue management policies, procedures and regulations | 2.1 Signs and symptoms of fatigue in employees are identified in accordance with operational procedures  
2.2 Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers are recognised and reported as per standard procedures  
2.3 Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures  
2.4 Appropriate action is taken in conjunction with employees, subcontractors or suppliers concerned to ensure ongoing and future compliance with the organisation's fatigue management policy and procedures |
| **3** Develop and assess staff competence in fatigue management | 3.1 Appropriate training programs and learning resources are developed and provided to ensure that employees understand the organisation's fatigue management policies and procedures and the risks, causes and consequences of fatigue  
3.2 Employees are assessed to confirm that they are competent in their understanding of the organisation's fatigue management strategies and can apply them to their day-to-day work activities and responsibilities  
3.3 Any deficiencies in the competence of individual employees to apply the organisation's fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided to the employee to enable her or him to achieve the competence required |
| **4** Provide feedback to employees on any shortcomings in fatigue management skills and knowledge | 4.1 Evidence of any shortcomings in an employee's implementation of fatigue management strategies is obtained and interpreted from observation of signs and symptoms of fatigue in their work activities, periodic evaluations of work performance, and assessments of competence carried out as part of training and learning activities  
4.2 Employees are provided with feedback on any identified shortcomings in their implementation of fatigue management strategies |
ELEMENT

PERFORMANCE CRITERIA

strategies and appropriate support and counselling is provided on how they might address these shortcomings

4.3 Where appropriate, further learning opportunities and information are provided to the employees to assist them in implementation of organisation's fatigue management strategies in their area of work activity

5 Report on the implementation of fatigue management policy

5.1 Periodic audits of the implementation of fatigue management strategies in the work areas of responsibility are carried out as per standard procedures

5.2 Accidents and safety incidents are investigated and analysed to identify the extent to which fatigue might have been a contributing factor

5.3 Reports on the implementation of the organisation's fatigue risk management system are prepared and submitted to designated personnel as per standard procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Organisation's fatigue risk management system as it relates to the operational areas being administered
- Organisation's fatigue risk management system and the workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Responsibilities of both the organisation and individual employees for the implementation of fatigue management regulations and policies in an organisation including suppliers and sub-contractors in the supply chain of the organisation's services and products
- Procedures for the auditing and review of an organisation's fatigue risk management system and related policy and procedures, and for reporting the outcomes of audits
- The risks and hazards created by fatigue in the workplace
- Causes and consequences of fatigue on both employees and an organisation
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
REQUIRED KNOWLEDGE AND SKILLS

- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Factors which increase fatigue-related accidents
- Lifestyles which promote the effective long-term management of fatigue
- Ways of assisting individuals to assess their own sleep patterns and to evaluate their own fitness for work. This may include information on identifying sleep disorders and obtaining appropriate treatment
- Options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management
- Processes and resources for assessing employees' competence in fatigue management
- Ways of providing feedback to employees on any identified deficiencies in their competence to implement fatigue management strategies

Required skills:

- Communicate effectively with others when implementing the organisation's fatigue risk management system
- Read and interpret documentation on an organisation's fatigue risk management system and related policy, instructions, procedures and regulations related to fatigue management and apply them to supervisory activities
- Recognise breaches of fatigue management strategies and regulations and take appropriate action in accordance with organisation's fatigue risk management system
- Work collaboratively with employees and other management staff others to implement the organisation's fatigue risk management system
- Plan and organise training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system
- Plan and carry out audits and reviews of an organisation's fatigue risk management system
- Modify activities and take appropriate initiatives to administer the implementation of an organisation's fatigue risk management system depending on differing contexts, risk situations and environments
- Adapt to any changes in regulations policies and procedures as they may relate to fatigue management
- Assist employees to identify their own learning needs on matters related to fatigue management
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:
- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

Components of a fatigue risk management system include:
- risk management policy documents
- risk management procedures
- risk management competence assessment processes
- risk management training and learning opportunities
- hazard control system

The need for fatigue management in a range of industry situations including:
- operations conducted at all times but particularly at night
- typical weather conditions
- while working and/or driving at a workplace, depot, base or warehouse
- while working and/or driving at a client's workplace or work site
- driving a motor vehicle on the open road
- driving a motor vehicle on a private road
- driving a train, locomotive or motive power unit
- operating a marine vessel in coastal or international waters
- operating an aircraft
- operating load shifting equipment
- operating safety critical industrial plant and equipment
- work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (e.g. working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Work-related factors that may contribute to fatigue include:
- lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms

Worker/operator-related factors that may contribute to fatigue include:
- sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms
RANGE STATEMENT

Responsibilities of organisation for fatigue risk management may include:

- providing support such as: complying with fatigue management regulations, developing and implementing appropriate policy and procedures, providing assessment, training and learning opportunities, and establishing and implementing error and incident reporting systems
- ensuring work schedules provide adequate opportunity for rest and recovery between shifts
- assessing work tasks for fatigue related risk and redesigning if necessary
- managing fatigued employees

Responsibilities of individual for fatigue risk management may include:

- following the organisation's fatigue management policy and procedures
- using time away from work appropriately to rest and recover
- checking and ensuring fitness for work
- reporting symptoms of fatigue

Fatigue management competency-based training may include:

- initial induction training (incorporating a basic fatigue management component)
- fatigue management awareness training
- in-depth training on fatigue and fatigue management techniques
- remedial training where existing competence is assessed as being insufficient
- refresher training on fatigue management

Depending on the organisation operating procedures may include:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- Commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- fatigue risk management system documents
- workplace instructions and procedures on fatigue management
- reports of audits of fatigue risk management system
- error and safety incident reports
- relevant OH&S regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures

Applicable legislation, regulations

- relevant regulations and codes of the Commonwealth Government and the state/territory roads and traffic
RANGE STATEMENT

and codes may include:

- authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field F - Safety Management
TLIF3083B Conduct track protection assessment

Modification History
New release. This unit replaces and is equivalent to TLIF3083A.

Unit Descriptor
This unit involves the skills and knowledge required to perform a safety assessment to determine the appropriate level of track protection required for the infrastructure and work groups on a rail network during track work activities in accordance with Access Provider, legislative and regulatory requirements.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the legislated rail safety requirements including acts and regulations from the applicable state or territory together with any nationally approved compliance codes and/or guidelines.
The unit includes the application of Access Provider rules, procedures and protocols for rail safety.
All activities are performed under established rules and procedures.
This unit also provides the authority to position lookout protection.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Access Provider policies, procedures and protocols for identified unsafe situations or emergencies within workplace role
- Access Provider rules and procedures
- Access Provider rules and procedures for working around electrical infrastructure
- Characteristics of track worksites
- Operational communication protocols and systems
- Positioning requirements for handsignallers
- Rail terminology as defined by the applicable Access Provider
- Railway track signals and their use, if applicable
- Types of track protection
- Types of worksite protection equipment and their use
- Work activity complexity
- Worksite protection plans

Required skills:

- Analyse track work activities for complexity
- Communicate effectively with individuals and work groups
- Follow rules and procedures
- Identify unsafe situations and emergencies
- Prepare site protection arrangements plans
- Use required personal protective equipment conforming to Access Provider requirements
- Visually assess a track worksite
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant workplace rules and procedures
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying complexity of track work activity
  - conducting a visual assessment of the characteristics of track worksite
  - determining type of track protection required
  - preparing worksite protection plan

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Worksites may include:
- rail corridor
- danger zone:
  - running line
  - parallel networks (adjacent access providers, shared corridor)
  - adjacent lines
  - sidings/yards
  - platforms/buildings
  - structures

Terminology will be:
- as defined by Access Provider

Work may occur:
- by day or night, under varied weather conditions and situations

Safety assessment will be:
- as defined within workplace procedures
- as defined in the safety assessment for work including:
  - view - line of sight
  - direction of approaching trains
  - speed of approaching trains
  - position of safety
  - changed local conditions

Communications may include:
- receiving and passing on verbal messages/information
- reporting unsafe situations and responding to emergencies
- general safety and emergency messages

Communications equipment and systems may include:
- hand signals and audible commands
- audible warning signal
- two way radio
- telephone/mobile phone
- signage

Safety clothing and equipment may include:
- high visibility clothing
- protective footwear
- hearing protection

Where applicable, worksite protection equipment may include:
- warning devices, whistles and sirens
- signs
- railway track signals
- demarcation barriers
- lights and flags
- electronic devices
Information and documents may include:
- workplace procedures, policies and work instructions
- emergency plan
- pre-work briefing
- worksite protection plan

Complexity of work activity may include:
- type of work to be undertaken
- hand tools to be used
- track vehicles/track machines
- machinery
- number of work groups
- rail traffic within or between worksite/s

Characteristics of track worksite may include:
- location
- cuttings and embankments
- speed and density of adjacent traffic
- parallel networks
- electrified network
- track circuits
- level and pedestrian crossings
- limits of worksite
- visibility
- how the work may affect track under the control of other access providers
- multiple work activities

Types of track protection may include:
- lookout
- track occupancy authority (TOA)
- track work authority (TWA)
- local possession authority (LPA)
- absolute signal blocking (ASB)
- electronic authority system blocking (EASB)

Worksite protection plan may include:
- defining the authorities boundaries
- identifying safe places
- identifying positions for inner/outer handsignaller and lookouts
- identifying level and pedestrian crossings
- identifying fixed rail infrastructure including:
  - signals
  - overhead structures
  - bridges/tunnels
  - turn outs
- minimum sighting distances
Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF3084A Follow mobile crane safety procedures

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to follow and apply mobile crane safety procedures and OH&S procedures when carrying out mobile crane operations. It includes identifying and following mobile crane and workplace procedures for hazard identification and risk control, contributing to arrangements for the management of occupational health and safety, and completing all relevant safety records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the relevant mobile crane safety and workplace procedures and OH&S regulations and procedures.

Mobile crane operations are performed under some supervision generally within a team environment. It involves the application of established mobile crane and workplace procedures, OH&S and hazard minimisation principles and procedures to the conduct of mobile crane operations.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable
Employability Skills Information

Employability Skills
This unit contains employability skills.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:
- Relevant mobile crane safety procedures
- Relevant OH&S procedures and guidelines
- Risks associated with mobile cranes, and related precautions to control the risk
- Risks associated with multiple crane operations
- Hazards associated with crane operations on a demolition site
- Hazards associated with mobile crane operations on a construction site
- Lifting personnel using a workcage/workbox
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms, emergency shut-off systems, emergency communication systems
- Signs and signals used for warnings
- Terms used in material safety data sheets (where relevant)
- HAZCHEM symbols and implications for safe work and storage
- Storage and use of hazardous substances
- Handling of broken or damaged equipment
- Manual and mechanically assisted lifting and load shifting procedures
- Transport requirements for goods within workplace
- Mobile crane and workplace emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:
- Communicate effectively with others when following mobile crane and OH&S procedures
- Read and comprehend simple statements in English
- Read and interpret relevant safety-related information including safety labels, instructions for safe work, relevant material safety data sheets, mobile crane and workplace procedures and codes of practice
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to mobile crane procedures and OH&S in the workplace
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when following procedures
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following mobile crane and OH&S procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when following mobile crane and OH&S procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during mobile crane operations and workplace activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation, mobile crane safety procedures and workplace procedures
  - procedures for identifying mobile crane safety hazards and OH&S issues
  - appropriate action to report identified mobile crane and site hazards in the workplace to minimise or eliminate risk to personnel, workplace and the
EVIDENCE GUIDE

environment

- mobile crane and OH&S recording procedures in accordance with workplace requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- using multiple cranes
- using a workcage/workbox

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites
- demolition sites
RANGE STATEMENT

Work may be conducted in:
- construction site
- restricted spaces
- exposed conditions
- controlled or open environments

Workplace hazards may include:
- chemicals and other harmful substances
- electrical and other overhead services
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- a range of storage areas

Personnel in the work area may include:
- workplace personnel
- site visitors
- OH&S specialists
- union representatives
- contractors
- official representatives

Participative arrangements may include:
- formal and informal meetings which deal with OH&S issues
- toolbox talks
- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio/hand or whistle signals
RANGE STATEMENT

Designated personnel may include:
- workplace personnel
- supervisors
- dogman/rigger
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- OH&S regulations
- mobile crane safety procedures
- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- ADG Code and material safety data sheets (where relevant)
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
- emergency procedures
- regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
RANGE STATEMENT

- mobile crane codes of practice
- Australian Standards
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

Unit Sector(s)
Not Applicable

Competency Field

Competency Field  F - Safety Management
TLIF3085A Apply local incident response procedures

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to apply local incident response procedures according to regulatory and organisational procedures. It includes responding to the incident, carrying out incident response activities, and completing follow-up actions. Licensing, legislative, or certification requirements may be applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in the event of an emergency, fire or accident. Work is performed under minimal supervision and involves applying basic emergency response principles when dealing with incidents within a defined local area.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S and other regulatory codes, procedures and guidelines concerning response to incidents
- Risks and hazards and related precautions to control the risk
- Organisational procedures and policies for responding to incidents, including procedures for responding to and providing practical assistance where required
- Types of incidents that can occur and appropriate action to be taken in each case
- Layout of network or area under control and potential obstacles for responding parties
- Procedures for contacting emergency personnel and other relevant stakeholders
- Procedures for identifying:
  - goods coding
  - HAZCHEM markings
  - where applicable, emergency information panels

Required skills:

- Communicate clearly and effectively with others when applying local incident response procedures
- Read and interpret instructions, procedures and information relating to applying local incident response procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation relating to applying local incident response procedures
- Operate electronic communication equipment to required protocol
- Collaborate with others when applying local incident response procedures
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Action to be taken in the event of an incident may include:

- identifying and following established incident procedures
- assessing the nature and extent of the incident
- ensuring medical assistance is provided where required
- isolating and coordinating safety of the scene
- alerting relevant organisational personnel and emergency services
- recording relevant information and reporting on incident situation in accordance with regulatory and organisational requirements

Consultative processes may include:

- personnel and management
- designated emergency officers
- emergency services personnel, including ambulance, police, fire services and SES
- OH&S specialists
- other professional or technical staff
- contractors

Communication systems may include:

- telephone, including mobile telephone
- electronic, including email
- SMS
- radio

Organisational procedures may be known as:

- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:

- incident response procedures
- manifests, goods and container identification numbers and codes
- codes of practice, including the Australian Dangerous Goods (ADG) Code
- International Maritime Dangerous Goods (IMDG) Code markings
- HAZCHEM codes and where applicable emergency information panels
- relevant legislation, regulations and related documentation relating to incident response situations
- quality assurance procedures
- work instructions
Applicable regulations and legislation may include:
- acts and regulations, including the Rail Safety Act
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
  - rail safety
- emergency procedures regulations
- dangerous goods and hazardous materials regulations
- relevant Australian standards, codes of practice and guidance notes

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF3087A Follow occupational health, safety and environmental procedures in the rail industry

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to follow and apply occupational health, safety and environmental (OHS&E) procedures when carrying out work activities in the rail industry. It includes identifying and following workplace procedures for hazard identification and risk control, contributing to arrangements for the management of OHS&E, and completing appropriate records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant OHS&E regulations and procedures.
Work is performed under some supervision generally in a team environment. It involves applying established OHS&E and hazard minimisation principles and procedures to the conduct of workplace activities.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. **Follow workplace procedures for hazard identification and risk control**
1.1 Workplace procedures for dealing with environmental incidents, accidents, fires and emergencies are known and followed
1.2 Workplace procedures for OHS&E and related work instructions for controlling risks in a workplace are followed
1.3 Hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
1.4 Safety regulations and established workplace safety and hazard control practices and procedures are obtained, interpreted and applied to day-to-day work activities
1.5 Where applicable, personal protective clothing and equipment is correctly used in accordance with established safety practices and procedures
1.6 Established emergency and contingency plans are followed in the event of an emergency
1.7 Information on workplace OHS&E policies, procedures and programs is stored in a readily accessible location and manner

2. **Contribute to arrangements for the management of occupational health and safety**
2.1 OH&S issues and identified safety hazards are raised with designated personnel in accordance with workplace procedures and relevant OH&S legislation
2.2 Contributions to OH&S management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation
2.3 OH&S issues are raised with designated personnel in accordance with workplace procedures and relevant OH&S legislation
2.4 Participative arrangements for OH&S management in the workplace are contributed to within workplace procedures and scope of responsibilities and competencies

3. **Implement environmental control procedures**
3.1 Environmental protection measures are implemented or applied in accordance with organisational policies and procedures
3.2 Where improvements to existing procedures are identified they are passed on to appropriate personnel

4 Complete OHS&E records

4.1 OHS&E records and reports are completed in accordance with organisational requirements
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms and emergency communication systems
- Signs and signals used for OH&S warnings
- Relevant environmental protection regulations
- Workplace procedures and guidelines for the care of the environment during workplace operations
- Typical problems that can occur when caring for the environment
- Emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles

Required skills:

- Communicate effectively with others when following OHS&E procedures
- Read and comprehend simple statements in English
- Read and interpret relevant safety-related information, including workplace procedures and codes of practice
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to OHS&E in the workplace
- Operate electronic communication equipment in line with required protocol
- Work collaboratively with others when following OHS&E procedures
- Report and rectify within limits of own role problems, faults and malfunctions that may arise when following OHS&E procedures in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
- Work systematically with required attention to detail without injury to self or others, or damage to equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

| Work may be conducted in: | • exposed conditions  
• controlled or open environments |
| Workplace hazards may include: | • chemicals and other harmful substances  
• movement of equipment, goods and vehicles  
• toxic substances  
• broken and damaged equipment  
• inflammable materials and fire hazards  
• lifting practices  
• waste management and disposal  
• extremes in weather conditions  
• lighting levels  
• trip and slip hazards  
• water hazards  
• traffic flows  
• vehicle and equipment operation  
• a range of storage areas |
| Personnel in the work area may include: | • site visitors  
• OH&S specialists  
• union representatives  
• contractors  
• official representatives |
| Participative arrangements may include: | • formal and informal meetings that deal with OH&S issues  
• workplace OH&S committees  
• other committees, for example, consultative, planning and purchasing  
• OH&S representatives  
• suggestions, requests, reports and concerns put forward by staff |
| Communication in the work area may include: | • telephone  
• fax  
• electronic, including email and internet  
• radio |
| Designated personnel may include: | • workplace personnel  
• supervisors  
• team leaders  
• management |
Personal protective equipment may include:
  - occupational health and safety personnel
  - other persons authorised or nominated by the organisation
  - gloves
  - safety headwear and footwear
  - safety glasses
  - two-way radios
  - high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
  - company procedures
  - enterprise procedures
  - organisational procedures
  - established procedures

Information and documents may include:
  - workplace OH&S procedures and policies
  - Australian Dangerous Goods (ADG) Code and material safety data sheets (MSDS)
  - emergency procedures
  - relevant legislation, regulations and related documentation

Applicable regulations and legislation may include:
  - relevant state and territory OH&S legislation and safety codes
  - regulations and policies concerning noise, smoking, work station ergonomics and other critical OH&S issues
  - workplace relations regulations
  - workers compensation regulations

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF3089A Implement fatigue management policies and procedures for rail infrastructure

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to implement fatigue management policies and procedure for rail infrastructure. It includes monitoring the implementation of fatigue management and recognising breaches of fatigue management policies, procedures and regulations. It also includes assessing staff competence in fatigue management, providing feedback to staff on shortcomings in their fatigue management skills and knowledge, and reporting to management on the implementation of fatigue management policy.

Licensing, legislative, regulatory or certification requirements are applicable to this unit. Persons achieving competence in this unit will need to fulfil the requirements of the applicable commonwealth and state or territory legislation and relevant regulations covering the management of fatigue in the workplace.

Application of the Unit
Work is performed under limited supervision generally as a team leader or supervisor within a rail infrastructure environment. It involves the application of relevant regulations and the principles of fatigue management when administering the implementation of an organisation’s fatigue management strategies during work operations in a defined workplace.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Monitor the implementation of fatigue management</td>
</tr>
<tr>
<td>1.1</td>
<td>Work activities of employees, subcontractors and suppliers, if applicable, in the supply of products and services are monitored in accordance with the organisation’s fatigue risk-management implementation plan</td>
</tr>
<tr>
<td>1.2</td>
<td>Reviews are undertaken of scheduled versus actual hours of work and where a compliance breach is identified, appropriate action is taken to analyse the reasons concerned and rectify the situation</td>
</tr>
<tr>
<td>1.3</td>
<td>Deficiencies in the competence of individual employees to apply the organisation’s fatigue management strategies to their work activities are identified, and appropriate learning opportunities are provided</td>
</tr>
<tr>
<td>2</td>
<td>Recognise breaches of fatigue management policies, procedures and regulations</td>
</tr>
<tr>
<td>2.1</td>
<td>Signs and symptoms of fatigue in employees are identified in accordance with operational procedures</td>
</tr>
<tr>
<td>2.2</td>
<td>Breaches of fatigue management policies, procedures and regulations in the work activities of employees, subcontractors and suppliers, if applicable, are identified and reported according to standard procedures</td>
</tr>
<tr>
<td>2.3</td>
<td>Errors and incidents traceable to non-compliance with fatigue management procedures and regulations are investigated and reported in accordance with operational procedures</td>
</tr>
<tr>
<td>2.4</td>
<td>Appropriate action is taken in conjunction with employees, subcontractors and suppliers, if applicable, to ensure ongoing and future compliance with the organisation’s fatigue management policy and procedures</td>
</tr>
<tr>
<td>3</td>
<td>Provide feedback to employees on shortcomings in fatigue management skills and knowledge</td>
</tr>
<tr>
<td>3.1</td>
<td>Employees are provided with feedback on identified shortcomings in their implementation of fatigue management strategies and appropriate support and counselling are provided on how they might address these shortcomings</td>
</tr>
<tr>
<td>3.2</td>
<td>Where appropriate, information is provided to employees to assist them in implementing the organisation’s fatigue management strategies in their area of work activity</td>
</tr>
</tbody>
</table>
4 Report on the implementation of fatigue management policy

4.1 Periodic audits of the implementation of fatigue management policies and procedures in the work areas of responsibility are carried out in accordance with organisational policies and procedures.

4.2 Reports on the implementation of the organisation’s fatigue risk-management system are prepared and submitted to designated personnel in accordance with organisational procedures.
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant rail safety and OH&S legislation as they relate to fatigue
- Organisation’s fatigue risk-management system as it relates to the operational areas being administered
- Risks and hazards created by fatigue in the workplace
- Causes, ways of recognising, and consequences of fatigue on both employees and an organisation, and ways of managing them
- Ways of assisting individuals to assess their own sleep patterns and evaluate their own fitness for work, including information on identifying sleep disorders and obtaining appropriate treatment
- Options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of an organisation’s fatigue risk management system
- Processes and resources for assessing employees’ competence in fatigue management
- Ways of providing feedback to employees on identified deficiencies in their proficiency to implement fatigue management strategies

Required skills:

- Read and interpret documentation on an organisation’s fatigue risk-management system and related policy, instructions, procedures and regulations relating to fatigue management; and apply them to supervisory activities
- Recognise breaches of fatigue management strategies and regulations and take appropriate action in accordance with organisation’s fatigue risk-management system
- Use appropriate numeric functions when carrying out reporting procedures
- Work collaboratively with employees and other staff to implement the organisation’s fatigue risk-management system
- Identify training and learning opportunities for employees on fatigue management
- Assist employees to identify their own learning needs on matters relating to fatigue management
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:
- any work environment requiring safety critical operational judgements to be made, in particular when conducting rail safety work by day or night

Components of a fatigue risk-management system may include:
- risk management policy documents
- risk management procedures
- risk management competence assessment processes
- risk management training and learning opportunities
- hazard control system

Need for fatigue management in a range of industry situations includes:
- operations conducted at all times
- extreme weather conditions
- operating load shifting equipment
- operating plant and equipment
- operating rail vehicles
- performing rail safety work

Work-related factors that may contribute to fatigue include:
- work demands, such as workload, work duration, shift pattern, time of day, frequency and duration of breaks, and type of work (e.g. working in isolation, repetitive tasks)
- excessive travel to and/or from worksite
- organisational factors, such as:
  - work environment
  - trip and work scheduling

Worker/operator-related factors that may contribute to fatigue include:
- on-call work
- lifestyle factors, such as:
  - sleep patterns
  - alcohol and drug use
  - quantity and timing of food and drink
  - opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors, such as:
  - state of mental and physical health
  - inadequate sleep
  - sleep disorders
  - emotional stress
Responsibilities of organisation for fatigue risk management may include:
- ensuring work schedules provide adequate opportunity for rest and recovery between shifts
- managing fatigued employees

Information and documents may include:
- federal and state or territory regulations and guidelines concerning fatigue management in workplace situations
- risk management system documents
- fatigue management system documents
- workplace instructions and procedures on fatigue management
- safety incident reports
- relevant OH&S regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures
- workplace documents (e.g. pre-work briefs, toolbox briefs)

Applicable legislation, regulations and codes may include:
- relevant regulations and codes of:
  - the Commonwealth Government
  - state and territory roads and traffic authorities concerning fatigue management
- relevant state and territory road rules
- acts and regulations, including the Rail Safety Act
- relevant state and territory permit regulations and requirements
- relevant state and territory OH&S legislation

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF3091A Apply awareness of dangerous goods and hazardous materials requirements

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to identify and apply an awareness of dangerous goods and hazardous materials requirements. It includes identifying legislation relating to dangerous goods and hazardous materials; segregating dangerous goods and hazardous materials; and dealing with incidents involving dangerous goods and hazardous materials.

Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit is intended for persons with minimal or no contact with explosives or dangerous goods as part of their job role but who do require an awareness of how dangerous goods and hazardous materials are labelled and segregated when being transported.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not Applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT       PERFORMANCE CRITERIA

1  Identify and apply appropriate legislation related to transporting dangerous goods and hazardous materials
   1.1  Legislation and organisational policies and procedures relating to the transport of dangerous goods and hazardous materials are identified and accessed
   1.2  Labelling of different types of dangerous goods and hazardous materials is identified from accessed documentation
   1.3  Hazardous loads are identified from transport manifests

2  Separate dangerous goods and hazardous materials
   2.1  Where applicable, dangerous goods are correctly separated in line with relevant documentation and according to class and subsidiary risk information

3  Deal with incidents involving dangerous goods and hazardous materials
   3.1  Where possible information is obtained for dangerous goods and hazardous materials involved
   3.2  If applicable, documentation is checked for compliance with separation rules in accordance with organisational procedures
   3.3  Information regarding dangerous goods and hazardous materials is relayed to the appropriate persons and authorities
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant federal, state and territory regulations and codes pertaining to identifying and labelling dangerous goods and hazardous materials, including appropriate sections of the current Australian Dangerous Goods (ADG) Code and any other applicable legislation
- Risks and hazards when transporting dangerous goods and hazardous materials
- Labelling of dangerous goods and hazardous materials

**Required skills:**

- Communicate effectively with others
- Read and interpret instructions, procedures, information and signs relevant to transporting dangerous goods and hazardous materials
- Identify dangerous goods and hazardous materials labels
- Operate electronic communication equipment in line with required protocol

**Evidence Guide**

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and/or equipment, and/or
  - applicable documentation, including, workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Classes of dangerous goods and hazardous materials are:
• as defined in the respective Australian codes

Standard marking and signage for identified dangerous goods and hazardous materials are:
• as required in the respective Australian codes

Personnel may include:
• organisational personnel
• emergency services
• contractors
• official representatives
• other network access providers

Communication in the work area may include:
• telephone
• fax
• electronic, including email and internet
• radio

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
• company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information and documents may include:
• dangerous goods identification numbers, codes, markings and signs
• codes of practice, including:
  • ADG Code
  • International Maritime Dangerous Goods (IMDG) Code
  • Australian and international explosives codes
• manifests, bar codes, goods and container identification
• supplier instructions
• client instructions
• material safety data sheets (MSDS)
• emergency procedures

Applicable regulations and legislation may include:
• current Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  • Australian and International Dangerous Goods Codes
• Australian Marine Orders and the IMDG Code
• International Air Transport Association (IATA) Dangerous Goods by Air regulations
• Australian and international explosives codes
• relevant state or territory legislation relating to:
  • environmental protection
  • equal employment opportunity and affirmative action
  • OH&S
• workplace relations regulations

Unit Sector(s)
Not Applicable.

Competency Field
F – Safety Management
TLIF3093A Implement chain of responsibility regulations

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to implement chain of responsibility regulations.
It includes identifying and interpreting relevant regulations, and reviewing operations in line with chain of responsibility regulations.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.
The unit generally applies to those who provide leadership of others, individually or in teams.
Associated units relating to chain of responsibility can be found in TLI10 Transport and Logistics Training Package.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state or territory regulations relating to job function
- Regulations, and workplace policy and procedures relating to job function
- Effects of a breach on applicable job role and related penalties
- Job roles and functions in the workplace that are affected by chain of responsibility
- Reporting systems within the organisation
- Consequences of non-compliance with chain of responsibility regulations
- Where to locate current chain of responsibility information
- Action required within limits of own job role or function when possible breaches are identified
- Required workplace documentation
- Understanding of the five key aspects: load restraint, mass, dimensions, speed, and fatigue management

Required skills:

- Apply strategies to prevent breaches of chain of responsibility
- Recognise a breach of the workplace policy and procedure
- Take appropriate action if a breach takes place
- Complete relevant documentation in relation to chain of responsibility
- Implement change as it relates to chain of responsibility
- Review and implement updates to the chain of responsibility regulations as they occur
- Apply communication strategies within the organisation for chain of responsibility
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - an understanding of chain of responsibility
  - an understanding of associated state or territory regulations in which the job is, relative to chain of responsibility
  - techniques used to implement relevant workplace policy and procedures as they pertain to chain of responsibility
  - an analysis of records relevant to chain of responsibility as they apply at a company level

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written, practical and oral assessments
- Practical assessment must occur:
  - through appropriately simulated activities at the training organisation, and/or
  - in an appropriate range of situations in the workplace
- Online assessment is not suitable for final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Parties and responsible persons within the chain include:

- consigner
- consignee
- packer
- loader
- scheduler
- driver
- receiver
- carrier
- manufacturer
- employee
- employer
- owner
- board of directors
- senior official
- dispatch officer
- operator
- person in charge or apparently in charge of a vehicle
- agent
- subcontractor
- authorised officer
- elected councillor

Customers may include:

- external customer
- receiver
- forwarder
- dispatcher
- yard foreman
- safety regulator
- police or enforcement official
- public
- subcontractor

Depending on the organisation concerned, workplace procedures may be called:

- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- company

Work environment includes:
Communication in the work area may include:

- site
- depot
- loading dock
- warehouse
- customer premises
- terminal
- storage or loading facility
- equipment
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- oral, aural or signed communications

Documentation and records may include:

- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- relevant OH&S regulations
- workplace policies and procedures relating to chain of responsibility regulations
- relevant Australian standards and certification requirements
- relevant internal data entry books, including work diaries, data sheets and load sheets
- transport and journey documentation

Applicable legislation and regulations may include:

- relevant transport regulations for the enterprise, including Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state and territory OH&S and environmental protection legislation
- workplace relations regulations

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF3096A Carry out emergency response to a dangerous goods incident

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to carry out an emergency response in the event of a dangerous goods incident, including responding to the incident, controlling and assisting at the site, identifying the product being carried, and completing reports and other required documentation in accordance with regulatory requirements and workplace procedures.

Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with OH&S codes and regulations and workplace requirements.

Work is performed under limited supervision. It involves the application of regulatory requirements and workplace emergency response procedures when responding to accidents and emergencies.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>Identify incident response procedures</th>
<th>1.1 Company procedures for responding to incidents and emergencies are identified and explained</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1.2 Procedures for accessing first aid are determined</td>
</tr>
<tr>
<td></td>
<td>1.3 Relevant personal protective equipment (PPE) is selected and used</td>
</tr>
<tr>
<td></td>
<td>1.4 Familiarisation with the use of fire safety equipment is demonstrated</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Respond to the incident</th>
<th>2.1 Nature, extent and degree of threat from the incident are assessed in accordance with emergency procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2.2 Guides for product being carried are located and UN number and shipping/technical name are obtained from available documents</td>
</tr>
<tr>
<td></td>
<td>2.3 Resources and vulnerability of the situation are analysed</td>
</tr>
<tr>
<td></td>
<td>2.4 Key people and relevant support agencies are identified and notified of the incident and the product details</td>
</tr>
<tr>
<td></td>
<td>2.5 Instructions and support are sought from key people and support agencies in accordance with emergency procedures and transport emergency response plan (TERP)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Apply emergency strategies</th>
<th>3.1 Safety and security procedures are complied with in all actions</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>3.2 PPE is selected and used according to the requirements of the situation in accordance with OH&amp;S and emergency procedures</td>
</tr>
<tr>
<td></td>
<td>3.3 Welfare of people is guarded and protected as the first priority in any action</td>
</tr>
<tr>
<td></td>
<td>3.4 Exclusion zone is established around the incident site</td>
</tr>
<tr>
<td></td>
<td>3.5 Safe access and exit are maintained for emergency services in accordance with emergency procedures and situational analysis</td>
</tr>
<tr>
<td></td>
<td>3.6 Controls are selected and applied to achieve objectives with minimum damage to people and the environment</td>
</tr>
<tr>
<td></td>
<td>3.7 Immediate response to threat or danger to people is provided while preserving personal safety in accordance with emergency procedures</td>
</tr>
</tbody>
</table>
3.8 Emergency first aid treatment of minor injuries is carried out correctly and details of any treatment administered are reported accurately to incident response leader

Communicate with and complement other personnel

4.1 Effective communication and documentation with key people and support agencies are constantly maintained

4.2 Activities are consistent with the incident response leader’s plan of action

4.3 Activities support the work of other key people and support agencies

Monitor the environment and the incident

5.1 Factors that may create or increase risk of injury or damage are constantly assessed and reported to incident response leader

5.2 Hazard controls are monitored to ensure continued effectiveness

5.3 Own and others’ health and morale are monitored and maintained

5.4 Changes in conditions and behaviour are identified and reported

Assist with recovery from incident

6.1 Evidence relating to the cause of the incident is preserved and recorded as far as possible

6.2 Appropriate assistance is provided in accordance with emergency procedures

6.3 Emergency equipment is returned to a state of readiness as soon as is reasonably possible

6.4 Debriefings are attended and participated in as appropriate
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills required at the completion of this unit.

Required knowledge:

- Appropriate PPE and clothing
- Concept of dynamic risk assessment
- Emergency equipment operating characteristics, limitations, hazards, precautions, procedures and general care
- General emergency priorities and strategies
- Hazard analysis
- Hazards and the precautions necessary during control activities
- Survival, rescue and recovery procedures
- Tactics for safely handling emergencies involving dangerous goods
- Organisational emergency procedures

Required skills:

- Access and use PPE and clothing safely and effectively under emergency conditions
- Use communication skills during emergencies
- Care for protective clothing and equipment
- Re-stow response equipment
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying own responsibilities in line with company procedures
  - communicating understanding of own responsibility in control of various incidents until authorities arrive
  - clearly describing an incident

Context of and specific resources for assessment

- Assessment must ensure access to:
  - relevant and appropriate materials and equipment to meet the performance criteria
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
- In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
- Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Company procedures include:

- TERP
- standard operating procedures (SOP)
- emergency procedures guide (EPG)
- emergency information procedure (EIP)

Types of incidents include:

- recovery
- in depot
- on road
- at unloading point

Personal safety measures include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing
- eye wash kit
- emergency shutdown controls
- evacuation controls

Key people and support agencies include:

- fire brigade/CFA
- ambulance
- government agencies

Evidence to be preserved or recorded includes:

- workplace documentation
- load documentation
- details of incident

Applicable legislative procedures and codes include:

- Australian code for the transport of dangerous goods by road or rail: the Australian Dangerous Goods (ADG) Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations
  - environmental protection legislation and regulations
Documentation and records include:

- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- workplace policies and procedures
- relevant Australian standards and certification requirements
- relevant internal data entry books, including log books, data sheets and load sheets
- TERP

Unit Sector(s)

TLIF4007A Implement and coordinate accident-emergency procedures

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to implement and coordinate accident-emergency procedures, including responding to the incident, conducting on-site activities, and completing follow-up actions. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in the event of an emergency, fire or accident.

