Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing customer energy requirements, efficiency improvements and site limitations
- reading and interpreting drawings related to and apparatus locations and circuit connections
- placing and securing system components accurately
- maintaining fire integrity
- connecting system extra-low voltage (ELV) components to comply with requirements
- testing system operation and verifying compliance with standards and job specifications
- completing necessary documentation, including handing over system operational documents to the customer
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices
- installing and setting up small wind energy conversion systems (WECS) for ELV stand-alone application for one mainstream type of small WECS.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation and maintenance of small ELV WECS, including:
  - installation of an ELV WECS encompassing:
    - selection of an appropriate tower for the installation of a WECS taking into consideration soil type and footings, local council approvals, appropriate codes,

© Commonwealth of Australia, 2025
Powering Skills Organisation

AS/NZS 1170.2 Structural design actions - Wind actions, and transport of tower
    - appropriate methods and safety procedures for raising tower and WECS, lightning protection, tower maintenance, safety in the erection and maintenance of the tower and WECS, and site management to minimise environmental impacts
    - appropriate electrical transmission voltage and cable size from the WECS to the load or energy storage
    - appropriate installation, commissioning, fault diagnosis and rectification using appropriate safety procedures, including WECS power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, and shutdown
    - schematic and wiring diagrams for the WECS showing the general circuit layout and protection between the WECS, energy storage, inverter and loads according to AS/NZS 3000 Electrical installation (known as the Australian/New Zealand Wiring Rules), AS/NZS 4509 Stand-alone power systems, and lightning protection requirements
    - suitable layout for the location of energy storage to meet AS/NZS 3000 Electrical installation (known as the Australian/New Zealand Wiring Rules), AS 3011.1 Electrical installations - Secondary batteries installed in buildings - Vented cells and AS/NZS 4509 Stand-alone power systems
    - safety procedures for the installation, commissioning, fault diagnosis of system components
- maintenance of an ELV WECS encompassing:
    - appropriate methods and safety procedures for tower maintenance
    - appropriate maintenance methods and safety procedures, including WECS power output, voltage regulation, and transmission cable voltage-drop, manual and automatic furling, and shutdown
    - safety procedures for the maintenance of system components
    - maintenance schedule for the system
- tower maintenance
- relevant industry standards
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

© Commonwealth of Australia, 2025
Powering Skills Organisation

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing small WECS for stand-alone applications
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0037 Install, configure and commission LV micro-hydro systems rated up to 6.4 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install, configure and commission low voltage (LV) micro-hydro systems rated up to 6.4 kilowatt (kW).

It includes preparing to install LV micro-hydro systems, installing LV micro-hydro systems, and completing and reporting installation activities.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories

UEERE0045 Solve basic problems in micro-hydro systems

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install LV micro-hydro systems	**1.1** WHS/OHS processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
	1.2 WHS/OHS hazards are identified, risks assessed, reported to relevant person/s and workplace procedures for risk control measures applied in preparation for work
	1.3 System installation is planned in consultation with others impacted by the work and sequenced appropriately
	1.4 Nature and location of the work are determined from documentation or relevant person/s to determine the scope of work
	1.5 Location of system components is planned within the constraints of the building structure and regulations
	1.6 Instructions for coordinating work with others is obtained from relevant person/s and applied
	1.7 Material required is obtained in accordance with workplace procedures and checked against job requirements
	1.8 Tools, equipment and testing devices required are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements
2 Install LV micro-hydro systems	**2.1** Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures
	2.2 Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
	2.3 System components are installed in compliance with technical standards, job specifications and requirements, and with sufficient access to enable terminations,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		adjustment and maintenance
	2.4	Wiring is terminated at system components in accordance with manufacturer specifications and functional and regulatory requirements
	2.5	Unplanned situations are discussed with relevant person/s and responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
	2.6	Checks of installed apparatus quality are conducted in accordance with workplace procedures
	2.7	Apparatus installation is conducted minimising waste of materials, damage to apparatus, circuits, the surrounding environment and services using sustainable energy principles
3 Complete and report installation activities	**3.1**	Worksite is cleaned and made safe in accordance with workplace procedures
	3.2	Final checks are conducted to confirm installed apparatus conforms to requirements
	3.3	'As-installed' apparatus and associated equipment are documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK136A Install, configure and commission LV micro-hydro systems rated up to 6.4 kW.

Assessment Requirements for UEERE0037 Install, configure and commission LV micro-hydro systems rated up to 6.4 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- reading and interpreting drawings related to and apparatus locations and circuit connections
- placing and securing system components accurately
- maintaining fire integrity
- connecting system components to comply with requirements
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices
- installing and setting up low voltage (LV) micro-hydro systems, including:
  - conducting quality checks.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- micro-hydro systems LV installation and maintenance processes, including:
  - micro-hydro systems LV installation processes encompassing:
    - selection of an appropriate micro-hydro system taking into account the topology of the site, local council approvals, environmental considerations, site access and transport of equipment, water and power transmission distances and daily and seasonal load profiles
    - appropriate methods, using appropriate safety procedures, for dam or weir construction, watercourse construction and/or penstock installation, and turbine installation

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - appropriate installation, testing, commissioning, fault diagnosis and rectification procedures using appropriate safety procedures
    - schematic and wiring diagrams for the micro-hydro system showing the general circuit layout and protection between the micro-hydro system, batteries, inverter and loads according to AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules), AS/NZS 4509 Stand-alone power systems, and AS 4086.2 Secondary batteries for use with stand-alone power systems – Installation and maintenance requirements
    - safety procedures for the installation, commissioning, fault diagnosis of system components
- micro-hydro systems maintenance processes encompassing:
    - appropriate maintenance methods using appropriate safety procedures
    - maintenance schedule for the system
    - safety procedures for the maintenance of system components
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing and setting up LV micro-hydro systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0038 Install, configure and commission LV wind energy conversion systems rated up to 10 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install, configure and commission low voltage (LV) wind energy conversion system (WECS) rated up to 10 kilowatt (kW).

It includes preparing to install LV WECS, installing LV WECS, completing installation and reporting installation activities.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEEEL0012 Install low voltage wiring, appliances, switchgear and associated accessories

UEERE0047 Solve problems in wind energy conversion systems rated up to 10 kW

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install LV WECS	**1.1** WHS/OHS processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
	1.2 WHS/OHS risks are identified and workplace procedures for risk control are applied in preparation for work
	1.3 Risks/hazards are identified, assessed, reported to relevant person/s and control measures implemented
	1.4 System installation is planned in consultation with others impacted by the work and sequenced appropriately
	1.5 Nature and location of the work are determined from documentation or relevant person/s to determine the scope of work
	1.6 Sitting limitations and customer system requirements are identified by consultation with the customer
	1.7 Suitable system components are specified and selected in accordance with workplace procedures
	1.8 Location of system components is planned within the constraints of the building structure and regulations
	1.9 Instructions for coordinating work with others are obtained from relevant person/s and applied
	1.10 Materials and components required are obtained in accordance with workplace procedures, pre-assembled, as required, and checked against job requirements
	1.11 Materials and components are prepared for transport to the site and transport is arranged in accordance with workplace procedures
	1.12 Tools, equipment and testing devices required are obtained in accordance with workplace procedures and checked for correct operation and safety

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.13	Preparatory work is checked to ensure no unnecessary damage has occurred previously and complies with requirements
2 Install LV WECS	**2.1**	Workplace risk control measures and procedures are applied
	2.2	Equipment is transported safely to the site in accordance with workplace procedures
	2.3	Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures
	2.4	Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
	2.5	System components are installed in compliance with technical industry standards, job specifications and requirements, and with sufficient access to enable terminations, adjustment and maintenance
	2.6	Wiring is terminated at components and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements
	2.7	Unexpected events are discussed with relevant person/s, dealt with and documented in accordance with workplace procedures
	2.8	Unexpected situations are dealt with safely and with the approval of authorised person/s
	2.9	Quality checks of installed apparatus are conducted in accordance with workplace procedures
	2.10	System installation is completed minimising waste of materials, damage to apparatus, circuits, the surrounding environment and services using sustainable energy principles
3 Complete installation and report installation activities	**3.1**	Workplace risk control measures and procedures are applied
	3.2	Worksite is cleaned and made safe in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.3 Final checks are conducted to confirm installed apparatus conforms to requirements

3.4 System operation is tested and installation verified as compliant with industry standards and work specifications

3.5 'As-installed' apparatus and associated equipment are documented and relevant person/s notified in accordance with workplace procedures

3.6 Customer is informed of system operation, routine maintenance and limitations

3.7 Documentation required by industry standards or job specifications is provided to the customer

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK144A Install, configure and commission LV wind energy conversion systems rated up to 10 kW.

Assessment Requirements for UEERE0038 Install, configure and commission LV wind energy conversion systems rated up to 10 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- assessing customer energy requirements, efficiency improvements and site limitations
- reading and interpreting drawings related to and apparatus locations and circuit connections
- placing and securing system components accurately
- maintaining fire integrity
- connecting system low voltage (LV) components to comply with requirements
- testing and commissioning system operation and verifying compliance with standards and job specifications
- completing necessary documentation, including handing over system operational documents to the customer
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices
- installing and setting up a mainstream type, wind energy conversion system (WECS) for LV application
- transporting equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation and maintenance of LV WECS, including:
  - installation of a LV WECS encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- selection of an appropriate tower for the installation of a WECS taking into consideration soil type and footings, local council approvals, appropriate codes, AS/NZS 1170.2 Structural design actions - Wind actions, and transport of tower
- appropriate methods and safety procedures for raising tower and WECS, lightning protection, tower maintenance, safety in the erection and maintenance of the tower and WECS, and site management to minimise environmental impacts
- appropriate electrical transmission voltage and cable size from the WECS to the load or energy storage
- appropriate installation, commissioning, fault diagnosis and rectification using appropriate safety procedures, including WECS power output, voltage regulation, and transmission cable voltage drop, manual and automatic furling, and shutdown
- schematic and wiring diagrams for the WECS showing the general circuit layout and protection between the WECS, energy storage, inverter and loads according to AS/NZS 3000 Electrical installation (known as the Australian/New Zealand Wiring Rules), AS/NZS 4509 Stand-alone power systems, and lightning protection requirements
- suitable layout for the location of energy storage to meet AS/NZS 3000 Electrical installation (known as the Australian/New Zealand Wiring Rules), AS 3011.1 Electrical installations - Secondary batteries installed in buildings - Vented cells and AS/NZS 4509 Stand-alone power systems
- safety procedures for the installation, commissioning, fault diagnosis of system components

- maintenance of a LV WECS encompassing:
  - appropriate methods and safety procedures for tower maintenance
  - appropriate maintenance methods and safety procedures, including WECS power output, voltage regulation, and transmission cable voltage-drop, manual and automatic furling, and shutdown
  - safety procedures for the maintenance of system components
  - maintenance schedule for the system
- tower maintenance
- relevant industry standards
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

Assessment Requirements for UEERE0039 Install, set up and maintain ELV micro-hydro systems rated up to 6.4 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- reading and interpreting drawings related to and apparatus locations and circuit connections
- placing and securing system components accurately
- maintaining fire integrity
- connecting system components to comply with requirements
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- conducting quality checks
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices
- installing and setting up stand-alone extra-low voltage (ELV) micro-hydro systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- micro-hydro systems ELV installation and maintenance processes, including:
  - micro-hydro systems ELV installation processes encompassing:
    - selection of an appropriate micro-hydro system taking into account the topology of the site, local council approvals, environmental considerations, site access and transport of equipment, water and power transmission distances, and daily and seasonal load profiles
    - appropriate methods and safety procedures for dam or weir construction, watercourse construction and/or penstock installation, and turbine installation
    - appropriate installation, testing, commissioning, fault diagnosis and rectification

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures using appropriate safety procedures
    - schematic and wiring diagrams for the micro-hydro system showing the general circuit layout and protection between the micro-hydro system, batteries, inverter and loads according to Australian Standards AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules), AS/NZS 4509 Stand-alone power systems, and AS 4086.2 Secondary batteries for use with stand-alone power systems - Installation and maintenance requirements
    - safety procedures for the installation, commissioning, fault diagnosis of system components
- micro-hydro systems maintenance processes encompassing:
    - appropriate maintenance methods using appropriate safety procedures
    - maintenance schedule for the system
    - safety procedures for the maintenance of system components
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing and setting up ELV micro-hydro systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0040 Maintain and monitor remote area essential service operations

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain and monitor remote area essential service operations.

It includes preparing to maintain a power station compound, monitoring performance, developing maintenance schedules, completing work and reporting outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERE0023 Work safely with remote area power supply systems

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to maintain remote area power supply (RAPS) compound and monitor	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements for a remote area power station facility are identified and applied in accordance with workplace routines and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	performance	
		1.2 Risks are identified, assessed and control measures applied in accordance with workplace procedures prior to commencing work
		1.3 Risks/hazards are identified, assessed, reported to relevant person/s and control measures implemented
		1.4 Nature and location of remote area power station facility is obtained from documentation or from relevant person/s to determine the scope of work
		1.5 Advice on coordinating work with others and the local community is obtained from relevant person/s and applied
		1.6 Sources of materials required for work are identified and accessed in accordance with workplace routines and procedures
		1.7 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
		1.8 Defective and unsafe tools and service equipment are repaired or replaced in accordance with workplace procedures
2	**Maintain RAPS compound and monitor performance**	**2.1** Workplace risk control measures and procedures are applied
		2.2 Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
		2.2 Power station building, generating equipment and compound are cleaned and tidied to maintain a safe and efficient plant area in accordance with workplace procedures
		2.3 Inspection and reporting are conducted on suitability, location and legibility of safety signage
		2.4 Inspection and reporting are conducted on location, suitability and condition of firefighting equipment
		2.5 Performance status and fuel and oil use of generation equipment is monitored and logged based on information obtained from instruments, meters and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		measuring devices
	2.7	Non-routine events are referred to relevant person/s for directions in accordance with workplace procedures
	2.8	Quality checks are conducted in accordance with instructions and workplace procedures
3 Develop maintenance schedule and complete work report	**3.1**	Workplace risk control measures and procedures are applied
	3.2	Maintenance schedule is developed based on logged information on power station performance status and condition of compound
	3.3	Maintenance issues beyond the scope of work are referred to relevant person/s in accordance with workplace procedures
	3.4	Work completed is reported to relevant person/s in accordance with maintenance reporting and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK118A Maintain and monitor remote area essential service (RAPS) operations.

Links

Assessment Requirements for UEERE0040 Maintain and monitor remote area essential service operations

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- understanding the location and nature of the work required
- following established procedures for repairing or replacing defectives tools and service equipment
- cleaning and tidying remote area power station building, generating equipment and compound effectively
- inspecting and reporting suitability, location and legibility of safety signage
- inspecting and reporting location, suitability and condition of firefighting equipment
- monitoring and logging performance, status and fuel and oil use of generation equipment
- developing an appropriate basic maintenance schedule from logged information
- documenting work activities accurately
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- checking isolation of circuits/machines/system
- completing relevant documentation/reporting
- conducting quality checks
- coordinating work with relevant person/s
- determining scope of work from documentation and/or relevant person/s
- identifying and accessing materials, tools, equipment and testing devices
- identifying deterioration and damage to facilities
- identifying maintenance issues beyond the scope of work and notifying relevant person/s
- maintaining and monitoring remote area essential service operations
- preparing to maintain power station compound and monitor performance.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- power station and compound maintenance, remote area power supply (RAPS) compound maintenance and meter reading, including:
  - maintaining clean, tidy and safe condition of the RAPS building and generating equipment encompassing:
    - removal of generating plant oil, coolant and fuel leaks
    - removal fluid spills from plant room floor areas
    - cleaning of RAPS ventilation systems
    - removal of insects and fauna from plant area
    - environmentally safe disposal of used consumables and rubbish
    - repositioning emptied rubbish bins
    - correct storage of plant spares
  - maintaining a clean, tidy and safe working environment of RAPS compound encompassing:
    - repairing and securing compound perimeter fencing and gates
    - removal and environmentally safe disposal of flora from the fence line and plant room perimeter
    - removal and environmentally safe disposal of compound rubbish
    - cutting and watering the compound grassed area
    - safe arrangements for storage of fuel drums and other flammable liquids
    - maintaining water reticulation equipment
  - inspecting, classifying and repairing the RAPS tools and equipment encompassing:
    - inspecting and reporting hand tools and service equipment for serviceability
    - equipment repair procedures
    - cleaning and storage of tools and equipment
  - inspecting and reporting on the safety signage displayed in the RAPS and on the perimeter fence encompassing:
    - types and location of safety signs relevant to a community RAPS and compound
    - reporting on the conditions and suitability of the signs
  - locating, inspecting and reporting on the fixed and portable firefighting equipment contained in and around the power station encompassing:
    - types of firefighting equipment suitable for a power station
    - typical locations of power station firefighting equipment
    - inspecting and reporting suitability and condition of firefighting equipment
  - instruments/meters showing performance/status of community power stations encompassing:
    - types of information displayed on the instrument panel and switchboards (engine oil pressure, coolant temperatures fuel pressure/flow, amperes, voltage, kilowatt, kilowatt hours, frequency, Hertz and engine running hours)
    - instrument/meter reading and recording techniques
    - dip stick measurement and recording methods of bulk fuel and engine oil
  - maintenance schedules from logged information of community power station

© Commonwealth of Australia, 2025 Powering Skills Organisation

performance encompassing:

- logged information
- maintenance schedules, including timely ordering of fuel, coolant and engine oil, engine oil changes, engine oil filter changes, fan belt condition and adjustment, air cleaner element service, minor tune up requirements, valve adjustments and minor and major overhaul work

- instrument/meter reading and maintenance scheduling records
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining and repairing facilities associated with remote area essential service operations
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0041 Maintain operation of remote area power generation plant

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain operation of remote area power generation plant where the exposed voltage is not greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c).

It includes preparing for, conducting, completing and reporting on maintenance of power generation plant.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERE0018 Maintain and repair remote area power generation facilities

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for maintenance	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements for a remote area power generation plant are identified and applied in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.2	Risks are identified, assessed and control measures applied in accordance with workplace procedures prior to commencing work
	1.3	Risks/hazards are identified, assessed, reported to relevant person/s and control measures implemented
	1.4	Nature and location of the power plant are obtained from documentation or from work supervisor to determine the scope of work to be undertaken
	1.5	Advice on coordinating work with others and the local community is obtained from relevant person/s and applied
	1.6	Sources of materials required for work are identified and accessed in accordance with workplace routines and procedures
	1.7	Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
2 Conduct maintenance work	**2.1**	Workplace risk control measures and procedures are applied
	2.2	Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures
	2.3	Relevant maintenance procedures are applied to test and check remote area power plant
	2.4	Known types of remote area power plant functional faults are identified and repaired in accordance with workplace procedures
	2.5	Maintenance performance measurements and repairs are conducted safely in accordance with workplace routines and procedures
	2.6	Workplace procedures are applied for referring non-routine events to relevant person/s for directions
	2.7	Maintenance and repair work is conducted minimising waste of materials, energy, damage to apparatus, circuits, the surrounding environment and services
	2.8	Quality checks are conducted in accordance with instructions and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Complete maintenance work and reporting**	**3.1** Workplace risk control measures and procedures are applied
		3.2 Worksite is cleaned and made safe in accordance with workplace procedures
		3.3 Maintenance issues beyond the scope of work are referred to relevant person/s in accordance with workplace procedures
		3.4 Work completed is reported to relevant person/s in accordance with maintenance reporting and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK120A Maintain operation of remote area power generation plant.

Assessment Requirements for UEERE0041 Maintain operation of remote area power generation plant

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- understanding the location and nature of the work required
- following prescribed procedures to testing and checking plant
- identifying and repairing known functional faults
- carrying out maintenance and repairs effectively
- identifying maintenance issues beyond the scope of prescribed work and notifying appropriate person/s
- documenting work activities accurately
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- checking isolation of circuits/machines/systems
- conducting quality checks
- identifying and accessing materials, tools, equipment and testing devices
- maintaining operation of remote area power generation plant.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- minor servicing of a remote area power generating plant encompassing:
    - engine oil and filters
    - fuel filters
    - coolant filters
    - water trap devices
    - air cleaners
- minor maintenance of a remote area power generating plant encompassing:
    - fan and accessory drive belts

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - repair of minor leaks: coolant, oil and fuel
- servicing of a remote area power generating plant battery systems encompassing:
    - starting battery set
    - switchboard (nicad) batteries
- information displayed by the instruments/meters in a remote area power generating plant encompassing:
    - generating equipment (diesel engine)
    - engine lubrication
    - system oil pressure
    - engine cooling system coolant
    - temperature (in and out)
    - fuel pressure
    - current
    - voltage
    - power (kW)
    - kilowatt hours
    - frequency, hertz (Hz)
    - engine running hours
    - station services: fuel tank dip and lubricating oil tank level
    - fuel flow meter
- use of the information gathered from instruments/meters encompassing:
    - ordering of fuel, lubricating oil and coolant
    - scheduling regular servicing and maintenance for engine oil and filter changes, fuel filters, drive belt (condition/adjustment), valve adjustments (if applicable), major and minor mechanical servicing by outside agents and air cleaner (both dry paper and oil bath types)
- power plant log sheets and readings encompassing:
    - completed log sheets
    - forwarding information to appropriate person/location at regular intervals (weekly)
- general cleanliness of the power generating plant and buildings encompassing:
    - generation plant
    - oil leaks
    - water leaks
    - fuel leaks
    - safety awareness
    - plant buildings
    - internal floor area
    - used consumables
    - spare parts storage
    - spider webs and other pests

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - rubbish containers
    - ventilation
    - power station compound
    - fence and gate (if applicable)
    - weeds
    - grass (if applicable)
    - rubbish containers
    - fuel and oil supply (drums)
    - water reticulation (if applicable)
    - tools and equipment
    - location/storage
    - cleanliness
    - maintenance
    - drain/drip tins
    - safety signage
    - location
    - condition
    - suitability
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Powering Skills Organisation

currently used in industry
- resources that reflect current industry practices in relation to maintaining operation of remote area power generation plant
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0042 Manage renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to manage renewable energy (RE) projects. It includes determining the scope of the project, managing the project and completing the project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Determine scope of the RE project	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified, interpreted and applied in accordance with workplace procedures
	1.2 Project deliverables and budget are identified from project planning and other relevant documentation and discussions with appropriate person/s
	1.3 Measurable outcomes are identified from project

© Commonwealth of Australia, 2025 Powering Skills Organisation

		planning and other relevant documentation to evaluate the project on completion
	1.4	Plant, materials and skills required to achieve project outcome/s are identified from project planning and other relevant documentation
	1.5	Processes and procedures are developed for managing contract variations from discussions with relevant person/s and in accordance with contractual agreement
2 Manage RE project	**2.1**	WHS/OHS policies, procedures and programs are implemented and monitored
	2.2	Project tasks/outcomes are delegated to project personnel with required competence
	2.3	Project risks are identified and strategies implemented to ensure outcomes achieved are in accordance with quality standards specified in the contract, safety requirements and workplace policies and procedures
	2.4	Procurement processes and procedures are monitored to ensure on-time supply of plant and materials and in accordance with workplace policies
	2.5	Project progress is monitored against schedule, quality requirements and budget
	2.6	Conflicts at worksite and between stakeholders, clients and regulators are identified and managed in accordance with workplace policies
	2.7	Variations are managed in accordance with agreed processes and in accordance with the contract
	2.8	Project records are maintained and progress reports written and provided to relevant person/s
3 Complete RE project	**3.1**	Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget
	3.2	Project completion acceptance is sought from appropriate person/s and handover documented in accordance with workplace policies

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Managing a RE project must include:	• an industry accepted medium-sized RE project

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK121A Manage renewable energy (RE) projects.

Links

Companion Volume implementation guides are found in VETNet - - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6

Assessment Requirements for UEERE0042 Manage renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- establishing the scope of the project accurately
- ascertaining the input of a project
- developing effective management processes
- managing resources and variations effectively
- resolving conflicts
- adopting risk management strategies
- maintaining records and submitting progress reports
- meeting project outcomes
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- completing and handing over project
- developing and applying relevant hazard identification, risk assessment, relevant control measures and reporting.
-

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- renewable energy (RE) project management, including:
  - project management encompassing:
    - defining project parameters: project scope, project stakeholders and clients, project phases and the relationship between phases, time requirements and limitations, resource requirements and limitations, quality requirements and limitations
    - time management: time-management concepts and standard practices for ensuring a

© Commonwealth of Australia, 2025 Powering Skills Organisation

project runs to time
    - financial management: financial management concepts; standard practices for managing project finances; project budget, costs, variations and estimations; invoicing against project phases/deliverables; and acquittals
    - quality management: quality management concepts and standard practices for managing quality within a project
    - human resource management: human resource management concepts and standard practices for managing personnel within a project
    - communication management: communication management concepts and standard practices for managing communication within a project
    - risk management and contingencies: risk management concepts, standard practices for managing risk within a project, internal risks, external risks, risk minimisation, risk removal and contingencies
    - procurement management: procurement management concepts and standard practices for managing procurement
    - physical resource management: types of physical resources, including:
        - equipment, technology, information, facilities, physical resource management concepts and standard practices for managing physical resources
    - contracts: understanding project contracts, standard practices for working to contract specifications, contract format, contract content, legal obligations of contract parties, and accompanying documentation, including:
        - contract schedules
    - performance assessment and continuous improvement: standard performance assessment practices and standard continuous improvement practices
    - engineering ethics principles
- customer/client relations encompassing:
    - importance of customer/client relations
    - interpersonal skills that enhance customer/client
    - dispute resolution
    - customer/client relations strategies
- RE industry sector customs and practices encompassing:
    - technical aspects of project planning and management:
        - method of ensuring equipment meets specified performance requirements
        - performance/cost-benefit analysis
        - equipment procurement
        - typical approaches to planning and management
        - successful planning techniques
        - best practice management methods and styles
- WHS/OHS and enterprise responsibilities encompassing:
    - provisions of relevant WHS/OHS legislation
    - principles and practices of effective WHS/OHS management
    - management arrangements relating to regulatory compliance

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - enterprise hazards and risks, control measures and relevant expertise required
    - characteristics and composition of workforce and their impact on WHS/OHS management
    - relevance of enterprise management systems to WHS/OHS management
    - analysis of working environment and design of appropriate WHS/OHS management systems
    - analysis of relevant data and evaluation of WHS/OHS system effectiveness
    - assessment of resources to establish and maintain WHS/OHS management systems
- relevant manufacturer specifications
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to managing RE projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0043 Plan periodic maintenance schedules of remote area power supplies (RAPS)

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to plan periodic maintenance schedules of remote area power supplies (RAPS).

It includes establishing maintenance requirements, developing and implementing maintenance schedule, and evaluating maintenance program.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work

UEERE0023 Work safely with remote area power supply systems

UEERE0006 Conduct periodic maintenance of remote area power supply battery banks

UEERE0007 Conduct periodic maintenance of remote area power supply generator sets

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Establish RAPS system maintenance requirements**	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures, skills required and frequency and level of maintenance work are determined in accordance with maintenance routines and workplace procedures
		1.2 Records are created to manage maintenance work and updated in accordance with workplace procedures
		1.3 Maintenance and replacement or repair work are determined in accordance with manufacturer and community requirements and workplace procedures
		1.4 Maintenance program, including basic periodic instruction in demand side use, is determined in accordance with local community requirements and workplace procedures
2	**Develop and implement RAPS system maintenance schedule**	**2.1** Maintenance schedules are developed from equipment manufacturer recommendations and in accordance with RAPS system safety and performance requirements
		2.2 Procedures are developed and implemented to ensure the maintenance program is completed in accordance with the planned schedule and requirements
		2.3 Procedures are developed and implemented to ensure records are maintained in accordance with planned schedule and requirements
3	**Evaluate RAPS system maintenance program**	**3.1** Periodic and sample inspection reports are used to determine maintenance quality and the need for revision of maintenance schedule and frequency
		3.2 Maintenance schedule is periodically reviewed and revised to maintain the integrity of the RAPS system

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package

© Commonwealth of Australia, 2025 Powering Skills Organisation

Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK108A Plan periodic maintenance schedules of remote area power supplies (RAPS).

Assessment Requirements for UEERE0043 Plan periodic maintenance schedules of remote area power supplies (RAPS)

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- completing maintenance schedule reporting and record keeping
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- developing a plan for periodic maintenance of remote area power supply (RAPS) systems located in different communities, including the following:
  - items to be check and tested
  - items to be replaced or repaired
  - frequency of the periodic maintenance
  - required materials and equipment
  - timeframes to conduct maintenance on each RAPS system
  - travel distance and times to each community
  - periodic and sample inspection reports
  - protocols for working in different communities
  - methods for recording and evaluating maintenance
  - periodic review and revision of RAPS system maintenance schedule.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- development and self-management of simple maintenance programs
- maintenance scheduling principles, including:
  - limitation of the role of the RAPS service worker
  - periodic maintenance planning procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - development of vehicle booking procedures
  - development of checklists for replacement equipment
  - determining items to be checked
  - determining items to be replaced
  - development procedures for recording and reporting
  - scheduling of maintenance at multiple communities
  - developing checklists for preparation of service, vehicle and tools and equipment
  - developing processes for sourcing and funding replacement components
- plant maintenance planning
- relevant RAPS system manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- reporting of maintenance work.
- techniques to develop and implement RAPS system maintenance schedule.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate maintenance materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to developing a plan for periodic maintenance of RAPS systems located in different communities
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals
- maintenance equipment for RAPS system, including:
  - battery bank
  - engine driven generator sets

© Commonwealth of Australia, 2025 Powering Skills Organisation

- fuel storage
- inverter and regulator
- photovoltaic (PV) array
- wind generators.

UEERE0044 Plan renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to plan a renewable energy (RE) project.

It includes preparing to plan a project, developing a RE project plan proposal and obtaining approval for a project plan.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to plan project	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified, interpreted and applied in accordance with workplace procedures
	1.2 Relevant techniques for project planning are reviewed and applied in accordance with workplace policies

© Commonwealth of Australia, 2025 Powering Skills Organisation

		1.3	Scope of the project is determined from design brief specification and/or other relevant documentation and discussions with relevant person/s
2	**Develop RE project plan proposal**	**2.1**	Estimated plant, material, labour and other costs are obtained from relevant person/s in accordance with workplace policies and procedures
		2.2	Project budget is established from estimated plant, material, labour and other costs in accordance with workplace policies and procedures
		2.3	Critical path analysis is applied to developing workflow strategies
		2.4	Sources and availability of materials and human resources for the project are identified in accordance with workplace policies and procedures
		2.5	Risk management strategies are identified, obtained and applied in the project plan
		2.6	Project plan is reviewed against all inputs and adjusted to rectify any anomalies
		2.7	Project plan proposal is documented in accordance with workplace policies and procedures
3	**Obtain approval for project plan**	**3.1**	Project plan is presented and discussed with relevant person/s
		3.2	Alterations to the project plan resulting from the presentation/discussion are negotiated with relevant person/s within constraints of workplace policies
		3.3	Final project plan is documented and approval obtained from relevant person/s

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK122A Plan renewable energy (RE) projects.

Assessment Requirements for UEERE0044 Plan renewable energy (RE) projects

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- determining the project requirements accurately
- establishing a project budget
- developing effective workflow strategies
- documenting project plan proposal
- negotiating alterations to the proposed project plan successfully
- obtaining approval of the final plan
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- determining and applying relevant risk management strategies
- determining and sourcing material, equipment and human resource requirements
- determining project scope
- planning a medium-sized renewable energy (RE) industry project plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- RE project planning, including
  - project planning encompassing:
    - purpose of project planning
    - documents needed to plan a project
    - factors influencing sequence and restraints of project activities
  - critical path project analysis encompassing:
    - purpose of critical path analysis
    - essential data
    - relational sequence of work activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - graphical representation methods
    - methods of representing time/rates
    - monitoring methods
- RE industry sector customs and practices encompassing:
    - technical aspects of project planning and management:
        - method of ensuring equipment meets specified performance requirements
        - performance/cost-benefit analysis
        - equipment procurement
        - typical approaches to planning and management
        - successful planning techniques
        - best practice management methods and styles
- WHS/OHS and enterprise responsibilities encompassing:
    - provisions of relevant WHS/OHS legislation
    - principles and practice of effective WHS/OHS management
    - management arrangements relating to regulatory compliance
    - enterprise hazards and risks, control measures and relevant expertise required
    - characteristics and composition of workforce and their impact on WHS/OHS management
    - relevance of enterprise management systems to WHS/OHS management
    - analysis of working environment and design of appropriate WHS/OHS management systems
    - analysis of relevant data and evaluation of WHS/OHS system effectiveness
    - assessment of resources to establish and maintain WHS/OHS management systems
- human and physical resource management concepts
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to planning RE projects
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0045 Solve basic problems in micro-hydro systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to solve basic problems in micro-hydro systems.

It includes preparing to work on micro-hydro systems, solving problems in micro-hydro systems and completing work and documenting problem-solving activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Those holding an ‘Unrestricted Electrician’s Licence’ or equivalent issued in an Australian state or territory meet the prerequisite requirements of this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEEEL0019 Solve problems in direct current (d.c.) machines

UEEEL0021 Solve problems in electromagnetic devices

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to work on micro-hydro systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
	1.2 Risk control measures are applied in accordance with workplace procedures prior to commencing work
	1.3 Nature of the apparatus problem is obtained from documentation or from relevant person/s to determine the scope of work
	1.4 Instructions for coordinating work with others is obtained from relevant person/s and applied
	1.5 Materials required for the work are identified and accessed in accordance with workplace procedures
	1.6 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
2 Solve problems in micro-hydro systems	**2.1** Workplace risk control measures and procedures are applied
	2.2 Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures
	2.3 Circuits are isolated in accordance with WHS/OHS requirements and workplace procedures
	2.4 Micro-hydro problems are solved using measured and calculated values of apparatus operating parameters and in accordance with workplace procedures
	2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment and services applying sustainable energy practices
3 Complete work and document problem-solving	**3.1** Workplace risk control measures and procedures are applied

© Commonwealth of Australia, 2025 Powering Skills Organisation

activities

3.2 Worksite is cleaned and made safe in accordance with workplace procedures

3.3 Justification for solutions used to solve micro-hydro problems is documented

3.4 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Solving problems in micro-hydro systems must include at least the following:	• problems related to:
	  • installation
	  • fault finding
	  • maintenance or development work functions in relation to the following:
	  • determining the operating parameters of an existing apparatus/system
	  • identifying and locating electrical faults
	  • identifying and locating mechanical faults

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK124A Solve basic problems in micro hydro systems.

Assessment Requirements for UEERE0045 Solve basic problems in micro-hydro systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- understanding the nature of the problem
- using established routines to solve apparatus/system problems
- providing viable solutions to apparatus/system problems
- documenting justification for the solutions used
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- micro-hydro systems, including:
  - system components and configuration encompassing:
    - structural differences between the Pelton, turbo impulse, Francis and propeller type, Michell or Banki cross-flow turbines and Pumps as Turbines (PATs)
    - system configuration for each turbine type identifying all major components
    - for impulse and cross-flow turbine types, the comparison of bucket and blade shapes, nozzle shapes and types, types of hydraulic and electrical controllers/governors, speed increasers and over speed clutches and their basic operation and appropriate application

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - operational parameters and efficiency of different turbines
    - circumstances under which battery storage would be used
    - respective merits and suitability of various turbine types for various micro-hydroelectric applications
    - operation of hydraulic rams or similar water pumps:
        - typical efficiencies of hydraulic ram systems and appropriate applications
    - advantages and disadvantages of water energy storage systems with other energy storage systems, such as battery banks
- micro-hydro systems standards encompassing:
    - relevant Australian Standards AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules), AS/NZS 4509 Stand-alone power systems and AS 4086.2 Secondary batteries for use with stand-alone power systems - Installation and maintenance associated with the installation, maintenance and operation of micro-hydro small-scale generation units
- micro-hydro systems drawings encompassing:
    - schematic and wiring diagrams for the micro-hydro system showing the general circuit layout and protection between the micro-hydro system, batteries, inverter and loads
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to solving basic problems in

© Commonwealth of Australia, 2025 Powering Skills Organisation

micro-hydro systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0046 Solve problems in stand-alone renewable energy (RE) systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to solve problems in stand-alone renewable energy (RE) systems.

It includes preparing to work on stand-alone RE systems, solving problems in stand-alone RE systems, completing work and documenting problem-solving activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERE0025 Carry out basic repairs to renewable energy apparatus

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to work on stand-alone RE systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
	1.2 Risk control measures are applied in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		workplace procedures prior to commencing work
		1.3 Nature of the apparatus problem is identified from documentation or from relevant person/s to determine the scope of work
		1.4 Instructions for coordinating work with others is obtained from relevant person/s and applied
		1.5 Materials required for the work are identified and accessed in accordance with workplace procedures
		1.6 Tools, equipment and testing devices required for work are obtained and checked for correct operation and safety
2	**Undertake problem solving in stand-alone RE systems**	**2.1** Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures
		2.2 Circuits are isolated in accordance with WHS/OHS requirements and workplace procedures
		2.3 Stand-alone RE system problems are solved using measured and calculated values of apparatus operating parameters and in accordance with workplace procedures
		2.4 Problems are solved without damage to apparatus, circuits, the surrounding environment and services applying sustainable energy practices
3	**Complete work and document problem-solving activities**	**3.1** Worksite is cleaned and made safe in accordance with workplace procedures
		3.2 Justification for solutions used to solve stand-alone RE systems problems is documented
		3.3 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

RE system problem solving must include at least three of the following problems:

- open circuit
- short circuit
- incorrect connections
- insulation failure
- unsafe condition
- apparatus/component failure
- related mechanical failure

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK128A Solve problems in stand-alone renewable energy systems.

Assessment Requirements for UEERE0046 Solve problems in stand-alone renewable energy (RE) systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- understanding the nature of the problem
- using established routines to solve apparatus problems
- providing viable solutions to apparatus problems
- documenting justification for the solutions used
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- stand-alone renewable energy (RE) system components, including:
  - extra-low voltage (ELV) wiring and circuit protection for RE systems encompassing:
    - ELV and low voltage (LV) circuits in a stand-alone or grid connected RE system and the regulatory restrictions regarding work at each level
    - earthing requirements for RE systems over a range of applications and environments
    - required sizes for ELV cabling in a RE system, considering allowable voltage drops and cable current-carrying capacity, in accordance with AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules) and AS/NZS 4509 Stand-alone power systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - selection of suitable direct current (d.c.) circuit protection and isolation for all relevant points in a stand-alone RE system in accordance with AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules) and AS/NZS 4509 Stand-alone power systems
- electrical diagrams for a RE system encompassing:
    - functional block diagrams for typical stand-alone RE system configurations
    - circuit schematic of typical RE systems supplying d.c. and/or alternating current (a.c.) loads, including all major components, protection devices, earthing, isolation, switching and metering
    - unit wiring diagram for a typical stand-alone RE system d.c. control board
    - architectural and site diagrams to show the locations of equipment, fittings and cabling
- batteries encompassing:
    - major features of each of the major types of commercially available batteries for stand-alone RE applications, including basic chemistry, physical structure, advantages and disadvantages
    - factors affecting the life of a battery
    - processes of sulphation and stratification in lead-acid batteries, their causes, effects and methods of prevention or reduction
    - effect of depth of discharge and of temperature on the capacity and life of lead-acid batteries
    - major specifications for a lead-acid battery in a stand-alone RE system application
    - main features of charging regimes suitable for the major types of stand-alone RE system batteries, using real examples
    - life of a stand-alone RE system battery in years, based on manufacturer's cycle life data and given capacity, configuration and operating conditions
    - precautions required when handling, installing or maintaining lead-acid batteries
    - procedures required for safe disposal of the major commercially available types of batteries in accordance with AS/NZS 4509 Stand-alone power systems
- balance of system components and common loads encompassing:
    - features of commercially available inverters suitable for use in stand-alone RE systems
    - major operating parameters of an inverter, including d.c. voltage operating window, efficiency, output voltage waveform and output voltage regulation over a range of loads up to 5-minute ratings
    - problems that may be caused by non-sine supply voltage waveforms on typical loads, and the solutions used to overcome these
    - significance of low power factor loads for inverter systems and the principle of power factor correction
    - operation of the major types of regulators for use in stand-alone RE systems using commercially available equipment as examples
    - current vs. voltage characteristics, efficiency and charging voltage waveform for a transformer/rectifier type and a switch mode type battery charger suitable for use in

© Commonwealth of Australia, 2025 Powering Skills Organisation

stand-alone RE systems
    - operation of and applications for MPPTs for photovoltaic (PV) arrays
    - basic operation, advantages and disadvantages of mechanical tracking devices for PV arrays
    - control parameters or data using digital displays on inverters, regulators or controllers
- basic lighting design encompassing:
    - properties and features of the major lamp types, including their suitability for use in stand-alone RE power systems
    - effect on room lighting levels, of luminaire design and positioning, décor, room construction and windows
    - selection and sizing of suitable lamps and fittings and their placement in a household taking into account usage, lighting levels required by relevant standards and energy efficiency considerations
- generating sets encompassing:
    - major components in the construction of a generating set
    - main components of gas, petrol or diesel internal combustion engines
    - basic principle of operation of internal combustion engines, including different fuel types and ignition methods
    - operating characteristics, advantages and disadvantages of generating sets using different fuel types, aspiration methods, operating speed and number of cylinders
    - major methods of mechanical coupling and power transmission between an engine and alternator
    - function and ratings of mechanical and electronic speed governing systems
    - basic structure and operation of an alternator
    - advantages and disadvantages of different types of excitation system and voltage regulation used for generating set alternators
    - components and basic operation of a brushless excitation system in an alternator, and the principle of self-excitation
- generator set sizing calculations encompassing:
    - major electrical and mechanical ratings which control the performance of a generator set
    - calculations relating to real and apparent power, power factor, mechanical power, voltage regulation and speed droop for single phase gensets
    - derating factor for a generator set given manufacturer’s derating data and a given set of operating conditions
    - selection of a suitable generator set given maximum demand and surge loadings and derating factor
    - calculation of the fuel consumption of a generator set given manufacturer’s data and operating conditions
- problem-solving techniques, including measuring and calculating value requirements
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation

© Commonwealth of Australia, 2025 Powering Skills Organisation

processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to solving basic problems in stand-alone RE systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0047 Solve problems in wind energy conversion systems (WECS) rated up to 10 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to solve problems in wind energy conversion systems (WECS) rated up to 10 kilowatt (kW).

It includes preparing to work on WECS, solving problems in WECS, completing work and documenting problem-solving activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEEEL0019 Solve problems in direct current (d.c.) machines

UEEEL0021 Solve problems in electromagnetic devices

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Prepare to work on WECS**	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
		1.2 Risk control measures are applied in accordance with workplace procedures prior to commencing work
		1.3 Nature of apparatus problem is identified from documentation or from relevant person/s to determine the scope of work
		1.4 Instructions for coordinating work with others is obtained from relevant person/s and applied
		1.5 Materials required for the work are identified and accessed in accordance with workplace procedures
		1.6 Tools, equipment and testing devices required to carry out work are obtained and checked for correct operation and safety
2	**Solve problem in WECS**	**2.1** Workplace risk control measures and procedures are applied
		2.2 Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures
		2.3 Circuits are isolated in accordance with WHS/OHS requirements and workplace procedures
		2.4 WECS problems are solved using measured and calculated values of apparatus operating parameters and in accordance with workplace procedures
		2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment and services using sustainable energy practices
3	**Complete work and document problem-solving activities**	**3.1** Workplace risk control measures and procedures are applied
		3.2 Worksite is cleaned and made safe in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

workplace procedures

3.3 Justification for solutions used to solve WECS problems is documented

3.4 Work completion is documented and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Problem solving in WECS must include the following:	• installation, fault-finding, maintenance or development work functions on at least three of the following:
	  • determining the operating parameters of an existing apparatus
	  • identifying and locating electrical faults
	  • identifying and locating mechanical faults

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK130A Solve problems in wind energy conversion systems rated up to 10 kW.

Assessment Requirements for UEERE0047 Solve problems in wind energy conversion systems (WECS) rated up to 10 kW

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- understanding the nature of the problem
- using established routines to solve apparatus problems
- providing viable solutions to apparatus problems
- documenting justification for the solutions used
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- identifying and accessing materials, tools, equipment and testing devices
- solving problems in wind energy conversion systems (WECS).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- types, construction and operating features of small WECS, construction and operating features to the extent indicated by the following aspects:
  - basic operation of lift and drag type WECS
  - characteristics of WECS in terms of power and torque, efficiency (power and output co-efficient), solidity and tip speed ratio
  - major categories and sub-categories of WECS
  - advantages and disadvantages of each type of WECS
  - suitable materials for the construction of WECS taking into consideration fatigue stresses

© Commonwealth of Australia, 2025 Powering Skills Organisation

and environmental conditions such as salt air, humidity and ice
- typical system configurations and components for stand-alone power systems and water pumping
- strategies and/or mechanisms to control mechanical stresses on the WECS in gale force winds and power output for battery charging
- appropriate types of WECS for a particular application
- problem-solving techniques
- relevant manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures encompassing:
  - power output for battery charging
  - water pumping.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to solving problems in WECS
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE0048 Verify compliance and functionality of an extra-low voltage renewable energy installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to verify compliance and functionality of an extra-low voltage (ELV) renewable energy (RE) installation.

It includes preparing to inspect and test a RE installation, visually inspecting and conducting safety testing on the installation, and reporting inspection and test findings.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0020 Fix and secure electrotechnology equipment

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuit

UEECD0045 Solve problems in multiple path extra low voltage (ELV) a.c. circuits

UEECD0016 Document and apply measures to control WHS risks associated with electrotechnology work

UEEEL0019 Solve problems in direct current (d.c.) machines

UEEEL0021 Solve problems in electromagnetic devices

UEERE0025 Carry out basic repairs to renewable energy apparatus

UEERE0034 Diagnose and rectify faults in renewable energy control systems

UEERE0046 Solve problems in stand-alone renewable energy systems

UEERE0035 Install ELV stand-alone photovoltaic power systems

and

UEECD0043 Solve problems in direct current circuits

or

UEECD0044 Solve problems in multiple path circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEECD0046 Solve problems in single path circuits

Competency Field

Renewable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to inspect and test a RE installation	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for relevant work area are identified and applied in accordance with workplace procedures
	1.2 WHS/OHS hazards are identified, risks assessed, reported to relevant person/s and workplace procedures for risk control measures applied in preparation for work
	1.3 Relevant documentation and/or industry standards are reviewed and interpreted
	1.4 Relevant person/s is consulted to ensure the work is coordinated effectively with others
	1.5 Tools, equipment and testing devices required to verify compliance are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.6 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements
2 Visually inspect and conduct safety testing on the RE installation	**2.1** Need to test or measure live electrical work is determined in accordance with WHS/OHS requirements and conducted in accordance with workplace procedures
	2.2 Circuits/machines/plant are isolated in accordance with WHS/OHS requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.3	Suitability of wiring is checked for the environment/s in which they are installed and protected from damage or overheating
	2.4	Cable conductor sizes that meet current-carrying capacity requirements and voltage-drop are acquired
	2.5	Protection methods and devices are validated as meeting coordination requirements for overload and short circuit protection
	2.6	Switchgear and control gear are validated as correctly rated and appropriate for functional requirements
	2.7	Evidence that electrical equipment complies with safety requirements is cited
	2.8	Correct location of earthing system and size of conductors is checked
	2.9	Markings on switchboards are checked for accuracy, clarity and compliance with requirements
	2.10	Visual inspection is conducted to ensure that system complies with requirements
	2.11	Testing is conducted to verify that circuit connections are correct, voltage drop is within limits, circuit protection operates as intended, polarities are correct, and charging rates are compliant with specifications
3 Report inspection and test findings	**3.1**	Worksite is cleaned and made safe in accordance with workplace procedures
	3.2	Non-compliance defects are identified and reported in accordance with workplace procedures
	3.3	Recommendations for rectifying defects are made in accordance with workplace procedures
	3.4	Documentation is completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Verifying compliance and functionality of an ELV RE installation must include at least the following:

- two electrical installations comprising:
  - a photovoltaic (PV) array of at least 450 watts
  - a battery bank
  - an inverter
  - a battery charger (or inverter/charger)
  - a generating set

Unit Mapping Information

This unit replaces and is equivalent to UEENEEK149A Verify compliance and functionality of a extra low voltage renewable energy installation.

Assessment Requirements for UEERE0048 Verify compliance and functionality of an extra-low voltage renewable energy installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least one occasion and include:

- selecting correct tools and testing equipment
- identifying visual non-compliance defects
- using effective methods for conducting tests
- identifying non-compliance from test results
- identifying causes of non-compliance
- completing mandatory reporting
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures and practices, including the use of risk control measures
- applying sustainable energy principles and practices
- checking isolation of circuits/machines/systems
- coordinating work with relevant person/s
- determining live electrical testing/measurement requirements
- verifying compliance and functionality of extra-low voltage (ELV) renewable energy (RE) installations.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- RE installations and ELV installation requirements encompassing:
  - requirements for installation of wiring and equipment
  - compliant methods for providing protection
  - requirements for installation planning and selection of equipment
  - testing and verification requirements
  - documentation encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - results of tests conducted that comply with requirements and ensure the ELV RE installation is safe, including any formal documents of the results of testing required by authorities
    - documents of periodic inspection and testing of ELV RE wiring and equipment, including any tagging, in accordance with requirements
- energy efficient building design
- relevant RE manufacturer specifications
- relevant safe work method statements (SWMS)/job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERE4001 Install, maintain and fault find battery storage systems for grid-connected photovoltaic systems

Modification History

Release 1. New unit of competency.

Application

This unit involves the skills and knowledge required to safely and effectively install, maintain and fault find battery storage systems for grid-connected photovoltaic (PV) systems.

A person competent in this unit will hold an unrestricted electrical licence issued in an Australian State or Territory and be able to install, maintain and fault find battery storage systems for grid-connected PV in accordance to relevant industry standards and regulations.

This unit is subject to the following requirements:

- Legislation, regulations, relevant industry standards and codes of practice for electrical work including specific work health and safety (WHS)/occupational health and safety (OHS) legislation and regulatory requirements
- Electrical licencing requirements – unrestricted electrical work
- Legislation, regulations, relevant industry standards and codes of practice for renewable energy.

There may be variations in these requirements across jurisdictions.

Pre-requisite Unit

UEENEEK148A Install, configure and commission LV grid connected photovoltaic power systems

Competency Field

Renewable and Sustainable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

Elements describe the essential Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

outcomes.	demonstrate achievement of the element.
1 Plan for the installation, maintenance or fault finding of battery storage systems for grid-connected PV systems	**1.1** Installation design requirements, components and how they interconnect with the different system configurations are identified
	1.2 Hazards associated with battery storage systems for grid-connected PV systems are identified and the risk control measures are listed in safe work method statements/job safety analysis
	1.3 Designer recommendations, relevant industry standards, regulations and manufacturer specifications are identified and applied to planning the system installation, maintenance or fault finding
	1.4 Tools and safety equipment are selected and checked for safe performance of required tasks
	1.5 Maintenance is planned in accordance with system designer's requirements
	1.6 PV system and reported faults are identified and fault finding techniques applied
2 Carry out the installation, maintenance and fault finding of battery storage systems for grid-connected PV systems	**2.1** Job safety analysis is undertaken or safe work method statement is prepared and used to inform work processes in accordance with regulations and workplace procedures
	2.2 Battery storage components are installed in accordance with system design documentation, relevant industry standards, regulations and manufacturer specifications
	2.3 Inverters are installed in accordance with system design documentation, relevant industry standards, regulations and manufacturer specifications
	2.4 System charge controllers are installed in accordance with system design documentation, relevant industry standards, regulations and manufacturer specifications
	2.5 Storage system equipment including, cables, protection and isolation equipment, and signs are installed in accordance with system design documentation, relevant industry standards,

© Commonwealth of Australia, 2025 Powering Skills Organisation

	regulations and manufacturer specifications
	2.6 System charge controllers and inverters are programmed in accordance with design documentation, relevant industry standards, regulations and manufacturer specifications
	2.7 Required modification to the electrical installation is carried out in accordance with design documentation, regulations and relevant industry standards
	2.8 Maintenance checklists are used to identify items needing servicing or replacement
	2.9 Required maintenance is performed by servicing or replacing items
	2.10 Fault finding techniques are applied to correctly diagnose and rectify system faults
	2.11 Testing, commissioning or reinstatement of the system is conducted in accordance with design documentation, regulations, relevant industry standards and manufacturer specifications
3 Document the installation, maintenance or fault finding of battery storage systems for grid-connected PV systems	**3.1** Testing, commissioning and required compliance documents are completed
	3.2 As installed, electrical system drawings and equipment location plans are produced
	3.3 Client system documentation, from designer, is completed
	3.4 Client is briefed on safe and correct system operation and recommended maintenance
	3.5 Maintenance checklists are finalised correctly and added to client system documentation
	3.6 Fault report/record is completed and added to client system documentation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UEERE4001 Install, maintain and fault find battery storage systems for grid-connected photovoltaic systems

Modification History

Not applicable.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- documenting the battery storage system installation for the client:
  - plan and enact scheduled maintenance of a system
  - document/record maintenance activities
- finding faults in battery storage systems for grid-connected photovoltaic (PV) system:
  - plan and enact identified fault finding procedures for the installed system
  - document/record fault finding activities
- installing battery storage systems for grid-connected PV systems:
  - install battery storage components
  - install inverter/s
  - install charge controller/s
  - install the balance of system equipment including cables, protection and isolating devices, and signage
  - program inverter/s and charge controller/s
  - modify electrical installation as required
- maintaining battery storage systems for grid-connected PV systems
- preparing for the installation of a battery storage system:
  - interpret system design documentation that specifies the quantity and location of all equipment in compliance with relevant industry standards, building codes and regulations
- testing and commissioning PV system:
  - test operation of each piece of equipment
  - test operation of complete system
  - commission the system
  - brief client on safe and correct system operation and recommended maintenance
- undertaking site assessment:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- interpret system design documentation that specifies the quantity and location of all equipment in compliance with relevant industry standards, building codes and regulations.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- battery storage systems:
  - battery storage systems for grid-connected PV systems including:
    - applications for battery storage including:
      - electrical energy supply during grid outages
      - electrical energy supply direct to loads during periods of high tariffs
  - purpose of each component in battery storage systems for grid-connected PV systems
  - functional block diagrams for typical configurations of battery storage systems for grid-connected PV systems including:
    - multimode inverter/s for connecting to renewable energy, grid, loads and battery storage; these inverter/s provide backup to dedicated loads on grid failure and may:
      - have a built in charge controller for direct connection of a PV array or
      - require a separate charge controller to direct current (DC) couple the PV array and battery
    - two types of inverters comprising, PV grid-connected inverter/s and multimode inverter/s where:
      - both inverter types are connected to the grid and loads via a switching device that may provide backup to dedicated loads during grid failure
      - both inverter types are connected to the grid and only the multimode inverter/s may provide backup to dedicated loads on grid failure
      - only the multimode inverter/s are connected to the grid. The grid-connected inverter/s are alternate current (AC) coupled to the multimode inverter/s and both types can provide backup to dedicated loads on grid failure
- charge controllers including:
  - types and applications of charge controllers for different system configuration
  - specifications of a charge controller, including:
    - output rating DC voltage operating window and/or rating

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - DC current rating in and out
        - efficiency
- grid-connected batteries:
    - battery terms including:
        - nominal voltage
        - cell
        - primary and secondary cells
        - battery
        - charge and discharge rate
        - amp hour capacity
        - watt hour capacity
        - state of charge (SOC)
        - depth of discharge (DOD)
    - battery types including:
        - major features of commercially available types of batteries suitable for battery storage systems for grid-connected PV systems
        - factors affecting the life of commercially available types of batteries including the estimation of battery life
        - charging regimes suitable for commercially available types of batteries
    - battery safety including:
        - hazards associated with handling, installing or maintaining commercially available types of batteries and risk control measures
        - procedures for safe disposal of commercially available types of batteries
    - common processes leading to battery failure in commercially available batteries including sulphation and stratification in lead acid batteries
- grid-connected inverters:
    - inverters including:
        - differences between multimode and grid connect inverters
        - output rating of a multimode inverter/s in relation to:
            - required maximum demand
            - capacity for battery charging
        - program parameters for a multimode inverter, for the correct operation of the system
- grid-connected storage systems fault finding:
    - fault finding procedures including:
        - fault finding procedures for individual equipment
        - fault finding procedures for interconnected systems
- grid-connected storage systems installations:
    - installation requirements including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - installing battery storage devices in accordance with system design documentation, relevant industry standards, regulations and manufacturer requirements
    - installing inverters suitable for connecting to battery storage in accordance with system design documentation, relevant industry standards, regulations and manufacturer requirements
    - installing charge controllers in accordance with system design documentation, relevant industry standards, regulations and manufacturer requirements
    - installing all balance of system equipment in accordance with system design documentation, relevant industry standards, regulations and manufacturer requirements
  - electrical drawings including:
    - electrical systems circuit diagrams of typical battery storage systems for grid-connected PV systems including:
      - AC loads being supplied during periods when grid is unavailable
      - all major components
      - protection devices
      - earthing
      - isolation
      - switching
      - metering
    - equipment location plan/s to show the locations of equipment, fittings and cabling
- grid-connected storage systems maintenance procedures including:
  - maintenance requirements for individual equipment
  - maintenance requirements for interconnected systems
- grid-connected storage systems testing and commissioning procedures including:
  - safe testing of equipment
  - safe testing of system operation
  - commissioning of battery storage system.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

Industry Standards

- relevant industry standards
- relevant industry product standards
- AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules)

Documentation including reporting formats

- manufacturer technical data site plans
- system designer documentation relevant to installing the system
- maintenance checklists and/or testing and commissioning sheet

Measuring and testing equipment

- multimeter insulation resistance tester clamp tester (DC and AC)

Plant

- an existing installed PV array along with the equipment to facilitate the installation of a battery storage system for grid-connected PV systems. This equipment shall comprise:
  - battery storage
  - multi-mode inverter/s
  - devices for interconnecting solar to system either including charge controller or an appropriate inverter and all required balance of system equipment including:
    - cables
    - protection and isolating devices
    - isolators and signage in accordance with relevant industry standards, regulations and industry guidelines
- appropriate switchboard (or similar) to simulate interconnection of the system with an existing electrical installation

Safety systems and personal protective equipment (PPE)

- example of a job safety analysis or safe work method statement form relevant for the practical installation; PPE related to the types of battery storage included in the system

Software/Systems

- programming software for the inverter/s and charge controller/s

Specialist requirements

- specific manufacturer specifications for the equipment included in the battery storage system for grid-connected PV systems including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - installation manuals and user guides for typical components and those provided for the practical installation
- special tools as required for installing specific equipment
- special testing tools or equipment required for testing and commissioning, maintenance and fault finding of specific equipment

Tools and equipment

- hand tools and power tools.

