# **UEENEEI001B Install and set up transducers and sensing devices**

Release: 1

### **UEENEEI001B** Install and set up transducers and sensing devices

## **Modification History**

Not Applicable

# **Unit Descriptor**

Unit Descriptor 1)

#### 1.1) Descriptor

This unit covers the installation and setting up of transducers and sensors. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required pneumatic, hydraulic and electrical circuit connections, adjusting and setting up devices to specifications and manufacturer instructions and completing the necessary installation documentation.

# **Application of the Unit**

#### **Application of the Unit 4**)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

## **Licensing/Regulatory Information**

#### **1.2) License to practice**

The skills and knowledge described in this unit require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

## **Pre-Requisites**

Prerequisite Unit(s) 2)

#### 2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002B Dismantle, assemble and fabricate electrotechnology components

**UEENEEE005B** Fix and secure equipment

UEENEEE007B Use drawings, diagrams, schedules and manuals

For the full prerequisite chain details for this unit please refer to Table 2 in Volume 1, Part 2

## **Employability Skills Information**

3)

Employability Skills

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

OHS procedures for a given work area are

Health and safety risks are identified and

in preparation for the work are followed.

the work and sequenced appropriately.

The nature and location of the work is

Safety hazards that have not previously been identified are noted, and established risk control

established risk control measures and procedures

Installation of transducer and sensing devices are prepared in consultation with others affected by

determined from documentation or appropriate person(s) to establish the scope of work to be

identified, obtained and understood

measures are implemented.

## **Elements and Performance Criteria Pre-Content**

6) Elements describe the<br/>essential outcomes of a<br/>unit of competencyPerformance criteria describe the required performance<br/>needed to demonstrate achievement of the Element.<br/>Assessment of performance is to be consistent with the<br/>evidence guide.

## **Elements and Performance Criteria**

undertaken.

- 1.6 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.7 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.9 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 2.4 Transducers and sensing devices are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
  - 2.5 Wiring and tubing is terminated at transducers and sensing devices in accordance with manufacture's specifications and functional and regulatory requirements.
  - 2.6 Transducers and sensing devices are adjusted and set up drawing on knowledge of measurement and detection parameters applicable to the particular types and in accordance with regulatory requirements and

2 Install and set up transducers and sensing devices

#### ELEMENT **PERFORMANCE CRITERIA** manufacturer instructions 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented. 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person. 2.9 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures. 2.10 Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. 3 Completion and 3.1 OHS work completion risk control measures and report installation and procedures are followed. setting up activities 3.2 Work site is cleaned and made safe in accordance with established procedures.

- 3.3 Final checks are made to that the installed devices conform to requirements.
- 3.4 'As-installed' transducers and sensing devices are documented and appropriate person(s) notified in accordance with established procedures

## **Required Skills and Knowledge**

#### **REQUIRED SKILLS AND KNOWLEDGE**

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and setting up transducers and sensing devices.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.4	Basic cable and conductor terminations
2.3.4	Pneumatic/hydraulic control tubing/piping
2.5.14	Technical standards, regulations and codes applicable to instrumentation and control
2.12.1	Instrumentation principles
2.12.23	Transducers and sensing devices
2.18.7	Instrumentation safe working practices

# **Evidence Guide**

#### **EVIDENCE GUIDE**

**9**) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	<b>9.1)</b> Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.
	Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.
	The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.
	Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

#### **EVIDENCE GUIDE**

Critical aspects of evidence required to demonstrate competency in this unit	<ul><li>9.2)</li><li>Before the critical aspects of evidence are considered all prerequisites must be met.</li><li>Evidence for competence in this unit shall be considered</li></ul>
	holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:
	• A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
	• Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
	<ul> <li>Apply sustainable energy principles and practices as specified in the performance criteria and range statement</li> <li>Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.</li> <li>Demonstrate an appropriate level of skills enabling employment</li> <li>Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and</li> </ul>
	<ul> <li>workplace procedures</li> <li>Demonstrated consistent performance across a representative range of contexts from the prescribed items below:</li> </ul>
	• Install and set up transducers and sensing devices as described in 8) and including:
	A Reading and interpreting drawings related to and device locations
	B Placing and securing devices accurately
	C Connecting apparatus and associated equipment to comply with requirements

#### **EVIDENCE GUIDE**

	D	Setting up and adjusting transducers and sensing devices to requirements	
	Ε	Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items	
Context of and specific resources for assessment	9.3)		
	This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:		
	OHS pol	icy and work procedures and instructions.	
		work environment, facilities, equipment and s to undertake actual work as prescribed by this	
	These should environment	d be part of the formal learning/assessment	
	Note: Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.		
	industry prac	es used for assessment should reflect current ctices in relation to installing and setting up and sensing devices.	
Method of assessment	9.4)		
	This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.		
	practices is e This requires intended prin necessary eq	etent performance with inherent safe working expected in the Industry to which this unit applies. s assessment in a structured environment which is marily for learning/assessment and incorporates all uppment and facilities for learners to develop and the essential knowledge and skills described in this	
Concurrent	9.5)		
assessment and relationship with other units	-	tion of training and assessment effort, competency t in this unit may be arranged concurrently with	

#### **EVIDENCE GUIDE**

UEENEEE007B	Use drawings, diagrams, schedules and service manuals
UEENEEI007C	Install process instrumentation and control cabling and tubing

## **Range Statement**

#### **RANGE STATEMENT**

**8**) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of transducers and two different types of sensing devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.