Work is performed under some supervision generally within a team environment. It involves the application of the basic emergency response principles to the implementation of accident-emergency procedures including the provision of assistance ranging from simple injuries to the application of life support systems.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1  Respond to the incident | 1.1 Details of incidents, accidents and emergencies are received, analysed and confirmed  
1.2 Immediate coordination requirements are identified and actioned in accordance with organisation procedures  
1.3 Travel to the incident site is by the shortest, fastest, legal means and routes |
| 2  Coordinate on-site activities | 2.1 Control of site activities is assumed on arrival and the operator and other authorities present are informed of this action  
2.2 Assistance is provided to clients and operators within the limitations of duty of care and organisation requirements  
2.3 Details of personnel, including names and nature of injuries, are notified to relevant personnel, following enterprise procedures  
2.4 Assistance is provided to relevant authorities within legal and policy limitations |
| 3  Complete follow-up actions | 3.1 Details of affected personnel, including names, nature of injuries and follow-up treatments are notified to next-of-kin in accordance with organisation procedures  
3.2 Incidents resulting in a near miss, accident or emergency are investigated and a report, including recommendations, is completed in accordance with enterprise policies and procedures  
3.3 Accident procedures and emergency plans are reviewed for effectiveness and recommendations for changes are prepared and submitted to appropriate persons |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S and other regulatory codes, procedures and guidelines concerning response to accidents and emergencies
- Risks and hazards in the workplace and related precautions to control the risk
- Workplace procedures and policies for responding to accident/emergency situations
- Types of accidents and emergencies that can occur in a workplace and the appropriate action to be taken in each case
REQUIRED KNOWLEDGE AND SKILLS

- Types of emergency equipment in the workplace and instructions for its use
- Site layout and obstacles
- Means to control and organise the accident scene, provide practical assistance and cooperate with others at the scene
- Focus of operation of work systems, equipment, management and site operating systems

Required skills:

- Communicate effectively with others when implementing and coordinating accident and emergency procedures
- Read and interpret instructions, procedures, information and signs relevant to the implementation and coordination of accident and emergency procedures
- Identify containers and goods coding, ADG and IMDG markings and where applicable emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation and coordination of accident and emergency procedures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing and coordinating accident and emergency procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when implementing and coordinating accident and emergency procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when implementing and coordinating accident and emergency procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify, select and use emergency equipment, processes and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

| Work may be conducted: | • in a range of work environments and weather conditions  
| | • by day or night  
| Customers may be: | • internal or external  
| Workplaces may comprise: | • large, medium or small worksites  
| Work may be conducted in: | • restricted spaces  
| | • exposed conditions  
| | • controlled or open environments  
| Action to be taken in the event of an accident-emergency may include: | • identifying and following established emergency procedures  
| | • assessing the nature and extent of the emergency  
| | • rendering assistance and first aid  
| | • isolating and coordinating safety of the scene  
| | • alerting relevant organisational personnel and emergency services  
| | • recording relevant information and reporting on accident/emergency situation in accordance with regulatory and workplace requirements  
| Emergency equipment may include: | • first aid kit  
| | • fire extinguishers  
| | • fire hose  
| | • fire blanket  
| | • resuscitation equipment  
| Hazards in the work area may include: | • exposure to chemicals  
| | • exposure to dangerous or hazardous substances  
| | • movements of equipment, goods and materials  
| | • accidents involving chemicals, toxic substances and other harmful substances  
| | • accidents involving equipment and vehicles  
| | • explosion and/or fire  
| | • personal accidents including lifting injuries  
| | • waste management and disposal  
| | • violent incidents such as armed robberies  
| Consultative processes may include: | • workplace personnel and management  
| | • designated workplace emergency officers  
| | • emergency services personnel including ambulance,
RANGE STATEMENT

Communication in the work area may include:
- phone
- electronic data interchange
- fax
- email
- internet
- radio
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing
- breathing apparatus

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace emergency/fire/accident procedures
- workplace procedures for the use of emergency equipment and personal protection equipment
- first aid instructions and procedures
- manufacturers instructions concerning the use and servicing of equipment
- manifests, bar codes, goods and container identification
- goods identification numbers and codes
- material safety data sheets
- codes of practice including the Dangerous Goods Code
- IMDG code markings, HAZCHEM codes and where applicable emergency information panels
- relevant legislation, regulations and related documentation related to emergency response situations
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification
RANGE STATEMENT

- quality assurance procedures
- supplier and/or client advice on the hazards involved with goods or cargo

Applicable regulations and legislation may include:

- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- emergency procedures regulations
- dangerous goods and hazardous goods regulations
- relevant Australian standards and certification including Australian Standard AS 2865 - Safe Working in a Confined Space Code
- workplace relations regulations
- workers compensation regulations

Unit Descriptor

This unit involves the skills and knowledge required to develop and maintain a safe workplace, including providing and informing personnel about OH&S legislation, codes and standards; planning and implementing safety requirements in accordance with regulations; monitoring, adjusting and reporting safety performance; investigating and reporting non-conformance; and evaluating the OH&S system and related policies, procedures and programs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work involves discretion and judgement in developing and maintaining a safe workplace.

Work is performed under minimum supervision with general guidance on progress and outcomes of work. A range of opportunities may be used to develop awareness and practice of OH&S policies and procedures, to support the development of OH&S and risk management systems, and to encourage the achievement of the organisation's OH&S goals and related key performance objectives.

Work generally involves responsibility for resource coordination and allocation and provides leadership of others individually or in teams.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Plan and implement safety requirements** | 1.1 Health and safety risk assessments are made as part of all production planning exercises  
1.2 Policy and procedures are developed to implement requirements for a safe workplace  
1.3 Work practices are planned with colleagues to ensure compliance with workplace and environmental legislation and standards  
1.4 Safe operating procedures are documented and communicated  
1.5 Work practices are implemented in accordance with requirements specified in legislation and standards for safe workplaces and environments  
1.6 Effective induction and supervision is provided to support colleagues in managing their organisational responsibilities  
1.7 Purchasing policy for the provision of goods and services is informed by OH&S considerations |
| **2 Inform and train personnel on OH&S legislation, codes and standards** | 2.1 Legislation, standards and the organisation's policies and practices relevant to the creation and maintenance of a safe workplace and environment are made available to individuals/teams  
2.2 Arrangements are made to provide information in a language, style and format which is understood by colleagues  
2.3 An OH&S training program is developed and implemented to identify and fulfil employees' OH&S training needs as part of the workplace's general training program  
2.4 Individuals/teams know their legal responsibility for maintaining a safe workplace and environment  
2.5 The implications of an unsafe workplace and environment are clear to all within the workplace |
| **3 Establish and maintain procedures for assessing and controlling safety risks** | 3.1 Safety risks presented by identified hazards are correctly assessed in accordance with OH&S legislation and codes of practice  
3.2 Activities are monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility  
3.3 Risk assessment is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that the risk from hazards is not increased  
3.4 Measures to control assessed safety risks are developed and implemented in accordance with the hierarchy of control, relevant OH&S legislation, codes of practice and trends identified from the OH&S records system |
<table>

</tr>
<tr>
<td>7.1</td>
<td>A system for keeping OH&amp;S records is established and monitored to allow identification of patterns of occupational injury and disease within the area of managerial responsibility, including provision for relevant workplace OH&amp;S reports to be submitted to management</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the management of personal work priorities and professional development
- The systems of risk control recognising the significance of OH&S for effective workplace operation
- Workplace business policies and plans related to OH&S issues
- The significance of other management systems and procedures for OH&S
- Hazards and associated safety risks that exist in the workplace
- The range of control measures available for these safety risks
- Considerations for choosing between different control measures
- How to identify when expert advice is needed
- Elements of an effective OH&S management system
- Principles of risk management
- Appropriate links to other management systems, for example contractors, maintenance and purchasing
- The role of technical information and experts in designing hazard control measures, monitoring systems and health surveillance procedures
- The hierarchy of hazard and risk control measures
- Arrangements for participation and consultation over OH&S
- Incident and accident investigation arrangements
- Training, coaching and mentoring approaches appropriate for use in OH&S training programs
- Typical problems that can occur when managing OH&S systems and related action that can be taken

Required skills:

- Communicate effectively with others when establishing a safe workplace
- Read and interpret instructions, procedures, information, labels and signs relevant to developing and maintaining a safe workplace
- Interpret and follow operational instructions and prioritise work
Required skills:

- Complete documentation related to developing and maintaining a safe workplace
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when developing and maintaining a safe workplace
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S management systems
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when developing and maintaining a safe workplace in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan work activities, including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to improve OH&S compliance, information systems and reporting requirements
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

Context of and specific resources for assessment

- relevant legislation and workplace procedures
- other relevant aspects of the range statement
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:

- single and multi-site location
- large, medium and/or small companies

Services, products, risks, work systems and requirements may:

- potentially vary across different sections of the workplace
RANGE STATEMENT

Operations involve:
- internal and external customer/supplier contact and coordination

Work priorities and professional development are:
- directed at maximising achievement of the individual in accordance with the enterprises objectives and strategic plans

Workplace hazards may include but are not restricted to:
- moving heavy loads in an unsafe work environment
- unsecured machinery, components or repaired equipment
- slippery floors
- welding equipment
- sharp tools and implements
- power tools
- moving and rotating machinery
- flammable liquids, vapours and fuel
- faulty machinery, handling equipment and lifting gear
- using equipment beyond safe working limits
- poor housekeeping procedures
- non-compliance with safe working procedures
- electrical wiring and systems, including exposed electrical circuits
- working at heights and in confined spaces
- toxic gases and substances
- chemicals and other harmful substances
- damaged goods, pallets and containers
- dangerous/hazardous goods

Training activities may include:
- attendance at formal education/training programs
- completion of internal short training programs
- attendances at relevant conferences, seminars and workshops
- reading of relevant journals and literature
- coaching/mentoring on the job
- workplace training projects

Consultative processes may involve:
- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:

- workplace OH&S procedures and policies
- workplace OH&S management system including hazard/safety risk control strategies
- OH&S training notes and materials
- journals and work-related literature concerning OH&S
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- legislation, regulations and related documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- trading regulations relevant to business operations
- relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to hazards present in the workplace or industry, including:
  - general duty of care under OH&S legislation and common law
  - requirements for the maintenance and confidentiality of records of occupational injury and disease
  - requirements for provision of OH&S information and training
  - provisions relating to health and safety representatives and/or OH&S committees
  - provisions relating to OH&S issue resolution
RANGE STATEMENT

- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements

Unit Sector(s)
Not Applicable

Competency Field
Competency Field F - Safety Management
TLIF4061A Respond to electric tram-driving emergencies and abnormal situations

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to respond to emergencies and abnormal situations when driving an electric tram in accordance with regulatory requirements and workplace procedures. It includes identifying and responding to emergency and abnormal situations; arranging follow-on support and assistance; and communicating with staff and passengers in accordance with workplace procedures and relevant regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines, as well as relevant road rules and tramway regulatory requirements of the states/territories concerned.

Work is performed under minimal supervision, generally within a team environment. It involves the application of routine operational principles and procedures to respond to electric tram-driving emergencies and abnormal situations as part of workplace activities across a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Identify emergency or abnormal situation** | 1.1 Emergency, potential emergency or abnormal electric tram-driving situation is promptly identified and assessed and needs are prioritised in accordance with the workplace emergency response plan/procedures  
1.2 Implications of the emergency, potential emergency or abnormal electric tram-driving situation are evaluated in accordance with workplace requirements  
1.3 Options for reporting the situation and/or taking action are considered in accordance with workplace procedures and regulatory requirements  
1.4 Relevant personnel are alerted to the emergency, potential emergency or abnormal situation as required within workplace operating and emergency procedures and plans  
1.5 Communications are maintained with relevant personnel to determine appropriate course of action |
| **2 Respond to emergency or abnormal situations** | 2.1 Response to emergency, potential emergency or abnormal situation is in accordance with workplace procedures, received instructions, regulatory requirements and emergency response plan where relevant  
2.2 Safety incidents and emergencies are handled appropriately in accordance with established response plan and within limits of responsibility and duty of care  
2.3 Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements  
2.4 Assistance is provided in controlling the site both prior to and following arrival of emergency services  
2.5 In the case of an emergency, assistance is provided to other staff and emergency service personnel conducting an initial survey of the scene  
2.6 Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions  
2.7 Incident reports are completed accurately in accordance with regulatory and workplace procedures |
| **3 Arrange follow-on support and assistance** | 3.1 In the case of accidents or illnesses, medical assistance and support is arranged as required in accordance with workplace procedures  
3.2 First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures |
| **4 Communicate with staff** | 4.1 Staff and passengers are provided with relevant, appropriate and |
ELEMENT and passengers

PERFORMANCE CRITERIA
timely advice on abnormal and emergency situations

4.2 Instructions are provided to relevant personnel and/or passengers in accordance with workplace procedures and consistent with the nature of the abnormal situation or emergency

4.3 Where applicable, evacuation procedures for personnel and/or customers are explained and/or demonstrated in accordance with workplace procedures

4.4 Customer service and safety needs arising from abnormal situations and emergency situations are identified and acted upon in accordance with regulatory and workplace requirements

Required Skills and Knowledge

REQUIdED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant state/territory roads and traffic authority and tramway operating procedures
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures for responding to electric tram-driving abnormal situations and emergencies
- Focus of operation of work systems, equipment, management and site operating systems when responding to electric tram-driving abnormal situations and emergencies
- Problems that may occur when responding to electric tram-driving abnormal situations and emergencies, and action that can be taken to resolve the problems
- Relevant documentation and reporting requirements
- Hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies
- Electric tram knowledge may include: monitoring devices, braking and drive equipment, ancillary systems and signalling systems
- Procedures for operating any electronic communications equipment with required protocol
- Fatigue management knowledge and techniques including: causes and effects of fatigue; strategies to manage fatigue; factors which increase fatigue-related accidents; and lifestyles which promote the effective long-term management of fatigue
**Required skills:**

- Communicate effectively with others when responding to electric tram-driving emergencies and abnormal situations
- Read and interpret instructions, procedures and information relevant to identifying and responding to electric tram-driving abnormal situations and emergencies
- Identify hazards and abnormal situations related to electric tram operations and take appropriate action
- Complete required documentation and reports
- Work collaboratively with others when responding to electric tram-driving abnormal situations and emergencies
- Modify activities depending on differing workplace contexts, risk situations and environments
- Identify and solve and/or report problems that arise when identifying and responding to electric tram-driving abnormal situations and emergencies
- Follow emergency response plan and procedures
- Provide first aid within limits of responsibility and competence
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Adapt to differences in electric trams and ancillary equipment
- Select and use relevant communications and other equipment required when identifying and responding to electric tram-driving abnormal situations and emergencies
- Apply fatigue management knowledge and techniques

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
EVIDENCE GUIDE

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- by day or night in all relevant weather conditions
- hand-operated or foot pedal control systems or both

Electric trams include all electric trams in service within Australian transport systems and may include:

Emergency situations may include:

- collision
- derailments
- customer emergency
- suicide on the track or road
- passenger behavioural issues
RANGE STATEMENT

- chemical spills
- fire and explosion
- bomb threats

Abnormal situations may include:

- technology failure
- wheel slip and uncontrolled slide
- traffic signals in stop mode
- assault on passengers or personnel
- brawls between passengers
- false alarm
- passenger initiated alarm
- obstructions
- extreme weather conditions (e.g. heat, storm, ice, etc.)
- passenger caught in self-closing doors
- pedestrians crossing the track
- illness
- incorrect information or failure in communications

Hazards that may occur in tramway transport that can lead to emergency situations may include:

- sudden and unexpected movement
- infectious and contagious diseases
- dehydration in extreme weather conditions

Self-closing doors
- sharp objects
- syringes and drugs
- contact with human and biological waste
- faulty or out of specification track
- faulty rolling stock or electric trams

Relevant personnel can include:

- tram controllers
- tram examiners
- maintenance personnel
- those providing operational assistance

Consultative processes may involve:

- other employees, supervisors and managers
- emergency services
- affected customers
- official representatives
- relevant authorities and institutions
- union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- radio
- fax
- email
RANGE STATEMENT

Emergency services may include:

- internet
- oral, aural or signed communications
- fire brigade
- police
- ambulance
- medical services
- rescue services
- security services

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the organisation concerned workplace procedures may be called:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- relevant tramways regulatory requirements applicable to emergencies and abnormal situations that may occur during an electric tram journey
- workplace procedures and policies for the management of electric tram abnormal situations and emergencies, including the relevant emergency response plan where applicable
- operations manuals, job specifications and induction documentation including first aid manual
- emergency procedures
- communication equipment procedures and protocols
- equipment operation manuals and maintenance specifications
- conditions of service, legislation and industrial agreements including workplace agreements and awards

Applicable legislation, regulations and codes may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory road rules and tramway codes of practice
- relevant Australian Standards and related requirements
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to manage fatigue management policy and procedures in an organisation, including identifying legal requirements, liabilities and responsibilities; establishing and/or improving fatigue management implementation plan and related policy and procedures; and acting appropriately upon reports on the implementation of fatigue management policy and any identified breaches of fatigue management regulations. It also includes ensuring that the operation's systems are compliant with fatigue management regulations and policy; planning and organising adequate resources and operational systems; and facilitating the training and assessment of staff on their responsibilities and fatigue management techniques. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Persons achieving competence in this unit will need to fulfil the applicable Commonwealth and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under minimum supervision generally as a manager. It involves the application of relevant regulations and the principles of fatigue management to the management of an organisation's fatigue management policies and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify or confirm fatigue management legal requirements and responsibilities | 1.1 Current legal requirements, liabilities and responsibilities for effective fatigue management within the organisation are identified and interpreted  
1.2 Any existing fatigue management plans, policies and procedures are obtained and reviewed  
1.3 Internal risks concerning the potential effects of fatigue are identified or confirmed and reviewed  
1.4 External risks within the supply chain of the organisation's services and/or products concerning the potential effects of fatigue are identified or confirmed and reviewed in accordance with regulations on fatigue management and the related chain of responsibility |
| 2 Establish and improve fatigue management policy and procedures | 2.1 A fatigue risk management system implementation plan for the organisation is developed or reviewed and improved  
2.2 The fatigue risk management policy and procedures for the organisation are developed or reviewed and improved in conjunction with relevant personnel  
2.3 Feedback is obtained from key stakeholders both within and outside of the organisation on the implementation plan and the related policy and procedures  
2.4 Appropriate adjustments are made to the plan, policy and procedures based on the feedback received  
2.5 Managerial approval for the fatigue risk management system implementation plan and the related policy and procedures is obtained in accordance with organisational procedures  
2.6 The fatigue risk management system implementation plan and the related policy and procedures are distributed and presented to relevant personnel in the organisation for implementation |
| 3 Act upon reports on the implementation of fatigue management policy | 3.1 Reports from designated personnel on the implementation of the organisation's fatigue risk management system implementation plan and the related policy and procedures are received and interpreted  
3.2 Accidents and safety incidents are reviewed and/or investigated and analysed to identify the extent to which fatigue might have been a contributing factor  
3.3 Information provided in the reports indicating that fatigue management policy and procedures are not being correctly implemented is analysed and an appropriate managerial response and related action is initiated  
3.4 Opportunities for improvements to the organisation's fatigue risk management system implementation plan and its related policy and procedures are identified and appropriate action is
<table>

</thead>
</table>
| 4 Act upon identified breaches of fatigue management regulations | 4.1 Identified or reported breaches of fatigue management policy are investigated in accordance with organisational procedures and regulatory requirements  
4.2 Action is take to ensure that internal and/or external personnel who may have contributed to any breach of fatigue management policy are provided with appropriate feedback and information to avoid any recurrence of the breakdown in planned fatigue management processes  
4.3 Where organisational procedures or culture is found to have contributed to a breach in fatigue management policy, appropriate action is taken to improve the procedures or address the culture in ways that aim to avoid any recurrence of the breakdown in planned fatigue management processes  
4.4 A report on any breaches of fatigue management policy is prepared and submitted to designated personnel as per organisational procedures together with details of action taken to prevent a recurrence |
| 5 Ensure that operations systems are compliant with fatigue management regulations and policy | 5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisation's fatigue management regulations and policy  
5.2 Where necessary, changes are made to operations systems and standard operating procedures to ensure that they are compliant  
5.3 In accordance with the principles of 'chain of responsibility', appropriate discussions are held with relevant personnel in supplier or subcontractor companies in the organisation's supply chain to ensure their operation's systems and standard operating procedures are compliant with the fatigue management regulations and policy |
| 6 Plan and organise adequate resources and operational systems | 6.1 Organisational budgets and resource allocation strategies are planned to provide adequate resources for the implementation of the organisation's fatigue risk management system  
6.2 Periodic reviews are undertaken of budgetary and resource allocation arrangements as they relate to the implementation of the organisation's fatigue risk management systems and appropriate improvements are made if required |
| 7 Facilitate the training and assessment of staff on fatigue management policy and procedures | 7.1 Organisational training systems are planned to provide competency-based on the job and off the job training and assessment opportunities as detailed in the organisation's strategic plan  
7.2 Team leaders and supervisory and training staff are provided with adequate opportunities to develop the required expertise to contribute to the organisation's fatigue management training and |
ELEMENT PERFORMANCE CRITERIA

7.3 Periodic reviews are undertaken of fatigue management training systems and appropriate improvements are made if required

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant legislation, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Components of a fatigue risk management system and policies and procedures related to fatigue management, and the control of factors that can contribute to fatigue and fatigue-related accidents
- Responsibilities of both an organisation and individual employees for the implementation of fatigue management regulations and policies, including requirements agreed with suppliers and sub-contractors in the supply chain of the organisation's services and products
- Procedures for the auditing and review of an organisation's fatigue risk management system and related policy and procedures, and for the reporting of the outcomes of audits
- Budgetary and resource requirements for the implementation of an organisation's fatigue risk management system
- Processes and resources for assessing employees' competence in fatigue management
- Systems for auditing of the effectiveness and efficacy of an organisation's fatigue risk management strategies, policies and procedures
- Strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fatigue is a contributing factor
- Options and resources for providing training and learning opportunities for employees on fatigue management and the implementation of an organisation's fatigue risk management system, including initial induction training, in-depth training on fatigue and fatigue management techniques, remedial training where existing competence is assessed as being insufficient, and refresher training on fatigue management
- Sources of information on fatigue
- The risks and hazards created by fatigue in the workplace
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
REQUIRED KNOWLEDGE AND SKILLS

- Fatigue reduction and proofing strategies available to an organisation that can minimise the risk of errors and safety incidents due to fatigue such as assigning low risk tasks to periods when fatigue risk is higher
- Causes and effects of fatigue on employees
- Strategies and ways to manage fatigue
- Factors which increase fatigue-related errors and accidents
- Lifestyles which promote the effective long-term management of fatigue

Required skills:

- Communicate effectively with others when implementing the organisation's fatigue risk management system
- Read and interpret documentation on fatigue management legislation and the organisation's fatigue risk management system and apply them to management activities
- Recognise breaches of fatigue management strategies and regulations and take appropriate action in accordance with organisation's fatigue risk management system
- Work collaboratively with employees and other management staff others to implement the organisation's fatigue risk management system
- Plan and organise budgetary requirements and resource allocation for the implementation of an organisation's fatigue risk management system
- Organise audits and reviews of an organisation's fatigue risk management system
- Modify activities and take appropriate initiatives to manage the implementation of an organisation's fatigue risk management system depending on differing contexts, risk situations and environments
- Adapt to any changes in legislation and regulations as they may relate to fatigue management
- Facilitate systems that assist employees to identify their own learning needs on matters related to fatigue management

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit:

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
EVIDENCE GUIDE

unit

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:

- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

Components of a fatigue risk

- risk management policy documents
RANGE STATEMENT

Management system include:
- Risk management procedures
- Risk management competence assessment processes
- Risk management training and learning opportunities
- Hazard control system

The need for fatigue management in a range of industry situations including:
- Operations conducted at all times but particularly at night
- Typical weather conditions
- While working and/or driving at a workplace, depot, base or warehouse
- While working and/or driving at a client's workplace or work site
- Driving a motor vehicle on the open road
- Driving a motor vehicle on a private road
- Driving a train, locomotive or motive power unit
- Operating a marine vessel in coastal or international waters
- Operating an aircraft
- Operating load shifting equipment
- Operating safety critical industrial plant and equipment
- Work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (e.g. working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- Organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Work-related factors that may contribute to fatigue include:
- Lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- Working multiple jobs
- Personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms

Worker/operator-related factors that may contribute to fatigue include:
- Providing support such as: complying with fatigue management regulations, developing and implementing appropriate policy and procedures, providing assessment, training and learning opportunities, and establishing and implementing error and incident reporting systems
- Ensuring work schedules provide adequate opportunity for rest and recovery between shifts
- Assessing work tasks for fatigue related risk and

Responsibilities of organisation for fatigue risk management may include:
RANGE STATEMENT

Responsibilities of individual for fatigue risk management may include:

- redesigning if necessary
- managing fatigued employees
- following the organisation's fatigue management policy and procedures
- using time away from work appropriately to rest and recover
- checking and ensuring fitness for work
- reporting symptoms of fatigue

Fatigue management competency-based training may include:

- initial induction training (incorporating a basic fatigue management component)
- fatigue management awareness training
- in-depth training on fatigue and fatigue management techniques
- remedial training where existing competence is assessed as being insufficient
- refresher training on fatigue management

Depending on the organisation, operating procedures may include:

- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:

- Commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- fatigue risk management system documents
- workplace instructions and procedures on fatigue management
- reports of audits of fatigue risk management system
- error and safety incident reports
- relevant OH&S regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures

Applicable legislation, regulations and codes may include:

- relevant regulations and codes of the Commonwealth Government and the state/territory regulatory authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of national and state or territory regulatory requirements and codes of practice, including detailed knowledge and understanding of the Australian Dangerous Goods Code, the conditions and the employees to whom it applies.
- Relevant OH&S and environmental procedures and regulations particularly as they overlap.
REQUIRED KNOWLEDGE AND SKILLS

with the current ADG Code

- Operational procedures for safe transfer and storage of dangerous goods and hazardous materials
- Requirements for completing relevant documentation in line with requirements of the current ADG Code
- Code of practice for working collaboratively with others
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:

- Communicate effectively with others when completing work activities, particularly in order to ensure their understanding of the current ADG Code and their responsibilities in relation to it
- Read and interpret the current ADG Code, related documents and procedures, and information materials provided as guidance notes
- Complete documentation related to work activities
- Work collaboratively with others to ensure compliance and safety
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events, particularly to deal with any potential breaches of the current ADG Code
- Recognise hazards and apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities and engage others in the process
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities of team members in terms of planned schedule
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment

- The evidence required to demonstrate competency in
EVIDENCE GUIDE

and evidence required to
demonstrate competency in this
unit

this unit must be relevant to and satisfy all of the
requirements of the elements and performance criteria of
this unit and include demonstration of:

• complying with the applicable regulations and the
current ADG Code
• complying with the relevant and current
documentation for compliance of the current ADG
Code
• demonstrating an understanding of the hierarchy of
control
• demonstrating the using of effective communication
techniques to give clear and accurate information in a
form which is preferred and understood by the
receiver

Context of and specific resources
for assessment

Performance is demonstrated consistently over a period
of time and in a suitable range of contexts

• Resources for assessment include:

  • a range of relevant exercises, case studies and/or
other simulated practical and knowledge assessment,
and/or
  • access to an appropriate range of relevant operational
situations in the workplace

• In both real and simulated environments, access is
required to:

  • relevant and appropriate materials and equipment,
and
  • applicable documentation including workplace
procedures, regulations, codes of practice and
operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a
registered training organisation
• As a minimum, assessment of knowledge must be
conducted through appropriate written/oral tests
• Practical assessment must occur:

  • through activities in an appropriately simulated
environment at the registered training organisation,
and/or
  • in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Licensing requirements may include:

- specific licences to deal with named dangerous goods
- specific licences or permits required by states, territories or regions to transport dangerous goods into or through their jurisdiction

Documentation and records may include:

- regulations and codes of practice relevant to the current ADG code, including safeworking and local authority regulations and procedures
- relevant OH&S and environmental protection regulations
- workplace policies and procedures related to the current ADG code
- quality assurance procedures
- emergency procedures
- operations manuals, job specifications and induction documentation
- technical instructions
- dangerous goods declarations and material safety data sheets, where applicable
- goods manifest
- relevant Australian Standards and certification requirements

Applicable legislation and regulations may include:

- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, specifically the ADG Code
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant sections of transport regulations as they apply to the enterprise, including state or territory and national regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures for operating electronic communications equipment
REQUIRED KNOWLEDGE AND SKILLS

- Requirements for completing relevant documentation
- Code of practice for working collaboratively with others
- Typical defects that can occur and related action that should be taken
- Procedures for identifying equipment defects and assessing for appropriate action
- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency
- Procedures for managing and controlling hazardous situations when carrying out work activities

Required skills:

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities, including the relevant parts of transport regulations, or related implementation materials
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events, particularly any breaches, or threatened breaches of the relevant transport regulations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Modify activities depending on differing operational contingencies, risk situations and environments
- Monitor work activities in terms of planned schedule
- Operate equipment in accordance with standard operating procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use required personal protective clothing and equipment conforming to industry and OH&S standards
- Monitor performance of equipment in terms of its potential effect on compliance
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:

TLIF4069A Monitor and respond to traffic flow

Modification History
New release. This unit replaces and is equivalent to TLIF0069A.

Unit Descriptor
This unit involves the skills and knowledge required to monitor and respond to traffic flow when operating in a road tunnel control room. It includes monitoring and maintaining traffic flow in a tunnel, and implementing changes to traffic flow as required. Legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
This unit involves the application of workplace safe work instructions and procedures and regulatory requirements as part of work activities. It also includes an understanding of the risk management procedures for monitoring and responding to traffic flow. Tasks are performed individually within a controlled environment. The role may at times be required to work within a team environment.

Licensing/Regulatory Information

Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Road law applicable to state or territory
- Relevant environmental protection regulations
- Relevant OH&S procedures and guidelines
- Workplace procedures and guidelines for monitoring and responding to traffic flow when operating a road tunnel control room
- Relevant electronic communication equipment used in a road tunnel control room and related operational procedures, including multi-monitor displays, CCTV, message boards and traffic management systems
- Risk assessment policies and procedures

Required skills:

- Communicate effectively with others when monitoring and responding to traffic flow within a road tunnel control room
- Read and interpret information relevant to monitoring and responding to traffic flow within a road tunnel control room including instructions for traffic flow, workplace procedures, and applicable standards and codes of practice
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to monitoring and responding to traffic flow within a road tunnel control room
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to and monitoring traffic flow within a road tunnel control room
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when monitoring and responding to traffic flow with a road tunnel in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for anticipated and unanticipated situations that may occur when monitoring and responding to traffic flow with a road tunnel
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
• Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - maintaining traffic flow in a road tunnel
  - operating equipment required to complete the job role
  - operating the traffic management system
  - identifying changes to traffic flow, including abnormal traffic flow

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operational context may include:
- by day or night
- in a range of work environments

Customers may be:
- internal or external
- motorists
- clients
- energy services
- emergency services

Workplaces may comprise:
- large, medium or small worksites
- high intensity worksites
- indoors
- outdoors within a tunnel

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives
- emergency workers

Environment may include:
- tunnel
- freeway/tolling roads
- confined space
- complex interchanges

Equipment/vehicles may include:
- motor vehicles, trucks and motorcycles
- computers
- keyboards
- communication equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Applicable regulations and legislation may include:
- relevant state/territory OH&S road law and safety codes
- dangerous goods regulations
- relevant state/territory equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

**Unit Sector(s)**

Not applicable.

**Competency Field**

F - Safety Management
TLIF4070A Operate fire and life safety system within a road tunnel

Modification History
New release. This unit replaces and is equivalent to TLIF0070A.

Unit Descriptor
This unit involves the skills and knowledge required to operate fire and life safety systems within a road tunnel control room. It includes operating and maintaining fire and life safety systems, and activating system procedures. Legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
This unit involves the application of workplace safe work instructions and procedures and regulatory requirements as part of work activities. It also includes an understanding of the risk management procedures for operating fire and life safety systems as part of a road tunnel. Tasks are performed individually within a control environment. The role may at times be required to work within a team environment.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1 | Operate fire and life safety systems | 1.1 Fire and life safety systems are operated on control panels in accordance with workplace procedures |
|   |                                      | 1.2 Electrical distribution systems are identified and operated in accordance with workplace procedures |
|   |                                      | 1.3 Pumps and drainage systems are identified and operated in accordance with workplace procedures |
|   |                                      | 1.4 Relevant information is processed to establish priorities and responses for dealing with issues or incidents |
|   |                                      | 1.5 Traffic management (closed tunnel) is coordinated to ensure safety of all traffic |
| 2 | Maintain fire and life safety systems | 2.1 Fire and life safety systems are maintained according to workplace procedures |
|   |                                      | 2.2 Actions undertaken are clearly documented and filed |
| 3 | Activate fire and life safety system procedures | 3.1 Ventilation and/or deluge systems are operated in accordance with workplace procedures |
|   |                                      | 3.2 Lighting levels are maintained according to workplace procedures |
|   |                                      | 3.3 Liaison is initiated and maintained with organisations/individuals affected by changed operational activities |
|   |                                      | 3.4 Evacuation of tunnel is conducted in accordance with workplace procedures |
|   |                                      | 3.5 Systems are monitored and reactivated in accordance with workplace procedures |
Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian standards, codes and regulations
- Relevant OH&S procedures and guidelines
- Workplace procedures and guidelines for operation of fire and life safety systems within a road tunnel
- Purpose and operations of fire and safety systems used in a road tunnel, including electrical distribution system, pumps and drainage system, ventilation system
- Emergency procedures
- Emergency services liaison
- Emergency vehicle access to tunnel
- Site layout including familiarisation

Required skills:

- Communicate effectively and calmly with others when operating within a road tunnel control room environment
- Read and interpret instructions, procedures and information relevant to the operation of fire and life safety systems within a road tunnel
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of fire and life safety systems within a road tunnel
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when operating fire and life safety systems within a road tunnel in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when operating fire and life safety systems within a road tunnel
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment and vehicles in accordance with environmental protection regulations and guidelines
• Accurately brief emergency services of tunnel layout, and available equipment and its use
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - activating the fire and life safety system as it applies to the workplace and within the job role
  - evacuating a tunnel
  - understanding ventilation and deluge system as it applies to the workplace and the job role
  - understanding electrical distribution system as it applies to the workplace and job role
  - knowledge of fire and life safety system as it applies in the workplace
  - identifying the maintenance requirements of fire and life safety systems according to workplace procedures
  - identifying tunnel layout
  - identifying all relevant liaisons that apply when required to activate the fire and life safety systems of a tunnel

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operation of fire and life safety systems within a road tunnel may be conducted:
- by day or night
- in a range of work environments
- on top of containers
- in limited or restricted spaces
- in all weather conditions

Customers may be:
- internal or external

Environment may include:
- control room
- tunnel
- vehicle tunnel
- ventilation chambers
- roadway

Equipment/vehicles may include:
- motor vehicles
- trucks
- motorcycles
- livestock
- hazardous/dangerous goods

Personnel in the work area may include:
- workplace personnel
- tunnel users
- pedestrians
- site visitors
- contractors
- official representatives
- emergency services

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- protective clothing
- high visibility clothing
- full arrest safety harness
- hearing protection

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Applicable regulations and legislation may include:
- relevant state/territory OH&S legislation and safety codes
- dangerous goods regulations
- OH&S manual handling guidelines
- relevant state/territory equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workplace relations regulations

Unit Sector(s)
Not applicable.

Competency Field
F - Safety Management
TLIF4086A Control and coordinate incident responses

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to control and coordinate incident responses according to organisational and regulatory procedures. It includes responding to the incident, coordinating incident response activities, and completing follow-up actions. Licensing, legislative, or certification requirements may be applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in the event of an emergency, fire or accident.
Work is performed under minimal supervision generally in a team environment. It involves applying basic emergency response principles when implementing incident response procedures.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT  PERFORMANCE CRITERIA

1  Respond to the incident
   1.1 Details of incidents are received, analysed, confirmed and prioritised
   1.2 Immediate coordination requirements are identified and actioned in accordance with organisational and regulatory procedures

2  Coordinate incident response activities
   2.1 Control and coordination of incident response activities are assumed and relevant personnel and other authorities are informed of this action
   2.2 Assistance to be provided to clients and operators is arranged within the limitations of duty of care and organisational requirements
   2.3 Assistance is provided to relevant authorities in accordance with workplace policy and legislative requirements
   2.4 Information is collected and passed to relevant personnel/stakeholders in accordance with workplace procedures

3  Complete follow-up actions
   3.1 Details of incident are collected, recorded and managed in accordance with organisational procedures
   3.2 Where required, a contribution is made to the debrief process and recommendations are prepared and submitted
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

• Relevant OH&S and other regulatory codes, procedures and guidelines concerning response to incidents
• Risks and hazards and related precautions to control the risk
• Organisational procedures and policies for responding to incidents
• Types of incidents that can occur and appropriate action to be taken in each case
• Layout of network or area under control, and potential obstacles for responding parties
• Means to control and organise the incident and provide practical assistance where required
• Procedures for contacting emergency personnel and other relevant stakeholders

Required skills:

• Communicate clearly and effectively with others when implementing and coordinating incident responses
• Read and interpret instructions, procedures and information relating to implementing and coordinating incident responses
• Identify where the following are involved in the incident:
  • containers and goods coding
  • Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) Code markings
  • where applicable, emergency information panels
• Interpret and follow operational instructions and prioritise work
• Complete documentation relating to the implementation and coordination of incident responses
• Operate electronic communication equipment in line with required protocol
• Collaborate with others when implementing and coordinating incident responses
• Report and rectify within limits of own role problems, faults and malfunctions that may arise when implementing and coordinating incident responses in accordance with regulatory requirements and workplace procedures
• Implement contingency plans for unplanned events that may occur when implementing and coordinating incident responses
• Apply precautions and required action to minimise, control or eliminate potential hazards during work activities
• Modify activities depending on differing operational contingencies, risk situations and environments
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Action to be taken in the event of an incident may include:
- identifying and following established incident procedures
- assessing the nature and extent of the incident
- ensuring medical assistance is provided where required
- isolating and coordinating safety of the scene
- alerting relevant organisational personnel and emergency services
- recording relevant information and reporting on incident situation in accordance with regulatory and organisational requirements

Consultative processes may include:
- personnel and management
- designated emergency officers
- emergency services personnel, including ambulance, police, fire services and SES
- OH&S specialists
- other professional or technical staff
- contractors

Communication systems may include:
- telephone, including mobile telephone
- electronic data interchange (EDI)
- SMS
- radio

Organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documents may include:
- acts and regulations, including the Rail Safety Act
- incident response procedures
- manifests, goods and container identification numbers and codes
- codes of practice, including the ADG Code
- IMDG Code markings
- HAZCHEM codes and where applicable emergency information panels
- relevant legislation, regulations and related documentation related to incident response situations
- quality assurance procedures

Applicable regulations and
- relevant state or territory legislation relating to:
  - environmental protection legislation
legislation may include:

- OH&S
- rail safety
- emergency procedures regulations
- dangerous goods and hazardous materials regulations
- relevant Australian standards, codes of practice and guidance notes

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4088A Implement and coordinate rail safety and OH&S risk-control strategies

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to implement and coordinate rail safety and OH&S risk-control strategies in accordance with regulatory and legislative requirements. It includes accessing rail safety and OH&S information, developing risk-control procedures, selecting and implementing risk controls, and contributing to monitoring and evaluating their effectiveness.