UEERE5001 Design battery storage systems for grid-connected photovoltaic systems

Modification History

Release 1. New unit of competency.

Application

This unit involves the skills and knowledge required to design battery storage systems for grid-connected photovoltaic (PV) systems.

This unit applies to a person with a sound knowledge of the components and different system configurations of battery storage systems for grid-connected PV systems and suitable energy management strategies that can be applied to the site where a system can be installed.

A person competent in this unit will be able to design a system, which includes calculating and selecting the correct sized equipment so the system output performance meets the client specific requirements within the guidelines of relevant industry standards, regulations and manufacturer requirements.

The unit involves designing a system taking into consideration all necessary work health and safety requirements relevant for the selected system and documenting the design including all calculations, equipment specifications and layouts.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEENEEK135A Design grid connected photovoltaic power supply systems

Competency Field

Renewable and Sustainable Energy

Unit Sector

Electrotechnology

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Plan the design of battery storage systems for grid-connected photovoltaic systems**	**1.1** Available components are identified and the different system configurations are applied to system design planning
		1.2 Hazards associated with battery storage systems for grid-connected PV systems are determined and appropriate risk control measures are developed
		1.3 Electrical load/s to be supplied from the battery storage system are identified
		1.4 Energy assessments are undertaken using appropriate tools including data logging tools and/or energy assessment forms
		1.5 Site is assessed to determine feasibility, equipment location and any required switchboard modification
		1.6 Energy management strategies are applied to produce an energy management plan
		1.7 Relevant industry standards, building codes, regulations and manufacturer requirements are applied to system design planning
		1.8 Relevant electricity tariffs are incorporated in the system design
		1.9 Solar resource data is applied in the system design
		1.10 Client situation, budget and desired outcomes are incorporated in the system design
2	**Design battery storage systems for grid-connected photovoltaic systems**	**2.1** Suitable system configurations are selected to meet client requirements
		2.2 System efficiencies are applied to system designs and overall system yield for different system configurations is determined
		2.3 Type and capacity of inverter/s to meet performance requirements are determined
		2.4 Type and capacity of battery storage to meet performance requirements are determined
		2.5 Type and capacity of charge controller/s to meet performance requirements are determined

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Capacity of PV array to meet performance requirements is determined
	2.7	Merits of alternate configurations including maintenance requirements are analysed and the most appropriate system design is selected
	2.8	Location of each item of equipment is determined
	2.9	Size of cables and ratings of protection and isolations devices are determined
3 Document the design of battery storage systems for grid-connected photovoltaic systems	**3.1**	Identified hazards are listed and appropriate risk control methods are specified
	3.2	Required items of equipment and system components are identified and listed
	3.3	System operating parameters are specified
	3.4	Electrical systems schematic/s and equipment location plan/s, inclusive of signage, are produced
	3.5	System cost and performance are documented
	3.6	Maintenance, client and installer documentation are produced

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This is a new unit – no equivalent unit.

Assessment Requirements for UEERE5001 Design battery storage systems for grid-connected photovoltaic systems

Modification History

Not applicable.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying work health and safety (WHS)/occupational health and safety (OHS) policy, work procedures and instructions
- ascertaining and documenting system requirements including:
  - client objectives for the proposed system
  - client budget
  - energy profile of the site where the system will be connected and producing an energy management report
  - energy management strategies
  - hazards related to the system and the site
  - relevant electricity tariffs and utility requirements
  - site inspection including existing electrical installation to meet client objectives
- designing the system including:
  - analysing, reviewing and selecting configuration to meet performance requirements
  - assessing the photovoltaic (PV) array capacity to meet performance requirements
  - determining location of equipment
  - determining sub-system efficiencies
  - determining suitable configuration/s
  - drawing the suitable configuration/s
  - selecting and sizing cables, protection and isolation devices
  - selecting type and capacity of inverter/s, including programming of parameters to meet performance requirements
  - selecting type and capacity of battery storage to meet performance requirements
  - selecting type and capacity of charge controller, including programming of parameters to meet performance requirements
- documenting the system design including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- compiling client documentation
- compiling installer documentation
- preparing electrical system schematic and equipment location plan
- specifying equipment including signage
- specifying system budget and performance including battery storage capacity and PV yield
- specifying maintenance requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- batteries including:
  - meaning of the terms that define aspects of batteries including:
    - amp hour capacity
    - battery
    - cell
    - charge and discharge rate
    - depth of discharge (DOD)
    - nominal voltage
    - primary and secondary cells
    - state of charge (SOC)
    - watt hour capacity
  - major features of commercially available types of batteries suitable for battery storage systems for grid-connected PV systems
  - factors affecting the life of commercially available types of batteries including the estimation of battery life
  - common processes leading to battery failure in commercially available batteries including sulphation and stratification in lead acid batteries
  - charging regimes suitable for commercially available types of batteries
  - hazards associated with handling, installing or maintaining commercially available types of batteries and risk control measures
  - procedures for safe disposal of commercially available types of batteries
- battery storage energy demand including:
  - load profiles illustrating average demand and maximum demand, based on appliances required during grid outages or during periods of high tariffs
  - total energy demand including:
    - energy required during periods of high tariffs
    - length of time of typical or expected grid outage

© Commonwealth of Australia, 2025 Powering Skills Organisation

- battery storage systems for grid-connected PV systems including:
  - applications for battery storage including:
    - electrical energy supply direct to loads during periods of high tariffs
    - electrical energy supply during grid outages
  - drivers of grid-connected battery storage
  - purpose of each component in a battery storage system for grid-connected PV system
  - functional block diagrams for typical configurations of battery storage systems for grid-connected PV systems including:
    - multimode inverter/s for connecting to renewable energy, grid, loads and battery storage; this inverter/s provide backup to dedicated loads on grid failure and may:
      - have a built in charge controller for direct connection of a PV array or
      - require a separate charge controller to direct current (DC) couple the PV array and battery
  - two types of inverters comprising, photovoltaic grid-connected inverters and multimode inverters where:
    - both inverter types are connected to the grid and loads via a switching device that provides backup to dedicated loads during grid failure
    - both inverter types are connected to the grid and only the multimode inverter/s provide backup to dedicated loads on grid failure
    - only the multimode inverter/s are connected to the grid; the grid-connected inverter/s are alternating current (AC) coupled to the multimode inverter/s and both types can provide backup to dedicated loads on grid failure
- charge controllers including:
  - types and applications of charge controllers within the various system configurations
  - specifications of a charge controller including:
    - DC current rating in and out
    - DC voltage operating window and/or rating
    - efficiency
    - output rating
- diagrams including:
  - electrical schematics of battery storage systems for grid-connected PV systems including modifications to switchboard to cater for specified loads
  - site diagrams to show the locations of equipment, fittings and cabling
- energy management strategies and/or energy source switching options to reduce the maximum and surge demand, based on load profile analysis
- inverters including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - differences between multimode and grid-connected inverters
  - output rating of a multimode inverter in relation to:
    - capacity for battery charging
    - required maximum demand
  - program parameters for a multimode inverter, for the correct operation of the system
- maintenance and installation requirements including:
  - maintenance schedule for battery storage systems for grid-connected PV systems
  - specification of the installation and maintenance requirements for battery storage systems for grid-connected PV systems taking into consideration safety and relevant industry standards, regulations and manufacturer requirements
- system design including:
  - determining the system yield/performance, equipment costs, maintenance requirements, budget and overall life-cycle costs
  - relationship between the system components:
    - PV array, battery storage and inverters/controllers and the system design criteria
  - size and selection of the battery storage to meet the system performance requirements
  - selecting and sizing the balance of system components including:
    - earthing
    - isolation and switching devices
    - protection devices
- WHS/OHS policy, workplace procedures and instructions.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant industry standards
- relevant industry product standards
- AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules)
- applicable documentation including:
  - energy assessment forms
  - examples of typical client requirements and site specific details
  - manufacturer technical information including:
    - data sheets, installation manuals and user guides
    - block of systems configurations and circuit diagrams
  - relevant industry standards and regulations
  - solar resource data and electricity tariffs.

Assessment must include the design of battery storage systems for grid-connected PV systems that meet the specific requirements of the client within the guidelines of relevant Australian Standards, including designs for new and retrofit installations.

UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to attach flexible cord and plug to electrical equipment for connection to a single phase supplies up to 230 volts (V) alternating current (a.c.) supply.

It includes planning and attaching flexible cord and plug, using test equipment for inspection and safety testing. It also includes locating, inspecting, testing and repairing faults in flexible cords and plugs.

This unit does not cover the knowledge and skills necessary for work associated with high current faults on complex electrical apparatus, circuits and electrical work; in hazardous areas or on electrical equipment that is part of an explosion-protection technique; nor, work associated with fixed wiring.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, is required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan electrical equipment connection	**1.1** Work is planned, sequenced and prepared in accordance with WHS/OHS requirements and workplace procedures
	1.2 Condition and ratings of cord and plugs are in accordance with workplace procedures and work instruction from appropriate person/s
	1.3 Flexible cords and plugs are selected in accordance with relevant industry standards and workplace procedures for condition and rating
	1.4 Materials necessary to complete work are obtained and checked in accordance with workplace procedures and work instructions
	1.5 Tools, equipment and testing devices needed to carry out work are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.6 Flexible cord and plugs are prepared without damage to insulation and conductors and in accordance with relevant industry standards
2 Attach flexible cord and plugs	**2.1** WHS/OHS workplace policies and procedures are followed
	2.2 Single insulated metal framed equipment is earthed in accordance with relevant industry standards and workplace procedures
	2.3 Double insulated equipment is inspected and maintained in accordance with relevant industry standards and workplace procedures
	2.4 Conductors are connected to terminals ensuring required polarity is in accordance with relevant industry standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Inspect and test equipment for operation and safety**	**3.1** Electrical installation and operation of cord and plug/s connected to electrical equipment are inspected and tested in accordance with relevant industry standards, work instructions and workplace procedures
		3.2 Quality checks of work are undertaken in accordance with workplace procedures
4	**Locate and repair fault in flexible cord and plug/s**	**4.1** Electrical equipment and attached flexible cord and plug/s are isolated in accordance with WHS/OHS requirements and workplace procedures
		4.2 WHS/OHS workplace policies and procedures are followed
		4.3 Quality checks of the attached flexible cord and plug/s are undertaken in accordance with workplace procedures to detect any abnormal, damage or fault
		4.4 Faults in attached flexible cord and plug/s are determined and details of components to be replaced are recorded in accordance with workplace procedures
		4.5 Faults in attached flexible cord and plug/s are repaired, as required, in accordance with workplace procedures
		4.6 Repairs are inspected and tested for compliance with industry standards
		4.7 Unplanned events are referred to supervisor for direction in accordance with workplace procedures
		4.8 Status report/s is completed and supervisor notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Attaching cords and plugs to electrical equipment must include:	• any cord, cable and plug connected to equipment and cord extension leads intended for single phase supplies up to 230 V
Safe working procedures within in the scope of this unit must:	• be in accordance with AS/NZS 4836 Safe working on low-voltage electrical installations

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP024A Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply.

Assessment Requirements for UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying quality to workplace procedures and instructions
- attaching flexible cord/s and plug/s and without damage
- inspecting flexible cords and plugs for damage, faults or abnormalities
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- determining the current rating of a range of commonly used flexible cords
- drawing of a basic electrical circuit using correct symbols
- testing flexible cords, plugs and connected equipment for operation and safety up to 230 volts (V) alternating current (a.c.), including polarity and continuity testing
- finding and repairing faults in attached flexible cords and plugs in accordance with established procedures
- preparing to attach flexible cord and plug supplies up to 230 V a.c. supply
- providing status report/s
- using testing equipment
- selecting appropriate flexible cords for a range of single phase appliances relating to application, load and service duty
- identifying correct plug and socket polarities for the range of commonly used 230 V plug socket combinations
- selecting the correct plug and socket combinations for a range of applications, including use in damp areas
- fitting a range of various plugs and sockets with attention to requirements, colour code, polarity and correct termination of conductors with the sheath well into the body, and the cord grip anchored
- terminating cords to several appliances utilising the appropriate cord type and rating.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- electrical safety requirements, including the requirements of AS/NZS 4836 Safe working on low-voltage electrical installations
- basic electrical circuits, including:
  - simple electric circuit (supply, control device and load)
  - industry standard symbols, units of measurement and the abbreviation for electromotive force, potential difference, current and resistance
  - using multiples and sub-multiples for voltage, current and resistance values
  - a.c and direct current (d.c.) supplies
  - single phase electrical loads
  - electrical circuit protection devices
- relationships in an electrical circuit, including:
  - relationship between voltage, current and resistance (Ohm's Law)
  - changes in circuit parameters for altered values of voltage, current and resistance
  - electrical power in relationship to d.c. or resistive a.c. circuits
- test equipment - resistance measurement, including:
  - types of electrical test equipment used for resistance measurement (analogue and digital multimeters, insulation resistance testers and continuity testers)
  - selection of appropriate electrical test instrument for continuity and insulation resistance measurement
  - using analogue and digital multimeters for resistance measurement (ensuring zero setting, correct scale selection, avoidance of parallax error and estimation of between division readings for analogue multimeters)
  - continuity tests and using a continuity tester to check the polarity of a three-core extension cord
  - insulation resistance tests and minimum values for insulation resistance for low voltage (LV) equipment
  - reasons for insulation resistance testing is conducted at higher than supply voltage to relevant industry standards
  - using insulation resistance handheld tester
  - care and storage of electrical instruments
  - regulatory requirements relating to the maintenance and testing of test instrumentation for resistance measurement
- selection of flexible cords and plugs to suit given applications, including:
  - types, structures and applications of common cores, including:
    - parallel two core unsheathed ('figure 8')
    - cords, light duty sheathed
    - ordinary duty sheathed

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - heavy duty sheathed
    - textile braided
  - service duty
  - purpose of colour coding and the recommended single phase colour code
  - conventional code used in the most common alternative colours
  - factors affecting the choice of plugs and sockets, including ingress protection (IP) rating
- connecting flexible cords and plugs to appliances, including:
  - design features of plugs and sockets which protect the conductor terminations from undue force when disconnecting a cord - tortuous path
  - cord preparation - not to mark/damage the inner core when stripping the sheath for termination, double the end of the conductor to be terminated
  - purpose of earthing
  - structure of double insulated appliances, symbol, reasons they should not be earthed, and maintenance of the integrity of the double insulation
  - preparation of the surfaces at an earthing connection before and after completion of the termination, including terminations exposed to corrosion, and those for which no specific earthing terminal is provided
  - techniques for fitting plugs and sockets
  - techniques for terminating cords and conductors including consequences of poor electrical terminations
- testing, including:
  - importance of conducting both visual and electrical tests to ensure leads are safe and appropriate for connection to supply in regard to physical condition
  - checking the polarity of plug, and for any abnormal or obvious damage or fault
  - minimum acceptable value of insulation resistance between active neutral and earth
  - conducting insulation resistance and continuity tests prior to, and after, connecting cords and plugs to appliances
  - visually checking that the cord/plug assembly has a suitable IP rating for the operating environment
  - visual checks to ensure that arrangements for protection against dangers of mechanical movement as relevant are undamaged and in place
  - techniques for fault finding attached cords and plugs, and cord extension leads
- producing documentation and reports, including:
  - nature and content of, and the need to produce, status reports and documents
- relevant WHS/OHS legislated requirements including inspection and testing of electrical equipment
- relevant industry standards
- relevant manufacturer specifications and operating instruction for tools, equipment and testing devices
- relevant safe job safety assessments or risk mitigation processes
- relevant workplace policies, procedures and instructions, including relevant workplace quality procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant industry standards, codes of practice and operation manuals.

UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to attach flexible cords, cables and plugs to electrical equipment connected to a supply up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.).

It includes planning and attaching flexible cords, cables and plugs; and using test equipment for inspection and safety testing. It also includes locating, inspecting, testing and repairing faults in flexible cords and plugs.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Assessment Requirements for UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying to quality, workplace procedures and instructions
- attaching cords, cables and plugs to electrical equipment for connection to 1,000 volts (V) alternating current (a.c.) or 1,500 volts (V) direct current (d.c.) supply
- attaching, replacing and repairing flexible cords, cables and plugs to equipment for operation, safely up to 1,000 V a.c. to 1,500 V d.c.
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- finding and repairing fault/s in attached flexible cords, cables and plugs
- inspecting and testing flexible cords, cables, plugs and equipment for operation and safety up to 1,000 V a.c. to 1,500 V d.c.
- planning and preparing to attach flexible cords, cables and plugs up to 1,000 V a.c. to 1,500 V d.c.
- providing status reports
- replacing and repairing flexible cords, cables and plugs up to 1,000 V a.c. to 1,500 V d.c.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- safety, including:
  - WHS/OHS and electrical safety requirements
  - requirements of AS/NZS 4836 Safe working practices on low voltage installations
- selection of flexible cords, cables and plugs to suit given applications, including:

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - multi-phase systems
  - structure of plug pin configuration
  - applications of commonly used flexible cords, cables and plugs for connection to 1,000 V a.c. or 1,500 V d.c. supply
  - determining the current rating of a range of commonly used flexible cords, cables and plugs for connection to 1,000 V a.c. or 1,500 V d.c. supply
  - determining the number of cores/pins required for given situations
  - multi-phase colour code and the conventional code used in the most common cords and cables
  - selecting flexible cords and cables for given multi-phase loads to 1,000 V and service duty
  - selecting multi-phase plugs to 1,000 V for a given load and ingress protection (IP) rating
  - selecting the correct plug and socket combinations for a range of applications, including use in damp areas
- flexible cords, cables and plugs connected to multi-phase equipment, including:
  - design features of plugs and sockets which protect the conductor terminations from undue force when disconnecting a cord - tortuous path
  - cord preparation - not to mark/damage the inner core when stripping the sheath for termination, double the end of the conductor to be terminated
  - preparation of the surfaces at an earthing connection before and after completion of the termination, including terminations exposed to corrosion, and those for which no specific earthing terminal is provided
  - prepare flexible cords, cables for connection
  - single insulated metal framed equipment is earthed in accordance with requirements or the integrity of double insulated equipment is maintained
  - fitting a range of various multiphase flexible cords, cables, plugs, and sockets with attention to tortuous path requirements, colour code, polarity and correct termination of conductors with the sheath well into the body, and the cord grip anchored
- determine that a flexible cord, cable and plug is safe and is connected correctly, including:
  - importance of conducting both visual and electrical tests to ensure leads are safe and appropriate for connection to supply in regard to physical condition, sufficiently high insulation resistance, continuity, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating, and arrangements for protection against dangers of mechanical movement as relevant are undamaged and in place
  - check polarity of plug, and for any abnormal or obvious damage or fault
  - minimum acceptable value of insulation resistance between actives, neutral and earth
  - insulation resistance and continuity tests prior to, and after, connecting cords, cables and plugs to appliances
  - fault finding attached multi-phase flexible cords, cables and plugs, and multi-phase cord extension leads
- producing documentation and reports, including:
  - nature and content of, and the need to produce, status reports and documents
  - producing status reports and documents

© Commonwealth of Australia, 2025
Powering Skills Organisation

- problem-solving techniques
- producing documentation and reports
- relevant industry standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications and operating instruction for tools, equipment and testing devices
- relevant WHS/OHS legislated requirements, including relevant inspections and tests
- relevant workplace policies, procedures and instructions
- relevant workplace quality procedures
- selection of flexible cords, cables and plugs to suit given applications.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to attaching cords, cables and plugs to electrical equipment for connection to 1,000 V a.c. or 1,500 V d.c. supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

It includes working safely, using portable appliance tester (PAT), identifying faults, applying tagging, arranging for repair of faulty equipment and complete testing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to test cord connected apparatus and cord assemblies	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
	1.2 WHS/OHS risk control work preparation measures and procedures are followed

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.3	Advice is sought from relevant person/s to ensure work is effectively coordinated with others
	1.4	Cord connected apparatus and cord assemblies to be tested are obtained in accordance with workplace procedures
	1.5	PAT device is checked for correct operation and safety in accordance with relevant industry standards and workplace procedures
2 Test cord connected apparatus and cord assemblies	**2.1**	WHS/OHS risk control work measures and procedures are followed
	2.2	Measures are followed to ensure that cord connected apparatus and cord assemblies to be tested are not connected to the electrical supply in accordance with relevant industry standards
	2.3	Electrical safety requirements and parameters are applied to ensure correct test results are in accordance with relevant industry standards
	2.4	Visual inspection and checks of the cord connected apparatus and cord assemblies are carried out in accordance with workplace procedures to detect any abnormal damage or fault
	2.5	Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
	2.6	PAT routines are followed to test cord connected apparatus and cord assemblies in accordance with workplace procedures
	2.7	Unsafe cord connected apparatus and cord assemblies are identified from test results in accordance with workplace procedures
	2.8	Testing is undertaken effectively to minimise waste of energy and damage to apparatus
3 Tag cord connected apparatus and cord assemblies and document testing activities	**3.1**	WHS/OHS work completion risk control measures and procedures are followed

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Worksite is cleaned and made safe in accordance with workplace procedures

3.3 Cord connected apparatus and cord assemblies are tagged in accordance with workplace procedures for their safety status

3.4 Arrangements are made for unsafe cord connected apparatus and cord assemblies to be repaired by relevant person/s

3.5 Safety testing activities are documented in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

In-service safety testing must include the following:	• at least two different electrical cords and three different items of cord connected equipment with safety faults, including:
	  • a device containing an element
	  • a device containing a motor
	  • a device containing metal oxide varistors (MOV)

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP026A Conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

Assessment Requirements for UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying appropriate tagging
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- connecting cords and apparatus to the testing device
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting testing activities, including workplace register
- identifying safe and unsafe cords and apparatus
- preparing to test cord connected apparatus and cord assemblies
- preparing and using the portable appliance tester (PAT)
- safety testing of electrical cord connected equipment and cord assemblies
- tagging tested cord connected apparatus and cord assemblies and document testing activities
- using test results to determine the safety status.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian Standards and Commonwealth/state/territory legislation and regulations including:
  - Australian Standard AS/NZS 3760 In-service safety inspection and testing of electrical equipment
  - Commonwealth/state/territory WHS/OHS Acts and regulations
  - limitations of work that can be undertaken
  - codes of practice and associated guidance material
  - risk management principles

© Commonwealth of Australia, 2025 Powering Skills Organisation

- basic electrical testing concepts, including:
  - basic electrical circuits
  - functions of electrical circuit
  - conductors and insulators
  - basic electrical supply system
  - relationship of electrical quantities
  - effects of electrical currents
  - methods/devices used to negate or minimise electrical shock
  - PAT
  - PAT maintenance and calibration
- electrical equipment and cord assemblies testing, including:
  - classification of electrical equipment
  - inspection of electrical equipment (visual inspections)
  - using PAT:
    - earth continuity testing
    - insulation resistance testing
    - polarity testing (extension cords and IEC cords)
- testing and tagging documentation requirements, including:
  - risk assessment documentation
  - frequency of inspection and testing
  - tagging of equipment
  - records maintenance
- electrical cord testing and tagging documentation requirements
- electrical equipment and cord assemblies testing
- electrical testing concepts
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant legislation and regulations
- relevant manufacturer specifications
- relevant testing and tagging of portable and cord connected electrical apparatus
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

© Commonwealth of Australia, 2025 Powering Skills Organisation

time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities. equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to conducting in-service safety testing of electrical cord connected equipment and cord assemblies
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to disconnect and reconnect electrical equipment connected to low voltage (LV) installation wiring.

It includes preparing electrical equipment for disconnecting and then reconnecting equipment connected to LV installation wiring. It also includes inspecting and testing the reconnected electrical equipment for safe operation, identifying and reporting electrical faults and providing status reports. This must be incidental to a primary or regular function of the workplace.

The unit excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets and circuit protective devices), or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installation work).

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Additional and/or other conditions may also apply under State and Territory legislation and regulations related to licencing, electrical work and work health and safety (WHS)/occupational health and safety (OHS) regulations, which must be confirmed prior to commencing this unit.

In some jurisdictions additional information related to licencing may be required on certification documentation. Further guidance can be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to disconnect electrical equipment	**1.1** Electrical equipment disconnection is planned to ensure WHS/OHS policies and procedures are followed
	1.2 Relevant person/s is consulted to ensure work is coordinated effectively with others involved at the worksite
	1.3 Safety hazards which have not previously been identified are documented, risks assessed, and control measures determined and implemented in consultation with relevant person/s and in accordance with workplace procedures
	1.4 Point of isolation of electrical equipment to be disconnected is determined
	1.5 Tools, equipment and testing devices needed to carry out electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Disconnect electrical equipment	**2.1** WHS/OHS policies and workplace procedures are followed
	2.2 Electrical equipment is isolated in accordance with relevant electrical installation industry standards and workplace procedures
	2.3 Isolated equipment is confirmed as de-energised
	2.4 Conductor connection sequence is recorded and labelled in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Visual inspection and checks of the electrical equipment and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
	2.6	Electrical equipment is disconnected from fixed wiring without damage to other components
	2.7	Disconnected conductors/cables are terminated in accordance with relevant industry standards to ensure they are safe and present no potential hazard
	2.8	Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
3 Prepare to reconnect electrical equipment	**3.1**	Reconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
	3.2	Relevant person/s is consulted to ensure work is coordinated effectively with others involved in the work site
	3.3	Point of isolation of the circuit to which the electrical equipment to be connected is determined
	3.4	Replacement electrical equipment is selected on the basis of rating and specifications being the same as that of the original electrical equipment
	3.5	Appropriate person/s is consulted in the event that replacement electrical equipment is not available
	3.6	Original and/or replacement electrical equipment is inspected and tested to ensure it is safe to connect to the electrical supply and use
	3.7	Tools, equipment and testing devices needed to carry out electrical work, are obtained in accordance with workplace procedures and checked for correct operation and safety
4 Reconnect electrical equipment	**4.1**	WHS/OHS policies and procedures are followed
	4.2	Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated and de-energised in accordance with relevant electrical installation industry standards and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	4.3 Earth continuity of the equipment is tested to determine whether it is in accordance with relevant industry standards
	4.4 Insulation resistance of the equipment is tested to confirm that it is in accordance with relevant industry standards
	4.5 Appropriate person/s is consulted regarding any non-compliant conditions identified during testing
	4.6 Electrical equipment is connected in accordance with previously recorded conductor connection sequence and relevant industry standards
	4.7 Connections to the equipment are checked to confirm they are correct
	4.8 Continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure is confirmed
5 Test the reconnected electrical equipment for safe operation	**5.1** WHS/OHS policies and workplace procedures for the reinstatement of isolated circuits and electrical equipment is followed
	5.2 Supply is reinstated to equipment and checked in accordance with established procedures and industry requirements
	5.3 Arrangements are made with relevant person/s to test the operation of the electrical equipment in accordance with workplace procedures
	5.4 Operational non-conformances are identified and reported in accordance with workplace procedures
6 Complete compliance documentation	**6.1** Equipment status report/s are completed and relevant person/s notified in accordance with task requirements and workplace procedures
	6.2 Complete compliance documentation in accordance with industry standards and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnection and reconnection of electrical equipment must include at least one of the following, and must be selected to align with the candidates' primary trade or work function:	• air conditioning/refrigeration equipment • instrumentation equipment • electronic equipment • electrical equipment • neon signs • composite equipment • control devices • water heaters • motors • gas appliances
MUST NOT INCLUDE: disconnect/reconnect electrical equipment connected to supplies up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.) must not include the following:	• electrical work associated with fixed wiring, circuits at a switchboard or to general electrical equipment, including switches, socket outlets, circuit protective devices etc • in hazardous areas or on electrical equipment that is part of an explosion-protection technique • where high fault currents are possible • which are luminaires

Assessment Requirements for UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - selecting and using and appropriate range of personal protective equipment (PPE)
  - hazard identification
  - using risk control measures
  - using safe working practices when carrying out electrical disconnect/reconnect work
  - working safely with low voltage (LV) electrical installations
- determining electrical characteristics of electrical equipment
- selecting tools, equipment and testing devices
- identifying the point of isolation
- preparing to disconnect and reconnect electrical equipment
- disconnecting and reconnecting electrical equipment
- connecting circuits from the schematic diagrams
- connecting and using voltmeters and ammeters, including selecting the correct range in terms of magnitude and whether the supply is alternating current (a.c.) or direct current (d.c.)
- isolating, testing and tagging accessories
- connecting a simple electrical circuit, including supply, control switch and load
- measuring voltage and current within a simple circuit
- producing a wiring diagram of the connections used in following the schematic diagram
- connecting a simple circuit following a wiring diagram
- producing a schematic diagram from the wiring diagram
- using an analogue multimeter for voltage measurement ensuring the following: setting zero, correct scale, a.c. or d.c., polarity and magnitude, avoiding parallax error and estimating between division readings
- using a digital multimeter for voltage measurement ensuring the following: correct range and no active conductors are connected to any meter earth
- measuring resistance using a digital multimeter

© Commonwealth of Australia, 2025 Powering Skills Organisation

- conducting insulation resistance tests using a handheld insulation tester after checking for zero and meter calibration
- checking the polarity of a three-core extension cord using a continuity tester
- measuring current using a clip-on (tong tester) taking each circuit conductor in turn
- terminating cables using stud, screw, tunnel and lug terminal types employing the correct preparation and the relevant terminating tools
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected
- testing the availability of supply for electrical equipment about to be disconnected
- locating isolation device/s, including lockable adjacent switching device, and/or identification of fuse/circuit breaker at switchboard, and use of equipment schedules where provided
- determining the method of isolation to be used; which available device
- isolating a supply at a fuse, ensuring the fuse wedge is removed only after the electrical equipment is turned off and demonstrating why the empty wedge is replaced once the fusible link has been removed
- isolating a supply at a circuit breaker, ensuring the circuit breaker is locked and secured in the open position
- undertaking tests to determine if the electrical equipment is turned off when isolating at a fuse/circuit breaker
- using danger tags at the point of isolation
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multiphase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- applying procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
- disconnecting isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- applying termination practices in regard to disconnected wiring
- checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
- visually inspecting and testing equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate ingress protection (IP) rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
- testing compliance of the electrical equipment, i.e. insulation resistance and continuity
- testing the disconnected electrical equipment for faults (open circuits, partial open circuits, short circuits, partial short circuits and earth faults), and recognise any unsatisfactory test results obtainedidentifying the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- reconnecting electrical equipment to fixed wiring with minimal damage to wiring system
- ensuring continuity between exposed conductive parts of the equipment and the main earth or

© Commonwealth of Australia, 2025 Powering Skills Organisation

metal switchboard enclosure
- restoring supply after ensuring correct connections, and all safety requirements have been met
- testing the supply at the electrical equipment
- restoring all mechanical protection, e.g. terminal covers
- checking operation of reconnected equipment
- dealing with unplanned events/situations in accordance with workplace procedures and in a manner that minimises risk to personnel and equipment
- producing reports and documents to describe a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply in accordance with workplace, industry and regulatory requirements
- producing reports and compliance documentation for the safe reconnection/commissioning of a component to the supply in accordance with workplace, industry and regulatory requirements
- completing required regulatory compliance documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- the basic electrical circuit, including:
  - elements of a simple electric circuit (supply, control switch, protection device and load)
  - definition, the symbol and the abbreviation of the unit for electromotive force, potential difference, current and resistance
  - types of electrical load
  - need for devices to afford electrical protection and the mechanisms used in protection devices, including resetting
  - a.c supply (both single and multi-phase) and d.c. supply
  - need for isolating, testing and tagging electrical circuits
- relationships in an electrical circuit, including:
  - relationship between voltage, current and resistance
  - definition of power in electrical terms (for d.c. or resistive a.c. circuits)
  - electrical diagrams, including:
    - symbols used for fuse, circuit breaker, isolator, normally open contacts, normally closed contacts, coil, energy meter, a.c. motor and transformer
    - using a block diagram as means of developing concepts and understanding
    - function of single line diagrams, including their application in three phase systems
    - definition of a circuit or schematic diagrams
    - wiring diagrams
- test equipment selection and care, including:
  - fault currents and the implications of incorrectly connecting a meter to a high fault current

© Commonwealth of Australia, 2025 Powering Skills Organisation

source
    - category ratings of multimeters in terms of their breaking capacity (fault current interruption) and identification of the appropriate category of instrument for typical domestic work and for typical commercial work
    - regulatory requirements in regard to the maintenance and testing of test instrumentation
    - steps and procedures for the safe use, care and storage of electrical instruments
    - selecting test equipment for given situations
- test equipment - voltage measurement, including:
    - voltage measurement - meters connected in parallel
- test equipment - resistance measurement, including:
    - insulation resistance, and the required minimum values for insulation resistance LV equipment (including the insulation resistance values for electrical equipment incorporating heating elements)
    - insulation resistance needs to be measured at higher than supply voltage and the voltages to be used
    - continuity and what a continuity tester does
- test equipment - current measurement, including advantage/s of the clip-on method of current measurement
- cable connections, including:
    - construction of typical power cables
    - principle of operation of the following types of terminals stud, screw, tunnel and lugs
    - cable preparation and terminating methods appropriate to each type of terminal, including any special requirements which apply
- protection for safety, including:
    - dangers associated with earth-faults
    - protection of persons against electric shock from earth-faults
    - maintaining a low earth-fault current path resistance
    - components in an earth-fault current path
    - regulatory issues/requirements/limitations in regard to working live
- safety testing preparation and procedures, including:
    - faulty earth-fault current paths
    - using safe working practices when carrying out fault-finding work
    - identification of earthing system components
    - unsatisfactory resistance of a fault current path
    - actions to rectify unsatisfactory resistance of an earth-fault current path or insulation
- isolating supplies, including:
    - regulatory requirements in regard to working de-energised, and ensuring and maintaining isolation
    - reasons for advising all personnel likely to be affected
    - preventing others wanting to remake supply
    - reason for isolation and approximate time of outage to allow planning of alternate

© Commonwealth of Australia, 2025 Powering Skills Organisation

activities
  - identification of the type and arrangement of circuits supplying equipment that is to be disconnected
  - use of and reason for danger tags at the point of isolation
  - reason for the following steps: testing on a known live supply, testing for isolation, retesting on a known live supply after confirming isolation
- disconnecting electrical equipment - LV, including:
  - identification of the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
  - procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
  - disconnection of isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- reconnecting electrical equipment - LV, including:
  - importance of checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
  - need to visually inspect and test the equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
  - procedures for equipment with unsatisfactory results - unsuitability for reconnection
  - identification of the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
  - procedures ensuring isolation of supply
  - engaging appropriately qualified person to rectify any non-compliance
- produce documentation and reports in accordance with workplace, industry and regulatory requirements, including:
  - need to produce status reports and documents to locate and identify isolation mechanisms for a wide range of circuits and associated loads
  - production of reports and documents to use a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply
  - content required in reports and documents used to safely determine the suitability of a component for reconnection to supply
  - production of reports and documents for the safe reconnection/commissioning of a component to the supply.
  - need to comply with regulatory compliance documentation requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, including where not permissible under regulatory and licencing requirements, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources used should reflect current industry practices in relation to disconnecting and reconnecting electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, standards, codes of practice and operation manuals.

UEERL0005 Locate and rectify faults in low voltage (LV) electrical equipment using set procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to locate and rectify faults in low voltage (LV) electrical equipment.

It includes following workplace procedures to inspect and test electrical equipment, identify and rectify faults and complete reporting. This must be incidental to a primary or regular function of the workplace. The Range of Conditions describes exclusions for this unit of competency.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Additional and/or other conditions may also apply under State and Territory legislation and regulations related to licencing, electrical work and work health and safety (WHS)/occupational health and safety (OHS) regulations, which must be confirmed prior to commencing this unit.

In some jurisdictions additional information related to licencing may be required on certification documentation. Further guidance can be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to identify faults	**1.1** Work is planned to ensure WHS/OHS policies and workplace procedures are applied
	1.2 Tools, electrical equipment and testing devices required for work are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.3 Relevant person/s is consulted to ensure the work is coordinated with others
	1.4 Electrical characteristics of electrical equipment and electrical supply are determined and recorded in accordance with workplace procedures
	1.5 Electrical equipment and associated circuits are identified for isolation purposes in accordance with workplace procedures
2 Locate faults in the electrical equipment	**2.1** Electrical equipment and associated circuits are isolated in accordance with workplace procedures
	2.2 WHS/OHS workplace policies and procedures are followed
	2.3 Visual inspection and checks of the electrical equipment and components are carried out to detect any abnormality, damage or fault in accordance with workplace procedures
	2.4 Wiring diagrams are checked and possible fault causes identified based on the wiring diagrams
	2.5 Faults are confirmed and components to be replaced or adjusted are determined and details recorded in accordance with workplace procedures
	2.6 Electrical equipment is dismantled and/or removed, as required, and components stored to protect them against

© Commonwealth of Australia, 2025 Powering Skills Organisation

		loss or damage in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Rectify faults	**3.1**	Materials and resources required to complete work are obtained in accordance with workplace procedures and job requirements
	3.2	Adjustments are made to electrical equipment for operation and parameters in accordance with manufacturers requirements, workplace procedures and relevant industry standards
	3.3	Faults are rectified in accordance with workplace procedures
	3.4	Approval for contingencies is obtained from appropriate person/s before implementation in accordance with workplace procedures
	3.5	Tests on the electrical equipment are performed in accordance with industry procedures to ensure safe return to service and operation of equipment
	3.6	Report/s, documentation and compliance certifications are completed in accordance with workplace, industry and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Locating and rectifying faults in LV electrical equipment must include at least one single phase and one multi-phase item of equipment of any of the following, and must be selected to align with the candidates' primary trade or

- air conditioning/refrigeration equipment
- instrumentation equipment
- electronic equipment
- electrical equipment
- neon signs

© Commonwealth of Australia, 2025 Powering Skills Organisation

work function:	• composite equipment • control devices • water heaters • motors • gas appliances

MUST NOT INCLUDE locating and rectifying faults in electrical equipment intended to operate from fixed wired supply up to 1,000 V a.c. or 1,500 V d.c. and not listed above. This includes:	• electrical work associated with fixed wiring, circuits at a switchboard or to general electrical equipment, including:
	  • switches, socket outlets, circuit protective devices etc); or
	  • installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installation work)
	• in hazardous areas or on electrical equipment that is part of an explosion-protection technique
	• where high fault currents are possible
	• which are luminaries

Assessment Requirements for UEERL0005 Locate and rectify faults in low voltage (LV) electrical equipment using set procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - selecting and using and appropriate range of personal protective equipment (PPE)
  - hazard identification
  - using risk control measures
  - using safe working practices when carrying out electrical disconnect/reconnect work
  - working safely with low voltage (LV) electrical installations
- dealing with unplanned events
- using routine fault-finding techniques, workplace procedures and problem-solving techniques to locate and rectify faults in LV electrical equipment
- following safe work method statements (SWMS) and procedures
- using wiring diagrams to assist in identifying fault locations
- identifying, inspecting, testing and isolation of electrical equipment
- preparing to replace, implementing repairs and reconnecting electrical equipment
- applying safe procedures to discharge a capacitor
- returning to service and testing for polarity, continuity and insulation resistance
- using safe working practices when carrying out fault finding
- identifying common types of electrical faults (open circuit, short circuit, partial open circuit and partial short circuit)
- interpreting ratings from nameplates for comparison with any replacement
- visual checking techniques on a range of single and multi-phase equipment
- using test instrumentation, safely conduct procedures to identify faults in a range of single and multi-phase equipment
- rectifying all identified faults and ensuring appropriate consultation/approval before implementing contingencies
- checking repaired equipment for safe and correct operation
- producing reports and documents for the identification and rectification of faults in electrical

LV equipment in accordance with workplace procedures and regulatory and compliance documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- safe fault finding, including:
  - identification of common types of electrical faults (open circuit, short circuit, partial open circuit and partial short circuit) in single and multi-phase equipment
  - test equipment to locate common faults
  - techniques for using wiring diagrams to identify possible fault locations
- types of single and multi-phase equipment, including:
  - identifying basic principles of operation of typical equipment
  - visual inspection and checking techniques on a range of single/multi-phase equipment
  - interpretation of ratings from nameplates for comparison with any replacement
  - principles of operation of control equipment and protection devices associated with a range of single/multi-phase equipment
- problem-solving techniques, including:
  - symptoms of common faults
  - common faults that occur in single and multi-phase equipment and the indicators of such faults
  - techniques to ensure the electrical isolation and the maintenance of electrical isolation of single/multi-phase equipment when conducting fault finding
  - regulatory requirements/obligations regarding any live testing that may be unavoidable
  - fault-finding procedures
  - rectification of identified faults ensuring appropriate consultation/approval before implementing contingencies
- documentation and reporting- including:
  - reporting and recording systems
  - relevant workplace documentation, including quality, policies and procedures
  - status reports and documents related to locating and identifying isolation mechanisms for a wide range of circuits and associated loads
  - reports, documents and procedures related to safely locating and rectifying faults in electrical LV equipment
- relevant job safety assessments or risk mitigation processes include safe working methods statements
- relevant industry standards, including AS/NZS 4836 Safe working on or near low-voltage electrical installations and equipment
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements.

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to attach flexible cords, cables and plugs, including trailing and feeder cables, to high voltage (HV) electrical equipment connected to a supply exceeding 1,000 volts (V) alternating current (a.c). or 1,500 volts (V) direct current (d.c.).

It includes working safely; identifying plug configurations; selecting and using inspecting, testing and measuring devices; terminating and connecting HV flexible cables, plugs and conductors; safety testing and reporting.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEERL0001 Attach cords and plugs to electrical equipment for connection to a single phase 230 volt supply

UEERL0002 Attach cords, cables and plugs to electrical equipment for connection to 1,000 V a.c. or 1500 V d.c. supply

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to attach flexible cables and plugs	**1.1** Work is planned, sequenced and prepared in accordance with WHS/OHS requirements and workplace procedures
	1.2 Condition and ratings of cables and plugs are determined from relevant industry standards and work instructions from relevant person/s
	1.3 Flexible cables and plugs are selected in accordance with relevant industry standards and workplace procedure for condition and rating
	1.4 Materials necessary to complete work are obtained in accordance with workplace procedures and checked against work instruction
	1.5 Tools, equipment and testing devices needed to carry out work are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Attach flexible cables and plugs	**2.1** WHS/OHS policies and procedures are followed
	2.2 Flexible cables and plugs are prepared without damage to insulation and conductors and in accordance with relevant industry standards
	2.3 Equipment is earthed in accordance with relevant industry standards and confirmed de-energised
	2.4 Visual inspection and checks of the electrical equipment and associated wiring are conducted in accordance with workplace procedures to detect any abnormal damage or fault
	2.5 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
	2.6 Insulated equipment is inspected and maintained in accordance with relevant industry standards and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Conductors are connected to terminals ensuring the required polarity is in accordance with relevant industry standards
3 Inspect and test equipment for operation and safety	**3.1**	HV electrical installation and operation of cables and plugs connected to equipment are inspected and tested in accordance with relevant industry standards, work instructions and workplace procedures
	3.2	Approval is obtained from relevant person/s to confirm completion of work is in accordance with workplace procedures before supply is connected
	3.3	Status reports are completed in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Flexible cables and plugs for connecting equipment intended to operate at HV must not include:	• where high fault currents are possible • on complex electrical work • competencies associated with fixed wiring

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP023A HV Flexible Cables and Plugs.

Assessment Requirements for UEERL0006 Attach HV flexible cables and plugs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying quality, workplace procedures and instructions
- attaching flexible cables and plugs to electrical equipment connected to high voltage (HV) electrical equipment
- attaching, replacing and repairing flexible cables and plugs connected to HV electrical equipment
- connecting flexible cables and plugs to multi-phase appliances
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- inspecting and testing flexible cables, plugs and electrical equipment connected to HV electrical equipment for operation and safety
- planning and preparing to attach flexible cables and plugs connected to HV electrical equipment
- providing status reports.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- flexible cords/cables and plugs to suit given HV applications, including:
  - flexible cables and plugs to suit given HV applications
  - types of multi-phase plug HV for a specific load and ingress protection (IP) rating requirements
- safety of a HV electrical apparatus (including basic principles of its operation non-mathematical and control) of an appliance for connection to the supply, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - appropriate test equipment to check that apparatus is safe
  - procedures to be followed to ensure the correct use of test equipment
  - basic principles of operation and control of apparatus supplied by the flexible cables and plugs
  - test results that show apparatus is unsafe
- connection of flexible cables and plugs to multi-phase appliances, including:
  - preparation of flexible cables for connection to HV apparatus
  - connection of flexible cables to HV apparatus
  - connection of a HV plug to a flexible cable
- safety of flexible cable and plug assembly, including:
  - plug and cord testing procedures
  - safe operation of apparatus supplied by HV cable and plug assembly
- connection of flexible cables and plugs to multi-phase appliances
- flexible cords/cables and plugs to suit given HV applications
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies, procedures and instructions
- safety of flexible cable and plug assembly
- types of multi-phase plug HV for specific load and IP rating requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to attaching flexible cables and plugs to a variety of electrical equipment connected to a HV supply

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0007 Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to isolate, disconnect and reconnect high voltage (HV) electric propulsion components on engine driven, self-propelled earth moving vehicles under the restrictions of designated electrical equipment and conditions specified, operating at 3,300 volts (V).

It includes working safely, identifying circuit and isolation arrangements, following isolation procedures, selecting and using HV testing and measuring devices, terminating and connecting HV cables and conductors, safety testing and reporting.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V alternating current (a.c.) or 120 V direct current (d.c.).

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Restricted Licensing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for disconnection or reconnection	**1.1** Designated HV electric propulsion components to be replaced are identified and purpose of the work is verified with relevant person/s
	1.2 WHS/OHS requirements and workplace procedures are followed in accordance with relevant industry standards
	1.3 Work clearances are obtained, and isolation and disconnection are followed in accordance with workplace procedures
2 Disconnect designated HV electric propulsion components	**2.1** Relevant electrical characteristics and protection specifications are identified in accordance with workplace procedures
	2.2 On-board cables are identified and marked, and connection sequence recorded
	2.3 Designated HV electric propulsion components are inspected for damage and conclusions verified with relevant person/s
	2.4 Visual inspections and checks of the designated HV electric propulsion components and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
	2.5 Isolated equipment is confirmed as de-energised
	2.6 Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
	2.7 On-board cables are disconnected, where appropriate, without damage to terminals or components
	2.8 Designated HV electric propulsion component/s are dismantled, removed and/or replaced in accordance with relevant industry standards
	2.9 Designated HV electric propulsion components parts and/or associated components are stored appropriately to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		protect against damage
	2.10	Repairs to the removed equipment are in accordance with relevant industry standards and workplace procedures
3 Reconnect designated HV electric propulsion components	**3.1**	Cables are re-connected without damage to terminals or components
	3.2	Connections are checked and tested to confirm correct polarity and continuity
	3.3	Designated HV electric propulsion components are assembled and checked in accordance with relevant industry standards
	3.4	Designated HV electric propulsion components are inspected and tested for safety and correct operation
4 Prepare for return to service	**4.1**	Isolation devices are removed and work clearance is released in accordance with workplace procedures
	4.2	Documentation is completed in accordance with workplace procedures
	4.3	Relevant person/s is notified when designated HV electric propulsion components are ready for return to service in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnecting and reconnecting of HV electric propulsion components on engine driven, self-propelled earth moving vehicles operating at 3,300 V must not include the following:	• associated electrical work other than to disconnect and reconnect of HV electric propulsion components of off-road HV electric propulsion components on engine driven, self-propelled earth moving vehicles

© Commonwealth of Australia, 2025 Powering Skills Organisation

operating at 3,300 V
- competencies associated with fixed wiring
- on complex electrical work
- where high fault currents are possible

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP022A Disconnect and reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles.

Assessment Requirements for UEERL0007 Disconnect-reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - hazard identification
  - using risk control measures
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- disconnecting and reconnecting 3.3 kilovolts (kV) electric propulsion components of self-propelled earth moving vehicles
- disconnecting of high voltage (HV) electric propulsion components
- preparing of HV electric propulsion components for return to service
- preparing to disconnect or reconnect of HV electric propulsion components of operating at 3,300 volts (V)
- providing status report/s
- reconnecting of HV electric propulsion components
- repairing in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- basic electrical circuits, including:
  - elements of a simple electric circuit (supply, control switch, protection device and load)
  - definition, the symbol and the abbreviation of the unit for electromotive force, potential difference, current and resistance
  - types of electrical load
  - need for devices to afford electrical protection and the mechanisms used in protection

© Commonwealth of Australia, 2025
Powering Skills Organisation

devices, including resetting
    - symbols for the components of a basic electrical circuit
    - connection of the circuit from the schematic diagram
    - alternating current (a.c.) supply (both single and three phase) and direct current (d.c.) supply
    - correct connection and use of voltmeters and ammeters, including the selection of correct range in terms of magnitude and whether the supply is a.c. or d.c.
    - need for isolating, testing and tagging electrical circuits
    - isolation, testing and tagging accessories in a simulated environment
    - connecting a simple electrical circuit including supply, control switch and load
    - measuring voltage and current within a simple circuit
- relationships in an electrical circuit, including:
    - relationship between voltage, current and resistance
    - connection of meters to determine resistance from voltmeter and ammeter readings using a variation of the Ohm s Law relationship
    - predicting changes in circuit parameters for altered values of voltage, current and resistance
    - definition of power in electrical terms (for d.c. or resistive a.c. circuits)
    - using circuit readings determine power using the appropriate equations, symbols and unit abbreviations, including the use of multiples and sub-multiples
- electrical diagrams, including:
    - symbols used for fuse, circuit breaker, isolator, normally open contacts, normally closed contacts, coil, energy meter, a.c. motor and transformer
    - using a block diagram as means of developing concepts and understanding
    - producing a block diagram of a simple circuit
    - function of single line diagrams, including their application in three phase systems
    - definition of a circuit or schematic diagrams
    - wiring diagrams
    - connecting a simple circuit using a schematic diagram noting the wide degree of variety in the way the conductors may be run
    - producing the wiring diagram of the connections used in following the schematic diagram
    - connecting a simple circuit following a wiring diagram
    - producing a schematic diagram from the wiring diagram
- test equipment selection and care, including:
    - fault currents and the implications of incorrectly connecting a meter to a high fault current source
    - category ratings of multimeters in terms of their breaking capacity (fault current interruption) and identification of the appropriate category of instrument for typical domestic work and for typical commercial work
    - regulatory requirements in regard to the maintenance and testing of test instrumentation
    - steps and procedures for the safe use, care and storage of electrical instruments

© Commonwealth of Australia, 2025
Powering Skills Organisation

    - selecting test equipment for given situations
- test equipment - voltage measurement, including:
    - voltage measurement-meters connected in parallel
    - operation of series test lamps
    - construction of a set of series test lamps with emphasis on safety requirements
    - using a set of series test lamps
    - operation of neon test pencils and test screwdrivers with emphasis on the limitations of their safe use
    - operation and limitations of voltage probes, including their limitations
    - using an analogue multimeter for voltage measurement ensuring the following - setting zero, correct scale; a.c or d.c., polarity and magnitude, avoiding parallax error and estimating between division readings
    - using a digital multimeter for voltage measurement ensuring the following - correct range and no active conductors are connected to any meter earth
- test equipment - resistance measurement, including:
    - voltmeter-ammeter method of resistance measurement
    - measuring resistance in a simple circuit using the voltmeter-ammeter method with emphasis on the correct choice of long or short shunt
    - measuring resistance in a simple circuit using an analogue multimeter ensuring the following - setting zero, selecting correct range and estimating of between division readings
    - measuring resistance using a digital multimeter
    - insulation resistance and list the required minimum values for insulation resistance for low voltage (LV) wiring and LV equipment (insulation resistance between active and earth the value for appliances incorporating heating elements)
    - insulation resistance needs to be measured at higher than supply voltage and the voltages to be used
    - conducting insulation resistance tests using a handheld tester after checking for zero and meter calibration
    - continuity and what a continuity tester does
    - checking the polarity of a three-core extension cord using a continuity tester
- test equipment - current measurement, including:
    - advantages of the clip-on method of current measurement
    - measuring current in a simple circuit using a multimeter on the correct current range and why a series connection must be used
    - measuring current using a clip-on (tong tester) taking each circuit conductor in turn
- cable connections, including:
    - construction of typical power cables
    - principle of operation of the following types of terminals stud, screw, tunnel, faston and soldered
    - cable preparation and terminating methods appropriate to each type of terminal, including any special requirements which apply

© Commonwealth of Australia, 2025
Powering Skills Organisation

    - terminating cables using all of the above terminal types employing the correct preparation and the relevant terminating tools, including the correct size soldering equipment
- protection for safety, including:
    - dangers associated with earth-faults
    - protection of persons against electric shock from earth-faults
    - maintaining a low earth-fault current path resistance
    - components in an earth-fault current path
    - testing the resistance of a fault current path
    - regulatory issues/requirements/limitations relating to working live
- safety testing preparation and procedures, including:
    - faulty earth-fault current paths
    - using safe working practices when carrying out fault-finding work
    - identification of earthing system components
    - unsatisfactory resistance of a fault current path
    - actions to rectify unsatisfactory resistance of an earth-fault current path or insulation
- isolating supplies, including:
    - regulatory requirements relating to working de-energised, and ensuring and maintaining isolation
    - reasons for advising all personnel likely to be affected
    - preventing others wanting to remake supply
    - reason for isolation and approximate time of outage to allow planning of alternate activities
    - identification the type and arrangement of circuits supplying equipment that is to be disconnected
    - availability of supply is tested at components about to be disconnected
    - locating isolation device/s, e.g. lockable adjacent isolating switch or fuse/circuit breaker at a distribution board usually identified at the appliance
    - determining the method of isolation to be used and which available device
    - isolating a supply at a fuse, the fuse wedge is removed only after the components is turned off and why the empty wedge is replaced once the fusible link has been removed
    - tests to determine if a component is turned off when isolating at a fuse/circuit breaker
    - use of and reason for danger tags at the point of isolation
    - reason for the following steps: testing on a known live supply, testing for isolation, retesting on a known live supply after confirming isolation
- disconnecting 3.3 kV electric propulsion components, including:
    - identification of the type and arrangement of circuits supplying electric propulsion components that is to be disconnected from a 3.3 kV supply
    - procedures that ensure the safe isolation of the supply to electric propulsion components which is to be disconnected
    - disconnection of isolated electric propulsion components from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of

© Commonwealth of Australia, 2025
Powering Skills Organisation

conductor connection sequence
    - termination practices relating to disconnected wiring
- reconnecting 3.3 kV electric propulsion components, including:
    - importance of checking the new electric propulsion components nameplate details against those of the electric propulsion components being replaced
    - need to visually inspect and test the electric propulsion components electrical characteristics using suitable test equipment to ensure electric propulsion components are safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate ingress protection (IP) rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
    - compliance testing of the fixed electric propulsion components, i.e. insulation resistance and continuity
    - testing the disconnected electric propulsion components for faults (open circuits, partial open circuits, short circuits, partial short circuits and earth-faults), and any unsatisfactory test results obtained
    - procedures for electric propulsion components with unsatisfactory results - unsuitability for reconnection
    - identification of the type and arrangement of circuits supplying electric propulsion components that are to be reconnected to a 3.3 kV supply
    - procedures ensuring isolation of supply
    - process to establish the integrity of the circuit to which the disconnected electric propulsion components are to be connected
    - testing the resistance between the protective earthing conductor and neutral conductor as applicable is sufficiently low, i.e. not greater than 2 ohms
    - insulation resistance of the active conductors is greater than 1 megohm
    - engaging appropriately qualified person to rectify any non-compliance
    - appropriate cable termination practices
    - reconnection of electric propulsion components to fixed wiring with minimal damage to wiring system
    - continuity between exposed conductive parts of the electric propulsion components and the main earth or metal switchboard enclosure
    - restoring supply after ensuring correct connections, and all safety requirements have been met
    - testing the supply at electric propulsion components
    - restoring all mechanical protection, e.g. terminal covers
    - checking operation of reconnected electric propulsion components
- documentation and reports, including:
    - need to produce status reports and documents to locate and identify isolation mechanisms for a wide range of circuits and associated loads
    - production of reports and documents to use a suitable procedure to safely disconnect a component from a 3.3 kV supply
    - content required in reports and documents used to safely determine the suitability of a

© Commonwealth of Australia, 2025
Powering Skills Organisation

component for reconnection to supply
    - producing reports and documents for the safe reconnection/commissioning of a component to the supply
- enterprise reporting and recording system, including:
    - purpose and extent of maintaining work activities records in an enterprise
    - types of records for maintaining work activities in an enterprise
    - methods for recording and maintaining work records
    - work records for regulation requirements
    - producing enterprise records and documents for the safe reconnection/commissioning of a component to the supply
- disconnection and reconnection HV electric propulsion components on off-road earth moving trucks
- electrical circuit
- electrical diagrams
- isolating supplies
- protection for safety
- relationships in an electrical circuit
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- risk mitigation processes
- safety inspecting and testing preparation and procedures
- working de-energised and ensuring and maintaining isolation regulatory requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to disconnecting and reconnecting

UEERL0008 Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to disconnect and reconnect flameproof (Ex 'd'), increased safety (Ex 'e') and intrinsic safety (Ex 'i') electrical equipment to supply up to 1,000 volts (V) alternating current (a.c.) or 1,500 volts (V) direct current (d.c.).

