UEECS0024 Integrate multiple computer operating systems on a client server local area network

Release: 1

UEECS0024 Integrate multiple computer operating systems on a client server local area network

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to integrate multiple computer operating systems on a client server local area network (LAN).

It encompasses applying different computer and network operating systems on a single LAN, using network standards and protocols, selecting network topology and physical media, disaster planning recovery, performance management and documentation of work activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Computer Systems

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

1 Prepare to install multiple operating systems on computers and a client server network

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and applied

- 1.2 Operating systems, devices, software and services required are determined from network performance specifications and in consultation with relevant person/s
 - 1.3 Network security policy is reviewed in accordance with network performance specifications and in consultation with relevant person/s
 - 1.4 Activities are planned in accordance with workplace procedures and security policies for timelines and in consultation with others involved
 - 1.5 Relevant person/s is consulted to ensure the work is coordinated effectively with others in accordance with workplace procedures
- 2 Install and configure computer and network operating systems**
 - 2.1 Operating systems and software on computers and client server are installed and configured in accordance with network performance specifications and relevant industry standards
 - 2.2 Network protocols are installed and configured to integrate computers with different operating systems in accordance with relevant industry standards and network performance specifications
 - 2.3 Security measures of the network are implemented in accordance with workplace procedures, relevant industry standards and network performance specifications
 - 2.4 Disaster recovery plan is tested in accordance with workplace procedures and security measures
 - 2.5 Methods for dealing with unplanned situations are selected in accordance with and workplace procedures
- 3 Monitor and optimise computer and network performance**
 - 3.1 Network is monitored and methods are implemented to optimise system performance in accordance with workplace procedures and network performance specifications
 - 3.2 Computer and server malfunctions are identified and rectified using techniques and solutions in accordance with workplace procedures and network performance specifications
 - 3.3 Computer and server operating system incremental updates and security patches are installed in accordance

		with workplace procedures and network performance specifications
	3.4	Methods for dealing with unplanned situations are selected in accordance with workplace procedures and security policies
	3.5	Quality checks of work outcomes are conducted in accordance with workplace procedures, network performance specifications and relevant industry standards
	3.6	Work is carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
4 Report integration and outcome of network monitoring activities	4.1	Documented justification is made for solutions used to rectify malfunctions and relevant person/s notified in accordance with workplace procedures
	4.2	Computer and network installation and monitoring records are maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Integrating multiple computer operating systems on a client server network must include at least two of the following:

- different operating systems for a client server, and
- computers connected to the server to form a client server network.

Unit Mapping Information

This unit replaces and is equivalent to UEENEED124A Integrate multiple computer operating systems on a client server local area network.