Licensing or certification requirements may be applicable to this unit.

Application of the Unit
This unit covers the requirements to implement and coordinate rail safety and OH&S risk-control strategies and to identify, assess and control risks associated with people, plant, environment, rail infrastructure, and associated interfaces.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

1 Access information about rail safety, OH&S and organisational policies and procedures

1.1 Relevant provisions of rail safety and OH&S legislation and codes of practice are identified and accessed

1.2 Information on organisational rail safety and OH&S policies and procedures is stored in a readily accessible location and manner

1.3 Information is accurately interpreted and clearly explained to the appropriate personnel

2 Develop options to control rail safety and OH&S risks

2.1 Hazard register, outcomes of previous incident investigations, and risk assessments are reviewed to identify possible rail safety and OH&S hazards and/or risks requiring control action

2.2 Rail safety, OH&S legislation and standards are used to develop a range of options to control specific risks in the workplace

2.3 Principles of the hierarchy of control are applied when developing risk-control options

2.4 Where appropriate, input is sought from stakeholders and workplace personnel

2.5 If required, advice from rail safety and OH&S specialists and technical advisors is sought

3 Select appropriate options to control rail safety and OH&S risks

3.1 Outcomes of risk assessments are used to select appropriate options to control risks

3.2 Selected risk controls are prioritised

3.3 Factors that may potentially limit effectiveness of controls are identified

3.4 Where appropriate, stakeholders and workplace personnel are consulted when selecting appropriate control options

3.5 Recommended risk controls are communicated to stakeholders and workplace personnel

4 Implement rail safety and OH&S risk controls

4.1 Appropriate authority and relevant resources to implement controls are identified and applied

4.2 Actions required to control risks are implemented
4.3 Stakeholders and workplace personnel are consulted with and involved in the implementation of risk controls

5 Contribute to monitoring and evaluating the effectiveness of risk controls

5.1 Effectiveness of implemented risk controls is evaluated, in consultation with stakeholders where necessary

5.2 Compliance with any new procedures is monitored and documented in accordance with organisational procedures

5.3 If required, workplace sources of information and data are accessed to evaluate effectiveness of risk controls and to check for new hazards introduced as a result of controls

5.4 Areas for further improvement are identified in consultation with stakeholders and appropriate action is taken

5.5 Where requested, assistance is provided in developing and documenting an improvement plan
Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant rail safety and OH&S acts, legislation, procedures and guidelines
- Reporting procedures in regard to unsafe situations, hazards and risks
- Location and use of safety and emergency communication systems
- Signs and signals used for OH&S warnings
- HAZCHEM symbols and implications for safe work and storage
- Emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace

Required skills:

- Communicate effectively with others when implementing and monitoring compliance with rail safety and OH&S procedures and policies
- Read and interpret relevant instructions, procedures, information and signs
- Complete documentation related to implementing and coordinating rail safety and OH&S risk-control strategies
- Report and rectify within limits of own role problems, faults and malfunctions that may arise
- Implement contingency plans for unanticipated situations that may occur
- Use appropriate numeric functions when implementing and monitoring compliance with rail safety and OH&S procedures and policies
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Associated interfaces and stakeholders may include:
- federal, state and local authorities
- emergency services
- transport authorities
- land owners
- local residents
- local community groups
- utility service providers
- other rail infrastructure managers
- other work groups
- employees
- contractors
- unions

Readily accessible locations may include:
- organisational intranet
- site offices
- depots
- personal electronic devices
- vehicles

Workplace hazards may include:
- chemicals and other hazardous substances
- movement of equipment, goods and vehicles
- broken and damaged tools and equipment
- inflammable materials and fire hazards
- lifting practices
- extremes in weather conditions
- lighting levels
- uneven and slippery surfaces
- water hazards
- traffic flows
- vehicle and equipment operation
- rail traffic
- overhead line equipment
- signal and electrical equipment
- bridges, tunnels, cuttings and pits

Responsibilities in the implementation and monitoring of rail safety and OH&S may include:
- providing rail safety and OH&S information to personnel
- consultation and participating in meetings on rail safety and OH&S matters
• implementing and monitoring emergency procedures and responses
• assessing and controlling rail safety and OH&S risks
• reporting rail safety and OH&S issues and incidents
• resolving rail safety and OH&S issues
• participating in rail safety and OH&S audits and workplace inspections

Controlling rail safety and OH&S risks may include:

• measures to remove the cause of a risk at its source
• consultation with workers and their representatives
• application of the hierarchy of control, namely:
  • elimination of the risk
  • engineering controls
  • administrative controls

Workplace sources of information and data may include:

• rail safety and OH&S audits and inspection reports
• health surveillance and workplace environmental monitoring records
• records of instruction and training
• manufacturer and supplier information, including material safety data sheets (MSDS) and dangerous goods storage lists
• hazardous substances registers
• maintenance and testing reports
• workers compensation and rehabilitation records
• first aid and medical post records
• company procedures
• enterprise procedures
• workplace procedures
• established procedures
• applicable state Rail Safety Acts
• OH&S regulations, responsibilities and obligations
• workplace rail safety and OH&S procedures and policies
• codes of practice
• MSDS
• manufacturer, supplier and/or client

Depending on the type of organisation concerned and the local terminology used, organisational procedures may include:

Information and documents may include:
instructions concerning the use and servicing of equipment
- emergency procedures
- goods identification numbers and codes
- standards and certification requirements

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF4090A Implement safeworking rules and regulations for network control activities

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to implement and coordinate safeworking rules and regulations for network control activities. It includes implementing safeworking rules and regulations; applying and managing safeworking protocols and communications; and taking appropriate action in the event of safety incidents, unsafe situations or emergencies.

Licensing or certification requirements may be applicable to this unit.

Application of the Unit
Work is performed using established procedures, with accountability and responsibility for self and others in achieving the prescribed outcomes.

The unit involves the implementation of relevant principles, protocols, rules and requirements of the legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines to network control activities.

It covers the activities required of network controllers in the operation of safeworking procedures within their area of control.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Conduct network control activities following safeworking rules and procedures | 1.1 Relevant rules for the applicable safeworking system are followed when carrying out network control activities as part of rail operation  
1.2 All network control activities are conducted in compliance with relevant state and territory safeworking rules and regulations  
1.3 Requirements of the safeworking systems are implemented and managed in accordance with applicable safeworking system rules and regulations |
| **2** Apply and manage communications | 2.1 Communication protocols are applied and managed in accordance with applicable safeworking system requirements  
2.2 Authorities required by safeworking systems are issued in accordance with applicable safeworking system rules and regulations using communication systems  
2.3 Appropriate records of communications are managed as required within the applicable safeworking system rules, regulations and procedures |
| **3** Apply safeworking protocols | 3.1 Relevant protocols are managed as specified in the applicable safeworking system rules and regulations  
3.2 Appropriate records and documentation pertinent to safeworking protocols are completed and managed in accordance with the requirements of the applicable safeworking system rules and regulations |
| **4** Take action in the event of unsafe situations or emergencies | 4.1 Unsafe situations are identified in accordance with the requirements of applicable safeworking system rules and regulations  
4.2 Where a safety incident, emergency or unsafe situation has been identified, appropriate action is taken to report and/or control the incident or situation in accordance with the requirements of applicable safeworking system rules and regulations  
4.3 Appropriate records and documentation of an identified unsafe situation, emergency or safety incident are maintained in accordance with the requirements of applicable safeworking system rules and regulations and organisational procedures  
4.4 Reports of the identified unsafe situation, emergency or safety incident are completed in accordance with |
organisational requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S, rail safety and environmental protection legislation and policies
- Safeworking system types, requirements and limitations
- Route integrity requirements, including general requirements, position of points and route occupancy requirements
- Communication protocols as they relate to the functions of the safeworking systems concerned
- Safeworking system rules and protocols applicable to the individual’s area of responsibility and/or control
- Action to be taken in the event of safety incidents, identified unsafe situations, and emergencies applicable to the individual’s area of responsibility and/or control

Required skills:

- Communicate effectively with others when applying safeworking rules and regulations to rail functions
- Read, interpret and follow relevant rules, regulations and instructions applicable to the rail operations concerned
- Use appropriate numeric functions when applying safeworking rules and regulations to rail functions
- Work collaboratively with others to fulfil safeworking requirements applicable to the rail operations concerned
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Terminology and related meanings will be:

- as defined within the applicable safeworking system

Communications equipment may include:

- hand-held or portable radios
- fixed equipment
- telephones, including mobile phones
- fax machines

Relevant safeworking documentation may include:

- rules and operating procedures
- workplace procedures, policies and work instructions
- procedure manuals
- train running information (TRI)
- train notices
- train register books
- train graphs and/or diagrams
- local instructions
- track and infrastructure drawings and diagrams
- log books
- safeworking forms

Applicable legislation, regulations and codes may include:

- legislated rail safety requirements, including acts and regulations from each applicable state and territory, together with any nationally approved compliance codes and/or guidelines
- relevant Australian standards and related requirements
- relevant state and territory OH&S regulations
- state, federal or territory environmental protection legislation
- conditions of service, legislation and industrial agreements, including workplace agreements and awards
- relevant national, state and territory dangerous goods legislation

Unit Sector(s)

Not applicable.
Competency Field

F – Safety Management
TLIF4094A Ensure compliance with chain of responsibility

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to ensure workplace compliance with chain of responsibility legislation.
It includes the ability to identify the requirements, undertake the appropriate activity, and monitor and review procedures.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
Work may be undertaken in various contexts within the transport and logistics industry.
The unit generally applies to people in a management level position in an organisation with responsibility for ensuring the entire organisation or work place is compliant with the relevant state or territory regulations around chain of responsibility.
Associated units relating to chain of responsibility can be found in TLI10 Transport and Logistics Training Package.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- How to access and interpret relevant state and territory regulations
- State and territory regulations and workplace procedures relating to job function
- Range of penalties relevant to the workplace
- Consequences of non-compliance with chain of responsibility regulations
- Where to access updated chain of responsibility state or territory regulations
- Understanding of the five key aspects: load restraint, mass, dimensions, speed and fatigue management
- Required workplace documentation

Required skills:

- Use basic interpersonal and communication skills to ensure compliance within the workplace.
- Apply strategies to prevent breaches of chain of responsibility regulations
- Identify warning signs of a possible breach
- Take appropriate action when breach occurs
- Review updates to the chain of responsibility regulations as they occur
- Undertake an audit of organisational requirements for chain of responsibility
- Conduct risk assessment of organisational policy and procedures
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - an understanding of chain of responsibility
  - an understanding of regulations of state or territory in which the company operates relating to chain of responsibility
  - establishing relevant workplace policy and procedures around chain of responsibility
  - conducting a risk assessment of organisational policy and procedure to ensure they meet current chain of responsibility regulations
  - maintaining and reviewing policy and procedures to ensure they meet current regulation around chain of responsibility

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment
  - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals
Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written, practical and oral assessments.
- Practical assessment must occur:
  - through appropriately simulated activities at the training organisation, and/or
  - in an appropriate range of situations in the workplace
- Online assessment is not suitable for final assessment of this unit of competency.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Parties and responsible persons within the chain may include:
- consigner
- consignee
- packer
- loader
- scheduler
- driver
- receiver
- carrier
- manufacturer
- employee
- employer
- owner
- board of directors
- senior official
- dispatch officer
- operator
- person in charge or apparently in charge of a vehicle
- agent
- subcontractor
- authorised officer
- elected councillor

Customers may include:
- external customer
- receiver
- forwarder
- dispatcher
- yard foreman
- safety regulator
- police or enforcement official
- public
- subcontractor

Depending on the organisation concerned, workplace procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work
- telephone
area may include:

- electronic data interchange (EDI)
- fax
- email
- internet
- oral, aural or signed communications

Documentation and records may include:

- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- relevant OH&S regulations
- workplace policies and procedures relating to chain of responsibility regulations
- relevant Australian standards and certification requirements
- relevant internal data entry books, including work diaries, data sheets and load sheets
- transport and journey documentation

Applicable legislation and regulations may include:

- relevant transport regulations for the enterprise, including Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- relevant state and territory OH&S and environmental protection legislation
- workplace relations regulations

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4095A Apply occupational health and safety requirements for driving operations

Modification History
Release 2. This is the second release of this unit in the TLI10 Transport and Logistics Training Package Version 4.0.
Minor change: One point has been moved from Required Skills to Required Knowledge.
Release 2 is equivalent to the previous release.

Unit Descriptor
This unit involves the skills and knowledge required to undertake occupational health and safety requirements for driving operations.
Licensing, legislative, regulatory and certification requirements are applicable to this unit.

Application of the Unit
This unit applies to those working in the road transport fuel/gas and heavy recovery industry.
It does not include salvage operations.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Identify OH&S legislative requirements for vehicle driving operations

1.1 OH&S legislative requirements relevant to own work role and responsibilities in vehicle driving operations are identified and explained

1.2 OH&S legislative requirements relevant to others involved in vehicle driving operations are identified

1.3 Duty of care requirements pertaining to vehicle driving operations are identified

1.4 OH&S requirements for the vehicle are identified

1.5 Information for safe operation of ancillary equipment is sourced and followed

1.6 Own responsibilities to comply with safe work practices are identified

1.7 Information on workplace and site OH&S policies and procedures is made readily available in vehicle

1.8 OH&S communication and reporting processes are identified

### 2 Identify and assess risks in vehicle driving operations

2.1 Hazards in vehicle driving operations are identified, assessed and reported to designated personnel

2.2 Safety risks in vehicle driving operations are identified, assessed and reported to designated personnel

2.3 Safe work practices, duty of care requirements and safe work instructions pertaining to vehicle driving operations are followed for controlling risks

### 3 Identify hazardous materials and other hazards pertaining to vehicle driving operations

3.1 Hazardous materials in vehicle driving operations are correctly identified, handled and used in accordance with organisational and legislative procedures

3.2 Measures for controlling risks are applied effectively and immediately

3.3 Hazardous materials that have safety implications for self and others are secured using appropriate signs and signals

3.4 Existing and potential hazards are identified and reported in accordance with site and company procedures
4 Plan and prepare for safe work practices

4.1 Correct personal protective equipment (PPE) and clothing are identified, correctly fitted, used and stored in accordance with organisational procedures

4.2 Tools, equipment and materials are selected and tasks are organised in accordance with organisational procedures

4.3 Required signage and barricades are determined and used during vehicle driving operations and at the site

4.4 Material safety data sheets (MSDS), and job safety analysis (JSA) and safe work method statements relevant to vehicle driving operations are completed and followed in accordance with regulatory and workplace procedures

5 Apply safe work practices

5.1 Task is performed in a manner that is safe for the operator, other personnel and the general community in accordance with legislative requirements and organisational procedures

5.2 Hazards, incidents and injuries are reported in accordance with legislative requirements and organisational procedures

5.3 Site safety signs and symbols are identified and followed

5.4 Site is cleared and maintained to prevent and protect self and others from accidents and incidents and to meet environmental requirements

6 Contribute to the management of OH&S

6.1 OH&S issues are raised with designated personnel in accordance with organisational and legislative procedures

6.2 Contributions are made to participative arrangements for OH&S management in accordance with organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines in the workplace
- Reporting procedures:
  - for safety incidents
  - in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Relevant duty of care requirements
- Safe work practices
- Location and use of safety alarms, manifests, emergency shut-off systems, and emergency communication systems
- HAZCHEM symbols and implications for safe work and storage
- Identification of the requirements of a transport emergency response plan (TERP)
- Procedures for storage and use of hazardous substances
- Cultural differences in the workplace and appropriate modes of behaviour and ways of interacting with others
- Containers and goods coding, including Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings

Required skills:

- Identify hazards and other OH&S issues
- Recognise safety signs and symbols
- Maintain environmental requirements on site
- Use signs and signals for OH&S warnings
- Use terms in MSDS
- Safely handle broken or damaged equipment
- Apply emergency evacuation procedures
- Store and use hazardous substances
- Implement contingency plans for unanticipated situations that may occur when following OH&S procedures
- Work collaboratively with others when following OH&S procedures
- Operate electronic communication equipment to required protocol
- Complete documentation related to OH&S in the workplace
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of:

- awareness of occupational health and safety as it applies to job function
- hazardous materials implications
- an understanding of RIPH ID
- interpreting safe work procedures as they apply to the job function

**Context of and specific resources for assessment**

Assessment must ensure access to:

- tools, equipment and PPE currently used in industry
- relevant regulatory and equipment documentation that impacts on work activities

**Method of assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended.

In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge.

Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

OH&S legislative requirements include:
- relevant state and territory requirements
- relevant workplace policies and procedures

Others include:
- employer
- contractor
- consigner
- consignee
- packer
- loader
- scheduler
- driver
- receiver
- carrier
- manufacturer
- employee
- owner
- dispatch officer
- operator
- person in charge or apparently in charge of a vehicle
- subcontractor

Documentation and records include:
- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- workplace policies and procedures relating to chain of responsibility regulations
- relevant Australian standards and certification requirements
- relevant internal data entry books, including log books, data sheets and load sheets

Hazardous materials include:
- fuel
- gas

Workplace documentation includes:
- MSDS
- JSA
- standard operating procedures (SOP)
- workplace procedure and/or policy
- TERP

Personal safety measures include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
• protective clothing
• high visibility clothing
• eye wash kit
• emergency shutdown controls
• evacuation controls

Applicable legislative procedures and codes include:
• Australian code for the transport of dangerous goods by road or rail: the ADG Code
• relevant state and territory:
  • roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
• road rules
• OH&S legislation
• fatigue management regulations
• environmental protection legislation and regulations

Unit Sector(s)
Not applicable.

Competency Field
F - Safety Management
TLIF4099A Develop an application for, or variation to, rail accreditation

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to develop an application for rail safety accreditation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit covers the requirements to develop an application for new rail transport operator accreditation and/or for a variation to current accreditation.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify requirements for accreditation or variation application

1.1 Documentation and requirements relevant to the application for, or variation to, accreditation is accessed and interpreted

1.2 Policies and objectives that express the organisation's commitment to regulatory compliance management are developed

1.3 Plan is prepared for the development of compliance requirements

1.4 Required resources are identified and maintained to support the plan and approval from relevant personnel is gained

1.5 Framework for the regulatory compliance management system is established and implemented

1.6 Scope of proposed compliance requirements and resources is determined in consultation with relevant personnel and regulatory compliance is integrated into all relevant documentation

1.7 Consultation process is documented, information on the regulatory compliance system and procedures is explained and ready access to this information by all relevant stakeholders is ensured

2 Collate, compile and submit application for accreditation or variation

2.1 Relevant documentation relating to governance, scope of operations, systems and procedures to meet application requirements is collected

2.2 Endorsement and sign off of documents by relevant authorising officers is ensured

2.3 Required resources to meet scope of operations are identified and documented

2.4 Completed application with supporting evidence is verified prior to sign off by senior management

2.5 Finalised application is submitted to the relevant jurisdiction regulatory body

2.6 Requests for further details or additional information are acted upon in a timely manner
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Components of and policies and procedures related to, rail accreditation system
- Relevant legislation, regulations, permit and licence requirements related to rail accreditation
- Responsibilities of organisation and individual employees related to rail accreditation system
- Strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fatigue is a contributing factor

Required skills:

- Adapt to any changes in legislation and regulations as they may relate to rail accreditation application activities
- Communicate effectively with others when developing the organisation’s rail accreditation application
- Read and interpret documentation related to rail accreditation application activities
- Work collaboratively with employees and management to develop the rail accreditation application
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying relevant internal and external persons relevant to an application for rail accreditation
  - developing an application or variation to an accreditation submission

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components of a regulatory system include:
- policy documents
- procedures

Depending on the organisation, operating procedures may include:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information and documents may include:
- commonwealth and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- fatigue risk management system documents
- workplace instructions and procedures on fatigue management
- reports of audits of fatigue risk management system
- error and safety incident reports
- relevant occupational health and safety (OH&S) regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures

Applicable legislation, regulations and codes may include:
- relevant national and/or state/territory regulatory requirements
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4100A Identify and meet rail safety regulatory compliance requirements

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to identify and meet rail safety regulatory requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit involves interpreting the rail safety legislation for the specific scope and nature of the rail transport operator railway operations.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Establish rail regulatory requirements

1.1 Legislation applicable to organisational railway operations is established

1.2 Issues relating to rail safety regulation are determined in accordance with legislation and their impact on railway operations and management, rail safety and systems interfaces are identified

### 2 Maintain currency in regulatory requirements

2.1 Changes in safety regulation are monitored and their implications for rail industry operations and technology are identified

2.2 Changes in rail safety regulatory requirements are monitored and available information, training and awareness sessions are accessed to maintain knowledge and skill base

2.3 Regular contact and information exchange with appropriate personnel within the railway organisation are undertaken to ensure compliance with regulatory requirements

### 3 Apply knowledge of rail regulatory requirements

3.1 Rail safety operating principles are identified and confirmed

3.2 Applicable current national and international standards, codes and local rules are identified and their relevance to rail safety regulation is confirmed

3.3 Accreditation requirements and/or conditions applicable to organisational railway operations are identified

3.4 Requirements of rail industry standards applicable to organisational railway operations are identified in the context of safety management systems and risk management

3.5 Implications of using particular rail industry standards for rail safety compliance are explained as required, in accordance with organisational needs

### 4 Identify principles underpinning rail safety regulation

4.1 Role, function and purpose of co-regulation in the rail industry are identified and explained

4.2 Role, function and purpose of an organisational safety management system and accreditation in the context of legislation and guidelines are identified

4.3 Functions and obligations of duty holders and their general duties in the context of rail safety legislation are identified

### 5 Establish and maintain rail regulatory relationships

5.1 Appropriate regulatory channels are identified and lines of communications are established and maintained

5.2 Interests and requirements of the organisation are represented and promoted

5.3 Feedback is exchanged and used to improve regulatory
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Changes in rail industry operations and technology with implications for rail safety regulation
- Duty holders and their duties under rail safety legislation
- Key concepts and definitions relating to rail safety regulation
- Key principles and practices associated with railway operations
- Key regulatory and standards participants in the rail industry
- Rail industry and rail industry terminology, including terminology used in technical standards
- Rail regulatory framework
- Rail safety management systems
- Relevance of national and international standards to the rail industry

Required skills:

- Access and use rail safety industry standards
- Communicate with others, involving the interpretation of complex information relating to rail safety regulation
- Develop and maintain currency of rail industry knowledge and regulatory requirements
- Network and build relationships with a diverse range of rail industry organisations
- Research information related to the rail industry and rail safety regulation
- Review changing regulatory information
- Work ethically and in accordance with legislation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying regulatory requirements
  - identifying key stakeholders
  - establishing relationships with key stakeholders

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Systems interfaces may include:
- design
- construction and/or manufacturing
- testing and commissioning
- operation
- maintenance
- decommissioning

Information may include:
- rail regulatory requirements
- changes to regulations
- safety notices
- audit program information
- compliance and enforcement regime

Appropriate personnel may include:
- board of directors
- senior management
- line managers/supervisors

Rail safety operating principles include:
- identification and management of risk
- protection of persons from injury
- protection of property from damage
- ensuring that emergencies and incidents are properly managed
- ensuring that interfaces between different organisations are properly defined and managed
- track access
- train separation

Applicable current national and international standards may include:
- Rail Industry Safety and Standards Board (RISSB) (formerly Code Management Company [CMC]) codes and standards e.g. National Standard for Health Assessment of Rail Safety Workers Volumes 1 and 2
- AS4292 series: Railway Safety Management
- ISO 31000 Risk Management

Implications may include:
- a requirement that rail transport operators demonstrate that use of the appropriate standard or code will mitigate the risk

Duty holders include:
- rail transport operators - rail infrastructure managers and/or rolling stock operators
- contractors
- designers, manufacturers, suppliers, commissioners, erectors and installers
- de-commissioners
- managers of private sidings
- rail safety workers
Purpose of general duties is:

- to provide a concise statement of a duty holder’s overall safety responsibilities

General duties are:

- broad legal requirements that define the extent and nature of the responsibilities of a duty holder
- described as general duties to distinguish them from other more specific and detailed legal requirements
- sometimes referred to as ‘general duties of care’ or more simply as the ‘duty of care’

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4101A Implement and maintain a rail safety culture

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to implement and maintain a rail safety culture within rail organisations in accordance with organisational requirements. Licensing, legislative, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
People completing this unit must be able to assess compliance with safety culture requirements and confirm that organisational policies and practices are consistent with the principles that support the development of a positive safety culture. They must promote the benefits of developing a positive safety culture.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1. Explain key principles relating to a rail safety culture

1.1 Current information related to rail safety is obtained and confirmed in accordance with organisational policies and procedures

1.2 Principles that encourage a rail safety culture are identified and promoted to people within the organisation in accordance with organisational policies, procedures and guidelines

### 2. Apply rail safety culture to organisational activities

2.1 Concepts related to a positive rail safety culture are promoted to people within the organisation using appropriate communication strategies

2.2 Integration of a positive rail safety culture within the organisation is identified and implemented

2.3 Rail safety information is used to cross-check the presence or absence of a rail safety culture within all organisational rail safety documentation and practices

2.4 Rail safety culture is applied equally with engineering, technical and other factors that reduce the potential for incidents

2.5 Documentation that includes information related to the safety culture are clearly expressed in appropriate terms, to reinforce general understanding within the organisation

2.6 Behaviours and skills required for safe and effective work performance are identified and their contribution to a rail safety culture is promoted within the organisation

### 3. Review safety culture within an organisation

3.1 Behaviour of personnel is monitored to determine whether a positive rail safety culture exists

3.2 Resources committed to rail safety activities relative to the size and complexity of operations are evaluated

3.3 Attitudes, behaviours or systems that might be detrimental to a positive rail safety culture are identified and corrective actions are determined

3.4 Evidence of just culture principles are identified and promoted in accordance with organisational policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**
- Appropriate safety survey tools
- Behavioural marker system for rail safety
- Concept and key elements of a positive rail safety culture
- Legislation and guidelines relating to rail safety culture
- Organisational policies, procedures and systems relating to developing and maintaining a positive rail safety culture
- Principles and application of rail safety
- Rail environment

**Required skills:**
- Communicate information relating to rail safety culture at the appropriate level
- Influence others positively
- Read and comprehend complex and formal documents, such as literature and guidelines relating to rail safety legislation and related materials
- Research information relating to a rail safety culture
- Solve problems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying factors in a positive rail safety culture
  - identifying media available for dissemination of rail safety information
  - conducting a review of rail safety culture within an organisation/project

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operating principles include:
- valuing people’s knowledge, skills and judgement in carrying out their work safely
- recognising human limitations and potential for error
- just treatment when errors are made
- acceptance that organisations are imperfect and will only improve if they are open to feedback and prepared to learn and adapt

Appropriate communication strategies may include:
- documents
- toolbox talks
- report summaries
- electronic media
- face-to-face communication
- forums
- presentations
- committees
- workshops
- formal training

Documentation may include:
- reported findings
- safety incident feedback
- report summaries
- guides
- manuals
- training materials
- alerts
- positive reinforcement initiatives

Behavioural markers are:
- short, precise statements each describing a single non-technical skill or competency, such as using correct radio protocols and asking questions to clarify understanding

Positive safety culture is characterised by:
- communication founded on mutual trust
- shared perceptions of the importance of safety
- confidence in effectiveness of preventive measures
- shared concern for, commitment to and accountability for safety
- key elements that include:
  - keeping people informed
• maintaining vigilance
• promoting a just culture environment
• promoting organisational flexibility
• encouraging willingness to learn

Just culture is:
• transparent and establishes clear accountability for actions
• neither blame free (total immunity for actions) nor punitive (disciplinary responses regardless of whether acts were unintentional or deliberate)
• one where uncensored reporting of near miss occurrences and worker participation in safety issues is encouraged
• one which acknowledges human error and the need to manage it by supporting systems and practices that promote learning from past errors or mistakes

Information and documents may include:
• rail safety management system documents
• reports of audits of rail safety
• error and safety incident reports
• relevant occupational health and safety (OH&S) regulations and procedures
• relevant standards and certification requirements
• quality assurance procedures

Applicable legislation, regulations and codes may include:
• relevant commonwealth and state/territory regulations
• relevant rail industry safe working codes and regulations
• relevant state/territory OH&S legislation
Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF4102A Implement and maintain safety management plans

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to implement and maintain rail safety management plans. It includes identifying safety management plans appropriate to the organisation's activities, implementing them, monitoring their effectiveness and identifying and reporting on non-compliance issues. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the applicable commonwealth and state/territory legislation and relevant regulations.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify appropriate rail safety management plans

1.1 Compliance documentation relevant to rail safety for the activities being carried out is accessed and interpreted

1.2 Relevant personnel are consulted about the content of the rail safety management plans

1.3 Rail safety management plans are developed or adapted to meet organisational and regulatory requirements

1.4 Strategies for the management of ongoing changes that may affect rail safety management plans are identified and communicated

1.5 Information relating to the rail safety management plan is provided to relevant personnel in a language, style and format appropriate to their needs

1.6 Implications of non-compliance are clarified with all relevant personnel within the organisation

2 Implement rail safety management plans

2.1 Implementation is planned in collaboration with others to ensure compliance with the rail safety management system and organisational requirements

2.2 Implementation of work activities is monitored to ensure compliance with the rail safety management system and organisational requirements

2.3 Training needs of personnel are identified and supported to ensure they meet their rail safety management responsibilities in the workplace

3 Monitor rail safety management plan

3.1 Actual and potential problems relating to rail safety compliance within the workplace are identified and reported

3.2 Identified problems are reported to appropriate personnel to ensure compliance with the rail safety management system and organisational requirements

3.3 Recommendations on improvements to rail safety management plans are submitted to appropriate personnel in accordance with organisational and/or regulatory requirements

3.4 Records are maintained in accordance with organisational and regulatory requirements

4 Report non-compliance

4.1 Identified non-compliance is reported and recorded in accordance with legislative requirements and organisational policies and procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Components of a rail safety management system and plans
- Options and resources for providing training and learning opportunities for employees about rail safety management
- Procedures and tools for monitoring and reviewing rail safety management plans and related policy and procedures
- Relevant legislation, regulations, permit and licence requirements relating to rail safety management
- Responsibilities of organisation and employees for the implementation of rail safety management plans

Required skills:

- Adapt to any changes in legislation and regulations as they may relate to rail safety
- Communicate effectively with others when implementing organisational rail safety management plans
- Modify activities and take appropriate initiatives to manage the implementation of an organisation’s rail safety management plans depending on differing contexts, risk situations and environments
- Read and interpret documentation relating to rail safety legislation and the organisation’s rail safety management system, and apply them to activities
- Recognise breaches of the organisation’s rail safety management plans and take appropriate action in accordance with organisational policies and procedures
- Undertake audits and reviews of an organisation’s rail safety management system
- Work collaboratively with employees and management to implement the organisation’s rail safety management plans
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying rail safety management plans for a particular activity
  - monitoring a rail safety management plan
  - making recommendations for improvements to a rail safety management plan

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer guidelines and specifications
- Australian Standards
- legislation, codes, standards and business requirements relevant to rail safety compliance
- employment and workplace relations legislation
- equal employment opportunity and disability discrimination legislation

Workplace legal compliance may include:
- requirements for the maintenance and confidentiality of records of non-compliance
- requirements for the maintenance of records of breaches
- provision of information and training
- regulations and code of practice relating to hazards present in work area
- site/work/groups representatives and committees
- issue resolution

Relevant personnel may include:
- senior management
- other managers
- employees
- contractors
- suppliers

Ongoing changes may include:
- updates to documents
- staff training requirements
- decommissioning of documents
- changes to legislation
- changes to work environment
- changes to operational parameters

Regulatory requirements may include:
- acts
- regulations
- guidelines
- industry standards
- codes of practice

Information and documents may include:
- commonwealth and state/territory regulations and guidelines concerning rail safety
- rail safety management system documentation
- workplace instructions and procedures on rail safety
- reports of audits of rail safety management systems
• error and safety incident reports
• relevant occupational health and safety (OH&S) regulations and procedures
• relevant standards and certification requirements
• quality assurance procedures

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF4103A Implement fitness for work procedures

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to implement fitness for work policy and procedures in an organisation. It includes identifying legal requirements, liabilities and responsibilities; establishing and/or improving implementation plans and related policy and procedures; and acting appropriately upon reports on the implementation of fitness for work policy and any identified breaches of associated regulations. It also includes ensuring that the operation’s systems are compliant with regulations and organisational policy, and establishing, implementing, monitoring and communicating fitness for work programs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant fitness for work regulations and procedures. Work is performed under some supervision generally within a team environment. It involves implementing and monitoring fitness for work policies and procedures as part of workplace activities.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Components of a fitness for work risk management system including returning to work
- Relevant legislation and regulations relating to fatigue management, drug and alcohol use, and medical requirements in the rail industry
- Responsibilities of an organisation and employees for implementing fitness for work regulations and policies
- Systems for auditing of the effectiveness of an organisation’s fitness for work management strategies, policies and procedures

Required skills:

- Adapt to any changes in legislation and regulations as they relate to fitness for work
- Communicate effectively with others when implementing the organisation’s fitness for work management system
- Contribute to audits and reviews of an organisation’s fitness for work management system
- Read and interpret documentation on fitness for work management legislation
- Recognise non-conformance to fitness for work management programs and regulations, and take appropriate action
- Work collaboratively with employees and management to implement the organisation’s fitness for work management system
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Components of a fitness for work management system may include:
- fatigue management policy and procedures
- drug and alcohol policy and procedures
- drug and alcohol testing and reporting requirements
- legislated rail safety worker medical requirements
- health assessment requirements

Information and documents may include:
- commonwealth and state/territory regulations and guidelines concerning fatigue management, drug and alcohol and medical requirements for rail safety workers
- fitness for work management system documents
- workplace instructions and procedures on fitness for work
- reports of audits of fitness for work management systems
- error and safety incident reports
- relevant occupational health and safety (OH&S) regulations and procedures
- relevant standards and certification requirements
- quality assurance procedures
- return to work policies and procedures

Applicable legislation, regulations and codes may include:
- commonwealth government and state/territory regulatory authority regulations and codes of practice concerning fitness for work
- national health assessment standards for rail safety workers
- relevant state/territory OH&S legislation
- Privacy Act

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4104A Manage change in the rail safety environment

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to manage change in a rail safety environment and the risks associated with it. Change may be required because of organisational restructuring or the introduction of new equipment, systems or practices. It includes establishing the context for change, developing a risk management strategy, advertising workplace change, implementing the change management strategy and monitoring the outcomes of the change process.
Licensing, legislative, regulatory or certification requirements are not applicable to this unit.