It includes working safely in hazardous areas, identifying supply arrangements, following isolation procedures, handling explosion-protected equipment, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safety testing, reporting electrical faults and providing status report/s.

Hazardous area is one in which an explosive atmosphere is present, or may be expected to be present, in quantities such as to require special precautions for the construction, installation and use of equipment. In hazardous areas, precautions should be taken to reduce the likelihood of installed electrical equipment causing an ignition.

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Competency development activities in this unit are subject to regulations directly related to licensing. Where a licence or permit to practice is not held, a relevant contract of training, such as an Australian Apprenticeship, may be required.

Additional and/or other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to disconnect electrical equipment	**1.1** Electrical equipment disconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
	1.2 Relevant person/s is consulted to ensure work is coordinated effectively with others
	1.3 Safety hazards which have not previously been identified are documented, risks assessed, and control measures determined and implemented in consultation with relevant person/s in accordance with workplace procedures
	1.4 Point of isolation of electrical equipment to be disconnected is determined
	1.5 Tools, equipment and testing devices required for electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Disconnect electrical equipment	**2.1** WHS/OHS policies and procedures are followed
	2.2 Electrical equipment is isolated in accordance with relevant electrical installations, industry standards and workplace procedures
	2.3 Conductor connection sequence is recorded and labelled in accordance with workplace procedures
	2.4 Visual inspections and checks of the electrical equipment and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
	2.5 Isolated equipment is confirmed as de-energised

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Electrical equipment is disconnected from fixed wiring without damage to other components
	2.7	Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
	2.8	Disconnected conductors/cables are terminated in accordance with relevant industry standards to ensure they are safe and present no potential hazard
3 Prepare to reconnect electrical equipment	**3.1**	Reconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
	3.2	Relevant person/s is consulted to ensure work is coordinated effectively with others
	3.3	Point of isolation of the circuit to which the electrical equipment is to be connected is determined
	3.4	Replacement electrical equipment is selected on the basis of rating and specifications in accordance with designated electrical equipment and conditions
	3.5	Relevant person/s is consulted in the event that replacement electrical equipment is not available
	3.6	Original and/or replacement electrical equipment is inspected and tested to ensure it is safe to connect to the electrical supply and use
	3.7	Tools, equipment and testing devices needed to carry out the electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
4 Reconnect electrical equipment	**4.1**	WHS/OHS policies and procedures are followed
	4.2	Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated and de-energised in accordance with relevant electrical installations, industry standards and workplace procedures
	4.3	Continuity of the protective earthing conductor is tested to determine whether it is sufficiently low
	4.4	Resistance between the protective earthing conductor

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and the neutral conductor is inspected and tested to determine that it is in accordance with relevant industry standards
	4.5	Insulation resistance of active conductors is inspected and tested to confirm that it is in accordance with relevant industry standards
	4.6	Appropriate person/s is consulted to regarding any non-compliance condition identified during the earthing and resistance conductor inspection and testing
	4.7	Continuity between exposed conductive parts of the appliance and the main earth or metal switchboard enclosure is confirmed
	4.8	Electrical equipment is connected in accordance with relevant industry standards
	4.9	Connections to the electrical equipment are checked to confirm they are correct
5 Test the reconnected electrical equipment for safe operation	**5.1**	WHS/OHS policies and workplace procedures for the reinstatement of isolated circuits and electrical equipment are followed
	5.2	Arrangements are made with relevant person/s to test the operation of the electrical equipment in accordance with workplace procedures
	5.3	Operational non-conformances are identified and reported in accordance with workplace procedures
6 Identify and report faults	**6.1**	Electrical equipment is isolated in accordance with workplace procedures
	6.2	WHS/OHS policies and procedures are followed
	6.3	Visual inspection and checks of the electrical equipment to be disconnected and/or reconnected are carried out in accordance with workplace procedures to detect any abnormal or damage or fault
	6.4	Faults at point of disconnection and/or reconnection are identified and reported in accordance with workplace procedures
	6.5	Approval is obtained in accordance with workplace procedures from relevant person/s before any

contingencies are implemented

6.6 Status report/s is completed and relevant person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Disconnecting and reconnecting equipment connected to supplies up to 1,000 V a.c. or 1,500 V d.c. explosion-protection techniques must include the following:	• flameproof (Ex 'd') • increased safety (Ex 'e') • intrinsic safety (Ex ‘i’)

MUST NOT INCLUDE
Disconnecting and reconnecting equipment connected to supplies up to 1,000 V a.c. or 1,500 V d.c. explosion-protection techniques must not include the following:
	• comprised of complex electrical apparatus and circuits:
	  • associated with fixed wiring, including locating and rectifying faults of circuits at a switchboard or to general electrical accessories (including switches, socket outlets, circuit protective devices); or
	  • installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work)
	• where high fault currents are possible
	• which are luminaries
	• in hazardous areas or on electrical equipment that is part of an explosion-protection technique

Unit Mapping Information

This unit replaces and is equivalent to UEENEEP021A Disconnect - reconnect explosion-protected appliances and control devices connected to low voltage installation wiring.

Assessment Requirements for UEERL0008 Disconnect-reconnect explosion-protected appliances and control devices connected to LV installation

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant electrical installations industry standards
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying sustainable energy principles and practices
- completing workplace documentation
- dealing with unplanned events/situations in accordance with workplace procedures to minimise risk to personnel and equipment
- determining electrical characteristics of explosion-protected electrical equipment
- disconnecting and reconnecting fixed wired electrical equipment connected to a low voltage (LV) supply
- disconnecting and reconnecting electrical equipment
- disconnecting explosion-protected electrical equipment
- identifying and isolating circuit
- identifying and reporting faults
- identifying faults at point of disconnection and reconnection in accordance with workplace procedures
- identifying point of installation
- inspecting and testing disconnected and reconnected electrical equipment for safe operation
- preparing to disconnect and reconnect electrical equipment
- preparing to disconnect explosion-protected electrical equipment
- preparing to reconnect explosion-protected electrical equipment
- reconnecting explosion-protected electrical equipment
- selecting tools, equipment and testing devices
- testing of the reconnected explosion-protected electrical equipment for safe operation, including polarity and earth continuity
- undertaking visual checks of the explosion-protected electrical equipment and associated wiring to detect and report any abnormal damage or faults.

© Commonwealth of Australia, 2025
Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- hazardous area safe working practices, including:
  - WHS/OHS responsibilities related to hazardous areas: the main features and purpose of a clearance to work (including hot work permit systems) system
  - typical safety procedures that should be followed before entering a hazardous area
  - the purpose of gas detectors and their use and limitations
  - effects of temperature on gas and vapour detection; frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise; factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature; and safety in use of gas detectors, for example, read and run concept
  - safety measures to be taken when working in a hazardous area
  - the roles of the parties (including standard bodies and experienced consultants) involved in the safety of hazardous areas: common Acts and regulations related to the safety of hazardous areas and the authorities responsible for their implementation; where assistance and further information can be obtained to assist persons with hazardous area responsibilities: persons with hazardous area responsibilities, including the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities and insurers
- hazardous area and explosion-protection principles, including:
  - properties of combustible substances and their potential to create an explosive hazard; condition in the workplace that will lead to an explosion; the terms combustion, ignition and propagation; explosive range of substances encountered in the workplace i.e. lower explosion limit (LEL)/upper explosion limit (UEL); and explosive parameters of substances as given in tables of substance properties
  - combustible materials, including gases, vapours (from liquids) and dusts; flash point; the difference between gases and vapours; and the toxic nature of gases and vapours and potential harmful consequences
  - the nature of hazardous areas: the standard definition of a hazardous area; the recommended methods for classifying the type and degree of explosion hazard in an area; hazardous area classifications as defined by standards; and factors that are considered when a hazardous area is classified
  - the basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution and avoidance of ignition source
- explosion-protected techniques and principles, including:
  - the principles of each explosion-protection technique, the methods used and how each

© Commonwealth of Australia, 2025
Powering Skills Organisation

technique works
    - how explosion-protected equipment is identified by the Ex symbol marked on the equipment, including old equipment and equipment certified in another country
    - visible conditions or actions that would void the explosion-protection provided by a particular technique
- flameproof (Ex 'd') explosion-protection technique, including:
    - the purpose and characteristics of the design features of apparatus and circuits protected by the Ex 'd' technique (flame paths, integrity under pressure, pressure piling and enclosure entries)
    - typical situations where the Ex 'd' explosion-protection technique is used
    - actions or conditions that would void the protection provided by the Ex 'd' technique
    - the use of standards in determining the requirements to which the installation of Ex 'd' explosion-protected apparatus shall comply
- increased safety (Ex 'e') explosion-protection technique, including:
    - the purpose and characteristics of the design features of apparatus and circuits protected by the Ex 'e' technique (temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries)
    - typical situations where the Ex 'e' explosion-protection technique is used
    - actions or conditions that would void the protection provided by the Ex 'e' technique
    - the use of standards in determining the requirements to which the installation of Ex 'e' explosion-protected apparatus shall comply
- intrinsic safety (Ex 'i') explosion-protection technique, including:
    - the purpose and characteristics of the design features of apparatus and circuits protected by the Ex 'i' technique (field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances)
    - typical situations where the Ex 'i' explosion-protection technique is used
    - actions or conditions that would void the protection provided by the Ex 'i' technique
    - the use of standards in determining the requirements to which the installation of Ex 'i' explosion-protected apparatus shall comply
- common characteristics of explosion-protection techniques, including:
    - the purposes of temperature classification and gas grouping/apparatus grouping
    - compliance plate markings
    - limitations of non-metallic or specific alloy enclosures
    - the purpose of conformity and certification/approval for equipment used in hazardous areas
    - environmental conditions that may impact on explosion-protection techniques
    - features and purpose of conduit seals and cable termination devices designed for use in hazardous areas (conduit seals and barrier and compression glands for cables with or without armouring, screening and/or drain wires)
- hazardous areas cable termination devices and applications, including:

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - explosion-protection features of cable terminations devices
  - selecting compliant cable termination devices
- hazardous areas cable termination techniques, including:
  - installing conduit systems, where applicable, including seals to meet hazardous areas requirements (gases only)
  - terminating a cable with a barrier gland (gases only)
  - terminating a multipair, steel wire armoured (SWA), overall screened and individual screened cable into an enclosure
  - testing termination/connections of installed cables/circuits
- enterprise reporting and recording system, including:
  - purpose and extent of maintaining work activities records in an enterprise
  - types of records for maintaining work activities in an enterprise
  - methods for recording and maintaining work records
  - work records for regulation requirements
  - producing enterprise records and documents for the safe reconnection/commissioning of a component to the supply
- disconnect and reconnect explosion-protected electrical equipment, including:
  - common characteristics of explosion-protection techniques
  - explosion-protected techniques and principles
  - Ex ‘d’ explosion-protection technique
  - hazardous area and explosion protection principles
  - hazardous areas cable termination devices and applications
  - hazardous areas cable termination techniques
  - Ex ‘e’ explosion-protection technique
- relevant job safety assessments or risk mitigation processes, including working in hazardous areas and precautions to reduce the likelihood of electrical equipment causing an ignition
- relevant manufacturer specifications
- relevant relationships in an electrical circuit
- relevant testing equipment
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including purpose and extent of maintaining work activities records
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

© Commonwealth of Australia, 2025
Powering Skills Organisation

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to disconnecting and reconnecting fixed wired explosion-protected electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0001 Assemble and wire internal electrical rail signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to assemble and wire internal rail signalling equipment for location boxes, enclosures and equipment rooms.

It includes following workplace procedures, assembling and mounting components, performing internal wiring, terminating cables, and wiring and testing to certify equipment.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEEEL0003 Arrange circuits, control and protection for general electrical installations

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to assemble and wire internal signalling	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment		for work area are identified and applied
	1.2	Hazards are identified, risks assessed, and control measures and workplace procedures are implemented
	1.3	Safety hazards that have not previously been identified are noted on the job safety assessments and existing risk control measures implemented
	1.4	Technical requirements relating to specific signalling equipment are obtained
	1.5	Assembly and wiring are appropriately sequenced in accordance with job schedule
	1.6	Appropriate person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
	1.7	Materials needed for assembly and wiring are obtained in accordance with workplace procedures and checked against job requirements
	1.8	Tools, equipment, and testing devices needed to assemble and wire equipment are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.9	Rail signalling equipment is prepared for assembly and wiring in accordance with workplace procedures and relevant specifications
2 Assemble and wire internal signalling equipment	**2.1**	WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
	2.2	Equipment is assembled, wired, connected and labelled to comply with technical standards and job specification requirements
	2.3	Risk control measures for dealing with unplanned situations are discussed with appropriate person/s and documented in job safety assessments
	2.4	Unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of authorised person/s
	2.5	Equipment is assembled, wired, connected and labelled efficiently without waste of materials or damage to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		apparatus, the surrounding environment or services using sustainable energy practices
3 Complete assembly and wiring of internal signalling equipment	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Terminations are tested in accordance with workplace testing procedures to ensure tightness and functionality
	3.3	Continuity and insulation tests are carried out in accordance with workplace test procedures to ensure and verify system standards are met
	3.4	Wiring diagrams, quality requirements and safety issues are addressed and relevant reports/documentation are updated and completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN102A Assemble and wire internal electrical rail signalling equipment.

Assessment Requirements for UEERS0001 Assemble and wire internal electrical rail signalling equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- applying relevant rail signalling regulations and codes
- applying relevant technical manuals and catalogues to workplace practices
- applying sustainable energy principles and practices
- assembling and wiring equipment to specified/technical workplace requirements
- completing the assembly and wiring of internal signalling equipment
- completing mandatory reporting
- completing relevant technical reports, records and documentation
- conducting mandatory tests and identifying non-conformance using effective workplace methods
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- ensuring assembled/wired equipment operates to specifications
- following correct testing procedures
- following relevant codes of practice, WHS/OHS and environmental protection procedures and requirements
- interpreting signalling circuit diagrams
- interpreting specifications correctly
- preparing to assemble and wire internal signalling equipment
- using appropriate tools correctly and safely.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical safe working practices and workplace procedures
- faults in inverters

© Commonwealth of Australia, 2025 Powering Skills Organisation

- features and characteristic of inverters under load and no-load characteristics - circuit configuration, input and output wave forms, relationship between input and output voltages and output voltage under load conditions
- hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents, including:
  - arrangement of power distribution and circuits in an electrical installation
  - parts of an electrical system and equipment that operate at LV and ELV
  - parts of an electrical system and equipment where high currents are likely
- linear and switch mode power supplies, including:
  - direct current (d.c.) to d.c. converters
  - diagnostic procedures to isolate faults
  - isolation requirements and circuitry
  - characteristics of switched mode power supplies
  - operation of step-down and step-up regulators, variable frequency and pulse width modulated regulation techniques, and switched mode power supplies
  - radiation suppression circuitry
- mechanical rail signalling principles, including:
  - overview and purpose of elements - signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, interlocking and safe working systems
- mechanical rail signalling equipment including:
  - equipment and their components, operating principles and servicing procedures
- optical fibre safety, including:
  - coherent optical sources and joining procedures
  - laser safety class 3a devices or equivalent
- rail signalling, drawings and diagrams, including layouts, conventions and symbols
- rail signalling and electro-pneumatic equipment, including operating principles and parameters, and servicing procedures
- relevant cable and equipment schedules
- relevant job safety assessments/risk mitigation processes
- relevant principles and purposes of risk management
- relevant processes for conducting a risk assessment
- relevant manufacturer specifications
- relevant rail safe working practices, protection and management
- relevant rail signalling, regulations and codes of practice
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, manuals and catalogues
- relevant workplace policies and procedures
- risks and control measures associated with harmful dusts and airborne contaminants - thermal insulation, fibrous cement materials and asbestos, and other fibre reinforced switchboard materials
- risks and control measures associated with LV, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - control measures before, during and after working on electrical installations, circuits or equipment
  - control measures for working live
  - isolation and tagging-off procedures
  - risks and restrictions in working live
  - risks associated with modifying electrical installations, fault finding, maintenance and repair
- risks and control measures associated with high voltage (HV), including:
  - parts of an electrical system and equipment that operate at HV
  - terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV, and control measures used for dealing with the hazards of HV
- safety, selection, use, maintenance and care of test equipment, including:
  - checks and storage methods for maintaining the safety of testing devices
  - safety characteristics and safe use of electrical testing devices
- typical applications of inverters.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- relay, racks/frames/enclosures, switch circuit controllers, telephone technology and vital computer-based interlocking modules
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0002 Decommission electrical and electromechanical rail signalling from service

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to decommission electrical and electromechanical rail signalling from service on rail networks.

It includes preparing to withdraw electrical and electromechanical rail signalling from service. It also includes completing disconnection of operating and redundant circuitry, equipment and components; testing of remaining circuitry and equipment; finding and repairing faults; testing of control and indicating equipment; and reporting.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0007 Install and maintain non-vital screen-based rail control systems

UEERS0008 Install and maintain non-vital telemetry systems

UEERS0004 Find and repair rail signalling system faults

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to decommission electrical and electromechanical rail signalling from service	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
	1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
	1.3 Scope of decommissioning is determined from job specifications, design drawings and regulatory requirements
	1.4 Appropriate safe working person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
	1.5 Materials needed for the safe disconnection of circuits, equipment and components are obtained in accordance with workplace procedures and checked against job specifications
	1.6 Tools, equipment and testing devices needed to disconnect circuits, equipment and components are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Withdraw electrical and electromechanical rail signalling from service	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
	2.2 On-track safe working requirements are complied with in accordance with relevant industry standards and network rules
	2.3 Inspection is carried out and circuits, equipment and components are checked to ensure they are in accordance with manufacturer and system specifications
	2.4 Disconnecting, isolating and removal of redundant wiring; the termination of altered wiring; and checking indicators and signal system operation are completed in accordance with network requirements and relevant industry standards
	2.5 Methods for dealing with unplanned situations are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		selected on the basis of safety and specified work outcomes
	2.6	Decommissioning is performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.7	System and design faults are verified using relevant, technical information, fault-finding and diagnostic techniques to identify faulty rail signalling equipment
	2.8	Faulty rail signalling equipment is replaced, adjusted and secured in accordance with manufacturer specifications and workplace procedures
	2.9	Control equipment is adjusted, inspected and tested using workplace test procedures and equipment to ensure it operates in accordance with specified industry technical standards
3 Complete decommissioning work and reports	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	System faults are identified and reported for follow-up action in accordance with workplace procedures
	3.3	Inspection and test results are documented in accordance with workplace procedures and faulty or replaced equipment is tagged and despatched to maintain equipment spares

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Assessment Requirements for UEERS0002 Decommission electrical and electromechanical rail signalling from service

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- reading and interpreting specifications correctly
- disconnecting signalling circuits, equipment and components to meet operational and technical standards
- using effective fault diagnosis and repair/replacement techniques to specified model level
- confirming circuits, equipment and components operated within specified technical parameters
- testing equipment and instruments
- using tools correctly
- following relevant codes of practice, environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- decommissioning electrical and electromechanical rail signalling from service in accordance with workplace procedures
- preparing to decommission electrical and electromechanical rail signalling from service
- withdrawing electrical and electromechanical rail signalling from service.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical and electromechanical rail signalling decommissioning, safe working practices and relevant standards, codes and regulations, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - purpose of decommissioning
  - decommissioning planning and documentation
  - decommissioning requirements and hazards
  - decommissioning procedures
- fault diagnosis and repair/replacement techniques
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant safe working practices, industry standards, codes of practice, regulations and WHS/OHS legislated requirements, including decommissioning requirements and hazards
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable rail workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable rail simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to decommissioning electrical and electromechanical signalling from service
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0003 Develop rail signalling system maintenance programs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to develop rail signalling system maintenance programs for rail signalling equipment and infrastructure.

It includes preparing and developing rail signalling maintenance programs, including identifying tasks and work responsibilities, and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0007 Install and maintain non-vital screen-based rail control systems

UEERS0008 Install and maintain non-vital telemetry systems

UEERS0004 Find and repair rail signalling system faults

Assessment Requirements for UEERS0003 Develop rail signalling system maintenance programs

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting specifications correctly
- checking that technical/operational specifications are met and that equipment is in compliance with work orders
- ensuring safe train movement through work area
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant WHS/OHS requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- developing rail signalling equipment and infrastructure maintenance programs, including:
  - finalising rail signalling maintenance program, roster and schedule requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail signalling maintenance program development, safe working practices and relevant standards, codes and regulations, including:
  - maintenance principles encompassing:
    - maintenance function
    - role of maintenance department
    - WHS/OHS requirements
  - maintenance systems encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - maintenance terminology
    - preventative maintenance
    - predictive maintenance
    - corrective maintenance
  - data acquisition encompassing:
    - plant history cards/files
    - inspection techniques
    - predictive maintenance
    - remote visual inspection
    - non-destructive testing
    - thermography
    - vibration analysis
    - oil analysis
  - rail signalling maintenance plan development encompassing:
    - characteristics of rail signalling operation
    - assessment of failure characteristics
    - link failure characteristics to maintenance systems
    - identification of maintenance windows
    - resources
    - labour
    - materials
    - establish plan
    - implementation procedures and records
    - plan review
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant rail safe working practices, industry standards, codes of practice, regulations and WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable rail workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable rail simulated workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities and equipment currently used in industry
- resources that reflect current industry practices in relation to developing rail signalling maintenance programs
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0004 Find and repair rail signalling system faults

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to find and repair rail signalling system faults.

It includes preparing to find and repair signalling system faults, using appropriate fault-finding techniques, repairing or rectifying faults and completing reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0006 Install and maintain computer-based interlocking systems

or

UEERS0014 Install and maintain vital relay interlocking systems

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Prepare to find and repair rail signalling system fault/s**	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
		1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures are implemented in preparation for work
		1.3 Safety hazards that have not previously been identified are documented on job safety assessments, risks are assessed, and control measures determined and implemented in consultation with appropriate person/s
		1.4 Appropriate person/s is consulted to determine the nature and scope of the fault/s and to coordinate effectively with others affected by the fault/s
		1.5 Likely causes of the fault/s and order of probability are determined from system data and historical trends
		1.6 Impact of the fault on system is ascertained and appropriate person/s notified in accordance with workplace procedures
		1.7 Materials needed to find and repair the fault are obtained in accordance with workplace procedures and checked against job specifications
		1.8 Tools, equipment and testing devices needed to find and repair the fault/s are obtained in accordance with workplace procedures and checked for correct operation and safety
		1.9 Circuits/equipment are inspected and checked as being isolated, where necessary, in strict accordance with operational procedures and WHS/OHS requirements
2	**Find and repair rail signalling system faults**	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
		2.2 Signalling system performance parameters/standards are applied to appropriate fault-finding techniques
		2.3 Inspection and tests are conducted to determine the type and location of fault/s
		2.4 Wiring system is visually inspected for physical damage or installation defects, as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Methods for dealing with unplanned situations are selected on the basis of safety and specified work outcomes
	2.6	Ongoing inspections and checks of the signalling system are undertaken to confirm the continued rectification of the fault
	2.7	Fault/s are located and identified efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.8	Signalling system faults are rectified in accordance with workplace procedures
3 Complete repair/s to rail signalling system	**3.1**	WHS/OHS risk control measures and workplace procedures for carrying out work are followed
	3.2	Unresolved faults are reported to appropriate person/s for further action in accordance with workplace procedures
	3.3	Inspection and test results, actions taken or recommended are documented and appropriate person/s notified in accordance with workplace procedures
	3.4	Component fault/s, test result/s, authorisation/s and permit/s documentation are completed to provide an accurate database and facilitate follow-up action and relevant reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN118A Find and repair rail signalling system faults.

Assessment Requirements for UEERS0004 Find and repair rail signalling system faults

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- locating and repairing three different types of rail signalling system faults, including:
  - interpreting plans and specifications correctly
  - identifying and interpreting fault history
  - identifying faults efficiently
  - rectifying faults promptly using appropriate diagnostic techniques
  - minimising interruption to rail traffic and services
  - using testing equipment and tools correctly and safely
  - confirming the integrity of the signalling system
  - following relevant codes of practice
  - completing relevant technical reports, records
  - dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- confirming fault history and symptoms through observation and application of first-line tests
- finding and repairing of the signalling system fault/s and reporting requirements
- locating and repairing rail signalling system faults.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail signalling system fault finding and repair, safe working practices and relevant

© Commonwealth of Australia, 2025 Powering Skills Organisation

standards, codes and regulations, fault-finding and diagnostic techniques encompassing:

- establishing an accurate description of the fault situation by appropriate questioning of client or operator
- questioning techniques to efficiently and effectively obtain from a client/operator a description of a fault situation
- confirming the fault history and symptoms through observation and application of first-line tests
- drawing valid conclusions from observations
- identifying concepts of broad first-line testing
- in the absence of the client or operator, to establish the symptoms through application of systematic tests and observation
- identifying appropriate diagnostic tests for given symptoms using manufacturers' charts, handbooks and specification sheets
- using results of systematic tests to identify symptoms

- rail signalling system fault finding encompassing:
  - system operational and safety requirements
  - common mechanical faults, symptoms and testing
  - common electrical faults, symptoms and testing
  - common control faults, symptoms and testing
- rail signalling system repairs encompassing:
  - system operational and safety requirements
  - fault/circuit/system isolation
  - repairing/replacing faulty components
  - component testing
  - reconnection of component/circuit/system

- relevant job safety assessments or risk mitigation processes, including:
  - possessions protection and management
- relevant industry standards, codes of practice, regulations and WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to locating and repairing rail signalling system faults
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0005 Install and maintain active level crossing equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain active level crossing equipment on rail networks.

It includes preparing and installing /maintaining active level crossing equipment. It also includes completing the installation/maintenance and testing active level crossing equipment.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0013 Install and maintain train detection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install/maintain active level crossing equipment	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified and applied

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.2	Hazards are identified, WHS/OHS risks are assessed, and control measures and workplace procedures implemented in preparation for work
	1.3	Scope of installation/maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
	1.4	Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others to minimise rail traffic disruption
	1.5	Materials needed for the installation/maintenance work are obtained in accordance with workplace procedures and checked against job specifications
	1.6	Tools, equipment and testing devices needed for installation/maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Install/maintain active level crossing equipment	**2.1**	WHS/OHS risk control measures and workplace procedures for carrying out work are followed
	2.2	Equipment function is determined from relevant technical manuals and operating instructions to identify accessible operating requirements
	2.3	Equipment and components are cleaned, lubricated and adjusted to specified industry standards
	2.4	Equipment/component abnormalities are identified and appropriate remedial actions taken to ensure equipment conforms and performs to technical specifications
	2.5	Fit and maintenance are performed efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.6	Equipment faults/damage are identified using efficient fault-finding and diagnostic techniques, including fault indicators, error codes and maintenance records
	2.7	Installation/maintenance are performed using appropriate tools, inspection and test equipment to ensure signalling equipment operates to required technical and operational standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8	Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and workplace requirements
	2.9	Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
	2.10	Fault-finding and repairs are carried out efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.11	Equipment is inspected, tested and adjusted using appropriate test equipment and workplace procedures to ensure it operates within the specified technical standards
	2.12	Level crossing lamp alignments are carried out as part of testing and adjusting workplace procedures, as required
3 Complete active level crossing equipment installation/maintenance	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Equipment is taken out of service/brought back into use, as required, and documentation is completed in accordance with workplace procedures
	3.3	Work records and documentation are completed to ensure accurate maintenance records are maintained
	3.4	Worksite/equipment is reinstated in accordance with organisation requirements and faulty components are tagged, recorded and dispatched for repair/replacement

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for UEERS0005 Install and maintain active level crossing equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting specifications correctly
- using appropriate fault-finding techniques
- maintaining electrically-operated level crossing equipment to operational requirements
- organising work to minimise road and rail traffic disruptions
- using tools correctly
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant WHS/OHS requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing the installation/maintenance of active level crossing equipment
- installing/maintaining active level crossing equipment
- preparing to install/maintain active level crossing equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- active level crossing equipment installation and maintenance, safe working practices and relevant standards, codes and regulations, including:
  - rail signalling and active level crossing equipment
  - equipment and their components encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - flashing lights
    - audible warning devices
    - boom gate/barrier
    - pedestrian gate/barrier
    - relay operation
    - crossing predictor
    - operation alarm monitoring
    - traffic light interfaces
  - operating principles and parameters encompassing:
    - single line control
    - double line control
    - special controls
    - processor controls
    - remote alarm monitoring
    - failure modes
    - emergency operation
    - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
    - correct operation in accordance with control and locking tables
  - servicing procedures encompassing:
    - maintenance documentation
    - coordination/planning sequence
    - operational test procedures
    - scheduled/preventative maintenance
    - unscheduled/corrective maintenance
    - certification of active level crossing equipment (commission/decommission)
    - certifying procedures applicable for compliance with rail operator and/or enterprise standards
- rail safe systems of working
- safety management system
- safe working practices and relevant standards, codes and regulations
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures, including rail transport operator safety management system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining active level crossing equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0006 Install and maintain computer-based interlocking rail systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain computer-based electronic equipment for rail network signalling system.

It includes preparing and installing/maintaining computer-based interlocking (CBI) equipment. It also includes completing installation/maintenance of CBI systems and replacing faulty equipment requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0005 Install and maintain active level crossing equipment

UEERS0009 Install and maintain power-operated point actuating devices

UEERS0012 Install and maintain trackside signal and train protection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

Assessment Requirements for UEERS0006 Install and maintain computer-based interlocking rail systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and includes:

- maintaining computer-based and solid-state interlocking (SSI) equipment to operational requirements, plans and specifications
- interpreting specifications and plans correctly
- using appropriate testing and fault-finding techniques
- rectifying faults with minimal disruption to rail traffic and services
- using tools and test equipment correctly
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures requirement
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant WHS/OHS requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing installation and maintenance of computer-based interlocking (CBI) system
- installing and maintaining CBI system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- CBI systems installation/maintenance
- electronic communications, principles encompassing:
  - requirements of a basic communications system - satellites, data communications, navigation, telecommunications and noise
  - antennae and electro-magnetic wave propagation

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - reason for modulation
  - amplitude and frequency modulation, difference, advantages and disadvantages
  - simple transmitter and receiver circuits (block diagram level)
  - optical communications principles
- rail signalling - electronic equipment encompassing:
  - equipment and their components - telemetry (supervisory control and data acquisition (SCADA)), monitoring systems, IASS, train describer and panel processors
  - operating principles and parameters
  - servicing procedures
- computer peripherals encompassing:
  - types and applications
  - operating principles
  - software (drivers) installation
  - network management of peripheral devices
- personal computers (PCs), engineering applications and software basics encompassing:
  - application software types
  - configurations and preferences
  - use of particular software packages - word processor, spreadsheet, database, presentation software, web/document publisher, computer-aided design (CAD)/drawing packages, email, and client and business management
- rail signalling - CBI encompassing:
  - equipment and their components - SSI, Microlock and Westrace
  - operating principles and parameters
  - servicing procedures
- rail signalling - computer applications encompassing:
  - types of software and their scope - interrogator software for loggers, monitors and CBI and database (work instruction, commissioning work structures and cable schedules)
  - setting up and use
- rail signalling - remote control systems encompassing:
  - equipment and their components - programmable logic controllers (PLCs), dedicated PCs and prep systems
  - operating principles and parameters
  - servicing procedures
- electronic equipment
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- safe working practices and relevant industry standards, codes and regulations.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining computer-based and SSI systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0007 Install and maintain non-vital screen-based control systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain non-vital indication screen-based control systems on rail networks.

It includes preparing and installing/maintaining non-vital screen-based control systems. It also includes completing installation/maintenance of non-vital screen-based control systems.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install/ non-vital screen-based	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	control systems		for a given work area are identified, obtained and understood
		1.2	Hazards are identified, WHS/OHS risk are assessed, and control measures and workplace procedures are followed in preparation for the work
		1.3	Scope of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
		1.4	Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
		1.5	Materials needed for installation/maintenance work are obtained in accordance with workplace procedures and checked against job specifications
		1.6	Tools, equipment and testing devices needed to install/maintain work are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Install/maintain non-vital screen-based control systems**	**2.1**	WHS/OHS risk control measures and workplace procedures for installation/maintenance of non-vital screen-based control systems are followed
		2.2	Non-vital screen-based control systems are installed/maintained to comply with technical industry standards, job specifications and requirements
		2.3	Control system fault-finding and repairs are performed efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
		2.4	Control system faults are verified using relevant technical industry standard information, fault-finding and diagnostic techniques to identify faulty control equipment
		2.5	Faulty modules are replaced, adjusted and secured in accordance with manufacturer specifications and workplace procedures
		2.6	Methods for dealing with unplanned situations/events are selected on the basis of safety and specified work outcomes

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Complete non-vital screen-based control system installation/maintenance**	**3.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
		3.2 Control equipment is inspected, adjusted and tested using workplace test procedures and equipment to ensure system operates within specified technical industry standards
		3.3 Control system faults identified beyond the scope of first level maintenance are reported for follow-up action in accordance with workplace procedures
		3.4 Inspection and test results are documented in accordance with workplace procedures and, as required, faulty and/or replaced module/s are tagged with relevant reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN106A Install and maintain non-vital screen based control systems.

Links

Companion Volume implementation guides are found in VETNet - - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=b8a8f136-5421-4ce1-92e0-2b50341431b6

Assessment Requirements for UEERS0007 Install and maintain non-vital screen-based control systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- reading and interpreting specifications correctly
- installing/maintaining non-vital screen-based control systems to meet operational and technical standards
- using effective fault diagnosis and repair/replacement techniques to a specified level
- confirming equipment operates within specified technical parameters
- using testing equipment, instruments and tools correctly
- following relevant codes of practice, environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying safe working practices and relevant industry standards, codes of practice and rail safety regulations
- applying sustainable energy principles and practices
- planning to install/maintain non-vital screen-based control systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- non-vital screen-based rail control system installation and maintenance, safe working practices and relevant standards, codes and regulations, including rail signalling and non-vital computer applications
- equipment and their components encompassing:
  - visual display
  - non-vital software

© Commonwealth of Australia, 2025 Powering Skills Organisation

- operating principles and parameters encompassing:
  - normal mode operation via indications
  - failure mode via fault reports and indications
- servicing procedures encompassing:
  - maintenance documentation
  - coordination/planning sequence
  - operational test procedures
  - scheduled/preventative maintenance
  - unscheduled/corrective maintenance
  - rail signalling and computer peripheral application
- equipment and their components encompassing:
  - visual display units
  - keyboards
  - front end processors
  - printers
- operating principles and parameters encompassing:
  - normal mode operation via indications
  - failure mode via fault reports and indications
- servicing procedures encompassing:
  - maintenance documentation
  - operational test procedures
  - scheduled/preventative maintenance
  - unscheduled/corrective maintenance
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures
- safe working practices and relevant industry standards, codes of practice and rail safety regulations
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining non-vital screen-based control systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0008 Install and maintain non-vital telemetry systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain non-vital telemetry equipment and systems in a rail network.

It includes preparing and installing/maintaining non-vital telemetry system. It also includes completing the installation/maintenance of non-vital telemetry systems, repairing faults, testing telemetry equipment and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install/ non-vital telemetry	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	system		for a given work area are identified, obtained and clarified
		1.2	Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
		1.3	Safety hazards not previously identified are noted on job safety assessments, and risk control measures are determined and implemented
		1.4	Function of equipment is determined in accordance with operating manuals, rail system specifications and rail transport operator's interface
		1.5	Materials needed to install/maintain non-vital telemetry system are obtained in accordance with system specifications and workplace procedures
		1.6	Tools, equipment and testing devices needed to install/maintain non-vital telemetry system and diagnose the fault are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Install/maintain non-vital telemetry system**	**2.1**	WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
		2.2	Installation/maintenance work is carried out in accordance with manufacturer specifications and workplace procedures
		2.3	Normal function and operating parameters are confirmed in accordance with appropriate manuals, job/manufacturer specifications and rail operator's interface
		2.4	Fault-finding and diagnostic techniques are undertaken using circuit diagrams and manufacturer specifications to verify system/faults
		2.5	Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
		2.6	Installation/maintenance work is carried out efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Fault/s is isolated and assessed to determine appropriate repair method, tools, test and measurement instruments to be used
	2.8	Faulty, damaged or insecure components are replaced/repaired or secured in accordance with manufacturer/technical specifications, workplace procedures and returned to service
	2.9	Parts/components identified as suitable for replacement are replaced from available parts/component resources
	2.10	Parts/components requiring repairs beyond the repair capacity of the service centre are despatched for external repairs or disposed of in accordance with workplace procedures
	2.11	Faults are diagnosed and rectified efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.12	Repaired/replaced equipment is tested using approved test equipment in accordance with appropriate test procedures to ensure equipment is fully operational
	2.13	Test equipment is checked to ensure it is calibrated to manufacturer/technical specifications in accordance with industry standards and workplace procedures
	2.14	Appropriate adjustments and calibrations are carried out to manufacturer/technical specifications in accordance with industry standards and workplace procedures
3 Complete non-vital telemetry system installation/maintenance	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Documentation is completed to confirm equipment has been repaired to manufacturer specifications and relevant technical reports produced
	3.3	Arrangements are made for the safe return of equipment to the customer and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN110A Install and maintain non-vital telemetry systems.

Assessment Requirements for UEERS0008 Install and maintain non-vital telemetry systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting plans and specifications correctly
- installing/maintaining and testing of non-vital telemetry equipment in accordance with workplace procedures
- using effective and efficient diagnostic fault-finding techniques
- using resources efficiently
- repairing equipment in accordance with workplace procedures
- ensuring repaired equipment conforms to manufacturer specifications
- calibrating and using test equipment and tools correctly
- following relevant codes of practice, environmental protection procedures and requirements
- following correct liaison procedures
- completing relevant technical reports records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing maintenance of non-vital telemetry systems
- reading mimics and animated graphics.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- non-vital telemetry systems installation/maintenance, safe working practices and relevant standards, codes and regulations, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- electronic switching encompassing:
  - devices and used for electronic switching and their switching characteristic
  - circuit configuration and switch-on, switch-off conditions
  - faults in electronic switching devices/circuits
  - typical applications of electronic switching
- using supervisory control and data acquisition systems (SCADA) encompassing:
  - SCADA system features and applications
  - industries in which SCADA systems are used
  - associate benefits of the package
  - features and facilities of different SCADA packages
  - hardware requirements
- transmission protocols encompassing:
  - carriers
  - multidrop configuration
  - time division multiplexing
  - relay and computer-based interlocking (CBI) interfaces
  - data structure
- elements, including addressing, parity, cyclic redundancy check, direction control data and indication data
- reading mimics and animated graphics
- trending
- analysis of process to select data
- viewing data and graphical representation of selected information
- trend graphs and data matching
- alarm logging
- analysing select data
- corrective action of alarm status
- safe working practices and relevant standards, codes and regulations
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- servicing procedures, including:
  - maintenance documentation
  - coordination/planning sequence
  - operational test procedures
  - scheduled/preventative maintenance
  - unscheduled/corrective maintenance
  - relevant rail transport operator certifying train detection equipment (commission and

© Commonwealth of Australia, 2025 Powering Skills Organisation

decommission) workplace procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining non-vital telemetry systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0009 Install and maintain power-operated point actuating devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain power-operated point actuating devices in rail networks.

It includes preparing and installing/maintaining power-operated point actuating devices. It also includes completing installation/maintenance of power-operated point actuating device, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0013 Install and maintain train detection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Prepare to install/maintain power-operated point actuating device**	**1.1** Work health and safety (WHS)/Occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
		1.2 Hazards are identified, WHS/OHS risks are assessed, control measures and workplace procedures are implemented in preparation for work
		1.3 Scope of the installation/maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements
		1.4 Appropriate rail safe working personnel are consulted to ensure work is coordinated effectively with others involved on the worksite
		1.5 Materials needed for the installation/maintenance are obtained in accordance with workplace procedures and checked against job specifications
		1.6 Tools, equipment and testing devices needed for installation/maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Install/maintain power-operated point actuating device**	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
		2.2 Installation/maintenance, cleaning, brushing and lubricating work are carried out on point actuating devices in accordance with technical and operational specifications
		2.3 Adjustments to point actuating devices are made to ensure correct operation, and perway fastenings and timbers are inspected in accordance with operational specifications
		2.4 Position and mounting of point actuating devices are checked in accordance with site layout and operational specifications
		2.5 Installation/maintenance is performed efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Function of equipment is determined from technical data, maintenance handbooks, workplace and equipment operating procedures
	2.7	Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with technical and manufacturer specifications to ensure operational effectiveness
	2.8	Equipment is inspected and tested in accordance with workplace testing procedures to ensure operational and technical requirements are achieved
	2.9	Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
3 Complete power-operated point actuating device installation/maintenance	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Documentation is completed to provide an accurate installation/maintenance record and Network Control Officer informed of work status details
	3.3	Reusable, faulty or worn components are tagged and despatched for repair to maintain adequate spares
	3.4	Faulty perway conditions/components are documented to provide details for corrective/follow-up action
	3.5	Point actuating devices are temporarily taken out of service, instated back into service and certified in accordance with organisation requirements and workplace procedures
	3.6	Maintenance work activities are recorded in accordance with organisation requirements to provide accurate records and produce relevant reports

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UEERS0009 Install and maintain power-operated point actuating devices

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting plans and specifications correctly
- maintaining point actuating devices to operational requirements
- using appropriate fault-finding techniques
- documenting perway defects accurately
- using tools correctly
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety **(**OHS) and environmental protection procedures and requirements, including:
    - implementing workplace procedures and practices
    - using risk control measures
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying sustainable energy principles and practices
- completing the installation/maintenance of power-operated point actuating devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- power-operated point actuating device installation/maintenance, safe working practices and relevant standards, codes and regulations, including:
    - rail signalling principles - electrical
    - overview of electrical rail signalling encompassing:
        - types of rail signalling/safe working systems, including centralised traffic control (CTC), automatic, controlled and interlocked signalling
        - advantages of electrical over mechanical signalling

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - advantages of computer-based interlocking (CBI) over electrical signalling systems
  - effects of overhead traction systems on electrical signalling systems (where applicable)
  - purpose of elements of an electrical rail signalling system, including signals and aspect systems, train protection systems, point actuating systems, mechanical locking, relay interlocking, CBI, train detection systems, control input devices, indicators, diagrams and monitors, and safe working systems
- rail signalling principles - mechanical
- overview of mechanical rail signalling encompassing:
  - types of mechanical rail signalling systems for different rail traffic, including passenger train, freight train, maintenance vehicles and heritage/tourism train
  - deficiencies of mechanical signalling systems, including automatic, controlled and interlocked signalling
  - effects of overhead traction systems on mechanical signalling systems (where applicable)
  - effects of external factors on the mechanical rail signalling system, including rail overhead, gradients/terrain, environmental and civil configuration
  - purpose of elements of a mechanical rail signalling system, including signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, mechanical interlocking frames, safe working systems and electro-mechanical interfaces
- rail signalling - point actuating devices
- equipment and their components encompassing:
  - point actuating mechanisms, including mechanical, pneumatic, hydraulic and electric powered units
  - blade and operation detection devices
  - on-rail locking devices
  - off-rail locking devices
  - swing nose devices
  - ironwork and fixtures
  - equipment, including point machines, detectors, claw/clamp locks, swing nose mechanisms and in-bearer mechanisms
- operating principles encompassing:
  - point operation, normal and reverse
  - point locking, normal and reverse
  - point detection, normal and reverse
  - detectors
  - off-rail locking operation
  - on-rail locking operation
  - electric operation of contactors, motor control and detection circuits
  - interpreting circuit diagrams to evaluate correct operation and relationship to other signalling circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - normal mechanical movement
    - failure mode mechanical movement, including wrong side and right-side conditions identifying if movement should be possible
    - correct operation in accordance with control and locking tables
  - servicing procedures encompassing:
    - maintenance documentation
    - coordination/planning sequence
    - operational test procedures
    - scheduled/preventative maintenance
    - unscheduled/corrective maintenance
    - certifying point equipment (commission and decommission)
    - certifying procedures applicable for compliance with rail operator/enterprise standards
- safe working practices and relevant standards, codes and regulations
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures, including rail transport operator safety management system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining onsite power-operated point actuating devices
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0010 Install and maintain rail signalling power supplies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain rail signalling power supplies.

It includes preparing and installing/maintaining rail signalling power supplies by working safely to installation/maintenance industry standards, matching equipment with that specified for location, terminating cables and connecting wiring compliance, functional testing, certifying and reporting.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0001 Assemble and wire internal electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to	**1.1** Work health and safety (WHS)/occupational health and

	install/maintain rail signalling power supplies		safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
		1.2	Hazards are identified, risks assessed, and control measures and workplace procedures implemented
		1.3	Safety hazards which have not previously been identified are noted on job safety assessments and risk control measures are implemented
		1.4	Scope of work and location of power supply are determined by site inspection and from job instructions, specifications and/or diagrams
		1.5	Materials needed for the installation/maintenance work are obtained in accordance with workplace procedures and checked against job specifications
		1.6	Tools, equipment and testing devices needed to install/maintain power supplies are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Install/maintain rail signalling power supplies**	**2.1**	WHS/OHS risk control measures and workplace procedures for carrying out work are followed
		2.2	Power supply is checked to comply with technical industry standards, job specifications and requirements
		2.3	Wiring is run and cables terminated to comply with technical industry standards, job specifications and requirements
		2.4	Inspection and tests are conducted to ensure installed/maintained power supply complies with job specifications and functions as intended
		2.5	Installation/maintenance of power supply is carried out efficiently, without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
		2.6	Correct functioning of equipment is established from reference to manuals, system specifications and commissioning data
		2.7	Faults are identified in accordance with relevant technical information of power supplies and

Assessment Requirements for UEERS0010 Install and maintain rail signalling power supplies

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- interpreting specifications and circuit diagrams correctly
- installing/maintaining power supplies correctly
- using appropriate diagnostic and fault-finding techniques
- using tools and test instruments correctly
- following relevant codes of practice, procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing installation/maintenance of rail signalling power supplies
- planning installation/maintenance of rail signalling power supplies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail signal power supply installation/maintenance, safe working practices and relevant standards, codes and regulations for basic rail operations, including:
  - rail terminology encompassing:
    - rail signalling nomenclature
    - rail signalling symbols
    - state/territory standards
    - standard glossary of terms relevant to each state/territory and where the standard originated from and how new standards are developed to meet a national standard
  - train dynamics encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - types of rail vehicles, including suburban/country passenger, freight, maintenance vehicles and heritage/tourism
    - braking distance
    - gradients/terrain
    - sighting distance
    - the relationship to the signalling arrangement plan/scheme
- essentials of safe movement of trains encompassing:
    - the role of the signalling system in enabling safe and efficient movement of trains
    - standard operating conditions as per operating timetable/schedule
    - degraded signalling system performance, including a partial failure of signalling infrastructure or a system override
- abnormal train operating conditions, including signaller operation error, driver operation error, train delayed and train breakdown
- emergency train and signal system operation
- scheduled infrastructure maintenance
- unscheduled infrastructure maintenance, including civil, signalling, traction and overhead
- purpose of rail signalling encompassing:
    - safe distances between rail vehicles
    - safe movement of rail vehicles
    - conflicting movement between rail vehicles
    - how the signalling system provides driver information
    - how the driver interprets the information to safely control a train
    - restrictions on the signaller and driver following an operation error, including signals passed at stop, driver exceeding speed requirement and signaller setting incorrect route
- enterprise work activities records
- purpose and extent of maintaining work activities records in an enterprise
- types of records for maintaining work activities in an enterprise
- methods for recording and maintaining work records
- work records required by regulation requirements
- environmental and heritage awareness
- purpose of environmental and heritage regulation
- typical issues affecting electrotechnology services and systems
- meeting requirements
- rail signalling, power supplies
- equipment and their components encompassing:
    - transformers
    - batteries
    - converters
    - inverters

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - uninterruptable power supplies (UPS)
    - generator
    - solar panels
    - earthing
    - surge protection
    - switchboards
    - high voltage (HV) and low voltage (LV) power distribution
    - automatic power changeover panels
    - wiring and termination
- operating principles and parameters encompassing:
    - normal mode operation
    - alarm mode
    - redundancy mode
    - power interruption/standby mode
    - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
- servicing procedures encompassing:
    - maintenance documentation
    - coordination/planning sequence
    - operational test procedures
    - scheduled/preventative maintenance
    - unscheduled/corrective maintenance
    - certifying power supply equipment (commission and de-commission), including certifying procedures applicable for compliance with rail operator and/or enterprise standards
- safe working practices and relevant standards, codes and regulations
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining rail signalling power supplies
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0011 Install and maintain rail track circuit leads and bonds

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain track circuit leads and bonds of rail signalling electrical power and control systems.

It includes following workplace procedures, job planning, running and positioning, connecting track leads and bonds, maintaining and testing track leads and bonds, and completing required documentation.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0001 Assemble and wire internal electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Prepare to install/maintain track circuit leads and bonds	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for work area are identified, obtained and applied
	1.2 Hazards are identified, risks assessed, and control measures and workplace procedures implemented
	1.3 Safety hazards that have not previously been identified are noted on job safety assessments and existing risk control measures implemented
	1.4 Appropriate person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
	1.5 Installation/maintenance instructions are reviewed to obtain clear and concise work requirements
	1.6 Site bonding layout plan is reviewed to clarify bonding requirements
	1.7 Material to install/maintain track circuit leads and bonds is obtained in accordance with workplace procedures and checked against job specifications
	1.8 Tools, equipment and testing devices to install/maintain track circuit leads and bonds are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.9 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with job specifications
2 Install/maintain track circuit leads and bonds	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
	2.2 Specified leads of bonds are run and positioned appropriately to the formation conditions and to minimise potential damage from track maintenance machines
	2.3 Installation/maintenance of track circuit leads and bonds are appropriately sequenced in accordance with job schedule
	2.4 Positions of boxes and cable pits are checked to ensure compliance with specifications and appropriate follow-up action is initiated, as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Components and rail surfaces are prepared to ensure secure and sound connections in accordance with job specifications
	2.6	Leads or bonds are connected using specified fastening techniques ensuring technical compliance is achieved
	2.7	Established methods for dealing with unplanned situations are discussed with appropriate person/s and documented in accordance with workplace procedures
	2.8	Unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of an authorised person
	2.9	Track circuit leads and bonds are installed and connected efficiently without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.10	Bonds, leads and rail connections are inspected for damage or deterioration and appropriate corrective action is initiated in accordance with workplace procedures
	2.11	Appropriate tests are completed to identify components requiring repair or replacement in accordance with workplace procedures and job specifications
	2.12	Repair or replacement of components is carried out with due regard to train movements and safety of person/s involved
	2.13	Temporary bonding is installed, as required, and electrical readings on bonds/lead connections and insulated rail joints are taken to ensure compliance with specifications and site bonding layout plan
	2.14	Track-related equipment is inspected for faults or damage and all faults are documented and appropriate follow-up action is initiated in accordance with workplace procedures
3 Complete installation/maintenance of track circuit leads and bonds	**3.1**	WHS/OHS risk control, work completion measures and workplace procedures are followed
	3.2	Worksite is cleaned and made safe in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

workplace procedures

3.3 Work completion is documented, relevant reports produced and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN103A Install and maintain rail track circuit leads and bonds.

Assessment Requirements for UEERS0011 Install and maintain rail track circuit leads and bonds

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying bonding techniques correctly
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements
- applying safe working practices, rules and relevant industry standards, codes of practice and regulations
- completing installation/maintenance of track circuit leads and bonds
- completing relevant technical reports, records and documentation
- dealing with unplanned events in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- ensuring bonds and leads testing and test results comply with technical requirements
- following relevant codes of practice, WHS/OHS and environmental procedures and requirements
- installing/maintaining track circuit leads and bonds correctly
- interpreting relevant diagrams and track insulation plans
- interpreting specifications correctly
- preparing to install/maintain track circuit leads and bonds
- selecting and using tools correctly.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- abnormal train operating conditions
- basic rail operations
- braking distance
- emergency train and signal system operation
- environmental and heritage awareness, including the purpose for regulation
- gradients/terrain

© Commonwealth of Australia, 2025 Powering Skills Organisation

- methods for recording and maintaining work records and documentation
- relevant rail terminology, including signalling nomenclature, signalling symbols and terms relevant to each state or territory
- relationship to the signalling arrangement plan/scheme
- relevant enterprise work activities records
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant purpose of rail signalling, including:
  - conflicting movement between rail vehicles
  - driver interprets the information to safely control a train
  - emergency train and signal system operation
  - safe distances between rail vehicles
- safe movement of rail vehicles and trains, including
  - degraded signalling system performance
  - role of rail signalling system in enabling safe and efficient movement of trains
  - standard operating conditions as per operating timetable/schedule
  - signalling system provides driver information
  - signalling system restricts the signaller and driver following an operation error
- relevant scheduled and unscheduled infrastructure maintenance requirements
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- train dynamics including types of rail vehicles
- tail track circuit leads and bonds installation and maintenance
- typical issues/faults affecting rail electrotechnology services and systems
- sighting distance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0012 Install and maintain trackside signal and train protection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain trackside signal and train protection equipment.

It includes preparing and installing/maintaining trackside signal and train protection equipment. It also includes completing installation/maintenance of trackside signal and train protection equipment and repairing faults, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0013 Install and maintain train detection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Prepare to install/maintain trackside signal and train protection equipment**	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
		1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
		1.3 Safety hazards that have not previously been identified are documented as part of the job safety assessments, and risk control measures are determined and implemented in consultation with appropriate person/s
		1.4 Appropriate rail safe working person/s is consulted to ensure work can proceed without delaying or compromising rail operational safety of train movements
		1.5 Materials needed for the installation/maintenance work are obtained in accordance with workplace procedures and checked against job specifications
		1.6 Tools, equipment and testing devices needed for installation/maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Install/maintain trackside signal and train protection equipment**	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
		2.2 Signal and train protection equipment are checked in accordance with job and technical specifications
		2.3 Sub-assemblies of signal and train protection equipment are assembled in accordance with work/job specifications and checked to confirm circuit integrity
		2.4 Assembled sub-assemblies are inspected and tested off-site, where possible, in accordance with job and technical specifications
		2.5 Installation/maintenance, wiring and assembly of signal and train protection equipment are completed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Signal and train protection components and sub-assemblies are inspected, checked and installed in accordance with job specifications
	2.7	Component and wiring test/s are conducted under live test conditions to ensure train protection equipment functions correctly
	2.8	Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
	2.9	Installation/maintenance work is carried out in accordance with manufacturer specifications, workplace procedures and relevant industry standards
	2.10	Appropriate operational inspection and test procedures are applied to ensure equipment and components are operational
	2.11	Signal/s and train protection equipment are monitored, inspected and tested to ensure they operate in accordance with technical parameters specified and job specifications
	2.12	Testing is performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete trackside signal and train protection equipment installation/maintenance	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Worksite is made safe in accordance with workplace safety management procedures
	3.3	Test results and documentation are completed to confirm system operational compliance to job specifications and relevant reports produced
	3.4	Work completion is documented and appropriate rail safety person/s notified in accordance with workplace safe working procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for UEERS0012 Install and maintain trackside signal and train protection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- interpreting specifications and circuit diagrams correctly
- using appropriate fault-finding techniques
- installing/maintaining trackside signal and train protection equipment to operational requirements
- organising work to minimise traffic disruptions
- using tools and test equipment correctly
- following relevant codes of practice and environmental protection procedures and requirements
- completing relevant technical reports and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing installation/maintenance of trackside signal and train protection equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- trackside signal and train protection equipment installation/maintenance, safe working practices and relevant standards, codes and regulations, including:
  - rail signalling principles - electrical
  - overview of electrical rail signalling encompassing:
    - types of rail signalling/safe working systems including computer-based interlocking (CBI), automatic, controlled and interlocked signalling

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - advantages of electrical over mechanical signalling
  - advantages of CBI over electrical signalling systems
  - effects of overhead traction systems on electrical signalling systems (where applicable)
  - purpose of elements of an electrical rail signalling system, including signals and aspect systems, train protection systems, point actuating systems, mechanical locking, relay interlocking, CBI, train detection systems, control input devices, indicators, diagrams and monitors, and safe working systems
  - rail signalling principles - mechanical
- overview of mechanical rail signalling encompassing:
  - types of mechanical rail signalling systems for different rail traffic, including passenger train, freight train, maintenance vehicles and heritage/tourism train
  - deficiencies of mechanical signalling systems, including automatic, controlled and interlocked signalling
  - effects of overhead traction systems on mechanical signalling systems (where applicable)
  - effects of external factors on the mechanical rail signalling system, including rail overhead, gradients/terrain, environmental and civil configuration
- purpose of elements of a mechanical rail signalling system encompassing:
  - signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, mechanical interlocking frames, safe working systems and electro-mechanical interfaces
  - rail signalling and signal equipment
- equipment and their components encompassing:
  - incandescent lamps
  - light-emitting diode (LED) lamps
  - electro-mechanical
  - mechanical
  - interfacing to different interlocking systems, e.g. relay and CBI
- operating principles and parameters encompassing:
  - automatic signal control circuits
  - controlled signal control circuits
  - approach control circuits
  - bi-directional block control circuits
  - lamp proving circuits
  - failure mode
  - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
  - correct operation in accordance with control and locking tables
- servicing procedures encompassing:
  - maintenance documentation

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - coordination/planning sequence
    - operational test procedures
    - scheduled/corrective maintenance
    - unscheduled/preventative maintenance
    - certifying signal equipment (commission and de-commission)
    - certifying procedures applicable for compliance with rail operator/enterprise standards
  - rail signalling, train protection equipment
  - equipment and their components encompassing:
    - electro-mechanical (e.g. train-stops)
    - electro-magnetic (e.g. automatic warning system (AWS))
    - electronic (e.g. train protection warning system (TPWS))
    - automatic train protection (ATP) system - Balise/beacon based (e.g. ETCS level 1, and Westect)
  - operating principles encompassing:
    - permissive operation
    - restrictive operation
    - failure modes
    - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
    - correct operation in accordance with control and locking tables
- safe working practices and relevant standards, codes and regulations
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment Requirements for UEERS0013 Install and maintain train detection equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting plans and specifications correctly
- installing/maintaining, adjusting and testing equipment in accordance with workplace procedures
- using tools and test equipment safely
- checking that technical operational specifications are met and equipment is in compliance with work orders
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety **(**OHS) and environmental protection procedures and requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- completing the installation/maintenance of train detection equipment
- preparing to install/maintain train detection equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- train detection equipment installation and maintenance, safe working practices and relevant standards, codes and regulations, including:
  - rail signalling, train detection equipment
  - train detection equipment and their components encompassing:
    - track circuits, including jointed, jointless, non-vital, axle counters, treadles and level crossing predictors
    - alternating current (a.c.) and direct current (d.c.) power supplies

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - transmitters
    - receivers
    - relays
    - track shunts
    - tuned joint couplers
    - central processor
    - diagnostics
    - fixtures to ironwork
- operating principles and parameters encompassing:
    - interpreting circuits diagrams to evaluate correct operation and relationship to other signalling circuits
    - normal mode operation:
        - instantaneous coil energisation and delay pick-up
        - wrong-side operation
        - failure mode operation, including wrong-side and right-side conditions
    - alarm mode
    - redundancy mode
    - correct operation in accordance with control and locking tables
    - servicing procedures encompassing:
        - maintenance documentation
        - coordination/planning sequence
        - operational test procedures
        - scheduled/preventative maintenance
        - unscheduled/corrective maintenance
        - certification of train detection equipment (commission and decommission)
        - certifying procedures applicable for compliance with rail operator and/or enterprise standards
- safe working practices and relevant standards, codes and regulations
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do

© Commonwealth of Australia, 2025 Powering Skills Organisation

so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining train detection equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0014 Install and maintain vital relay interlocking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to install/maintain vital relay interlocking systems in a rail network.

It includes preparing and installing/maintaining vital relay interlocking system. It also includes completing the installation/maintenance of vital relay interlocking system, repairing system faults, performing operational tests and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0005 Install and maintain active level crossing equipment

UEERS0009 Install and maintain power-operated point actuating devices

UEERS0012 Install and maintain trackside signal and train protection equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Prepare to install/maintain vital relay interlocking system**	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
		1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures are implemented in preparation for work
		1.3 Scope of installation/maintenance work is determined from job specifications, drawings and regulatory requirements
		1.4 Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others to minimise traffic disruptions
		1.5 Materials needed for installation/maintenance work are obtained in accordance with workplace procedures and checked against job specifications
		1.6 Tools, equipment and testing devices needed for installation/maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Install/maintain vital relay interlocking system**	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out the work are followed
		2.2 Visual inspection of installation wiring and equipment is carried out to identify damaged or faulty equipment
		2.3 Damaged or faulty component/s identified during inspection is replaced in accordance with technical instructions, manufacturer specifications and workplace maintenance procedures
		2.4 Installation/maintenance is performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
		2.5 Systems are investigated using appropriate fault-finding and diagnostic techniques to identify faults
		2.6 Fault circuit indicators and maintenance records are used to assist in the identification of electrical faults
		2.7 Repairs, replacement and/or adjustment of

© Commonwealth of Australia, 2025 Powering Skills Organisation

		equipment/systems are carried out using appropriate tools and test equipment to ensure equipment/systems function to relevant technical and operational standards
	2.8	Faulty, worn, damaged or insecure components are repaired/replaced or secured whilst ensuring system safety integrity is maintained in accordance with technical and/or manufacturer specifications
	2.9	Methods for dealing with unplanned situations are determined on the basis of safety and specified work outcomes
	2.10	Vital relay interlocking system is inspected and tested in accordance with workplace test procedures and relevant equipment is used to ensure it operates within specified technical parameters
3 Complete vital relay interlocking system installation/maintenance	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Reusable, faulty and worn components are tagged and despatched for repair in accordance with workplace procedures
	3.3	Maintenance work activities are recorded in accordance with workplace procedures and organisation requirements
	3.4	Documentation, including component faults test results, authorisations and permits, is completed to provide an accurate database and facilitate follow-up action and relevant reports produced

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN112A Install and maintain vital relay interlocking systems.

Assessment Requirements for UEERS0014 Install and maintain vital relay interlocking systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting plans and specifications correctly
- using appropriate fault-finding techniques
- installing/maintaining vital relay interlocking systems to operational requirements
- organising work to minimise rail traffic disruptions
- using tools correctly
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant WHS/OHS requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing installation/maintenance of vital relay interlocking systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- vital relay interlocking systems installation/maintenance, including:
  - rail signalling, interlocking systems - electrical
  - equipment and their components encompassing:
    - power supplies
    - relays - timers
    - relays - latching/delatching

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - relays - line
    - relays - biased
    - signaller controls/indications
    - geographic modules
    - mechanical interface
- operating principles and parameters encompassing:
    - normal mode operation
    - route selection circuits
    - signal approach circuits and timers
    - point release circuits and timers
    - panel indications and circuits
    - wrong-side protection mode
    - alarm mode
    - emergency operation
    - correct operation in accordance with control and locking tables
- servicing procedures encompassing:
    - maintenance documentation
    - coordination/planning sequence
    - operational test procedures
    - scheduled/preventative maintenance
    - unscheduled/corrective maintenance
    - certifying interlocking equipment (commission and decommission)
- certifying procedures applicable for compliance with rail operator and/or enterprise standards
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace policies and procedures
- safe working practices and relevant industry standards, codes and regulations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to installing/maintaining power signalling and protective relay interlocking systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0015 Maintain electronic and microprocessor-based remote control systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain electronic and microprocessor-based remote control systems for a rail network signalling system.

It includes preparing and maintaining electronic and microprocessor-based remote control system. It also includes completing electronic and microprocessor-based remote control system maintenance and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0007 Install and maintain non-vital screen-based rail control systems

UEERS0008 Install and maintain non-vital telemetry systems

UEERS0004 Find and repair rail signalling system faults

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

outcomes.	demonstrate achievement of the element.
1 Prepare to maintain electronic and microprocessor-based remote control system	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures for a given work area are identified, obtained and clarified
	1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures are implemented in preparation for work
	1.3 Maintenance program/fault/irregularity reports are reviewed to determine work priorities, resources, logistics and site information
	1.4 Appropriate person/s is consulted to ensure work is coordinated effectively with others affected by the work and authorisations are obtained in accordance with workplace procedures
	1.5 Materials needed for the work are obtained in accordance with workplace procedures and checked against job specifications
	1.6 Tools, equipment and testing devices needed for work are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Maintain electronic and microprocessor-based remote control system	**2.1** WHS/OHS risk control measures and workplace procedures for carrying out work are followed
	2.2 Equipment inspection and checks are carried out to ensure performance is in accordance with operational specifications
	2.3 Security of fittings, terminations and mountings are inspected, checked and adjusted, as required, for compliance in accordance with job specifications
	2.4 Methods for dealing with unplanned situations are selected on the basis of safety and specified work outcomes
	2.5 Maintenance work is performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Appropriate operating parameters are ascertained from job specifications and commissioning data to enable performance checks to be completed
	2.7	Appropriate fault-finding and diagnostic techniques are used to verify symptoms or irregularities
	2.8	Symptoms are reproduced, monitored and documented, as required
	2.9	System is adjusted and operationally tested in accordance with industry technical standards and design specifications
	2.10	Appropriate conclusions are determined from fault indicators, error codes, maintenance records and print-outs to assist fault finding
	2.11	Appropriate technical support is obtained, as required
	2.12	Faulty components are replaced or repaired in accordance with workplace procedures
	2.13	Components are terminated, connected system levels adjusted and parameters set in accordance with job specifications
3 Complete electronic and microprocessor-based remote control system maintenance and report/s	**3.1**	WHS/OHS completion risk control work measures and workplace procedures are followed
	3.2	System is functionally inspected and tested in accordance with specified job parameters and industry standards
	3.3	Maintenance documentation is completed, as required, and equipment is labelled, packaged and returned to service, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN116A Maintain electronic and microprocessor-based remote control systems.

Assessment Requirements for UEERS0015 Maintain electronic and microprocessor-based remote control systems

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- interpreting specifications, circuit diagrams and workplace procedures correctly
- using appropriate diagnosis and fault-finding techniques to sub-module level
- maintaining electronic switched and microprocessor-based remote control systems to operational requirements (to sub-module level)
- working efficiently and effectively
- using tools and test equipment correctly
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant WHS/OHS requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices
- completing maintenance and reporting of electronic and microprocessor-based remote control system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- rail signalling remote control system maintenance, safe working practices and relevant standards, codes and regulations, including:
  - maintenance principles encompassing:
    - maintenance function
    - role of maintenance department

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - WHS/OHS requirements
- maintenance systems encompassing:
    - maintenance terminology
    - preventative maintenance
    - predictive maintenance
    - corrective maintenance
- data acquisition encompassing:
    - plant history cards/files
    - inspection techniques
    - predictive maintenance
    - remote visual inspection
    - non-destructive testing
    - thermography
    - vibration analysis
    - oil analysis
- rail signalling maintenance plans encompassing:
    - characteristics
    - maintenance windows
    - required resources (labour and materials)
    - procedures and records
    - maintenance of rail signalling electronics and microprocessor-based remote control systems
    - components requiring maintenance
- rail safe working practices encompassing:
    - rail enterprise safety standard and procedures
    - rail safe working requirements
    - possessions protection and management
- WHS/OHS requirements
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant industry standards, codes of practice, regulations and WHS/OHS legislated requirements
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

© Commonwealth of Australia, 2025 Powering Skills Organisation

time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to maintaining electronic switched and microprocessor-based remote control systems
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0016 Maintain mechanical rail signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to maintain mechanical rail signalling and infrastructure connected to electromechanical equipment.

It includes preparing, carrying out and completing the maintenance of mechanical rail signalling equipment and infrastructure.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare mechanical signalling equipment and	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are

© Commonwealth of Australia, 2025 Powering Skills Organisation

	infrastructure		identified, obtained and applied
		1.2	Hazards are identified, risks assessed and control measures and workplace procedures implemented
		1.3	Safety hazards that have not previously been identified are noted on job safety assessments and existing risk control measures are implemented
		1.4	Maintenance is sequenced in accordance with job specification
		1.5	Appropriate rail safe working person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
		1.6	Location of equipment to be maintained is determined from job specifications and diagrams
		1.7	Materials needed for maintenance are obtained in accordance with workplace procedures and checked against job specification
		1.8	Tools, equipment and testing devices needed to conduct maintenance work are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Carry out mechanical signalling equipment and infrastructure maintenance**	**2.1**	WHS/OHS risk control measures and workplace procedures for carrying out work are followed
		2.2	Chemicals, lubricants and consumables are used and disposed of in accordance with material safety data sheets (MSDS)/safety data sheets (SDS) and WHS/OHS codes of practice
		2.3	Rubbish, weeds and obstructions are removed from equipment and housings
		2.4	Visual inspections and checking of operational equipment are performed to identify any equipment faults
		2.5	External surfaces are prepared/painted in accordance with organisational standards to protect equipment
		2.6	Internal surfaces and operational components are cleaned and lubricated to ensure operational

© Commonwealth of Australia, 2025 Powering Skills Organisation

		effectiveness
	2.7	Maintenance is carried out in accordance with relevant industry standards and workplace procedures
	2.8	Existing methods for dealing with unplanned situations are discussed with appropriate person/s and documented in accordance with workplace procedures
	2.9	Unplanned situations are dealt with safely in a manner that minimises risk to personnel and with the approval of authorised person/s
	2.10	Maintenance is carried out efficiently without waste of materials, damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete mechanical signalling equipment and infrastructure maintenance	**3.1**	WHS\OHS work completion risk control measures and procedures are followed
	3.2	Approval to conduct a check of equipment operation is obtained in accordance with relevant rail operational rules and procedures
	3.3	Track clearance check is made before conducting equipment operation check to ensure safe train movement
	3.4	Authorised equipment check is carried out in accordance with workplace procedures to identify any equipment faults
	3.5	Operational effectiveness of equipment is confirmed through observation during train movements, as required
	3.6	Equipment faults are identified, recorded and corrective action is taken
	3.7	Equipment is locked and secured to prevent unauthorised access
	3.8	Work completion is documented and appropriate person/s notified in accordance with workplace procedures and relevant report/s completed

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN101A Maintain mechanical rail signalling equipment and infrastructure.

Assessment Requirements for UEERS0016 Maintain mechanical rail signalling equipment and infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- interpreting specifications correctly
- maintaining equipment in accordance with workplace procedures
- using chemicals and tools safely
- testing that equipment is fully functional after maintenance
- checking that technical/operational specifications are met and that equipment is in compliance with work orders
- applying effective fault diagnosis techniques
- ensuring safe trained movement through work area
- following relevant codes of practice, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant standards, codes and rail safety regulations
- applying relevant WHS/OHS) requirements, including:
  - implementing workplace procedures and practices
  - using of risk control measures
- applying sustainable energy principles and practices
- completing rail mechanical signalling equipment and infrastructure maintenance
- preparing rail mechanical signalling equipment and infrastructure for maintenance.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mechanical rail signalling equipment and infrastructure maintenance requirements and techniques, safe working practices and relevant standards, codes and regulations, including:
  - basic rail operations encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - rail terminology
    - train dynamics
    - essentials of safe movement of trains
    - purpose of rail signalling
- rail signalling, regulations and codes encompassing:
    - codes - philosophy and format
    - how to read and apply a code
    - codes that apply to rail signalling - relevant to a rail network
- technical manuals and catalogues encompassing:
    - typical format
    - how to read and apply information
- environmental and heritage awareness encompassing:
    - purpose of environmental and heritage regulation
    - typical issues affecting electrotechnology services and systems
    - meeting requirements
- enterprise work activities records encompassing:
    - purpose and extent of maintaining work activities records in an enterprise
    - types of records for maintaining work activities in an enterprise
    - methods for recording and maintaining work records
    - work records required by regulation requirements
- electrical safe working practices encompassing:
    - risk management and assessment of risk
    - principle and purpose of risk management
    - processes for conducting a risk assessment
    - hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents
    - arrangement of power distribution and circuits in an electrical installation
    - parts of an electrical system and equipment that operate at LV and ELV
    - parts of an electrical system and equipment where high currents are likely
    - safety, selection, use, maintenance and care of test equipment
    - safety characteristics of electrical testing devices
    - safe use of electrical testing device
    - checks and storage methods for maintaining the safety of testing devices
- rail safe working practices encompassing:
    - rail enterprise safety standards and procedures
    - rail safe working requirements
    - possessions protection and management
- rail signalling, drawings and diagrams
- drawing types and applications encompassing:
    - drawing layouts and conventions

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - drawing symbols
    - cable and equipment schedules
- rail signalling principles - mechanical encompassing:
    - overview of mechanical rail signalling
    - purpose of elements of a mechanical rail signalling system - signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, interlocking and safe working systems
- rail signalling - mechanical equipment encompassing:
    - equipment and their components
    - operating principles
    - servicing procedures
- rail signalling - point actuating devices encompassing:
    - equipment and their components - point machines, detectors, claw/clamp locks, swing nose mechanisms and in-bearer mechanisms
    - operating principles
    - servicing procedures
- rail signalling - interlocking systems - mechanical encompassing:
    - equipment and their components
    - operating principles and parameters
    - servicing procedures
- rail signalling - electro-pneumatic equipment encompassing:
    - equipment and their components - compressors, air lines and control valves
    - operating principles and parameters
    - servicing procedures
- safe working practices and relevant standards, codes and regulations
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to servicing mechanical rail signalling equipment and infrastructure
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0017 Repair rail signalling power and control cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to repair of signalling power cables and multi-core signalling control cables up to 50 cores.

It includes following workplace procedures, selecting and using appropriate cable joining methods, testing continuity and insulation resistance of repaired cable cores, and reporting repair activities.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0001 Assemble and wire internal electrical rail signalling equipment

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to repair rail signalling cables	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

		for work area are identified, obtained and applied
	1.2	Hazards are identified, risks assessed, and control measures and workplace procedures implemented
	1.3	Safety hazards that have not previously been identified are noted on the job safety assessments and existing risk control measures implemented
	1.4	Access times and safe work methods are confirmed to comply with customer requirements and relevant rail safety legislation
	1.5	Appropriate person/s is consulted to ensure work is coordinated effectively with others on the worksite
	1.6	Extent and nature of the fault or damage to the rail signalling cable is confirmed with appropriate person/s in accordance with workplace procedures
	1.7	Cable joining kit is obtained in accordance with workplace procedures and components checked with manufacturer specifications
	1.8	Cable diagrams necessary to effect repairs are obtained, read and interpreted
	1.9	Tools and cable testing devices for cable repair are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Repair damaged rail signalling cables	**2.1**	Work area is made safe, damaged rail signalling cable is isolated for repair and WHS/OHS risk control measures and workplace procedures for carrying out the repair/s are followed
	2.2	Corresponding ends of broken cable core are identified by core marking and confirmed by continuity test in accordance with workplace procedures
	2.3	Cable joining kit is used to repair damaged cable following manufacturer specifications and workplace procedures
	2.4	Repair to damaged cable is tested for cable core continuity insulation between cable cores and cores to earth in accordance with workplace procedures
	2.5	Cause of failed cable test is located and rectified in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with workplace procedures
	2.6	Existing work methods for dealing with unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of an authorised person/s
	2.7	Cable repair is completed without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete rail signalling cable repairs	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Work area is cleaned and made safe in accordance with workplace procedures
	3.3	Cable repair work, test results and relevant reports are documented and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Performing signalling cable repairs must include the following:

- repairing at least one signalling power cable relevant to a particular rail transport operator
- repairing at least one signalling multi-core control cable, six cores or greater, relevant to a particular rail transport operator
- repairing signalling cables using at least one approved jointing kit

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN121A Repair rail signalling power and control cables.

Assessment Requirements for UEERS0017 Repair rail signalling power and control cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying sustainable energy principles and practices
- completing rail signalling cable repairs
- completing relevant technical reports, records and documentation
- dealing with unplanned events in a manner that minimises risk to personnel and equipment
- identifying corresponding ends of broken cable cores accurately
- interpreting cable diagrams
- locating and rectifying causes of failed cable test
- preparing to repair rail signalling cables
- repairing damaged rail signalling cables effectively and in accordance with workplace procedures
- selecting approved cable joining kit, cable repair tools and testing devices
- using testing devices and tools correctly and safely.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- conductor continuity and core insulation and earth testing procedures and acceptable results, including:
  - testing to confirm de-energised cores
  - continuity of repaired cores, earth resistance of repaired cores and insulation between repaired cores
  - industry standard acceptable cable test results
  - recording of test results
- methods of joining broken cable core conductors and reinstating insulation, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - using hand tools to remove insulation and apply crimp lugs
    - selecting inline joiner lugs
    - selecting appropriate jointing materials and kits
- relevant job safety assessments or risk mitigation processes
- relevant manufacturer specifications
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- special termination tools and their use, including:
    - insulation removal tools
    - inline crimping tools
    - conducting tool tests
    - checking calibration date
    - recording tests
- types of cable used for rail signalling including signalling power and multi-core control cables
- types of cable joining kits used to repair damaged signal cables, including heat shrink and waterproof jointing (epoxy mould)
- workplace procedures for identifying corresponding ends of broken cable cores, including cable isolation methods and testing de-energised cable cores.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0018 Test and commission rail power equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to test and commission rail signalling power equipment into service on rail networks.

It includes preparing, inspecting, testing and commissioning rail power signalling circuits, equipment and components. It also includes completing connection of wiring circuitry, equipment and components; testing of wiring circuitry, equipment and components; finding and repairing faults; testing of control and indicating equipment; and reporting requirements.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0007 Install and maintain non-vital screen-based rail control systems

UEERS0008 Install and maintain non-vital telemetry systems

UEERS0004 Find and repair rail signalling system faults

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

outcomes.	demonstrate achievement of the element.
1 Prepare to inspect, test and commission power signalling circuits, equipment and components	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and clarified
	1.2 Hazards are identified, WHS/OHS risks assessed, and control measures and workplace procedures implemented in preparation for work
	1.3 Scope of inspection, testing and commissioning is determined from job specifications, design drawings and regulatory requirements
	1.4 Appropriate safe working person/s is consulted to ensure work activity is coordinated effectively with others involved on the worksite
	1.5 Materials needed for testing and commissioning of power signalling circuits, equipment and components are obtained in accordance with workplace procedures and checked against job specifications
	1.6 Tools, equipment and testing devices needed to inspect, test and commission power signalling circuits, equipment and components are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Inspect, test and commission power signalling circuits, equipment and components	**2.1** WHS/OHS risk control measures and procedures for carrying out work are followed
	2.2 On-track safe working requirements are identified and applied in accordance with workplace procedures and safety management system
	2.3 Inspection is carried out and circuits, equipment and components are checked to ensure they are in accordance with manufacturer and system specifications
	2.4 Inspecting, testing and commissioning work includes installation, termination and operation of the signalling equipment; and checking indicators and signal system operation is completed in accordance with network

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and relevant industry standards
	2.5	Methods for dealing with unplanned situations are selected on the basis of safety and specified work outcomes
	2.6	Inspection, testing, commissioning and repairs are performed efficiently, without waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
	2.7	System and design faults are verified using relevant industry technical standards information, fault-finding and diagnostic techniques to identify faulty wiring equipment and components
	2.8	Identified irregularities and non-conforming wiring, equipment or components are documented and immediate follow-up action is initiated to ensure faults are rectified
	2.9	Faulty signalling equipment is replaced, adjusted and secured in accordance with manufacturer specifications and workplace procedures
3 Complete testing and commissioning work and reports	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Inspection and test results are documented in accordance with workplace procedures and faulty or replaced equipment is tagged and despatched to maintain equipment spares
	3.3	Operational equipment is handed over to approved person/s in accordance with handover workplace procedures and final documentation is completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN128A Test and commission rail power equipment.

Assessment Requirements for UEERS0018 Test and commission rail power equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- reading and interpreting specifications correctly
- testing and commissioning signalling circuits, equipment and components to meet operational and technical standards
- using effective fault diagnosis and repair/replacement techniques to specified model level
- confirming circuits, equipment and components operated within specified technical parameters
- testing equipment and instruments
- using tools correctly
- following relevant codes of practice, environmental protection procedures and requirements
- completing relevant technical reports, records and documentation
- dealing with unplanned events
- applying rail safe working practices and relevant industry standards, codes and rail safety regulations
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - implementing workplace procedures and practices
  - using risk control measures
- applying sustainable energy principles and practices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- power signalling testing and commissioning, safe working practices and relevant standards, codes and regulations, including power signalling system design, encompassing:
  - characteristics
  - diagrams

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - specifications
  - power signalling components encompassing:
    - types
    - testing
    - adjustments
  - power signalling system commissioning encompassing:
    - requirements
    - hazards
    - procedures
    - records and reporting
- rail safe working and safety management systems
- relevant industry standards, codes of practice, regulations and WHS/OHS legislated requirements
- relevant workplace documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to testing and commissioning power signalling equipment
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UEERS0019 Test copper rail signalling cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Application

This unit involves the skills and knowledge required to test signal and communication copper cables.

It includes following workplace procedures, determining tools required, setting up and conducting tests, interpreting test results, determining activities to maintain system integrity and reporting activities.

Persons achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rules and/or guidelines.

No other licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

UEERS0017 Repair rail signalling power and control cables

Competency Field

Rail Signalling

Unit Sector

Electrotechnology

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to inspect and test rail signalling cable	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

		for work area are identified, obtained and applied
	1.2	Hazards are identified, risks assessed, and control measures and workplace procedures implemented
	1.3	Safety hazards that have not previously been identified are noted on the job safety assessments and existing risk control measures implemented
	1.4	Access times and work methods are confirmed to comply with customer requirements and relevant rail safety legislation
	1.5	Rail service access is checked prior to testing and signalling cable is isolated/disconnected from rail network/equipment to ensure no equipment damage can occur during testing
	1.6	Required inspection, test procedures and purpose are identified from site, client, workplace documentation and manufacturer specifications
	1.7	Tools and testing devices needed for cable testing are obtained in accordance with workplace procedures and checked for correct operation and safety
	1.8	Testing devices calibration certification is checked and current in accordance with manufacturer specifications
2 Inspect and test rail signal cables	**2.1**	Work area and rail cable system is made safe for testing in accordance with WHS/OHS risk control measures and workplace procedures
	2.2	Rail signal cables are inspected in accordance with workplace procedures and relevant specifications
	2.3	Tests are set up and performed in accordance with safety risk control measures and manufacturer specifications
	2.4	Test results are read accurately and compared against manufacturer and site specifications for rail cable performance
	2.5	Existing methods for dealing with unplanned situations are dealt with safely in a manner that minimises risk to personnel and equipment and with the approval of an authorised person/s
	2.6	Testing is performed efficiently without waste of materials or damage to apparatus, the surrounding

© Commonwealth of Australia, 2025 Powering Skills Organisation

		environment or services in accordance with sustainable energy practices
	2.7	Available services are connected and tested for functionality to ensure all previous services have been resumed
3 Report test results	**3.1**	WHS/OHS work completion risk control measures and workplace procedures are followed
	3.2	Recommendations and required actions to maintain cable system integrity resulting from cable tests are reported and documented
	3.3	Results of tests are documented accurately and in a timely manner to ensure test results remain current
	3.4	Site and installation records are updated to ensure traceability of system information performance is maintained in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Identifying and testing of copper rail signalling cables must include the following:

- five non-compliant test results

Unit Mapping Information

This unit replaces and is equivalent to UEENEEN104A Test copper rail signalling cables.

Assessment Requirements for UEERS0019 Test copper rail signalling cables

Modification History

Release 1. This is the first release of this unit of competency in the UEE Electrotechnology Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including risk control measures
- applying sustainable energy principles and practices
- performing copper rail signalling cable tests, including:
  - checking that technical/operational specifications are met and that cables comply with specifications
  - completing relevant technical reports, records and documentation
  - confirming the integrity of a cable system
  - dealing with unplanned events
  - following relevant codes of practice, procedures and requirements
  - interpreting plans and specifications correctly
  - testing cable in accordance with workplace procedures
  - using test equipment and tools correctly and safely
- preparing to test rail signalling cable
- reporting test results
- testing rail signal cables.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- performance parameters associated with copper cables and coaxial cables, including:
  - attenuation
  - attenuation to cross talk ratio (ACR)
  - characteristic impedance
  - insulation resistance (leakage)

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - loop resistance
  - near end cross talk (NEXT)
  - noise (impulse noise and average noise)
  - open circuit, short circuit and pair continuity
  - return loss
  - split pair and crossed pair
- rail signalling cable testing techniques
- relevant industry standards and requirements relating to results for compliance for structured copper and coaxial cables, including:
  - operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results
  - test equipment and leads needed to evaluate a given performance parameter
  - tests required to evaluate a given performance parameter
  - transmission performance requirements
  - typical/common causes of non-compliant test results
- relevant manufacturer specifications
- relevant job safety assessments or risk mitigation processes
- relevant WHS/OHS legislated requirements
- relevant workplace documentation, including:
  - methods for recording and maintaining work records
  - purpose, and extent for maintaining work activities records
  - records required by regulation/regulator
  - types of records for maintaining work activities
- relevant workplace policies and procedures
- structured cabling, including:
  - higher performance cabling
  - shielded twisted pair (STP)
  - twisted pair cabling
  - unshielded twisted pair (UTP)
- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated suitable workplace operational situations that replicate workplace conditions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources that reflect current industry practices in relation to testing copper rail signalling cables
- applicable documentation, including policy and workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

BSBCUS201 Deliver a service to customers

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to deliver all aspects of customer service at an introductory level. It includes creating a relationship with customers, identifying their needs, delivering services or products and processing customer feedback.

It applies to individuals who perform a range of routine tasks in the workplace using a limited range of practical skills and fundamental knowledge of customer service in a defined context under direct supervision or with limited individual responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Service

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Establish contact with customers	1.1 Acknowledge and greet customer in a professional, courteous and concise manner according to organisational and legislative requirements 1.2 Maintain personal dress and presentation in line with organisational requirements 1.3 Communicate using appropriate interpersonal skills to facilitate accurate and relevant exchange of information

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Maintain sensitivity to customer specific needs and any cultural, family and individual differences 1.5 Establish rapport/relationship with customer and express a genuine interest in customer needs/requirements
2 Identify customer needs	2.1 Use appropriate questioning and active listening to determine customer needs 2.2 Assess customer needs for urgency to identify priorities for service delivery 2.3 Provide customer with information about available options for meeting customer needs and assist customer to identify preferred option/s 2.4 Identify personal limitations in addressing customer needs and seek assistance from designated persons where required
3 Deliver service to customers	3.1 Provide prompt customer service to meet identified needs according to organisational requirements 3.2 Provide information regarding problems and delays, and follow-up within appropriate timeframes as necessary 3.3 Communicate with customers in a clear, concise and courteous manner 3.4 Identify opportunities to enhance the quality of service and products, and take action to improve the service whenever possible
4 Process customer feedback	4.1 Promptly recognise customer feedback and handle sensitively according to organisational and legislative requirements 4.2 Accurately record any feedback and communication between customers and the organisation according to organisational standards, policies and procedures and legislative requirements 4.3 Identify any unmet customer needs and discuss suitability of other products/services 4.4 Support customers to make contact with other services according to organisational policies and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 3.1, 4.1, 4.2, 4.4	• Understands requirements in organisational policy and procedure documents • Interprets product and service information in a range of formats to provide customer advice
Writing	4.2	• Records customer information according to organisational requirements
Oral Communication	1.1, 1.3, 1.4, 1.5, 2.1-2.4, 3.2, 3.3, 4.3	• Provides information or advice using structure and language to suit the audience • Asks questions and listens to gain information or confirm understanding
Navigate the world of work	1.1, 1.2, 3.1, 4.1, 4.2, 4.4	• Follows organisational procedures and practices relevant to own role
Interact with others	1.1, 1.3-1.5, 2.1-2.4, 3.1, 3.2, 3.3, 4.1, 4.3, 4.4	• Uses accepted communication practices to establish connections, build rapport and develop professional working relationships • Adjusts personal communication style in response to the opinions, values and particular needs of others
Get the work done	3.2, 3.4, 4.1- 4.3	• Addresses routine problems in familiar work contexts • Recognises opportunities to enhance work practices and outcomes

Assessment Requirements for BSBCUS201 Deliver a service to customers

Modification History

Release	Comments
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- greet customer and establish rapport/relationship in accordance with organisational requirements
- identify customer needs using appropriate interpersonal skills
- provide prompt service to address customer needs in accordance with organisational requirements
- identify and follow up opportunities to increase the quality of service and products
- respond to and record all customer feedback according to organisational standards, policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and briefly describe key provisions of relevant legislation from all forms of government that apply to provision of customer services
- identify and explain workplace organisational policies and procedures relating to customer service and the customer service process.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- office equipment and technology
- workplace documents, organisational policies and procedures for customer service

© Commonwealth of Australia, 2025 Powering Skills Organisation

- examples of customer complaints and feedback
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBCUS401 Coordinate implementation of customer service strategies

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0 Version created to clarify assessment conditions
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to advise, carry out and evaluate customer service strategies.

It applies to individuals who have well developed skills and a broad knowledge of customer service strategies for addressing customer needs and problems, and who may provide guidance or delegate work related tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Stakeholder Relations – Customer Service

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Advise on customer service needs	1.1 Clarify and accurately assess customer needs using appropriate communication techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.2 Diagnose problems matching service delivery to customers and develop options for improved service within organisational requirements 1.3 Provide relevant and constructive advice to promote the improvement of customer service delivery 1.4 Use business technology and/or online services to structure and present information on customer service needs
2 Support implementation of customer service strategies	2.1 Ensure customer service strategies and opportunities are promoted to designated individuals and groups 2.2 Identify and allocate available budget resources to fulfil customer service objectives 2.3 Promptly action procedures to resolve customer difficulties and complaints within organisational requirements 2.4 Ensure that decisions to implement strategies are taken in consultation with designated individuals and groups
3 Evaluate and report on customer service	3.1 Review client satisfaction with service delivery using verifiable data in accordance with organisational requirements 3.2 Identify and report changes necessary to maintain service standards to designated individuals and groups 3.3 Prepare conclusions and recommendations from verifiable evidence and provide constructive advice on future directions of client service strategies 3.4 Maintain systems, records and reporting procedures to compare changes in customer satisfaction

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.2, 1.4, 2.3, 3.1	• Reviews textual information and comprehends details that relate to the interests or requirements of the client and organisation
Writing	1.4, 3.3, 3.4	• Creates a range of formal texts using structure, grammar and clear and specialised language to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		describe customer needs, maintain information and support a particular position
Oral Communication	1.1, 1.3, 2.1, 2.4, 3.2	• Uses pace, intonation, intelligible pronunciation and listening and questioning techniques to interact effectively with others
Numeracy	2.2	• Recognises and interprets numerical information and performs calculations on familiar mathematical information
Navigate the world of work	1.2, 2.3, 3.1, 3.2	• Recognises and applies organisational protocols and meets expectations associated with own work
Interact with others	1.1, 1.3, 2.1, 2.4, 3.2, 3.3	• Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role • Uses a range of strategies to establish a sense of connection and build rapport with customers • Collaborates with others contributing knowledge and skills to achieve joint outcomes
Get the work done	1.2, 1.4, 2.3, 3.1- 3.4	• Applies formal and logical processes when planning and implementing tasks • Applies standard procedures when responding to familiar problems within own work context • Uses digital technologies to access, organise, present and store information relevant to own role

Assessment Requirements for BSBCUS401 Coordinate implementation of customer service strategies

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify assessment conditions
Release 1	This version first released with Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify the needs and priorities of the organisation in delivering services to customers
- diagnose problems in delivery of customer service
- respond to and report on customer feedback and complaints
- review client satisfaction using verifiable data
- consult and communicate effectively with relevant people
- develop and implement strategies and methods to improve customer service delivery including:
  - budgeting
  - promotion to staff
  - documentation and follow up.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the principles of customer service
- explain sources of information and techniques for identifying customer needs and reviewing customer satisfaction
- explain the organisational business structure, products and services related to customer service
- describe product and service standards and best practice models.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- office equipment
- business technology
- organisational policies and procedures for customer service
- examples of customer complaints and feedback
- client satisfaction data
- case studies and, where possible, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBINM401 Implement workplace information system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement and review the workplace information system. It involves the identification, acquisition, initial analysis and use of appropriate information which plays a significant part in the organisation's effectiveness.

It applies to individuals whose work will normally be carried out within routine and non-routine methods and procedures which require planning and evaluation, leadership and guidance of others, and some discretion and judgement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Knowledge Management – Information Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Identify and source information needs	1.1 Determine and locate information required by teams 1.2 Acquire and review information held by the organisation to determine suitability, accessibility, currency and reliability according to organisational policies
2 Collect, analyse and report information	2.1 Collect information, which is adequate and relevant to the needs of teams, in a timely manner

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	2.2 Ensure information is in a format suitable for analysis, interpretation and dissemination 2.3 Analyse information to identify and report relevant trends and developments in terms of the needs for which it was acquired
3 Implement information systems	3.1 Implement management information systems effectively to store, retrieve and regularly review data for decision making purposes 3.2 Use technology available in the work area to manage information effectively 3.3 Submit recommendations for improving the information system to designated persons and/or groups
4 Prepare for information system changes	4.1 Collect information about information system future needs in consultation with colleagues, including those who have a specialist role in resource management 4.2 Ensure estimates of information system future needs reflect the organisation's business plans, and customer and supplier requirements 4.3 Support proposals to secure resources by clearly presenting submissions that describe realistic options, benefits, costs and outcomes 4.4 Prepare team members to work with new technology and information system changes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1, 4.2, 4.3, 4.4	• Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements
Writing	1.2, 2.1, 2.3, 3.1, 3.3, 4.1, 4.2, 4.3, 4.4	• Develops material for a specific audience using clear and detailed language in order to convey explicit information, requirements and recommendations
Oral	1.1, 3.3, 4.1, 4.3, 4.4	• Uses active listening and questioning and reading of verbal and non-verbal signals to convey and clarify

© Commonwealth of Australia, 2025 Powering Skills Organisation

Communication		information and to confirm understanding
Numeracy	4.1-4.3	• Selects from and uses a variety of developing mathematical and problem solving strategies to ensure estimates of information reflect the business plan and staff requirements
Navigate the world of work	1.2	• Takes responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation
Interact with others	1.1, 3.3, 4.1, 4.3, 4.4	• Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts • Cooperates with others and contributes to work practices where joint outcomes are expected and deadlines are to be met
Get the work done	1.1, 1.2, 2.1, 2.3, 3.1, 3.2, 4.1, 4.2	• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Contributes to continuous improvement of current work practices by applying basic principles of analytical thinking • Uses familiar digital technologies and systems to access, enter, present and communicate data and information

Assessment Requirements for BSBINM401 Implement workplace information system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify, source and analyse information to determine
  - information system needs
  - whether it is fit for purpose
  - trends and developments
- implement and review the workplace information system
- review a workplace information system and prepare and present a submission recommending improvements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify the information systems that are, or should be, available in the workplace
- explain the information management systems and technology typically associated with the workplace including:
  - budgets and financial management systems
  - customer information software or records
  - databases
  - personal digital assistant (PDA)
  - product and service information
  - project management software
  - record management systems
  - spreadsheets.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the knowledge management – information management field of work and include access to:

- business technology
- a workplace information system
- workplace policies and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBINM501 Manage an information or knowledge management system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to organise training for others for an information or knowledge management system and to manage the use of the system.

It applies to individuals who are responsible for seeing that key information and corporate knowledge are retained, accessible to others and improve business outcomes.

The unit applies to information or knowledge management systems which comprise policies, protocols, procedures and practices to manage information or knowledge within the organisation and among relevant stakeholders.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Knowledge Management – Information Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Organise learning to use information or knowledge management system	1.1 Identify learning needs of relevant personnel and stakeholders for input into and use of an information or knowledge management system 1.2 Identify and secure human, financial and physical resources

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	required for learning activities to use an information or knowledge management system 1.3 Organise and facilitate learning activities 1.4 Promote and support use of the system throughout the organisation 1.5 Monitor and document effectiveness of learning activities
2 Manage use of information or knowledge management system	2.1 Ensure implementation of policies and procedures for the information or knowledge management system are monitored for compliance, effectiveness and efficiency 2.2 Address implementation issues and problems as they arise 2.3 Monitor integration and alignment with data and information systems 2.4 Collect information on achievement of performance measures 2.5 Manage contingencies such as system failure or technical difficulties by accessing technical specialist help as required
3 Review use of information or knowledge management system	3.1 Analyse effectiveness of system and report on strengths and limitations of the system 3.2 Review business and operational plan and determine how effectively the system is contributing to intended outcomes 3.3 Make recommendations for improvement to system, policy or work practices

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.5, 2.1-2.5, 3.1-3.3	• Researches and critically analyses documentation from a variety of sources to determine requirements
Writing	1.1-1.5, 2.1-2.4, 3.2, 3.3	• Prepares and produces documentation for a specific audience using clear and detailed language to convey explicit information, requirements and recommendations

© Commonwealth of Australia, 2025 Powering Skills Organisation

Oral Communication	1.1, 1.2, 1.3, 1.4, 2.2, 2.5, 3.3	• Presents information using structure and language to suit the audience • Uses active listening and questioning and reading of verbal and non-verbal signals to clarify information and to confirm understanding
Navigate the world of work	2.1, 3.3	• Takes full responsibility for following policies, procedures and legislative requirements and identifies organisational implications of new legislation or regulation • Modifies or develops organisational policies and procedures to comply with legislative requirements and organisation goals
Interact with others	1.1-1.4, 2.5, 3.3	• Implements strategies for a diverse range of colleagues and clients in order to build rapport and foster strong relationships • Collaborates with others sharing information to build strong work groups and avoid behaviours that are not conducive to a productive environment • Elicits feedback and provides feedback to others in order to improve self or workgroup behaviours
Get the work done	1.1-1.5, 2.1-2.5, 3.1, 3.2	• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness • Monitors progress of plans and schedules and reviews and changes them to meet new demands and priorities • Applies systematic and analytical processes to address problems and make decisions in complex situations • Investigates new and innovative ideas as a means to continuously improve, work practices and processes • Uses and investigates new digital technologies and applications to manage and manipulate data and communicate effectively with others

Assessment Requirements for BSBINM501 Manage an information or knowledge management system

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify learning needs and plan and implement learning activities to enable personnel to use information or knowledge management system including
  - providing human, financial and physical resources as required
  - use of coaching, mentoring, information sessions, workshops, training programs and e-learning as appropriate
- monitor performance and address issues and contingencies as they arise including
  - accessing technical specialists as required
  - correct application of policies and procedures for the information or knowledge management system
  - alignment and effectiveness of the policies and procedures
  - effectiveness of information or knowledge management system for intended outcomes
- recommend improvements to systems, policies and practices as appropriate.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline relevant legislation, codes of practice and national standards relevant to privacy, freedom of information and knowledge management
- explain organisational policies and procedures including:
  - records management
  - information management
  - customer service
  - commercial confidentiality

© Commonwealth of Australia, 2025 Powering Skills Organisation

- describe the organisational operations and existing data and information systems.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the knowledge management – information management field of work and include access to:

- relevant legislation, regulation, standards and codes
- relevant workplace systems, documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBINN301 Promote innovation in a team environment

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to be an effective and proactive member of an innovative team.

It applies to individuals who play a proactive role in demonstrating, encouraging or supporting innovation in a team environment. The individual may be a team participant or a team leader. Teams may be formal or informal and may comprise a range of personnel.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Creativity and Innovation – Innovation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Create opportunities to maximise innovation within the team	1.1 Evaluate and reflect on what the team needs and wants to achieve 1.2 Check out information about current or potential team members' work in the context of developing a more innovative team 1.3 Bring people into the team or make suggestions for team members based on what needs to be achieved and the potential for cross fertilising ideas

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Acknowledge, respect and discuss the different ways that people may contribute to building or enhancing the team
2 Organise and agree effective ways of working	2.1 Jointly establish ground rules for how the team will operate 2.2 Agree and communicate responsibilities in ways that encourage and reinforce team-based innovation 2.3 Agree and share tasks and activities to ensure the best use of skills and abilities within the team 2.4 Plan and schedule activities to allow time for thinking, challenging and collaboration 2.5 Establish personal reward and stimulation as an integral part of the team's way of working
3 Support and guide colleagues	3.1 Model behaviour that supports innovation 3.2 Seek external stimuli and ideas to feed into team activities 3.3 Proactively share information, knowledge and experiences with other team members 3.4 Challenge and test ideas within the team in a positive and collaborative way 3.5 Proactively discuss and explore ideas with other team members on an ongoing basis
4 Reflect on how the team is working	4.1 Debrief and reflect on activities and on opportunities for improvement and innovation 4.2 Gather and use feedback from within and outside the team to generate discussion and debate 4.3 Discuss the challenges of being innovative in a constructive and open way 4.4 Take ideas for improvement, build them into future activities and communicate key issues to relevant colleagues 4.5 Identify, promote and celebrate successes and examples of successful innovation

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill	Performance Criteria	Description
Reading	1.2, 4.2	• Interprets and analyses textual information, from a wide range of sources, to identify information relevant to team activities
Writing	2.2, 3.3, 4.4	• Uses clear language and formats appropriate for the audience to highlight and present specific information
Oral Communication	1.2, 1.3, 1.4, 2.1, 2.2, 3.5, 4.1, 4.2, 4.3, 4.4, 4.5	• Actively participates in verbal exchanges of ideas and elicits the views and opinions of team members by listening and questioning • Uses clear language to clarify rules and roles relating to team activities in formal and informal situations
Numeracy	1.2, 4.2	• Interprets numeric information relevant to team activities
Navigate the world of work	1.1, 3.1, 3.2, 3.5	• Understands the nature and purpose of own role and how it affects others in the work context
Interact with others	1.1-1.4, 2.1, 2.2, 3.1, 3.2, 3.4, 3.5, 4.1, 4.2, 4.4, 4.5	• Uses inclusive techniques to initiate, contribute and promote discussion amongst potentially diverse team members • Recognises the importance of establishing and building effective working relationships • Selects the appropriate form, channel and mode of communication for a specific purpose relevant to own role
Get the work done	1.3, 1.4, 2.2, 2.4, 2.5, 3.2, 3.4, 4.2, 4.4, 4.5	• Plans, sequences and prioritises tasks for efficient and effective outcomes • Contributes to continuous improvement of current work practices by applying basic principles of analytical and lateral thinking • Uses problem-solving processes to address less predictable problems, and when appropriate, seeking input from others • Reflects on outcomes and further explores own and the team’s role in implementing innovation

Assessment Requirements for BSBINN301 Promote innovation in a team environment

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- apply practices that promote innovation within a team including:
  - modelling open and respectful communications
  - contributing to the make-up and rules of the team
  - planning and scheduling of activities
  - reflecting on activities, feedback and challenges to identity improvement options
- encourage others to contribute to innovation in the team
- implement improvements and communicate about them.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain what innovation is, the different types of innovation and the benefits of innovation
- describe the internal and external factors that contribute to a team becoming and remaining innovative including:
  - team characteristics
  - the role of group dynamics and diversity
  - broader environmental factors
- explain how activities can encourage or hinder innovation in a team including:
  - allocation of time and activities
  - modelling behaviour
  - rewards and recognition
  - communications

© Commonwealth of Australia, 2025 Powering Skills Organisation

- feedback.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBINN502 Build and sustain an innovative work environment

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to create an environment that enables and supports the application of innovative practice focusing on a holistic approach to the integration of innovation across all areas of work practice.

It applies to individuals working in leadership or management roles in any industry or community context. The individual could be employed by the organisation, but may also be an external contractor, the leader of a cross organisation team or of a self-formed team of individuals. The work group could be permanent or temporary in nature.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Creativity and Innovation – Innovation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Lead innovation by example	1.1 Make innovation an integral part of leadership and management activities 1.2 Demonstrate positive reception of ideas from others and provide constructive advice 1.3 Establish and maintain relationships based on mutual respect and trust

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Take considered risks to open up opportunities for innovation 1.5 Regularly evaluate own approaches for consistency with the wider organisational or project context
2 Establish work practices that support innovation	2.1 Consult on and establish working conditions that reflect and encourage innovative practice 2.2 Introduce and maintain workplace procedures that foster innovation and allow for rigorous evaluation of innovative ideas 2.3 Facilitate and participate in collaborative work arrangements to foster innovation 2.4 Build and lead teams to work in ways that maximise opportunities for innovation
3 Promote innovation	3.1 Acknowledge suggestions, improvements and innovations from all colleagues 3.2 Find appropriate ways of celebrating and promoting innovation 3.3 Promote and reinforce the value of innovation according to the vision and objectives of the organisation or project 3.4 Promote and support the evaluation of innovative ideas within the wider organisational or project context
4 Create a physical environment which supports innovation	4.1 Evaluate the impact of the physical environment in relation to innovation 4.2 Collaborate with colleagues about ideas for enhancing the physical work environment before taking action 4.3 Consider potential for supporting innovation when selecting physical resources and equipment 4.4 Design, fit-out and decorate workspaces to encourage creative mindsets, collaborative working and the development of positive workplace relationships
5 Provide learning opportunities	5.1 Pro-actively share relevant information, knowledge and skills with colleagues 5.2 Provide or encourage formal and informal learning opportunities to help develop the skills needed for innovation 5.3 Create opportunities in which individuals can learn from the experience of others

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.5, 2.2, 4.1, 5.1	• Interprets and evaluates information that may deal with complex ideas related to issues both within and outside a given workplace context
Writing	3.3, 3.4, 5.1	• Develops information for others using language to suit the context and audience
Oral Communication	1.2, 2.1, 2.3, 3.1, 3.3, 3.4, 5.1	• Presents ideas and concepts to a range of audiences using structure and language to suit the audience • Uses active listening and questioning to discuss and clarify information and to confirm understanding
Navigate the world of work	1.1, 1.5, 2.1, 2.2, 3.3, 5.1, 5.2	• Takes responsibility for implementing practices and procedures to achieve organisational objectives in innovation according to role requirements • Stays up to date with professional development options to provide relevant information to staff
Interact with others	1.2, 1.3, 2.3, 2.4, 3.1-3.4, 4.2, 5.1, 5.3	• Uses appropriate communication techniques to build rapport and foster strong relationships with co-workers in a range of work contexts • Uses inclusive and collaborative techniques to share, promote and convey complex information about new ideas and systems within the workplace
Get the work done	1.1, 1.4, 1.5, 2.1, 3.2, 3.3, 4.1, 4.3, 4.4, 5.2, 5.3	• Accepts responsibility for planning and implementing tasks and practices to achieve organisational goals, negotiating key aspects with others and taking into account current capabilities and needs • Develops new and innovative ideas through exploration, evaluation, analysis and critical thinking • Facilitates a climate where people feel comfortable suggesting and discussing improvements or new ideas • Uses problem solving processes to identify, assess and respond to challenges and risks around innovation

Assessment Requirements for BSBINN502 Build and sustain an innovative work environment

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to maximise opportunities for innovation by:

- establishing procedures and practices that foster innovation including:
  - collaborative work arrangements
  - building team capacity to contribute to innovation
  - providing formal and informal learning opportunities
  - evaluating ideas
  - celebration and promotion of innovation
  - consultation
  - respectful communications and sharing of ideas and feedback
- reinforcing the value of innovation to the vision and objectives of the organisation,
- model ling behaviour including being receptive to ideas, giving constructive advice, evaluating own work, establishing and maintaining relationships based on mutual respect and trust, taking considered risks that provide opportunities for innovation
- evaluating how the physical environment can be enhanced to support innovation and collaboration and collaborating on ideas to make improvements including in the selection of physical resources and equipment, and the design, fit-out and decoration of the workspaces
- making changes to a workspace that will encourage innovation in at least one of
  - design
  - fit-out
  - decoration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain the concepts and theories of innovation and how these link to innovation in practice
- explain the context for innovation in the workplace including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- discuss the factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- research the legislative framework that impacts on operations in the relevant workplace context
- explain how different approaches to management and leadership can support or hinder innovation
- discuss typical challenges and barriers to innovation within teams and organisations and ways of overcoming these including rewarding and celebrating innovation, coaching and learning, modelling behaviour and managing the physical environment.
-

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the creativity and innovation and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBLDR402 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit defines skills, knowledge and outcomes required to use leadership to promote team cohesion. It includes motivating, mentoring, coaching and developing the team and forming the bridge between the management of the organisation and team members.

This unit applies to team leaders, supervisors and new or emerging managers where leadership plays a role in developing and maintaining effective workplace relationships. It applies in any industry or community context.

At this level work will normally be carried out within routine and non-routine methods and procedures, which require planning and evaluation and leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership - Leadership

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Collect, analyse and communicate information and ideas	1.1 Collect relevant information from appropriate sources and analyse and share with the work team to improve work performance 1.2 Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	audience and any specific needs 1.3 Lead consultation processes to encourage employees to contribute to issues related to their work, and promptly relay feedback to the work team in regard to outcomes 1.4 Seek and value contributions from internal and external sources in developing and refining new ideas and approaches 1.5 Implement processes to ensure that issues raised are resolved promptly or referred to relevant personnel as required
2. Develop trust and confidence as leader	2.1 Treat all internal and external contacts with integrity, respect and empathy 2.2 Use the organisation's social, ethical and business standards to develop and maintain effective relationships 2.3 Gain and maintain the trust and confidence of colleagues, customers and suppliers through competent performance 2.4 Adjust interpersonal styles and methods to meet organisation's social and cultural environment 2.5 Lead and encourage other members of the work team to follow examples set according to organisation's policies and procedures
3. Develop and maintain networks and relationships	3.1 Use networks to identify and build relationships 3.2 Use networks and other work relationships to provide identifiable benefits for the team and organisation
4. Manage difficulties into positive outcomes	4.1 Identify and analyse difficulties and take action to rectify the situation within the requirements of the organisation and relevant legislation 4.2 Guide and support colleagues to resolve work difficulties 4.3 Regularly review and improve workplace outcomes in consultation with relevant personnel 4.4 Manage poor work performance within the organisation's processes 4.5 Manage conflict constructively within the organisation's processes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill	Performance Criteria	Description
Reading	1.1	• Collects, analyses and evaluates textual information from a range of resources to inform improvement strategies
Oral Communication	1.2, 1.3, 2.4, 2.5, 4.2	• Selects or adjusts communication style to maintain effectiveness of interaction and build and maintain engagement consistent with organisational requirements
Navigate the world of work	2.2, 2.5, 4.1, 4.4, 4.5	• Recognises and follows legislative and organisational requirements relevant to own role
Interact with others	1.1-1.4, 2.1, 2.3, 2.5, 3.1, 3.2, 4.2, 4.5	• Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders • Adapts personal communication style to build trust and positive working relationships and to show respect for the opinions, values and particular needs of others • Plays a lead role in situations requiring effective collaboration, demonstrating conflict resolution skills and ability to engage and motivate others
Get the work done	1.1, 1.5, 4.1, 4.3	• Plans and implements activities and processes to manage and review work performance • Systematically gathers and analyses all relevant information to formulate and evaluate possible solutions to difficulties

Assessment Requirements for BSBLDR402 Lead effective workplace relationships

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- access and analyse information to achieve planned outcomes
- apply techniques for resolving problems and conflicts and dealing with poor performance within organisational and legislative requirements
- review and improve workplace outcomes in consultation with relevant personnel
- adjust interpersonal style and communications to respond to cultural and social diversity
- apply relationship management and communication skills with a range of people that:
  - demonstrate integrity, respect, empathy and cultural sensitivity and promote trust
  - forge effective relationships with internal and/or external people and help to maintain these networks
  - encourage participation and foster contribution of and respect for ideas and feedback
  - provide support to colleagues to resolve difficulties.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of how work relationships, and the cultural and social environment, can support or hinder achieving planned outcomes
- explain techniques for developing positive work relationships and building trust and confidence in a team including interpersonal styles, communications, consultation, cultural and social sensitivity, networking
- explain the impact of legislation and organisational policies on workplace relationships
- describe a range of methods and techniques for communicating information and ideas to a range of stakeholders
- outline problems solving methods

© Commonwealth of Australia, 2025 Powering Skills Organisation

- explain methods to resolve workplace conflict
- explain methods to manage poor work performance
- explain how to monitor, analyse and introduce ways to improve work relationships.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation, regulations, standards and codes
- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBLDR403 Lead team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit defines skills, knowledge and outcomes required to plan and supervise the performance of the team and develop team cohesion.