Application of the Unit
People achieving competence in this unit will need to fulfil the applicable commonwealth and state/territory legislation and relevant regulations.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Establish the context for change</td>
<td>1.1 Requirement for change is confirmed through consideration of changes to legislation, business or organisational requirements</td>
</tr>
<tr>
<td></td>
<td>1.2 Key stakeholders are identified and consulted on the proposed change</td>
</tr>
<tr>
<td></td>
<td>1.3 Benchmarking is conducted with other similar organisational/functional/best practice standards to confirm the preferred methodology for managing the change</td>
</tr>
<tr>
<td></td>
<td>1.4 Specialists and experts are consulted as required to assist in identifying major change requirements or opportunities</td>
</tr>
<tr>
<td></td>
<td>1.5 Overall life-cycle and phases of change are identified</td>
</tr>
<tr>
<td>2 Develop risk management strategy</td>
<td>2.1 Risk assessment is conducted to identify risks and hazards related to the change</td>
</tr>
<tr>
<td></td>
<td>2.2 Identified risks are evaluated and controls are established so far as is reasonably practicable in accordance with organisational policy and procedures</td>
</tr>
<tr>
<td></td>
<td>2.3 Responsibility for management of established controls is determined</td>
</tr>
<tr>
<td>3 Develop implementation plan</td>
<td>3.1 Complexity of change is identified and appropriate phases and transition plans are developed</td>
</tr>
<tr>
<td></td>
<td>3.2 Communication strategy is developed in collaboration with key stakeholders</td>
</tr>
<tr>
<td></td>
<td>3.3 Modifications to systems and infrastructure are identified</td>
</tr>
<tr>
<td></td>
<td>3.4 Resources required to implement the change are identified</td>
</tr>
<tr>
<td></td>
<td>3.5 Affected personnel and required training/up skilling is identified</td>
</tr>
<tr>
<td></td>
<td>3.6 Updating of risk registers and other safety documentation is identified</td>
</tr>
<tr>
<td></td>
<td>3.7 Procedures for post implementation monitoring and review are established</td>
</tr>
<tr>
<td></td>
<td>3.8 Changes are documented and approval by key stakeholders is obtained in accordance with regulatory and organisational requirements</td>
</tr>
<tr>
<td>4 Communicate workplace change</td>
<td>4.1 Anticipated change is advertised to appropriate organisational personnel who will be affected by the change</td>
</tr>
<tr>
<td></td>
<td>4.2 Range of strategies is used to foster a positive attitude to the change, especially from the individuals on whom the organisational change will have the most effect</td>
</tr>
</tbody>
</table>
4.3 Advice is provided to key stakeholders on strategies for effective change management and sensitivity is shown to people’s individual responses to change

4.4 Leadership and communication strategies are used to assist others to deal with ambiguity and to adapt to change

5 Implement workplace change

5.1 Policies, practices and procedures are altered and implemented as required to support the change management strategy

5.2 Modifications to systems and infrastructure are implemented

5.3 Required training/up skilling of affected personnel is facilitated

5.4 Risk registers and other safety documentation are updated to reflect the implemented change

6 Monitor and review change process and outcomes

6.1 Organisational safety management system is reviewed and revised to reflect the changes

6.2 Ongoing process are monitored following the implementation of the change to ensure it is meeting organisational requirements
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Change management strategies
- Hazard identification
- Key factors in the internal and external operating environment
- Negotiation processes
- Organisational goals, policies and procedures
- Relevant legislation, regulations, permit and licence requirements related to changes
- Risk management principles
- Safety management system

Required skills:

- Adapt to any changes in legislation and regulations as they may relate to change management
- Communicate effectively with others when managing workplace change
- Conduct risk assessments
- Consult with stakeholders using appropriate words and language structure to explain complex ideas to different audiences
- Interpret and explain complex, formal documents and assist others to apply them in the workplace
- Monitor change management strategies
- Prepare written advice and reports
- Work collaboratively with employees and management when managing anticipated changes in the workplace
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying barriers to change within an organisation
  - developing a plan to implement a specific change within an organisation
  - implementing a specific change within an organisation
  - conducting a review of an implemented change within an organisation

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace

- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Changes may apply to:
- systems
- policies and procedures
- equipment
- practices
- regulatory requirements

External stakeholders may include:
- regulators
- consultants
- operators/maintainers
- constructors/manufacturers
- statutory bodies
- customers/community

Internal stakeholders may include:
- board and executives
- business managers
- consortium partners
- employees

Applicable legislation, regulations and codes may include:
- relevant legislation and regulations of the commonwealth government and each applicable state/territory regulatory authority
- relevant rail industry safe working codes and regulations
- relevant state/territory permit regulations and requirements
- relevant state/territory occupational health and safety (OH&S) and environmental legislation

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4105A Manage rail safety compliance

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to manage rail safety compliance requirements.
It includes planning, establishing, maintaining, monitoring and reviewing compliance, consultation and audit procedures, feedback procedures and auditing systems.
Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
This unit is intended for people involved in managing rail safety compliance functions within a rail organisation.
Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, perform detailed analyses, use discretion and judgement, and take responsibility for the quality of their outputs.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

1. **Plan and establish a rail safety compliance framework**

   1.1 Rail safety compliance documentation relevant to organisational activities is accessed, interpreted and applied
   
   1.2 Policies and objectives that express the organisation's commitment to rail safety compliance are developed in collaboration with relevant personnel
   
   1.3 Rail safety compliance system framework is established and implemented in accordance with organisational requirements/operations
   
   1.4 Scope of proposed rail safety compliance requirements and required resources are determined in consultation with relevant personnel
   
   1.5 Rail safety compliance is integrated into all job descriptions and relevant organisational procedures
   
   1.6 Procedures are established to ensure information related to rail safety compliance is readily accessible to all relevant stakeholders
   
   1.7 Where required, approval for establishing the rail safety compliance system is sought from relevant personnel

2. **Establish consultation and audit procedures**

   2.1 Relevant stakeholders are identified and system procedures to maximise opportunities to implement rail safety compliance are developed and documented
   
   2.2 Relevant stakeholders are consulted on rail safety compliance requirements and information is used to establish monitoring and auditing systems
   
   2.3 Resource allocation for the implementation of compliance requirements are identified and reported in accordance with organisational and relevant legislative requirements
   
   2.4 Measures are established in collaboration with relevant stakeholders to ensure compliance with organisational objectives by validating processes

3. **Implement, maintain and review a rail safety compliance system**

   3.1 Rail safety management system is implemented in accordance with organisational and regulatory requirements
   
   3.2 Effectiveness of the system is assessed against organisational and regulatory requirements
   
   3.3 Rail safety management system is audited following established procedures
   
   3.4 Audit procedures are reviewed regularly to identify necessary changes and opportunities for continual improvement
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Components of a rail safety compliance system
- Options and resources for providing training and learning opportunities for employees about rail safety compliance
- Procedures and tools for monitoring and reviewing an organisation’s rail safety compliance system and related policy and procedures, and for reporting outcomes
- Relevant legislation, regulations, permit and licence requirements relating to rail safety compliance
- Responsibilities of an organisation and employees for implementing a rail safety compliance system

Required skills:

- Adapt to any changes in legislation and regulations as they may relate to safety compliance
- Communicate effectively with others when implementing the organisation’s rail safety compliance system
- Modify activities and take appropriate initiatives to manage the implementation of an organisation’s safety compliance system depending on differing contexts, risk situations and environments
- Organise audits and reviews of an organisation’s safety compliance system
- Read and interpret documentation related to rail safety legislation and the organisation’s rail safety compliance system, and apply them to management activities
- Recognise non-conformance with rail safety requirements and take appropriate action in accordance with organisational policies and procedures
- Work collaboratively with employees and management to implement the organisation’s safety compliance system
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying or establishing rail safety compliance within an organisation
  - auditing a rail safety compliance system
  - reviewing a rail safety compliance system

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Rail safety compliance documentation may include but is not limited to:
- legislative, organisation and site requirements and procedures
- manufacturer guidelines and specifications
- Australian Standards
- legislation, codes, standards and business requirements relevant to rail safety compliance
- employment and workplace relations legislation
- equal employment opportunity and disability discrimination legislation
- safety management system
- risk register
- rules and procedures
- engineering standards

Rail safety compliance framework may include:
- audit plans
- information storage and retrieval systems
- information gathering tools
- reporting systems
- monitoring systems

Resources may include:
- appropriately trained personnel
- auditing tools
- inspection tools
- record management systems

Relevant stakeholders may include:
- senior management
- other managers
- employees
- contractors
- suppliers
- customers
- regulatory bodies
- rail operators
- local authorities
- emergency services

Legislation, codes and national standards relevant to the workplace may include:
- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to:
  - OH&S
  - rail safety
- environmental issues
- equal opportunity
- industrial relations
- anti-discrimination
- relevant industry code of practice
- applicable codes and standards

**Unit Sector(s)**
Not applicable.

**Competency Field**
F – Safety Management
TLIF4107A Respond to notifiable rail safety occurrences

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit involves the skills and knowledge required to respond to notifiable rail safety occurrences in accordance with legislation, regulatory requirements and organisational procedures. It includes identifying notifiable occurrences; completing and submitting documentation; conducting internal investigations; and assisting with external investigations in accordance with organisational procedures and relevant safeworking requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This unit applies to all types of occurrences that are recognised as notifiable rail safety occurrences according to rail safety regulations.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Identify legislative and regulatory requirements for reporting notifiable rail safety occurrences

1.1 Legislative and regulatory requirements for reporting notifiable rail safety occurrences are identified and accessed

1.2 Individual state/territory requirements for reporting notifiable rail safety occurrence are accessed and interpreted

1.3 Documentation required for reporting notifiable rail safety occurrences for each applicable state/territory is accessed and interpreted

1.4 Legislative and individual state/territory requirements for reporting notifiable rail safety occurrences are communicated to relevant organisational personnel

2 Complete and submit notifiable occurrence documentation

2.1 Notifiable rail safety occurrence is checked against documentation to determine the appropriate manner and timing for reporting the occurrence

2.2 Documentation to report the notifiable rail safety occurrence is accessed, completed and submitted in accordance with regulatory requirements

2.3 Top event in the notifiable occurrence is identified and reported in accordance with regulatory requirements

3 Contribute to investigating a notifiable occurrence

3.1 Contribution is made to investigating a notifiable rail safety occurrence in accordance with organisational safety management system requirements

3.2 Evidence is collected and managed in accordance with organisational procedures and regulatory requirements

3.3 Organisational information is managed appropriately to ensure consistency between multiple agency investigations

3.4 Confidentiality is maintained in accordance with organisational and regulatory requirements

3.5 Occurrence reports including recommendations and/or lessons learnt are submitted to relevant personnel in accordance with regulatory requirements and organisational procedures
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Basic information and evidence collection and preservation techniques for notifiable occurrences
- Principles of just culture as applied to investigating notifiable occurrences
- Relevant legislation, regulations, permit and licence requirements relating to rail safety management
- Requirements for investigating and reporting notifiable occurrences
- Requirements of organisational safety management system and incident management plans

Required skills:

- Communicate effectively with others verbally and in writing when investigating and reporting notifiable occurrences
- Complete occurrence reports
- Interpret and follow operational instructions and prioritise work
- Read and interpret instructions, procedures and information relevant to notifiable occurrences
- Work collaboratively with others when responding to notifiable occurrences
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the required knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying notifiable occurrence legislative and regulatory requirements
  - completing a notification form for an identified notifiable occurrence
  - identifying a top event from a notifiable occurrence
  - completing a report on a notifiable occurrence

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Notifiable rail safety occurrences may include:
- derailments
- collisions
- level crossing occurrences
- breaches of safeworking
- signals passed at danger (SPAD)
- load irregularity
- dangerous goods occurrence
- rail network security occurrence
- wrong side failures

Documentation may include:
- occurrence classification – guideline one (OC-G1)
- notifiable occurrence report
- notification form
- investigation report

Organisational procedures may include:
- safety management system
- incident management plans
- risk management procedures
- emergency management plans

Multiple agencies may include:
- emergency services
- regulator
- operators
- maintainers
- rail infrastructure managers
- coroner

Relevant personnel may be:
- supervisors and/or managers
- customers
- official representatives
- contractors
- relevant authorities
- employees
- regulators

Top event is:
- the event with the greatest adverse outcome – expressed in terms of causalities, damage or accident potential

Applicable regulations and legislation may include:
- legislated rail safety requirements including acts and regulations from each applicable state and/or territory together with any nationally approved compliance codes and/or guidelines
- relevant state/territory occupational health and safety (OH&S) and environmental protection legislation
• privacy regulations
• data protection regulations

Unit Sector(s)
Not applicable.

Competency Field
F – Safety Management
TLIF4108A Implement traffic management plan in the transport industry

Modification History
Release 1 - New unit of competency

Unit Descriptor
This unit covers the competency required to implement a traffic management plans in the Transport Industry. It includes: planning and preparing; setting out, monitoring and closing down the traffic guidance scheme; and housekeeping.

Application of the Unit
These traffic management plans include those for public and private roads, parking areas and restricted access sites. This unit is appropriate for those working in an operational roles, at worksites within:

- Tunnel Operations
- Open Road Operations

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan traffic guidance scheme

1.1 Relevant compliance documentation is accessed and interpreted according to workplace procedures and regulatory requirements

1.2 Work instructions relevant to the task are obtained and applied according to workplace procedures and regulatory requirements

1.3 Safety requirements for the allotted tasks are obtained, confirmed and applied according to workplace policies and procedures and regulatory requirements

1.4 Relevant signage and devices are identified, obtained and implemented according to the traffic management plan, workplace procedures and regulatory requirements

1.5 Required tools and equipment are selected and inspected for serviceability according to workplace procedures and regulatory requirements

1.6 Environmental protection requirements are identified and applied according to workplace procedures and regulatory requirements

1.7 Legislative requirements for traffic controller’s assigned are checked and confirmed according to workplace procedures and regulatory requirements

1.8 Site specific requirements for traffic flow are communicated appropriately in accordance with workplace procedures and regulatory requirements

1.9 Work crew safety is appropriately considered within the Traffic Management Plan according to workplace procedures and regulatory requirements

2 Implement traffic guidance scheme

2.1 Site specific traffic guidance scheme is selected according to workplace procedures and regulatory requirements

2.2 Work schedule adherence requirements are determined, communicated and monitored according to workplace procedures and regulatory requirements

2.3 Signage and device positioning is checked in accordance with the traffic management plan and according to workplace procedures and regulatory requirements
2.4 Traffic plan is appropriately adjusted on site according to site specific conditions as appropriate to ensure Work Crew safety and in accordance with workplace procedures and regulatory requirements

3 Monitor traffic guidance scheme

3.1 Traffic flow is monitored and effectiveness of traffic guidance scheme is measured according to workplace procedures and regulatory requirements

3.2 Traffic guidance scheme adjustments are implemented according to workplace procedures and regulatory requirements

3.3 Traffic controller performance management is undertaken according to workplace policies and procedures and regulatory requirements

3.4 Offending motorists are dealt with according to workplace policies and procedures and regulatory requirements

4 Evaluate and audit the traffic guidance scheme

4.1 Applied Traffic Plan is checked to ensure it matches the approved Traffic Plan in accordance with workplace procedures and regulatory requirements

4.2 Traffic plan is checked to ensure suitability to the actual traffic conditions in accordance with workplace procedures and regulatory requirements

4.3 The applied Traffic Plan is audited to ensure compliance with the approved safety plans in accordance with workplace procedures and regulatory requirements

5 Close down traffic guidance scheme

5.1 Traffic control devices are removed in a safe and sequential manner, according to workplace policies and procedures and regulatory requirements

5.2 Traffic guidance scheme information is accurately recorded according to workplace procedures and regulatory requirements

5.3 Workplace incidents are accurately reported according to workplace procedures and regulatory requirements

6 Undertake housekeeping

6.1 Work area is cleared in accordance with project environmental management plan and in accordance with workplace procedures and regulatory requirements

6.2 Work tools and equipment is cleaned, checked, maintained and stored in accordance with manufacturer’s
recommendations and workplace policies and procedures and regulatory requirements

6.3 Traffic Management signs are returned to pre-work state in accordance with workplace procedures and regulatory requirements

Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit.

Required Knowledge:

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement a traffic management plan:

- site and equipment safety requirements
- state and territory traffic management legislation
- requirements set down by the Manual for Uniform Traffic Control Devices
- potential hazards
- traffic controlling
- traffic management plans
- basic signaling
- signs and devices
- radio operations
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of travel speed
- quality requirements
- tunnel and open road terminology
- JSAs/Safe work method statement

Required Skills:

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement a traffic management plan:

- apply legislative requirements, workplace procedures and site requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for implementing of traffic management plans
- implementation of requirements, procedures and techniques for the safe, effective and efficient implementing of traffic management plans, which are to include:
  - complying with State/Territory regulations on three separate live traffic projects, and
  - controlling site vehicles
  - working collaboratively with others to undertake and complete the traffic management plans that meet all of the required outcomes
  - consistent and timely implementation of traffic management plans that safely, effectively and efficiently meet the required outcomes

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- The environment of assessment and delivery should be sufficiently customised to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site
circumstances.
- Where appropriate, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
  - capacity to work with others to implement traffic management plans

Guidance information for assessment
Consult the TLISC for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Codes of Practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may be received via verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, maps, materials safety data sheets (MSDS) and diagrams or sketches and may include:

- specifications
- quality requirements
- operational details
- safe work procedures or equivalent
- regulatory/legislative requirements
- manufacturers' specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised organisational or external personnel
- relevant Australian standards
- those included in compliance documentation
- personal protective equipment
- safe operating procedures, including recognising and preventing hazards associated with:
  - uneven/unstable terrain
  - trees
  - pits

Safety requirements may include:
- poles
- trip hazards
- dirt mounds
- overhead services
- underground services
- bridges
- surrounding buildings
- obstructions
- structures
- facilities
- fires
- excavations
- traffic
- embankments
- cuttings
- hazardous materials
- recently filled trenches
- other machines
- personnel
- restricted access barriers
- traffic control
- working in proximity to others
- worksite visitors and the public
- safe parking practices, including:
  - ensuring access ways are clear
  - equipment/machinery is away from overhangs and refuelling sites
  - safe distance from excavations
  - secured from unauthorised access or movement
  - emergency procedures
- temporary warning signs
- regulatory and traffic cones
- vehicle mounted signs and flashing lights
- guide signs

Signage and devices are to include

Signage and devices may include:
• warning signs
• barriers
• hazard markers
• portable traffic signals
• bollards
• arrow boards

Tools and equipment are to include:
• high visibility vests
• cones
• signage
• notebooks
• pens
• radios
• stop-slow bats
• delineators
• barricades
• barriers
• bollards
• warning lights and beacons
• arrow boards
• signalling devices

Environmental aspects may include the requirements of the organisation/project environmental management plan, and may include:
• waste management
• water quality protection
• noise, vibration, dust management
• clean-up management

Conditions may include:
• varying terrain
• all weather conditions
• varying road surfaces
• all vehicle types
• rural, urban or residential localities
• all times of day
• varying traffic volumes
• varying road types
• congested urban environments
• low traffic rural areas
• off-road un-trafficked areas
• buildings
• parking sites
• pedestrian areas
• tunnels
• open roads
Communications is to include:

- verbal instructions
- fault reporting

Communications may include:

- 2-way radio
- hand signals
- mobile phone
- site specific instructions
- written instructions
- instructions related to job/task

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4109A Communicate effectively to coordinate incident response procedures

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to communicate effectively to coordinate incident response procedures in accordance organisational procedures. It includes responding to the incident, coordinating incident responses, communicating effectively and completing follow-up actions.

Licensing, legislative, or certification requirements are not applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in an emergency, fire or accident.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Respond to reported incidents

1.1 Details of incidents are received, analysed, confirmed and prioritised

1.2 Immediate coordination requirements are identified and actioned in accordance with organisational procedures

### 2 Coordinate incident response activities

2.1 Control and/or coordination of incident response activities is assumed and all relevant personnel and other authorities are informed of this action

2.2 Assistance to be provided to clients and operators is arranged within the limitations of duty of care and organisational requirements

2.3 Assistance is provided to relevant authorities in accordance with organisational policies and legislative requirements

2.4 Information is collected and passed on to relevant personnel/stakeholders in accordance with workplace procedures

### 3 Convey complex information

3.1 Complex information is conveyed clearly and accurately

3.2 Recipient understanding of information is monitored and mode of communication is adjusted appropriately

3.3 Interaction is monitored to ensure it is consistent with the urgency of the situation, in accordance with organisational policies and procedures

### 4 Communicate with relevant personnel

4.1 Information is conveyed clearly and clarified when requested by other parties

4.2 Requirements are communicated clearly and in a manner that reflects an appropriate level of authority

4.3 Direction, advice and assistance is sought when required and is followed as appropriate to the situation

4.4 Difficulties in communication are recognised and resolved using appropriate communication skills and techniques

4.5 Roles and authority of relevant personnel involved in the situation are clarified and respected

### 5 Overcome barriers to communication

5.1 Barriers to effective communication are identified by continuous monitoring of the situation

5.2 Situational needs are identified, clarified and confirmed using appropriate communication skills and techniques
5.3 Conflict and potential for conflict are dealt with in a manner that prevents escalation

6 Communicate as a team

6.1 Handover-takeover is performed and full details are communicated to/received from other team member to ensure continuity of incident response

6.2 Team member communications are acknowledged as received and understood

6.3 Observations are verbalised to team members

6.4 Inquiries are made of team members to clarify information required to provide continued incident response

7 Complete follow-up actions

7.1 Details of incident are collected, recorded and managed in accordance with organisational procedures

7.2 Contribution is made to debrief process and recommendations are prepared and submitted as required
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Hazards, risks and related precautions to control risk
- Layout of network/area under control and potential obstacles for responding parties
- Means to control and organise incidents and to provide practical assistance where required
- Organisational procedures and policies for responding to incidents
- Procedures for contacting emergency personnel and other relevant stakeholders
- Relevant work health and safety (WHS)/occupational health and safety (OHS) and other regulatory codes, procedures and guidelines concerning responding to incidents
- Types of incidents that can occur and the appropriate action to be taken in each case

Required skills:

- Collaborate with others when implementing and coordinating incident response procedures
- Complete documentation related to the implementation and coordination of incident response procedures
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information relevant to the implementation and coordination of incident response procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

<table>
<thead>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Action to be taken in an incident may include:
- alerting relevant organisational personnel and emergency services
- assessing nature and extent of incident
- ensuring medical assistance is provided where required
- identifying and following established incident procedures
- isolating and coordinating safety of the scene
- recording relevant information and reporting on incident situation in accordance with regulatory and organisational requirements

Consultative processes may include:
- contractors
- designated emergency officers
- emergency services personnel including ambulance, police, fire agencies, SES
- personnel and management
- other professional or technical staff
- WHS/OHS specialists

Communication systems may include:
- electronic data interchange
- oral communications
- phone/mobile phone
- radio
- short message service (SMS)

Barriers to effective communication may include:
- differing terminology/jargon
- emotional state
- hearing difficulties
- language difficulties
- religious, social or cultural factors
- speech impediments

Complex information may include:
- emergency procedures
- human resources requirements
- incident history
- incident situation and implications
- specific emergency response equipment
- specific emergency response requirements

Information/documents may include:
- Acts and regulations
- International Maritime Dangerous Goods (IMDG) code markings, HAZCHEM codes and where applicable emergency information panels
Applicable regulations and legislation may include:

- incident response procedures
- quality assurance procedures
- relevant legislation, regulations and documentation related to incident response situations
- dangerous goods and hazardous goods regulations
- emergency procedures regulations
- relevant Australian standards, codes of practice and guidance notes
- relevant commonwealth, state/territory WHS/OHS legislation
- relevant state/territory environmental protection legislation
- relevant state/territory rail safety legislation

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF4110A Respond to abnormal situations and emergencies when driving a train

Modification History

Release 1. This is the first release of this unit.
This unit replaces and is equivalent to TLIF4021A Respond to train-driving emergencies and abnormal situations.

Unit Descriptor

This unit involves the skills and knowledge required to respond to abnormal situations and emergencies when driving a train, in accordance with regulatory requirements, relevant codes of practice and organisational procedures.
It includes identifying and responding to abnormal situations and emergencies when driving a train, arranging follow-on support and assistance, and communicating with personnel and passengers in accordance with organisational procedures and relevant safeworking requirements.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit

People achieving competence in this unit will need to fulfil the legislated rail safety requirements including applicable state and territory acts and regulations, and nationally approved compliance codes and/or guidelines.
Work is generally performed without supervision and within a team environment. It involves the application of organisational procedures and regulatory requirements when responding to abnormal situations and emergencies when driving a train, as part of work activities in a range of contexts across the Australian rail system.
must be carried out in compliance with the relevant regulations and workplace procedures concerning action to be taken in an emergency, fire or accident.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify abnormal situations and emergencies
   1.1 Abnormal situations and emergencies when driving a train are identified, assessed and prioritised in accordance with workplace emergency response plans and safeworking requirements and procedures
   1.2 Implications of abnormal situations and emergencies when driving a train are evaluated in accordance with workplace requirements, and safeworking requirements and procedures
   1.3 Options for reporting abnormal situations and emergencies when driving a train and/or taking action are considered in accordance with organisational procedures and regulatory requirements
   1.4 Relevant personnel are alerted to abnormal situations and emergencies when driving a train in accordance with workplace operating and emergency procedures and plans
   1.5 Communications are maintained with relevant personnel to determine appropriate course of action

2 Respond to abnormal situations
   2.1 Abnormal situations when driving a train are responded to in accordance with organisational procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan where relevant
   2.2 Responsibilities are fulfilled in accordance with organisational procedures, and safeworking and/or regulatory requirements
   2.3 Assistance is provided to relevant personnel as required
   2.4 Information is provided to relevant personnel as requested in accordance with regulatory and organisational procedures
3 Respond to emergencies

3.1 Emergency situations are responded to in accordance with organisational procedures, received instructions from relevant personnel, regulatory requirements and emergency response plan where relevant.

3.2 Emergencies are handled appropriately in accordance with established response plan and within limits of own responsibility and duty of care.

3.3 Responsibilities are fulfilled in accordance with organisational procedures, emergency response plan and safeworking and/or regulatory requirements.

3.4 Assistance is provided in controlling site prior to and following arrival of emergency services as required.

3.5 Assistance is provided to other staff and emergency service personnel conducting initial survey of scene as requested.

3.6 Directions of controlling emergency authority are followed and all possible assistance is provided in response to those directions.

3.7 Information is provided to relevant emergency service personnel as requested in accordance with regulatory and organisational procedures.

4 Communicate with staff and/or passengers

4.1 Staff and/or passengers are provided with relevant, appropriate and timely advice about abnormal situation or emergency.

4.2 Instructions are provided to relevant personnel and/or passengers in accordance with organisational procedures, consistent with the nature of abnormal situation or emergency.

4.3 Evacuation procedures for personnel and/or passengers are explained and/or applied as required, in accordance with organisational procedures.

4.4 Customer service and safety needs arising from abnormal situations and emergencies are identified and acted upon in accordance with regulatory and workplace requirements.

5 Follow incident reporting procedures

5.1 Incident reports are completed accurately in accordance with regulatory requirements and organisational procedures.

5.2 Incident reports are processed in accordance with regulatory requirements and organisational procedures.
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Emergency procedures
- Focus of operation of work systems, equipment, management and site operating systems when responding to abnormal situations and emergencies when driving a train
- Hazards that may occur that can lead to emergencies, and related hazard control strategies
- Organisational procedures and policies for identifying and responding to abnormal situations and emergencies when driving a train
- Problems that may occur when responding to abnormal situations and emergencies when driving a train and action that can be taken to resolve these problems
- Relevant Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- Relevant documentation and reporting requirements
- Relevant environmental protection legislation, procedures and guidelines
- Relevant information/documents such as:
  - agent/supplier/customer instructions and advice in the case of freight
  - communication equipment procedures and protocols
  - conditions of service, legislation and industrial agreements including workplace agreements and awards
  - dangerous goods declarations and safety data sheets (SDS)/material safety data sheets (MSDS)
  - equipment operation manuals and maintenance specifications
  - manifests, goods identification numbers and codes, including the Australian Dangerous Goods (ADG) Code and International Maritime Dangerous Goods (IMDG) markings, and HAZCHEM signs
  - operations manuals, job specifications and induction documentation
  - organisational procedures and policies for identifying and responding to abnormal situations and emergencies when driving a train
  - procedures and policies for the management of emergencies and abnormal situations, including the relevant emergency response plan where applicable
  - quality assurance and customer service standards and procedures including passenger comfort and on-time running standards
  - train timetables and schedules
  - Relevant legislated rail safety requirements including state and territory acts and regulations, and nationally approved compliance codes and/or guidelines
  - Relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, procedures and guidelines
  - Relevant workplace relations regulations
**Required skills:**

- Communicate effectively with others when responding to abnormal situations and emergencies when driving a train
- Complete documentation and reports related to abnormal situations and emergencies when driving a train
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Operate electronic communication equipment to required protocol
- Select and use relevant communications and other equipment when identifying and responding to abnormal situations and emergencies when driving a train
- Select and use required personal protective equipment conforming to industry and WHS/OHS standards
- Work collaboratively with others when responding to abnormal situations and emergencies when driving a train
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and organisational procedures
- other relevant aspects of the range statement.

Assessment must include exercises that demonstrate competent performance of the following in a range of situations:

- identifying abnormal situations and emergencies when driving a train
- identifying possible responses to identified abnormal situations and emergencies when driving a train
- communicating effectively with relevant personnel when responding to abnormal situations and emergencies when driving a train.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Trains may include:
- freight trains
- heavy haul
- passenger

Work may be conducted:
- by day or night
- in a range of work environments
- on track owned and maintained by different organisations

Abnormal situations may include:
- assault on passengers and/or personnel
- incorrect information or failure in communications
- faulty safeworking equipment:
  - motorised or manually operated points
  - non operating signals or indicators
- locomotive failure
- passenger caught in self-closing doors
- passenger initiated alarm/false alarm
- pedestrians crossing the track
- railway technology failure
- track obstructions
- wheel slip and uncontrolled slide

Emergencies may include:
- bomb threats
- chemical spills
- collision with:
  - infrastructure
  - person
  - train
  - vehicle
- derailments
- fire and explosion
- flooding/wash away
- passenger emergency
- suicide on track

Hazards that can lead to emergency situations may include:
- contact with:
  - human and/or biological waste
  - infectious and contagious diseases
  - self-closing doors
  - sharp objects
  - syringes and drugs
TLIF4110A Respond to abnormal situations and emergencies when driving a train

- faulty or out of specification track
- faulty rolling stock or motive power units
- handling of hot food and equipment
- handling, storage and carriage of dangerous goods and other hazardous substances
- sudden and unexpected movement of rolling stock/infrastructure

Relevant personnel may include:
- maintenance personnel
- network owners
- passengers
- signals staff
- station staff
- those providing operational assistance
- train controllers
- train examiners

Consultative processes may include:
- affected customers
- emergency services
- industrial relations and WHS/OHS specialists
- official representatives
- other employees, supervisors and managers
- relevant authorities and institutions
- union representatives

Communication in the work area may include:
- electronic data interchange (EDI)
- mobile/satellite phone
- oral, aural or signed communications
- radio
- radio frequency (RF) systems

Emergency services may include:
- ambulance
- Defence
- fire services
- medical services
- police
- rescue services
- security services
- state/territory emergency services

Personal protective equipment may include:
- end of train markers
- flags
- gloves
- hand lamps
- hearing protection
- high visibility clothing
- safety:
- devices
- footwear
- glasses
- headwear
- sunglasses
- sunscreen
- two-way radios

Organisational procedures may include:
- company procedures
- enterprise procedures
- established procedures
- workplace procedures

**Unit Sector(s)**
Not applicable.

**Competency Field**
F – Safety Management
TLIF4111A Work effectively in a train-driving environment

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to work effectively in a train-driving environment and includes monitoring own health and wellbeing, maintaining situational awareness, maintaining workplace safety, mitigating threats and errors, and maintaining currency of industry skills and knowledge.
Licensing or certification requirements are not applicable to this unit.

Application of the Unit
This activity applies to individuals who are engaged in operating rolling stock in the work environment and who are responsible for their own work. This may be in a defined context under direct supervision and/or with some individual responsibility.
This unit has limited application in the rail operations environment.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Monitor own health and wellbeing**
   - 1.1 Health and wellbeing issues that impact on train driving are identified
   - 1.2 Own health and wellbeing is assessed against identified issues
   - 1.3 Potential for own health and wellbeing to deteriorate in relation to identified issues is determined
   - 1.4 Action is taken to improve own health and wellbeing status in relation to identified issues

2. **Maintain situational awareness**
   - 2.1 Self and others are assessed for task knowledge requirements at commencement and duration of the task
   - 2.2 External and internal information that impacts on the operation of the train is gathered
   - 2.3 Information about the train and its systems is accurately interpreted
   - 2.4 Significance of this information in relation to the current situation is determined
   - 2.5 Changes in the current situation are anticipated and action is taken to correct any negative impacts of these anticipated changes
   - 2.6 Appropriate personnel involved are informed of these changes

3. **Implement work safety requirements**
   - 3.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures and work instructions are identified and implemented
   - 3.2 Pre-start systems and equipment checks are carried out according to organisational procedures
   - 3.3 Organisational procedures for responding to emergency incidents are implemented
   - 3.4 Designated persons for reporting queries and concerns about safety in the workplace are identified
   - 3.5 Existing and potential hazards in the workplace are identified, reported to designated persons and recorded according to organisational procedures
   - 3.6 Emergency incidents and injuries are identified and reported to designated persons according to organisational procedures
   - 3.7 WHS/OHS duty holders in own work area and their duties are identified
### 4 Recognise, manage and mitigate threats and errors

4.1 Relevant environmental and/or operational threats and errors are identified

4.2 Standard operating procedures are applied to avoid identified operational threats and errors occurring

4.3 Strategies for reducing the frequency of errors are implemented

4.4 Strategies for limiting the consequences of errors are implemented

4.5 Progress is monitored and assessed to ensure a safe journey

4.6 Actions are modified and communicated as required when a safe journey is in doubt

4.7 Systems, environment and rail operations staff are monitored, and information is collected and analysed to identify potential or actual threats and errors

4.8 Timely action is taken to prevent identified threats and errors

### 5 Maintain currency of industry skills and knowledge

5.1 Notices and directives about new policies, processes and procedures are read and implemented

5.2 Clarification is sought from relevant personnel about anything that is not clear in relation to new policies, processes and procedures

5.3 Where issues about new policies, processes and procedures are interpreted, this information is provided to relevant personnel

5.4 Relevant professional development and training activities are undertaken
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Awareness of the impact illness and medication can have on information processing
- Decision making processes
- Factors that impact on worker health and wellbeing and their effects
- Fatigue management strategies
- Emergency management
- How preconceptions of what is going to happen can detract from situational awareness
- How to make better use of resources (human, equipment, information and procedures) to reduce rail safety occurrences
- Human error as source of risk in rail operations
- Leadership
- Notices and directives about new policies, processes and procedures
- Reducing rail safety occurrences attributable to human error
- Relevant safety, WHS/OHS, and environmental procedures and regulations
- Risk management processes (hazard identification, risk management and risk controls)
- Self-management
- Situations that can result in a loss in situational awareness:
  - ambiguous information
  - becoming fixated or preoccupied
  - breakdown in standard operating procedures
  - confusion
  - complacency
  - contradictory information
  - fatigue
  - ineffective communication
  - non-compliance
  - poor health
  - standard operating procedures not being followed correctly
- Standard operating procedures to avoid identified threats and errors occurring
- Task and workload management
- Teamwork
- Threat and error management
- Tools and techniques to improve and manage human performance
Required skills:

- Be aware of the roles of other rail operations staff as they impact on train driving
- Be vigilant
- Communicate effectively and positively with rail operations staff
- Continually assess and reassess situations
- Develop and implement safety and operations plans
- Execute response training in critical situations
- Familiarise oneself with train system being used
- Interpret rosters and prepare for rosters as required
- Keep industry knowledge up-to-date
- Perform to track owner requirements, specifications and operational demands
- Plan ahead and develop alternative plans
- Plan for contingencies
- Prioritise safety issues that will impact on work tasks
- Prioritise tasks
- Remain alert and active when monitoring automatic systems
- Report changes in situations as necessary
- Scan environment at regular intervals or important points in the process
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Health and wellbeing issues may include:

- alcohol, tobacco and other drugs
- diet/eating plans
- exercise
- fatigue
- health and other requirements for workers undertaking safety critical tasks and jobs
- lifestyle factors
- non-work related health and wellbeing problems
- stress
- weight
- work related factors
- workplace psychosocial factors

Action may include:

- advice on healthy eating plans
- commitment to and action of quality family/personal time
- regular allotment of time to exercise
- using company provided counselling services

External and internal information that impacts on the operation of the train may include:

- access to and use of company and/or public counselling services
- commonwealth and state/territory government information about improving health, wellbeing and lifestyle
- commonwealth and state/territory government information on the impact of alcohol and other drugs in relation to individuals and families
- requirements in regards to rail health requirements
- time management information to assist in prioritising personal and professional priorities

Changes in the current situation may include:

- environmental
- incidents, both mechanical and human
- task related

Appropriate personnel may include:

- commonwealth and state/territory bodies and/or departments
- counselling services
- internal health programs
- family

Relevant environmental or operational threats and errors may include:

- dangerous goods related incident
- safety breach
- train quality (mechanical) failure
Strategies for reducing the frequency of errors may include:

- terrorism
- uncooperative work relationship (direct or remote)
- reducing reliance on memory
- using checklists, reminders
- using communication protocols
- adequate human machine interface design

Strategies for limiting the consequences of errors may include:

- improve communication skills
- cross checking and monitoring
- training for error detection and recovery
- transparent systems with adequate feedback
- new operational procedures and processes
- regulatory requirements
- track owner network requirements

Notices and directives about new policies, processes and procedures may include:

- new operational procedures and processes
- regulatory requirements
- track owner network requirements

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to investigate safety incidents in accordance with regulatory and workplace requirements, including planning the investigation, collecting and analysing information, and preparing the safety incident report. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines.

Work is performed under some supervision generally within a team environment. It involves the application of workplace procedures and relevant regulatory and code requirements to the investigation of safety incidents as part of work activities in the rail transport and/or allied industries.