It applies team leaders, supervisors and new emerging managers who have an important leadership role in the development of efficient and effective work teams.

Leaders at this level also provide leadership for the team and bridge the gap between the management of the organisation and the team members. As such they must 'manage up' as well as manage their team/s.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership - Leadership

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan to achieve team outcomes	1.1 Lead the team to identify, establish and document team purpose, roles, responsibilities, goals, plans and objectives in consultation with team members 1.2 Engage team members to incorporate innovation and

ELEMENT	PERFORMANCE CRITERIA
	productivity measures in work plans 1.3 Lead and support team members in meeting expected outcomes
2. Lead team to develop cohesion	2.1 Provide opportunities for input of team members into planning, decision making and operational aspects of work team 2.2 Encourage and support team members to take responsibility for own work and to assist each other in undertaking required roles and responsibilities 2.3 Provide feedback to team members to encourage, value and reward individual and team efforts and contributions 2.4 Recognise and address issues, concerns and problems identified by team members or refer to relevant persons as required 2.5 Model expected behaviours and approaches
3. Participate in and facilitate work team	3.1 Actively encourage team members to participate in and take responsibility for team activities and communication processes 3.2 Give the team support to identify and resolve problems which impede its performance 3.3 Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers
4. Liaise with management	4.1 Maintain open communication with line manager/management at all times 4.2 Communicate information from line manager/management to the team 4.3 Communicate unresolved issues, concerns and problems raised by the team/team members to line manager/management and ensure follow-up action is taken 4.4 Communicate unresolved issues, concerns and problems related to the team/team members raised by line managers/management to the team and ensure follow-up to action is taken

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance	Description

© Commonwealth of Australia, 2025 Powering Skills Organisation

	Criteria	
Writing	1.1, 4.2	• Prepares workplace plans that communicate intent and elicits feedback clearly and effectively
Oral communication	1.1, 1.3, 2.2, 2.3, 3.1, 3.2, 4.2-4.4	• Engages in discussions or provides information using structure and language appropriate to the audience and situation
Interact with others	1.1-1.3, 2.1-2.5, 3.1, 3.3, 4.1	• Selects and uses appropriate conventions and protocols when communicating with team members • Adapts personal communication style to model required behaviours, build trust and positive working relationships and to show respect for the opinions and values of others • Plays a lead role in situations requiring effective collaboration, demonstrating conflict resolution skills and ability to engage and motivate others
Get the work done	1.1-1.3, 3.2	• Develops, implements and monitors plans and processes to ensure team engagement and effectiveness • Uses formal analytical thinking techniques to identify issues and generate possible solutions, seeking input from others as required

Assessment Requirements for BSBLDR403 Lead team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- apply knowledge of organisational goals, objectives and plans
- develop a team work plan including documentation of how it was generated and how it will be monitored
- identify and incorporate innovation and productivity measures into a team work plan
- communicate with team members and management to identify and establish the team purpose, roles, responsibilities, goals plans and objectives and resolve problems
- use techniques to consult, encourage, support and provide feedback to team members
- model team leadership behaviours and approaches
- liaise with management to develop the teamwork plan, resolve issues and ensure follow-up action is taken.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must explain principles and techniques associated with:

- delegation and work allocation
- goal setting
- group dynamics and processes
- individual behaviour and difference
- leadership styles
- motivation
- negotiation
- problem solving
- planning

© Commonwealth of Australia, 2025 Powering Skills Organisation

- workplace innovation
- workplace productivity.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- information about the organisation, including organisational structure, goals, objectives and plans
- case studies, and where possible, real situations
- workplace equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBLED401 Develop teams and individuals

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify assessment requirements
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to determine individual and team development needs and to facilitate the development of the workgroup.

It applies to individuals with a broad knowledge of learning and development who apply their skills in addressing development needs to meet team objectives. They may have responsibility to provide guidance or to delegate aspects of tasks to others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Workforce Development – Learning and Development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine development needs	1.1 Systematically identify and implement learning and development needs in line with organisational requirements 1.2 Ensure that a learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	implemented 1.3 Encourage individuals to self-evaluate performance and identify areas for improvement 1.4 Collect feedback on performance of team members from relevant sources and compare with established team learning needs
2. Develop individuals and teams	2.1 Identify learning and development program goals and objectives, ensuring a match to the specific knowledge and skill requirements of competency standards relevant to the industry 2.2 Ensure that learning delivery methods are appropriate to the learning goals, the learning style of participants, and availability of equipment and resources 2.3 Provide workplace learning opportunities, and coaching and mentoring assistance to facilitate individual and team achievement of competencies 2.4 Create development opportunities that incorporate a range of activities and support materials appropriate to the achievement of identified competencies 2.5 Identify and approve resources and time lines required for learning activities in accordance with organisational requirements
3. Monitor and evaluate workplace learning	3.1 Use feedback from individuals or teams to identify and implement improvements in future learning arrangements 3.2 Assess and record outcomes and performance of individuals/teams to determine the effectiveness of development programs and the extent of additional development support 3.3 Negotiate modifications to learning plans to improve the efficiency and effectiveness of learning 3.4 Document and maintain records and reports of competency according to organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Powering Skills Organisation

Learning	1.1-1.4, 2.1-2.4, 3.1, 3.3	• Uses structured approaches to set goals, monitor progress and adjust learning approaches for self and others • Builds on knowledge and experience to facilitate interaction and learning with others
Reading	1.1, 1.2, 1.4, 2.1, 2.2, 2.4, 2.5, 3.1-3.4	• Analyses textual information from a range of sources to identify organisational requirements • Analyses information from a range of sources to evaluate performance
Writing	1.1, 1.2, 1.4, 2.1, 2.5, 3.1-3.4	• Develops materials to suit the requirements of different roles and individuals in the organisation • Maintains records using correct technical and organisational vocabulary
Oral Communication	1.2, 1.3, 1.4, 2.3, 3.1, 3.3	• Uses vocabulary appropriate to context and to establish a supportive and learning environment • Uses listening and questioning techniques to confirm or show understanding of different perspectives
Navigate the world of work	1.1, 2.5, 3.4	• Recognises and responds to explicit and implicit organisational procedures and protocols Understands how own role meshes with others and contributes to broader goals
Interact with others	1.2, 1.3, 1.4, 2.2, 2.3, 3.1, 3.3	• Selects and uses appropriate conventions and protocols when communicating with co-workers in a range of work contexts • Recognises the importance of building rapport to establish effective working relationships • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction • Negotiates with others to achieve joint/agreeable outcomes playing an active role in facilitating consensus in potentially contentious situations
Get the work done	1.1, 1.2, 1.4, 2.1, 2.2, 2.3, 2.5, 3.1, 3.2, 3.4	• Uses logical planning processes to organise, implement and monitor learning and development needs • Systematically gathers and analyses all relevant information and evaluates options to make informed decisions • Evaluates outcomes of decisions to identify opportunities for improvement

Assessment Requirements for BSBLED401 Develop teams and individuals

Modification History

Release	Comments
Release 2	This version released with BSB Business Services Training Package Version 2.0. Version created to clarify assessment requirements
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- systematically identify and implement learning opportunities for others
- collect feedback on team and individual performance
- give and receive feedback from team members to encourage participation in and effectiveness of the team
- collaboratively develop learning plans to match skill needs of individuals and groups
- provide mentoring and coaching assistance to teams and individuals
- monitor and review workplace learning.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe facilitation techniques to encourage team development and improvement
- outline organisational policies, plans and procedures for developing teams
- identify career paths and competency standards relevant to the industry.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the workforce learning and development field of work and include access to:

- office equipment and resources
- learning and development plans, policies and procedures
- case studies and, where available, real situations
- interaction with others.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

BSBMGT402 Implement operational plan

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement the operational plan by monitoring and adjusting operational performance, planning and acquiring resources and providing reports on performance as required.

It applies to individuals who plan activities to achieve the measurable, stated objectives of the team and the organisation. At this level work will normally be carried out within routine and non-routine methods and procedures which require planning, evaluation, leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Implement operational plan	1.1 Collate, analyse and organise details of resource requirements in consultation with relevant personnel, colleagues and specialist resource managers 1.2 Implement operational plans to contribute to the achievement of organisation's performance/business plan 1.3 Identify and use key performance indicators (KPIs) to monitor

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	operational performance 1.4 Manage contingencies by adjusting the implementation of the operational plan in consultation with others 1.5 Provide assistance in the development and presentation of proposals for resource requirements in line with operational planning processes
2. Implement resource acquisition	2.1 Recruit and induct employees within organisation's policies, practices and procedures 2.2 Implement plans for acquisition of physical resources and services within organisation's policies, practices and procedures and in consultation with relevant personnel
3. Monitor operational performance	3.1 Monitor performance systems and processes to assess progress in achieving profit/productivity plans and targets 3.2 Analyse and use budget and actual financial information to monitor profit/productivity performance 3.3 Identify unsatisfactory performance and take prompt action to rectify the situation according to organisational policies 3.4 Provide mentoring, coaching and supervision to support individuals and teams to use resources effectively, economically and safely 3.5 Present recommendations for variation to operational plans to the designated persons/groups and gain approval 3.6 Implement systems, procedures and records associated with performance in accordance with organisation's requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	3.4	• Actively reinforces learning by applying new knowledge and skills in mentoring, coaching and supervising others
Reading	1.1-1.5, 2.1, 2.2, 3.1, 3.2, 3.6	• Identifies, interprets, analyses and reviews textual information related to the operational plan and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		monitoring of operational performance
Writing	1.1-1.5, 2.1, 2.2, 3.2-3.6	• Communicates relationships between ideas and information, matching style of writing to purpose and audience • Researches, plans and prepares workplace documentation for relevant stakeholders using organisational formats
Oral Communication	1.1, 1.4, 1.5, 2.1, 2.2, 3.3, 3.4, 3.5	• Participates in a variety of spoken exchanges with a range of audiences varying structure and language to suit the audience
Numeracy	1.1, 1.2, 1.3, 1.4, 1.5, 2.2, 3.1, 3.2, 3.3	• Selects and uses familiar mathematical techniques to organise timely supply of adequate resources for the operational plan and to use budgetary information to monitor performance
Navigate the world of work	1.5, 2.1, 2.2, 3.3, 3.4, 3.6	• Monitors adherence to organisational policies and procedures and considers own role in terms of its contribution to broader goals of the work environment
Interact with others	1.1, 1.4, 1.5, 2.1, 2.2, 3.3, 3.4, 3.5	• Selects and uses appropriate conventions and protocols when communicating with diverse individuals to build rapport, seek or present information • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group communication, influencing direction and taking a leadership role on occasion
Get the work done	1.1, 1.2, 1.3, 1.4, 1.5, 2.2, 3.1, 3.2, 3.3, 3.6	• Takes responsibility for planning, organising, implementing and monitoring tasks required to achieve required outcomes • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria • Evaluates effectiveness of decisions in terms of how well they met stated goals • Recognises and addresses an increasing range of familiar problems by implementing contingency plans

Assessment Requirements for BSBMGT402 Implement operational plan

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- interact with a range of people/groups to identify resource requirements, performance objectives, systems, procedures and records relating to the operational plan
- vary the operational plan and gain approval to deal with contingencies
- monitor operational performance against the performance objectives and budgets and take action to rectify unsatisfactory performance
- plan and acquire physical and human resources using organisation's systems and procedures
- manage and support personnel to achieve performance objectives. including inducting new employees and providing mentoring and coaching
- present information and recommendations to support implementation and variation of the operational plan
- document and provide reports on performance as required by the organisation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe performance monitoring systems and processes
- describe methods for problem solving
- explain how organisational policies and procedures relate to the operational plan.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- organisational operational plans, policies and procedures
- workplace documentation and resources including budgets, physical and human resource procurement documentation, employee induction and performance monitoring procedures
- case studies and, where possible, real situations.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBMGT403 Implement continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement the organisation's continuous improvement systems and processes. It covers using systems and strategies to actively encourage the team to participate in the process, monitoring and reviewing performance, and identifying opportunities for further improvements.

It applies to managers who have an active role in implementing the continuous improvement process to achieve the organisation's objectives. Their position is closely associated with the creation and delivery of products and services which means that they have an important role in influencing the ongoing development of the organisation.

At this level, work will normally be carried out within routine and non-routine methods and procedures, which require planning, evaluation, leadership and guidance of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Implement continuous improvement systems and	1.1 Implement systems to ensure that individuals and teams are actively encouraged and supported to participate in decision

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
processes	making processes, assume responsibility and exercise initiative 1.2 Communicate the organisation's continuous improvement processes to individuals and teams, and obtain feedback 1.3 Ensure effective mentoring and coaching allows individuals and teams to implement the organisation's continuous improvement processes
2. Monitor and review performance	2.1 Use the organisation's systems and technology to monitor and review progress and to identify ways in which planning and operations could be improved 2.2 Improve customer service through continuous improvement techniques and processes 2.3 Formulate and communicate recommendations for adjustments to those who have a role in their development and implementation
3. Provide opportunities for further improvement	3.1 Implement processes to ensure that team members are informed of savings and productivity/service improvements in achieving the business plan 3.2 Document work performance to aid the identification of further opportunities for improvement 3.3 Manage records, reports and recommendations for improvement within the organisation's systems and processes

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 3.2, 3.3	• Evaluates and integrates facts and ideas to construct meaning from a range of text types in an effort to implement continuous improvement systems and processes
Writing	1.1, 1.2, 2.1, 2.2, 2.3, 3.1, 3.2, 3.3	• Selects vocabulary, grammatical structures and conventions appropriate to text • Researches, plans and prepares continuous improvement documentation for relevant stakeholders
Oral	1.2, 1.3, 2.3	• Participates in a variety of spoken exchanges with a range of audiences using structure and language to suit

© Commonwealth of Australia, 2025 Powering Skills Organisation

Communication		the audience
Navigate the world of work	2.1	• Monitors adherence to organisational policies and procedures and considers own role in terms of its contribution to broader goals of the work environment
Interact the work of others	1.2, 1.3, 2.3, 3.1	• Selects and uses appropriate conventions and protocols when communicating with diverse individuals to seek or share information • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group communication, influencing direction and taking a leadership role on occasion
Get the work done	1.1, 1.3, 2.1, 2.2, 3.1, 3.2, 3.3	• Takes responsibility for planning and organising own workload to achieve required outcomes • Uses systematic, analytical processes in complex, non-routine situations, setting goals, gathering relevant information and identifying and evaluating options against agreed criteria • Evaluates effectiveness of decisions in terms of how well they meet stated goals • Uses digital applications to access and filter data, extract, organise, integrate and share relevant information • Recognises the potential of new approaches to enhance work practices and outcomes

Assessment Requirements for BSBMGT403 Implement continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- implement continuous improvement systems and provide mentoring and coaching support to enable individuals and teams to participate in decisions, take responsibility, show initiative and implement improvement processes
- implement processes to inform team members about savings and productivity/service improvements achievements
- communicate effectively to support the continuous improvement system and implementation of improvements
- apply continuous improvement to customer services including internal and external customers
- implement, monitor and adjust improvement plans, processes and procedures to improve performance
- document performance to identify further opportunities for improvement
- manage records and reports within the organisation's systems and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- give examples of continuous improvement processes
- list typical areas of need for coaching and mentoring to support continuous improvement
- explain how change management techniques can support continuous improvement and initiative
- identify the organisation's systems and data that can be used for benchmarking and monitoring performance for continuous improvement.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBMGT502 Manage people performance

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.

It applies to individuals who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.

The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and Leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Allocate work	1.1 Consult relevant groups and individuals on work to be allocated and resources available

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.2 Develop work plans in accordance with operational plans 1.3 Allocate work in a way that is efficient, cost effective and outcome focussed 1.4 Confirm performance standards, Code of Conduct and work outputs with relevant teams and individuals 1.5 Develop and agree performance indicators with relevant staff prior to commencement of work 1.6 Conduct risk analysis in accordance with the organisational risk management plan and legal requirements
2. Assess performance	2.1 Design performance management and review processes to ensure consistency with organisational objectives and policies 2.2 Train participants in the performance management and review process 2.3 Conduct performance management in accordance with organisational protocols and time lines 2.4 Monitor and evaluate performance on a continuous basis
3. Provide feedback	3.1 Provide informal feedback to staff on a regular basis 3.2 Advise relevant people where there is poor performance and take necessary actions 3.3 Provide on-the-job coaching when necessary to improve performance and to confirm excellence in performance 3.4 Document performance in accordance with the organisational performance management system 3.5 Conduct formal structured feedback sessions as necessary and in accordance with organisational policy
4. Manage follow up	4.1 Write and agree on performance improvement and development plans in accordance with organisational policies 4.2 Seek assistance from human resources specialists, where appropriate 4.3 Reinforce excellence in performance through recognition and continuous feedback 4.4 Monitor and coach individuals with poor performance 4.5 Provide support services where necessary 4.6 Counsel individuals who continue to perform below expectations and implement the disciplinary process if necessary 4.7 Terminate staff in accordance with legal and organisational

ELEMENT	PERFORMANCE CRITERIA
	requirements where serious misconduct occurs or ongoing poor-performance continues

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	2.2, 3.3, 4.4	• Consolidates and improves own knowledge and skills by coaching, mentoring or training others
Reading	1.2, 1.6, 2.4	• Gathers, interprets and analyses texts in organisational documents to facilitate performance management
Writing	1.2, 1.4, 1.5, 1.6, 2.1, 2.3, 2.4, 3.4, 3.5, 4.1, 4.7	• Plans and prepares documents for allocating work and managing performance suitable for the target audience and in accordance with organisational requirements
Oral Communication	1.1, 1.4, 1.5, 2.2, 2.3, 3.1, 3.2, 3.3, 3.5, 4.2-4.7	• Uses language and structure appropriate to context and audience to explain expected standards of performance, provide feedback and coach staff
Numeracy	1.3, 1.4, 1.5, 1.6, 2.1, 2.4, 3.4, 4.1	• Extracts and evaluates mathematical information embedded in a range of tasks and text relating to performance standards and risk analysis
Navigate the world of work	1.2, 1.6, 2.1, 2.3, 3.4, 3.5, 4.1, 4.7	• Appreciates the implications of legal and regulatory responsibilities related to own work and the organisation as a whole • Monitors adherence to organisational policies and procedures
Interact with others	1.1, 1.3, 1.4, 1.5, 2.2, 3.1, 3.2, 3.3, 4.2-4.6	• Recognises and applies the protocols governing what to communicate to whom and how in a range of work contexts • Collaborates with others to achieve joint outcomes, influencing direction and taking a leadership role on occasion
Get the work done	1.2, 1.3, 1.5, 1.6, 2.1, 2.4, 4.1, 4.2	• Sequences and schedules complex activities, monitors implementation and manages relevant communication • Seeks advice, feedback and support as required to assist in the decision-making process • Uses experiences to reflect on the ways in which

Assessment Requirements for BSBMGT502 Manage people performance

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- consult with relevant stakeholders to identify work requirements, performance standards and agreed performance indicators
- develop work plans and allocate work to achieve outcomes efficiently and within organisational and legal requirements
- monitor, evaluate and provide feedback on performance and provide coaching or training, as needed
- reinforce excellence in performance through recognition and continuous feedback
- seek assistance from human resources specialists where appropriate
- keep records and documentation in accordance with the organisational performance management system.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline relevant legislative and regulatory requirements
- outline relevant awards and certified agreements
- explain performance measurement systems utilised within the organisation
- explain unlawful dismissal rules and due process
- describe staff development options and information.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant legislation
- workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

BSBMGT516 Facilitate continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to lead and manage continuous improvement systems and processes. Particular emphasis is on the development of systems and the analysis of information to monitor and adjust performance strategies, and to manage opportunities for further improvements.

It applies to individuals who take an active role in managing a continuous improvement process in order to achieve an organisation's objectives.

At this level, work will normally be carried out using complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem-solving and decision-making strategies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Management and leadership – Management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Lead continuous improvement systems and processes	1.1 Develop strategies to ensure that team members are actively encouraged and supported to participate in decision-making processes, assume responsibility and exercise initiative as

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	appropriate 1.2 Establish systems to ensure that the organisation's continuous improvement processes are communicated to stakeholders 1.3 Ensure that change and improvement processes meet sustainability requirements 1.4 Develop effective mentoring and coaching processes to ensure that individuals and teams are able to implement and support the organisation's continuous improvement processes 1.5 Ensure that insights and experiences from business activities are captured and accessible through knowledge management systems
2. Monitor and adjust performance strategies	2.1 Develop strategies to ensure that systems and processes are used to monitor operational progress and to identify ways in which planning and operations could be improved 2.2 Adjust and communicate strategies to stakeholders according to organisational procedures
3. Manage opportunities for further improvement	3.1 Establish processes to ensure that team members are informed of outcomes of continuous improvement efforts 3.2 Ensure processes include recording of work team performance to assist in identifying further opportunities for improvement 3.3 Consider areas identified for further improvement when undertaking future planning

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.2, 1.3, 1.4, 1.5, 2.1, 2.2, 3.3	• Identifies and extracts relevant information from a range of complex texts • Locates, interprets and analyses workplace documentation to gather information relating to continuous improvement
Writing	1.1, 1.2, 1.4, 1.5, 2.1, 2.2, 3.1-3.3	• Develops complex texts related to continuous improvement processes according to organisational requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

		• Ensures the vocabulary, grammatical structures and conventions are appropriate for the context and target audience
Oral Communication	1.1, 1.2, 1.4, 2.2	• Presents information to a range of audiences using appropriate structure and language • Listens and comprehends information from a variety of spoken exchanges with clients, co-workers and other stakeholders • Confirms understanding through questioning and active listening
Navigate the world of work	1.1-1.3, 2.1, 2.2	• Develops strategies to enable compliance with legislative requirements and achievement of the organisation's goals • Monitors adherence to organisational policies, procedures and protocols and considers own role in terms of its contribution to broader goals of the work environment
Interact with others	1.1, 1.2, 1.4, 2.2	• Identifies and uses appropriate conventions and protocols when communicating with colleagues and external stakeholders • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction and influencing direction
Get the work done	1.1, 1.2, 1.4, 1.5, 2.1, 3.1, 3.2, 3.3	• Takes responsibility for developing, implementing and monitoring systems and processes to achieve organisational outcomes • Uses analytical and lateral thinking to review current practices and develop ideas for improvement • Reflects on the ways in which digital systems and tools are used, or could be used, to achieve work goals

Assessment Requirements for BSBMGT516 Facilitate continuous improvement

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to establish systems and processes for continuous improvement that:

- facilitate effective contributions to and communications about continuous improvement processes and outcomes
- address sustainability requirements
- incorporate mentoring, coaching and other support to enable people to participate effectively in continuous improvement processes
- capture insights, experiences and ideas for improvements and incorporate them into the organisation's knowledge management systems and future planning.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how systems and procedures can support effective continuous improvement
- explain how continuous improvement systems and processes relate to other business systems and requirements including, knowledge management, quality, performance management and sustainability.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the management and leadership field of work and include access to:

- relevant workplace documentation and resources
- case studies and, where possible, real situations
- interaction with others.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessors must satisfy NVR/AQTF assessor requirements.

BSBWOR404 Develop work priorities

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1. Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to monitor and obtain feedback on own work performance and access learning opportunities for professional development.

This unit applies to individuals who are required to design their own work schedules and work plans and to establish priorities for their work. They will typically hold some responsibilities for the work of others and have some autonomy in relation to their own role.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Industry Capability – Workplace Effectiveness

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and complete own work schedule	1.1 Prepare workgroup plans which reflect consideration of resources, client needs and workgroup targets 1.2 Analyse and incorporate work objectives and priorities into personal schedules and responsibilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.3 Identify factors affecting the achievement of work objectives and establish contingencies and incorporate them into work plans 1.4 Efficiently and effectively use business technology to manage and monitor planning completion and scheduling of tasks
2. Monitor own work performance	2.1 Identify and analyse personal performance through self-assessment and feedback from others on the achievement of work objectives 2.2 Seek and evaluate feedback on performance from colleagues and clients in the context of individual and group requirements 2.3 Routinely identify and report on variations in the quality of service and performance in accordance with organisational requirements
3. Co-ordinate professional development	3.1 Assess personal knowledge and skills against organisational benchmarks to determine development needs and priorities 3.2 Research and identify sources and plan for opportunities for improvement in consultation with colleagues 3.3 Use feedback to identify and develop ways to improve competence within available opportunities 3.4 Identify, access and complete professional development activities to assist career development 3.5 Store and maintain records and documents relating to achievements and assessments in accordance with organisational requirements

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	3.1, 3.2, 3.3, 3.4	• Develops strategies to reflect on own performance, obtain feedback, and plan and source professional development opportunities
Reading	1.2, 2.1, 2.3, 3.1, 3.5	• Recognises and interprets textual information from relevant sources to understand organisation's policies and practices

© Commonwealth of Australia, 2025 Powering Skills Organisation

Writing	1.1, 1.3, 2.2, 2.3, 3.2, 3.5	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Oral Communication	2.2, 2.3, 3.2	• Provides or seeks information using language suitable to audience and context • Employs listening and questioning techniques to confirm understanding
Numeracy	1.1, 1.2, 1.3	• Interprets numerical information related to budgets and timeframes
Navigate the world of work	1.2, 2.1, 2.3, 3.1, 3.5	• Identifies and understands roles and responsibilities in relation to organisational objectives, policies and procedures
Interact with others	2.2, 2.3, 3.2	• Selects and uses appropriate practices when communicating with internal and external stakeholders to seek or share information • Establishes and builds rapport and relationships with others to foster a culture of trust and honesty in communications
Get the work done	1.1-1.4, 2.3, 3.1, 3.2, 3.4, 3.5	• Plans, organises and implements tasks to meet organisational requirements • Systematically gathers and analyses information and evaluates options in order to anticipate potential problems and develop contingency plans • Uses the main features and functions of digital technologies and tools to complete work tasks efficiently and effectively

Assessment Requirements for BSBWOR404 Develop work priorities

Modification History

Release	Comments
Release 2	This version first released with BSB Business Services Training Package Version 1.1. Version created to correct mapping table information
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- prepare and communicate own work plan
- schedule work objectives and tasks to support the achievement of the workgroup goals
- review own work performance against workgroup objectives through self-assessment and seeking and acting on feedback from clients and colleagues
- plan and access learning opportunities to extend personal work competencies.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how business technology applications can be used to schedule tasks and plan work
- explain techniques to prepare personal plans and establish priorities
- identify methods to identify and prioritise personal learning needs
- outline a range of professional development options
- explain methods to elicit, analyse and interpret feedback
- provide a detailed explanation of methods that can be used to evaluate own performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace documentation including policies and procedures, and benchmarks for work group productivity and performance
- workplace equipment and resources
- case studies and, where possible, real situations
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

ELEMENT	PERFORMANCE CRITERIA
	outcomes
2. Develop and facilitate team cohesion	2.1 Develop strategies to ensure team members have input into planning, decision making and operational aspects of work team 2.2 Develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities 2.3 Provide feedback to team members to encourage, value and reward individual and team efforts and contributions 2.4 Develop processes to ensure that issues, concerns and problems identified by team members are recognised and addressed
3. Facilitate teamwork	3.1 Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes 3.2 Support the team in identifying and resolving work performance problems 3.3 Ensure own contribution to work team serves as a role model for others and enhances the organisation's image for all stakeholders
4. Liaise with stakeholders	4.1 Establish and maintain open communication processes with all stakeholders 4.2 Communicate information from line manager/management to the team 4.3 Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders 4.4 Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Powering Skills Organisation

Reading	1.1, 4.4	• Analyses and interprets textual information from the organisation's policies, goals and objectives to establish team goals or to determine corrective action
Writing	1.2, 2.1, 2.2, 2.4, 4.2, 4.3, 4.4	• Prepares written reports and workplace documentation that communicate complex information clearly and effectively
Oral Communication	1.1, 2.3, 3.1, 4.1, 4.2, 4.3	• Engages in discussions or provides information using appropriate vocabulary and non-verbal features • Uses listening and questioning techniques to confirm understanding and to engage the audience
Navigate the world of work	1.1, 2.1, 2.2, 3.3	• Understands how own role contributes to broader organisational goals • Modifies or develops policies and procedures to achieve organisational goals
Interact with others	1.1, 1.3, 2.2, 2.3, 3.1, 3.2, 4.2, 4.3	• Selects and uses appropriate conventions and protocols when communicating with diverse stakeholders • Uses interpersonal skills to gain trust and confidence of team and provides feedback to others in forms that they can understand and use • Adapts personal communication style to build positive working relationships and to show respect for the opinions, values and particular needs of others • Plays a lead role in situations requiring effective collaboration, demonstrating high level conflict resolution skills and ability to engage and motivate others
Get the work done	1.2, 2.1, 2.2, 2.4, 3.2, 4.1, 4.3, 4.4	• Develops, implements and monitors plans and processes to ensure team effectiveness • Monitors and actively supports processes and development activities to ensure the team is focused on work outcomes • Plans for unexpected outcomes and implements creative responses to overcome challenges

Assessment Requirements for BSBWOR502 Lead and manage team effectiveness

Modification History

Release	Comments
Release 1	This version first released with BSB Business Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use leadership techniques and strategies to facilitate team cohesion and work outcomes including:
  - encouraging and fostering shared understanding of purpose, roles and responsibilities
  - identifying and resolving problems
  - providing feedback to encourage, value and reward others
  - modelling desired behaviour and practices
- develop policies and procedures to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities
- establish processes to address issues and resolve performance issues
- support team to meet expected performance outcomes including providing formal and informal learning opportunities as needed
- develop performance plans with key performance indicators (KPIs), outputs and goals for individuals or the team which incorporate input from stakeholders
- communicate effectively with a range of stakeholders about team performance plans and team performance
- facilitate two-way flow of information between team and management relevant to team performance
- evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders.

Note: if a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain how group dynamics can support or hinder team performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

- outline strategies that can support team cohesion, participation and performance
- explain strategies for gaining consensus
- explain issue resolution strategies.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the industry capability - workplace effectiveness field of work and include access to:

- workplace documents
- case studies and, where possible, real situations
- office equipment and resources
- interaction with others.

Assessors must satisfy NVR/AQTF assessor requirements.

CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release	Comment
Version 1	Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Application

This unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work. The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements in order to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of:

- Part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations;
- Division 11 of Part 3 of the Occupational Safety and Health Regulations 1996 for Western Australia; and
- Division 3 of Part 5.1 of the Occupational Health and Safety Regulations 2007 for Victoria.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Pre-requisite Unit

Nil

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.
1.	Identify health and safety legislative requirements of construction work.	1.1. Basic roles, responsibilities and rights of duty holders are identified and explained according to ***jurisdictional health and safety legislative requirements***.
		1.2. Duty of care requirements are identified.
		1.3. Construction safe work practices are identified and explained.
2.	Identify construction hazards and risk control measures.	2.1. Basic principles of risk management are identified.
		2.2. Construction hazards are identified and discussed.
		2.3. Purpose and use of PPE are identified and demonstrated.
		2.4. Measures for controlling hazards are identified.
3.	Identify health and safety communication and reporting processes.	3.1. Health and safety documents are identified and discussed.
		3.2. Roles of designated health and safety personnel are identified and explained.
		3.3. Safety signs and symbols are identified and explained.
		3.4. Procedures for reporting hazards, incidents and injuries are identified.
4.	Identify incident and emergency response	4.1. Procedures for responding to incidents and emergencies are identified and explained.
		4.2. Procedures for accessing first aid are identified.

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures.	4.3.	Types and purpose of fire safety equipment are identified and discussed.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

Skill	Performance feature
Numeracy skills to:	• locate and recognise numbers commonly used in safety signs.
Oral communication skills to:	• ask questions to clarify instructions • listen to instructions to identify key safety information • tell another person about a construction problem or hazard.
Reading skills to:	• follow simple pictorial safety instructions • follow simple safety instructions that are written in English.
Problem-solving skills to:	• select risk control measures.

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Jurisdictional health and safety legislative requirements must include at least one of the following state and territory Acts or their equivalent:	• Australian Capital Territory: Work Health and Safety Act 2011 • New South Wales: Work Health and Safety Act 2011 • Northern Territory: Work Health and Safety (National Uniform Legislation) Act 2011 • Queensland: Work Health and Safety Act 2011 • South Australia: Work Health and Safety Act 2012 • Tasmania: Work Health and Safety Act 2012 • Victoria: Occupational Health and Safety Act 2004 • Western Australia: Occupational Safety and Health Act 1984.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

Supersedes and is equivalent to CPCCOHS1001A Work safely in the construction industry

Links

Assessment Requirements for CPCCWHS1001 Prepare to work safely in the construction industry

Modification History

Release	Comment
Version 1	Replaces superseded equivalent CPCCOHS1001A Work safely in the construction industry.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- orally explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- orally explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
  - fire blankets
  - fire extinguishers, including water, carbon dioxide, powder and foam
  - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- orally explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- orally explain the roles of the following designated health and safety personnel:
  - first aid officers
  - work health and safety representatives
  - work health and safety committee members
  - supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat

© Commonwealth of Australia, 2025 Powering Skills Organisation

- high visibility retro reflective vest.

Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
  - identify hazard
  - assess risk
  - consult and report
  - control hazard
  - review
- basic procedures for accessing first aid
- construction hazards, including those relating to:
  - asbestos
  - confined spaces
  - electrical: power lines, cords and equipment
  - excavations and trenches, including underground services
  - dust
  - falling objects
  - hazardous substances and dangerous goods
  - hot and cold work environments
  - manual handling
  - noise
  - plant and equipment operation
  - traffic and mobile plant
  - unplanned collapse
  - ultraviolet radiation
  - working at heights, including scaffolding
- construction work that requires a high risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and ultraviolet (UV) protective clothing and sunscreen
- construction emergencies, including:
  - chemical spill
  - fire
  - injury to personnel
  - structural collapse
  - toxic or flammable vapour emission

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - vehicle or mobile plant accident
- construction incidents, including:
    - incidents resulting in personal injury or damage to property
    - near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
- safe work practices that should be followed in construction work, including:
    - accessing and using site amenities for drinking water, hand washing and toilets
    - following safety procedures when performing work tasks and using equipment
    - identifying and reporting hazards, incidents and injuries in the workplace
    - keeping the work area clean, tidy and free from debris
    - not using or being affected by drugs and/or alcohol while at work
    - preventing bullying and harassment in the workplace
    - selecting and using required PPE
    - smoking only in designated areas
    - storing and removing waste and debris in designated areas
- meanings and symbols associated with construction safety signs, symbols and tags, including:
    - emergency information signs: exits, emergency equipment and first aid
    - fire signs: location of fire alarms and firefighting equipment
    - hazard signs and symbols: danger and warning
    - regulatory signs and symbols: prohibition, mandatory and limitation or restriction
    - safety and lockout tags: danger and out-of-service tags.

Assessment Conditions

The following must be present and available to learners during assessment activities:

- equipment:
    - all of the PPE listed in the performance evidence
- specifications:
    - state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment of performance evidence must be done by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessors must hold the unit *CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry*, or its successor.

CPPBDN5013A Develop and collaborate on building information models for small-scale building design projects

Modification History

New unit

Unit Descriptor

This unit of competency specifies the outcomes required to develop three-dimensional (3-D) models of small-scale building design projects covered by the Building Code of Australia (BCA), except construction Type A buildings, into true building information models (BIM).

It also covers adding and adjusting values of components of building designs, collaborating with consultants and contractors from other disciplines, working live within the model alongside other disciplines and creating project documentation using modelling software programs.

Application of the Unit

This unit of competency supports building designers who create and use BIMs to optimise productivity and enhance streamlining of the construction process through improved communication and collaboration with consultants and contractors involved in the construction life cycle.

Licensing/Regulatory Information

Work in this area must be completed according to relevant legislative, industry and organisational requirements, including occupational health and safety (OHS) policies and procedures.

Different states and territories may have regulatory mechanisms that apply to this unit. Users are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Develop BIM project documentation	1.1	BIM project processes and schedules are planned and finalised in consultation with relevant project stakeholders.
		1.2	Procedures to provide accurate and reliable exchange of project models are developed according to ***organisational and project requirements***.
		1.3	Project documentation is generated according to organisational and project requirements using outputs of appropriate functions of design technology tools.
2	Develop a BIM project	2.1	Information **relating to *small-scale building design projects*** is analysed and applied to plans for BIM development.
		2.2	3-D models are created according to organisational and project requirements and software operation instructions using appropriate ***design technology tools***.
		2.3	***Building design data*** is embedded in project model ***objects*** to allow collaboration, integration and generation of required project documentation.
		2.4	BIM is checked and tested according to organisational and project requirements to confirm accuracy and functionality.
3	Exchange and collaborate on project models	3.1	Transfer of BIM files is tested according to organisational procedures to ensure integrity of format and data is retained on receipt.

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 BIMs are provided to other consultants or contractors for addition of specialist data according to project requirements and data sharing protocols.

3.3 BIMs or BIM data provided by other consultants or contractors are imported or linked and checked for integrity according to project and organisational requirements.

3.4 BIMs are amended and manipulated live in collaboration with other contractors and consultants operating within the same model.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- administration and management skills to:
  - develop process map, task list and schedule for BIM implementation
  - implement and manage standards
  - manage projects and documents
  - manage time, including planning and prioritising work
- analytical and problem-solving skills to:
  - develop innovative ideas and designs
  - select cost-effective products and materials that contribute to sustainable development
  - work out optimum compliant and cost-effective design solutions
- interpersonal skills to interact with clients and other stakeholders, including planning and regulatory personnel and technical experts
- language, literacy and numeracy skills to:
  - communicate with clients and contacts
  - estimate costs
  - interpret and apply complex information, including legislation, regulations, and codes and standards
  - present design options to clients
- technical skills to:
  - produce accurate design documentation and hand drawings
  - apply compliance requirements, including drawing standards
  - design from a brief
  - plan and carry out design, including visualising spaces, form, shapes and light

© Commonwealth of Australia, 2025 Powering Skills Organisation

- technology skills to use information technology, BIM technologies and relevant software

Required knowledge

- architectural styles and terminology
- basic principles of structural engineering
- building designers' duty of care to ensure quality and safety of designs
- benefits and challenges of adopting a BIM approach to design production and documentation
- contextual and site constraints
- conventional and sustainable construction materials and methods, including their application, behaviour, characteristics, performance and interactions with other materials
- design development and approval processes, and implications of changes to design at each stage
- design drawing and representation methods
- design technology's built-in tools and networking tools required to maintain two or more disciplines in a single project model within a local area network (LAN)
- tools required to manage a project with two or more disciplines across a wide area network (WAN)
- hazards of site, materials, construction practices and building use over life cycle
- key features of building life cycles
- legislation, codes and standards relevant to sustainable design requirements for small-scale building design projects
- organisational scope of business, service levels and fees
- planning processes and requirements
- pricing of resources
- principles of integrated project delivery
- principles of sustainable design
- project management strategies
- scientific and social principles of human interactions with the built environment
- tools required to create a realistic BIM implementation plan that responds to specific staff, financial and schedule constraints

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence	A person should demonstrate the ability to: • produce interactive BIM projects for a range of small-scale

© Commonwealth of Australia, 2025 Powering Skills Organisation

required to demonstrate competency in this unit	building design projects in consultation with project team
	• collaborate on BIM projects with a range of stakeholders, including:
	  • integration of imported data
	  • live interoperations.

Context of and specific resources for assessment	Assessment of this unit:
	• must be in the context of the work environment
	• may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
	• must meet relevant compliance requirements.
	Resource implications for assessment include:
	• access to:
	  • suitable assessment venue and equipment
	  • suitable simulated or real opportunities and resources to demonstrate competence
	• assessment instruments.

Method of assessment	Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods: • written and/or oral assessment of the candidates required knowledge for the unit • observed, documented and/or firsthand testimonial evidence of the candidates • implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes • identification of the relevant information and scope of the work required to meet the required outcomes • identification of viable options and the selection of options that best meet the required outcomes • consistently achieving the required outcomes.
Guidance information for assessment	This unit could be assessed on its own or in combination with other units relevant to the job function. Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. Assessment processes and techniques must be culturally

© Commonwealth of Australia, 2025 Powering Skills Organisation

	appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Organisational and project requirements may include:	• communications protocols • file exchange formats • reporting requirements • schedule.

Small-scale building design projects:	• include buildings covered by the BCA, except construction Type A buildings
	• may be residential projects, such as:
	  • additions and renovations
	  • heritage restoration
	  • new buildings
	• may be commercial or industrial projects, such as:
	  • factories
	  • motels
	  • offices
	  • restaurants
	  • retail and service outlets
	  • warehouses.

Design technology tools may include:	• proprietary 3, 4 and 5-D modelling software, such as:
	  • Autodesk Architectural Desktop
	  • Autodesk Revit
	  • Bentley Architecture
	  • Graphisoft ArchiCAD
	  • VectorWorks ARCHITECT.

Building design data may include:	• details of compliance requirements, including those specified in:
	  • Australian standards
	  • client requirements
	  • design specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• legislation and regulations • manufacturer specifications • dimensions • labour costs • material costs • material properties, such as: • acoustic values • energy efficiency • fire resistance • R-value and U-value • strength.
Objects may include:	• customised imports • imports from online object libraries • new objects created by the designer.

CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Modification History

Revised unit

Unit updated and equivalent to PRMPFES43A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Unit Descriptor

This unit of competency specifies the outcomes required to identify and describe agreements, protocols, legislation, regulations, codes of practice and handling licences developed to reduce ozone layer depletion and global warming.

Application of the Unit

This unit of competency supports individuals responsible for:

- complying with legal, industry, regulatory and licensing requirements relating to ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) extinguishing agents used in fire protection
- considering the impact of work practices in the fire protection industry on ozone layer depletion and global warming
- proposing changes to reduce the risk of accidental emmissions that contribute to ozone layer depletion and global warming.

Licensing/Regulatory Information

The unit supports one or more fire protection industry extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Apply rules and regulations to the use of ODS and SGG extinguishing agents.	1.1	Requirements of relevant ***rules and regulations*** are ***confirmed*** and applied to ***work procedures*** to prevent ODS and SGG emissions.
		1.2	***Compliance requirements are checked*** and ***action*** is taken according to organisational policies and procedures, ODS and SGG policies and procedures, and best practice requirements.
2	Identify ODS and SGG handling licences, trading authorisations and usage permits.	2.1	Types of ODS and SGG ***extinguishing agent handling licences***, licence requirements and ***entitlements of licensees*** are identified.
		2.2	Extinguishant trading authorisations are identified.
		2.3	Halon special permit usage requirements are identified.
3	Apply an understanding of ozone layer depletion and global warming.	3.1	Role and functions of ***ozone layer*** are identified and explained.
		3.2	Factors involved with, and effects of, ***global warming*** are identified and described.
		3.3	***ODS and SGG extinguishing agents*** used in fire protection industry are identified by type.
		3.4	***Effect of ozone depletion and global warming*** on

© Commonwealth of Australia, 2025 Powering Skills Organisation

human health, environment and fire protection industry work practices is described.

3.5 Relevant fire protection industry ODS and SGG work practices are identified.

3.6 Improvements to ODS and SGG work practices are identified and proposed to reduce the risk of accidental emmissions.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - read and comply with work industry regulations and codes of practice
  - interpret information
- initiative and enterprise skills to:
  - seek advice on license requirements
  - apply understanding of ozone layer depletion and global warming to change and improve fire protection industry work practices
  - identify and act upon learning opportunities
- technology skills to use technology to access information

Required knowledge

- effect of ozone layer
- actions to take where a breach of ODS and SGG policies and procedures occurs
- effect of:
  - ODS and SGG emissions on ozone depletion and global warming
  - ozone depletion and global warming on environment and human health
- factors involved in global warming
- implications of not applying ODS and SGG legislative requirements to the workplace
- key features of:
  - legislation, regulations and standards applicable to ozone protection in the fire protection industry
  - fire protection industry codes of practice
- ODS and SGG substances used in the fire protection industry
- ODS and SGG EAHL features and requirements, authorisations and permit requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant federal, state or territory legislation that affects organisational operations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed by oral or written questioning covering: • underpinning knowledge of the effects of ODS and SGG emissions and current arrangements • workplace examples of action taken to reduce risk of emissions and responses to potential or actual breaches of legislation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.
	In particular the person should demonstrate the ability to:
	• apply understanding of ozone layer depletion and global warming for:
	  • discussing the effect of ODS and SGG emissions on the ozone layer and global warming
	  • describing the impact of ozone depletion and global warming on human health and the environment
	  • assessing impact on fire protection industry work practices
	  • proposing changes to fire protection industry work practices to meet ODS and SGG legal requirements
	  • taking action to respond to potential and actual breaches of ODS and SGG regulations
	• locate, interpret and explain:
	  • ODS and SGG legal requirements for handling extinguishing agents in the fire protection industry
	  • EAHL types, associated responsibilities, usage permits and trading authorisations
	  • agreements, protocols, regulatory requirements, fire protection industry code of practice, and Australian standards relevant to EAHL.

Context of and specific resources for assessment	Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

	Resource implications for assessment include: • assessment documentation • necessary legislation and regulatory documents, manuals, textbooks and other relevant documentation • training and assessment record books.
Method of assessment	Assessment methods must: • satisfy the endorsed Assessment Guidelines of the Property Services Training Package • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application • reinforce the integration of employability skills with workplace tasks and job roles • confirm that competency is verified and able to be transferred to other circumstances and environments.
Guidance information for assessment	Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. This unit could be assessed on its own or in combination with other units relevant to the job function.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Rules and regulations may include:	• dangerous goods regulations • environmental regulations • fire protection industry codes of practice • licensing arrangements, such as EAHL • manufacturers' system manuals • ODS and SGG legislation, codes and regulations, including

© Commonwealth of Australia, 2025 Powering Skills Organisation

	penalties and policing
	• OHS legislation, regulations and codes
	• other relevant legislation relating to fire protection equipment, including:
	  • international shipping codes
	  • marine codes for different Australian States
	  • requirements of Australian petroleum industry
	• relevant agreements and protocols
	• relevant Australian standards, such as:
	  • AS 1851 Maintenance of fire protection systems and equipment
	  • note: Australian standards are frequently revised and users must always check for currency and amendments
	• relevant federal, state and territory Acts, regulations and codes.

Requirements may be ***confirmed*** with:	• colleagues • managers • supervisors • team leaders.
Work procedures may include:	• assignment instructions • equipment manufacturers' requirements • instructions from colleagues, supervisor or manager • personal protective equipment requirements • reporting and documentation requirements • specific customer requirements.
Checking compliance requirements may include ensuring that:	• persons trading in ODS and SGG hold the appropriate trading authorisation or ODS and SGG permit • scope of work to be undertaken is covered by the appropriate license.
Action may include:	• advising customer • documenting non-compliance • making equipment safe • reporting, as required.
Types of ***extinguishing agent handling licence*** include:	• control systems installation, commissioning and decommissioning • fixed system installation and decommissioning • fixed system testing and maintenance • portable fire extinguisher maintenance • recovery, reclamation, fill and recycling • warehouse maintenance.
Entitlements of licensees include:	• portable fire extinguisher maintenance licence entitles holder: • to charge and recharge a portable fire extinguisher with

© Commonwealth of Australia, 2025 Powering Skills Organisation

	non-ODS and SGG agent • note: a reclaim and refill licence is required to charge or recharge a portable extinguisher with ODS or SGG • repair the extinguisher valve • fixed system installation and decommissioning licence entitles holder to: • install and decommission a gaseous fire-extinguishing system (fire protection equipment) including to: • install and disconnect actuation devices (mechanisms) to and from container valves • install and disconnect gaseous agent containers • install and disconnect interconnections to other gaseous system containers • install and disconnect ancillary equipment connections to manifold and pipework • attach and remove transport equipment, such as valve outlet and actuator port caps, plugs and locking devices installed to prevent accidental discharge • commission actuation control devices set to operate and engage safety devices as needed and decommission these devices • fixed system testing and maintenance licence entitles holder to: • test and maintain a gaseous fire-extinguishing system (fire protection equipment), including to: • test actuation release systems • disconnect and reconnect actuation devices (mechanisms) • disconnect and reconnect interconnections to other gaseous system containers • disconnect and reconnect ancillary equipment connections from containers to manifold and pipework • test actuation devices (mechanisms) • perform tests and maintenance on any fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system • perform tests and maintenance on gaseous agent containers and ancillary equipment connections from containers to manifold and pipework • recovery, reclamation, fill and recycling licence entitles holder to: • recover, reclaim, fill and recycle an extinguishing agent into and from a fire extinguisher and gaseous fire-extinguishing system container, from and to a bulk agent container

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• warehouse maintenance licence entitles holder to:
	  • monitor for leakage stocks of extinguishing agent bulk agent containers in a warehouse and, as needed, to transfer extinguishing agent from a leaking storage container
	• control systems installation, commissioning and decommissioning licence entitles holder to:
	  • install, commission and decommission a fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system.

Ozone layer facts include:	• composed of ozone (O3), which is a form of oxygen in which the oxygen molecule contains three atoms of oxygen instead of the usual two • ozone forms less than 0.4 parts per million of the atmosphere • about 90% of ozone is in upper part of atmosphere (stratosphere) • most ozone is in the layer from 20 to 25 km above the earth's surface.
Global warming involves:	• carbon dioxide found in small quantities (about 350 parts per million) in the atmosphere • carbon dioxide trapping infra red (heat) radiation and warming the atmosphere – the greenhouse effect.

ODS and SGG extinguishing agents may include:
 	
Note list format:
product name (other names) use
 	
Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.
	• ODS and SGG extinguishing agents **commonly** used in Australia:
	  • FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301
	  • Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia
	  • Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia
	  • NAF-P-III (HCFC Blend C) used as a streaming agent
	  • NAF-P-IV (HCFC Blend E) used as a streaming agent
	  • NAF-S-III (HCFC Blend A) used as a total flooding agent
	  • SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear
	• ODS and SGG extinguishing agents **not commonly** used in Australia:
	  • Blitz III (HCFC Blend D) used in flooding systems
	  • CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign

© Commonwealth of Australia, 2025 Powering Skills Organisation

	vessels) • FC-2-1-8 (CEA-308) used in flooding systems • FC-3-1-10 (CEA-410) used in flooding systems • FC-5-1-14 (CEA-614) used as a streaming agent • FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent • FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent • FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications • FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301 • FM100 (HBFC-22B1) used in portable fire extinguishers • Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia • Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent • Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301 • HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) • HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.

Effect of ozone depletion and global warming on human health and the environment may include:	• changes to work practices, including those in the fire protection industry
	• constraints on:
	  • aquatic ecosystems
	  • human immune system
	• increased:
	  • incidence of photochemical smog
	  • risk of:
	  • cataracts
	  • skin cancer
	  • inhibited growth of plants
	  • reduced production of agriculture.

HLTAID001 Provide cardiopulmonary resuscitation

Modification History

Release	Notes
Release 5	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 4	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 3	Updated mapping information. Equivalent outcome.
Release 2	Updated mapping information. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to elements and performance criteria. Revised evidence requirements, including volume and frequency of assessment.

Application

This unit describes the skills and knowledge required to perform cardiopulmonary resuscitation (CPR) in line with the Australian Resuscitation Council (ARC) Guidelines.

This unit applies to all workers who may be required to provide CPR, in a range of situations, including community and workplace settings.

Specific licensing /regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation	1.1 Recognise an emergency situation 1.2 Identify, assess and minimise immediate hazards to health and safety of self and others 1.3 Assess the casualty and recognise the need for CPR 1.4 Seek assistance from emergency response services
2. Perform CPR procedures	2.1 Perform cardiopulmonary resuscitation in accordance with ARC guidelines 2.2 Display respectful behaviour towards casualty 2.3 Operate automated external defibrillator (AED) according to manufacturer's instructions
3. Communicate details of the incident	3.1 Accurately convey incident details to emergency response services 3.2 Report details of incident to workplace supervisor as appropriate 3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTAID001 Provide cardiopulmonary resuscitation

Modification History

Release	Notes
Release 5	Updated: • assessor requirements statement • foundation skills lead in statement • licensing statement • modification history to reflect 2012 standards Equivalent outcome.
Release 4	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 3	Updated mapping information. Equivalent outcome.
Release 2	Updated mapping information. Equivalent outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to elements and performance criteria. Revised evidence requirements, including volume and frequency of assessment.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has completed the following tasks in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- Followed DRSABCD in line with ARC guidelines, including:
  - performed at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - performed at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
  - responded appropriately in the event of regurgitation or vomiting
  - managed the unconscious breathing casualty
  - followed single rescue procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
  - followed the prompts of an automated external defibrillator (AED)
- Responded to at least one simulated first aid scenario contextualised to the candidate's workplace/community setting, including:
  - demonstrated safe manual handling techniques
  - provided an accurate verbal or written report of the incident

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/Territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to the provision of CPR
  - safe work practices to minimise risks and potential hazards
  - infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- Legal, workplace and community considerations, including:
  - awareness of potential need for stress-management techniques and available support following an emergency situation
  - duty of care requirements
  - respectful behaviour towards a casualty
  - own skills and limitations
  - consent
  - privacy and confidentiality requirements
  - importance of debriefing
- Considerations when providing CPR, including:
  - airway obstruction due to body position
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - chain of survival
  - standard precautions
- Basic anatomy and physiology relating to:
  - how to recognise a person is not breathing normally
  - chest

© Commonwealth of Australia, 2025 Powering Skills Organisation

- response/consciousness
- upper airway and effect of positional change

Assessment Conditions

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- AED training device
- workplace injury, trauma and/or illness record, or other appropriate workplace incident report form

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessor Requirements

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

In addition hold current first aid certificate HLTAID003 or higher.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation	1.1 Recognise an emergency situation 1.2 Identify, assess and manage immediate hazards to health and safety of self and others 1.3 Assess the casualty and recognise the need for first aid response 1.4 Assess the situation and seek assistance from emergency response services
2. Apply appropriate first aid procedures	2.1 Perform cardiopulmonary resuscitation (CPR) in accordance with Australian Resuscitation Council (ARC) guidelines 2.2 Provide first aid in accordance with established first aid principles 2.3 Display respectful behaviour towards casualty 2.4 Obtain consent from casualty where possible 2.5 Use available resources and equipment to make the casualty as comfortable as possible 2.6 Operate first aid equipment according to manufacturer's instructions 2.7 Monitor the casualty's condition and respond in accordance with first aid principles
3. Communicate details of the incident	3.1 Accurately convey incident details to emergency response services 3.2 Report details of incident to workplace supervisor as appropriate 3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
4. Evaluate the incident and own performance	4.1 Recognise the possible psychological impacts on self and other rescuers involved in critical incidents 4.2 Participate in debriefing to address individual needs

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

  - followed the prompts of an Automated External Defibrillator (AED)
- Responded to at least two simulated first aid scenarios contextualised to the candidate's workplace/community setting, including:
  - conducted a visual and verbal assessment of the casualty
  - demonstrated safe manual handling techniques
  - post-incident debrief and evaluation
  - provided an accurate verbal or written report of the incident
- Applied first aid procedures for the following:
  - allergic reaction
  - anaphylaxis
  - bleeding control
  - choking and airway obstruction
  - envenomation, using pressure immobilisation
  - fractures, sprains and strains, using arm slings, roller bandages or other appropriate immobilisation techniques
  - respiratory distress, including asthma
  - shock

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/Territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to provision of CPR and first aid
  - safe work practices to minimise risks and potential hazards
  - infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- legal, workplace and community considerations including:
  - awareness of potential need for stress-management techniques and available support following an emergency situation
  - duty of care requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - respectful behaviour towards a casualty
  - own skills and limitations
  - consent
  - privacy and confidentiality requirements
  - importance of debriefing
- considerations when providing first aid including:
  - airway obstruction due to body position
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - chain of survival
  - standard precautions
  - how to conduct a visual and verbal assessment of the casualty
- principles and procedures for first aid management of the following scenarios:
  - abdominal injuries
  - allergic reaction
  - anaphylaxis
  - basic care of a wound
  - bleeding control
  - burns
  - cardiac conditions, including chest pain
  - choking and airway obstruction
  - crush injuries
  - diabetes
  - dislocations
  - drowning
  - envenomation
  - environmental impact, including hypothermia, hyperthermia, dehydration and heat stroke
  - eye and ear injuries
  - fractures
  - febrile convulsions
  - head, neck and spinal injuries
  - minor skin injuries
  - needle stick injuries
  - poisoning and toxic substances
  - respiratory distress, including asthma
  - seizures, including epilepsy
  - shock
  - soft tissue injuries, including strains and, sprains
  - stroke

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - unconsciousness
- basic anatomy and physiology relating to:
  - how to recognise a person is not breathing normally
  - chest
  - response/consciousness
  - upper airway and effect of positional change
  - considerations in provision of first aid for specified conditions

Assessment Conditions

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device
- AED training device
- placebo bronchodilator and spacer device
- roller bandages
- triangular bandages
- workplace First Aid kit
- workplace injury, trauma and/or illness record, or other appropriate workplace incident report form for written reports
- wound dressings

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessor requirements

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

ICTICT203 Operate application software packages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to identify, select and operate three commercial software packages, including a word-processing and a spreadsheet application package.