Licensing/Regulatory Information
Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan the investigation | 1.1 Clarification of the objectives of the incident investigation is established in conjunction with relevant personnel, and in accordance with workplace and regulatory requirements  
1.2 Timeframes and locations for the investigation are established in conjunction with relevant personnel  
1.3 Resources required for the investigation are identified and obtained within workplace guidelines |
| 2 Collect and analyse information | 2.1 All relevant available incident information is obtained and collated in order to facilitate a detailed and accurate analysis of the incident  
2.2 Interviews are conducted with relevant personnel to establish their recollection of events associated with the incident  
2.3 Information is analysed in accordance with the established objectives of the investigation, based on approved conditions, applicable standards and operational guidelines  
2.4 Options for action are generated which are consistent with workplace and/or statutory requirements and lead to recommendations which reduce future risk  
2.5 Criteria are specified to enable objective evaluation of the options to be undertaken |
| 3 Prepare report | 3.1 Conclusions are drawn and recommendations are made which will enable a satisfactory resolution of the incident issues, and meet workplace and any other statutory requirement.  
3.2 Opportunities to enhance operational efficiency and safety procedures are documented in accordance with the standard reporting guidelines  
3.3 Documentation is filed and distributed to all relevant parties for consideration and subsequent action |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures and policies for the investigation of safety incidents
- Focus of operation of work systems, equipment, management and site operating systems for the investigation of safety incidents
- Problems that may occur when investigating safety incidents and appropriate action that can be taken to resolve the problems
- Data collection and analysis techniques required when investigating safety incidents
- Documentation and reporting requirements for the investigation of safety incidents

Required skills:

- Communicate effectively with others when investigating safety incidents
- Read and interpret instructions, procedures and information relevant to the investigation of safety incidents
- Interpret and follow operational instructions and prioritise work
- Conduct interviews and take statements
- Negotiate, communicate and liaise effectively with others
- Prepare reports and recommendations
- Complete documentation related to the investigation of safety incidents
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when investigating safety incidents
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems identified when investigating safety incidents in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when investigating safety incidents
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the investigation of safety incidents
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer, communication and office equipment required when investigating safety incidents
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Resources required for the investigation may include:
- personnel time
- access to incident site
- access to equipment including rolling stock and infrastructure

Incident information may be obtained from:
- incident reports
- dangerous goods manifest
- drivers advice (train load)
- safeworking forms
- special train notices
- consist forms
- wagon cards
- out-of-gauge documents
- train journals or train register books transport instructions
- load and weight records
- material safety data sheets
- inspection reports-routine circulars
- interviews with those involved in the incident -f.
- interviews with witnesses

Depending on the context of the safety incident concerned, the applicable regulatory/code requirements may include:
- the relevant state/territory OH&S regulations
- the relevant state/territory codes of practice for safeworking
- the Code of Practice for the Defined Interstate Rail Network

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials, trains and vehicular traffic

Consultative processes may include:
- other employees, supervisors and managers
RANGE STATEMENT

involve:

- affected customers
- official representatives
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- workplace procedures and policies for the investigation of safety incidents
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including the ADG Code and Railways of Australia Code of Practices and Conditions for the Carriage of Dangerous Goods
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, and other industrial arrangements
- relevant Australian standards and certification requirements
RANGE STATEMENT

Applicable regulations and legislation may include:

- quality assurance procedures
- emergency procedures
- applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Code of Practice for the Defined Interstate Rail Network in situations where safety incidents occur on that network
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian and International Explosives Codes
- Railways of Australia Code of Practices and Conditions for the Carriage of Dangerous Goods
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Respond to emergency situations | 1.1 Emergency and potential emergency situations are promptly identified and assessed and needs are prioritised in accordance with the workplace emergency response plan/procedures  
1.2 Situations are handled appropriately following emergency  
1.3 Incident reports are completed accurately in accordance with regulatory and workplace procedures |
| 2 Take required action during an emergency | 2.1 Responsibilities are fulfilled in accordance with the workplace emergency response plan and code/regulatory requirements  
2.2 Assistance is provided to other staff in conducting an initial survey of the scene of an emergency  
2.3 Assistance is provided in controlling the site both prior to and following arrival of emergency services  
2.4 Directions of the controlling emergency authority are followed and all possible assistance is provided in response to those directions |
| 3 Arrange follow-on support and assistance | 3.1 Medical assistance and support is arranged as required in accordance with workplace procedures  
3.2 First aid is provided pending the arrival of medical assistance within limits of responsibility and competence in accordance with workplace procedures |
| 4 Communicate with staff | 4.1 Staff and customers are provided with relevant, appropriate and timely advice on emergency situations and instructions to be followed on an ongoing basis  
4.2 Evacuation procedures for staff/customers are demonstrated and explained in accordance with workplace procedures  
4.3 Customer service and safety needs arising from emergency situations are identified and acted upon in accordance with regulatory and workplace requirements |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian codes of practice, regulations and safeworking systems relevant to the management of emergencies, including the Australian Dangerous Goods Code and any applicable legislated rail safety requirements including acts and regulations from each state and territory together
REQUIRED KNOWLEDGE AND SKILLS

with any nationally approved compliance codes and/or guidelines

- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the management of emergencies, including the elements of an emergency response plan and first aid procedures where applicable
- Focus of operation of work systems, equipment, management and site operating systems for the management of emergencies
- Problems that may occur when managing emergencies and appropriate action that can be taken to resolve the problems
- Documentation and reporting requirements for the management of emergencies
- Hazards that may occur in transport and allied industries that can lead to emergency situations, and related hazard control strategies, including: handling hot food and equipment; sudden and unexpected movement; infectious and contagious diseases; self-closing doors; sharp objects; syringes and drugs; contact with human and biological waste; fire and explosion; collision; derailment of trains; handling, storage and carriage of dangerous goods and other hazardous substances; and the handling, storage and carriage of explosives
- Documentation and analysis techniques required when managing emergencies

Required skills:

- Communicate effectively with others when managing emergency situations
- Read and interpret instructions, procedures, information and signs relevant to the management of emergency situations
- Interpret and follow operational instructions and prioritise work
- Conduct interviews and take statements
- Complete documentation related to the management of emergency situations
- Prepare reports and recommendations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing emergency situations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when managing emergency situations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated developments that may occur when managing emergency situations
- Follow emergency response plan and procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during emergency situations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and
Required skills:
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer/communication/office equipment required when managing emergencies
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Competency Field

Competency Field F - Safety Management
TLIF5021A Apply rail safeworking rules and procedures

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to apply rail safeworking rules and procedures. It includes establishing the purpose and function of safeworking systems, implementing the principles of rail safeworking systems and implementing the principles of track protection systems. Licensing, legislative or certification requirements are not applicable to this unit at the time of publication.

Application of the Unit
This unit covers applying rail safeworking rules and procedures used within rail operations. It can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Establish purpose and function of rail safeworking systems
   1.1 Relevant information is accessed and analysed
   1.2 Purpose of rail safeworking rules and procedures are identified and explained
   1.3 Methods for developing safeworking rules and procedures are identified and outlined
   1.4 Types of safeworking systems, their functions and where they are used are explained

2 Implement principles of rail safeworking systems
   2.1 Relevant information is accessed and analysed
   2.2 Principles behind rail safeworking systems are identified and explained
   2.3 Main elements of rail safeworking systems are identified and explained
   2.4 Methods by which operations can continue in degraded situations are identified and outlined
   2.5 Appropriate procedures are prepared to enable operations to continue in various degraded situations

3 Implement principles of track protection systems
   3.1 Relevant information is accessed and analysed
   3.2 Risks involved in working on or beside the track are identified, explained and managed
   3.3 Purpose of track protection is identified and explained
   3.4 Different methods of track protection are identified and outlined
   3.5 Work is planned so that relevant track protection methods can be applied
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Changes in rail industry operations and technology with implications for rail safety
- Duty holders and their duties under rail safety legislation, such as:
  - contractors
  - designers, manufacturers, suppliers, commissioners, erectors and installers
  - de-commissioners
  - managers of private sidings
  - rail safety workers
  - rail transport operators-rail infrastructure managers and/or rolling stock operators
- Key concepts and definitions relating to rail safeworking
- Key regulatory requirements and standards for participants in the rail industry
- Key principles and practices associated with railway operations
- Rail regulatory framework
- Rail industry terminology, including terminology used in technical standards
- Rail safety management systems
- Rail safety operating principles:
  - ensuring emergencies and incidents are properly managed
  - ensuring interfaces between different organisations are properly defined and managed
  - identifying and managing risk
  - protecting persons from injury
  - protecting property from damage
  - track access
  - train separation
- Relevance of national and international standards to the rail industry
- Relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to safeworking and track protection

**Required skills:**

- Access and use rail safety industry standards
- Communicate effectively with others, particularly in relation to interpreting complex information relating to rail operations
- Develop and maintain currency of rail industry knowledge and regulatory requirements
- Network and build relationships with a diverse range of rail industry organisations
- Research information related to the rail industry and rail safety regulation
- Review changing regulatory information
- Work ethically in accordance with legislation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Relevant information may include:

- audit program information
- compliance and enforcement regime
- changes to regulations
- rail regulatory requirements
- safety notices

Safeworking systems may include:

- automatic train control (ATC)
- centralised traffic control (CTC)
- double line block
- electric staff
- manual block working
- mishap orders
- pilot staff working
- rail vehicle detection
- section authority
- special proceed authority
- staff and ticket
- train order working

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF5022A Develop and manage fitness for work policy and procedures

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to develop and manage fitness for work policy and procedures in an organisation. It includes identifying legal requirements, liabilities and responsibilities; establishing and/or improving implementation plans, related policy and procedures; and acting appropriately to reports on the implementation of fitness for work policy and any identified breaches of associated regulations. It also includes ensuring that the operation’s systems are compliant with regulations and organisational policy; and establishing, implementing, monitoring and communicating fitness for work programs. Licensing, legislative, regulatory or certification requirements are applicable to this unit. – here or below

Application of the Unit
This unit applies to people with the responsibility for rail operation management.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Not applicable.
## Elements and Performance Criteria

### 1 Identify or confirm regulatory requirements and organisational responsibilities

| 1.1 | Current regulatory requirements, obligations and responsibilities for fitness for work within the organisation are identified and interpreted |
| 1.2 | National health assessment standards for rail safety workers and/or other applicable standards are accessed and interpreted |
| 1.3 | Current regulatory requirements, obligations and responsibilities regarding the use of drugs and alcohol by rail safety workers are identified and interpreted |
| 1.4 | Current regulatory requirements, obligations and responsibilities regarding fatigue management of rail safety workers are identified and interpreted |
| 1.5 | Risk-based approach is taken to developing programs that meet regulatory requirements |

### 2 Establish and implement a fitness for work policy and procedures

| 2.1 | Organisational fitness for work implementation plan is developed and/or reviewed and implemented in conjunction with relevant personnel |
| 2.2 | Organisational fatigue management policy and procedures are developed and/or reviewed and implemented |
| 2.3 | Policy and procedures related to drug and alcohol testing are developed and/or reviewed and implemented |
| 2.4 | Fitness for work policy and procedures are aligned to organisational return-to-work policy and procedures |
| 2.5 | Risk management approach is taken to identifying medical requirements for categories of rail safety workers |
| 2.6 | Fitness for work risk management system implementation plan and related policy and procedures are distributed and presented to relevant organisational personnel for implementation |

### 3 Monitor implementation of fitness for work policy and procedures

| 3.1 | Reports from designated personnel on the implementation of the organisation’s fitness for work risk management system implementation plan and related policies and procedures are received and interpreted |
| 3.2 | Reports on accidents and safety incidents are reviewed to identify the extent to which a breach of the fitness for work procedures might have been a contributing factor |
| 3.3 | Organisational activities are monitored and changes to organisation’s fitness for work risk management system and procedures are |
identified, and appropriate action is taken to make the necessary adjustments

4 **Act upon identified breaches of fitness for work policy**

4.1 Identified or reported breaches of fitness for work policy are investigated in accordance with organisational procedures and regulatory requirements

4.2 Action is taken to ensure internal and/or external personnel who may have contributed to any breach of fitness for work policy are provided with appropriate feedback and information to avoid any recurrence of the breakdown in planned processes

4.3 Where organisational procedures or culture are found to have contributed to a breach in fitness for work policy, appropriate action is taken to improve procedures or to address the culture in ways that aim to avoid any recurrence of the breakdown

4.4 Report on any breaches of fitness for work policy is prepared and submitted to designated personnel in accordance with organisational procedures and/or regulatory requirements

5 **Ensure operations systems are compliant with fitness for work policy and regulations**

5.1 All operations systems and standard operating procedures are reviewed in terms of their compliance with the organisation’s fitness for work policy and regulations

5.2 Changes are made to operations systems and standard operating procedures to ensure they are compliant as required

5.3 Supplier and/or subcontractor operations systems and standard operating procedures are reviewed to ensure they are compliant with fitness for work policy and regulations, in accordance with legislated requirements

6 **Identify required resources and operational systems**

6.1 Resources to support the implementation of the organisation’s fitness for work risk management system are identified and submitted to appropriate authority

6.2 Organisation’s fitness for work risk management systems resources are periodically reviewed and appropriate changes are made or requested

7 **Communicate fitness for work policy and procedures**

7.1 Appropriate personnel affected by organisational fitness for work policy and procedures are identified

7.2 Organisational fitness for work policy and procedures are communicated to appropriate personnel using effective strategies

7.3 Team leaders, and supervisory and training staff are provided with adequate resources to deliver organisational fitness for work
communication strategies
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Components of a fitness for work risk management system:
  - drug and alcohol policy and procedures
  - drug and alcohol testing and reporting requirements
  - fatigue management policy and procedures
  - legislated rail safety worker medical requirements
- Procedures for the auditing and review of an organisation’s fitness for work management system and related policy and procedures, and for the reporting of the outcomes of audits
- Relevant commonwealth and state/territory legislation and regulations related to fatigue management, drug and alcohol use, and medical requirements in the rail industry
- Relevant commonwealth and state/territory legislation, regulations and procedures related to work health and safety (WHS)/occupational health and safety (OHS)
- Relevant documentation:
  - error and safety incident reports
  - fitness for work management system documents
  - quality assurance procedures
  - relevant standards and certification requirements
  - reports of audits of fitness for work management systems
  - return-to-work policies and procedures
  - workplace instructions and procedures on fitness for work
- Responsibilities of both an organisation and individual employees for implementing fitness for work policy and regulations
- Risk-based approaches to developing fitness for work programs
- Strategies for ensuring that the investigation and analysis of errors, safety incidents and accidents identify the extent to which fitness for work is a contributing factor
- Systems for auditing the effectiveness of an organisation’s fitness for work management strategies, policies and procedures

**Required skills:**

- Adapt to any changes in legislation and regulations as they may relate to fitness for work
- Communicate effectively with others when implementing the organisation’s fitness for work management system
- Facilitate systems that assist employees to identify their own learning needs on matters related to fitness for work
- Organise audits and reviews of an organisation’s fitness for work management system
- Read and interpret documentation on fitness for work management legislation
- Recognise breaches of fitness for work management strategies and regulations, and take appropriate action in accordance with the organisation’s fitness for work management system
- Work collaboratively with employees and management to implement the organisation’s fitness for work management system
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Assessment must include exercises which demonstrate competent performance of the following in a range of situations:

- identifying fitness for work requirements within an organisation
- developing a fitness for work system for an organisation
- reviewing current fitness for work procedures.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Regulatory requirements may include:
- Acts, regulations, codes of practice
- guidelines
- industry standards

Operating procedures may include:
- company procedures
- enterprise procedures
- established procedures
- organisational procedures
- standard operating procedures

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF5023A Undertake a derailment investigation

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to undertake a derailment investigation in accordance with legislative and regulatory requirements. It includes preparing for a derailment investigation, determining potential contributory factors, planning for derailment investigation report requirements, and investigating a derailment. No licensing or certification requirements apply to this unit at the time of publication.

Application of the Unit
This unit applies to people with the responsibility for rail operation management.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Evidence collection and analysis techniques
- Evidence preservation techniques
- Rail safeworking systems
- Relevant legislation and regulations related to rail operations
- Rolling stock operations including traction systems, braking systems, inspection regimes
- Signalling systems
- Track components and dynamics
- Wheel-track interface management

Required skills:

- Communicate effectively with others when undertaking a derailment investigation
- Read and interpret documentation and the organisation’s rail safety compliance system and apply them to a derailment investigation
- Recognise non-conformance with rail safety requirements and take appropriate action in accordance with organisational policies and procedures
- Record and preserve evidence
- Work collaboratively with employees and other management staff when undertaking a derailment investigation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Assessment must include exercises that demonstrate competent performance of the following in a range of situations:

- planning a derailment investigation
- evidence preservation and collection
- producing a derailment investigation report.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Definitions may include:
- mechanisms of derailment
- types of derailments

Types of data may include:
- dynamic data
- static data

Evidence may include:
- available
- perishable
- retrievable

Track structure may include:
- geometry
- support systems

Track components may include:
- anchors
- fastenings
- rail
- sleepers
- track furniture

Unit Sector(s)

Not applicable.

Competency Field

F – Safety Management
TLIF5024A Develop plans for emergency response and recovery of rail networks

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to develop plans for emergency response and recovery of rail networks. It includes identifying factors that contribute to degraded rail operations; and developing, implementing, monitoring and evaluating emergency response and recovery strategies in accordance with regulatory and organisational requirements. Licensing, legislative or certification requirements are not applicable to this unit at the time of publication.

Application of the Unit
This unit can be applied to freight, heavy haul or metropolitan and regional passenger rail systems.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| **1 Identify factors that contribute to degraded rail operations** | 1.1 Types of rolling stock and typical failures are identified  
1.2 Track and trackside equipment failures are identified and explained  
1.3 Operational factors that contribute to degraded rail operations are identified  
1.4 Control or safety critical system failures that contribute to degraded rail operations are identified  
1.5 External occurrences that contribute to degraded rail operations are identified  
1.6 Power supply systems and problems that contribute to degraded rail operations are identified |
| **2 Develop emergency response and recovery strategies** | 2.1 Risk assessments are included in developing emergency response and recovery strategies  
2.2 Policy and procedures are developed to implement emergency response and recovery strategies in accordance with organisational and regulatory requirements  
2.3 Emergency response and recovery strategies are planned with internal and external stakeholders to ensure compliance with organisational and regulatory standards and requirements  
2.4 Emergency response and recovery plans are disseminated to appropriate managers and, where required, regulators for approval  
2.5 Emergency response and recovery plans are amended in response to comments received from managers and regulators (as required)  
2.5 Emergency response and recovery procedures are documented and communicated to appropriate personnel in accordance with organisational requirements |
| **3 Implement emergency response and recovery strategies** | 3.1 Emergency response and recovery strategies are implemented in accordance with organisational and regulatory requirements  
3.2 Effective induction and supervision are provided to support individuals in meeting their organisational and regulatory responsibilities |
| **4 Monitor, adjust and report emergency response and recovery strategies** | 4.1 Emergency response and recovery strategies are monitored and deficiencies are identified  
4.2 Identified deficiencies are assessed against organisational standards and prioritised for action  
4.3 Recommendations for improvements to meet organisational and regulatory standards are developed and submitted to designated |
persons/groups

4.4 Agreed improvements and alterations to emergency response and recovery strategies, policies and procedures are implemented in accordance with organisational and regulatory requirements

4.5 Individuals/groups are informed of improvements and alterations to emergency response and recovery strategies

4.6 Systems, records and reporting procedures are maintained in accordance with organisational and regulatory requirements

5 Evaluate emergency response and recovery strategies

5.1 Effectiveness of emergency response and recovery strategies and related policies, procedures and programs is assessed in accordance with organisational and regulatory requirements

5.2 Improvements are identified, developed and implemented to ensure more effective achievement of emergency response and recovery strategies
Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Changes in rail industry operations and technology with implications for degraded operations
- Key principles and practices associated with railway operations
- Rail industry
- Rail industry terminology, including terminology used in technical standards
- Relevant rail safety, emergency management, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to train operations
- Train planning and management systems

Required skills:

- Access and use rail industry standards
- Communicate effectively with others, particularly in relation to emergency response procedures and recovery planning
- Develop and maintain currency of rail industry knowledge and regulatory requirements
- Network and build relationships with a diverse range of rail industry organisations
- Research information related to the rail network, emergency response procedures and recovery planning
- Review changing regulatory information
- Work ethically and in accordance with legislation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Assessment must include exercises that demonstrate competent performance of the following in a range of situations:

- identifying appropriate emergency response procedures for a given rail operational situation
- reviewing current emergency response procedures and making recommendations for improvement.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Typical failures may include:
- derailments
- safeworking system failures
- signals passed at danger
- train failures or breakdowns

Track and trackside equipment failures may include:
- broken/buckled rails
- defective trainstop
- points failures
- signal failures
- track circuit failures

Operational factors may include:
- maintenance issues
- passenger issues
- possession over-runs
- train crewing issues

Control or safety critical systems may include:
- control room operations
- IT networks
- radios
- safeworking systems
- signal cabins
- telemetry systems

External occurrences may include:
- emergency service operations
- level crossing obstructions
- livestock on tracks
- obstructions on lines
- trackside fires
- trespassers

Power supply systems may include:
- overhead systems
- signal systems
- station power supply

Designated persons/groups may include:
- designated management team
- senior managers
- specialists/technicians
- subject matter experts

Unit Sector(s)

F – Safety Management
TLIG1001A Work effectively with others

Modification History
Not Applicable

Unit Descriptor
This unit involves the basic skills and knowledge required to work effectively with others in a workplace including contributing to determination of appropriate work roles, contributing to the planning of activities, and working with others to complete the activities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work is carried out in accordance with workplace procedures and relevant regulatory requirements.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established procedures and appropriate interpersonal skills when working with others to complete workplace tasks.

Licensing/Regulatory Information
Refer to Unit Descriptor

| 1 Contribute to determination of appropriate work roles | 1.1 Work roles of each group member are identified based on information and instructions about objectives, performance requirements and procedures  
1.2 Contributions are made to assist in the determination of the appropriate roles and responsibilities for the successful completion of the activity |
| 2 Contribute to the planning of the activity | 2.1 Suggestions and information are provided as appropriate to contribute to the planning of the activity and the associated procedures |
| 3 Work with others | 3.1 Forms of communication appropriate to the activity are used  
3.2 Assistance in the completion of the activities is requested where appropriate  
3.3 Contributions to the achievement of a required outcome are made  
3.4 Work is undertaken in accordance with specified procedures on an individual and shared basis as appropriate  
3.5 Problems are discussed and resolved where possible through agreed and accepted processes  
3.6 Suggestions for improvements to processes are made and discussed within the team |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant workplace standards and procedures and duty of care requirements
- Relevant OH&S and environmental protection procedures and responsibilities
- Workplace structures and the roles and responsibilities of team/group members
- Basic principles of teamwork
- Typical misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them
- Focus of operation of work systems, equipment or management, site and organisational operating procedures
Required skills:

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to working with others as a team
- Interpret and follow operational instructions and prioritise work within the team
- Operate electronic communication equipment to required protocol when communicating with others in the workplace
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when working with others in a work environment
- Monitor team activities in terms of planned schedule
- Modify team activities depending on differing operational contingencies, risk situations and environments
- Adapt to any differences in language and culture in accordance with standard operating procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work:
- involves basic routine work operations carried out in collaboration with others
- may occur by day or night
- may be in a variety of work contexts

Customers may be:
- internal or external

Enterprises may comprise:
- large, medium or small worksites

Work colleagues may include:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English
RANGE STATEMENT

Personnel in work area may include:
- persons from a range of cultural backgrounds
- managers
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication may involve the basic use of a range of communication technology including:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio

Information/documentation may include:
- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

Unit Descriptor

This unit involves the skills and knowledge required to work in a socially diverse environment, including the development and application of the cultural awareness that is required by all people working in the transport and distribution industries. It includes the cultural awareness required for serving customers and working with colleagues from diverse backgrounds. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with workplace procedures and relevant anti-discrimination and equal employment opportunity regulations.

Work is performed with limited or minimum supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of communication principles and problem-solving techniques to facilitate work in a socially diverse environment.

Licensing/Regulatory Information

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees
- Recognition of the different cultural groups in Australian society
- Basic knowledge of the culture of Australia's indigenous and non-indigenous peoples
- Recognition of various international customer groups (as appropriate to the sector and individual workplace)
- Principles that underpin cultural awareness
- Knowledge of what it means to be 'culturally aware'
- Typical cross-cultural misunderstandings and problems that can occur in the workplace and appropriate ways of dealing with them
Required skills:

- Communicate effectively with others when working in a socially diverse environment
- Read and interpret instructions, procedures, information and signs relevant to working in a socially diverse environment
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to working in a socially diverse environment
- Work collaboratively with others in a socially diverse environment
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may occur when working in a socially diverse environment in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

- situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Cultural differences may include but are not limited to those of the following nature (examples only):
- race
- language
- special needs
- disabilities
- family-structure
- age
- sexual preference
- language spoken
- forms of address
- levels of formality/informality
- non-verbal behaviour
- work ethics
- personal grooming
- family obligations
- recognised holidays

Possible cultural differences may include but are not limited to:

© Commonwealth of Australia, 2014
Transport & Logistics Industry Skills Council
RANGE STATEMENT

Attempts to overcome language barriers may be made to:

- special needs
- product preferences
- meet and greet/farewell customers
- give simple directions
- give simple instructions
- answer simple enquiries
- prepare for, serve and assist customers
- describe goods and services

Outside organisations may include but are not limited to:

- interpretative services
- diplomatic services
- local cultural organisations
- appropriate government agencies
- educational institutions

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documents may include:

- workplace procedures
- guideline documents on cultural differences and how to deal with them
- documents that provide information on equal employment opportunity principles and obligations and anti-discrimination regulations

Applicable legislation may include:

- Australian and state/territory anti-discrimination legislation
- Australian and state/territory equal opportunity legislation

Unit Sector(s)

Not Applicable

Competency Field

Competency Field          G - Teamwork
TLIG3002A Lead a work team or group

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to lead a work team or group including participating in team/group planning, managing and developing team/group performance, participating in and facilitating the work team/group in its achievement of workplace tasks, and documenting and reviewing work team/group performance. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work is carried out in accordance with workplace procedures and relevant regulations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of established procedures to the provision of leadership within a work team or group.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Participate in team/group planning | 1.1 Requirements of a team/group task are identified and clarified in conjunction with other team or group members to ensure appropriate interpretation of specifications and in accordance with enterprise requirements  
1.2 Task is interpreted and relevant steps are identified in conjunction with other team/group members to ensure efficient conduct of work to meet specifications and enterprise requirements  
1.3 Steps are planned in conjunction with the work of other personnel to allow achievement of practical outcomes according to enterprise and/or manufacturers procedures |
| **2** Manage and develop team/group performance | 2.1 Task activities are assigned to team/group members based on their areas of competence and expertise and their availability  
2.2 Team/group members are advised on symptoms and effects of fatigue, drugs and alcohol, safe lifting techniques and other Occupational Health and Safety policies  
2.3 Performance measures and requirements are agreed upon between team/group members in accordance with enterprise procedures |
| **3** Participate in and facilitate the work team/group | 3.1 Work activity is organised and carried out with other involved team/group members and personnel using relevant communication processes to ensure safe, unambiguous and appropriate sequencing of tasks  
3.2 Individuals and teams/groups are actively encouraged to take individual and joint responsibility |
| **4** Document and review work team/group tasks | 4.1 All necessary documentation related to job planning and progress is completed and recorded in accordance with statutory, manufacturers and enterprise requirements  
4.2 The outcomes of the team's/group's task activities are compared with the planned objectives, task instructions and specifications to ensure all requirements have been met |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:
REQUIRED KNOWLEDGE AND SKILLS

- Relevant regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for leading work teams
- Techniques to encourage appropriate participation of team/group members
- Coaching and mentoring approaches
- Workplace policies and plans including procedures for training and development
- Principles, duty of care and obligations within the chains of responsibility in the transport industry
- Strategies to implement continuous improvement processes
- Typical problems that can occur when leading a work team and related appropriate action that can be taken

Required skills:

- Communicate effectively with others when leading a work team
- Read and interpret instructions, procedures and information relevant to team leadership and team activities
- Negotiate and work effectively with team members
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to team leadership and team activities
- Operate electronic communication equipment to required protocol
- Provide leadership and encouragement to team members
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when leading a work team in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when leading a work team
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during team activities
- Plan team activities, including predicting consequences and identifying improvements
- Monitor team activities in terms of planned schedule
- Modify team activities depending on differing operational contingencies, risk situations and environments
- Ensure application of fatigue management knowledge and techniques
- Operate and adapt to any differences in language and culture amongst team members
- Identify and recommend improvements to services, resource allocation and use
- Select and appropriately apply technology, information systems and procedures to complete
Required skills:

workplace tasks

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work involves:
- completion of workplace activities as a leader of a work team

Work may occur:
- by day or night
- in a variety of work contexts

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Team members may include:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English
- persons from a range of cultural backgrounds
- permanent, part-time and/or casual staff

Consultative processes may include:
- other members of the team
- supervisors/team leaders
- workplace personnel
- visitors
- contractors
- official representatives
- union representatives
- industrial relations and OH&S specialists
- other professional or technical staff
- managers

Communication may involve the basic use of a range of communication technology including:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio

Depending on the type of organisation concerned and the
- company procedures
- enterprise procedures
RANGE STATEMENT

Local terminology used, workplace procedures may include:
- organisational procedures
- established procedures

Information/documentation may include:
- workplace procedures, checklists and instructions
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturers specifications
- workplace policies
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice including the national standards for manual handling and the industry safety code
- legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice, including the national standards for manual handling and industry safety codes
- dangerous goods and freight regulations and codes
- relevant Australian and state/territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations

Competency Field G - Teamwork
TLIG3003A Apply positive behaviours in the workplace

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves skills and knowledge required to apply standards of conduct and positive behaviours in the workplace. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to team members who are making the transition to a leading role that can influence the performance of others. Such people have a strong influence on the work culture, values and ethics of the people with whom they work. As such it is important they model good practice, professionalism and confidently represent their organisation.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Model high standards of performance and behaviour

<table>
<thead>
<tr>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.1</td>
<td>Positive performance and behaviours that meet organisational standards are employed</td>
</tr>
<tr>
<td>1.2</td>
<td>Performance and behaviour that serve as a positive role model for others are displayed</td>
</tr>
<tr>
<td>1.3</td>
<td>Work/performance plans are implemented in accordance with organisational goals and objectives</td>
</tr>
</tbody>
</table>

### 2 Enhance organisational image

<table>
<thead>
<tr>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.1</td>
<td>Organisational standards and values are followed</td>
</tr>
<tr>
<td>2.2</td>
<td>Standards and values considered to be damaging to the organisation are questioned through established communication channels</td>
</tr>
<tr>
<td>2.3</td>
<td>Personal performance is monitored to ensure integrity and credibility are displayed in interactions with others</td>
</tr>
</tbody>
</table>

### 3 Contribute to organisational decisions

<table>
<thead>
<tr>
<th>Performance Criteria</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.1</td>
<td>Information relevant to issue/s under consideration is provided when requested</td>
</tr>
<tr>
<td>3.2</td>
<td>Active participation in decision-making processes is demonstrated</td>
</tr>
<tr>
<td>3.3</td>
<td>Options are examined, associated risks are assessed and preferred course/s of action are recommended based on experience and knowledge</td>
</tr>
<tr>
<td>3.4</td>
<td>Agreed decisions are implemented in cooperation with relevant individuals and teams</td>
</tr>
<tr>
<td>3.5</td>
<td>Organisational feedback processes are used to inform the organisation of the impact of agreed decisions</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Formal and informal feedback processes
- Leadership styles and concepts
- Organisational standards and values
- Theory of individual and group behaviour

Required skills:

- Make decisions based on analysis of evidence
- Represent the organisation
- Show good judgement and follow through
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Assessment must include exercises that demonstrate competent performance of the following in a range of situations:

- articulating organisational values and expectations of behaviour
- applying positive behaviours.

#### Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

#### Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to organise transport workload, including organising and accepting responsibility for own workload, participating in identifying and meeting own learning needs, and planning and organising a personal daily routine. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the relevant regulations for the transport of articles for courier delivery.

Work is performed under generally indirect supervision. It involves the application of the basic principles and routine procedures to organise own transport workload as part of courier/delivery operations.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
REQUIRED KNOWLEDGE AND SKILLS

- Relevant state/territory mass and loading regulations and permit requirements
- OH&S procedures and guidelines relevant to courier and delivery operations
- Risks in courier and delivery operations and related precautions to control the risk
- Workplace procedures and policies for organising transport loads in courier and delivery operations
- Principles, duty of care and obligations within the chains of responsibility in the transport industry
- Typical issues and problems that can occur when organising a transport workload and appropriate ways of dealing with them
- Housekeeping standards and procedures required in the workplace
- Requirements of courier work systems and operations and relevant equipment
- Methods and strategies for organising transport loads in courier and delivery operations

Required skills:

- Communicate effectively with others when organising a transport workload
- Read and interpret instructions, procedures and information relevant to organising a transport workload
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to organising a transport workload
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special delivery requirements of cargo, mail and courier items
- Work collaboratively with others when organising a transport workload
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified issues or problems that may occur when organising a transport workload in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when organising a transport workload
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when organising a transport workload
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Identify and correctly use equipment required when organising loads
- Work systematically with required attention to detail without injury to self or others, or
Required skills:

damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

\* The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

\* Performance is demonstrated consistently over a period of time and in a suitable range of contexts

\* Resources for assessment include:
- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

\* In both real and simulated environments, access is required to:
- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

\* Assessment of this unit must be undertaken by a registered training organisation

\* As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests

\* Practical assessment must occur:
- through activities in an appropriately simulated environment at the registered training organisation, and/or
EVIDENCE GUIDE

- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Operations may be:
- undertaken on- or off-base site

Work activities may be:
- routine or adopted for purposes involving courier deliveries, related clerical, packing and or load shifting activities
- activities associated with the planning of work

Hazards may include:
- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
- noise

Consultative processes may involve:
- clients
- other employees and supervisors
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Communication in the work area may include:
- fixed phone
- mobile phone
- fax
RANGE STATEMENT

- email
- internet
- radio
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunglasses and UV protection
- two-way radios
- high visibility clothing

Information/documents may include:
- operations manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications for relevant equipment
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail/courier items
- workplace procedures and policies for courier/delivery operations
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- state/territory roads and traffic authority road rule and licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to lead and facilitate work teams, including participating and providing leadership in team planning, developing team commitment and cooperation, managing and developing team performance, and participating in and facilitating the work of work teams/groups. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work is performed under minimum supervision with general guidance on progress and outcomes of work. It involves discretion and judgement for self and others in the facilitation of work teams or groups.

A range of opportunities may be used to develop the workplace and to support the development of work systems and innovative strategies to deal with contingencies and to encourage the achievement of the organisations' goals and key performance objectives.

Work involves responsibility for facilitating and encouraging the work of work teams/groups and the provision of leadership to others in the establishment and achievement of team objectives.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Participate in team planning | 1.1 The team establishes clearly defined goals, purpose, roles, responsibilities and accountabilities within the organisation's goals and objectives  
1.2 The team performance plan contributes to the organisation's business plan, policies and practices  
1.3 The team agrees to processes to monitor and adjust its performance within the organisation's continuous improvement policies  
1.4 The team includes in its plans ways in which it can benefit from the diversity of its membership |
| **2** Develop team commitment and cooperation | 2.1 The team uses open communication processes to obtain and share information  
2.2 The team encourages and exploits innovation and initiative  
2.3 Support is provided to the team to develop mutual concern and camaraderie |
| **3** Manage and develop team performance | 3.1 The team is supported in making decisions within agreed roles and responsibilities  
3.2 The results achieved by the team contribute positively to the organisation's business plans  
3.3 Team and individual competencies are monitored regularly to confirm that the team is able to achieve goals  
3.4 Mentoring and coaching supports team members to enhance personal and collective knowledge and skills  
3.5 Delegates' performance is monitored to confirm that they have completed the relevant delegation(s)/assignment(s) |
| **4** Encourage and facilitate the work of teams | 4.1 Team effectiveness is encouraged and enhanced through active participation in team activities and communication processes  
4.2 Individuals and teams are actively encouraged to take individual and joint responsibility for actions  
4.3 The team receives support to identify and resolve problems which impede performance |

Required Skills and Knowledge

REQUARED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:
- Relevant and regulatory and code requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the facilitation of work teams
- Mechanisms to encourage team decision making, and reward and support team achievement
- Coaching and mentoring approaches to support team members to share knowledge and skills
- Workplace policies and plans including procedures for training and assessment
- Strategies to implement continuous improvement processes
- Typical problems that can occur when facilitating work teams, and related appropriate action that can be taken
- Principles, duty of care and obligations within the chains of responsibility in the transport industry

Required skills:
- Communicate effectively with others when facilitating the operation of work teams
- Read and interpret instructions, procedures, information and signs relevant to work team functions and management
- Interpret and follow operational instructions and prioritise work
- Negotiate and work effectively with others
- Complete documentation related to team activities and organisation
- Operate electronic communication equipment to required protocol
- Lead and encourage others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when facilitating the operation of work teams in accordance with workplace procedures
- Ensure implementation of contingency plans for unplanned events that may occur during team activities
- Identify improvements to services, resource allocation and use
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Ensure implementation of fatigue management policies and procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Required skills:

- Select and appropriately apply technology, information systems and procedures to complete workplace tasks

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The workplace environment may involve twenty-four hour operation and may include:
- single and multi site location
- large, medium and/or small organisations

Services, products, risks, work systems and requirements may:
- potentially vary across different sections of the workplace

Operations involve:
- internal and external customer contact and coordination

Teams may be:
- new or long established
- within a functional area
- drawn from across the organisation
- changing on a regular basis
- evolving within the overall context of change within the enterprise

Team membership may be:
- English-speaking persons
- multilingual staff
- persons with limited ability to communicate in English
- persons from a range of cultural backgrounds

Team members/leaders may include:
- members and leaders of work teams
- other employees and supervisors
- customers/clients
- manufacturers and suppliers
- relevant authorities
- management
- union representatives
- OH&S specialists,
- other maintenance, professional or technical staff

Consultative processes may involve:
- face-to-face discussions or group meetings
- telephone
- fax
- email

Communications systems may involve:
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- mail
- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures
- workplace policies and procedures
- customer/client instructions and requirements
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, regulations and codes of practice, including the Australian standards relevant to services and operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- emergency procedures
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements

Applicable regulations and legislation may include:

- relevant regulations, standards and codes of practice
- relevant Australian and state/territory OH&S legislation
- regulations on equal opportunity, equal employment opportunity and affirmative action
- environmental protection regulations
- hazardous substances and dangerous goods codes
- relevant Australian standards and certification requirements
- licence, patent or copyright arrangements

Unit Descriptor
This unit involves the skills and knowledge required to interpret road maps and navigate routes as part of transport operations. It includes identifying and determining the most appropriate route, and completing required route documentation in accordance with operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant state/territory roads and traffic authorities.

Work is performed under general or limited supervision. It involves the application of the basic map reading principles and procedures when interpreting street directories and road maps and following pre-determined routes as part of transport operations.

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant state and territory permit and licence regulations and requirements
- Operational procedures for interpreting road maps, using GPS devices and navigating routes
- Road conditions for various routes, including sections undergoing road works
- Height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- Traffic conditions at various times of the day along specific routes
- Security hazards and issues (where relevant)
- Current information on accidents or emergencies that might close or restrict traffic on a particular route
- Location of service stations/rest stops where relevant
- Typical problems that may arise concerning the interpretation of road maps, the use of GPS
REQUIRED KNOWLEDGE AND SKILLS

- devices and the navigation of pre-determined routes, and appropriate action that should be taken
- Workplace requirements for recording and documenting route information

Required skills:

- Communicate effectively with others when interpreting road maps, using GPS devices and navigating pre-determined routes
- Read and interpret instructions, procedures, information and signs relevant to route navigation
- Identify and correctly use maps and other route documentation including: identification of town and suburb locations, identification of roads and intersections, reading and interpretation of map symbols, and estimation of route distances using map information
- Where applicable, use GPS devices to navigate pre-determined routes
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to route navigation
- Operate electronic communication equipment to required protocol
- Where applicable work collaboratively with others (such as fleet managers, sales team etc.) when interpreting road maps, using GPS devices and navigating pre-determined routes
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when interpreting road maps, using GPS devices and navigating pre-determined routes in accordance with workplace procedures
- Plan for alternative routes in the event of contingencies such as road works, emergencies or delays
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - plotting a route from one destination to another relevant to the job role
  - demonstrating the ability to navigate a pre-determined route

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
- A simulator/online assessment is not suitable for the final assessment of this unit of competency
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit covers:
- work of transport and distribution personnel involved in the delivery of a range of possible goods and materials including valuables, secured products and documents and materials

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Routes will be pre-determined but may include:
- alternative routes to accommodate contingency situations

Map areas may include:
- metropolitan areas
- country and regional areas
- interstate locations

Depending on the type of transport service being provided, consultative processes may involve:
- clients
- other employees and supervisors
- management
- other professional or technical staff
- private security personnel
- public sector security personnel
- police and other emergency services
- security consultants

Communication in the work area may include:
- mobile and fixed phones
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies
- route specifications
- maps and street directories
- published information on route hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- competency standards and training materials
- supplier and/or client route documentation
RANGE STATEMENT

Applicable regulations and legislation may include:

- quality assurance procedures
- emergency procedures
- relevant state/territory road rules and traffic acts
- regulations and codes related to the transport of dangerous goods, explosives and hazardous materials

Unit Descriptor
This unit involves the skills and knowledge required to plan and navigate routes as part of transport operations. It includes interpreting information from a road map, street directory or a GPS (Global Positioning System) device; planning the most appropriate route taking into account pertinent factors; and completing required trip documentation in accordance with operational requirements. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the regulations of the relevant state/territory roads and traffic authorities.

Work is performed under general or limited supervision. It involves the application of map reading principles and procedures to the planning and navigation of routes as part of transport operations route.

Licensing/Regulatory Information

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Interpret street maps | 1.1 Symbols in a street directory/road map/GPS are recognised and interpreted  
                             1.2 Places are identified in a directory index and the information is used to locate the places on the appropriate map |
| 2 Plan routes      | 2.1 Given a location and a destination, the most direct and alternative routes between two points are identified using a street directory/road map/GPS  
                             2.2 Where necessary, information on height, width and load limits of road infrastructure and other restrictions on thoroughfares is accessed and interpreted and taken into account when planning a route for a journey  
                             2.3 A suitable route is selected to ensure the most efficient, safe, secure and legal transport operation, taking into account relevant criteria for the transport operation concerned |
| 3 Follow planned route | 3.1 Planned route is correctly followed with the aid of a street directory, road map and/or GPS system  
                                3.2 Where relevant, geographic regions, tourism features and other places of interest are identified  
                                3.3 Required route documentation is completed in accordance with purpose of transportation and enterprise requirements  
                                3.4 Parking procedures are observed in accordance with enterprise procedures and relevant legislative requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory permit and licence regulations and requirements
- Operational procedures for planning and navigating transport routes
- Features and contents of maps and street directories and techniques for their use in transport navigation
- Basic GPS operation
- Road conditions for various routes, including sections undergoing road works
- Physical hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
REQUIRED KNOWLEDGE AND SKILLS

- Known traffic conditions at various times of the day along specific routes
- Security hazards on long routes
- Current information on accidents or emergencies that might close or restrict traffic on particular routes
- Location of service stations and rest stops
- Workplace requirements for recording and documenting route information

Required skills:

- Communicate effectively with others when planning and navigating routes
- Read and interpret instructions, procedures, information and signs relevant to the planning and navigation of routes including: identification of town and suburb locations, identification of roads and intersections, reading and interpretation of map symbols, and estimation of route distances using map information
- Access and interpret information required when planning and navigating transport routes and developing contingency routes (including road restrictions, traffic conditions, service stations/rest stops, etc.)
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the planning and navigation of routes
- Operate electronic communication equipment to required protocol
- Where applicable, work collaboratively with others when planning routes (such as fleet managers, sales team etc.)
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when planning and navigating routes in accordance with workplace procedures
- Plan for alternative routes in the event of contingencies such as road works, emergencies or delays
- Implement contingency arrangements for unanticipated situations that may be identified when planning and navigating routes
- Apply precautions and required action to minimise, control or eliminate hazards that may be identified during the planning and navigation of routes
- Plan for transport routes to meet workplace requirements
- Monitor work activities in terms of planned schedule
- Modify route planning activities depending on differing operational contingencies, risk situations and environments
- Apply an understanding of fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
Required skills:

- Adapt to changes in vehicle navigation technology, maps and street directories as they relate to route planning
- Operate and adapt to differences in vehicles, loads and equipment in accordance with standard operating procedures
- Select and use relevant route planning and navigation technology including GPS devices
- Adapt to changes and difference in vehicle navigation technology, maps and street directories as they relate to route planning

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - interpreting information to allow effective route planning
  - planning and navigating a route practically
  - applying relevant legislation and workplace procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and
EVIDENCE GUIDE

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
- A simulator/online assessment is not suitable for the final assessment of this unit of competency

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit covers:

- work of transport and distribution personnel involved in passenger services and/or the delivery of a range of possible goods and materials including valuables, secured products and documents and materials

Operations may be conducted:

- in a range of work environments and weather conditions
- by day or night

Customers may be:

- internal or external

Routes will be planned in accordance with:

- workplace guidelines with the development, where required, of alternative routes to accommodate contingency situations

Resources used in route planning and navigation may include:

- maps
- map models/sketches
- street directories
- mapping websites
- Global Positioning System (GPS) systems
- booklets and other information on road restrictions, traffic patterns, etc.
- broadcast information concerning traffic conditions, accidents, emergencies, weather, flooding, etc.

Transport areas may include:

- metropolitan areas
- country and regional areas
RANGE STATEMENT

Route criteria may include:
- interstate locations
- potential hazards
- potential road conditions
- traffic conditions and flow
- workplace operating procedures and requirements
- the class of vehicle involved
- the type of load being carried
- the availability of rest stops along the way

Potential hazards may include:
- height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- accidents and emergencies
- extreme weather conditions
- security risks

Depending on the type of transport service being provided, consultative processes may involve:
- clients
- other employees and supervisors
- management
- other professional or technical staff
- private security personnel
- public sector security personnel
- police and other emergency services
- security consultants

Communication in the work area may include:
- mobile and fixed phones
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace procedures and policies
- route specifications
- mapping websites
- maps and street directories
- published information on route hazards such as height, width and mass limitations of bridges, tunnels and other critical physical structures along a possible route
- instructions for the use of in-vehicle GPS systems
- competency standards and training materials
- supplier and/or client route documentation
- quality assurance procedures
RANGE STATEMENT

Applicable regulations and legislation may include:

- emergency procedures
- relevant state/territory road rules and traffic acts
- regulations and codes related to the transport of dangerous goods, explosives and hazardous materials

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to coordinate and prioritise courier/delivery operations including identifying work requirements, planning and preparing for work, undertaking work operations, adjusting to changing work priorities, and completing work activities to operational requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the relevant regulations for the transport of articles for courier delivery.

Work is performed under generally indirect supervision. It involves the application of the basic principles and routine procedures to the prioritisation of courier/delivery operations.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify work requirements | 1.1 Work requirements and specific customer requirements interpreted and, where necessary, clarified  
1.2 Pick-up and delivery points are located  
1.3 Size, weight and configuration of materials to be couriered are identified  
1.4 Equipment required to facilitate pick-up and delivery is identified |
| 2 Plan and prepare for work | 2.1 Work is planned based on an analysis of distance, travel times, customer requirements, resource implications and known priorities  
2.2 Planned steps and outcomes are checked to ensure conformity with instructions and work requirements  
2.3 Work sequence is identified and, where necessary, relayed to base  
2.4 Required resources are selected |
| 3 Undertake work operations | 3.1 Work operations are undertaken in accordance with plan and quality requirements and within operating capacity of the equipment and operator  
3.2 Difficulties/uncertainties occurring during operations are identified and alternative strategies determined  
3.3 Pick-up and delivery of materials is undertaken in accordance with workplace quality procedures |
| 4 Adjust to changing work priorities | 4.1 Work plan or route is adjusted/modified to meet changing priorities and circumstances  
4.2 Changes to work plan are relayed to base |
| 5 Complete work operations | 5.1 Work operations are reviewed to ensure outcomes have met customer requirements and quality outcomes  
5.2 Workplace documentation is completed  
5.3 Operational capacity of equipment is checked and returned to storage area (where applicable)  
5.4 Security of goods is maintained in accordance with enterprise procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Relevant state and territory mass and loading regulations
- National Load Restraint Guide
- OH&S procedures and guidelines relevant to courier and cargo delivery operations
- Risks in courier and delivery operations and related precautions to control the risk
- Workplace procedures and policies for the coordination and prioritisation of courier/delivery operations
- Typical problems that may arise when prioritising courier and cargo delivery operations and appropriate action that should be taken
- Security policies and procedures
- Housekeeping standards and procedures required in the workplace
- Requirements of cargo delivery and courier work systems and operations and relevant equipment
- Methods and strategies for the prioritisation of courier and cargo delivery operations

**Required skills:**
- Communicate effectively with others when prioritising courier and cargo delivery operations
- Read and interpret instructions, procedures, information and labels relevant to courier and cargo delivery operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to prioritising courier and cargo delivery operations
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special delivery requirements of mail articles
- Work collaboratively with others when prioritising courier and cargo delivery operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when prioritising courier and cargo delivery operations in accordance with workplace procedures
- Implement contingency plans for unexpected developments and security situations that may be identified when prioritising courier and cargo delivery operations
- Apply precautions and required action to minimise, control or eliminate hazards that may be identified when prioritising courier and cargo delivery operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
Required skills:

- Apply an understanding of fatigue management policies and regulations when prioritising courier and cargo delivery operations
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and correctly use equipment required when coordinating courier and cargo delivery operations
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a
EVIDENCE GUIDE

registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Customers may be:
- internal or external

Operations may be:
- undertaken on- or off-base site

Equipment required to facilitate pick-up and delivery may include:
- trolleys
- lifting devices
- rollers
- tarpaulins
- packing materials
- ropes
- securing devices

Difficulties/uncertainties may include:
- road and traffic conditions
- changing weather conditions
- time of travel
- load requirements
- changes in delivery and pick-up instructions

Hazards may include:
- vehicular traffic and pedestrians
- uneven ground, steps, road surfaces
- dust and vapours
- hazardous or dangerous materials
- humidity, air temperature and radiant heat
- light including UV
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- noise
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- clients
- other employees and supervisors
- management
- union representatives
- industrial relations, Occupational Health and Safety specialists
- other professional or technical staff

Consultative processes may involve:

- fixed phone
- mobile phone
- fax
- email
- internet
- radio
- oral, aural or signed communications

Communication in the work area may include:

- gloves
- safety headwear and footwear
- sunglasses and UV protection
- two-way radios
- high visibility clothing

Information/documents may include:

- operations manuals
- induction documentation
- competency standards and training materials
- manufacturers specifications for relevant equipment
- Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail/courier items
- workplace procedures and policies for the prioritisation of courier/delivery operations
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and
RANGE STATEMENT

legislation may include:

- licence requirements
- Australian Dangerous Goods Code, Explosives Code, HAZCHEM codes, and other relevant regulations pertaining to the delivery of mail
- relevant state/territory environmental protection legislation
- relevant state/territory OH&S legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to identify, and describe major roads, services and attractions as part of transport operations including the local geographical details and features of major roads, transport interchanges, suburbs, landmarks, public services and facilities, tourist attractions and central business districts. It covers the knowledge and skills required by taxi drivers, bus/coach drivers and other transport operators to locate roads, services and attractions both on a map and, where required, physically. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with the relevant transport regulations and workplace procedures.

Work is performed under general or limited supervision. It involves the application of basic research and map reading principles and procedures to the location of roads, services and attractions both on a map and, where required, physically.

In the case of taxi drivers if the original context of this unit changes i.e. moving from State to State or Territory then the unit may be reassessed.

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory regulations and road laws
- Workplace procedures for identifying and locating roads, services and attractions
- Information that may be required when locating roads, services and attractions, including:
  - main arterial roads; entry and access points to major road systems; location of metropolitan suburbs; most appropriate routes for entering and exiting a city centre; roads and suburbs connecting with freeways and transport interchanges, terminals, jetties, ports and stations; location of main hotels, motels and tourist attractions in a specified area; location of city centre streets and major buildings and traffic flows; bus and emergency lane usage; restrictions to traffic movement at major intersections; traffic patterns and densities; and road signs and route markers
- Typical problems that may arise when identifying and locating roads, services and attractions and appropriate action that should be taken

Required skills:

- Communicate effectively with others when identifying and locating major roads, services and attractions
- Read and interpret instructions, procedures, information and signs relevant to the identification and location of major roads, services and attractions
- Identify and correctly use maps and other information about the location and features of roads, services and attractions
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when identifying and locating major roads, services and attractions
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when identifying and locating major roads, services and attractions in accordance with regulatory requirements and workplace procedures
Required skills:

- Plan own work including predicting consequences and identifying improvements
- Apply precautions and required action to minimise, control or eliminate hazards that may be identified when identifying and locating major roads, services and attractions
- Physically locate identified roads, services and attractions (i.e. driving to the location)
- Monitor and anticipate traffic hazards
- Select approved and most economic routes
- Modify activities depending on differing operational contingencies, risk situations and environments

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

This unit covers:

- work of transport personnel who need to locate roads, services and attractions as part of transport operations. It includes all road transport passenger-carrying vehicles. It is specifically suited to the drivers of taxicabs, small charter vehicles, coaches, limousines and private charter vehicles involving the transport of passengers, including tourists

Operations may be conducted in a range of work environments including:

- operations conducted day or night
- in the vehicle, on the road, both stationary and mobile
- travel service within a metropolitan or regional district
- in a range of typical weather conditions
- transport of fare-paying passengers including tourists

Road conditions and traffic flows might include:

- wet or stormy weather
- fog and/or low lying cloud resulting in poor visibility
- peak-hour traffic congestion
- road-accidents and obstructions impeding traffic flow
- road works

Map areas may include:

- metropolitan areas
- country and regional areas
- interstate locations

Tourist locations may include:

- sporting, entertainment and recreational venues such as horse racing venues, sporting venues and stadiums, theatres, entertainment centres, ballrooms, cinemas,
RANGE STATEMENT

Casinos and gaming venues, river and coastal entertainment and recreational locations, main golf courses, show grounds, adventure and marine parks

- tourist centres and major hotels/motels
- main tourist attractions in specified areas
- significant cultural and arts centres and venues such as cultural centres, museums, art galleries, state library, concert halls, theatres
- significant historical buildings in specified areas
- vineyard districts (where relevant)
- main coastal attractions and landmarks (where relevant) such as bays, beaches, buildings, restaurants, look-out points, marinas and boat harbours

Public service locations may include:

- all main public hospitals, emergency entrances (and existing taxi ranks servicing the hospitals)
- main police, ambulance and fire stations
- major suburban shopping centres
- main public parks and reserves such as botanical gardens, public parks and gardens, wetland areas, and nature reserves

Transport interchanges may include:

- domestic and international airports and terminals for private and commercial airplanes
- sea and river ports, jetties and terminals
- bus station interchanges
- commuter and long distance railway stations

Communication in the work area may include:

- mobile and fixed phones
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- workplace protocols, procedures and policies
- route specifications
- maps and street directories
- tourism information
- published information on roads, services and attractions
- relevant state/territory road rules and traffic acts
- competency standards and training materials
RANGE STATEMENT

- customer requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations, road rules and traffic acts
- relevant state/territory OH&S regulations and procedures

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to apply routine customer service skills to relevant workplace operations including dealing with customer inquiries, monitoring customer satisfaction and taking appropriate action to satisfy customer needs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in accordance with workplace standards and procedures for the provision of customer service. Work is performed under supervision. It involves the application of established routine customer service principles and procedures to day-to-day interactions with internal and external customers during workplace operations.

Licensing/Regulatory Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Deal with customer inquiries | 1.1 Customer inquiries are dealt with courteously and efficiently both by phone and face to face  
1.2 Questions are used to clarify the customer's needs or concerns  
1.3 Assistance from other staff is sought when a customer's inquiry cannot be fully answered  
1.4 Knowledge of products, services and/or operations is used to answer customer queries or to respond to customers' needs  
1.5 Customer inquiries and associated action are recorded and reported in accordance with workplace procedures |
| 2 Monitor customer satisfaction | 2.1 Customer is greeted cordially in accordance with workplace procedures  
2.2 Customer requirements are dealt with according to workplace procedures  
2.3 Special needs are addressed within workplace policies  
2.4 Appropriate feedback is provided to managers and internal and/or external customers |

### Required Skills and Knowledge

#### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant duty of care responsibilities
- Relevant OH&S and environmental procedures and regulations
- Workplace procedures relevant to work activities
- Customer service policies and procedures
- Products and/or services provided by the workplace concerned
- Types of operations carried out in the workplace concerned
- Sources of information and documentation needed for workplace operations

**Required skills:**

- Communicate effectively with others when providing customer service, including the use of telephone techniques
- Effectively use interpersonal skills
Required skills:

- Effectively handle customer queries and complaints
- Read and interpret instructions, procedures, information and labels relevant to the provision of customer service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of customer service
- Write simple reports and records of inquiries
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing customer service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing customer service in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies and environments
- Work systematically with required attention to detail
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
EVIDENCE GUIDE

- access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer service is provided:
- in all areas of transport, distribution and storage including the provision of a range of services and/or the collection, movement, storage and delivery of equipment, goods, materials and various forms of freight

Workplace activities may be conducted:
- by day or night
- in any weather conditions

Customers may be:
- internal or external

Requirements for work may include:
- site restrictions and procedures
- relevant domestic and international regulations
- security procedures
- communications equipment
- hours of operation
- authorities and permits
RANGE STATEMENT

Consultative processes may involve:
- use of safety and personal protective equipment
- existing and potential customers/clients
- other employees and supervisors
- suppliers
- manufacturers
- relevant authorities
- management
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:
- face-to-face conversation
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established procedures

Documentation/records may include:
- workplace procedures and customer service standards
- job specifications
- operations manuals and instructions
- induction documentation
- competency standards and training materials
- manufacturers specifications, instructions and advice including material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- relevant Australian and international regulations, codes, standards and certification requirements
- OH&S procedures
- quality assurance procedures
- emergency procedures
- customer service manuals

Applicable regulations and legislation may include:
- relevant state/territory and international regulations, codes and procedures
- relevant Australian and international standards and certification requirements
- dangerous goods and hazardous substances codes and

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant codes of practice and legislative requirements including local and international freight regulations
- Relevant OH&S and environmental procedures and regulations
- Procedures and protocols for the provision of freight forwarding services to customers
- Sources of information and documentation needed when providing freight forwarding services to customers
- Customer service policies and procedures
- Typical problems that can occur when providing freight forwarding services to customers and related appropriate action that can be taken to prevent or solve them

Required skills:
- Communicate effectively with others when providing freight forwarding services to customers
Required skills:

- Read and interpret instructions, procedures, information and signs relevant to the provision of freight forwarding services to customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of freight forwarding services to customers including data entry to a computer
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing freight forwarding services to customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing freight forwarding services to customers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when providing freight forwarding services to customers
- Monitor work activities in terms of planned schedule
- Apply relevant codes of practice and legislative requirements including local and international freight
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit:

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
**EVIDENCE GUIDE**

**unit**
- providing information to customers on freight forwarding operations
- advising on procedures and protocols for forwarding various cargo to different destinations
- maintaining enterprise records and documentation
- advising on relevant export regulations and required documentation

**Context of and specific resources for assessment**
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

**Method of assessment**
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

**Range Statement**

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer information may include:  
- business structure
RANGE STATEMENT

include:

- general freight forwarding requirements
- legislative requirements
- information on export clearances
- documentation services
- freight charges

Workplace activities may be conducted:

- by day or night
- in any weather conditions

Customers may be:

- internal or external

Environment may include movement of:

- equipment
- goods
- materials
- vehicular traffic

Requirements for work may include:

- freight forwarding protocols and procedures
- communications equipment
- workplace operations
- authorities and permits
- hours of operation
- relevant regulations

Parameters of freight forwarding services relevant to customer requirements may include:

- procedures for forwarding freight
- type of transport modes
- various consignment methods
- relevant legislative requirements
- required import/export documentation and requirements
- insurance requirements
- service costs
- payment requirements and procedures
- fiduciary and legal responsibilities of either party

Communications systems may involve:

- face-to-face conversation
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Consultative processes may involve:

- other employees and supervisors
- international and domestic agents, suppliers, clients
- relevant authorities and institutions
- management
- OH&S specialists
- other professional or technical staff
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- operations manuals, job specifications and procedures and induction documentation
- competency standards and training materials
- manufacturers/client specifications, instructions
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and International standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:

- regulations and codes of practice for the local and international transport of freight
- relevant regulations for the import and export of cargo
- Australian and International Standards and certification requirements
- relevant state/territory OH&S legislation
- relevant regulations pertaining to trading and financial transactions
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- relevant state/territory environmental protection legislation

| 1 Prepare and provide take-away food and beverages | 1.1 Food and beverage items are prepared and presented to passengers in a form consistent with workplace procedures and equipment manufacturers instructions  
1.2 Stock is checked for spoilage and expiry dates on a regular basis following workplace procedures  
1.3 Out-of-date stock is disposed of in accordance with workplace procedures |
| 2 Maintain and control stock | 2.1 All stock is stored in accordance with workplace procedures and relevant health regulations  
2.2 Stock is rotated on a regular basis in line with workplace procedures and food regulations and guidelines  
2.3 Food which does not meet health requirements is disposed of workplace procedures and regulatory requirements |
| 3 Serve customers | 3.1 Customer requirements are ascertained using appropriate inquiries in a courteous manner  
3.2 Correct product and pricing information is clearly displayed  
3.3 Specials are promoted and sales opportunities are identified and optimised |
| 4 Carry out financial control procedures | 4.1 Financial transactions are accurately carried out in accordance with regulatory requirements and workplace procedures  
4.2 Financial reconciliation is carried out as required  
4.3 Cash is securely handled and stored in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Applicable legislated rail safety requirements including acts and regulations from each state and territory together with any nationally approved compliance codes and/or guidelines
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for operating an on-train buffet car
- Workplace knowledge requirements relevant to operating an on-train buffet car, including: relevant product knowledge, pricing structures, consumer laws and trade practice requirements, and health and hygiene regulations
REQUIRED KNOWLEDGE AND SKILLS

- Equipment, and materials used when operating an on-train buffet car, and precautions and procedures that should be followed in their use
- Problems that may occur when operating an on-train buffet car and appropriate action that can be taken to resolve the problems
- Documentation and record requirements
- Communication and negotiation requirements when operating an on-train buffet car

Required skills:

- Communicate and negotiate effectively with others when operating an on-train buffet car
- Read and interpret instructions, procedures, information and labels relevant to the operation of an on-train buffet car
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the operation of an on-train buffet car
- Operate electronic communication equipment to required protocol
- Carry out relevant calculations and cash transactions
- Work collaboratively with others when operating an on-train buffet car
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when operating an on-train buffet car in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations when operating an on-train buffet car
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the operation of an on-train buffet car
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Serve customers
- Select and use relevant equipment and food stock when operating an on-train buffet car
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Monitor performance of buffet equipment and take appropriate action if required
- Maintain and control stock
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

workplace policies and procedures

6 Apply ethical behaviour

6.1 Ethical behaviour that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers and other road users is applied

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant Australian and state/territory transport and taxi regulations, standards and codes of practice
- Relevant OH&S, equal opportunity and anti-discrimination procedures and guidelines
- Procedures and protocols for the provision of taxicab services to customers
- Requirements of workplace systems and operations and relevant equipment
- Risks involved in workplace operations and related precautions to control the risk
- Industry and workplace policies and procedures for the coordination of quality customer service in the taxi industry
- Sources of information and documentation needed when providing taxicab services to customers
- Effective customer service techniques that may include:
  - giving customers full attention
  - active listening
  - maintaining eye contact (for face-to-face interactions)
  - open and/or closed questions
  - speaking clearly and concisely
  - appropriate language style and tone of voice
  - culturally appropriate communication
  - conversing with people with disabilities
  - writing legibly
- Personal presentation requirements
- The taxi driver's role in presenting a positive image to the public and delivering customer service
- The role of customer service in company profitability
REQUIRED KNOWLEDGE AND SKILLS

- Typical problems that can occur when providing taxicab services to customers and related appropriate action that can be taken to prevent or solve them
- Relevant taxi transport subsidy scheme for the state or territory
- Services for customers with disabilities
- Security and emergency procedures
- Fare structures

Required skills:

- Communicate effectively with others when providing taxicab customer service to customers
- Read and interpret instructions, procedures, information and signs relevant to providing taxicab customer service to customers
- Read and interpret instructions, procedures, information and signs relevant to the provision of taxicab services to customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to customer service in the taxi industry
- Work collaboratively with others when applying customer service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing taxicab service to customers, in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when providing taxicab service to customers
- Identify and correctly use equipment, processes and procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Apply relevant codes of practice and legislative requirements
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - communicating effectively with a range of customers
  - identifying the needs of customers
  - selecting and using appropriate workplace colloquial and technical language and communication technologies
  - adopting ethical behaviour that avoids any form of sexual harassment, or physical or mental abuse, or intimidation towards passengers and other road users
  - recognising and adapting appropriately to cultural differences in customers
  - meeting customer needs
  - dealing with common customer complaints and taking steps to avoid them
  - identifying difficult customer situations and applying problem solving techniques and conflict resolution skills where necessary
  - working effectively with others
  - maintaining workplace records
  - maintaining personal appearance
  - following taxi housekeeping procedures

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customer contact:
- is typically a single encounter on a one-to-one basis
- includes all points of customer contact before, during and after the journey

Customers may include:
- regular and new customers
- customers with routine and special requests
- people from a range of social, cultural or ethnic backgrounds
- people with varying physical and intellectual abilities, including those with sight and hearing impairments
- people who may be unwell, drug affected and emotionally distressed

Customers with special needs may include:
- international visitors
- pregnant women/nursing mothers
- the elderly
- people with physical and/or intellectual disabilities
- children travelling alone or under supervision
- people with specific cultural or language needs
RANGE STATEMENT

Customers with special needs may require transport within the taxicab of:

- parents with young children
- guide dog
- walking frame
- walking stick
- foldaway wheelchair
- pram/pusher
- crutches

Difficult customer situations may include:

- abusive, racist or sexual encounters
- lack of ability to speak English by passengers
- aggressive customers
- fare evaders
- drug affected/intoxicated customers
- lack of compliance with no smoking signs
- graffiti in taxi cab by customer

Requirements for dress code and personal grooming may include:

- conforming to company and regulatory requirements for driver appearance and presentation
- wearing a uniform or a standard of dress approved by the company
- maintaining personal grooming and hygiene at a standard that is acceptable to customers within the context of work

Workplace policies and procedures may include:

- customer service standards and procedures, including dealing with customer requests
- quality assurance procedures
- security and emergency procedures
- industry, regulatory and company procedures for dealing with difficult customer situations
- security and emergency procedures codes
- lost property procedures

Regulatory policies and procedures may include:

- relevant national/state/territory transport and taxi regulations
- relevant national/state/territory OH&S regulations and legislation
- relevant national/state/territory equal opportunity and anti-discrimination legislation

TLII2020A Provide assistance to customers with specific needs

Modification History
Release 1. This is the first release of this unit.

Unit Descriptor
This unit involves the skills and knowledge required to assist customers with specific needs in accordance with organisational requirements. It includes establishing contact with customers, identifying customer needs, and providing appropriate support to customers with specific needs.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
Work is performed with limited or minimum supervision. It involves the provision of assistance to customers with specific needs requiring assistance within station areas both on and off a train.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

Required knowledge:

- Ancillary equipment operating procedures
- Manufacturer instructions, specifications and recommended operating procedures for ancillary equipment, including pre-operational checks
- Relevant legislation, regulations and codes of practice such as that relating to:
  - anti-discrimination
  - environmental protection
  - work health and safety (WHS)/occupational health and safety (OHS)
- Relevant organisational policies and procedures such as emergency procedures
- Service timetables and network information
- Workplace instructions and procedures for transporting customers with specific needs

Required skills:

- Adapt to differences in equipment in accordance with standard operating procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when transporting customers with specific needs
- Interact positively with customers with specific needs
- Interpret and follow operational instructions and prioritise work
- Modify activities depending on operational contingencies, risk situations and environments
- Operate electronic communication equipment to required protocol
- Promptly report and/or rectify any identified problems that may occur when transporting customers with specific needs in accordance with regulatory requirements and workplace procedures
- Read and interpret instructions, procedures, information and signs relevant to transporting customers with specific needs
- Use ancillary equipment
- Work collaboratively with others when transporting customers with specific needs
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement.

Assessment must include exercises demonstrate competent performance of the following in a range of situations:

- identifying different categories of specific need
- correctly using ancillary equipment to assist customers with specific needs
- identifying delays that may occur when assisting customers with specific needs and the correct procedures for dealing with them
- identifying types of inquires that are likely to be made and providing appropriate responses.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customers with specific needs may include:
- older people
- people with disabilities, which may include mobility, physical, intellectual, psychiatric, neurological, sensory, learning disabilities
- people with prams/small children
- people with heavy luggage

Ancillary equipment may include:
- audible alarms
- emergency evacuation equipment
- hearing loops
- platform markers for customers who are visually impaired
- wheelchair ramps
- visual alerts

Other personnel may include:
- customer service assistant
- platform staff
- signaller
- train controller
- train driver

Services and/or operations may include:
- alternative transport
- local area information
- network layout
- other customer service options
- ticketing information
- timetables

Preparation may include visual check:
- for customers on platforms
- of ancillary equipment

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to provide customer service for local and overseas passengers in transport vehicles/vessels. This includes monitoring and addressing passenger needs, preparing and delivering commentaries, resolving problems and conflicts involving customers, and liaising with the suppliers of tourism products to ensure appropriate materials and services are obtained and made available to service customer needs. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Customer service will be carried out in accordance with tourism and transport industries codes of practice and/or company procedures.

Work will be undertaken with limited or minimum supervision, with accountability and responsibility for self and others in achieving the prescribed outcomes.