It applies to individuals who utilise different software applications within a small to large office environment to produce diverse documents.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Use appropriate workplace health and safety (WHS) office work practices	1.1 Use safe work practices to ensure ergonomic, work organisation, energy and resource conservation requirements are addressed 1.2 Use wrist rests and document holders where appropriate 1.3 Use monitor anti-glare and radiation reduction screens where appropriate
2. Use appropriate	2.1 Select word-processing software appropriate to perform

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
word-processing software	activity 2.2 Identify document purpose, audience and presentation requirements, and clarify with personnel as required 2.3 Identify organisational requirements for text-based business documents, and design document structure and layout to ensure consistency of style and image 2.4 Match document requirements with software functions to provide efficient production of documents 2.5 Use technical functions, other data and formatting to finalise documents 2.6 Ensure the naming and storing of documents in appropriate directories or folders and the printing of documents to the required specifications
3. Use appropriate spreadsheet software	3.1 Select spreadsheet software appropriate to perform activity 3.2 Identify document purpose, audience and presentation requirements, and clarify with personnel as required 3.3 Enter simple formulas and functions using cell referencing where required 3.4 Customise spreadsheet settings to meet requirements 3.5 Ensure the naming and storing of documents in appropriate directories or folders and the printing of documents to the required specifications
4. Use a third application software package	4.1 Select software application package appropriate to perform activity 4.2 Identify purpose, audience and presentation requirements, and clarify with personnel as required 4.3 Use technical functions, other data and formatting to finalise documents 4.4 Ensure documents are named and stored in appropriate directories or folders and printed to required specifications

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill	Performance Criteria	Description
Reading	2.2-2.5, 3.2-3.4, 4.2, 4.3	• Recognises and interprets textual information to determine organisational standards and job requirements • Interprets and comprehends symbols, icons and text associated with applications software
Writing	2.3-2.6, 3.3- 3.5, 4.3, 4.4	• Enters both written and verbally received information and data into a format suitable for the software application • Selects vocabulary, syntax, terminology, labelling and naming conventions suitable for the program
Oral Communication	2.2, 2.3, 3.2, 4.2	• Uses simple, relevant language, effective questioning, and active listening techniques to clarify work requirements
Numeracy	3.2-3.4	• Adds, subtracts, multiplies and divides whole numbers and decimals, identifying and selecting the correct formulas and functions to use • Applies the order of operations in calculations
Navigate the world of work	1.1	• Takes some personal responsibility for adherence to legal and regulatory requirements
Get the work done	1.2, 1.3, 2.1-2.6, 3.1-3.5, 4.1-4.4	• Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role • Understands purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks, adapting some functions to improve personal efficiency • Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing

Assessment Requirements for ICTICT203 Operate application software packages

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- produce workplace documents using a minimum of three different software application packages
- open, amend and save files and documents according to organisational requirements
- apply workplace health and safety (WHS) principles and responsibilities for ergonomics, such as work periods and breaks
- use help manuals and online help.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify application software packages used by the organisation and list the purpose of each
- explain basic technical terminology related to reading help files and responding to system help prompts
- outline current business practices related to using software to prepare reports
- list features and functions of commercial computing packages
- describe import and export software functions
- describe the process of linking documents
- outline WHS principles and responsibilities for ergonomics, such as work periods and breaks
- explain the purpose of input and output devices.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) and printer
- software currently used in industry
- documents detailing organisational style guide and policy
- documents or information containing data suitable for developing software application documents.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTTEN203 Install and configure a home or small office network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required for entry level networking support to establish a small office or home office (SOHO) internet connected PC network.

It applies to individuals who may work as an installer or network technician configuring small networks with simple internet protocol (IP) addressing schemes that share a limited range of resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for installation of home or small office network	1.1 Prepare for given work confirming site-specific work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of the network and network resources from job briefs or appropriate personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select and obtain personal computer system and network device requirements according to enterprise procedures 1.5 Obtain operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Install and troubleshoot home or small office network	2.1 Set up personal computer systems according to manufacturer's specifications and enterprise procedures 2.2 Set up, configure and share network resources between network devices 2.3 Determine network addressing scheme for network connectivity and confirm using calculations 2.4 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures 2.5 Identify security threats and initiate control measures according to enterprise procedures
3. Complete and document network installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures 3.4 Notify appropriate personnel and obtain sign-off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Writing	3.2, 3.4	• Completes workplace documentation accurately using appropriate form and vocabulary for intended audience
Oral Communication	3.3, 3.4	• Conveys specific messages efficiently and uses an appropriate tone and vocabulary for intended audience

© Commonwealth of Australia, 2025 Powering Skills Organisation

Numeracy	2.3	• Confirms decisions using basic calculations and predictions
Navigate the world of work	1.1-1.4, 2.4, 2.5, 3.1-3.3	• Follows legislative requirements and organisational protocols, policies and procedures relevant to own role
Interact with others	1.1-1.3, 1.6	• Collaborates and cooperates with others to achieve specific outcomes
Get the work done	1.4, 1.5, 2.1-2.5	• Prioritises and plans work to meet organisational requirements and client expectations • Recognises and anticipates a range of problems, actively looking for early warning signs and implementing contingency plans when appropriate

Unit Mapping Information

Assessment Requirements for ICTTEN203 Install and configure a home or small office network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- implement work health and safety (WHS) workplace procedures and practices
- plan installation of an internet connected network with advice and approvals of relevant personnel
- set up and configure wired and wireless networks with simple addressing schemes
- troubleshoot network and internet connectivity
- set up resource sharing
- deploy simple firewall network security
- obtain sign-off with relevant personnel.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline correct usage of tools and equipment
- describe enterprise WHS procedures
- outline basic computer systems and network operating systems
- describe computer networking principles (wired and wireless)
- outline network addressing systems (basic)
- explain network services and associated network models and protocols
- outline network security management
- outline troubleshooting procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where installation of a small office home office network may be conducted
- tools, equipment and materials currently used in the industry
- relevant workplace procedures, specifications and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN204 Install and configure a small to medium business network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to establish and support a small to medium business network capable of providing wide area network (WAN) connectivity and common web internet services.

It applies to individuals who may be working as a small to medium enterprise (SME) internet protocol (IP) network installer, network technician or SME network support person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications networks engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for installation of small to medium enterprise network	1.1 Prepare for given work, confirming site-specific work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.3 Determine nature and scope of business network and network resources from job briefs or appropriate personnel 1.4 Select and obtain computer system and network device requirements according to enterprise procedures 1.5 Obtain operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at worksite
2. Install and configure small to medium enterprise network	2.1 Set up wired infrastructure according to manufacturer's specifications and enterprise procedures 2.2 Set up and configure resource sharing on a network server 2.3 Install WAN connection and ISP services and configure according to enterprise procedures 2.4 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures 2.5 Implement data back-up and disaster recovery measures according to enterprise procedures
3. Complete and document network installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures 3.4 Notify customer and obtain sign-off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Assessment Requirements for ICTTEN204 Install and configure a small to medium business network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- implement work health and safety (WHS) workplace procedures and practices
- plan installation of a network that uses subnet addressing and provides internet service provider (ISP) services
- set up and configure wired infrastructure
- troubleshoot local network and wide area network (WAN) connectivity and services
- configure resource sharing on a network server
- provide network data back-up and disaster recovery.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify correct usage of tools and equipment
- outline data back-up services and procedures
- describe enterprise WHS procedures
- define ISP services
- outline network device configuration
- describe network models and topologies
- define subnet addressing
- outline troubleshooting procedures
- describe WAN services and ISP responsibilities.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the telecommunications network engineering field of work and include access to:

- a site where installation of a small to medium business network may be conducted
- tools, equipment and materials currently used in industry

ICTTEN205 Build and maintain a secure network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to build a simple and secure wired local area network (LAN) or wide area network (WAN) using a range of client server applications and services.

It applies to individuals who may work in job roles such as an installer of internet protocol (IP) networks, a WAN and LAN network technician or a WAN and LAN network support person.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to build LAN or WAN	1.1 Prepare for given work confirming site-specific work health and safety (WHS) and environmental requirements, with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine network design specification from job briefs or

Assessment Requirements for ICTTEN205 Build and maintain a secure network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- effectively implement work health and safety (WHS) workplace procedures and practices
- develop a network addressing scheme
- determine required network components to build the network
- plan, build, configure, test and analyse performance of a network
- troubleshoot network problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe enterprise WHS procedures
- explain internet and computer network communication
- outline network addressing schemes including open systems interconnect (OSI) and transmission control protocol (TCP)/IP model
- describe planning the cabling of ethernet networks
- define the seven layer OSI model
- identify correct tool and equipment usage
- identify troubleshooting procedures.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications network engineering field of work and include access to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- a site where building and maintenance of secure network may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures
- product and manufacturing specifications and reference material.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN312 Install telecommunications network equipment

Modification History

Release	Comments
Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Application

This unit describes the skills and knowledge required to effectively install and test telecommunications network equipment. It includes processes for checking plans, obtaining equipment, and handling equipment and supplies.

It applies to field officers, technicians or technical supervisors working for carriers, contractors or other service providers who install switching, transmission and radio networks and various transmission paths. It includes cable, optical fibre, radio, microwave and satellite telecommunications equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Network Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Plan for installation of telecommunications network equipment	1.1 Prepare for given work according to relevant work health and safety (WHS) and environmental requirements 1.2 Obtain access to site and assess the options for network installation 1.3 Identify existing and potential site hazards 1.4 Verify network equipment installation according to appropriate plans obtained from authorised personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.5 Investigate how equipment is to be connected to existing network systems 1.6 Develop and finalise installation plans to ensure minimal workplace disruption according to relevant legislation, regulations, codes and standards 1.7 Obtain tools and test equipment required for safe work practice 1.8 Notify affected parties of possible network outage
2 Install network hardware and cabling	2.1 Install network equipment according to plan and manufacturer instructions, using safe industry practices 2.2 Install equipment or insert equipment cards and modules 2.3 Install all cables according to specifications 2.4 Confirm service interruption is within limits agreed with customer 2.5 Document all installation drawings for customer
3 Install equipment accessories	3.1 Install alarms according to instruction manuals and specifications 3.2 Install operations administration and maintenance system according to specification 3.3 Install communication facilities for operational staff according to specification, taking into account any special needs of site and operational staff 3.4 Install operator communication facilities according to needs and specifications
4 Configure and test system	4.1 Install software and configuration instructions according to system specifications as required 4.2 Test to verify system performance according to customer requirements 4.3 Recommend changes as required and confirm with customer 4.4 Record all test results
5 Clean-up worksite and complete documentation	5.1 Remove and dispose of installation waste and debris from worksite according to environmental requirements 5.2 Restore changes made to work area during installation according to customer satisfaction 5.3 Complete all installation documents and present to customer 5.4 Declare asset ready for commissioning and integration 5.5 Notify customer and obtain sign-off

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance, but not explicit in the performance criteria.

Skill	Description
Reading	• Interprets information from plans, specifications and manufacturer instruction manuals
Writing	• Uses clear and specific terminology to produce installation plans and instructions appropriate for audience • Records results of tests in required format using industry-specific language
Oral Communication	• Uses appropriate strategies to establish and maintain dialogue, notify parties of disruptions and changes to planned work
Numeracy	• Accurately interprets measurements from plans and applies results to installation plans and documents • Calibrates test equipment and calculates and compares results with specifications
Navigate the world of work	• Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements • Identifies and acts on issues that contravene relevant policies, procedures and legal requirements
Interact with others	• Follows accepted communication practices and protocols • Uses a range of strategies to establish a sense of connection and build rapport with customers and co-workers
Get the work done	• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes, occasionally negotiating changes • Maintains required records and reports according to enterprise requirements • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations

Unit Mapping Information

ICTTEN312 Install telecommunications network equipment supersedes and is equivalent to ICTTEN302 Install telecommunications network equipment.

Release 1	This version released with ICT Information and Communications Technology Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to perform the tasks outlined in the elements, performance criteria, and foundation skills, and to:

- plan for and install network hardware and cabling according to equipment or system manuals and customer specifications
- configure and test installation
- verify cable continuity
- comply with all work health and safety (WHS) and environmental requirements and work practices
- notify customer of work progress and obtain sign-off.

Note: Evidence must be provided at least once when a specific volume or frequency is not stated.

Knowledge Evidence

The candidate must demonstrate the knowledge required to perform the tasks outlined in the elements, performance criteria, and foundation skills, which includes knowledge about:

- WHS requirements and environmental procedures relating to the activity and site conditions
- cabling types, connectors and cabling structures
- equipment and connections to carrier infrastructure and internet service provider (ISP) technologies for single and multi-dwelling environments:
  - carrier, asymmetric digital subscriber line, very-high-bit-rate digital subscriber line, fibre network termination device (NTD), hybrid fibre coaxial (HFC) modems
- electrical and/or optical properties of installation
- network and transmission equipment principles
- power requirements and electrical safety

© Commonwealth of Australia, 2025 Powering Skills Organisation

- typical performance parameters and faults that may be encountered in customer equipment and related connection and transmission media
- various test equipment types suitable for tests to be made
- handling and environmental compliance for waste disposal.
-

Assessment Conditions

Skills must be assessed in a workplace or simulated environment where conditions are typical of those in a telecommunications work environment or workplace.

Access is required to:

- site/s where installation of telecommunications network equipment can be conducted
- network testing equipment currently used in industry
- relevant regulatory and equipment documentation that impact telecommunications network equipment installation activities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN419 Implement and troubleshoot enterprise routers and switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to determine customer needs, use information communication technologies (ICT) to meet network requirements, rectify equipment errors and create appropriate workplace documentation.

It applies to individuals working as installers of internet protocol (IP) networks, enterprise network technicians, network administrators and other network support personnel.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Prepare for implementation of network routers and switches	1.1 Prepare for given job according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of network routers, network switches and network resources from job briefs or appropriate

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	personnel 1.4 Select and obtain network services and network application requirements according to enterprise procedures 1.5 Obtain identified operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2 Implement network switches and routers	2.1 Configure routers and switches according to manufacturer's specifications and enterprise procedures 2.2 Determine network addressing scheme for network connectivity, and verify using calculations 2.3 Activate, and verify wide area network (WAN) links provide network connectivity 2.4 Enable network services and network applications to the network to complete network connectivity process 2.5 Set up traffic access and filtering according to enterprise procedures
3 Troubleshoot network switches and routers	3.1 Monitor network performance and isolate faults using diagnostic and analysis tools 3.2 Troubleshoot network and internet connectivity according to manufacturer's specifications and enterprise procedures
4 Document configuration and troubleshooting records	4.1 Restore work-site to safe condition according to established safety procedures 4.2 Record and store essential implementation information according to enterprise procedures 4.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Powering Skills Organisation

Reading	1.1, 1.3, 1.4, 2.1, 2.5, 3.2, 4.2, 4.3	• Recognises and interprets technical, legislative and operational documentation to determine job requirements
Writing	1.1, 1.2, 4.2, 4.3	• Uses clear, specific and industry-related terminology to produce and update workplace documentation and in communications with relevant personnel
Oral Communication	1.1-1.3, 4.3	• Clearly liaises with personnel on technical matters • Uses listening and questioning skills to confirm understanding for requirements
Numeracy	2.2	• Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 4.1	• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others • Recognises and follows explicit and implicit protocols and meets expectations associated with own role
Interact with others	1.6	• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.4, 1.5, 2.1-2.5, 3.1, 3.2	• Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including troubleshooting common network problems • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency • Implements actions according to a predetermined plan, making adjustments if necessary • Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action • Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes on the basis of safety and specified work outcomes

Assessment Requirements for ICTTEN419 Implement and troubleshoot enterprise routers and switches

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- determine customer networking requirements
- configure routers and switches using hierarchical addressing over virtual local area networks (VLANs) to meet network link requirements
- enable and control access to network services and applications across the network
- diagnose and rectify network hardware and device configuration faults
- document configuration information, fault-finding history and remediation action.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise access control lists
- give examples of characteristics of a typical enterprise including:
  - features and applications
  - work health and safety (WHS) procedures
  - record keeping procedures
  - switching and routing protocols and strategies:
    - hierarchical addressing
    - multilayer switching
    - routing protocols
    - VLAN routing
- summarise implementation of enterprise wide area networks (WAN) links
- explain network diagnostic and troubleshooting techniques
- describe network modelling

© Commonwealth of Australia, 2025 Powering Skills Organisation

- specify how to configure and activate network access and security measures
- describe the process of configuring switches and routers to enable local area networks (LAN) and WAN links
- describe the connection process for enterprise networks using WAN services and applications
- describe the purpose of maintaining enterprise network documentation
- summarise the process and importance of troubleshooting network faults and implementing recovery actions
- describe the use of a hierarchical internet protocol (IP) network address scheme
- select and use tools and equipment to analyse enterprise networks.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a network facility and workstations
- operating instructions, installation documents and manuals
- hardware and software testing tools currently used in industry.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN420 Design, install and configure an internetwork

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to determine customer needs, create appropriate workplace documentation, connect and organise an internetwork according to design specifications, resolving technical problems as they arise.

It applies to individuals who design and install internet protocol (IP) networks including enterprise internetwork technicians, network administrators and network support personnel for large, medium and small office home office (SOHO) enterprises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for design and installation of internetwork	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of internetwork from job briefs and appropriate personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Obtain operating instructions, manuals, hardware and software testing methodologies 1.5 Consult appropriate personnel to ensure the task is coordinated effectively with others involved at the worksite
2. Design enterprise internetwork	2.1 Produce enterprise internetwork topology after considering technical requirements, physical and financial constraints and expansion projections 2.2 Determine network devices and network resources, according to enterprise procedures 2.3 Produce internetwork design including network security and router and switch configurations to meet design specifications and enterprise procedures
3. Install and configure designed internetwork	3.1 Install network hardware to network topology design plan according to enterprise procedures 3.2 Determine network addressing scheme for network connectivity, and verify using calculations 3.3 Configure routers and switches to perform logical connection of the internetwork 3.4 Conduct connectivity and performance tests to verify network installation meets design specification 3.5 Troubleshoot internetwork and internet connectivity according to manufacturer's specifications and enterprise procedures
4. Complete and document network design and installation	4.1 Restore worksite to safe condition according to established safety procedures 4.2 Record and store essential design and installation information according to enterprise procedures 4.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description

© Commonwealth of Australia, 2025 Powering Skills Organisation

Reading	1.1, 1.3, 2.2, 2.3, 3.1, 3.4, 3.5, 4.2, 4.3	• Recognises and interprets legislation, enterprise procedures, manuals and technical specifications to determine job requirements
Writing	2.1, 2.3, 4.2, 4.3	• Uses clear, specific and industry-related terminology to produce network documentation and maintain network records • Writes concisely when communicating with relevant personnel
Oral Communication	1.2, 4.3	• Negotiates with customers and peers to achieve design specifications • Uses listening and questioning skills to confirm understanding for requirements
Numeracy	3.2	• Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 2.2, 2.3, 3.1, 3.5, 4.1-4.3	• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others • Recognises and follows organisational procedures protocols and meets expectations associated with own role
Interact with others	1.3, 1.5	• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.4, 2.1, 2.3, 3.1, 3.3-3.5	• Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including troubleshooting common network problems according to helpdesk procedures • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency • Implements actions according to a predetermined plan, making adjustments if necessary • Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action • Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes, on the basis of safety and specified work outcomes

Assessment Requirements for ICTTEN420 Design, install and configure an internetwork

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- determine customer requirements
- design internetwork that uses advanced routing and addressing techniques
- install internetwork according to design specification
- configure network devices to meet design functionality
- document internetwork design, installation and configuration.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe enterprise work health and safety (WHS) procedures
- summarise open systems interconnect (OSI) layered communication model
- outline network requirements including:
  - applications
  - lifecycle
  - manageability
  - quality of service
- clarify network design concepts including:
  - business requirements
  - network topologies
  - physical and financial constraints
  - security
  - wired or wireless options

© Commonwealth of Australia, 2025 Powering Skills Organisation

- describe tool and equipment use
- outline troubleshooting components of this work including:
  - impact of network failure
  - maintenance
  - troubleshooting methodologies
- analyse impact of applications on traffic flow in the network
- describe network design methodologies used to design networks providing a range of services and applications found in larger networks
- define technical requirements, constraints and manageability issues for a given customer network
- identify and describe common tools and equipment used in internet work.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where design and installation of an internetwork network may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN421 Apply advanced routing protocols to network design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use software tools, equipment, software and protocols to configure and troubleshoot network routers.

It applies to individuals who work cooperatively with others, interpret technical information accurately and work proficiently with information communication technology (ICT). Installers of internet protocol (IP), small and medium sized enterprise (SME) network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan to apply routing protocols	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine nature and scope of network and network routing

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	requirements from job briefs and appropriate personnel 1.4 Determine hardware and software diagnostic test methodologies and testing resources according to enterprise procedures 1.5 Obtain operating instructions, manuals, hardware and software testing methodologies 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Build and test advanced routing	2.1 Set up router interfaces according to manufacturer's specifications and established procedures 2.2 Implement advanced routing protocols to achieve network design requirements 2.3 Implement classless addressing across a network to perform logical connectivity, and confirm using calculations 2.4 Troubleshoot network routing according to manufacturer's specifications and established procedures 2.5 Identify security threats and initiate control measures according to enterprise procedures
3. Complete and document advanced router installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 2.1, 2.4, 2.5, 3.2, 3.3	• Recognises and interprets enterprise procedures, manuals and specifications to determine job requirements
Writing	1.2, 3.2, 3.3	• Uses clear, specific and industry-related terminology to develop network documentation and maintain network records

Assessment Requirements for ICTTEN421 Apply advanced routing protocols to network design

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- plan network routing requirements to meet design specification
- configure advanced protocols on network routers
- manage network addressing
- troubleshoot network
- install network security.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- explain distance vector routing protocols RIP v1 and v2
- outline dynamic routing
- summarise enterprise work health and safety (WHS) procedures
- outline hybrid routing protocols enhanced interior gateway routing protocol (EIGRP)
- explain link-state routing protocols open shortest path first (OSPF)
- explain routing and packet forwarding
- describe routing tables
- summarise scalable routing strategies variable length subnet masking (VSLM) and classless inter-domain routing (CIDR)
- outline security protocols using access lists
- clarify static routing
- explain the use of software tools and equipment.

ICTTEN422 Configure and troubleshoot advanced network switching

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to perform network switch configuration and troubleshooting. This unit applies to large networks involving wireless local area networks (WLANs), virtual local area networks (VLANs), interVLAN routing, remote access management and operating system management of network devices.

It applies to individuals who work cooperatively with others, interpret technical information accurately, and work proficiently with information communication technology (ICT). Installers of internet protocol (IP), enterprise network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to work on switched network	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in

Assessment Requirements for ICTTEN422 Configure and troubleshoot advanced network switching

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- build and configure a routed network
- configure a virtual local area networks (VLAN) on a given network topology
- configure VLAN trunking and spanning tree protocols
- establish VLANs over a wireless network
- design and deploy remote access and network security.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline enterprise work health and safety (WHS) procedures
- explain interVLAN routing
- describe spanning tree protocol
- clarify switch and remote network security management
- describe the tool and equipment required, and their correct usage
- outline troubleshooting procedures
- summarise VLAN trunking protocol
- explain wireless local area network (LAN) set-up and access configuration.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- a site where configuring advanced network switching may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

ICTTEN423 Install and maintain a wide area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use appropriate tools, equipment, software and protocols to connect and support a wide area network (WAN).

It applies to individuals who work cooperatively with others, interpret technical information accurately and work proficiently with information communication technology (ICT). Installers of internet protocol (IP) networks, IP network technicians, network administrators and network support personnel complete this type of work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Telecommunications – Telecommunications Networks Engineering

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for installation and maintenance of network with WAN access	1.1 Prepare for given work according to work health and safety (WHS) and environmental requirements with appropriate personnel 1.2 Identify safety hazards and implement risk control measures in consultation with appropriate personnel 1.3 Determine network nature and scope from job briefs or appropriate personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.4 Select and obtain network hardware, software, WAN protocol and technology requirements according to enterprise procedures 1.5 Obtain operating instructions, manuals, installation procedures, hardware and software testing methodologies and testing resources 1.6 Consult appropriate personnel to ensure task is coordinated effectively with others involved at the worksite
2. Install and maintain WAN accessible network	2.1 Determine network addressing scheme for network connectivity, and confirm using calculations 2.2 Identify security threats and initiate control measures according to enterprise procedures 2.3 Set up and configure network to provide WAN access according to manufacturer's specifications and enterprise procedures 2.4 Use hardware and software analysis and diagnostic methodologies to test network connectivity
3. Complete and document WAN network installation	3.1 Restore worksite to safe condition according to established safety procedures 3.2 Record and store essential installation information according to enterprise procedures 3.3 Notify appropriate personnel of completion of the task according to enterprise procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.4, 2.2, 2.3, 3.2, 3.3	• Recognises and interprets enterprise procedures, manuals and specifications to determine job requirements
Writing	1.2, 3.2, 3.3	• Uses clear, specific and industry-related terminology to develop network documentation and maintain network records • Writes concisely when communicating with relevant personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

Oral Communication	1.2, 1.3, 1.6, 3.3	• Liaises and negotiates with others to achieve outcomes • Uses listening and questioning skills to confirm understanding for requirements
Numeracy	2.1	• Interprets technical data and performs calculations to verify information
Navigate the world of work	1.1, 1.2, 1.4, 2.2, 2.3, 3.1-3.3	• Takes personal responsibility for adherence to legal and regulatory responsibilities relevant to own work, and draws attention to any issues that may affect self or others • Recognises and follows organisational procedures and protocols and meets expectations associated with own role
Interact with others	1.6	• Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction
Get the work done	1.4, 1.5, 2.1-2.4, 3.2, 3.3	• Understands key principles and concepts underpinning design and operation of digital systems and tools, and applies these as required including using industry-standard troubleshooting • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency • Implements actions according to a predetermined plan, making adjustments if necessary • Makes decisions quickly and intuitively in familiar situations requiring immediate attention, drawing on past experience to identify key variables and determine the best course of action • Recognises and anticipates an increasing range of unexpected problems, their symptoms and causes, on the basis of safety and specified work outcomes

Assessment Requirements for ICTTEN423 Install and maintain a wide area network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 2.0.

Performance Evidence

Evidence of ability to:

- plan installation of a wide area network (WAN) accessible network
- select and apply WAN link protocols
- configure internet protocol (IP) addressing across WAN
- troubleshoot WAN communication issues
- install WAN access security measures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline enterprise work health and safety (WHS) procedures
- explain IP addressing services and network scaling
- summarise methods of securing network services including access control lists
- explain Open Systems Interconnection (OSI) layered communication model
- outline requirements to provide teleworker network services
- describe correct usage of relevant tools and equipment
- outline WAN link protocols including:
  - frame relay
  - high-level data link control (HDLC)
  - link access procedure, balanced (LAPB)
  - point-to-point protocol (PPP)
- summarise WAN troubleshooting methodologies and analysis and diagnostic tools.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances should be typical of those experienced in the telecommunications networks engineering field of work and include access to:

- a site where installation and maintenance of a WAN may be conducted
- tools, equipment and materials currently used in industry
- relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Application

This unit of competency covers the skills and knowledge required to access, organise and communicate information related to production, maintenance or associated processes or tasks that apply in manufacturing, engineering or related environments.

For accessing and recording of data requiring system knowledge and judgement, Unit MEM16008 Interact with computing technology should be selected.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015 Work safely and effectively in manufacturing and engineering

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Access information**	1.1	Determine information requirements of tasks and access relevant information from a range of sources
		1.2	Recognise and use workplace terminology correctly

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Organise and analyse information**	2.1	Interpret information and organise in accordance with work requirements
		2.2	Determine relevance and implications for immediate work requirements
3	**Communicate organised information using established workplace methods**	3.1	Identify purpose of communication and appropriate communication method
		3.2	Communicate information using established workplace methods

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range of sources include using one (1) or more of the following:

- job instructions
- specifications
- standard operating procedures (SOPs)
- charts
- lists
- documents
- computer data
- drawings
- sketches
- tables

© Commonwealth of Australia, 2025 Powering Skills Organisation

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- technical manuals and/or charts
- other applicable reference material

Determining relevance of information includes one (1) or more of the following:

- checking relevance of information to own work
- selecting task relevant information from a larger document or from a diagram
- preparing an opinion based on analysis of simple facts
- expressing an opinion on the cause of faults

Workplace terminology refers to one (1) or more of the following:

- equipment
- processes
- workplace areas
- staff
- procedures

Established workplace methods include using one (1) or more of the following:

- proforma reports
- data entry
- verbal
- drawings

Purpose of communication includes one (1) or more of the following:

- simple incident/non-conformance report
- maintenance request
- production records
- material usage records
- work records
- other standard workplace records

Assessment Requirements for MEM16006 Organise and communicate information

Modification History

Release 1. Supersedes and is equivalent to MEM16006A Organise and communicate information

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing and recording relevant information from a range of sources
- recognising and using workplace appropriate terminology
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information
- communicating using appropriate methods and procedures for a variety of situations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- types of information relevant to the workplace and required tasks
- terminology used in the workplace relevant to own work
- available sources of information
- information analysis techniques appropriate to tasks and position
- methods of categorising and organising information including correct sequencing of information
- methods of recording and communicating information.

Assessment Conditions

- Assessors must:
  - have vocational competency in organising and communicating information at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM16008 Interact with computing technology

Modification History

Release 1. Supersedes and is equivalent to MEM16008A Interact with computing technology

Application

This unit of competency defines the skills and knowledge required to use a range of computing technology typically used in manufacturing, engineering or related environments to access, input and store information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: **A**

Unit Weight: **2**

Pre-requisite Unit

MEM13015	Work safely and effectively in manufacturing and engineering
MEM16006	Organise and communicate information

Competency Field

Communication

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Follow standard operating procedures and comply with work health and safety (WHS) requirements at all times
		1.2	Identify job requirements from specifications, job sheets or work instructions
		1.3	Identify information/data required to be accessed, input

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			or stored and its source
2	**Access information/data**	2.1	Follow access procedures and navigate technology to find the required information/data
		2.2	Use relevant software application menus, functions and commands to locate required information/data
		2.3	Retrieve information/data using organisational procedures
		2.4	Check information/data for relevance to job requirements
3	**Input information/data**	3.1	Use relevant software menus, functions and commands to manipulate information/data
		3.2	Enter, change or remove information/data, as required
4	**Store information/data**	4.1	Save data/files following standard procedures prior to exiting the application
		4.2	Produce data output, as required
		4.3	Follow procedures for shutting down/logging off/exiting computing technology
5	**Access assistance as required**	5.1	Identify appropriate personnel and consult, as required
		5.2	Identify manuals, online help and other reference materials and use, as required

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Access procedures include one (1) or more of the following:	• logging on • security procedures • virus checks • start-up routines • application start-up
Technology includes one (1) or more of the following:	• hand held data recording devices • screen based equipment • personal computers • bar coders • tablets
Applications include one (1) or more of the following:	• word processing • spreadsheets • databases • customised engineering and manufacturing applications • material resource planning (MRP) • warehousing inventory applications • predictive reliability and maintenance applications • production data management applications
Data output includes one (1) or more of the following:	• report • email • chart • graph • printout • data transfer • labels

Assessment Requirements for MEM16008 Interact with computing technology

Modification History

Release 1. Supersedes and is equivalent to MEM16008A Interact with computing technology

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing, inputting, manipulating and storing information using workplace computing technology whilst following standard procedures
- accessing assistance, where required.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- functions and capabilities of computing technology used in the workplace
- functions of software applications
- use and features of data outputs.

Assessment Conditions

- Assessors must:
  - have vocational competency in interacting with computing technology at least to the level being assessed with relevant industry knowledge and experience
  - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

Application of the Unit

This unit is suitable for those working within a CAD or drafting work environment and may be applied across engineering and manufacturing environments. It covers competent use of a CAD program to perform basic drawing tasks used in the development of detail drawings. Drawings may include plans, diagrams, charts, circuits, systems or schematics.

This unit includes using computer equipment and selecting software functions in order to generate basic drawing elements.

Work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

© Commonwealth of Australia, 2025 Powering Skills Organisation

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm drawing requirements	1.1	Confirm purpose, scope, and information and presentation requirements for drawing
		1.2	Review available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify computing equipment and software used in the organisation
		1.4	Identify work flow and procedures for work supervision
		1.5	Examine requirements for presentation of drawings
2	Identify key features of CAD software	2.1	Describe types of CAD software used for detail drafting, their key features and suitability for producing specific drawing outcomes
		2.2	Describe types of CAD software used for design drafting, their key features and suitability for producing specific drawing outcomes
		2.3	Identify differences in CAD process to generate 2-D drawings and 3-D models, and reasons for each presentation
		2.4	Identify differences in CAD process to generate single and multiple view drawings, and reasons for each presentation
		2.5	Identify CAD software used in the organisation and confirm compatibility with other software programs and peripheral equipment
		2.6	Identify software features for linked specifications, catalogues or materials ordering
3	Access software and set up for	3.1	Open software and navigate organisational filing and library system

© Commonwealth of Australia, 2025 Powering Skills Organisation

	drawing work	3.2	Identify organisational and software templates and determine uses
		3.3	Identify organisational symbols, codes and standards to be applied in drafting work and how these are accessed and applied
		3.4	Apply workplace procedures to retrieve and manipulate required information and navigate computing technology
		3.5	Set up working environment
4	Produce basic drawing elements	4.1	Use CAD functions to produce basic drawing elements
		4.2	Use editing and transfer tools and methods to modify drawing elements
		4.3	Apply dimensions, text and symbols to drawing elements
		4.4	Import and export files into/out of working space
		4.5	Generate different views and perspectives
		4.6	Organise presentation of work
5	Complete CAD operations	5.1	Save and file drawing elements according to organisational procedures
		5.2	Print drawing elements and evaluate presentation
		5.3	Evaluate work and identify areas for improvement
		5.4	Close applications, perform CAD housekeeping and maintain organisational filing system

Required Skills and Knowledge

Required skills

Required skills include:

- literacy skills sufficient to read instructions for drawings work

© Commonwealth of Australia, 2025 Powering Skills Organisation

- using computer technologies and navigating software
- numeracy skills sufficient to interpret technical information and determine scaling and layout issues
- navigating software to:
  - manipulate drawing entities
  - modify dimension styles
  - create and use layers
  - manipulate the drawing origin
  - define and utilise symbol libraries
  - utilise grids/grid snaps and object snaps
  - display views at multiple scales
  - add title blocks/frame to layout a drawing for printing
  - prepare advanced drawings in plane orthogonal or equivalent
  - set up prototype drawings
  - define and extract attribute data
  - create bills of materials (BOM) utilising attribute data and third-party application software

Required knowledge

Required knowledge includes:

- general knowledge of different approaches to drawing
- awareness of copyright and intellectual property issues and legislation in relation to drawing
- environmental and occupational health and safety (OHS) issues associated with the tools and materials used for drawing
- quality assurance procedures
- CAD program capabilities and processes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use CAD software to produce graphics commonly used in drafting work.
Critical aspects for assessment and evidence required to demonstrate competency in this	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

© Commonwealth of Australia, 2025 Powering Skills Organisation

unit	knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • identify drawing work requirements and determine appropriate software functions and features • identify features and uses of CAD software used in detail and design drafting • access and use computing equipment and CAD software functions to produce drawing elements.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with drafting or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

CAD software	CAD software may include: • AutoCAD • Inventor • Revitt • Solidworks • ProSteel • XSteel • other programs
Key features	Key features may include: • 2-D • 3-D modelling • built-in specifications • file import/export • save • undo • scale
Specific drawing outcomes	Specific drawing outcomes may include • 2-D • 3-D modelling • drawings for specific engineering applications • orthographic/isometric/perspectives/schematics
Basic drawing elements	Basic drawing elements may include: • points, line angles, circles, arcs, planes, figures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	and solids • squares, rectangles and triangles • bisected lines and dividing lines • polygon, ellipse, spline, dimension and hatch
Editing and transfer tools and methods	Editing and transfer tools and methods may include: • delete, fillet, chamfer, erase, trim/extend, break, undo and redo commands • zooming and panning • moving, copying, rotating and mirroring • polar and rectangular duplication • object snaps • dimensions • selecting entities • dividing • scaling • measuring • grouping

Unit Sector(s)

MEM30032A Produce basic engineering drawings

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers producing drawings or similar graphical representations where the critical dimensions and associated tolerances and design specifications are predetermined.

Application of the Unit

This unit applies to any of the full range of engineering disciplines. All work is carried out under supervision and all specifications, dimensions and tolerances are predetermined. The unit covers application of introductory drafting skills to select and apply drawing protocols.

Manual drafting or computer-aided design (CAD) drawing equipment may be used.

If CAD skills are required, MEM30031A Operate computer-aided design (CAD) system to produce basic drawing elements, should be selected.

Drawings are completed to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

© Commonwealth of Australia, 2025 Powering Skills Organisation

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify drawing requirements	1.1	Identify information requirements for work and obtain all relevant job requirements and design specifications in accordance with workplace procedures
		1.2	Identify, interpret and analyse drawing requirements, specifications and relevant workplace information
		1.3	Interpret and apply industry terminology for drawing work
		1.4	Confirm communication practices required during drawing work
		1.5	Estimate time requirements for completing work
2	Select drawing features	2.1	Set up drawing list or register
		2.2	Determine level of detail and numbers of drawings required for work
		2.3	Plan presentation and layout, and determine drawing sheets, text style and size, and scales, appropriate for drawing work
		2.4	Identify features and applications of line types and thicknesses and select for drawing work
		2.5	Establish datums and dimensions
3	Prepare and detail drawings	3.1	Prepare drawings in plane orthogonal, isometric projection or equivalent
		3.2	Detail drawings in third angle projection, including auxiliary views, sections and assemblies
		3.3	Draw sections through engineering components incorporating correct use of cutting plane symbols and conventions

© Commonwealth of Australia, 2025 Powering Skills Organisation

		3.4	Include appropriate symbols for limits and fits, surface texture and geometric tolerances
		3.5	Resolve problems in consultation with a supervisor
		3.6	Check drawing compliance with work instructions and specifications
4	Select physical dimensions and produce engineering parts list	4.1	Where required, select components and/or materials from supplier/manufacturer catalogues using predetermined design specifications
		4.2	Produce an engineering parts list in accordance with workplace procedures
5	Complete drawing documentation	5.1	Obtain approval for drawings and/or parts list
		5.2	Store approved drawings and/or parts lists
		5.3	Catalogue and issue drawing and documentation in accordance with workplace procedures

Required Skills and Knowledge

Required skills

Required skills include:

- correctly using and maintaining equipment, including CAD
- manual drafting, filing and printing
- reading and interpreting specifications
- communicating with supervisor to confirm work requirements and outcomes
- visualising components
- preparing a drawing in plane orthogonal, isometric projection or equivalent
- determining drawing protocols required to complete drawing to industry standard
- selecting and locating text to support presentation
- establishing datums and dimensions for drawings
- drawing sections through an engineering component incorporating correct use of cutting plane symbols and conventions

Required knowledge

© Commonwealth of Australia, 2025 Powering Skills Organisation

Required knowledge includes:

- drafting media, including cartridge paper, tracing paper, drafting film and plain printing paper
- layout conventions
- effective use of blank space, location of notes and symbols
- sectioning
- overview of graphical techniques
- assembly drawings and explosion drawings
- schematics/line drawings, graphs and pictorials
- standard engineering drawing symbols, references and terminology
- application of surface finish symbols to drawings
- uses of different scales in industry applications
- uses and types of line weights
- uses and types of drawing sheets
- type of information provided with drawings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to produce basic engineering drawings to AS 1100.101–1992 Technical drawing – General principles.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• apply appropriate safety procedures • produce drawings in orthogonal and isometric projection to AS 1100.101–1992 Technical drawing – General principles • produce drawings in third angle projection, including auxiliary views, sections and assemblies • include all details, symbols and notation.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with producing basic engineering graphics, or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

Specifications	Specifications may be obtained from: • design information • customer

© Commonwealth of Australia, 2025 Powering Skills Organisation

	• ideas • concepts/expectations/requirements • sketches • preliminary layouts
Drawings	Drawings may include: • plans • diagrams • charts
Consultation	Consultation may include • reference to appropriate personnel, including technical supervisors, manufacturers, suppliers, contractors and customers
Engineering parts list	Engineering parts list may include: • part name • description of part • material specification or part number • quantities • other details, as required
Issued drawings	Issued drawings may include: • hard copy • photographic, slide or transparency form, including presentation as a single drawing and/or with other drawings • support documentation as a package

MEM30033A Use computer-aided design (CAD) to create and display 3-D models

Modification History

Release 1 - New unit of competency

Unit Descriptor

This unit of competency covers using a computer-aided design (CAD) program to produce and plot basic 3-D view drawings.

Application of the Unit

This unit applies to the production of 3-D models using CAD software and associated equipment. This will include the use of region and solid modelling techniques, section views and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques.

All work is conducted under supervision.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

MEM30031A	Operate computer-aided design (CAD) system to produce basic drawing elements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

© Commonwealth of Australia, 2025 Powering Skills Organisation

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm drawing requirements	1.1	Confirm purpose, scope and information and presentation requirements for drawing
		1.2	Identify, interpret and analyse available information relevant to project and work requirements, and identify and address further information needs
		1.3	Identify computing equipment and software used in the organisation
		1.4	Identify work flow and procedures for work supervision and confirm communication requirements through project
		1.5	Examine requirements for presentation of drawings
2	Create and display 3-D views	2.1	Set up a 3-D environment on the screen to allow multiple viewing
		2.2	Create 3-D views on the screen by manipulation of drawing planes and insertion of 3-D geometric shapes
		2.3	Draw on any plane of the 3-D view
		2.4	Use editing functions to modify 3-D geometric shapes in creating 3-D views
		2.5	Produce wire line, surface and solid face displays in isometric, perspective and orthographic projections
3	Detail 3-D model	3.1	Extract the mass and surface area of a given solid model made from a nominated material
		3.2	Apply basic rendering techniques to render solid model to a specified set of criteria
4	Save completed	4.1	Save file in an appropriate format to enable retrieval and

© Commonwealth of Australia, 2025 Powering Skills Organisation

drawing file in various formats		use in a CAD system
	4.2	Save file in other formats to enable retrieval in other software applications

Required Skills and Knowledge

Required skills

Required skills include:

- reading and interpreting engineering specifications
- organising information
- using computer and peripherals
- using CAD program
- saving 3-D modes in various file formats
- preparing drawings in plane orthogonal, isometric projection or equivalent

Required knowledge

Required knowledge includes:

- region modelling techniques
- solid modelling techniques
- development of sectioned models
- use of cutting plane
- use of cross hatching
- use of pre-drawn library files and primitives to produce a 3-D model
- use of third level software to produce 3-D models
- how to extract mass and area properties
- how to extract area properties from region models
- application of basic rendering techniques to a 3-D model

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria required skills and knowledge range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to use CAD to create and display 3-D models.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. Specifically the candidate must be able to: • work within typical site/teamwork structures and methods • apply worksite communication procedures • comply with organisational policies and procedures, including quality requirements • participate in work meetings • comply with quality requirements • use industry terminology • apply appropriate safety procedures • identify modelling work requirements and determine appropriate software functions and features • apply CAD functions to produce a rendered 3-D model to Australian Standard (AS) 1100.101–1992 Technical drawing – General principles.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using CAD to create and display 3-D models or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways, including direct observation, supervisor's reports, project work,

© Commonwealth of Australia, 2025 Powering Skills Organisation

	samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Range Statement

Multiple viewing	Multiple viewing includes: • top views • front and side views • general 3-D view
3-D geometric shapes	3-D geometric shapes may include: • arcs and lines • spheres • cones • cylinders • boxes

MSS402001 Apply competitive systems and practices

Modification History

Release 1 - Supersedes and is equivalent to MSS402001A Apply competitive systems and practices

Application

This unit of competency covers the skills and knowledge required to implement basic improvement practices within an organisation using competitive systems and practices. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to operations. It would typically be carried out working as part of a team.

This unit applies to an individual in an organisation that has embarked on competitive systems and practices. The unit covers the skills and knowledge required to contribute to the competitive systems and practices processes and assumes that they are to be used within the scope of the individual's job and authority.

This unit requires the application of skills associated with planning and organising an individual's own role within the competitive systems and practices framework.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

essential outcomes.		demonstrate achievement of the element.	
1	**Identify own place in the value chain**	1.1	Identify customers relevant to own work and their needs/requirements.
		1.2	Identify suppliers for own work.
		1.3	Identify value contributions along the chain.
		1.4	Identify and recommend methods of increasing own contribution to the value chain.
2	**Improve the product and process value**	2.1	Identify customer features/benefits in the product and process.
		2.2	Identify aspects of product and process which contribute to customer features/benefits.
		2.3	Identify aspects of product and process which do not contribute to customer benefits/features.
		2.4	Recommend methods of reducing waste and increasing features/benefits.
3	**Use competitive systems and practices**	3.1	Identify competitive systems and practices used in organisation and own work area.
		3.2	Apply practices appropriate for the job or process.
		3.3	Monitor the job/process and make adjustments to improve it in accordance with procedures.
		3.4	Identify own skill requirements and seek skill development, if required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Customers include one or more of:

- internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable
- final customers used as the basis for the identification of value and waste.

Suppliers include one or more of:

- internal suppliers
- external suppliers sufficiently close to the individual's work as to be easily identifiable.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

- any similar instructions provided for the smooth running of the plant.

Unit Mapping Information

Assessment Requirements for MSS402001 Apply competitive systems and practices

Modification History

Release 1 - Supersedes and is equivalent to MSS402001A Apply competitive systems and practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to always apply competitive systems and practices to their own job to:

- identify own place in the value chain relevant to their job
- use competitive systems and practices tools and thinking
- recommend improvements in product and/or process.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- customer requirements and their role in fulfilling them
- the value chain for products they make and their place in it
- identification of muda (waste) and its reduction.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of competitive systems and practice in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402020 Apply quick changeover procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Application

This unit of competency covers the skills and knowledge required to apply quick changeover procedures in an organisation implementing competitive systems and practices.

This unit applies to individuals in an organisation which is implementing competitive systems and practices and is pursuing quick changeover as one of its competitive operations tools. The unit can apply to quick changeovers of equipment, processes, batches or product type. It requires the application of skills associated with applying quick changeover procedures, including the planning and organising of own work, identifying problems and making suggestions for improvement of procedures.

Particular technical skills may also be required in some operations sectors and for some jobs. These skills should be gained from the Training Package relevant to the individual's industry and occupation.

This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. The unit is also not applicable to a maintenance/PVI shutdown as experienced by continuous process manufacturers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for changeover**	1.1	Determine when changeover will be required.
		1.2	Review plans and instructions for quick changeover.
		1.3	Identify role of others in quick changeover.
		1.4	Obtain all required tools/parts/materials for changeover.
		1.5	Organise process and tools/parts/materials ready for changeover.
2	**Make quick changeover**	2.1	Plan changeover according to quick changeover principles.
		2.2	Liaise and work with relevant people in quick changeover.
		2.3	Complete changeover according to procedures.
		2.4	Check output meets specification.
		2.5	Debrief with all relevant stakeholders.
		2.6	Note any steps which cause a problem.
		2.7	Recommend changes to problematic steps.
3	**Improve work health and safety (WHS)**	3.1	Identify hazards to self or others in all steps/actions.
		3.2	Determine risks from each hazard.
		3.3	Identify actions which may be performed in a more ergonomic manner.
		3.4	Recommend changes to improve WHS.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Changeover may include one or more of:	• an exchange of equipment (often dies or tools (traditional)) • a change between products/batches or between campaigns or processes. It may be any quantum change to produce a different product or undertake a different process.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Set-up can be divided into two types:	• internal set-up (requires work to stop, work that can be done only when the machine or process is not actively engaged in production, computers etc. need to be reset and restarted) • external set-up (work can continue during the changeover, work can be done concurrently with the machine or process performing production duties).
Set-up time includes:	• the work time required to change over a machine or process from one item or operation to the next item or operation.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=5b04f318-804f-4dc0-9463-c3fb9a3fe998

Assessment Requirements for MSS402020 Apply quick changeover procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more quick changeovers, to:

- identify the scope and equipment to be used in a quick changeover implemented in their own workplace
- plan and complete changeover
- identify problems in quick changeovers
- contribute suggestions for improvement.

Knowledge Evidence

- Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision and to solve routine problems, including knowledge of:
- principles of quick changeover, including:
  - setting of target time for changeover
  - conversion of internal set-up time to external set-up time, where appropriate
  - simplification of changeover steps
  - monitoring and continuous improvement of changeovers
- purpose and requirements of changeover
- minimisation of changeover waste (e.g. scrap and energy)
- quality requirements for products and purposes
- relevant operational procedures
- health, safety and environment (HSE) principles relevant to own job.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include actual quick changeovers, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Application

This unit of competency covers the skills and knowledge required to work in an organisation implementing and/or utilising Just in Time (JIT) procedures.

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Respond to indicator of demand**	1.1	Identify pull of product through work role.
		1.2	Recognise indicator of flow authorisation.
		1.3	Identify production or service required.
2	**Make products or deliver service to demand**	2.1	Make product or deliver service as required by ticket.
		2.2	Identify any factors likely to prevent demand being satisfied in own work or work of the team.
		2.3	Take action in accordance with procedures.
3	**Update demand information as required**	3.1	Record information on ticket to procedures, as required.
		3.2	Facilitate operation of flow authorisation as part of work.
4	**Recommend improvements**	4.1	Examine the operation of the JIT system as it relates to own work.
		4.2	Identify areas for improvement.
		4.3	Identify any additional personal skill requirements to implement JIT procedures.
		4.4	Recommend improvements.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect

performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
JIT requires availability:	• precisely when the service, product or operation is to be produced or undertaken • in the right quantity and at the right quality.
Product includes one or more of:	• a physical product • a supporting utility service, such as water, gas and power • some other service (e.g. cranes and forklifts).
Indicator of demand includes one or more of:	• kanban bin, ticket or similar • some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software).
Procedures (written, verbal, visual, computer based, etc.) include one or	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes

Assessment Requirements for MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more JIT procedures, to:

- identify the indicators of demand and the flow authorisation system in their own workplace
- relate products and services supplied by suppliers and customers to the flow authorisation system
- interpret received indicators of demand correctly for quantity, quality and time of delivery
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- JIT methods relevant to own job
- relevant indicator of demands for own job
- own role in flow authorisation
- faults and other issues that may threaten the JIT delivery of own product or service
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include JIT procedures in own workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402040 Apply 5S procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Release 2. Duplicated performance Criteria removed. Equivalent outcome.

Application

This unit of competency covers the skills and knowledge required by an individual to apply 5S procedures to their own job and work area. The unit assumes the individual has a particular job and an allocated work area and that processes in the work area are known by the individual.

This unit applies to an individual in an organisation who works in an operational position as part of production, maintenance, logistics, etc. The unit can also apply to individuals in other organisations who have a discrete role and responsibility for individually managed processes.

This unit applies where an organisation has decided to embark on a competitive systems and practices strategy and as part of this has adopted the philosophy of 5S as one of the tools to improve performance. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.

This unit requires the application of skills associated with planning and organising, problem solving and self-management, in order to identify and implement 5S housekeeping practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Sort needed items from unneeded**	1.1	Identify all items in the work area.
		1.2	Sort items to achieve deliverables and value expected by downstream and final customers.
		1.3	Sort items required for regulatory or other required purposes.
		1.4	Place any non-essential item in an appropriate place other than the workplace.
		1.5	Regularly check that only essential items are in the work area.
2	**Set the workplace in order**	2.1	Identify the best location for each essential item.
		2.2	Place each essential item in its assigned location.
		2.3	After use immediately return each essential item to its assigned location.
		2.4	Regularly check that each essential item is in its assigned location.
3	**Shine the work area**	3.1	Keep the work area clean and tidy at all times.
		3.2	Conduct regular housekeeping activities during shift.
		3.3	Ensure the work area is neat, clean and tidy at both beginning and end of shift.
4	**Standardise activities**	4.1	Follow procedures.
		4.2	Follow checklists for activities, where available.
		4.3	Keep the work area to specified standard.
5	**Sustain the 5S system**	5.1	Clean up after completion of job and before commencing next job or end of shift.
		5.2	Identify situations where compliance to standards is unlikely and take actions specified in procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

5.3 Inspect work area regularly for compliance to specified standard.

5.4 Recommend improvements to lift the level of compliance in the workplace.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

5S includes all of:

- sort

© Commonwealth of Australia, 2025 Powering Skills Organisation

- set in order
- shine
- standardise
- sustain.

Sort includes all of:

- separating necessary from unnecessary items (equipment and supplies)
- keeping only what is absolutely necessary for the work processes that comprise the job
- disposing of (or relocating) all other items.

Set in order includes all of:

- assigning required equipment and materials appropriate locations in the work area
- consideration of frequency of use, ergonomics and work health and safety (WHS)
- provision of facilities to maintain the locations.

Shine includes one or more of:

- keeping the work area clean at all times which should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process
- keeping work area organised
- noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention.

Best location includes one or more of:

- changes to the layout of furniture
- arrangement of equipment
- provision of services
- location of personnel.

Standardising includes one or more of:

- activities that help maintain the order and the housekeeping standards
- using procedures and checklists developed from a procedure.

Sustain includes one or more of:

- making sure that daily activities are completed every day regardless of circumstance
- cleaning up after a job
- undertaking inspections, including:
- informal inspections carried out often, at least weekly
- formal inspections carried out at least monthly

© Commonwealth of Australia, 2025 Powering Skills Organisation

- generating continuous improvement actions from daily activities
- following up specific actions to generate continuous improvement.

Items in work area include one or more of:

- tools
- jigs/fixtures
- materials/components
- plant and equipment
- manuals
- personal items (e.g. bags, lunch boxes and posters)
- safety equipment and personal protective equipment (PPE)
- other items which happen to be in the work area.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Release 2. Equivalent to MSS402040 Apply 5S procedures Release 1.

Assessment Requirements for MSS402040 Apply 5S procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Release 2. Duplicated performance Criteria removed. Equivalent outcome.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, in one (1) or more allocated areas, to:

- implement and sustain 5S in own workplace
- identify own tasks and responsibilities
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- purpose of 5S in the workplace
- meaning and application of 5S steps to own workplace and job
- principles of efficient workplace organisation
- identifying waste (muda)
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of 5S procedures in a work area where 5S has not previously been undertaken, or, demonstration of sustaining 5S principles in a work area that has already undergone prior 5S procedures
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402080 Undertake root cause analysis

Modification History

Release 1. Supersedes and is equivalent to MSS402080A Undertake root cause analysis

Application

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA). This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

This unit applies to individuals working in an organisation that is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Recognise problems**	1.1	Identify features or occurrences indicative of a problem.
		1.2	Use appropriate tools, techniques and charts to define the problem.
2	**Implement quick fix**	2.1	Recommend a quick fix within the scope of competency and authority.
		2.2	Use technology or processes relevant to the problem to implement quick fix.
3	**Determine root cause**	3.1	Identify a range of possible causes.
		3.2	Gather data and other information to eliminate or confirm possible causes.
		3.3	Use available data and information to link causes and effects.
		3.4	Seek assistance to obtain additional information if problem is beyond own competency/authority.
		3.5	Identify root cause.
4	**Develop permanent solution**	4.1	Identify a range of methods to eliminate the root cause or break the cause tree.
		4.2	Select the most appropriate solution.
		4.3	Liaise with relevant people.
		4.4	Recommend or implement solution within the limits of competency and authority.
		4.5	Monitor impact of solution and make further recommendations, as required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Problems include one or more of:

- variation to normal plant or equipment operation
- unplanned or non-conforming process or operations outcomes
- out of specification products
- excess scrap
- accidents and emergencies
- regulatory breaches
- customer returns and complaints
- reduction or loss of sales.

Techniques/charts include one or more

- control charts
- Pareto charts

© Commonwealth of Australia, 2025 Powering Skills Organisation

of:

- run charts
- flow charts
- cause and effect diagrams
- tree diagrams
- 5 Whys analysis
- organisation specified/mandated methods.

Assessment Requirements for MSS402080 Undertake root cause analysis

Modification History

Release 1. Supersedes and is equivalent to MSS402080A Undertake root cause analysis

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more problems, to:

- undertake problem identification
- use appropriate processes to achieve root cause identification
- recommend solutions and implementation procedures to problems within own area
- monitor implementation of solutions.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- methodology of root cause analysis, including:
  - difference between quick fix and root cause elimination
  - breaking of causal tree
- indicators of problems and variances to normal operation
- relevant analysis tools (e.g. Pareto charts, 5 Whys).

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include a root cause analysis in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402081 Contribute to the application of a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS402081A Contribute to the application of a proactive maintenance strategy

Application

This unit of competency covers the skills and knowledge required by an individual to make a positive contribution to proactive maintenance strategies, including actions that contribute to equipment uptime and overall equipment effectiveness (OEE). This unit applies in an organisation which is following a predictive, preventative or reliability-centred maintenance strategy and which requires commitment from all employees. The employee should 'own' their equipment/plant and take an active part in the implementation of the strategy within the scope of their authority.

This unit requires the application of skills associated with accessing and maintaining equipment/plant documentation. It also requires problem solving, initiative and enterprise to continually monitor and maintain operational performance of equipment/plant used in work role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

essential outcomes.		demonstrate achievement of the element.	
1	**Maintain equipment/plant**	1.1	Keep equipment/plant within area of responsibility clean.
		1.2	Ensure equipment/plant is serviced and adjusted, as required, in accordance with procedures and own level of responsibility.
		1.3	Access manufacturer manuals and specifications, where required, to expand knowledge on the maintenance of equipment/plant.
		1.4	Access and update documentation on equipment/plant operation and maintenance in accordance with workplace procedures.
2	**Monitor operation of equipment/plant**	2.1	Regularly check key conditions of the equipment/plant as defined in workplace procedures.
		2.2	Regularly check equipment/plant OEE.
		2.3	Note any deviation from conditions specified in procedures.
3	**Identify deviations and patterns**	3.1	Identify any previous occurrences of a deviation.
		3.2	Identify any related deviations which have occurred.
		3.3	Identify any unusual occurrence which may be related to a deviation.
4	**Take action appropriate to competency and authority on deviation**	4.1	Liaise with relevant people regarding the deviation and the solution.
		4.2	Implement solution and/or assist with the implementation of the solution, as appropriate.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • OEE • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Uptime includes one or more of:	• the overall availability of the plant • the inverse of downtime or the unavailability of the plant • the fraction, percentage or time the plant is available for production.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402081 Contribute to the application of a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS402081A Contribute to the application of a proactive maintenance strategy

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to monitor equipment/plant in one (1) or more areas, and to:

- maintain the equipment/plant to the required standard
- identify deviations in OEE requiring action
- take the action required by the procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- interpretation of trends or other non-random variation
- determining OEE (availability x performance x quality rate) and uptime metrics
- principles of operation of plant/equipment and factors likely to cause deviations in performance
- identifying deviations requiring action
- appropriate actions for dealing with deviations.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of proactive maintenance in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

PMASUP410 Develop plant documentation

Modification History

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Application

This unit of competency covers the skills and knowledge required to develop, establish and evaluate plant documentation in response to identified information requirements. Examples of information requirements include workplace documents for the introduction of new systems, processes, equipment and record keeping requirements.

This unit of competency applies to senior technicians, team leaders and supervisors, or those in similar roles who are required to apply in-depth knowledge of process and plant to in order to investigate the need for new plant documentation, determine operating principles and best practice in consultation with others, draft and validate the plant documentation, and communicate and distribute the new/amended documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Identify information need/deficiency**	1.1 Identify the need for documentation in accordance with company requirements
		1.2 Evaluate current documentation where existent

© Commonwealth of Australia, 2025 Powering Skills Organisation

		1.3	Define information need/deficiency
		1.4	Discuss information requirements with appropriate personnel
2	**Develop plant documentation**	2.1	Specify information need and set/prioritise objectives
		2.2	Analyse existing documentation/records in accordance with specified requirements
		2.3	Source information and determine operating principles, best practice and other content as required.
		2.4	Develop/amend documentation as a draft in accordance with specifications to standard format
		2.5	Issue documentation to appropriate personnel for review
		2.6	Edit documentation and amend in accordance with review requirements
		2.7	Complete documentation to satisfy the initial identified need/deficiency
3	**Communicate changes to plant documentation**	3.1	Explain and communicate documentation to all relevant personnel
		3.2	Distribute documentation to all appropriate personnel
		3.3	Evaluate implementation of documentation
		3.4	Amend documents, if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Plant documentation

Plant documentation to be developed/amended includes one or more of the following:

- operating procedures
- work instructions
- incident procedures
- operating manuals
- quality manuals and procedures
- training program contents/materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for PMASUP410 Develop plant documentation

Modification History

Release 1. Supersedes and is equivalent to PMASUP410B Develop plant documentation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- review and interpret a range of relevant sources of information and select relevant content
- communicate and consult effectively with all stakeholders
- clearly convey complex/technical information in writing
- use language, structures and formats that are appropriate to information needs, the reader and organisation requirements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- principles of operation of plant/equipment
- process-specific science (e.g. physics, chemistry and biochemistry) and mathematics
- organisation procedures, including those covering:
  - information systems
  - data management
  - quality
  - safety, emergency and hazard control
  - policy/procedure development
  - document control and approvals
  - style guides and standards for documentation
  - use of internet
  - relevant standard operating procedures
- standard codes of practice relevant to developing plant documentation
- sources of information, including:
  - manufacturing specifications
  - product specifications
  - company policies and procedures
  - customer requirements
  - industry/work place codes of practice
  - state/territory work health and safety (WHS) legislation and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- ISO and other industry standards and regulations
- industry associations, networks and professional bodies.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include developing and/or amending at least two (2) types of plant documentation, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
  - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
  - conducting on-the-job training/assessments of the type of work being assessed
  - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

RIIRAI609D Establish and maintain electrical installations, reticulation and protection system

Modification History

Release	Comment
1	This unit replaces RIIQAI609A Establish and maintain electrical installations, reticulation and protection system
2	Plan and Prepare element added.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit develops a participant's skills and knowledge required to establish and maintain electrical installations, reticulation and protection systems in Coal mining.

This unit is appropriate for those working in management or technical specialist roles.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Unit Sector

Coal mining

Elements and Performance Criteria

1. Plan and prepare for electrical installations, reticulation and protection	1.1 Access, interpret and apply electrical installations, reticulation and protection system documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues and implement control measures 1.4 Select and wear personal protective equipment appropriate for

© Commonwealth of Australia, 2025 Powering Skills Organisation

	work activities 1.5 Identify design/selection specifications and critical aspects of the systems from a comprehensive analysis of operating requirements 1.6 Identify systems options from an analysis of all relevant technical, operational and financial information 1.7 Select the preferred systems options on the basis of performance against specification requirements
2. Provide power supply systems for the mine site	2.1 Install, maintain, review and modify mine power supply systems 2.2 Undertake processes and procedures and ensure reliability and quality of supply taking into account transients, harmonics, over-voltages, voltage regulation, lightning and stray currents 2.3 Plan and install alternative power supply associated with mine site conditions and safety needs 2.4 Undertake processes and procedures to protect high energy sources (sub stations and transformers) through the selection and installation of switchgear and protective devices 2.5 Provide mine illumination systems and equipment 2.6 Plan and install battery and associated charging equipment 2.7 Review, audit, report and maintain all power supply systems
3. Provide electrical protection system for mine sites	3.1 Access, interpret and apply the compliance documentation requirements related to mine electrical protection system 3.2 Install and maintain the electrical protection system 3.3 Identify, isolate, rectify faults in electrical installations and verify ability of the system through recognised decision-making processes, including the use of fault level calculations, discrimination and component ratings 3.4 Apply management decision-making processes for the maintenance, examination and testing of electrical protection systems relative to mine site and safety needs 3.5 Review, modify, audit and maintain all electrical protection systems and devices
4. Provide cables from power source to point of usage	4.1 Access, interpret, apply and implement the compliance documentation requirements related to provision and use of mine cables 4.2 Identify, select and install mine cables 4.3 Identify, report and rectify mine cable faults and hazards in accordance with mine site and hazard control requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	4.4 Inspect mine cables for their integrity, usage, consequence of fault/damage and previous repairs 4.5 Carry out management, inspection, application, testing, fault finding and repair
5. Provide mobile machinery and electrical apparatus	5.1 Access, interpret, clarify and apply the compliance documentation requirements related to provision and use of mobile machinery and electrical apparatus 5.2 Identify, select and install mobile machinery and electrical apparatus 5.3 Inspect, monitor, report and rectify mobile machinery and electrical apparatus faults and hazards 5.4 Carry out testing
6. Provide overall electrical services that apply to production systems	6.1 Access, interpret, clarify and apply the compliance documentation requirements related to overall electrical services that apply to production systems 6.2 Select, install, monitor and maintain mine communication systems 6.3 Select, install, monitor, modify and maintain the electrical components of the gas monitoring and detection systems 6.4 Select, install, monitor, modify and maintain control systems 6.5 Control, monitor and rectify electromagnetic interference that may affect the safe use of electrical systems and other mining equipment 6.6 Select, install, monitor, modify and maintain remote control systems on mining equipment 6.7 Select, install, monitor, modify and maintain welding equipment and energy delivery sources, including pre and post operations 6.8 Identify, control and manage hazards from electrostatic charges
7. Provide safe electrical work procedures	7.1 Access, interpret, clarify and implement the compliance documentation requirements related to safe electrical work procedures 7.2 Monitor and audit safe electrical work procedures 7.3 Determine and implement training needs

Assessment Requirements for RIIRAI609D Establish and maintain electrical installations, reticulation and protection system

Modification History

Release	Comment
1	This unit replaces RIIQAI609A Establish and maintain electrical installations, reticulation and protection system
2	Plan and Prepare element added.
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- implements procedures and techniques for the safe, effective and efficient completion of the establishing and maintenance of mine electrical installations, reticulation and protection systems including:
  - accessing, interpreting and applying legislative, organisation and site requirements and procedures
  - accessing, interpreting and applying:
  - technical information
  - records and reports
  - applying the principles of electrical installations, reticulation, control and protection system theory
  - applying procedures for the evaluation of designs and installations of electrical installations, reticulation, control and protection systems at a mine in terms of safety requirements
  - applying risk management processes for the risks associated with and consequences of failure of electrical installations, reticulation, control and protection systems at a mine

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - applying risk management processes for the risks associated with and consequences of changes to electrical installations, reticulation, control and protection systems at a mine
    - applying development procedures, for the management, operation, testing and maintenance of the mines electrical installations, reticulation, control and protection systems
    - applying procedures for the planning, coordination and documentation of work on the mines electrical installations, reticulation, control and protection systems
    - applying training needs analysis
- works effectively with others to establish and maintain mine electrical installations, reticulation and protection systems including:
    - managing people and processes
    - resolving conflict
    - coordinating human, financial and physical resources
    - developing, initiating and administering work plans
    - interpreting and applying operational performance data
    - engaging internal and external stakeholders
- demonstrates completion of the establishing and maintenance of mine electrical installations, reticulation and protection systems that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
    - identifying the relevant information and scope of the work
    - identifying the full range of specification requirements
    - identifying all aspects of mine power supply systems
    - identifying options for power supply systems, electrical protection systems, and cables from power source to point of usage

Knowledge Evidence

The candidate must demonstrate knowledge of the in establishing and maintaining electrical installations, reticulation and protection systems through:

- legislative, organisation and site requirements and procedures for;
    - inspections and reporting
    - hazards associated with high energy systems in mining
- electrical protection theory, including earthing systems, coordination and fault level calculations, step and touch potential management
- fault discrimination and fault clearance characteristics of equipment
- mining electrical protection systems, including earth continuity monitoring, earth leakage protection, earth fault current limitation and relevant standards
- typical low and high voltage switching and distribution systems on mines
- transient over-voltages, harmonics and lightning theory, hazards and protection schemes

© Commonwealth of Australia, 2025 Powering Skills Organisation

- mining cables, faults and consequences, cable protection systems, standards and cable repair
- classification of hazardous areas and explosion-protected electrical equipment principles, general requirements, verification, testing and standards
- automatic control system hazards, protection schemes and standards
- electromagnetic interference hazards, protection schemes and standards
- management and control of processes for change to software and hard wired based systems
- electromagnetic interference hazards, protection schemes and standards
- radio remote control systems hazards, protection schemes and standards
- safety protective devices associated with welding machines such as Voltage Reducing Devices
- the principles of electrical installations, reticulation, control and protection system theory
- the risks associated with and consequences of failure of electrical installations, reticulation, control and protection systems at a mine
- the risks associated with and consequences of changes to electrical installations, reticulation, control and protection systems at a mine

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIRIS601D Establish and maintain the risk management system

Modification History

Release	Comment
1	This unit replaces RIIRI601A Establish and maintain the risk management system
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to establish and maintain the risk management system in the Resources and Infrastructure Industries.

This unit is appropriate for those working in management roles.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

1. Plan and prepare to establish the framework for the risk management system	1.1 Access, interpret and apply risk management documentation, and ensure the work activity is compliant 1.2 Develop the policy and objectives that express the organisation's commitment to risk management 1.3 Establish and implement the structure and framework 1.4 Define, allocate and document responsibilities for risk management in job descriptions and duty statements
2. Establish processes to support the risk management system	2.1 Develop, document and communicate procedures covering risk identification, assessment, treatment, communication, consultation, monitoring and review 2.2 Provide or arrange appropriate development and/or training for personnel 2.3 Identify, obtain and maintain information sources to support the system, and make them available to personnel to implement 2.4 Provide information on known and intended process changes

© Commonwealth of Australia, 2025 Powering Skills Organisation

	and enhancements to responsible personnel 2.5 Determine and make available organisation's criteria for assessing the acceptability of risks to responsible personnel 2.6 Obtain and provide expert advice to responsible personnel
3. Plan and facilitate the implementation of the risk management system	3.1 Plan, schedule and document the systems coverage 3.2 Monitor activities and achievement targets, and provide and focus resources to ensure the work plan is satisfied 3.3 Provide support and encouragement to those responsible for the system activities 3.4 Review and update the system work plan when changing circumstances are anticipated or occur
4. Audit the management processes	4.1 Formally audit risk management processes, including operating procedures and implementation processes, to ensure compliance and effectiveness 4.2 Respond to changed requirements disclosed during audits in a systematic and timely manner 4.3 Complete and retain risk management documentation including the reasons for and changes made to the system
5. Monitor completion of records and reports	5.1 Ensure all risk management documentation is produced and processed 5.2 Ensure all risk management documentation is maintained

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIRIS601D Establish and maintain the risk management system

Modification History

Release	Comment
1	This unit replaces RIIRI601A Establish and maintain the risk management system
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locate and apply relevant documentation, policies and procedures
- demonstrates completion of the establishment and maintenance of the risk management system that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - reading, interpreting and applying risk management legislation to develop and maintain risk management systems
  - applying procedures for developing and maintaining procedures and policies
  - applying procedures for facilitating and documenting management planning
  - applying procedures for monitoring and deciding on changes to process
  - explaining complex risk management information to superiors/subordinates
  - applying coaching and mentoring support to supervisors who are carrying out risk management activities
  - actively encouraging the free exchange of information through consultation, using technology mediums and policies
  - preparing written reports communicating the options for managing risk, clarifying the decision and reviewing of outcomes
  - performing audits of risk management processes, recognising positive behaviours of others contributing to the management of risk, and providing direction and amendment to others and processes when the compliance is not achieved

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

The candidate must demonstrate knowledge of establishing and maintaining risk management systems through:

- applies active listening, identifies barriers to communication and provides clarification to make meaning
- action planning methods
- actions based on cost, safety, and welfare issues
- work procedures
- risk management system reporting and recording procedures
- hazard identification, risk assessment and risk treatment processes

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

RIIWHS202D Enter and work in confined spaces

Modification History

Release	Comment
1	The unit replaces RIIOHS202A Enter and work in confined spaces.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to enter and work in confined spaces in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles undertaking work in confined spaces.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1 Plan and prepare for working in confined space	1.1 Access, interpret and apply procedures for confined space entry and the environmental management plan and ensure the work activity is compliant 1.2 Obtain, confirm, clarify and apply work instructions and agreed procedure 1.3 Obtain, confirm, clarify and apply safety requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4 Obtain and confirm authorisation (entry permit) meets regulatory requirements 1.5 Confirm the emergency response procedure is with the stand-by person and understood 1.6 Identify, obtain and implement signage and barrier requirements 1.7 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults 1.8 Identify, confirm and apply the environmental protection requirements 1.9 Position rescue equipment by the entry permit
2 Work in confined space	2.1 Gain access to confined space 2.2 Ensure that the atmosphere is tested and monitored for harmful elements 2.3 Correctly apply tagging and lock-out procedures 2.4 Enter the confined space correctly 2.5 Maintain ongoing communication with the stand-by person 2.6 Comply with entry permit requirements 2.7 Monitor and adhere to allocated entry time
3 Exit confined space	3.1 Exit confined space correctly 3.2 Recover tools, equipment and materials 3.3 Conduct inspection of the confined space 3.4 Secure access to the confined space 3.5 Remove tagging and lock-out 3.6 Accurately complete confined space entry permit
4 Clean up	4.1 Clear work area and dispose of or recycle materials 4.2 Clean, check, maintain and store tools and equipment 4.3 Remove, clean and store barriers and signs

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS202D Enter and work in confined spaces

Modification History

Release	Comment
1	The unit replaces RIIOHS202A Enter and work in confined spaces.
2	Editorial corrections.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of entering and working in confined spaces that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - obtain appropriate entry permit and instructions for performing work in confined space
  - interpreting and applying safe work method statements
  - apply tagging and lock out
  - selecting, wearing and caring for personal protective equipment applicable to all tasks and environment identified
  - entering the confined space
  - using atmospheric monitoring devices prior to entering the confined space
  - working in the confined space
  - using atmospheric monitoring devices during confined space activity
  - applying safe materials handling methods
  - exiting the confined space
  - remove tagging and lock out

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

The candidate must demonstrate knowledge of enter and work in confined spaces through:

- identifying areas that constitute confined spaces
- complying with site and equipment safety requirements
- complying with the entry and exit procedures, risks and regulations
- types of air contaminants and toxic gases
- identifying the limitations of breathing apparatus
- identifying equipment types, characteristics, technical capabilities and limitations
- complying with site isolation and site control responsibilities and authorities
- locations of safety data sheets (SDS) information and application
- using confined space and Industry terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

© Commonwealth of Australia, 2025 Powering Skills Organisation

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

RIIWHS204D Work safely at heights

Modification History

Release	Comments
1	This unit replaces RIIOHS204A Work safely at heights.
2	Formatting corrections.
3	Inserted Application information.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to work safety at heights in the Resources and Infrastructure Industries.

This unit it appropriate for those working in operational roles where they are required to perform work at heights.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1. Identify work requirements	1.1 Access, interpret and apply height safety procedures and ensure the work activity is compliant 1.2 Inspect site to determine layout and physical condition, condition of structures, prevailing weather conditions, equipment requirements and potential hazards

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.3 Adhere to WHS requirements 1.4 Identify, select and check safety equipment for serviceability 1.5 Identify, manage and report potential risks and hazards
2. Identify work procedures and instructions	2.1 Consult with authorised personnel to select materials, tools and equipment and check for serviceability 2.2 Select, wear and care for personal protective equipment 2.3 Inspect/install fall protection and perimeter protection equipment 2.4 Identify approved methods of moving tools and equipment to work area and minimise potential hazards associated with tools at heights 2.5 Ensure safety system has been installed correctly 2.6 Select and install appropriate signs and barricades
3. Access and install equipment	3.1 Consult with authorised personnel to ensure anchor fall protection and associated equipment is correctly fitted and adjusted 3.2 Ensure all required equipment is installed 3.3 Use recommended methods to access work area for people, tools and equipment 3.4 Locate tools and materials to eliminate or minimise the risk of items being knocked down
4. Perform work at heights	4.1 Check access from ground to work area and ensure it is safe 4.2 Keep fall equipment in place and adjusted appropriately for movement during work 4.3 Undertake manual handling of materials and equipment 4.4 Locate materials and equipment ensuring that they are safely secured and distributed 4.5 Check safety system periodically for compliance 4.6 Monitor risk control measures to ensure that they are effective and appropriate 4.7 Reassess risk control measures, as required, in accordance with changed work practices and/or site conditions and undertake alterations
5. Clean up work area	5.1 Consult with authorised personnel to ensure safety system is dismantled and removed 5.2 Clear work area and dispose of or recycle materials 5.3 Clean, check, maintain and store tools and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIWHS204D Work safely at heights

Modification History

Release	Comments
1	This unit replaces RIIOHS204A Work safely at heights.
2	Formatting corrections.
3	Inserted Application information.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of working safely at heights that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - accessing, interpreting and applying technical and safety information for working at heights
  - assessing hazards and risk associated with working at heights and implement control methods
  - selecting wearing and caring for personal protective equipment
  - identifying required safety systems including fall protection and associated equipment
  - checking that fitting, adjusting and anchoring of fall protection and associated equipment is correct
  - performing work safely at heights

Knowledge Evidence

The candidate must demonstrate knowledge of the following when working safely at heights:

- names and functions of equipment, components and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

- complying with equipment manufacturer's instructions and specifications
- safe shifting and handling of tools and materials
- adhering to statutory and regulatory authority requirements
- the nature of work undertaken at heights
- complying with heights safety systems
- the processes of providing for safe working practices
- using safety equipment/systems and considerations to facilitate working safely at heights
- complying with safe work methods

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,

RIIWHS205D Control traffic with stop-slow bat

Modification History

Release	Comment
1	The unit replaces RIIOHS205A Control traffic with stop-slow bat.
2	Editorial corrections; Performance Criteria numbering for element 1 corrected.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to control traffic with stop-slow bat in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

1. Plan and prepare	1.1 Access, interpret and apply site traffic plan procedures and ensure the work activity is compliant 1.2 Obtain, confirm, clarify and apply work instructions 1.3 Obtain, confirm, clarify and apply safety requirements 1.4 Identify, obtain and implement signage and devices 1.5 Select tools and equipment, check for serviceability and rectify or report any faults

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.6 Identify, confirm, clarify and apply environmental protection requirements
2. Control traffic	2.1 Position or confirm temporary traffic signs and barriers 2.2 Direct traffic correctly 2.3 Control vehicles and pedestrian traffic and ensure safety 2.4 Monitor traffic, make adjustments for changing conditions and position waiting vehicles for smooth traffic flow 2.5 Use hand held stop/slow bats 2.6 Use visibly clear and unobstructed hand signals 2.7 Report traffic offenders
3. Operate communication devices	3.1 Adjust communication device controls for optimum reception/transmission results 3.2 Transmit messages clearly and concisely 3.3 Maintain communication device power supply 3.4 Check communications contact after nominated period of non-contact
4. Clean up	4.1 Remove or cover signs and devices sequentially to provide warning to motorists during shutdown 4.2 Clean, check, maintain and store tools and equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Unit Mapping Information

Assessment Requirements for RIIWHS205D Control traffic with stop-slow bat

Modification History

Release	Comment
1	The unit replaces RIIOHS205A Control traffic with stop-slow bat.
2	Editorial corrections; Performance Criteria numbering for element 1 corrected.
3	Amended Application field.
4	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of controlling traffic with a stop-slow bat that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - reading and interpreting the work instruction and planning work activity accordingly
  - positioning signage and barriers
  - directing and controlling vehicle traffic
  - directing and controlling pedestrian traffic
  - communicating to drivers and pedestrians clearly using hand signals
  - using approved communication devices such as hand held radios or phones to transmit message and report of offenders
  - removing or covering signs after work completion

Knowledge Evidence

The candidate must demonstrate knowledge of controlling traffic with stop-slow bat through:

- site and equipment safety requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

- traffic controlling requirements and procedures
- complying with traffic management plans
- erecting traffic control signage and barricades
- communication device operations
- determine equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- detailing site isolation and traffic control responsibilities and authorities
- describing the effects of travel speed and vehicle mass on stopping distances
- interpreting and implementing safe work method statement

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal	1	1 Year

© Commonwealth of Australia, 2025 Powering Skills Organisation

Mining, Extractive (Quarrying) and Civil Construction	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
	1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
	1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures
	1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures
	1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Prepare for work/task	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
	2.2	Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
	2.3	Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
	2.4	Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
	2.5	Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
	2.6	Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
	2.7	Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
	2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.9	Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
3 Perform work/task	**3.1**	Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.2	Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
	3.3	Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
	3.4	Unplanned and unsafe situations are responded to in accordance with safe work procedures
	3.5	Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
	3.6	Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4 Pack Up	**4.1**	Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
	4.2	Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
  - maintaining safe operating speed
  - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer requirements
  - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - document evidence of damage
  - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
  - ensuring availability of correct forklift truck logbook and updating records as required
  - ensuring forklift truck tynes or other attachment/s are securely fitted
  - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
  - fluid leaks
  - lights are working effectively
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - insufficient lighting
  - other specific hazards including dangerous goods
  - overhead hazards and fixed structures, roof beams and doorways
  - restricted and poorly ventilated areas

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - surface suitability based on forklift truck and task requirements
    - the risk of collision with people, moving plant and fixed structures
    - weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
    - all controls are located, identified and tested for functionality
    - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
    - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
    - recording and maintaining accurate information relating to forklift truck operations
    - safety devices as fitted
    - start-up is in accordance with manufacturer requirements
    - steering, transmission and brake functions comply with operating requirements
    - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
    - positioning of unusually balanced/shaped loads
    - centre of gravity
    - dynamic nature of load
    - tyne/attachment positioning
    - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
    - audible and visual warning devices
    - signage
    - two-way radio
    - verbal instructions
    - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring

© Commonwealth of Australia, 2025 Powering Skills Organisation

rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
  - aligning tynes/attachment to load
  - carrying out a lift to 75% of the maximum height
  - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
  - correctly using horns and mirrors in workplace
  - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
  - driving applicable to conditions and moving loads safely
  - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
    - an 'S' bend with a minimum 90 degrees left and right turn
    - ensuring load/s remains stable through pick up, transport and placement
    - forklift truck speed is appropriate to load and surroundings
    - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
  - tilting mast (or forks if applicable) to ensure balance of load
  - using gluts/dunnage appropriately and lowering load safely
  - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
- reporting to relevant person/s on site risk control measures that are not in place or are deficient
- setting up an exclusion zone
- securely parking forklift truck and isolating in appropriate position including:
  - minimising possible access by unauthorised person/s
  - tynes/attachment lowered to required position in accordance with manufacturer requirements
  - park brake applied
  - switching off, isolating fuel/power source and removing key according to workplace procedures
- shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
  - audible and visual warning devices
  - hand signals
  - questioning techniques
  - signage
  - traffic warning systems
  - two-way radio
  - written instructions
- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
  - failure/loss of control including brakes and steering
  - failure of equipment during forklift truck operations
  - forklift truck instability causes including:
    - deterioration of ground condition
    - overloading
    - pick up and placement of load
    - irregular loads
  - operating on ramps and uneven surfaces and in restricted spaces
  - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
    - labels on the actual load
    - markings on the actual load
    - paperwork such as consignment notes, running sheets and weighbridge dockets
    - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
  - wind
  - lightning
  - water/ice impacted surface/ground
  - rain
  - extreme heat
  - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
  - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE

© Commonwealth of Australia, 2025 Powering Skills Organisation

including:

- gas bottle
- connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
- refuelling

- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
  - bale clamps
  - carpet spike for carpet rolls
  - drum carrier
  - jib attachment
  - paper roll clamps
  - personnel work platforms
  - rotators
  - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
  - backfilled ground
  - bitumen (damaged, cracked)
  - concrete (damaged, cracked)
  - hard compacted soil
  - potholes
  - railway tracks
  - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
  - soft soils
  - trench covers
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety

© Commonwealth of Australia, 2025 Powering Skills Organisation

and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLIS2004 Install and maintain rail bonding systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to install and maintain all types of temporary and permanent bonds and bonding cables in use in the Australian rail system, in accordance with safeworking and regulatory requirements, and workplace procedures.

This includes planning the installation and maintenance, preparing the worksite, installing and maintaining the bonds and bonding cables, and conducting all required post-installation activities as a non-electrical rail safety worker.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated rail safety requirements and to comply with relevant codes of practice, rail industry standards and/or guidelines.

Work is performed under some supervision, generally within a team environment.

Rail bonding systems involve the application of routine operational principles and procedures when fixing cable across a break or joint in one rail, or between two rails to provide a path for traction return current or track-circuits, as part of workplace activities across a variety of operational contexts within the Australian rail system.

Operators of mechanised equipment must have undertaken training and, where appropriate, hold the relevant licence, permit or certificate and be recognised as competent for the class of machinery being used.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

S – Construction and Installation

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan the installation and maintenance of the relevant bonding systems	1.1 Works order including drawings, plans and material lists is received/accessed, analysed and confirmed as required by site inspection
	1.2 Work is assessed and prioritised in accordance with works scheduled
	1.3 Site relevant electrical permits are accessed and/or obtained as required
	1.4 Hazards are identified, risks are assessed and control measures are implemented
	1.5 Resources including personnel, plant, equipment and tools are identified and scheduled
	1.6 Liaison and communication issues with other personnel, authorities, clients and landowners are resolved
2 Prepare the worksite	2.1 Personnel participating in the task, including plant operators and contractors, are fully briefed
	2.2 Site preparation is completed in accordance with works order
	2.3 Specialist testing and earth equipment is inspected as required and replaced if defective
	2.4 Road signs, barriers and warning devices are positioned as required
	2.5 Safeworking practices are observed on or about the running track/line
3 Install and maintain bonding system cables	3.1 Systems and circuits are isolated as required, proved safe to work on in accordance with work plan and electrical permits are issued/accepted/relinquished as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.2 Cable and surrounds, including rail and other surfaces, are prepared to appropriate specifications
	3.3 Bonds are attached in accordance with specifications
	3.4 Joint and termination procedures are carried out in accordance with authorised work procedures
	3.5 Continuity testing procedures are carried out as required
	3.6 System is commissioned following visual inspection and the completion of other testing
4 Conduct post-operational activities	4.1 Worksite is rehabilitated in accordance with workplace procedures
	4.2 Work is completed in an agreed time and with minimum waste
	4.3 Notifications, records and documentation for updating system data are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIS2004A Install and maintain rail bonding systems.

Assessment Requirements for TLIS2004 Install and maintain rail bonding systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on **at least three** separate occasions and include:

- applying relevant safeworking and workplace procedures
- communicating effectively with others
- completing relevant documentation
- guiding operators of plant and equipment and using appropriate signals when installing and maintaining cables
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- implementing contingency plans
- interpreting and following operational instructions and prioritising work
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- organising activities in accordance with workplace procedures
- reading and interpreting relevant technical data, drawings, instructions and manuals
- reporting and/or rectifying identified problems, faults or malfunctions, in accordance with workplace procedures
- selecting and using relevant equipment and tools
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable state/territory legislated rail safety requirements, relevant codes of practice and/or guidelines
- characteristics, capabilities and uses of various types of cables
- circuits for signalling and communications systems awareness as a non-electrical rail safety worker
- current capacities, inductance and capacitance, protection systems and devices
- electrical hazard awareness including voltage and current transformation, voltage drop, cable and traction systems
- joint test and fault identification/location workplace procedures
- problems that may occur when installing and maintaining rail bonding systems and action that can be taken to report or resolve these problems
- rail industry standards for installing and maintaining rail bonding systems
- switching operation, isolation and access permit procedures
- testing and commissioning procedures, including testing and earth/rail connecting conductors
- traction earthing systems and bonding systems
- work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- workplace documentation and records systems
- workplace procedures for installing and maintaining rail bonding systems for non-electrical rail safety workers.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, rail industry standards, codes of practice and operation manuals.

UEPOPS202 Apply quality systems to work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to apply a quality assurance system to work.

Quality control is a process to ensure that significant variations in quality are kept to a minimum. Quality control in a power generation facility will focus on a set of procedures intended to ensure that personnel, plant and equipment operate smoothly and efficiently.

Competency in this unit requires the ability to plan and prepare quality procedures, conduct quality system practices and initiate changes to quality systems. Individuals will, in general, work as an operator in a power generation facility.

No licensing, legislative or certification requirements apply from this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare to work with quality systems	**1.1** Quality procedures are identified from quality system and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, in accordance with workplace procedures
	1.2 Performance objectives are identified, in accordance with workplace procedures and Quality Management System (QMS)
	1.3 Work plan is structured, in accordance with workplace procedures and site requirements, to ensure quality standards are achieved
2 Conduct quality system practices	**2.1** Quality assurance processes and procedures are implemented, in accordance with workplace procedures and manufacturers' recommendations
	2.2 Work is monitored against quality standards and sustainable energy principles, and are clarified with appropriate personnel, in accordance with workplace procedures
	2.3 Allocated work tasks are completed, in accordance with workplace procedures and quality assurance requirements
3 Initiate changes to quality systems	**3.1** Improvements to quality assurance procedures are identified by analysis of system outcomes, in accordance with workplace procedures and quality assurance requirements
	3.2 Extent of proposed changes to quality procedures are investigated, in accordance with workplace procedures and quality assurance
	3.3 Proposed improvements are negotiated and confirmed with appropriate personnel, in accordance with workplace procedures and quality assurance requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS202B Apply quality systems to work.

Assessment Requirements for UEPOPS202 Apply quality systems to work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying continuous improvement techniques
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- complying with legislation, industry standards, codes of practice and regulations
- contributing to quality control audits
- identifying quality procedural change requirements
- improving quality control procedures
- initiating changes to quality assurance processes and procedures
- planning and preparing for quality control
- using recording procedures for documenting
- utilising sustainable energy principles and practices
- working with quality assurance procedures, tools and techniques

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- continuous improvement
- continuous improvement techniques
- legislation, industry standards, codes of practice and regulations
- principles of sustainable energy practice
- procedural quality change requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

- quality control
- quality control audits including improvement implementation
- Quality Management System (QMS) tools and techniques
- WHS/OHS including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS337 Maintain quality systems within the team

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to oversee compliance of the maintenance quality system, using performance indicators, within a team environment.

Quality control is a process through which an organisation seeks to ensure that significant variations in quality are kept to a minimum. Quality control in power generation facilities will focus on a set of procedures intended to ensure that personnel, plant and equipment operate efficiently.

Competency in this unit requires the ability to formulate team aspects of the quality system and facilitate team quality systems. Individuals will, in general, work as an operator, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Formulate team aspects of the quality system	**1.1** Quality assurance requirements for team are identified or modified from an analysis of workplace needs, in accordance with workplace procedures
	1.2 Team performance indicators, are referred to appropriate personnel for approval in accordance with workplace procedures
	1.3 Quality system documentation is obtained, and modified, in accordance with workplace procedures and quality assurance standards
2 Facilitate team quality systems	**2.1** Team discussion on quality system is undertaken, in accordance with workplace procedures
	2.2 Quality system is monitored, in accordance with workplace procedures and quality assurance standards
	2.3 Failure to satisfy Key Performance Indicators (KPIs) is recorded and investigated, in accordance with workplace procedures and quality assurance standards
	2.4 Quality system is reviewed with the team to ensure currency and relevance, in accordance with workplace procedures and quality assurance standards
	2.5 Quality system records for the team are maintained, in accordance with workplace procedures and quality assurance standards

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

UEPOPS416 Monitor implementation of quality control for production and maintenance

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to monitor the implementation of production and maintenance quality control procedures at a power generation facility.

Quality control is a process used to ensure variations in quality are kept to a minimum. Quality control in a power generation facility will focus on a set of processes and procedures intended to ensure that personnel, plant and equipment operate smoothly and efficiently.

Competency in this unit requires the ability to plan for quality control, monitor quality control and complete all documentation. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

UETTDRIS43 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform low voltage (LV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes the operation of circuit breaking and isolating devices from a switching schedule, paralleling in accordance with the switching schedule, communicating with the switching control officer or electrical control officer, isolating the electrical equipment and the line or worksite, as well as proving the work area is de-energised and earthed, issuing/accepting electrical permits and returning the affected circuits to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for LV field switching to a given schedule	**1.1** Switching and work schedules, plans, drawings, workplace procedures and material lists are received, analysed and confirmed by site inspection, as required
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for LV switching are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		relevant personnel and in accordance with workplace procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority to perform work is obtained in accordance with requirements and workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out LV field switching to a given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	LV field switching to a given schedule are applied to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4	Communications with switching control officer, or equivalent, are established and maintained during the isolation operation in accordance with workplace procedures
	2.5	Electrical equipment and associated circuits to be switched, including paralleling, are isolated and proved de-energised using appropriate devices and earthed, as required, in accordance with workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with workplace procedures
3 Complete LV field switching to a given schedule	**3.1**	Completed work is checked against switching schedule for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and made safe and surplus materials are returned to storage or disposed of in accordance with workplace procedures
	3.4	Plant, equipment and tools are cleaned, checked and returned to service in accordance with workplace procedures
	3.5	Relevant work permits are signed off in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS43A Perform low voltage field switching operation to a given schedule.

Assessment Requirements for UETTDRIS43 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing low voltage (LV) field switching operation to a given schedule using all of the following:
  - approvals/clearances
  - access authority/permits
- using at least two (2) of the following:
  - voltage detectors
  - polarity testers
  - phase rotation indicators
- using at least one (1) of the following:
  - LV links
  - LV bridges
  - LV fuses
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - LV network interconnectors for alternate sources of supply and possible back-feed

© Commonwealth of Australia, 2025 Powering Skills Organisation

- procedures for obtaining correct LV switching authorisation, including:
  - identification of hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances (SAD)
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- techniques in LV system switching, including:
  - isolation procedures and proving dead
  - pre-switching checks
  - switching operational procedures
  - emergency fault procedures
  - energisation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing low voltage field switching operation to a given schedule
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS44 Perform HV field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform high voltage (HV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes the operation of circuit breakers, isolating devices, communicating with switching control officer or electrical control officer, isolating electrical equipment and line or worksite. It also includes proving area is de-energised and applying earthing equipment, issuing/accepting electrical permits and returning affected line and electrical equipment to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority is obtained to perform work in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out HV switching procedures to a given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	HV switching procedures to a given schedule are applied to ensure completion in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Communications with switching control officer are established and maintained throughout the isolation operation in accordance with workplace procedures
	2.5	Electrical equipment, associated circuits, line/network or worksite to be switched, including paralleling, is isolated and proved de-energised using appropriate devices and earthed, where required, in accordance with workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Relevant permits are prepared and issued in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with workplace procedures
3 Complete HV switching procedures to a given schedule	**3.1**	Completed switching is checked against work schedule and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned and made safe in accordance with workplace procedures
	3.4	Plant, equipment and tools are cleaned, checked and returned to service in accordance with workplace procedures
	3.5	Relevant work permits are signed off, safety devices removed and system re-energised and returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS44A Perform HV field switching operation to a given schedule.

Assessment Requirements for UETTDRIS44 Perform HV field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing high voltage (HV) field switching operation to a given schedule using the following:
  - approvals/clearances
  - access permits
- using all of the following:
  - HV operating sticks
  - HV operating earths
  - HV detectors
- using at least one (1) of the following specialist tools:
  - HV phasing sticks
  - HV ground mounted equipment isolating handles and earths
- operating switchgear with at least two (2) of the following:
  - HV links
  - air break switches
  - fuses
- using at least three (3) of the following:
  - reclosers
  - ring main units
  - circuit breakers
  - isolators
  - earth switches
  - sectionalisers
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - network interconnectors source of possible backfeed
- role of the HV switching operator
- procedures for obtaining correct HV switching authorisation, including:
  - identification of WHS/OHS hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances (SAD)
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- use and operation of equipment associated with HV overhead and substation equipment, including:
  - test instruments
  - sticks
  - interrupters
  - arc stranglers
- operation of protection systems and substation equipment, such as:
  - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- types and categories of HV switchgear
- application, function and operating capabilities of switchgear
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV transmission main and working earths
- earthing HV electrical apparatus practices and procedures for access, including:
  - purposes of operational and additional work part - on-site earths
  - factors determining the location and effectiveness of operational earthing
  - acceptable industry procedures
  - personal protective equipment (PPE)
- HV switching techniques, including
  - pre-switching checks
  - switching operational procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - isolation procedures and proving dead/de-energised
  - earthing procedures
  - emergency fault procedures
  - energisation procedures
- application and function of the single wire earth return (SWER) system components, including:
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- operation of HV overhead switching or indicating devices, including:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - systematic and defensive techniques
  - mobile radio procedures
  - double isolation procedures
  - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- primary causes, effects and types of HV electrical faults
- HV protection devices, including:
  - main components
  - types
  - categories
  - applications
  - functions
- basic principle of operation of HV system protection devices
- protection coordination and protection - zoning
- HV feeder auto-reclosing suppression, including:
  - function
  - application
- circuit condition requirements and switching considerations when paralleling and separating HV feeders
- operation of HV distribution transformers, including:
  - principle governing factors for transformer ratings
  - protection and alarms
  - operating limitations and the relationship between transformer and HV fuse rating
  - purpose and principle operation of HV distribution transformer tap changers
  - HV distribution transformer and transformer-cable combination switching practices
  - paralleling requirements
  - isolation and earthing procedures for access

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - common distribution transformer and associated electrical apparatus faults
- HV underground switching equipment, such as:
    - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- function of feeder automation system and the main components
- operation procedure for a remote field device from a local control station
- functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
- SCADA system security interlocks and access restrictions
- SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
- function of the main components of a local/remote control system
- operation of a field devices using SCADA systems via a remote access terminal (RAT), dial up voice annunciated system and local control station.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for perform HV field switching operations to a given schedule
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS47 Sample, test, filter and reinstate insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to sample, test, filter and reinstate insulating oil in the electricity supply industry (ESI).

It includes despatching oil samples to a laboratory for higher level testing, as required and post operational servicing of equipment and/or plant. It also includes identifying related environmental issues concerning disposing oil safely.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to sample, test, filter and reinstate insulating oil	**1.1** Works schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for sampling, testing, filtering and reinstating insulating oil are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.6 Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.11	Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out sampling, testing, filtering and reinstating of insulating oil	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Sampling, testing, filtering and reinstating of insulating oil are applied to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.5	Sampling, testing, filtering and reinstating of the insulating oil is performed in accordance with work schedules, job requirements and workplace procedures
	2.6	Unplanned events in the filtering, sampling and testing of insulating oil are responded to in accordance with workplace procedures
	2.7	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.8	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the sampling, testing, filtering and reinstating of insulating oil	**3.10**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures

3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage or disposed of in accordance with workplace procedures

3.5 Relevant work permits are signed off and equipment is returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS47A Sample, test, filter and reinstate insulating oil.

Assessment Requirements for UETTDRIS47 Sample, test, filter and reinstate insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- sampling, testing, filtering and reinstating insulating oil on at least two (2) of the following pieces of equipment:
  - transformer (tx) main tank
  - tx tap changer
  - switchgear
  - cable
  - reactor
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- filtering and sampling of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with filtering and sampling - safe handling procedures; personal hygiene, storage and disposal procedures; WHS/OHS hazards and precautions, including use of appropriate personal protective equipment (PPE); environmental procedures and effects of contaminates
  - properties of insulating oil - dielectric strength, moisture content, acidity and sludge
  - locations where insulating oil is used - transformer, switchgear and oil filled cable
  - filtering equipment – types, cleaning procedures and method of use
  - techniques in filtering and sampling insulating oil - methods of sampling, methods of filtering, testing procedures on site and analysing oil effectiveness
  - frequency of testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- testing of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with testing, such as precautions during testing and types of testing equipment
  - techniques in testing insulating oil - electric strength, water content, dielectric dissipation, resistivity and acidity
  - dissolved gas analysis (DGA)
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; d emergency procedures for the rescue of an electric shock victim, including cardio pulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- material handling and the environment, including:
  - methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
  - environmental standards, codes, environmental legislation, WHS/OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and/or enterprise requirements applicable environmental care when handling materials, including provision of manufacturer and supplier information such as material safety data sheets (MSDS)
  - types and application of PPE used for hazards substances and dangerous goods
  - techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from equipment, such as vehicle

© Commonwealth of Australia, 2025 Powering Skills Organisation

loading crane, chainsaw, enterprise vehicles and explosive power tools
    - procedures for handling and control of spillages of herbicides
    - methods of disposing and storage of herbicides, pesticides and chemicals
    - methods of cleaning mobile plant, equipment and tools
    - recording of data
- environmental issues when undertaking sampling and filtering of oil, including:
    - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the work to be undertaken
    - methods of obtaining updated environmental information and data sheets on the proper use and handling of oil used on transformers and switchgear, including provision of MSDS
    - techniques in filtering and sampling oil to eliminate/reduce risks to the environment from spillages
    - safety procedures and equipment for handling and control of the oil
    - methods of disposing and storage of the oil
    - methods of cleaning equipment, tools and equipment
    - emergency procedures for spillages of oil to reduce risks to the environment - methods of cleaning up excessive spillages, methods of protection to surrounding environment, procedures for notification of relevant personnel and authorities, and recording procedures
    - polychlorinated biphenyl (PCB) contamination, handling and disposal procedures
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, including:
    - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
    - identification of environmental issues associated with the handling and disposing of insulation materials
    - safety precautions when handling and disposing of heat dissipation materials
    - safe working practices
    - WHS/OHS hazards and precautions
    - identification of hazards, assessing and controlling risks
    - types, selection, maintenance and uses of PPE
    - permit to work systems and isolation procedures
    - types and function of specialised equipment
    - safe working practices when using specialised equipment
    - emergency response and rescue, including first aid
    - techniques in the handling and disposing of insulation materials - PCB, asbestos, insulating oil and SF6 gas
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records, including audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and/specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors; polarity testers and phase rotation
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storage of specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance and care and storage of specialised tools
  - identifying WHS/OHS hazards, assessing and controlling risks associated with their use

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques for the safe use of specialised power tools
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substation work, including responsibilities about the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue of personnel from energised conductors, emergency descent from an EWP and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures; use of mobile extendable equipment on or near energised HV conductors; emergency response procedures; hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction; and dangers of near approach to energised conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS67 Solve problems in energy supply network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to solve problems in energy supply network equipment in the electricity supply industry (ESI).

It includes determining correct operation of energy supply network electrical equipment and providing solutions. It also includes working safely, reading circuit and reticulation diagrams, applying problem solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

Competency Field

Industry Specific Cross Discipline

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve problems in energy supply network equipment	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Extent of work to be undertaken is determined from reports and/or discussions with relevant person/s
	1.3 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.4 Materials required for work are determined in accordance with workplace procedures
	1.5 Tools, equipment and testing devices required to take measurements are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Solve problems in energy supply network equipment	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in accordance with WHS/OHS requirements and, when necessary, conducted in accordance with workplace safety procedures
	2.3 Circuits/machines/plant are isolated, where necessary, in accordance with WHS/OHS requirements and workplace procedures
	2.4 Safety hazards resulting from reports and risk control measures devised and implemented in consultation with appropriate personnel
	2.5 Problem solving of energy network equipment is approached methodically using measured and calculated

© Commonwealth of Australia, 2025 Powering Skills Organisation

		values of circuit/apparatus parameters
	2.6	Circuit/apparatus components are dismantled, where necessary, and parts stored to protect them against loss or damage
	2.7	Circuits/components are rechecked and their operational status is confirmed
	2.8	Materials/replacement parts required to solve problems are sourced and obtained in accordance with workplace procedures
	2.9	Effectiveness of the repair is tested in accordance with workplace procedures
	2.10	Apparatus is reassembled, tested and prepared for return to service
	2.11	Unplanned events are dealt with safely and with the approval of relevant personnel
	2.12	Problem-solving activities are completed without damage to apparatus, circuits, the surrounding environment or services applying sustainable energy practices
3 Complete and report on problem solving in energy supply network equipment	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
	3.3	Maintenance work activities are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS67A Solve problems in energy supply network equipment.

Assessment Requirements for UETTDRIS67 Solve problems in energy supply network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment, including:
  - determining the operating parameters of existing energy supply equipment
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply equipment to comply with specified operating parameters
  - developing energy supply equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network equipment on at least one (1) of the following energy supply network systems:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- using at least three (3) of the following distribution/transmission equipment:
  - voltage regulation equipment
  - on load tap changers
  - energy metering
  - demand meters
  - load control

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - current transformers
  - potential transformers
- dealing with unplanned events on at least one (1) occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation, including:
  - primary energy sources
  - power stations
  - power station output
  - acts and legislation relating to generation
  - renewable energy sources and techniques
- transmission, including:
  - system requirements
  - principal components of a power system
  - voltage levels
  - grid systems
  - acts/legislation relating to transmission
  - future trends
- distribution, including:
  - high voltage (HV) distribution systems
  - medium/low voltage (LV) distribution systems
  - radial feeders
  - parallel feeders
  - ring main feeders
  - acts/legislation relating to distribution
- substations, including:
  - purpose
  - location
  - layout
- overhead and underground systems, including:
  - relative merits
  - applications

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - planning
  - installation
- power distribution system electrical characteristics, including:
  - transmission and distribution systems
  - inductance, capacitance and resistance
- voltage problems in a power distribution system, including:
  - LV
  - unbalanced voltages
  - voltage rises
- voltage regulation, including:
  - autotransformers with on-load tap changer (OLTC)
  - transformers with OLTC
  - static capacitors
  - load control
- control of OLTC, including:
  - regulation relays
  - control circuits
  - line drop compensation
- power distribution system faults, including:
  - type/classification of fault
  - typical causes/effects of faults
  - three phase symmetrical fault levels
  - fault level limitation
- voltage surges in a power distribution system, including:
  - lightning surges
  - switching surges
  - typical surge levels
  - surge impedance, typical values
  - significance of the system surge impedance
- metering and metered quantities, including:
  - purpose
  - energy
  - maximum demand
  - accuracy classes for metering systems
- energy and demand meters, including:
  - construction
  - operation
  - adjustments
  - testing
- metering circuits, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - direct metering
  - instrument transformer metering
- electronic metering systems and recording meters, including:
  - types
  - applications
  - connections
- load control, including:
  - purpose
  - methods.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers determining correct operation of energy supply network protection equipment and systems and providing solutions as they apply to energy supply network protection. It encompasses working safely, reading circuit and reticulation diagrams, applying logical problem-solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDRIS67 Solve problems in energy supply network equipment

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve problems in energy supply network protection equipment and systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 The likely extent of work to be undertaken is envisaged from reports and/or discussions with appropriate personnel
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures
	1.6 Tools, equipment and testing devices needed to take measurements are obtained in accordance with established procedures and checked for correct operation and safety
2 Solve problems in energy supply network protection equipment and systems	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4 Safety hazards resulting from the reports identified and risk control measures devised and implemented in consultation with appropriate personnel
	2.5 Problem solving is approached methodically drawing on knowledge of energy supply network protection equipment and systems using measured and calculated values of circuit/apparatus parameters
	2.6 Circuit/apparatus/system components are dismantled, where necessary, and parts stored to protect them against loss or damage
	2.7 Circuits/components/systems are rechecked and their operational status is confirmed
	2.8 Materials/replacement parts required to solve problems are sourced and obtained in accordance with established procedures
	2.9 Effectiveness of the repair is tested in accordance with established procedures
	2.10 Apparatus is reassembled, finally tested and prepared for return to service
	2.11 Unexpected situations are dealt with safely and with the approval of authorised personnel
	2.12 Problem-solving activities are carried out without damage to apparatus, circuits the surrounding environment or services using sustainable energy practices
3 Complete and report problem solving in energy supply network protection equipment and systems	**3.1** WHS/OHS work completion risk control measures and procedures are followed
	3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
	3.3 Maintenance work activities are documented in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS68A Solve problems in energy supply network protection equipment and systems.

Assessment Requirements for UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment including all of the following:
  - determining the operating parameters of existing energy supply protection equipment and systems
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply protection equipment to comply with specified operating parameters
  - developing energy supply protection equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply protection equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network systems including at least one (1) of the following:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- solving problems in energy supply protection equipment and systems including at least two (2) of the following:
  - over-current protection
  - earth fault protection
  - differential protection

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - oil and gas devices
  - busbar protection
  - surge protection
  - conventional relays
  - electronic relays
  - reclosers/sectionalisers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection fundamentals encompassing:
  - purpose of protection
  - features of a protection scheme
- instrument transformers for protection encompassing:
  - operating principles
  - applications of current transformers
  - applications of voltage transformers
- feeder protection encompassing:
  - fuse protection
  - overcurrent and earth fault
  - sensitive earth fault
  - unit schemes
  - distance protection
  - trip/close sequences for feeders
  - recloser/sectionaliser systems
- transformer protection encompassing:
  - overheating protection
  - overcurrent protection
  - restricted earth fault protection
  - differential protection
  - oil and gas devices
- busbar protection encompassing:
  - types of fault
  - requirements of busbar protection
  - system protection
  - frame-earth protection
- surge protection encompassing:
  - voltage surges

© Commonwealth of Australia, 2025 Powering Skills Organisation

- surge diverters
- arcing horns.