Customer service involves the application of routine service principles and procedures to fulfil the information, comfort and other needs of both local and overseas tourism customers travelling in transport vehicles/vessels.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Monitor and address passenger needs | 1.1 Circumstances affecting passengers' needs and comfort are monitored and action taken in accordance with company procedures  
1.2 Needs of all types of passengers are acknowledged and appropriate assistance provided  
1.3 Passengers are advised on the operation of internal vehicle/vessel facilities and the benefits of wearing seat belts, where relevant  
1.4 Risks to passenger safety are identified and appropriate action initiated to minimise the risk  
1.5 Passengers are suitably advised of any safety risk and the action being taken  
1.6 Tact, courtesy, friendliness and patience are demonstrated at all times when dealing with passengers  
1.7 Passenger inquiries and requests are received and resolved with minimal delays  
1.8 Passenger inquiries and associated action are recorded and reported in accordance with company procedures |
| 2 Prepare and deliver commentaries | 2.1 Comprehensive briefings are delivered clearly and precisely  
2.2 Commentary presentations are well researched and delivered clearly and at precise timings  
2.3 Additional information is provided in response to questions  
2.4 Audiovisual equipment is correctly and safely operated, where installed |
| 3 Implement conflict resolution strategies | 3.1 Conflict and difficult situations are recognised and fair solutions are negotiated equitably  
3.2 Conflicts which are unable to be resolved are referred to a higher authority  
3.3 Opportunities to enhance the quality of the service are taken, particularly in conflict situations |
| 4 Communicate with suppliers | 4.1 Liaison is maintained with suppliers of tourism products and/or information to obtain accurate and comprehensive information on products available to meet customer needs  
4.2 Needs for tourism products and/or information are appropriately communicated to relevant company personnel |

Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant state and territory regulations and industry codes of practice concerning tourism and transport operations as they relate to customer service and safety in tourism vehicles/vessels
- Relevant OH&S and environmental procedures and regulations
- Company customer service policies and procedures
- Relevant tourism products, services and/or operations
- Route information
- Local knowledge of features, history, landmarks and other items of interest to tourist passengers
- Special needs of persons with disabilities
- Special needs of different community sectors/cultures
- Procedures for the use of audiovisual equipment
- Procedures for the use of communications equipment
- Procedures for the handling of customer questions, complaints and conflicts

Required skills:

- Communicate effectively with others when providing customer service in transport vessels and vehicles
- Interact effectively with passengers
- Read and interpret instructions, procedures, information and signs relevant to the provision of customer service in transport vessels and vehicles
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of customer service in transport vessels and vehicles
- Operate electronic communication equipment to required protocol
- Conduct presentations to tourist passengers
- Provide leadership in the provision of customer service to tourism passengers
- Work collaboratively with others when providing customer service in transport vessels and vehicles
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing customer service in transport vessels and vehicles in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when providing customer service in transport vessels and vehicles
Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the provision of customer service in transport vessels and vehicles
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace
EVIDENCE GUIDE

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle/vessel may include:

- all transport vehicles/vessels providing services to local and overseas customers that may involve commentaries, answers to questions, and resolution of problems and conflict situations, including coaches, buses, taxis, hire cars, trams, trains, and tourism vessels and ferries on both short or long journeys/voyages, as required

Equipment may include:

- public address audio
- video players and videotapes
- audiotape/CD players and tapes/CDs
- interactive computer/video equipment

Information/documents may include:

- tourism industry codes of practice or recommended procedures
- company instructions and customer service procedures
- tourism information including pamphlets, brochures and booklets
- video and audio cassettes and CDs

Applicable procedures and codes may include:

- relevant state/territory regulations concerning tourism and transport operations as they relate to customer service and safety in tourism vehicles/vessels
- relevant state/territory OH&S legislation

| **1 Prepare for camping tour** | 1.1 Camping equipment requirements are identified and obtained  
| | 1.2 All equipment is checked for serviceability and damage prior to commencement of tour  
| | 1.3 Damaged items are repaired or replaced in accordance with workplace policy  
| | 1.4 All consumables required for the tour are determined and obtained in accordance with workplace procedures prior to commencement of tour  |
| **2 Oversee the establishment of the camp site** | 2.1 A suitable, level campsite is selected  
| | 2.2 Unloading of equipment and erection and commissioning of camping equipment is supervised  
| | 2.3 Appropriate arrangements are made with the host/cook for meals and other services during camping activity  
| | 2.4 Participants are advised of health and safety requirements and precautions including the safe use of fires  |
| **3 Vacate the campsite** | 3.1 The procedures for the vacation of the campsite are supervised in accordance with workplace procedures  
| | 3.2 The campsite is inspected for cleanliness and misplaced equipment in accordance with regulations and workplace procedures  |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations and permit requirements pertaining to camping activities
- Relevant OH&S and environmental procedures and regulations
- Workplace camping procedures
- Relevant camping equipment and instructions for its use
- Customer service policies and procedures
- Special needs of persons with disabilities
- Special needs of different community sectors and cultures
- Local knowledge including camping areas and facilities
- Typical problems that may arise during the management of camping activities for coaches and
REQUIRED KNOWLEDGE AND SKILLS

- Procedures to be followed in the event of a camping emergency

Required skills:

- Communicate effectively with others when managing camping activities for coaches and buses
- Handle complaints and conflicts that may arise during the management of camping activities for coaches and buses
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when managing camping activities for coaches and buses
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise during the management of camping activities for coaches and buses in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Implement contingency plans for unanticipated situations that may occur during the management of camping activities for coaches and buses
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Provide customer service during camping operations
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use camping equipment
- Monitor condition and performance of camping equipment and take appropriate action if required
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Camping operations are those carried out as part of:
- tour operations, including coaches, buses and other relevant tourism vehicles

Campsite operations may be carried out:
- in any transport environment, including operations conducted at day or night and typical weather conditions

Procedures for the vacation of a campsite may include:
- dismantling of equipment
- cleaning of the equipment and site
- loading of coach/vehicle/trailer
- extinguishing of fires

Camping hazards may include (examples only):
- fire or explosion
- flood
- animals
- poisonous insects, spiders and snakes
- damaged or faulty equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- relevant state/territory regulations and permit requirements pertaining to camping activities
- workplace camping instructions and procedures
- equipment manufacturers instructions, specifications and recommended procedures, including pre-operational checks of equipment
- emergency procedures
- camping tour log book or record book (where required)

Applicable procedures and codes may include:
- relevant state/territory regulations and requirements pertaining to camping operations
- relevant state/territory OH&S legislation
- relevant state/territory food and health regulations
- relevant state/territory environmental protection legislation

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Deal with customer freight forwarding inquiries | 1.1 Customer inquiries are dealt with courteously and efficiently  
1.2 Questions are used to clarify customer requirements, needs or concerns  
1.3 Information is accurately conveyed to the customer in a manner consistent with their level of understanding  
1.4 Areas not effectively dealt with are forwarded to other enterprise personnel or external individuals/authorities in accordance with enterprise procedures  
1.5 Follow-up procedures are undertaken in accordance with enterprise procedures |
| 2 Explain the process of freight forwarding | 2.1 The freight forwarding chain of operations is explained to customers  
2.2 Parameters of service relevant to customer requirements are explained in accordance with workplace procedures  
2.3 Handling and documentation requirements for various types of goods are explained to customers including dangerous goods and hazardous substances  
2.4 Documentation concerning service provision is forwarded to the customer in accordance with enterprise procedures |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian and international codes and regulations relevant to freight forwarding, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies relevant to the provision of freight handling information to customers
- Focus of operation of work systems, equipment, management and site operating systems for the provision of freight handling information to customers
- Problems that may occur when providing freight handling information and appropriate action that can be taken to prevent or resolve the problems
- Types of transport used in international trade and knowledge of the most economical modes of
REQUIRED KNOWLEDGE AND SKILLS

- Transport for different situations
- Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- Documentation requirements for the freight handling services including workplace freight tracking system
- Freight transport timetables, yard and terminal facilities, and site layout
- Housekeeping standards procedures required in the workplace

Required skills:

- Communicate effectively with others when providing freight forwarding information
- Read and interpret instructions, procedures, information and labels relevant to the provision of freight forwarding information
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of freight forwarding information
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing freight forwarding information
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when providing freight handling information in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when providing freight forwarding information
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer, communication and office equipment when providing freight handling information
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - reading and interpreting freight documentation
  - providing information to customers on freight forwarding operations
  - maintaining enterprise records and documentation
  - advising on relevant export regulations and required documentation
  - advise on procedures and protocols for forwarding various cargo to different destinations

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Work may be conducted in: • limited or restricted spaces • exposed conditions • controlled or open environments

Freight may include: • all forms of freight. Some freight may involve special handling and storage requirements, including temperature controlled goods, dangerous goods, explosives and hazardous substances

Parameters of freight forwarding service that may be explained to customers include: • procedures for forwarding freight • type of transport modes • various consignment methods • relevant legislative requirements • required import/export documentation and requirements • insurance requirements • service costs • payment requirements and procedures • fiduciary and legal responsibilities of either party

Customer information may include: • business structure • general freight forwarding requirements • legislative requirements • information on export clearances • documentation services • freight charges

Hazards in the work area may include: • exposure to chemicals • exposure to dangerous or hazardous substances • movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve: • other employees and supervisors • suppliers, customers and clients • drivers and agents • relevant authorities and institutions • management and union representatives
RANGE STATEMENT

Communication in the work area may include:

- industrial relations and OH&S specialists
- other maintenance, professional or technical staff
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers and codes
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for freight tracking
- codes of practice and regulations relevant to the transport of goods
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures
RANGE STATEMENT

Applicable regulations and legislation may include:

- relevant sections of Customs legislation, regulations and codes for the transport of freight
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and international Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and international explosives codes
- privacy legislation
- water and road use and license arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

### Required knowledge:

- Relevant state and territory regulations and requirements pertaining to revenue protection
- Relevant OH&S and environmental protection procedures and guidelines
- Details of on-board services provided to customers
- Organisation's transport services
- Procedures for the use of communications equipment
- Fare structures
- Concessional privileges
- Timetables
REQUIRED KNOWLEDGE AND SKILLS

- Organisational policies and procedures
- Customer service requirements
- Services for customers with disabilities
- Typical problems that can occur when providing on-board services to customers and related appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when providing on-board services to customers
- Handle and resolve conflict and grievance situations that may arise during the provision of on-board services to customers
- Read and interpret instructions, procedures, information and signs relevant to the provision of on-board services to customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the provision of on-board services to customers
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when providing on-board services to customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when providing on-board services to customers in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may arise when providing on-board services to customers
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the provision of on-board services to customers
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Complete transactions and revenue protection activities during the provision of on-board services to customers
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted: • in restricted spaces or exposed conditions or controlled or open environments
• in a range of weather conditions
• by day or night

Equipment may include: • use in restricted spaces or exposed conditions or controlled or open environments
• office equipment
• communication equipment
• computer software

On-board service applies to: • all long distance rail/coach/bus trips
• all points of customer contact before, during and after the journey
• all internal, external and potential customers

Customers with special needs include: • international visitors
• pregnant women
• the elderly
• physically and/or mentally disabled persons
• children travelling alone or under supervision

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: • company procedures
• enterprise procedures
• organisational procedures
• established procedures

Information/documents may include: • workplace policies and procedures
• customer requests
• customer service standards and procedures
• competency standards and training materials
• quality assurance procedures
• security and emergency procedures

Applicable regulations and legislation may include: • relevant state/territory transport regulations
• relevant state/territory OH&S regulations and legislation
• relevant state/territory environmental protection legislation

Unit Descriptor
This unit covers the skills and knowledge required to identify and locate major destinations, public services, attractions and facilities as part of the provision of public transport advice. It covers responding appropriately to customer enquiries with respect to destinations, related services and facilities and ticketing. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work involves the duties and tasks applicable to personnel working on public trams, trains and buses who may through their duties have contact with the public.

Work is performed under general supervision.

Licensing/Regulatory Information
Refer to Unit Descriptor

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan a journey using public transport | 1.1 Sources of current, accurate and relevant public transport information are identified and accessed to respond to customer needs  
1.2 Modes, connections, interchanges and tickets to complete a journey are identified for the planned customer destination  
1.3 Major destinations, attractions and public facilities and their proximity to public transport are identified and located in relation to customer needs or requests  
1.4 Information and/or advice provided to customers are reviewed regularly to ensure currency and accessibility |
| 2 Provide information and advice to customers | 2.1 The specific information and advice needs of customers are accurately identified and clarified in accordance with the circumstance  
2.2 Information provided to customers is appropriate, complete and effectively covers their needs  
2.3 Information and/or advice are presented in a respectful format, manner and style  
2.4 The information and/or advice are regularly reviewed to ensure customers acknowledge that the information given satisfies their enquiry |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Ticket and ticket structures including points and methods of purchase
- Concessional privileges
- Travel zones
- Major public transport connections, interchanges, stations, tram and bus terminals
- Major destinations, attractions and public facilities
- Standard operating hours
- 'Out of hours’ services
- Vehicle types and capacity
- Modes of public transport
REQUIRED KNOWLEDGE AND SKILLS

- Location of on-line information services
- Factors that can influence verbal communication
- Procedures for reviewing information and advice
- Strategies for clarifying and confirming customer needs
- Operational procedures

Required skills:

- Communicate effectively when providing travel information to customers
- Access, read, interpret and apply instructions, timetables and standard operating procedures relevant to the provision of travel information to customers
- Research relevant data when providing travel information to customers
- Interact with customers
- Work collaboratively with others in a team
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly solve and/or report any identified problems when responding to customer enquiries and/or travel concerns
- Monitor work activities in terms of planned schedule
- Work in accordance with instructions
- Review customer needs and confirm they are being addressed
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail
- Maintain currency on all operational procedures
- Select and utilise ticket validating equipment and communication technology

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of
EVIDENCE GUIDE

unit

this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Establish contact with customers** | 1.1 Customer is acknowledged and greeted in a professional, courteous and concise manner according to organisational requirements  
1.2 Personal dress and presentation is maintained in line with organisational requirements  
1.3 Communication involving appropriate interpersonal skills to facilitate accurate and relevant exchange of information is used  
1.4 Sensitivity to customer specific needs and any cultural and individual differences is maintained  
1.5 Genuine interest in customer needs is displayed |
| **2 Identify customer needs** | 2.1 Appropriate questioning and active listening are used to determine customer needs  
2.2 Urgency of customer needs is assessed to identify priorities for service delivery  
2.3 Customers with special needs and the appropriate customer service is identified |
| **3 Deliver service to customers** | 3.1 Prompt customer service to meet identified needs according to organisational requirements is provided  
3.2 Customer communications are conducted in a clear, concise and courteous manner  
3.3 Customer inquiries are dealt with courteously and efficiently  
3.4 Questions are used to clarify the customer's needs or concerns  
3.5 Knowledge of services and/or operations is used to answer customer queries or to respond to customers' needs  
3.6 Customer is directed to or assistance from other staff is sought when a customer's inquiry cannot be fully answered  
3.7 Opportunities to enhance the quality of service and products are identified and action is taken to improve the service whenever possible  
3.8 Information regarding problems and delays is provided and follow up is made within appropriate timeframes as necessary  
3.9 Where required, customer inquiries and associated action/s are recorded and/or reported and in accordance with workplace procedures |
| **4 Prepare for passengers with special needs** | 4.1 Vigilance is maintained for passengers with special needs/disabilities on arrival into the station platform  
4.2 Actions to assist customers with special needs are identified in accordance with workplace procedures and/or requirements |
| **5 Provide assistance to customers with special** | 5.1 Ancillary equipment is applied where appropriate for passengers in wheelchairs/prams, if required |
ELEMENT needs

PERFORMANCE CRITERIA
5.2 Customers with seeing/hearing eye dogs are observed and assisted if required
5.3 Customers with any other special needs are observed and assisted if required
5.4 Customers are assisted in a courteous manner, sensitive to the special needs
5.5 Ongoing support and/or vigilance is provided to the customer with special needs to maximise their travelling safety and comfort
5.6 Ancillary equipment is utilised safely in accordance with workplace procedures and safety regulations

6 Communicate regarding customers with special needs

6.1 Where dealing with customers with special needs may cause delays to services other personnel are informed
6.2 Where required, other personnel are informed about the presence of customers with special needs

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant legislation, regulations and organisational policies and procedures
- Service timetables and network information
- Ancillary equipment and procedures for operating/using ancillary equipment
- Availability and types of alternative service for customers with special needs

Required skills:

- Communicate effectively with others when transporting passengers with and without special needs
- Read and interpret instructions, procedures, information and signs relevant to the transporting of passengers with and without special needs
- Interpret and follow operational instructions and prioritise work
- Interact with passengers with and without special needs
- Complete documentation related to the transporting of passengers with and without special needs
- Operate electronic communication equipment to required protocol
Required skills:

- Use ancillary equipment
- Work collaboratively with others when transporting passengers with and without special needs
- Promptly report and/or rectify any identified problems that may occur when transporting passengers with and without special needs in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement
- Assessment must include exercises which demonstrate competent performance of the following in a range of situations:
  - identifying different categories of special needs
  - correctly using ancillary equipment to assist passengers with special needs
  - identifying delays that may occur when assisting passengers with special needs and the correct procedures for dealing with them
  - identifying types of inquiries that are likely to be made and providing appropriate responses
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Transporting of passengers may be carried out:
- by day or night
- in all weather conditions
- on station platforms
- on electric passenger trains

Passengers with special needs may include:
- people with disabilities, which may include physical, intellectual, psychiatric, neurological, sensory, learning disabilities
- the elderly
- people with prams/small children
RANGE STATEMENT

Other personnel may include:
- people with heavy luggage
- train controller
- signaller
- train driver
- customer service assistant
- platform staff

Services and/or operations may include:
- timetables
- network layout
- ticketing information
- alternative transport
- other customer service options
- local area information

Ancillary equipment may include:
- wheelchair ramps
- hearing loops
- audible alarms
- visual alerts
- platform markers for customers who are visually impaired
- emergency evacuation equipment

Preparation may include visual check:
- for passengers on platforms
- of ancillary equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:
- workplace instructions and procedures for the transport of passengers with special needs
- manufacturer's instructions, specifications and recommended operating procedures for ancillary equipment, including pre-operational checks
- emergency procedures
- record book

Applicable regulations, legislation and codes may include:
- relevant state/territory OH&S legislation
- relevant anti-discrimination legislation
- relevant state/territory environmental protection legislation

Competency Field

Competency Field I - Customer Service
TLII3022A Provide customer service in rail operations

Modification History
Release 1. This is the first release of this unit.
This unit replaces but is not equivalent to TLII3021A Provide customer service in rail operations.
Reference to customers with special needs has been removed from this unit and a new unit has been developed, TLII2020A Provide assistance to customers with specific needs.

Unit Descriptor
This unit involves the skills and knowledge required to provide customer service in rail operations according to regulatory, legislative and workplace requirements. It includes preparing to provide and providing assisting customers at platforms and/or on a train. Licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
Work is generally performed without supervision and in a team environment. It involves the provision of service to customers requiring assistance either on or off a train.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Establish contact with customers

1.1 Customer is acknowledged and greeted in a professional, courteous and concise manner according to organisational requirements

1.2 Personal dress and presentation is maintained in line with organisational requirements

1.3 Effective communication and interpersonal skills are used to facilitate accurate and relevant exchange of information

1.4 Sensitivity to customer specific needs and any cultural and individual differences is maintained

1.5 Genuine interest in customer needs is displayed

2 Identify customer needs

2.1 Appropriate questioning and active listening is used to determine customer needs

2.2 Urgency of customer needs is assessed to identify priorities for service delivery

2.3 Customers with specific needs and the appropriate customer service are identified

3 Deliver service to customers

3.1 Prompt customer service is provided to meet identified needs according to organisational requirements

3.2 Customer communications are conducted in a clear, concise and courteous manner

3.3 Customer inquiries are dealt with courteously and efficiently

3.4 Questions are used to clarify customer needs or concerns

3.5 Knowledge of services and/or operations is used to answer customer queries or to respond to customer needs

3.6 Customer is directed to other staff and/or assistance from other staff is sought when customer inquiry cannot be fully answered

3.7 Opportunities to enhance the quality of service and products are identified and action is taken to improve the service whenever possible

3.8 Information regarding problems, delays and follow up within appropriate timeframes as necessary is provided

3.9 Customer inquiries and associated action/s are recorded and/or reported in accordance with workplace procedures as required
Required Skills and Knowledge

This section describes the knowledge and skills required for this unit.

**Required knowledge:**

- Availability and types of alternative service for customers during planned and unplanned events that may affect regular services
- Relevant documentation/records:
  - emergency procedures
  - record book
- workplace instructions and procedures for transporting customers with specific needs
- Relevant state/territory and commonwealth legislation, regulations and organisational policies, procedures and codes, such as:
  - anti-discrimination legislation
  - environmental protection legislation
  - privacy
  - WHS/OHS legislation
  - Service timetables and network information

**Required skills:**

- Adapt to differences in equipment in accordance with standard operating procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Communicate effectively with others when transporting customers
- Interpret and follow operational instructions and prioritise duties according to customer needs
- Modify activities depending on operational contingencies, risk situations and environments
- Operate electronic communication equipment to required protocol
- Read and interpret instructions, procedures, information and signs relevant to transporting customers
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the Elements, Performance Criteria, Required Skills, Required Knowledge and include demonstration of applying:

- required knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Assessment must include exercises which demonstrate competent performance of the following in a range of situations:

- identifying different categories of customer needs
- identifying service and/or operational information commonly requested by customers
- identifying other types of inquiries that are likely to be made and appropriate responses.

Context of and specific resources for assessment

Performance is demonstrated consistently over time and in a suitable range of contexts.

Resources for assessment include access to:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- an appropriate range of relevant operational situations in the workplace.

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

Method of assessment

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:

- through activities in an appropriately simulated environment, and/or
- in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Information may include:
- alternative transport
- local area information
- network layout
- other customer service options
- ticketing information
- timetables

Unit Sector(s)

Competency Field

I - Customer Service
TLII4008A Monitor transport activities at interchanges

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to monitor transport activities at interchanges including monitoring transport and passenger movements, identifying and attending to coordination problems, and informing customers of irregularities. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with relevant workplace procedures.

Work is performed under some supervision, generally within a team environment.

Work involves the application of routine procedures and regulatory requirements to the monitoring of transport activities at interchanges.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Monitor transport and passenger movements | 1.1 Passenger and vehicle movements are monitored and recorded following workplace procedures  
1.2 Passenger and vehicle movement irregularities are identified and recorded and possible solutions are provided  
1.3 Timetables are monitored to identify variations and recommend where action is required  
1.4 Documentation is completed in accordance with workplace requirements to maintain transport movement records |
| 2 Identify coordination problems | 2.1 Problems with services coordination are reported promptly and possible solutions are submitted to the relevant authority  
2.2 Irregularities with internal systems are reported promptly according to organisation procedures |
| 3 Inform customers of irregularities | 3.1 Communications systems and equipment are operated in accordance with workplace policies and procedures to make necessary announcements  
3.2 Passengers are informed of irregularities and service changes promptly, clearly and courteously  
3.3 Transport service adjustments are conveyed to transport system staff |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:
- Relevant state and territory regulations and requirements pertaining to revenue protection
- Relevant OH&S and environmental protection procedures and guidelines
- Risks and hazards when monitoring transport activities at interchanges and related precautions to control the risk
- Organisation's transport services
- Complementary transport services
- Fare structures
- Concessional privileges
- Timetables
- Organisational policies and procedures
REQUIRED KNOWLEDGE AND SKILLS

- Customer service requirements
- Typical problems that can occur monitoring transport activities at interchanges and related appropriate action that can be taken to prevent or solve them

Required skills:

- Communicate effectively with others when monitoring transport activities at interchanges
- Handle and resolve conflict situations
- Read and interpret instructions, procedures, information and signs relevant to the monitoring of transport activities at interchanges
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the monitoring of transport activities at interchanges
- Operate electronic communication equipment to required protocol, including radio systems
- Calculate fares
- Work collaboratively with others when monitoring transport activities at interchanges
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when monitoring transport activities at interchanges in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when monitoring transport activities at interchanges
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the monitoring of transport activities at interchanges
- Organise staff deployment
- Manage stress when monitoring transport activities at interchanges
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Manage barrier operation
- Validate tickets
- Use basic mechanical skills required when monitoring transport activities at interchanges
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- in a range of work environments and weather conditions
- by day or night

Interchange operation embraces facilities used by:
- the organisation for the transfer of customers from one type of transport service to another or between services

Equipment may include:
- communication equipment
- video/audio equipment
- computer and related office equipment
- timetables and service information

Timetable variation refers to:
- services falling outside the boundaries used by the transport system in monitoring the compliance to scheduled services

Communications systems used can include:
- public address system
- telephone
- two-way radio

Internal systems include:
- timetables
- electronic equipment
- communications equipment

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- workplace policies, standards and procedures
- information from observation of passenger and vehicle movement
- transport timetables
- transport service information
- communication with other personnel
- relevant regulations concerning transport operations
- competency standards and training materials
- quality assurance procedures
- security and emergency procedures

Applicable regulations and legislation may include:
- relevant state/territory regulations and legislation concerned with revenue protection within transport systems
- relevant state/territory OH&S regulations and legislation
- relevant state/territory environmental protection legislation

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant occupational health, safety and environmental (OHS&E) protection policies and procedures
- Workplace protocols and procedures for meeting customer and organisation needs, including planning and quality improvement of services and operations
- Problems that can occur when meeting customer and organisation needs, and action that can be taken to resolve them

Required skills:

- Communicate and negotiate effectively with others when meeting customer and organisational needs
- Read and interpret instructions, procedures and information relevant to meeting customer and organisational needs
- Identify and assess customer and organisational requirements
- Use appropriate numeric functions when identifying customer needs
- Complete documentation related to meeting customer and organisational needs where applicable
- Operate electronic communication equipment in line with required protocol
- Work collaboratively with others when meeting customer and organisational needs
- Report and rectify within limits of own role problems that may arise when meeting customer and organisational needs in accordance with workplace procedures
- Implement contingency plans for unanticipated situations that may occur when meeting customer and organisational needs
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Customers may be:
- internal or external, including:
  - emergency services
  - network access
  - contractors
  - other network operators

Depending on the type of organisation concerned and the local terminology used, organisational procedures may be known as:
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Information and documentation may include:
- legislation, regulations and documentation relevant to business operations
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- reports of accidents and incidents within regulatory requirements and organisational procedures
- organisational guidelines on appropriate language and communication strategies and interpretation of relevant information
- quality assurance procedures

Applicable regulations and legislation may include:
- relevant regulations, standards and codes of practice
- relevant federal, state and territory OH&S legislation
- equal employment legislation and related policies
- environmental protection regulations
- dangerous goods and hazardous materials codes
- relevant Australian standards and certification requirements

</table>
| 1 Plan to meet internal and external customer requirements | 1.1 The needs of customers are researched, understood and assessed, and taken into account in the planning of the company's products and services  
1.2 Provision is made in plans to achieve the quality, time and costs specifications agreed with customers |
| 2 Ensure delivery of quality service | 2.1 Individual/team performance consistently meets quality, safety, resource and delivery standards  
2.2 Coaching and mentoring assists colleagues overcome difficulty in meeting customer service standards  
2.3 Delivery of services and products is coordinated and managed to ensure it effectively and efficiently meets agreed quality standards |
| 3 Monitor, adjust and report customer service | 3.1 Company's systems are used to monitor progress in achieving product/service targets and standards  
3.2 Customer feedback is sought and used to improve the provision of products/services  
3.3 Decisions to overcome identified problems with products/services are made in consultation with relevant individuals/groups  
3.4 Adjustments/recommendations (as required) are made to products/services  
3.5 Those who have a role in products/services planning and delivery are informed of changes  
3.6 Records, reports and recommendations are managed within the company's systems and processes |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant Australian and state and territory standards, regulations and codes of practice
- OH&S procedures and guidelines relevant to workplace operations
- Risks involved in workplace operations and related precautions to control the risk
- Workplace procedures and policies for the coordination of quality customer service in workplace operations
REQUIRED KNOWLEDGE AND SKILLS

- Customer and market characteristics
- The role of customer service in company profitability
- Requirements of workplace systems and operations and relevant equipment

Required skills:

- Communicate effectively with others when coordinating quality customer service
- Read and interpret instructions, procedures, information and signs relevant to the coordination of quality customer service
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the coordination of quality customer service
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when coordinating quality customer service
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when coordinating quality customer service in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when coordinating quality customer service
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply relevant agreements, codes of practice or other legislative requirements to work processes
- Identify and correctly use equipment, processes and procedures
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the
EVIDENCE GUIDE

demonstrate competency in this unit

requirements of the elements and performance criteria of this unit and include demonstration of applying:

- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:

- in a range of work environments and weather conditions
- by day or night
RANGE STATEMENT

Customers may be: • internal or external

Operations may be undertaken: • on- or off-base site or workplace

Coordination of workplace policies for the provision of customer service may include: • level of service provision • scheduling of operations • delivery of services

Consultative processes may involve: • clients • other employees and supervisors • management • union representatives • industrial relations and OH&S specialists • other professional or technical staff • local government authorities

Hazards may include: • vehicular traffic and pedestrians • uneven ground, steps, road surfaces • dust and vapours • hazardous or dangerous materials • humidity, air temperature and radiant heat • light including UV • noise

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include: • company procedures • enterprise procedures • organisational procedures • established procedures

Communication in the work area may include: • fixed phone • mobile phone • fax • email • internet • radio • oral, aural or signed communications

Information/documents may include: • operations manuals • induction documentation • competency standards and training materials • manufacturers specifications for relevant equipment • Dangerous Goods Code, Explosives Code, HAZCHEM codes and other regulations pertaining to the delivery of mail • workplace procedures and policies for the preparation of
RANGE STATEMENT

mail for delivery
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- customer service and quality assurance standards and procedures

</tr>
</thead>
</table>
| 1 Recognise opportunities to promote products and services | 1.1 Products and services available for on-selling from the enterprise are identified  
1.2 Technical specifications and application(s) of products and services are identified  
1.3 Applicability of products and or services are matched to particular clients or client groups  
1.4 Features of products and services (including technical specifications) are explained in relation to customer requirements or potential requirements  
1.5 Where appropriate, clients are referred to expert personnel or services |
| 2 Establish and maintain contact with clients | 2.1 Communication with clients is established and maintained to develop a professional relationship  
2.2 Clients are informed of the full range of business products  
2.3 Follow-up contacts with clients are made on client request and in accordance with enterprise policy |
| 3 Negotiate sales | 3.1 Potential sales opportunities are recognised and acted upon  
3.2 Negotiations with clients maintain enterprise professional standards and client satisfaction |
| 4 Close sales | 4.1 Documentation of the agreement is completed in accordance with enterprise policy, incorporating any special requirements  
4.2 Contact with customers is maintained until sale is completed  
4.3 After-sales service is provided in accordance with enterprise procedures and statutory requirements |

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulatory requirements
- Relevant OH&S and environmental protection policies and procedures
- Workplace protocols and procedures for the marketing of services and products to clients
- Relevant workplace business marketing policies and practices, including requirements for the maintenance of security and confidentiality
REQUIRED KNOWLEDGE AND SKILLS

- Strategies to implement continuous improvement processes
- Focus of operation of marketing systems and resources
- Typical problems that can occur when marketing services and products to clients and related appropriate action that can be taken

Required skills:

- Communicate effectively with others when marketing services and products to clients
- Negotiate and work effectively with others
- Read and interpret instructions, procedures and information relevant to the marketing of services and products to clients
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the marketing of services and products to clients
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when marketing services and products to clients
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when marketing services and products to clients in accordance with regulatory requirements and workplace procedures
- Plan work activities, including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Identify improvements to services, resource allocation and use
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and procedures to complete workplace tasks
- Operate and adapt to differences in equipment in accordance with standard operating procedures

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment
EVIDENCE GUIDE

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

The workplace environment may involve twenty-four hour operation and may include:

- single and multi-site locations
- large, medium and/or small companies

Services, products, risks, work systems and requirements may:

- potentially vary across different sections of the workplace

Operations involve:

- internal and external customer contact and coordination

Products may be:

- existing or potential

Consultative processes may involve:

- existing and potential customers/clients
- other employees and supervisors
- suppliers
- manufacturers
- relevant authorities
- management
- union representatives
- OH&S specialists
- other maintenance, professional or technical staff

Communications systems may involve:

- face-to-face conversation
- telephone
- fax
- email
- electronic data transfer of information (EDI)
- mail

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:

- workplace procedures for the marketing of services and products
- current and potential customer/client instructions and assessed requirements
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language
RANGE STATEMENT

and communication strategies and interpretation of relevant information

• legislation, regulations and related documentation relevant to business operations

• regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements

Applicable regulations and legislation may include:

• relevant regulations, standards and codes of practice

• trading regulations relevant to business operations

• relevant Australian and state/territory OH&S legislation

• environmental protection regulations

• hazardous substances and dangerous goods codes

• relevant Australian standards and certification requirements

• licence, patent or copyright arrangements

existing freight services are explained
5.4 Advertising programs promoting existing freight services are promoted to customers
5.5 Advantages of existing freight services are explained to potential customers

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international codes and regulations relevant to the maintenance of freight records, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the servicing of freight customers
- Focus of operation of work systems, equipment, management and site operating systems for the servicing of freight customers
- Problems that may occur when servicing freight customers and appropriate action that can be taken to resolve the problems
- Freight services offered by the workplace
- Freight management systems
- Workplace costing structures and rates
- Workplace public relations policies and procedures
- Profiles and details of all customers
- Workplace rail service advertising services and procedures
- Services provided by other freight service organisations
- Types of goods and related handling and documentation requirements including dangerous goods and hazardous substances
- Documentation requirements for freight forwarding including workplace freight tracking system
- Housekeeping standards procedures required in the workplace
- Freight transport timetables, yard and terminal facilities, and site layout

Required skills:
Required skills:

- Communicate effectively with others when servicing freight customers
- Read and interpret instructions, procedures, information and labels relevant to the servicing of freight customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the servicing of freight customers
- Present information using appropriate media and technology
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when servicing freight customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when servicing freight customers in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when servicing freight customers
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the servicing of freight customers
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer, communication and office equipment when servicing freight customers
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Work may be conducted:  
- in a range of work environments  
- by day or night

Customers may be:  
- internal or external

Workplaces may comprise:  
- large, medium or small worksites

Work may be conducted in:  
- limited or restricted spaces  
- exposed conditions  
- controlled or open environments

Freight services covers:  
- the application of all products and services offered by the workplace

Promotional activities may include:  
- public relations activities  
- press releases  
- open days  
- in-house newsletters  
- publications  
- advertising programs  
- seminars  
- promotional briefings

Support services can include:  
- loading/unloading requirements  
- load security/protection  
- receipt personnel  
- special vehicle access/parking

Hazards in the work area may include:  
- exposure to chemicals  
- exposure to dangerous or hazardous substances  
- movements of equipment, goods, materials and vehicular traffic

Consultative processes may involve:  
- other employees and supervisors  
- suppliers, customers and clients  
- drivers and agents  
- relevant authorities and institutions  
- management and union representatives  
- industrial relations and OH&S specialists  
- other maintenance, professional or technical staff

Communication in the work area may include:  
- phone  
- electronic data interchange (EDI)  
- fax  
- email  
- internet  
- RF systems
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- oral, aural or signed communications
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:

- goods identification numbers and codes
- manifests, cartnotes, delivery notes, special clearances, consignment notes, authorised weighbridge certificates, and special clearances
- internal documentation used for freight tracking
- codes of practice and regulations relevant to the servicing of freight customers
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations for freight forwarding
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
RANGE STATEMENT

- Australian and International Explosives Codes
- privacy legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

| **1 Identify potential freight business** | 1.1 The nature of potential customers freight needs is established with the customer  
1.2 Customers freight needs are analysed against existing services to identify variances against normal services  
1.3 Potential new customers are kept informed during review process |
| **2 Evaluate potential business** | 2.1 Potential new business is analysed against existing freight services offered by the workplace  
2.2 Special transportation requirements are identified and discussed with the customer  
2.3 Cost effectiveness of potential new business is established using workplace guidelines |
| **3 Develop proposals for new products or services** | 3.1 Potential new business is costed against new product or service  
3.2 Proposed new product or service is documented and presented for further consideration  
3.3 Decision regarding new product or service is conveyed promptly to the potential customer for follow-up action |
| **4 Negotiate products and services with customers** | 4.1 Techniques for minimising potential damage to freight are identified and negotiated with customers  
4.2 New products or services required to meet or improve customer services are implemented as approved |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian and international codes and regulations relevant to freight services, including the Australian Dangerous Goods Code and relevant bond, quarantine or other legislative requirements
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the international codes and regulations relevant to the development of freight customers
- Focus of operation of work systems, equipment, management and site operating systems for the development of freight customers
- Problems that may occur when developing freight customers and appropriate action that can be
REQUIRED KNOWLEDGE AND SKILLS

taken to resolve the problems

- Freight services offered by the workplace
- Freight management systems
- Workplace costing structures and rates
- Workplace public relations policies and procedures
- Profiles and details of all customers
- Workplace freight service advertising policies and procedures
- Services provided by other freight service organisations
- Documentation requirements for the development of freight customers
- Freight transport timetables, yard and terminal facilities, and site layout

Required skills:

- Negotiate, communicate and liaise effectively with others when developing freight customers
- Read and interpret instructions, procedures and information relevant to the development of freight customers
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the development of freight customers
- Operate electronic communication equipment to required protocol
- Undertake financial calculations involving cost analysis
- Prepare and present quotations
- Work collaboratively with others when developing freight customers
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when developing freight customers in accordance with regulatory requirements and workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the development of freight customers
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use relevant computer, communication and office equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - identifying and cultivating potential freight business
  - developing proposals for new products and services
  - negotiating with customers regarding products and services

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments by day or night
               • by day or night
Customers may be: • internal or external
Workplaces may comprise: • large, medium or small worksites
Work may be conducted in: • limited or restricted spaces
               • exposed conditions
               • controlled or open environments
Potential customers include: • all other rail and freight authorities
               • private businesses
               • government bodies
               • members of the public
               • internal customers
Promotional activities may include: • public relations activities
               • press releases
               • open days
               • in-house newsletters
               • publications
               • advertising programs
               • seminars
               • promotional briefings
               • corporate sponsorship
               • development of promotional materials
Servicing requirements may be obtained from: • customer requests
               • works orders
               • freight requirements
               • organisation personnel
Hazards in the work area may include: • exposure to chemicals
               • exposure to dangerous or hazardous substances
               • movements of equipment, goods, materials and vehicular traffic
Consultative processes may involve: • other employees and supervisors
               • current and potential customers
RANGE STATEMENT

- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- RF systems
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- market knowledge about competitors who are providing rail freight and those providing alternative transport systems
- customer requests and works orders
- workplace procedures and policies
- codes of practice and regulations relevant to freight services
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- internal documentation used for freight services
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
RANGE STATEMENT

Applicable regulations and legislation may include:

- quality assurance procedures
- emergency procedures
- relevant codes and regulations for the provision of freight services
- Australian and international regulations and codes of practice for the transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- privacy legislation
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to manage customer service. It includes planning to meet internal and external customer requirements; ensuring delivery of quality products/services; and monitoring, adjusting and reporting customer service. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work may be undertaken in various contexts within the transport and distribution industry.

The unit generally applies to those who provide leadership of others individually or in teams.

This unit is normally packaged at AQF V or above.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan to meet internal and external customer requirements | 1.1 The needs of customers are researched, understood and assessed, and included in the planning process  
1.2 Provision is made in plans to achieve the quality, time and cost specifications agreed with customers |
| 2 Ensure delivery of quality products/services | 2.1 Products/services are delivered to customer specifications within the team's/organisation's business plan  
2.2 Individual/team performance consistently meets quality, safety, resource and delivery standards  
2.3 Coaching and mentoring assist colleagues to overcome difficulty in meeting customer service standards  
2.4 Resources are used effectively and efficiently to provide quality products/services to customers |
| 3 Monitor, adjust and report customer service | 3.1 The organisation's systems and technology are used to monitor progress in achieving product/service targets and standards  
3.2 Customer feedback is sought and used to improve the provision of products/services  
3.3 Decisions to overcome problems and make improvements to products/services are taken in consultation with designated individuals/groups  
3.4 Adjustments are made to products/services, and those who have a role in their planning and delivery are informed of changes |

## Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant sections of national and state or territory regulatory requirements and codes of practice such as consumer protection legislation
- Relevant OH&S and environmental procedures and regulations
- Organisational policies, principles, codes and performance standards
- Risk management as it relates to dealings with customers, and managing potential fall-out from poor customer service
- Performance management systems used in the organisation
- Quality management systems
- Requirements for completing relevant documentation such as reports of customer complaints
REQUIRED KNOWLEDGE AND SKILLS

- Steps involved in planning the work activities

Required skills:

- Communicate and consult with others to ensure excellent customer service is modelled to staff and that customer issues are resolved
- Prepare reports to develop and disseminate information on customer service performance
- Interpret and follow operational instructions and prioritise work
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Deal effectively with unplanned events such as a change in the volume of customer enquiries
- Monitor work activities in terms of planned schedule, particularly in line with agreed time and quality standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Appropriate systems may include:
- quality management
- customer feedback/response

Customer service standards and plans may include:
- response times/delivery times
- protocols to which staff are trained to provide consistent quality service
- quality specifications

Documentation and records may include:
- quality assurance procedures
- emergency procedures
- customer surveys, lists of complaints, reports from staff in relation to customers

Applicable legislation and regulations may include:
- Australian legislation, regulations and codes of practice, including consumer protection legislation
- workplace relations regulations

Unit Descriptor

This unit involves the skills and knowledge required to apply quality procedures within work activities including applying quality concepts to work, planning and trialing improvements in work processes and implementing improvements confirmed through the trials. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with the relevant regulations and workplace quality standards.