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers diagnosing and rectifying faults in apparatus in energy supply and distribution systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply apparatus to logical fault-finding processes, implementing fault rectification, safety and functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to diagnose and rectify faults	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
	1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety
2 Diagnose and rectify faults	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements
	2.5	Suspected fault scenarios are tested as being the source of system problems
	2.6	Causes of faults are identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
	2.7	Faults in apparatus components are rectified to raise energy supply apparatus to its operation standard
	2.8	Apparatus is tested to verify that it operates as intended and to specified requirements
	2.9	Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
	2.10	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
	2.11	Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete and report fault diagnosis and rectification activities	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Worksite is made safe in accordance with established safety procedures
	3.3	Rectification of faults is documented in accordance with established procedures
	3.4	Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

Assessment Requirements for UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in energy supply apparatus, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- control of voltage encompassing:
  - conditions leading to voltage collapse and system disintegration
  - effects on the system of high voltage (HV)/low voltage (LV)
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers; electromagnetic voltage regulators; series and parallel capacitors; on-load tap changers (OLTC) transformers and static VAR compensations (SVCs), such as saturated reactor (SR) compensations, thyristor controlled reactor (TCR) compensators, combined

© Commonwealth of Australia, 2025 Powering Skills Organisation

TCR/TSCs and the production of wave-form distorting harmonics and control devices

- the importance of the location in the system of voltage control devices
- the use of graphical methods to calculate the size of VAR regulating plant
- control of power encompassing:
  - base load and spinning reserve
  - regulating machines
  - rapid start plant
  - phase shifting transformers and various forms of load shedding
  - principles and practices of automated control of individual machines
  - stations and transmission/tie-line elements
  - synchronising power
- the relationship between power and frequency encompassing:
  - limiting values
  - machine stabilising - steam by-pass, rapid valving, slip stabilisers and over speed limiting
  - use of single pole generator CB's
  - use of machine AVR's as angular stabilisers
  - damped and un-damped system oscillations
  - relationship between fault clearance times and system stability
  - calculation of critical clearance angles based on equal area criteria
- types of communication systems encompassing:
  - telephone, power line carrier, dedicated cable, microwave links and fibre optics
  - quantities and signals to be communicated
  - advantages and disadvantages of the various systems
  - equipment requirements
- transient over-voltages in power systems encompassing:
  - switching and lightning over-voltages and their effect on different plant items
  - transient over-voltage control and reduction using surge diverters, shield wires and CB control
  - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- factors leading to the generation of corona encompassing:
  - consequences of corona
  - reduction of corona
  - conductor bundling, grading rings and conductor surface treatment
- power system protection encompassing:
  - location of CT's in major plant items
  - earthing principles and devices
  - fault current control/limitation using neutral earthing compensators (NEC's), neutral point earth impedances, high conductivity shield wires and parallel feed interlocking
  - application of different types of protection.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

Assessment Requirements for UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in electrical energy distribution systems including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- distribution system overview encompassing:
  - regulatory conditions of supply and utilisation
  - compliance with Australian Standards
  - reticulation system, including overhead/underground, urban/rural, high voltage (HV) customers and high-rise building systems
  - methods used to ensure continuity of supply

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types of substations in current use
  - systems of distribution used, (primary and secondary)
  - voltage levels, power factor, wave-form distortion and transient loading
  - supply quality
  - load curve profiles (residential/industrial/commercial)
  - types of feeders
  - distribution systems (urban, rural single-phase systems, single wire earth return (SWER), spur, parallel and ring systems)
- overhead lines and installation encompassing:
  - industry and safety regulations
  - overhead conductors
  - conductor material
  - current rating factors (heating, voltage drops and power losses)
  - aerial bundled cables (HV and low voltage (LV))
  - covered conductors - characteristics of lines and cables, including the calculation of R, X and B for different arrangements of conductor; typical values for actual lines; transposition; models based on line length; voltage and line regulation
  - overhead line poles
  - types (wood, concrete and steel)
  - installation of poles (tooling, rake, life, labelling and sinking)
  - maintenance of poles (above and below ground)
  - pole strength and loads
  - crossarms
  - types and standard sizes
  - insulators
  - insulation types
  - types (pin, suspension or disc and shackle)
  - creepage and necessary clearances
  - arcing horns and insulator mounting
  - structure types
  - mechanical properties (working strength, maximum tension and limiting size)
  - interpretation of stringing charts
  - determination of sag (by calculations or measurement and/or tension measurement)
  - sight and wave sagging, and sag correction
  - stays
  - components and anchorage
- use of design schedules encompassing:
  - sample design problems - common design practice line, voltage, structure types used, line deviation, span sag, cross-arms, insulators and stays, wind loading and line deviation loading basic surveying

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - measurement of levels, deviation angle and compass bearings
  - perform survey of short distribution line extension of produce field notes
- underground cables encompassing:
  - cable types, ratings, core material, design considerations, cable dielectrics, insulating materials and abbreviations, electric stress, cable voltage drop and voltage drop calculations, cable termination, joints and installation
  - induction and eddy currents
  - cable testing and cable fault location
  - cable drawing
- voltage regulations of feeders and associated equipment encompassing:
  - terminology used - distribution system, service line, customer's terminals, customer voltage, utilisation voltage, base voltage, voltage variation and bandwidth
  - voltage limits and effects of voltage variation
  - causes of variation - inductance, capacitance and reactance of distribution lines, and transformers
  - methods of voltage control - off-load, on-load tap changers, voltage regulating relays, line drop compensation and different types of voltage regulators
  - voltage profiles - principles, effect on voltage profiles, limits of voltage, voltage drops due to LV mains transformers, tap-settings feeder and service lines
  - determining voltage drops for components within the profile
- control of voltage - conditions leading to voltage collapse and system disintegration; effects on the system of HV/LV; and voltage control devices encompassing:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - on-load tap changer (OLTC) transformers and static VAR compensations (SVCs)
- range of devices covered by SVCs encompassing:
  - saturated reactor (SR) compensations
  - thyristor controlled reactor (TCR) compensators
  - combined TCR/TSCs
  - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- types of communication systems encompassing:
  - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics
  - quantities and signals to be communicated
  - advantages and disadvantages of the various systems
  - equipment requirements
- transient over-voltages in power systems encompassing:
  - switching and lightning over-voltages and their effect on different plant items
  - transient over-voltage control and reduction using surge diverters, shield wires and CB control

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- the principles of operation, voltage and current range, breaking capacity and field of use of circuit breakers - bulk oil, small oil volume, air break, vacuum and SF6 (double pressure and puffer types)
- the types of isolators in use, such as duo-roll, blade and scissor type
- circuit breaker auxiliary systems encompassing:
  - direct current (d.c.) systems, including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling systems.

UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers diagnosing and rectifying faults in electrical energy transmission systems. The unit encompasses applying safe working practices, interpreting diagrams and technical data; applying knowledge of energy supply and transmission systems to logical fault-finding processes; implementing fault rectification, safety and functional testing; and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to diagnose and rectify faults	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
	1.4 The extent of faults is determined from reports and other documentation and from discussions with appropriate personnel
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety
2 Diagnose and rectify faults	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and procedures
	2.4	Logical diagnostic methods are applied to diagnose electrical energy transmission system faults employing measurements and estimations of system operating parameters referenced to system operational requirements
	2.5	Suspected fault scenarios are tested as being the source of system problems
	2.6	Source of fault is identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
	2.7	Faults in the system components are rectified to raise electrical energy transmission system to its operation standard
	2.8	System is tested to verify that it operates as intended and to specified requirements
	2.9	Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
	2.10	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
	2.11	Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to system, the surrounding environment or services using sustainable energy practices
3 Complete and report fault diagnosis and rectification activities	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Worksite is made safe in accordance with established safety procedures
	3.3	Rectification of faults is documented in accordance with established procedures
	3.4	Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS71A Diagnose and rectify faults in electrical energy supply transmission systems.

Assessment Requirements for UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in electrical energy supply transmission systems, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the source of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- overview of the transmission system encompassing:
  - lines, buses, transformers and cables; line/bus layouts, including single and double switching, breaker and a half systems and high voltage (HV) crossing methods
- the principles involved in HV alternating current (a.c.) transmission encompassing:
  - tower types and configurations; choice of towers or poles (economic and environmental); insulator types and configuration; types of conductors, their configuration and standard nomenclature; typical line spacing and ground clearances; line ratings based on ambient

© Commonwealth of Australia, 2025 Powering Skills Organisation

temperature; conductor terminating and clamping equipment, including vibration damping principles and equipment

- principles involved in direct current (d.c.) transmission encompassing:
  - the economics, harmonic generation, VAR requirements and protection difficulties; types of connections and transformer requirements; advantages and disadvantages of d.c. transmission; typical overseas systems and likely (future) use in Australia
- the principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers
  - bulk oil
  - small oil volume
  - air break
  - air blast
  - air puffer
  - vacuum and
  - SF6 (double pressure and puffer types)
- the types of isolators in use, such as duo-roll, blade and scissor type
- circuit breaker auxiliary systems encompassing:
  - high pressure air systems, and air storage and handling processes
  - d.c. systems, including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling system
- the characteristics of lines and cables encompassing:
  - the calculation of R, X and B for different arrangements of conductor; typical values for actual lines; transposition; models based on line length; voltage and line regulation; the transmission of power (P) and VARs (Q)
- control of voltage - conditions leading to voltage collapse and system disintegration, effects on the system of high voltage (HV)/low voltage (LV), and voltage control devices including:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - on-load tap changer (OLTC) transformers and static VAR compensations (SVCs)
- range of devices covered by SVCs, including:
  - saturated reactor (SR)compensations
  - thyristor controlled reactor (TCR) compensators
  - combined TCR/TSCs
  - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- use of graphical methods to calculate the size of VAR regulating plant
- types of communication systems including:
  - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics; quantities and signals to be communicated; Advantages and disadvantages of the various

© Commonwealth of Australia, 2025 Powering Skills Organisation

systems and equipment requirements

- transient over-voltages in power systems, including:
  - switching and lightning over-voltages and their effect on different plant items; transient over-voltage control and reduction using surge diverters, shield wires and CB control; insulation systems, insulation coordination, insulation grading in plant items, and bushings and capacitor bushings
- factors leading to the generation of corona encompassing:
  - consequences of corona; reduction of corona, including conductor bundling, grading rings and conductor surface treatment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

Assessment Requirements for UETTDRIS72 Diagnose and rectify faults in distributed generation systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in distributed generation systems including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS safety management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS

© Commonwealth of Australia, 2025 Powering Skills Organisation

management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- distributive generation systems encompassing:
  - concept and application
  - anti-islanding control and protection
  - system monitoring and load management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS73 Develop engineering solutions for energy supply power transformer problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, applying extensive knowledge of energy supply power transformer operation and their application, gathering and analysing data, applying problem-solving techniques, and developing and documenting solutions and alternatives.

Typical transformer problems are those encountered in meeting performance requirements and compliance standards, revising a transformer operating parameters and dealing with transformer malfunctions

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Distribution Pathway Unit Group

UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

Transmission Pathway Unit Group

UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Distributed Generation Pathway Unit Group

UETTDRIS72 Diagnose and rectify faults in distributed generation systems

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to develop engineering solution for energy supply power transformer problems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 The extent of the transformer problem is determined from performance specifications and situation reports and in consultation with relevant personnel
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently
2 Develop engineering solutions for energy supply power transformer problems	**2.1**	WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2	Knowledge of supply power transformer arrangements, operation, device characteristics and applications are applied to developing solutions to supply power transformer problems
	2.3	Parameters, specifications and performance requirements in relation to each transformer problem are obtained in accordance with established procedures
	2.4	Approaches to resolving supply power transformer problems are analysed to provide most effective solutions
	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policies
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Test, document and implement engineering solution for energy supply power transformer problems	**3.1**	Solutions to transformer problems are tested to determine their effectiveness and modified where necessary
	3.2	Adopted solutions are documented, including instruction for their implementation that incorporates risk control measures to be followed
	3.3	Appropriately competent and qualified person/s) required to implement solutions to supply power transformer problems is coordinated in accordance with regulatory requirements and enterprise policy
	3.4	Justification for solutions used to solve supply power transformer problems is documented for inclusion in work/project development records in accordance with professional standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

Note: A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS73A Develop engineering solutions for energy supply power transformer problems.

Assessment Requirements for UETTDRIS73 Develop engineering solutions for energy supply power transformer problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing engineering solutions for energy supply power transformer, including:
  - understanding the extent of the transformer problems
  - forming effective strategies for solution development and implementation
  - obtaining transformer parameters, specifications and performance requirements appropriate to each problem
  - testing and finding solutions to transformer problems
  - documenting instruction for implementation of solutions that incorporate risk control measure to be followed
  - documenting justification of solutions implemented in accordance with professional standards
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transformer construction and operating principles encompassing:
  - various types of lamination style and core construction used in single phase, three phase, double wound and auto transformers
  - different winding styles/types used in transformers

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - how input current is limited on no-load and how power is transferred from primary to secondary when a load is connected
  - using the transformation ratio to determine an unknown quantity of V, I and VA
  - significance of nameplate data items
  - operation of a transformer under load/no-load conditions
  - the reason any particular type of transformer is used in a specific application
  - safety features specified in regulatory standards with respect to transformers
  - safety features specified in regulatory standards with respect to isolating transformers
  - basic insulation resistance, continuity and winding identification tests
- transformer parameters encompassing:
  - the percentage impedance of a transformer by test
  - percentage impedance of a transformer by calculation
  - the equivalent circuit of a transformer
  - calculation of voltage regulation
  - losses that occur in a transformer
  - tests to determine losses
  - efficiency and state typical values
  - the all-day efficiency of a transformer
- cooling methods encompassing:
  - methods of natural and forced cooling
  - properties of transformer oil
  - tests performed on transformer oil
  - auxiliary equipment
  - the purpose and operation of the types of auxiliary equipment used on transformers - bushings, explosion vents, surge diverters, tap changers, conservator, breathers and desiccants, gas relays and temperature indicators
- instrument transformers encompassing:
  - construction of current transformers
  - uses and ratings of current transformers
  - construction of voltage transformers
  - uses and ratings of voltage transformers
  - safety techniques when using instrument transformers
- transformer connections encompassing:
  - vector group of a transformer from a connection diagram
  - connections of a three phase transformer to create a particular vector group
  - reasons for using the different vector groups
  - purpose of tertiary windings
  - consequences/effect of an incorrect connection
- parallel operation encompassing:
  - polarity markings for the windings of a transformer

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - conditions/restrictions for parallel operation of transformers
  - calculation of loading on transformers operating in parallel
  - connection of transformers in parallel to supply a common load
  - the consequences/effect of an incorrect connection
- harmonics in transformers encompassing:
  - how harmonics are generated in transformers
  - problems caused by harmonics in transformers
  - measurement of the harmonics in a transformer
  - methods/equipment used to overcome harmonics in transformers
- high voltage (HV) isolation encompassing:
  - the term HV
  - procedures for isolating HV apparatus
  - regulations with respect to access permits
  - clearances to be observed with respect to HV up to 33 kV
  - the term ‘step’ and ‘touch’ potential.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS74 Develop engineering solutions for energy supply system protection problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely; applying extensive knowledge of energy supply system protection operation, protection devices and their application; gathering and analysing data; applying problem-solving techniques and developing and documenting solutions and alternatives.

Typical protection problems are those encountered in meeting performance requirements and compliance standards, revising a protection operating parameters and dealing with protection malfunctions.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to develop engineering solution for energy supply system protection problems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 The extent of the protection problem is determined from performance specifications and situation reports and in consultation with relevant personnel
	1.4 Activities are planned to meet scheduled timelines in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		consultation with others involved in the work
	1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently
2 Develop engineering solution for energy supply system protection	**2.1**	WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2	Knowledge of supply system protection arrangements, operation, device characteristics and applications are applied to developing solutions to supply system protection problems
	2.3	Parameters, specifications and performance requirements in relation to each protection problem are obtained in accordance with established procedures
	2.4	Approaches to resolving supply system protection problems are analysed to provide most effective solutions
	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policies
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Test, document and implement engineering solution for energy supply system protection problems	**3.1**	Solutions to protection problems are tested to determine their effectiveness and modified where necessary
	3.2	Adopted solutions are documented, including instruction for their implementation that incorporates risk control measure to be followed
	3.3	Appropriately competent and qualified person/s required to implement solutions to supply system protection problems is coordinated in accordance with regulatory requirements and enterprise policies
	3.4	Justification for solutions used to solve supply system protection problems is documented for inclusion in work/project development records in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

	professional standards Note: A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS74A Develop engineering solutions for energy supply system protection problems.

Assessment Requirements for UETTDRIS74 Develop engineering solutions for energy supply system protection problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing engineering solutions for energy supply system protection, including:
  - understanding the extent of the protection problem
  - forming effective strategies for solution development and implementation
  - obtaining protection parameters, specifications and performance requirements appropriate to each problem
  - testing and solutions to protection problems
  - documenting instructions for implementation of solutions that incorporate risk control measure to be followed
  - documenting justification of solutions implemented in accordance with professional standards
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection scheme requirements encompassing:
  - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes,

© Commonwealth of Australia, 2025 Powering Skills Organisation

duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability
    - components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
    - protection applied to buses - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
    - protection applied to transformers - biased differential, gas, winding temperature and oil temperature
    - protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
    - protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- discrete protection systems encompassing:
    - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
    - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
    - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- interdependent protection systems encompassing:
    - overcurrent and earth leakage intertripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
    - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
    - load shedding, voltage control, parallel operation and load rejection
    - CB failure protection
    - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- complex protection systems encompassing:
    - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
    - differential, transformer differential, bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, CT connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, CT connections, special considerations and digital systems
    - types of revenue metering
    - applications of supervisory control and data acquisition (SCADA)

© Commonwealth of Australia, 2025 Powering Skills Organisation

- complex protection systems for communications
- harmonic control
- point on wave switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRF06 Perform rescue from a live LV panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of rescue procedures from live low voltage (LV) apparatus, not including overhead lines and underground cables in the workplace. It specifies the mandatory requirements of rescue from a live LV panel and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

HLTAID001 Provide cardiopulmonary resuscitation

Competency Field

Refresher Training

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Prepare to perform rescue procedures from live LV panel	**1.1**	Instruction in hazards and risk control measures for specific work functions and work areas are identified and obtained
	1.2	Electricity isolation point is identified and labelled, where appropriate
	1.3	Tools and emergency equipment are checked for safety, functionality and placed in an accessible location to facilitate response and rescue according to established procedures
2 Carry out rescue from live LV panel	**2.1**	Workplace procedures and work instructions for controlling risk are followed
	2.2	Workplace procedures for accessing and isolating the LV panel and removing the victim, where necessary, from contact with live apparatus are followed
	2.3	Workplace procedures for applying cardiopulmonary resuscitation (CPR), if required at the site, and gaining access to treatment by a medical professional, if necessary, are followed
	2.4	The worksite is secured and entry controlled until appropriate authorities inspect and release the site
3 Complete the LV panel rescue procedure	**3.1**	Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF06B Perform rescue from a live LV panel.

Assessment Requirements for UETTDRRF06 Perform rescue from a live LV panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- inspecting and placing rescue equipment
- identifying and labelling the isolation point
- performing a rescue from a low voltage (LV) panel in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the rescue of a victim from a live LV panel encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances SAD appropriate to rescue from a live LV panel
  - involvement of external emergency services
- emergency procedures required for the rescue of a victim from a live LV panel encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to rescue from a live LV panel
  - removing victim to safe location/place of safety.

UETTDRSB23 Install and maintain substation direct current systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain substation direct current systems in the electricity supply industry (ESI).

It includes installing and maintaining substation direct current (DC) systems such as main batteries, communication batteries, DC lighting systems, battery chargers, uninterrupted power supply (UPS) systems and associated control circuits in accordance with workplace procedures. It also includes diagnosing faults, replacing faulty equipment, conducting pre-commissioning/re-commissioning tests and interpreting test results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to install and/or maintain substation d.c. systems	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the installation and maintenance of substation d.c. systems	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Substation d.c. systems are installed safely to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Installation of substation d.c. systems is performed in accordance with work schedules, job requirements and workplace procedures
	2.8	Maintenance of substation d.c. systems is performed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with work schedules, job requirements and workplace procedures
	2.9	Installation and/or maintenance of substation d.c. systems are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.10	Unplanned events or conditions are responded to in accordance with workplace procedures
	2.11	Substation d.c. systems are performance tested in accordance with workplace procedures and job specifications
	2.12	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the installation and maintenance of substation d.c. systems	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and equipment made ready for service in accordance with workplace procedures, if required
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRSB23 Install and maintain substation direct current systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- working on at least one (1) of the following types of batteries:
  - nickel cadmium batteries
  - lead acid batteries
  - gel cell batteries
- working on at least one (1) of the following battery systems:
  - main batteries
  - communication batteries
- working on all of the following equipment:
  - battery chargers
  - d.c. control circuits
- performing at least two (2) of the following types of tests:
  - cell voltage test
  - hydrometer/specific gravity test
  - battery discharge and capacity tests
  - impedance testing
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with

© Commonwealth of Australia, 2025 Powering Skills Organisation

switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors; polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risk, types, selection, maintenance and use of PPE, responsibilities and protocols and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and

© Commonwealth of Australia, 2025 Powering Skills Organisation

protocols in accordance with enterprise-specific procedures
    - calculation of results and data measurements using the computer
    - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
    - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
    - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
    - types of electrical systems, including a.c., d.c. and combinations of both
    - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in-service plant/equipment
    - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
    - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
    - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
    - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
    - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
    - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
    - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any

© Commonwealth of Australia, 2025 Powering Skills Organisation

WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials, and oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements and electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements,
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain capacitor bank equipment for voltage regulation in the electricity supply industry (ESI).

It includes maintaining and repairing substation voltage regulating equipment and is restricted to high voltage (HV) capacitor banks and associated switching reactors and the inspection, recording of information, testing and measurement of the associated control circuits. It also includes the range of acceptance tests and discharge requirements for complete units within a substation in accordance with industry standards and workplace procedures, fault diagnosis and return to service tests and interpretation of test results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain voltage regulating equipment (capacitor banks)	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the maintenance of voltage regulating equipment (capacitor banks)	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Capacitor bank is isolated, discharged and maintained in accordance with workplace procedures
	2.7	Defective capacitor elements are identified, located and replaced in accordance with manufacturer instructions and workplace procedures
	2.8	Capacitor network is balanced and pre-service tests and measurements completed in accordance with workplace procedures
	2.9	Voltage regulating equipment (capacitor banks) are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.10	Unplanned events are responded to in accordance with workplace procedures
3 Complete the maintenance of voltage regulating	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment (capacitor banks)		anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and the capacitor bank is made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB29A Maintain capacitor bank equipment for voltage regulation.

Assessment Requirements for UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following systems:
  - double star neutral current unbalance type
  - voltage unbalance type, single star
- maintaining at least two (2) of the following components:
  - internal discharge resistor cans
  - external resistor type
  - switching reactors
  - neutral unbalance current transformer
- performing at least three (3) of the following types of tests:
  - insulation resistance tests
  - capacitance tests
  - unbalance current/voltage tests
  - primary injection tests
  - high voltage (HV) direct current d.c. withstand tests
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
    - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when deal with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and

© Commonwealth of Australia, 2025 Powering Skills Organisation

catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, and care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any

© Commonwealth of Australia, 2025 Powering Skills Organisation

WHS/OHS requirements associated with the use of EWPs
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - the rescue procedures for personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- principles of power transformer construction and operations, including:
  - applications of static reactive plant in HV networks, including voltage control, volt-ampere reactive VAR control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB39 Perform power system substation switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform power system substation switching operation to a given schedule in the electricity supply industry (ESI).

It includes conducting switching operations in a substation in accordance with given instructions, switching schedule and workplace procedures. It also includes operation of substation switching devices such as circuit breakers, air break switches, fuses, reclosers, ring main units and isolators.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for substation switching to given schedule	**1.1** Switching and work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for substation switching are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority is obtained to access and perform switching in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out substation switching to given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Substation switching to given schedule are applied to ensure completion in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Communications with switching control officer are established and maintained throughout isolation operation in accordance with workplace procedures
	2.5	Electrical equipment, associated circuits, line/network or worksite to be switched is isolated and checked as de-energised using appropriate devices, earthed, where required, and load transferred in accordance with job requirements and workplace procedures
	2.6	Substation switching to a given schedule is performed in accordance with work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8 Relevant work permits are prepared and issued in accordance with workplace procedures
	2.9 Quality checks of work are undertaken in accordance with workplace procedures
3 Complete substation switching to given schedule	**3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5 Relevant work permits are signed off, safety devices are removed, and the system is re-energised and returned to service in accordance with workplace procedures
	3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB39A Perform power system substation switching operation to a given schedule.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for UETTDRSB39 Perform power system substation switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- checking all the following:
  - approvals/clearances
  - access permits
- using all the following:
  - operating sticks
  - operating earths
  - voltage detectors
- using all the following:
  - phasing equipment
  - ground equipment isolating handles and earths
- using at least one (1) of the following:
  - links
  - air break switches
  - fuses
- using at least two (2) of the following:
  - reclosers
  - ring main units
  - circuit breakers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- installation of switchgear and associated equipment, including:
  - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, and requirements and techniques
  - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
  - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning - ESI standards and procedures
- low voltage (LV) switching principles including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching
- high voltage (HV) switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, purpose and procedure for operational forms, and access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and

© Commonwealth of Australia, 2025 Powering Skills Organisation

effectiveness of operational earthing, acceptable industry procedures, PPE and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV fault switching principles, including:
    - primary causes, effects and types of HV electrical faults
    - HV protection devices - main components, types, categories, applications and functions
    - basic principle of operation of HV system protection devices
    - protection coordination and protection zoning
    - HV feeder auto-reclosing suppression – function and application
    - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- HV distribution transformer principles, including:
    - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer-cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system, including:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system, including:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station
- HV overhead and substation switching principles, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
- requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
- role and responsibilities of the HV switching operator
- operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
- use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
- HV switchgear – types, categories, application and operating capabilities
- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, and types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operating switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry performing power system substation switching operations to a given schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEESS00131 Data Communications - ACMA 'Open' Cabling Provider Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00048 Data Communications - ACMA 'Open' Cabling Provider.

June 2025: Skill set requirements appended to description as a change without release to preserve content in migration to new training package authoring system.

Description

This Skill Set is for persons who are required to undertake Australian Communications and Media Authority (ACMA) 'Open' Cabling Provider Registration.

Detailed Skill Set Requirements

The following **units** of competency must be attained.

UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring ACMA ‘Open’ cabling provider registration.

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Open’ Cabling Provider Registration.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for ACMA ‘Open’ Cabling Provider Registration.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEESS00132 Data Communications - ACMA 'Restricted' Telecommunications Cabling Registration Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00049 Data Communications - ACMA 'Restricted' Telecommunications Cabling Registration.

Description

This Skill Set is for persons who are required to undertake Australian Communications and Media Authority (ACMA) Restricted Telecommunications Cabling Registration.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV, qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEEDV0013 Solve problems in voice and data communications circuits

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **5 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEEDV0003 Install and connect cabling for direct access to telecommunications service

Target Group

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Restricted’ Telecommunications Cabling Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for ACMA 'Restricted' Telecommunications Cabling Registration.

Custom Content Section

Not applicable.

UEESS00133 Restricted - Disconnection/Reconnection of Fixed Wired Low Voltage Electrical Equipment

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

Description

This Skill Set is for persons wishing to disconnect and reconnect low voltage (LV) fixed wired electrical equipment which is incidental or a primary and regular function of work related to a principle work function.

It includes working safely on electrical equipment, isolating LV electrical supplies, selecting and using testing and measuring devices, disconnecting and reconnecting electrical equipment, terminating and connecting cables and conductors in accordance with Australian Standards, and completing required reporting.

This excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets, light etc); or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work).

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0004	Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

The units of competency in this Skill Set are for persons who already hold a relevant Certificate III or equivalent and the work is incidental or a primary and regular function of work related to a principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a Restricted Electrical Licence - disconnection/reconnection of fixed wired low voltage electrical equipment.

Custom Content Section

Not applicable.

UEESS00134 Data Communications - Install Aerial Communication Cables Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00050 Data Communications - Install Aerial Communication Cables.

June 2025: Skill set requirements appended to description as a change without release to preserve content in migration to new training package authoring system.

Description

This Skill Set is for persons who are required to install aerial communication cables.

Detailed Skill Set Requirements

The following **units** of competency must be attained.

UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0002	Install aerial telecommunication cables
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services

AND

UEECD0043	Solve problems in direct current circuits

OR

UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0002	Install aerial telecommunication cables
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring Australian Communications and Media Authority (ACMA) ‘Open’ Cabling Provider Registration with aerial endorsement.

Note:

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Open’ Cabling Provider Registration with aerial endorsement.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing aerial communication cables.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEESS00135 Instrumentation - Programmable Control Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00124 Instrumentation - Programmable control systems.

Description

This Skill Set covers development, installation and testing of programs for programmable logic controllers (PLC) for a system requiring discrete control functions and industrial system requiring advanced control functions.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEEIC0013	Develop, enter and verify discrete control programs for programmable controllers
UEEIC0015	Develop, enter and verify word and analogue control programs for programmable logic controllers

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to develop, install and test programs for programmable control systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for Instrumentation – Programmable control systems.

Custom Content Section

Not applicable.

UEESS00136 Sustainable - Electrical Installations Sustainability Strategies Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00123 Sustainable - Electrical Installations Sustainability Strategies.

Description

This Skill Set is for persons responsible for developing strategies to address greenhouse gases and sustainability issues for residential, commercial and industrial electrical installations.

Pathways Information

The unit of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set must already hold a current Unrestricted Electrical Licence issued in an Australian state or territory.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEERE0014	Develop strategies to address sustainability issues for electrical installations

Target Group

This Skill Set is intended for persons who are required to develop electrical installation sustainability strategies.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements for electrical installations sustainability strategies.

Custom Content Section

Not applicable.

UEESS00137 Data Communications - Install Below Ground Communication Cables Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00053 Data Communications - Install Below Ground Communication Cables.

June 2025: Skill set requirements appended to description as a change without release to preserve content in migration to new training package authoring system.

Description

This Skill Set is for persons who are required to install below ground communication cables.

Detailed Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0007	Install underground communication cables
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0007	Install underground communication cables
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling requiring Australian Communications and Media Authority (ACMA) ‘Open’ Cabling Provider Registration with underground endorsement.

Note:

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that

© Commonwealth of Australia, 2025 Powering Skills Organisation

safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved' for ACMA 'Open' Cabling Provider Registration with underground endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing below ground communication cables.

Custom Content Section

Not applicable.

UEESS00138 Data Communications - Test, Report and Rectify Faults in Data and Voice Installations Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00119 Data Communications – Test, report and rectify faults in data and voice installations.

Description

This Skill Set covers testing for certification, and finding and repairing faults in telecommunication installations and local area networks (LANs).

The Skill Set encompasses working safely, reading cabling diagrams, performance testing, applying logical fault-finding procedures, testing functionality of the network, conducting repairs and completing the necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set must already hold:

- ACMA 'Open' Cabling Registration and nationally recognised endorsements for structured cable and optical fibre.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEDV0014	Test, report and rectify faults in data and voice installations

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to test, report and rectify faults in data and voice installations.

This Skill Set meets the ACMA industry recognised endorsement for testing.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for testing, reporting and rectifying faults in data and voice installations.

Custom Content Section

Not applicable.

UEESS00139 Data Communications - Restricted Telecommunications Cabler Registration - ACMA Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00054 Data Communications - Restricted Telecommunications Cabler Registration - ACMA.

June 2025: Skill set requirements appended to description as a change without release to preserve content in migration to new training package authoring system.

Description

This Skill Set is for persons who are required to undertake restricted telecommunications cabler registration.

Detailed Skill Set Requirements

The following **units** of competency must be attained.

UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0003	Install and connect cabling for direct access to telecommunications service
and	
UEECD0043	Solve problems in direct current circuits
or	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate

© Commonwealth of Australia, 2025 Powering Skills Organisation

II, Certificate III and Certificate IV, qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the unit:

- UEECD0042 Solve problems in ELV single path circuits

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0003	Install and connect cabling for direct access to telecommunications service
and	
UEECD0043	Solve problems in direct current circuits
or	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Target Group

This Skill Set meets the minimum Australian Communications and Media Authority (ACMA) ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Restricted’ Cabling Provider Registration.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for restricted telecommunications cabler registration - ACMA.

UEESS00140 Data Communications - Premises Cabling for NBN Rollout Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00116 Data Communications – Premises Cabling for NBN Rollout.

Description

This Skill Set covers the installation and modification of high-performance data communication cabling in buildings and premises and intended for connecting a telecommunications network.

The Skill Set encompasses working safely and to industry standards and specifications, installing multiple data lines and backbones using structured twisted pair cabling and optical fibre cabling, terminating at distributors, termination modules and in socket outlets, testing and compliance checks, preparing and filling trenches, placing conduits and ducts, drawing cables, installing catenary cable, fixing communication cables, terminating at distributors, splices and on socket outlets, testing and compliance checks and completing necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this skill set must already hold the following:

- Australian Communications and Media Authority (ACMA) 'Open' Cabling Registration.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEEDV0002 Install aerial telecommunication cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEEDV0006	Install and modify optical fibre performance data communication cabling
UEEDV0007	Install underground communication cables
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling

Target Group

This Skill Set is intended for persons who are required to undertake premises cabling for NBN rollout.

Note:

This Skill Set meets the ACMA industry recognised endorsements for optical fibre, structured cable, underground cabling and overhead cabling.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for premises cabling for NBN rollout.

Custom Content Section

Not applicable.

UEESS00141 Electrical - Providing Advice on Lighting Products Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00057 Electrical - Providing advice on lighting products.

Description

This Skill Set is for persons who are required to provide advice on lighting products.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEEEL0016	Provide advice on effective and energy efficient lighting products
UEEEL0022	Supply effective and efficient lighting products for domestic and small commercial applications

Target Group

This Skill Set is intended for persons who are required to undertake work in the electrical and/or retail industry where customers will seek advice on effective and energy efficient lighting products.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for electrical – providing advice on lighting products.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEESS00142 Data Communications - Plan an Integrated Cabling Installation System Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00118 Data Communications – Plan an integrated cabling installation system.

Description

This Skill Set covers planning of cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio; energy management and control; security and safety; digital home health; and age and assisted living.

This unit encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub, as required.

The Skill Set encompasses working safely and to industry standards and specifications and completing necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set must already hold:

- Australian Communications and Media Authority (ACMA) 'Open' Cabling Registration.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits
UEECD0028	Plan an integrated cabling installation system

Target Group

This Skill Set is intended for persons who are required to plan an integrated cabling installation system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning an integrated cabling installation system.

Custom Content Section

Not applicable.

UEESS00143 Instrumentation - Develop an Integrated System Interface for Access Through a Touch Screen Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00073 Instrumentation - Develop a integrated system interface for access through a touch screen.

Description

This Skill Set is for persons who are required to develop an integrated system interface for access through a touch screen.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEEIC0011 Develop electrical integrated systems

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEIC0009	Develop an electrical integrated system interface for access through a touch screen

Target Group

This Skill Set is intended for persons who are required to develop an integrated system interface for access through a touch screen.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for developing touch screen access in an integrated system.

Custom Content Section

Not applicable.

UEESS00144 Instrumentation - Develop Integrated Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00075 Instrumentation - Develop integrated systems.

Description

This Skill Set is for persons who are required to develop integrated systems.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold unit/s in electrical, electronic and data communication work and competency in the use of personal computers:

- UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

OR

- UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

AND

- ICTICT203 Operate application software packages

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEIC0011 Develop electrical integrated systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to develop integrated systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for developing integrated systems.

Custom Content Section

UEESS00145 Instrumentation - Plan the Installation of Integrated Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00077 Instrumentation - Plan the installation of integrated systems.

Description

This Skill Set is for persons who are required to plan the installation of an integrated system.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirement

It is essential that persons undertaking this Skill Set already hold the following unit in electrical, electronic and data communication work:

- UEECD0025 Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits

OR

- UEEEL0023 Terminate cables, cords and accessories for low voltage circuits

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEIC0024 Plan the electrical installation of integrated systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to plan the installation of an integrated system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning integrated systems.

UEESS00146 RAC - Design Ammonia Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00078 Refrigeration-Air Conditioning - Design Ammonia Refrigeration Systems.

Description

This Skill Set is for persons who are required to design ammonia refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant
UEERA0014	Design ammonia refrigerated systems
UEERA0016	Design commercial refrigeration systems and select components

Target Group

This Skill Set is intended for persons who are required to design ammonia refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing ammonia refrigeration systems.

UEESS00147 RAC- Design Complex Carbon Dioxide Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00079 Refrigeration-Air Conditioning - Design Complex Carbon Dioxide Refrigeration Systems.

Description

This Skill Set is for persons who are required to design complex carbon dioxide refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this skill set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant
UEERA0015	Design carbon dioxide refrigerated systems
UEERA0016	Design commercial refrigeration systems and select components

Target Group

This Skill Set is intended for persons who are required to design complex carbon dioxide refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing complex carbon dioxide refrigeration systems.

UEESS00148 RAC - Design Hydrocarbon Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00080 Refrigeration-Air Conditioning - Design Hydrocarbon Refrigeration Systems.

Description

This Skill Set is for persons who are required to design hydrocarbon refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this skill set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0007	Apply safety awareness and legal requirements for flammable refrigerants
UEERA0016	Design commercial refrigeration systems and select components
UEERA0023	Design hydrocarbon refrigerated systems

Target Group

This Skill Set is intended for persons who are required to design hydrocarbon refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing hydrocarbon refrigeration systems.

UEESS00149 RAC - Design Secondary Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00081 Refrigeration-Air Conditioning - Design Secondary Refrigeration Systems.

Description

This Skill Set is for persons who are required to design secondary refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0034 Establish heat loads for commercial refrigeration and/or air conditioning applications

AND

- UEERA0042 Evaluate thermodynamic and fluid parameters of refrigeration systems

OR

- Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Air Conditioning and Refrigeration Engineering

OR

- Advanced Diploma of Engineering Technology - Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0016	Design commercial refrigeration systems and select components
UEERA0027	Design secondary refrigerant systems

Target Group

This Skill Set is intended for persons who are required to design secondary refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designing secondary refrigeration systems.

UEESS00150 RAC - Install and Commission Ammonia Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00082 Refrigeration-Air Conditioning - Install and Commission Ammonia Refrigeration Systems.

Description

This Skill Set is for persons who are required to install and commission ammonia refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems

AND

- UEERA0051 Install, commission, service and maintain air conditioning systems

OR

- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0005 Apply safety awareness and legal requirements for ammonia refrigerant

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEERA0046	Install and commission ammonia refrigeration systems, components and associated equipment
UEERA0065	Repair and service ammonia refrigeration systems

Target Group

This Skill Set is intended for persons who are required to install and commission ammonia refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and commissioning ammonia refrigeration systems.

UEESS00151 RAC - Install and Commission Carbon Dioxide Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00083 Refrigeration-Air Conditioning - Install and Commission Carbon Dioxide Refrigeration Systems.

Description

This Skill Set is for persons who are required to install and commission carbon dioxide refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems

AND

- UEERA0051 Install, commission, service and maintain air conditioning systems

OR

- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERA0006	Apply safety awareness and legal requirements for carbon dioxide refrigerant

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEERA0047	Install and commission carbon dioxide refrigeration systems, components and associated equipment
UEERA0066	Repair and service carbon dioxide refrigeration systems

Target Group

This Skill Set is intended for persons who are required to install and commission carbon dioxide refrigeration system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and commissioning carbon dioxide refrigeration systems.

UEESS00152 RAC - Install and Commission Flammable Refrigerant Air Cond. and Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00084 Refrigeration-Air Conditioning - Install and Commission Hydrocarbon Refrigeration Systems, Major Components and Associated Equipment.

Description

This Skill Set is for persons who are required to install and commission hydrocarbon refrigeration systems, major components and associated equipment.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems

AND

- UEERA0051 Install, commission, service and maintain air conditioning systems

OR

- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEESS00153 RAC - Operate Ammonia Refrigeration Plant Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00085 Refrigeration-Air Conditioning - Operate Ammonia Refrigeration Plant.

Description

This Skill Set is for persons who are required to operate ammonia refrigeration plant.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERA0005	Apply safety awareness and legal requirements for ammonia refrigerant
UEERA0057	Operate ammonia refrigeration plant

Target Group

This Skill Set is intended for persons who are required to operate ammonia refrigeration plant.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to operate ammonia refrigeration systems.

UEESS00154 RAC - Service and Repair Ammonia Refrigeration Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00086 Refrigeration-Air Conditioning - Service and Repair Ammonia Refrigeration Systems.

Description

This Skill Set is for persons who are required to service and repair ammonia refrigeration system.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following units:

- UEERA0053 Install, commission, service and maintain medium temperature systems

AND

- UEERA0051 Install, commission, service and maintain air conditioning systems

OR

- Certificate III in Air Conditioning and Refrigeration

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEESS00155 RAC - Service and Repair Carbon Dioxide Refrigeration and Heat Pump Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00087 Refrigeration-Air Conditioning - Service and Repair Carbon Dioxide Refrigeration and Heat Pump Systems.

Description

This Skill Set is for persons who are required to service and repair carbon dioxide refrigeration and heat pump systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following unit:

- UEERA0051 Install, commission, service and maintain air conditioning systems

OR

- UEERA0089 Service refrigeration appliances

OR

- Certificate III in Air Conditioning and Refrigeration

OR

- Certificate III in Appliance Service

Licensing/Regulatory Information

Not applicable.

UEESS00159 Sustainable - Designer of Grid Connected Photovoltaic Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces but is not equivalent to UEESS00100 Sustainable - Designer of Grid Connected Photovoltaic Systems.

Description

This Skill Set is for persons who are required to design grid-connected photovoltaic systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEERE0011	Design grid-connected photovoltaic power supply systems
UEERE0022	Solve basic problems in photovoltaic energy apparatus and systems
AND	
UEECD0043	Solve problems in direct current circuits
OR	

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Target Group

This Skill Set is intended for persons who are required to design grid-connected photovoltaic systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for designers of grid-connected photovoltaic systems.

Custom Content Section

UEESS00160 Sustainable - Designer-Installer of Grid Connected Photovoltaic Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces but is not equivalent to UEESS00101 Sustainable - Designer-Installer of Grid Connected Photovoltaic Systems.

Description

This Skill Set is for persons who are required to design and install grid-connected photovoltaic systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current unrestricted electrical licence issued in an Australian state or territory.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERE0011	Design grid-connected photovoltaic power supply systems
UEERE0016	Install, configure and commission LV grid-connected photovoltaic power systems
UEERE0022	Solve basic problems in photovoltaic energy apparatus and systems

Target Group

This Skill Set is intended for persons who are required to design and install grid-connected photovoltaic system.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer and installer of grid-connected photovoltaic systems.

UEESS00161 Sustainable - Energy Assessment of Commercial Facilities Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00102 Sustainable - Energy assessment of commercial facilities.

Description

This Skill Set is for persons who are required to undertake an energy assessment of commercial facilities.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current Unrestricted Electrical Licence issued in an Australian state or territory.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERE0003	Assess energy loads and uses for energy efficiency in commercial facilities
UEERE0005	Assess energy loads and uses for energy efficiency in residential, office and retail premises
UEERE0014	Develop strategies to address sustainability issues for electrical installations

Target Group

This Skill Set is intended for persons who are required to undertake an energy assessment of

© Commonwealth of Australia, 2025 Powering Skills Organisation

commercial facilities.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for energy assessment of commercial facilities.

UEESS00162 Sustainable - Energy Assessment of Industrial Properties and Enterprises Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00103 Sustainable - Energy Assessment of industrial properties and enterprises.

Description

This Skill Set is for persons who are required to undertake energy assessments of industrial properties and enterprises.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current Unrestricted Electrical Licence issued in an Australian state or territory.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEERE0004	Assess energy loads and uses for energy efficiency in industrial properties and enterprises
UEERE0005	Assess energy loads and uses for energy efficiency in residential, office and retail premises
UEERE0014	Develop strategies to address sustainability issues for electrical installations

Target Group

This Skill Set is intended for persons who are required to undertake energy assessments of

© Commonwealth of Australia, 2025 Powering Skills Organisation

industrial properties and enterprises.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for energy assessment of industrial properties and enterprises.

UEESS00163 Sustainable - Energy Assessment of Residential, Office and Retail Premises Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00104 Sustainable - Energy assessment of residential, office and retail premises.

Description

This Skill Set is for persons who are required to undertake energy assessment of residential, office and retail premises.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current Unrestricted Electrical Licence issued in an Australian state or territory.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERE0005	Assess energy loads and uses for energy efficiency in residential, office and retail premises
UEERE0014	Develop strategies to address sustainability issues for electrical installations

Target Group

This Skill Set is intended for persons who are required to undertake energy assessment of residential, office and retail premises.

UEESS00164 Sustainable - Energy Efficiency Auditor Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00105 Sustainable - Energy Efficiency Auditor.

Description

This Skill Set is for persons who are required to undertake energy efficiency audits.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0024	Implement and monitor energy sector WHS policies and procedures
UEERE0001	Apply environmentally and sustainable procedures in the energy sector
UEERE0015	Implement and monitor energy sector environmental and sustainable policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to undertake energy efficiency audits.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an energy efficiency auditor.

UEESS00165 Sustainable - Energy Efficiency Systems Designer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00106 Sustainable - Energy Efficiency Systems Designer.

Description

This Skill Set is for persons who are required to design energy efficiency systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEECD0012	Contribute to risk management in electrotechnology systems
UEECD0041	Solve electrotechnical engineering problems
UEEEL0011	Evaluate performance of low voltage electrical apparatus
UEERE0010	Design energy management controls for electrical installations in buildings

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to design energy efficiency systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for a designer of energy efficient systems.

UEESS00166 Sustainable - Energy Efficiency Systems Developer Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00107 Sustainable - Energy Efficiency Systems Developer.

Description

This Skill Set is for persons who are required to develop energy efficiency systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **7 units** of competency must be attained.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0012	Contribute to risk management in electrotechnology systems
UEECD0041	Solve electrotechnical engineering problems
UEEEL0011	Evaluate performance of low voltage electrical apparatus
UEERE0010	Design energy management controls for electrical installations in buildings
UEERE0012	Develop effective engineering strategies for energy reduction in buildings

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector

Target Group

This Skill Set is intended for persons who are required to develop energy efficiency systems.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an energy efficiency systems developer.

UEESS00167 Sustainable - Identify Energy Efficiency Strategies Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00109 Sustainable - Identify Energy Efficiency Strategies.

Description

This Skill Set is for persons who are required to identify energy efficiency strategies.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

It is essential that persons undertaking this Skill Set already hold a Degree in Electrical Engineering, an Advanced Diploma or Diploma of Electrical Engineering or an electrical trade qualification from the UEE Electrotechnology Training Package or equivalent.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0012	Contribute to risk management in electrotechnology systems
UEERE0012	Develop effective engineering strategies for energy reduction in buildings
UEERE0013	Develop strategies to address environmental and sustainability issues in the energy sector

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to identify energy efficiency strategies.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements to identify energy efficiency strategies.

UEESS00168 Sustainable - Installer of Grid Connected Photovoltaic Systems Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces but is not equivalent to UEESS00110 Sustainable - Installer of Grid Connected Photovoltaic Systems.

Description

This Skill Set is for persons who are required to install grid-connected photovoltaic systems.

Pathways Information

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

It is essential that persons undertaking this Skill Set already hold a current Unrestricted Electrical Licence issued in an Australian state or territory.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEERE0016	Install, configure and commission LV grid-connected photovoltaic power systems
UEERE0022	Solve basic problems in photovoltaic energy apparatus and systems

Target Group

This Skill Set is intended for persons who are required to install grid-connected photovoltaic systems.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for an installer of grid-connected photovoltaic systems.

Custom Content Section

Not applicable.

UEESS00169 Data Communications - Install and Modify Performance Data Communication Structured Cabling Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00052 Data Communications - Install and Modify Performance Data Communication Structured Cabling.

June 2025: Skill set requirements appended to description as a change without release to preserve content in migration to new training package authoring system.

Description

This Skill Set is for persons who are required to install and modify performance data communication structured cabling.

Detailed Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEECD0046	Solve problems in single path circuits

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0008	Install, modify and verify coaxial and structured communication copper cabling
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

Target Group

This Skill Set is available to persons wishing to undertake work in telecommunication cabling

© Commonwealth of Australia, 2025 Powering Skills Organisation

requiring Australian Communications and Media Authority (ACMA) ‘Open’ Cabling Provider Registration with structured cabling endorsement.

Note:

This Skill Set meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’ for ACMA ‘Open’ Cabling Provider Registration with structured cabling endorsement.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and modifying performance data communication structured cabling.

Custom Content Section

Not applicable.

UEESS00170 Install and Modify Performance Data Communication Optical Fibre Cabling Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00051 Data Communications - Install and Modify Performance Data Communication Optical Fibre Cabling.

June 2025: Skill set requirements appended to description as a change without release to preserve content in migration to new training package authoring system.

Description

This Skill Set is for persons who are required to install and modify performance data communication optical fibre cabling.

Detailed Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEDV0005	Install and maintain cabling for multiple access to telecommunication services
UEEDV0006	Install and modify optical fibre performance data communication cabling
AND	
UEECD0043	Solve problems in direct current circuits
OR	
UEECD0044	Solve problems in multiple path circuits
UEECD0046	Solve problems in single path circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

The following **units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications

UEESS00171 Fire Detection and Alarm Systems - Installation, Maintenance, Commissioning and Servicing Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00058 Electronic - Fire Detection and Alarm Systems - Installation, Maintenance, Commissioning and Servicing.

Description

This Skill Set is for persons who are required to install, maintain, commission and service electronic fire detection and alarm systems.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **9 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEECD0019	Fabricate, assemble and dismantle utilities industry components
UEECD0020	Fix and secure electrotechnology equipment
UEECD0051	Use drawings, diagrams, schedules, standards, codes and specifications
UEEEC0008	Commission large fire protection systems
UEEEC0026	Enter and verify programs for fire protection systems
UEEEC0041	Install fire detection and warning system apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEEEC0071	Troubleshoot fire protection systems
UEEEC0076	Verify compliance and functionality of fire protection system installations

Target Group

This Skill Set is intended for persons who are required to install, maintain, commission and service electronic fire detection and alarm system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing, maintaining, commissioning and servicing electronic fire detection and alarm systems.

UEESS00172 Attachment of Cords and Plugs to Single Phase Low Voltage Electrical Equipment Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00091 Restricted - Attachment of cords and plugs to single phase low voltage electrical equipment.

Description

This Skill Set is designed for persons wishing to attach flexible cords and plugs for voltages operating to 250 volts (V). These competencies are in addition to competencies already gained in the relevant field to which the electrical work is incidental or a primary and regular function of the work.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply

Target Group

The units of competency in this Skill Set are for persons holding a relevant electrotechnology qualification at a Certificate II or higher and the work is incidental or a primary and regular

© Commonwealth of Australia, 2025 Powering Skills Organisation

function of work related to a principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for Restricted Electrical Licence - Attachment of cords and plugs to single phase low voltage electrical equipment.

UEESS00173 Attachment of Cords/Cables and Plugs to Low Voltage Three Phase Electrical Equipment Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00092 Restricted - Attachment of cords/cables and plugs to low voltage three phase electrical equipment.

Description

This Skill Set is designed for persons wishing to attach flexible cords/cables and plugs for voltages operating up to 1,000 volt (V) alternating current (a.c.). These competencies are in addition to competencies already gained in the relevant field to which the electrical work is incidental or a primary and regular function of the work.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **3 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0001	Attach cords and plugs to electrical equipment for connection to a single phase 230 Volt supply
UEERL0002	Attach cords, cables and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

The units of competency in this Skill Set are for persons holding a relevant electrotechnology qualification at a Certificate II or higher and the work is incidental or a primary and regular function of work related to a principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for restricted electrical licence - attachment of cords/cables and plugs to low voltage three phase electrical equipment.

UEESS00174 Electrical Safety Testing of Electrical Cord Connected Equipment and Cord Assemblies Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00098 Restricted - Electrical safety testing of electrical cord connected equipment and cord assemblies.

Description

This Skill Set is designed for persons wishing to undertake the testing, tagging and reporting of portable/handheld low voltage (LV) electrical equipment using a portable appliance tester (PAT). These competencies are in addition to competencies already gained in the relevant field to which the electrical work is incidental or a primary and regular function of the work.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate II, Certificate III and Certificate IV qualifications from the UEE Electrotechnology Training Package.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0007	Apply work health and safety regulations, codes and practices in the workplace
UEERL0003	Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Target Group

The units of competency in this Skill Set are for persons required to ensure the safety of portable equipment and the work is incidental or a primary and a regular function of work related to a

© Commonwealth of Australia, 2025 Powering Skills Organisation

principle work function.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for electrical safety testing of electrical cord connected equipment and cord assemblies.

Custom Content Section

Not applicable.

UEESS00175 Apply Compliance Requirements to all Aspects of Electrical Work Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

New Skill Set.

Description

This Skill Set covers the skills and knowledge required to apply work health and safety (WHS)/occupational health and safety (OHS) and electrical installation safety obligations of persons licensed to undertake electrical work.

It encompasses WHS/OHS requirements for identifying hazards, establishing levels of risk mitigation control, following safe working methods, determining whether an electrical installation is compliant, dealing with installation defects and documenting activities and outcomes.

Pathways Information

This Skill Set does not provide any articulation to any qualification or other unit of competency.

Licensing/Regulatory Information

This Skill Set has been designed to meet jurisdictional regulatory/licensing currency requirements for holders of an 'Unrestricted Electrical Licence'.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEEL0001	Apply compliance requirements to all aspects of electrical work

Target Group

This Skill Set is intended for electrical licence holders who, according to the regulatory authority, have exhibited recalcitrance in their licence and/or WHS/OHS obligations.

It may be called up by an electrical safety or WHS/OHS authority as a means of retraining of such licence holders. Incompetence in not meeting required obligation could result from:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- a competent person acting incompetently, or
- a previously competent person failing to keep abreast of changes and developments in the WHS/OHS requirements and practices, the Australian/New Zealand Wiring Rules and local service rules and related regulatory requirements.

As the purpose of this Skill Set is to address the deficiencies described above, the application of this unit requires that candidates shall not be afforded Recognition of Prior Learning (RPL) and must undertake training and assessment to demonstrate competency in all aspects of the work of the unit.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for compliance requirements to all aspects of electrical work.

Custom Content Section

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEESS00176 Apply Currency of Safe Working Practices and Compliance Verification of Electrical Installations

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

New Skill Set.

Description

This Skill Set covers current practices in working safely and verifying compliance of electrical installations that affect the currency of competencies held. It encompasses working safely, procedures for rescue from contact with live parts and for applying emergency first aid.

It also encompasses current practices in visual inspections and mandatory compliance testing, identifying non-compliance defects and mandatory reporting requirements.

Pathways Information

This Skill Set does not provide any articulation to any qualification or other unit of competency.

Holders of an ‘Unrestricted Electrical Licence’ or a ‘Qualified Electrical Contracting Licence’ are required by regulation to periodically undertake the unit UEEEL0002 Apply currency of safe working practices and compliance verification of electrical installations, to demonstrate currency in safe working, electrical rescue practices and compliance verification of electrical installations.

A ‘licensed electrician’ applying for an ‘electrical contractor's licence’ may be required by regulation to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case the candidate shall:

- hold a current ‘Unrestricted Electrical Licence’ issued in an Australian state or territory
- have recently been in permanent employment as a licensed electrician.

Licensing/Regulatory Information

This Skill Set has been designed to meet jurisdictional regulatory/licensing currency requirements for holders of an 'Unrestricted Electrical Licence'.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEEL0002	Apply currency of safe working practices and compliance verification of

© Commonwealth of Australia, 2025 Powering Skills Organisation

electrical installations

Target Group

This Skill Set is intended for holders of an 'Unrestricted Electrical Licence' or 'Qualified Electrical Contracting Licence' required by regulation to periodically undertake the unit UEEEL0002 Apply currency of safe working practices and compliance verification of electrical installations, to demonstrate currency in safe working, electrical rescue practices and compliance verification of electrical installations.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for currency of safe working practices and compliance verification of electrical installations

UEESS00177 Data Communications - Plan an Integrated Cabling Installation System - Electricians Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00120 Data Communications – Plan an integrated cabling installation system - Electricians Skill Set.

Description

This Skill Set covers planning of cable routes for intelligent power and lighting, information and communications, entertainment systems, distributed video and audio; energy management and control; security and safety; digital home health; age and assisted living.

This Skill Set encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub if required.

The Skill Set encompasses working safely and to industry standards and specifications, and completing necessary documentation.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set must already hold the following:

- Australian Communications and Media Authority (ACMA) 'Open' Cabling Registration

OR

- a current electrical licence issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0025	Lay wiring/cabling and terminate accessories for extra-low voltage (ELV) circuits
UEECD0028	Plan an integrated cabling installation system

Target Group

This Skill Set is intended for persons who are required to plan an integrated cabling installation - electrical system.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for planning an integrated cabling installation system.

Custom Content Section

Not applicable.

UEESS00178 Electrical - Develop and Implement Maintenance Programs Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00126 Electrical - Develop and Implement Maintenance Programs Skill Set.

Description

This Skill Set covers skills, knowledge and work performance requirements to allow qualified electricians to develop and implement energy sector maintenance programs and compile and produce an energy sector detailed report.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set hold the following:

- UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- a current 'Unrestricted Electrical Licence' issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **2 units** of competency must be attained.

UEECD0010	Compile and produce an energy sector detailed report
UEECD0013	Develop and implement energy sector maintenance programs

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to develop and implement maintenance electrical programs.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for developing and implementing maintenance programs.

Custom Content Section

UEESS00179 Electrical - Install and Set Up Interval Metering Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00056 Electrical - Install and Set Up Interval Metering Skill Set.

Description

This Skill Set covers the skills and knowledge required to install and set up electrical interval metering.

Pathways Information

The unit of competency in this Skill Set will contribute to the completion of relevant Certificate III, Certificate IV, Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following:

- UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- a current 'Unrestricted Electrical Licence' issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **1 unit** of competency must be attained.

UEEEL0013	Install, set up and commission interval metering

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set is intended for persons who are required to install and set up interval metering.

Suggested words for Statement of Attainment

This Skill Set from the UEE Electrotechnology Training Package meets the industry requirements for installing and setting up interval metering.

UEESS00180 Electrical - Plan, Manage and Report on Electrical Projects Skill Set

Modification History

Release 1: This is the first release of this Skill Set in the UEE Electrotechnology Training Package.

This Skill Set replaces and is equivalent to UEESS00125 Electrical - Plan, Manage and Report on Electrical Projects Skill Set.

Description

This Skill Set covers skills, knowledge and work performance requirements to allow qualified electricians to plan electrotechnology projects, apply work health and safety (WHS)/occupational health and safety (OHS) regulations, industry standards and codes of practices in the workplace, compile and produce an energy sector detailed report, and manage large electrical projects.

Pathways Information

The units of competency in this Skill Set will contribute to the completion of relevant Diploma and Advanced Diploma qualifications from the UEE Electrotechnology Training Package.

Entry Requirements

It is essential that persons undertaking this Skill Set already hold the following:

- UEEEL0039 Design, install and verify compliance and functionality of general electrical installations

OR

- a current 'Unrestricted Electrical Licence' issued in an Australian state or territory.

Licensing/Regulatory Information

Not applicable.

Skill Set Requirements

A total of **4 units** of competency must be attained.