Work is performed under limited or minimum supervision, generally within a team environment. It involves the application of established routine procedures to ensure the quality of products and services in the transport and distribution industry.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Apply quality concepts | 1.1 Responsibility is taken for quality of own work when providing services or products to meet external and internal customer needs
 | 1.2 Work is completed in accordance with workplace standards as defined in enterprise policies and procedures
 | 1.3 Basic quality concepts are applied to work activities
2 Trial improvements | 2.1 Improvements to work processes are planned and trialled
 | 2.2 Trials of improvements to work processes are checked for improvement outcomes and compliance with workplace requirements
3 Implement improvements | 3.1 Improvement initiatives trialled and confirmed as successful are implemented in accordance with enterprise procedures
 | 3.2 Work is completed in accordance with workplace procedures

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Workplace quality assurance and improvement principles and procedures
- Relevant OH&S procedures and guidelines
- Housekeeping standards and procedures required in the workplace
- Workplace or site layout
- Focus of operation of work systems, equipment or management, site and organisational operating procedures
- Typical quality-related problems that may arise in work operations and products, and related options for action and solutions
- Impact of job on enterprise and individual performance

**Required skills:**

- Communicate effectively with others when applying quality procedures and standards
- Read and interpret instructions and information relevant to quality procedures and standards
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to quality procedures and standards
Required skills:

- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying quality procedures and standards
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified quality-related problems in accordance with workplace procedures
- Monitor work activities in terms of quality procedures and standards and take appropriate action where required
- Modify quality assurance activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and use equipment, processes and procedures required within the context of the job concerned

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- in a range of typical weather conditions

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in a range of work contexts and may include:
- restricted spaces
- exposed conditions
- controlled or open environments
- exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles

Consultative processes may involve:
- other workplace personnel
- management
- union representatives
- industrial relations personnel
- OH&S specialists
- other professional or technical staff
RANGE STATEMENT

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- quality assurance procedures and standards
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- workplace procedures and policies
- manufacturers instructions concerning the use of equipment and/or materials
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- OH&S policy and procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and regulations
- water and road use and licence arrangements
- relevant patent or copyright arrangements
- dangerous goods and air freight regulations
- relevant export/import/quarantine/bond requirements

Unit Descriptor

This unit involves the skills and knowledge required to apply grain protection procedures within grain storage facilities in accordance with workplace procedures including identifying required pest control measures, preparing for application of pest control measures, monitoring application of pest control measures, ventilating fumigated storages, and maintaining records in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with regulations and workplace requirements relevant to grain storage operations.

Work is performed under some supervision, generally within a team/group environment. It involves the application of regulatory requirements and workplace procedures when applying grain protection measures as part of grain storage operations in the transport, warehousing, distribution and/or storage industries.

| 1 Prepare for application of pest control measures | 1.1 Legal and workplace requirements for fumigation are followed in accordance with work order  
1.2 Fumigation/spray application requirements are followed using silo and grain storage information in accordance with manufacturers instructions  
1.3 Written records are confirmed by site measurements and observations  
1.4 Access and site specific safety requirements to meet legislation and workplace instructions are determined  
1.5 Equipment is checked for conformance to workplace requirements and manufacturers specifications  
1.6 Where applicable, storage is checked for gas-proofing in accordance with manufacturers and workplace instructions prior to fumigation |
| 2 Apply pest control measures | 2.1 Personal protective equipment and engineering controls are used as instructed  
2.2 Fumigant and spray applications are applied in accordance with manufacturers and workplace instructions  
2.3 Warning signs are placed in accordance with legislative and workplace requirements  
2.4 Application is monitored to ensure effectiveness of operation  
2.5 Empty fumigant containers are returned to the manufacturer, retailer or disposed of in accordance with legislative and workplace requirements  
2.6 Baits are prepared in accordance with legislation and manufacturers instructions  
2.7 Baits are placed in accordance with site requirements and manufacturers instructions |

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**
- Regulations relevant to the application of grain protection measures in grain storage facilities
- Relevant OH&S and environmental protection procedures and guidelines
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures and policies for the application of grain protection measures
- Problems that may occur when applying grain protection measures and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Characteristics of commodity types, varieties and grades, and their identification
- Emergency response procedures
- Storage and safe handling procedures for fumigants, chemicals and other grain protection materials
- Procedures for environmental control and disposal activities
- Site layout and obstacles

Required skills:

- Communicate effectively with others when applying grain protection measures
- Read and interpret instructions, procedures information and labels relevant to the application of grain protection measures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the application of grain protection measures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying grain protection measures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when applying grain protection measures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when applying grain protection measures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the application of grain protection measures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Set up and maintain grain protection equipment
- Identify, select and efficiently and effectively use equipment needed when applying grain
Required skills:

- protection measures
- Identify pests that infest grain in grain storage facilities
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include movement of:
- equipment
- goods
- products
- materials
- vehicular traffic

Work is carried out in accordance with:
- required OH&S procedures
- hazard control strategies, including the use of personal protective equipment
- manufacturers instructions and labels for the use of fumigants and pest control chemicals

Pest control activities may include:
- spraying
- baiting
- use of controlled fumigants

Fumigation inert gas may be for the purposes of:
- treating identified pests
- for meeting grain quality standards

Pest control agents:
- must be used in accordance with relevant Commonwealth, state or territory legislation

Hazards in the work area may include exposure to:
- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
RANGE STATEMENT

Personal protective equipment may include:
- humidity, air temperature, radiant heat
- debris on floor
- faulty equipment
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:
- site restrictions and procedures
- licensing requirements
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- emergency procedures

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications, labels and instructions for fumigants, chemicals and equipment
- material safety data sheets
RANGE STATEMENT

- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures
- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Applicable regulations and legislation may include:

</table>
| 1 Install grain quality control equipment | 1.1 Procedures for maintaining the quality of stored grain are identified from work plans and considering climatic conditions, types of storage and general environment  
1.2 Aeration equipment (where required) is installed to workplace and site requirements to maintain appropriate grain temperature and moisture content  
1.3 Inspection/sampling equipment and procedures are confirmed and implemented in accordance with workplace procedures  
1.4 Equipment is checked to ensure correct set-up and operation  
1.5 Equipment is maintained in accordance with workplace requirements and manufacturers instructions  
1.6 Rectification of faults in equipment is undertaken in accordance with workplace procedures |
| 2 Monitor the quality of stored commodities | 2.1 Stored commodities and associated facilities are inspected for signs of damage or potential for damage  
2.2 Required repairs to facilities are reported to appropriate personnel for action  
2.3 Monitoring for pest infestations and climatic contamination/damage to grain is regularly completed in accordance with workplace sampling/inspection procedures  
2.4 Results of sampling/inspections are recorded and reported in accordance with workplace procedures  
2.5 Follow-up action to protect grain quality is undertaken in accordance with workplace procedures |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the implementation of grain monitoring measures in grain storage facilities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the implementation of grain monitoring measures
- Problems that may occur when implementing grain monitoring measures and appropriate action that can be taken to resolve the problems
REQUIRED KNOWLEDGE AND SKILLS

- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Classification procedures
- Emergency response procedures
- Storage and safe handling procedures
- Procedures for environmental control and disposal activities
- Site layout and obstacles

Required skills:

- Communicate effectively with others when implementing grain monitoring measures
- Read and interpret instructions, procedures, information and labels relevant to the implementation of grain monitoring measures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the implementation of grain monitoring measures
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing grain monitoring measures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when implementing grain monitoring measures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when implementing grain monitoring measures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the implementation of grain monitoring measures
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Set up and maintain grain protection equipment
- Identify, select and efficiently and effectively use equipment needed when implementing grain monitoring measures
- Select and use required personal protective equipment conforming to industry and OH&S standards
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted: • in a range of work environments • by day or night

Customers may be: • internal or external

Workplaces may comprise: • large, medium or small worksites

Workplace environment may include movement of: • equipment • goods • products • materials • vehicular traffic

Inspection/sampling processes may include: • turning • visual inspection • hand sampling • grain sieves • robes and spears • trapping

Problems identified in commodities and facilities may include: • presence of water or water damage • presence and activity of pests • dead vertebrate pests in stored grain • damage or deterioration of storage facility • storm damage • inappropriate grain temperature and moisture levels

Types of storage and environment may include: • permanent and/or temporary storage • fixed and/or portable commodity handling equipment • site buildings • haulage vehicles • rail loops • walkways and access points in buildings and facilities • site surroundings

Grain aeration involves: • set-up, maintenance, operational control and dismantling of equipment

Hazards in the work area may include exposure to: • chemicals and pesticides • dangerous or hazardous substances • stationary and moving equipment, parts and materials • noise, light, energy sources

- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications and instructions
RANGE STATEMENT

- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to apply quality systems in workplace operations including working within a quality improvement system and using quality improvement systems, tools and techniques in accordance with enterprise procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in accordance with the relevant regulations and workplace quality standards.

Work is performed under some supervision, generally within a team environment.

It involves the application of quality assurance principles and procedures to implement quality systems and quality improvement initiatives within workplace activities.

Licensing/Regulatory Information
Refer to Unit Descriptor

Employability Skills Information

Employability Skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. **Work within a quality improvement system** | 1.1 Instructions are followed and duties are performed either individually or as a member of a work team within a quality improvement system  
1.2 Work is completed either individually or as a member of a work team in accordance with standards as defined in workplace policies and procedures
2. **Use quality improvement systems, tools and techniques** | 2.1 Variations in the quality of services and/or products from required standards are detected and reported in accordance with workplace procedures  
2.2 Quality of operations/service is monitored and adjusted as required to ensure the satisfaction of both internal and external customers  
2.3 Quality improvement tools and techniques are used both individually and as part of a work team to systematically improve the quality of work and services

Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Workplace quality assurance and improvement principles and procedures  
- Quality improvement tools and methods  
- Relevant OH&S procedures and guidelines  
- Housekeeping standards and procedures required in the workplace  
- Workplace or site layout  
- Focus of operation of work systems, equipment or management, site and organisational operating procedures  
- Typical quality-related problems that may arise in work operations and products and related options for action and solutions  
- Impact of job on enterprise and individual performance

**Required skills:**

- Communicate effectively with others when applying and implementing quality systems  
- Read and interpret instructions, procedures and information relevant to the application and
Required skills:

- Implementation of quality systems
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the application and implementation of quality systems
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when applying and implementing quality systems
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may arise when applying and implementing quality systems in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur during the application and implementation of quality systems
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the application and implementation of quality systems
- Monitor work activities in terms of standards and processes of the quality system concerned
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and use quality improvement tools and methods
- Identify and use equipment, processes and procedures required within the context of the job concerned
- Operate and adapt to differences in equipment in accordance with standard operating procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
EVIDENCE GUIDE

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- in a range of typical weather conditions

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in a range:
- restricted spaces
RANGE STATEMENT

of work contexts and may include:

- exposed conditions
- controlled or open environments
- exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles

Quality improvement tools may include a range of techniques including:

- product sampling and testing
- monitoring of operational performance
- fault/problem analysis
- client surveys
- trials of quality improvement initiatives

Consultative processes may involve:

- other workplace personnel
- management
- union representatives
- industrial relations personnel
- OH&S specialists
- other professional or technical staff

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:

- quality assurance procedures and standards
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- workplace procedures and policies
- manufacturers instructions concerning the use of equipment and/or materials
- manifests, bar codes, goods and container information/serial number
- supplier and/or client instructions
- material safety data sheets
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
RANGE STATEMENT

- OH&S policy and procedures
- emergency procedures
- relevant codes of practice and regulatory requirements
- relevant Australian standards and certification requirements
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- workplace relations regulations
- workers compensation regulations
- Dangerous Goods Code and associated regulations
- water and road use and licence arrangements
- relevant patent or copyright arrangements
- dangerous goods and air freight regulations
- relevant export/import/quarantine/bond requirements

Competency Field J - Quality
TLI3005A Sample, inspect and test products to specifications

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to sample, inspect and test products to specification including establishing specifications and test procedures, selecting evidence, conducting and interpreting tests, and reporting findings. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with the relevant regulations, codes of practice, Australian standards and workplace quality standards.

Work is performed under limited or minimum supervision, generally within a team environment. Discretion and judgement are exercised in planning and using resources, services and processes to achieve required outcomes within organisational policy and procedures.

Work involves the application of quality assurance principles and procedures to the sampling, inspection and testing of products as part of operations in the warehousing, storage, transport and distribution industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Establish specifications and test procedures | 1.1 Product quality specifications and required outcomes are read, drawings interpreted and test parameters are identified  
1.2 Test methods for each required test parameter are identified and the most efficient test method is noted  
1.3 Requirements for testing by personnel external to the work area are identified and appropriate permission is obtained  
1.4 Sampling, inspection and testing are conducted in accordance with hazardous substances regulations |
| 2 Select evidence | 2.1 Appropriate conforming and/or non-conforming products, materials and/or waste are selected for testing  
2.2 Observations of operators and copies of procedures are collected |
| 3 Conduct and interpret tests | 3.1 Tests are conducted following workplace procedures, including quality assurance procedures, and the results are documented as required  
3.2 Emergency procedures are identified and engaged in the event of an incident  
3.3 Comparisons of all data collected are made  
3.4 Any recommendations are noted and considered for feasibility  
3.5 Equipment is maintained in accordance with workplace and manufacturers requirements |
| 4 Report findings | 4.1 Findings of tests are documented in accordance with workplace procedures  
4.2 Potential or existing problems and appropriate recommendations are proposed and reported either orally and/or in writing |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations, codes of practice and Australian standards
- Workplace quality assurance principles and procedures
- Relevant OH&S procedures and guidelines
REQUIRED KNOWLEDGE AND SKILLS

- Workplace quality procedures for the sampling, inspection and testing of products
- Quality standards and test/inspection criteria for the products concerned
- Workplace or site layout
- Focus of operation of work systems, equipment or management, site and organisational operating procedures
- Typical sampling/testing problems that may arise in work operations and products and related options for action and solutions
- Impact of job on enterprise and individual performance
- Housekeeping standards and procedures required in the workplace

**Required skills:**

- Communicate effectively with others when sampling, inspecting and testing products to specifications
- Read and interpret instructions, procedures, information and signs relevant to the sampling, inspecting and testing of products to specifications
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the sampling, inspecting and testing of products to specifications
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when sampling, inspecting and testing products to specifications
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems that are identified when sampling, inspecting and testing products to specifications in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when sampling, inspecting and testing products to specifications
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the sampling, inspecting and testing of products to specifications
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Identify and use equipment, processes and procedures required within the context of the job concerned
- Operate and adapt to differences in equipment in accordance with standard operating procedures
Required skills:
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment
- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:

Competency Field

Competency Field  J - Quality
TLIJ3006A Implement grain protection procedures

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to implement grain protection procedures within grain storage facilities in accordance with workplace procedures including identifying required pest control measures, preparing for application of pest control measures, monitoring application of pest control measures, ventilating fumigated storages, and maintaining records in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in accordance with regulations and workplace requirements relevant to grain storage operations.

Work is performed under some supervision, generally within a team/group environment. It involves the application of regulatory requirements and workplace procedures when implementing grain protection measures as part of grain storage operations in the transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Identify required pest control measures | 1.1 Stored grain is checked for live or dead pests in accordance with workplace procedures  
1.2 Pest infestation information, including prevalence, type and location, is gleaned from observation  
1.3 Actual and potential damage to stored grain is assessed and documented  
1.4 Pests causing or likely to cause damage are identified  
1.5 Appropriate form of protection and/or pest control is determined in accordance with workplace procedures  
1.6 Pest control measures are arranged and/or implemented in accordance with workplace requirements |
| 2 Plan and prepare for application of pest control measures | 2.1 Spray application and inert atmosphere/fumigation requirements and application procedures are confirmed in accordance with legislative, workplace and customer requirements  
2.2 Quantity and form of gas/liquid required and exposure period is determined from silo and grain storage information and matched to manufacturers instructions  
2.3 Method of application is determined based on the type of pest to be controlled and site arrangements  
2.4 Exposure period is determined from pest(s) to be controlled and storage specifications  
2.5 Written records of site are confirmed by site measurements and observations  
2.6 Access and site specific safety requirements, including appropriate signage, are coordinated to meet legislation and workplace procedures  
2.7 Equipment and personnel appropriate to the task are organised  
2.8 Storage is sealed in accordance with manufacturers and workplace instructions and appropriately tested as required |
| 3 Monitor application of pest control measures | 3.1 Application is undertaken in accordance with manufacturers instructions, workplace procedures and regulatory framework  
3.2 Suitable emergency equipment and personnel are coordinated on site during fumigation in accordance with workplace instructions  
3.3 Selected process is monitored for effectiveness in accordance with manufacturers and workplace instructions  
3.4 Tests are made to determine leakage of gas, and corrective action taken where this exceeds workplace limits |
| 4 Ventilate fumigated storages | 4.1 Where used, pressure equipment and/or generation equipment are shut down when requested in accordance with workplace |
ELEMENT PERFORMA NCE CRIT ERIA procedures

4.2 Ventilation procedures appropriate for the storage type are implemented in accordance with workplace procedures

4.3 Tests to legislative and workplace instructions are made to ensure gas has been dispersed before personnel are allowed to enter the storage

4.4 Warning signs and emergency equipment are removed when gas has dispersed to safe levels

4.5 Stored grain is checked for evidence of live and dead pests in accordance with workplace requirements

4.6 Empty gas/fumigant containers are returned to the manufacturer, retailer or disposed of in accordance with legislative and workplace requirements

5 Maintain records

5.1 Records of pest control activities are made and stored in accordance with legislative and workplace requirements

5.2 Pest control operations and results are reported in accordance with workplace requirements

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the implementation of grain protection measures in grain storage facilities
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the implementation of grain protection measures
- Problems that may occur when implementing grain protection measures and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Procedures and precautions when preparing grain protection agents
- Classification procedures
- Emergency response procedures
- Storage and safe handling procedures for fumigants, chemicals and other grain protection materials
- Procedures for environmental control and disposal activities
- Site layout and obstacles
Required skills:

- Communicate effectively with others when implementing grain protection procedures
- Read and interpret instructions, information and labels relevant to grain protection procedures
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when implementing grain protection procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when implementing grain protection procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when implementing grain protection procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Plan own work including predicting consequences and identifying improvements
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Set-up and maintain grain protection equipment
- Identify, select and efficiently and effectively use equipment needed when implementing grain protection measures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify pests that infest grain in grain storage facilities
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
RANGE STATEMENT

Customers may be:
- by day or night
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include:
- movement of equipment, goods, products, materials and vehicular traffic

Work is carried out:
- in accordance with required OH&S procedures and hazard control strategies, including the use of personal protective equipment and manufacturers instructions and labels for the use of fumigants and pest control chemicals

Pest control activities may include:
- spraying
- baiting
- use of controlled and generally available substances
- fumigation
- inert atmosphere operations

Fumigation inert gas may be:
- for the purposes of treating identified pests or for meeting grain quality standards. Application of fumigant inert gas includes the calculation of volumes and weight of stored grain

Pest control agents must be used:
- in accordance with relevant Commonwealth, state or territory legislation

Hazards in the work area may include exposure to:
- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- debris on floor
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:
- site restrictions and procedures
- licensing requirements
- use of safety and personal protective equipment
- communications/recording equipment
RANGE STATEMENT

Communication in the work area may include:
- authorities and permits
- emergency procedures
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- manufacturers of pesticides
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures

Information/documents may include:
- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications, labels and instructions for fumigants, chemicals and equipment
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:
- relevant codes and regulations pertaining to grain storage
- legislation regarding the use of fumigants/poisons
RANGE STATEMENT

- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

</table>

## Required Skills and Knowledge

### REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant sections of national and state or territory regulatory requirements and codes of practice
- Relevant OH&S and environmental procedures and regulations
- Various approaches to quality assurance, such as Total Quality Management, and the strengths and limitations of each when applied in this context
- Requirements for completing relevant documentation such as checklists, schedules and internal audit reports
- Code of practice for working collaboratively with others
- Typical defects that can occur and related action that should be taken
REQUIRED KNOWLEDGE AND SKILLS

- Steps involved in planning the work activities
- Procedures to be followed in the event of an emergency

Required skills:

- Communicate effectively with others when completing work activities
- Read and interpret instructions, procedures, information and signs relevant to work activities
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to work activities
- Operate electronic communication equipment to required protocol
- Work collaboratively with others
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Implement contingency plans for unplanned events
- Modify activities depending on differing operational contingencies, risk situations and environments without compromising quality

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

In both real and simulated environments, access is required to:

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Quality assurance methods and techniques may include:

- analysis
- sampling
- scanning
- evaluating the effectiveness of system controls
- questioning
- tracing
- trend analysis

Assessment objectives may include:

- evaluation of level of compliance with existing contract
- compliance with contractual and/or legislative requirements
- measuring performance in achieving quality objectives and confirming the effectiveness of the implemented quality system in meeting specified objectives
- identifying areas of potential improvement
- standard operating procedures (SOPs)

Depending on the organisation...
RANGE STATEMENT

Concerned, workplace procedures may be called:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Consultative processes may involve:
- other employees and supervisors
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists

Documentation and records may include:
- relevant OH&S and environmental protection regulations
- quality assurance procedures
- relevant Australian Standards and certification requirements
- outcomes or reports of quality audits or assessments

Applicable legislation and regulations may include:
- Relevant sections of national and state or territory regulatory requirements and codes of practice
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations

Unit Sector(s)

Competency Field

Competency Field J - Quality
TLIJ4009A Implement and monitor quality assurance systems

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to implement and monitor quality assurance (QA) systems. It includes planning for QA activities, and carrying out and evaluating QA procedures.

Licensing, legislative, regulatory or certification may be applicable to this unit.

Application of the Unit
This unit applies to ensuring that the quality of materials, resources and outputs, including final products, meet organisational specifications and standards.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan for quality assurance activities | 1.1 Products and services to be quality assured are identified alongside resources required  
1.2 Objectives of the QA activities are determined and discussed with those responsible for carrying them out  
1.3 Proposed methods and techniques to be applied are clearly understood and implemented |
| 2 Perform quality assurance procedures | 2.1 Resources required to carry out the QA efficiently and effectively are accessed  
2.2 Quality of operations, service or products is monitored and adjusted as required to meet organisational specifications and standards  
2.3 Variations in the quality of operations and services or products from required standards are detected and reported in accordance with organisational procedures  
2.4 Problems that affect or could potentially affect quality are reported to relevant person  
2.5 Records are kept according to organisational QA policy and procedures |
| 3 Evaluate quality assurance procedures | 3.1 Outcomes of implementing QA procedures are evaluated against organisational specifications and standards  
3.2 Suggestions for improvements of QA procedures are made according to organisational policy and procedures  
3.3 Outcomes of the QA are discussed with relevant parties |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Various approaches to quality assurance and their strengths and limitations
- Requirements for completing relevant documentation, such as checklists, schedules and internal audit reports
- Data analysis and evaluation methods
- Typical defects that can occur and related action that should be taken
- Relevant organisational specifications and standards that require quality assured outcomes

Required skills:

- Complete documentation related to work activities
- Apply analysis and evaluation methods to materials, resources and outputs, including final products
- Modify activities depending on differing operational contingencies, risk situations and environments without compromising quality
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

QA methods and techniques may include:
- analysis
- sampling
- scanning
- evaluating the effectiveness of system controls
- questioning
- tracking
- trend analysis

Products and services may include:
- materials
- contracted services
- resources
- equipment
- rail infrastructure

Assessment objectives may include:
- evaluating level of compliance with existing contract
- complying with contractual and/or legislative requirements
- measuring performance in achieving quality objectives and confirming the effectiveness of the implemented quality system in meeting specified objectives
- identifying areas for potential improvement

Depending on the organisation concerned, organisational procedures may be called:
- standard operating procedures (SOPs)
- company procedures
- enterprise procedures
- workplace procedures
- established procedures

Documentation and records may include:
- relevant OH&S and environmental protection regulations
- QA procedures
- relevant Australian standards and certification requirements
- outcomes or reports of quality audits or assessments

Applicable legislation and regulations may include:
- relevant sections of federal, state and territory regulatory requirements and codes of practice
- relevant state and territory legislation relating to:
  - environmental protection
  - OH&S
• workplace relations regulations

<tr>
<td>3.5</td>
<td>All information relating to work activities is confirmed or clarified with appropriate people as required</td>
</tr>
</tbody>
</table>
4 Deal with difficult customer situations

4.1 Customer complaints are handled courteously in accordance with organisational procedures
4.2 Nature and details of the customer’s complaint are established and agreed on
4.3 Action to resolve the customer’s complaint is taken wherever possible
4.4 Unresolved customer complaints are referred to a higher authority
4.5 All associated documentation is accurately completed in accordance with organisational procedures

5 Maintain personal presentation standards and present a professional image

5.1 Company uniform is maintained to present an appropriate image in accordance with organisational requirements
5.2 Specific presentation requirements are maintained in accordance with organisational requirements
5.3 Truck and equipment are kept clean, tidy and uncluttered in accordance with organisational requirements

6 Present a positive company image using effective communication techniques

6.1 Professional ethics are maintained to enhance customer commitment
6.2 Image and good standing are maintained by taking timely actions with customers in accordance with organisational requirements
6.3 Effective service environment is created through appropriate communication techniques
6.4 Communication equipment is used effectively and efficiently in accordance with organisational procedures
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required knowledge:

- Relevant federal, state and territory standards, regulations and codes of practice
- OH&S procedures and guidelines relevant to workplace operations
- Relevant dangerous goods information pertaining to the relevant workplace
- Workplace driving and operational instructions
- Enhancements available to customers in relation to dangerous goods quality service
- Required level of quality and safety for relevant workplace requirements
- Role of customer service in company profitability
- Requirements of workplace systems and operations and relevant equipment

Required skills:

- Communicate effectively with others when implementing quality customer service in the dangerous goods industry
- Interpret and follow operational instructions as they apply to the dangerous goods industry
- Apply relevant agreements, codes of practice and other legislative requirements to work processes
- Identify and correctly use equipment, processes and procedures
- Implement contingency plans for unanticipated situations that may occur when implementing quality procedures in the dangerous goods workplace
- Adapt appropriately to cultural differences in the workplace and with customers, including behaving appropriately when implementing quality service in the dangerous goods industry
- Operate electronic communication equipment to required protocol
- Complete documentation related to the implementation of quality customer service in the dangerous goods industry
- Apply precautions and required action to minimise, control or eliminate hazards that may occur when working in the dangerous goods industry
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment section in Section B of the accreditation submission.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - knowledge of organisational procedures within job function
  - rectifying a complaint using workplace policy and procedures
  - demonstrating effective customer service within the dangerous goods industry at a customer’s site
  - identifying good customer service with the dangerous goods industry

Context of and specific resources for assessment

- Assessment must ensure access to:
  - tools, equipment and personal protective equipment (PPE) currently used in the dangerous goods industry
  - relevant and current regulatory and equipment documentation that impacts on work activities as it applies to the dangerous goods industry

Method of assessment

- Practical assessment must occur:
  - through activities in an appropriately simulated environment consistent with current industry practice, and/or
  - in an appropriate range of situations in the workplace
  - Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended
  - In all cases where practical assessment is used it will be combined with targeted questioning to assess required knowledge
  - Assessment processes and techniques must be appropriate to the language and literacy capacity of the candidate and the work being performed
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Customers include:
- suppliers
- receivers
- contractors
- general public

Communication techniques include:
- telephone
- two-way radio
- email
- fixed phone
- mobile phone
- faxes
- internet
- oral, aural, or signed communications

Organisational documentation includes:
- transport emergency response plan (TERP)
- standard operating procedures (SOP)
- emergency procedures guide (EPG)
- emergency information procedure (EIP)

Documentation and records include:
- transport regulations as they apply to the enterprise, including local authority regulations and procedures
- workplace policies and procedures
- relevant Australian standards and certification requirements
- relevant internal data entry books, including log books, data sheets and load sheets
- TERP

Applicable legislative procedures and codes include:
- Australian code for the transport of dangerous goods by road or rail: the current Australian Dangerous Goods (ADG) Code
- relevant state and territory:
  - roads and traffic authority driving regulations and licence or permit requirements pertaining to operating heavy vehicles on unsealed roads
  - road rules
  - OH&S legislation
  - fatigue management regulations
• environmental protection legislation and regulations

Unit Sector(s)
Not applicable.

Competency Field
J – Quality
TLIJ5007A Conduct internal quality audits

Modification History
Not Applicable

Unit Descriptor

This unit involves the skills and knowledge required to conduct internal quality audits in accordance with relevant regulatory requirements and workplace procedures. It includes preparing for internal audit, scheduling internal audit, conducting audit and documenting findings, and reporting audit results in accordance with workplace requirements. Licensing, legislative, regulatory or certification requirements may be applicable to this unit.

Application of the Unit

Work must be carried out in compliance with the relevant regulations, standards and codes of practice, including the ADG Code.

Work is under general guidance on progress and outcomes of work. It requires discretion and judgement for self and others in planning and using resources, services and processes to achieve required outcomes within workplace policy and procedures.

A range of opportunities may be used to develop the work area and to support the development of work systems, innovative strategies to deal with contingencies and to encourage the achievement of the workplace's goals and key performance objectives by the work area and the individuals and teams within it.

The unit generally applies to those with responsibility for resource coordination and allocation, and leadership of others individually or in teams.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Prepare for internal audit** | 1.1 Benchmarks for the quality audit are established/identified  
1.2 Procedures required to be audited are identified and implications of non-conformance are estimated  
1.3 Technical and/or calibration requirements for audits are noted and (where necessary) appropriate support personnel are identified  
1.4 Production schedules are examined to identify appropriate schedule for audit |
| **2 Schedule internal audit** | 2.1 Audit timings are planned to ensure that relevant procedures are conducted within workplace agreed time intervals and timeframes  
2.2 Audit frequency is adjusted based on importance of activities to the business unit, process or workplace changes or customer feedback  
2.3 Contact is made with appropriate personnel and relevant appointments for the audit are made |
| **3 Conduct audit and document findings** | 3.1 Methods for the conduct of the audit are established and confirmed  
3.2 Observations and interviews are conducted with (any) required approved third party  
3.3 Documentation of observations and interview responses is completed |
| **4 Report audit results** | 4.1 Audit results are discussed with personnel associated with the procedures or standards audit  
4.2 Audit reports indicate compliances noted  
4.3 Non-compliance reports indicate location, relevant standard or procedure, and supporting evidence |

### Required Skills and Knowledge

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant regulations, codes of practice and legislative requirements including the Australian Dangerous Goods Code where applicable
- Relevant OH&S and environmental protection procedures and regulations
REQUIRED KNOWLEDGE AND SKILLS

- Workplace procedures for the conduct of internal quality audits
- Problems that may occur during the conduct of internal quality audits, and action that can be taken to resolve or report the problems
- Risks and hazards related to the conduct of internal quality audits, and ways of controlling the risks involved
- Focus of operation of work systems, resources, management and workplace operating systems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Enterprise business policies and plans including procedures for identification of non-compliance and best practice
- Application of relevant Australian Standards and certification requirements
- Quality procedures and implementation strategies
- Resource availability including the competencies of individuals in the team/group
- Understanding and knowledge of the application of current competencies within functional activity
- Coaching and mentoring approaches to support team members to share knowledge and skills
- Relevant workplace documentation procedures

Required skills:

- Communicate effectively with others when conducting internal quality audits
- Read and interpret instructions, procedures, information and signs relevant to the conduct of internal quality audits
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of internal quality audits
- Operate electronic communication equipment to required protocol
- Provide leadership to others
- Work collaboratively with others when conducting internal quality audits
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any problems, faults or malfunctions that may be identified when conducting internal quality audits in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may arise when conducting internal quality audits
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of internal quality audits
- Plan and organise activities
- Monitor work activities in terms of planned schedule
Required skills:

- Modify activities to cater for variations in workplace contexts and environment
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and apply appropriate application of technology, information systems and procedures
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - conducting an internal audit in the workplace

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate assessments using written/practical/oral assessments
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be undertaken:

- in various work environments in the sections of the warehousing, storage, transport and distribution industries

Customers may be:

- internal or external

Operations may be conducted:

- by day or night

The workplace environment may involve:

- twenty-four hour operation
- single and multi-site location
- large, medium and small workplaces

Audits may cover:

- aspects of services, products, risks, work systems and workplace

Quality audits may be conducted:

- as part of enterprise, site or licence requirements

Audits may be conducted:

- alone or in conjunction with other staff from the enterprise
- using external personnel

Hazards may include:

- confined spaces
- hazardous or dangerous materials/goods
- contamination of, or from, goods/materials being transported/stored
- fire/explosions
- noise, light, energy sources
- stationary and moving machinery, parts or components
- moving vehicles

Communication in the work area may include:

- phone
- electronic data interchange (EDI)
RANGE STATEMENT

- fax
- email
- internet
- RF communications
- barcode readers
- oral, aural or signed communications

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- systems and facilities for controlling storage environments
- specialised lifting and/or handling equipment
- incident/accident breakdown procedures
- additional gear and equipment
- noise restrictions
- hours of operations
- authorities and permits
- communications equipment

Hazard management is consistent with:
- the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- suppliers, potential customers and existing clients
- relevant authorities and institutions
- government instrumentalities
- emergency services
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documentation may include:
- Australian and international codes of practice and regulations relevant to workplace activities, including the ADG Code where applicable
- workplace operating procedures and policies
- supplier and/or client instructions
- operations manuals, job specifications and procedures and induction documentation
- manufacturers specifications for equipment and environmental control systems
RANGE STATEMENT

- suppliers handling and storage advice
- quality and customer service standards and procedures
- material safety data sheets
- Safe Working Limits (SWL) and Working Load Limits (WLL) of load shifting equipment and storage facilities
- relevant Australian and international standards, criteria and certification requirements
- communications technology equipment, oral, aural or signed communications
- emergency procedures
- relevant competency standards and training materials
- QA plans, data and document control
- conditions of service, legislation and industrial agreements including workplace agreements and awards
- relevant codes and regulations including ADG Code where applicable
- relevant Australian and international standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation in terms of duties of employers, employees, suppliers and contractors
- licence, patent or copyright arrangements
- relevant workplace relations legislation
- relevant workers compensation legislation
- equal opportunity, equal employment opportunity and affirmative action legislation

Applicable procedures and codes may include:

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant OH&S procedures and guidelines concerning the use of computer equipment in the workplace, including recommended posture, ergonomic settings of chair and workstation, and the use of periods of rest and exercise
- OH&S risks and hazards when using computer equipment for work tasks, and ways of controlling the risks/hazards
- Procedures for the use of keyboards and computer equipment in the workplace
- Typical problems that can occur when using keyboards to enter data and related appropriate action that can be taken to prevent or solve them
- Housekeeping standards and procedures required in the workplace
- Site layout

Required skills:

- Read and interpret instructions, procedures, information and manuals relevant to the use of keyboards to enter data
- Interpret and follow operational instructions and prioritise work
- Operate electronic infotechnology and computer equipment to required protocol
- Work collaboratively with others when using keyboards to enter data
Required skills:

- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when using keyboards to enter data in accordance with workplace procedures
- Apply precautions and required action to minimise, control or eliminate hazards that exist when using keyboards to enter data
- Work systematically with required attention to detail without injury to self
- Apply fatigue management knowledge and techniques
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in keyboards, software and computer equipment in accordance with standard operating procedures
- Maintain eye-hand coordination

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Performance is demonstrated consistently over a period of time and in a suitable range of contexts

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:

- in a range of work environments
- by day or night
- in a range of typical weather conditions

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Keyboards/keypads may be used in a range of work contexts, including:

- in the workplace, warehouse or depot
- in the business office
- in a vehicle on the road
- at a client's workplace

Keyboards/keypads may be used on a range of infotechnology equipment, including:

- computers
- cash registers
- calculators
- electronic typewriters
- various forms of data entry devices

Keyboard skills may be required to enter data via a range of:

- word processors
- inventory control and stock management systems
RANGE STATEMENT

work-based computer applications including:
- electronic data interchange (EDI) systems
- information databases and storage systems
- invoicing and payment systems
- manifests control systems
- work organisation systems
- internet browsers
- computerised presentation software

Personnel in the work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- goods identification numbers and codes
- manifests, bar codes, goods and container identification/serial number
- manufacturers instructions concerning the use of keyboards/keypads
- workplace procedures and policies for the use of computer equipment
- supplier and/or client instructions
- material safety data sheets
- relevant codes of practice
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- relevant state/territory OH&S legislation
- workplace relations regulations
- workers compensation regulations

Applicable regulations and legislation may include:
