Assessment Requirements for UEPOPS359 Monitor climatic conditions for renewable energy production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- carrying out preventative actions
- communicating with stakeholders and key personnel
- completing documentation using recording procedures
- identifying renewable energy plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting weather and climate conditions and possible impact on renewable energy plant, equipment and civil assets using data analysis techniques and tools
- monitoring weather and climate during adverse conditions
- organising resources
- preparing renewable energy plant and/or equipment for operation
- using manufacturers' specifications and manuals

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- climate and weather patterns in area
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- renewable energy plant and equipment, its location and operating parameters
- renewable energy plant status
- typical arrangements of renewable energy power production plant

© Commonwealth of Australia, 2025 Powering Skills Organisation

- weather and climate conditions and its possible impact on renewable energy plant, equipment and civil assets
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS360 Operate and monitor a hydro turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate, inspect and monitor in-service hydro turbines. Turbines are a basic component in most methods of generating electricity in hydro generation power facilities.

Competency in this unit requires the ability to plan work, operate hydro turbine plant, test hydro turbine plant, analyse hydro turbine plant faults, monitor and inspect hydro turbine plant and the completion of all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator. Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisites.

Competency Field

Operations

Unit Sector

Electricity generation

outcomes.	demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Safety issues related to operating and monitoring hydro turbine plant are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and legislative requirements
	1.2 Work tasks and hydro turbine plant requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Hydro turbine run up and loading schedule are ascertained from relevant documentation, in accordance with workplace procedures and site requirements
	1.4 Inspection, preoperational tests and field preparations for hydro turbine plant service are carried out, in accordance with workplace procedures and manufacturers' recommendations
	1.5 Hydro turbine plant operational prerequisites are established, in accordance with workplace procedures and manufacturers' recommendations
	1.6 Sequence for recommissioning of hydro turbine plant is determined, in accordance with workplace procedures and site requirements
2 Operate hydro turbine plant	**2.1** Output is adjusted to achieve required hydro turbine operating conditions and demand, in accordance with workplace procedures and operational requirements
	2.2 Hydro turbine plant is operated within limits of its' design, in accordance with workplace procedures
	2.3 Hydro turbine plant is monitored and observed, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.4 Corrective actions are taken to rectify hydro turbine abnormalities, in accordance with workplace procedures and manufacturers' recommendations
3 Test hydro turbine plant operation	**3.1** Operational tests are performed, in accordance with workplace procedures
	3.2 Hydro turbine plant is observed for correct operational

		response, in accordance with workplace procedures
	3.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, hydro turbine plant integrity or personnel safety requirements
	3.4	Hydro turbine plant is returned to required safe operational status upon completion of testing, in accordance with workplace procedures
4 Analyse hydro turbine plant faults	**4.1**	Cause of abnormal hydro turbine plant operating conditions are identified, in accordance with workplace procedures, and by analysing technical and operational information
	4.2	Actions necessary to rectify faults are correctly determined, in accordance with workplace procedures
	4.3	Hydro turbine plant integrity and personnel safety is maintained, in accordance with workplace procedures, and in consultation with appropriate personnel and technical and operational documentation
5 Monitor and inspect hydro turbine plant	**5.1**	Hydro turbine plant to be monitored and inspected is physically identified, in accordance with workplace procedures
	5.2	Hydro turbine plant is monitored and inspected, in accordance with workplace procedures, for normal operation or to detect deviations
	5.3	Corrective action is taken, in accordance with workplace procedures
	5.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
6 Complete documentation	**6.1**	Hydro turbine plant problems, movements, and status are reported, in accordance with workplace procedures
	6.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing hydro turbine plant faults using data analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- coordinating remote operation of equipment to maintain hydro turbine plant integrity
- identifying hydro turbine plant status
- monitoring and inspecting hydro turbine plant operation
- operating hydro turbine unit and equipment under the influence of high water pressures or flows
- organising resources
- preparing and planning work
- recognising and responding to abnormal hydro turbine plant operating conditions
- testing hydro turbine plant operationally using diagnostic and testing techniques
- using permit to work system
- working with hydro turbine plant and equipment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- hydro turbine plant and equipment, its location and operating parameters inclusive of the influence of high water pressure and/or flows
- hydro turbine plant status

UEPOPS361 Operate and monitor hydro plant auxiliary systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate, inspect and monitor hydro plant auxiliary systems.

A variety of auxiliary plant systems and related controls are used in power generation facilities to support the operation of hydro generating units. Auxiliary plant systems may include ancillary equipment such as pumps, valves, screens and seals.

Competency in this unit requires the ability to plan work, operate hydro plant auxiliary system, test hydro plant auxiliary system, analyse hydro plant auxiliary faults, monitor and inspect hydro plant and the completion of all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

UEPOPS362 Operate and monitor generator/alternator

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate, inspect and monitor a generator and/or alternator.

An alternator is an electrical generator that converts mechanical energy to electrical energy in the form of an Alternating Current (AC). In contrast, a generator can produce either Alternating Current (AC) or Direct Current (DC).

Competency in this unit requires the ability to plan work, operate generator and/or alternator plant, test generator and/or alternator plant, analyse generator and/or alternator plant faults, monitor and inspect generator and/or alternator plant and the completion of all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

UEPOPS364 Ensure compliance with Work, Health and Safety policy and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to ensure Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) policies and procedures are followed, in order to ensure safety in the workplace.

WHS/OHS is concerned with protecting the health and safety of all stakeholders in the workplace from exposure to hazards and risks resulting from work activities. It involves the application of WHS/OHS legislation and codes of practice, meeting regulatory obligations, identifying risks, determining strategies for control of risks and responding quickly to incidents.

Competency in this unit requires the ability to identify WHS/OHS policies and procedures, contribute to WHS/OHS in the workplace, confirm WHS/OHS compliance and maintain WHS/OHS records. Individuals will, in general, work as an operator in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no perquisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify WHS policies and procedures	**1.1** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation, including duty of care, and codes of practice are identified and explained to personnel and stakeholders, in accordance with workplace procedures
	1.2 WHS/OHS procedures for dealing with accidents, fires and emergencies are maintained and updated, in accordance with workplace procedures
	1.3 Information about identified hazards and the outcome of risk assessments and risk control procedures are provided to personnel and stakeholders, in accordance with workplace procedures
2 Contribute to WHS in the workplace	**2.1** Hazards are identified and reported to designated personnel, in accordance with workplace procedures
	2.2 WHS/OHS issues raised with designated personnel are confirmed, in accordance with workplace procedures and WHS/OHS legislation requirements
3 Confirm WHS compliance	**3.1** Risk control compliance is monitored, in accordance with workplace procedures
	3.2 Inadequacies in existing risk control measures are identified and reported, in accordance with workplace procedures and hierarchy of control
	3.3 Inadequacies in resource allocation for implementation of risk control measures are identified and reported to designated personnel, in accordance with workplace procedures
	3.4 Work is stopped and safety discussion is conducted where noncompliance is observed
4 Maintain WHS records	**4.1** WHS/OHS records are completed, in accordance with workplace procedures
	4.2 WHS/OHS records are monitored for compliance, in accordance with workplace procedures

UEPOPS368 Operate manual systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate power generation plant in manual mode, in conjunction with coordinated systems, under the control of appropriate authorised personnel.

Power generation plant may be manually controlled by an operator rather than automatically by a computer when required by circumstances.

Competency in this unit requires the ability to plan and prepare work, operate plant and equipment manually and complete documentation. Individuals will, in general, work under supervision, as an operator in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Safety issues are identified, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards and workplace procedures
	1.2 Work requirements are identified from relevant personnel and documentation, in accordance with workplace procedures
	1.3 Power generation plant status is identified and confirmed, in accordance with workplace procedures, site requirements and documentation
	1.4 Preoperational checks are carried out on power generation plant, in accordance with manufacturers' recommendations and workplace procedures
2 Conduct manual operation of plant	**2.1** Power generation plant to be manually controlled is identified and operated, in accordance with workplace operating procedures
	2.2 Power generation plant is manually operated within limits of its' design, in accordance with workplace procedures
	2.3 Power generation plant is monitored to detect deviations from normal operating conditions, in accordance with workplace procedures
	2.4 Corrective actions are taken to rectify power generation plant abnormalities, in accordance with manufacturers' recommendations and workplace procedures
3 Complete documentation	**3.1** Power generation plant problems, movements, and status are reported in accordance with workplace procedures
	3.2 Documentation is updated, in accordance with workplace procedures

Assessment Requirements for UEPOPS368 Operate manual systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- identifying operation of power generation plant and equipment
- implementing legislation, industry standards, codes of practices and regulations
- interpreting manufacturers' specifications and manuals
- operating manual systems in a power generation facility
- planning manual operation of power generation plant
- recognising power generation plant status

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- legislation, industry standards, codes of practices and regulations
- manual operation of power generation systems
- manufacturers' specifications and manuals
- power generation plant and equipment, its location and operating parameters
- typical arrangements of power generation plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS369 Respond to a critical incident

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to respond to a critical incident that may impact the operational effectiveness of a power generation facility's plant or system, endanger human life, damage or destroy property and/or have an adverse impact on the environment.

A critical incident refers to a crisis that may result in a high level of risk, directly or indirectly, to the core operations of a power generation facility. A high level of risk would be determined using the risk management processes outlined in the power generation facility's Risk Management System.

Competency in this unit requires the ability to identify a critical incident and consequences, stabilise power generation system, restore power generation system and review response to incident. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify critical incident and consequences	**1.1** Information and documentation to determine power generation system status, and consequences of critical incident is analysed, in accordance with workplace procedures, legislative requirements, industry standards and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations
	1.2 Fault location is determined by monitoring and evaluating power generation system configuration and operational prerequisites, in accordance with workplace procedures
	1.3 Fault information is collated, in accordance with workplace procedures, to determine type and cause of failure
	1.4 Power generation system limitations and performance, including location and any external influences, are identified, in accordance with workplace procedures
2 Stabilise power generation system	**2.1** Appropriate critical incident response techniques are identified and used, in accordance with workplace procedures
	2.2 Appropriate personnel and external stakeholders are consulted, in accordance with workplace procedures, prior to further critical incident actions being undertaken
	2.3 Power generation system requirements are assessed, and controlled, to maintain stability and integrity, in accordance with workplace procedures
	2.4 Corrective actions to rectify power generation system abnormalities are implemented, following analysis of data, in accordance with workplace procedures
3 Restore power generation system	**3.1** Specialised assistance, if required, is identified, in accordance with workplace procedures
	3.2 Strategies to restore power generation system integrity are identified, and communicated to appropriate personnel, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.3 Power generation system restoration is undertaken, and is monitored and adjusted, in accordance with workplace procedures
4 Review response to incident	**4.1** Power generation system response is analysed, in accordance with workplace procedures
	4.2 Critical incident preventive measures are documented, in accordance with workplace procedures
	4.3 Findings are communicated to appropriate personnel and key stakeholders, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS369A Respond to a critical incident.

UEPOPS370 Facilitate the use of contingency plans for power generation facilities

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to facilitate the use of contingency plans that are developed to support the integrity of power generation facilities.

A contingency plan is a course of action designed by a power generation facility to respond to potentially disruptive situations.

Competency in this unit requires the ability to identify contingencies, identify preferred contingency plans and complete all documentation. Individuals will, in general, work as an operator with responsibility for contingency planning or risk management, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify contingencies	**1.1** Potential contingencies are identified, in accordance with legislative requirements and industry standards from a risk assessment of functions which are critical to the performance of the power generation facility
	1.2 Likelihood and impact of risks is assessed and evaluated, in accordance with workplace procedures and the risk management system, and is also discussed with appropriate personnel and stakeholders
2 Identify contingency plan processes	**2.1** Contingency plan processes are identified and applied, in accordance with workplace procedures
	2.2 Roles and responsibilities for the contingency plan are identified, in accordance with workplace procedures
3 Complete documentation	**3.1** Power generating plant problems, movements and status are reported, in accordance with workplace procedures and contingency plan
	3.2 Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

UEPOPS371 Carry out operational checks on in-service electrical plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct operational checks on in-service electrical plant.

Operational maintenance checks need to be undertaken regularly to ensure the smooth and efficient operation of all in-service electrical plant in the power generation facility.

Competency in this unit requires the ability to plan, carry out in-service electrical checks on electrical plant and completion of work. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. UEPOPS372 Operate and monitor generator/alternator auxiliary plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate, inspect and monitor generator and/or alternator auxiliary plant, including stator water systems, hydrogen cooling systems, seal oil and lubricating oil systems.

A power generation facility's auxiliary equipment and systems are designed to keep power generating plant operating smoothly in a variety of circumstances.

Competency in this unit requires the ability to plan work, operate generator and/or alternator auxiliary plant, test generator and/or alternator auxiliary plant, analyse generator and/or alternator auxiliary plant faults, monitor and inspect generator and/or alternator auxiliary plant and the completion of all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Safety issues related to operating and monitoring generator and/or alternator auxiliary plant are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety(OHS) regulations and legislative requirements
	1.2 Work requirements and generator and/or alternator auxiliary plant are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Generator and/or alternator auxiliary running up and loading schedule is ascertained from relevant documentation, in accordance with workplace procedures and site requirements
	1.4 Inspection, preoperational tests and field preparations for generator and/or alternator auxiliary plant service are carried out, in accordance with workplace procedures and manufacturers' recommendations
	1.5 Generator and/or alternator auxiliary plant operational prerequisites are established, in accordance with workplace procedures and manufacturers' recommendations
	1.6 Sequence for recommissioning of generator and/or alternator auxiliary plant is determined, in accordance with workplace procedures and site requirements
2 Operate generator/alternator auxiliary plant	**2.1** Generator and/or alternator auxiliary plant is operated within limits of its' design and regulators requirements, in accordance with workplace procedures
	2.2 Generator and/or alternator auxiliary plant is monitored and observed, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.3 Corrective actions are taken to rectify generator and/or alternator auxiliary plant abnormalities, in accordance with workplace procedures and manufacturers' recommendations

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Test generator/alternator auxiliary plant operation**	**3.1** Operational tests are performed, in accordance with workplace procedures
		3.2 Generator and/or alternator auxiliary plant is observed for correct operational response, in accordance with workplace procedures
		3.3 Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, generator or alternator auxiliary plant integrity or personnel safety requirements
		3.4 Generator and/or alternator auxiliary plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4	**Analyse generator/alternator auxiliary plant faults**	**4.1** Cause of abnormal generator and/or alternator auxiliary plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
		4.2 Corrective actions to rectify generator and/or alternator auxiliary plant faults are determined, in accordance with workplace procedures
		4.3 Generator and/or alternator auxiliary plant integrity and personnel safety is maintained, in accordance with workplace procedures, and in consultation with appropriate personnel and technical and operational documentation
5	**Monitor and inspect generator/alternator auxiliary plant**	**5.1** Generator and/or alternator auxiliary plant to be monitored and inspected is physically identified, in accordance with workplace procedures
		5.2 Generator and/or alternator auxiliary plant is monitored and inspected, in accordance with workplace procedures, for normal operation or to detect deviations
		5.3 Corrective action is taken, in accordance with workplace procedures
		5.4 Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
6	**Complete documentation**	**6.1** Generator and/or alternator auxiliary plant problems, movements, and status are reported, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

6.2 Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UEPOPS372 Operate and monitor generator/alternator auxiliary plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing generator and/or alternator auxiliary plant faults using data analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- identifying generator and/or alternator auxiliary plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- monitoring and inspecting generator and/or alternator auxiliary plant operation
- operating generator and/or alternator auxiliary plant
- organising resources
- recognising and responding to abnormal generator and/or alternator auxiliary plant operating conditions
- testing generator and/or alternator auxiliary plant operationally using diagnostic and test techniques
- working with generator and/or alternator auxiliary plant and/or equipment
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- generator and/or alternator auxiliary plant and equipment, its location and operating

© Commonwealth of Australia, 2025 Powering Skills Organisation

parameters
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

UEPOPS402 Conduct multiple energy source isolation procedures for permit to work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required for the application of permit to work procedures where multiple energy sources require isolation for safe access to high voltage, low voltage or mechanical apparatus.

Permits to work are a formal system used to control high risk activities in power generation facilities. They specify the control measures that will be put in place to minimise risks. Permits ensure that all hazards and precautions have been considered before any hazardous work begins.

Competency in this unit requires the ability to plan and prepare for isolation, de-isolation and restoration, perform isolation and perform de-isolation and restoration. Individuals will, in general, work as an operator in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS301 Conduct single energy source isolation procedures for permit to work.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for multiple energy source isolation	**1.1** Work requirements, including permit to work, are identified and confirmed, in accordance with workplace procedures, with appropriate personnel or by site inspection
	1.2 Safety issues, Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and industry standards are identified, in accordance with workplace procedures
	1.3 Materials, tools, equipment and resources to satisfy job plan and permit to work requirements are requisitioned and inspected for compliance, in accordance with workplace procedures
	1.4 Isolation work is planned sequenced and prioritised, in accordance with workplace procedures and permit requirements
	1.5 Permit to work and risk assessment are coordinated with other personnel involved in, or affected by isolations, in accordance with workplace procedures
	1.6 Personnel participating in work are briefed and roles and responsibilities are confirmed, in accordance with workplace procedures
2 Perform multiple energy source isolation	**2.1** Multiple energy source to be isolated is correctly identified, in accordance with workplace procedures
	2.2 Isolation is performed, in accordance with workplace procedures and permit to work requirements
	2.3 Verification of isolation, dissipation and restraint of energy sources is performed, in accordance with workplace procedures
	2.4 Isolation is confirmed, in accordance with workplace procedures
3 Perform multiple energy source de-isolation and	**3.1** Multiple energy source de-isolation and restorations are performed, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

restoration	and permit to work requirements
	3.2 Multiple energy source de-isolations are confirmed, in accordance with workplace procedures
	3.3 Work completion details are finalised, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS402B Conduct multiple energy source isolation procedures for permit to work.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=1715b9fa-e7bd-441c-bb8d-cf22c9c825a8

Assessment Requirements for UEPOPS402 Conduct multiple energy source isolation procedures for permit to work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - hazard identification
  - risk control measures
  - safe working practices
- communicating with personnel and stakeholders
- completing documentation
- coordinating and briefing others on permit to work
- identifying power generating plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting plant drawings, diagrams and manufacturers manuals
- performing isolations, de-isolations and restorations
- planning and preparing for isolation, de-isolation and restoration
- preparing power generating plant or equipment for isolation operation
- using permit to work system
- working with equipment, tools, materials and resources

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- documentation requirements
- isolation, de-isolation and restoration techniques
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals

© Commonwealth of Australia, 2025 Powering Skills Organisation

- mechanical and electrical equipment isolation techniques
- mechanical and electrical isolation equipment types and characteristics
- permit to work system
- power generating plant and equipment, its location and operating parameters
- power generating plant status
- tools, materials and resources
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - hazard identification
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS403 Coordinate permit to work system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the permit to work system in a power generation facility inclusive of its implementation and application on a day to day basis, during major power outages and in other projects.

Permits to work are a formal system used to control high risk activities in power generation facilities. They specify control measures to be used. Permits to work ensure that all hazards and precautions have been considered before any hazardous work begins.

Competency in this unit requires the ability to plan implementation of permit to work procedures, coordination of power outage permit to work requirements and coordination of the permit to work system. Individuals will, in general, work as a coordinator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Implement permit to work procedures	**1.1** Permit to work requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.2 Permit to work is implemented, in accordance with legislative requirements and workplace procedures
	1.3 Power generation plant isolations are coordinated and confirmed with appropriate personnel, in accordance with workplace procedures
	1.4 Issue, cancellation and recording of permits to work is carried out, in accordance with workplace procedures
	1.5 Power generation plant de-isolation and restoration is coordinated with appropriate personnel, in accordance with workplace procedures
	1.6 Documentation is completed, in accordance with workplace procedures
2 Coordinate permit to work requirements	**2.1** Power outage plan is obtained from and confirmed with appropriate personnel, in accordance with workplace procedures
	2.2 Critical paths, major milestones and potential conflicts between permits to work for power outage work are identified and assessed, in accordance with workplace procedures
	2.3 Permits to work are detailed in maintenance plan and work is structured, in accordance with workplace procedures, to not impact power outage targets
	2.4 Resources are obtained and utilised, in accordance with workplace procedures, to ensure power outage plan targets are maintained
	2.5 Issue and cancellation of permits to work is coordinated, in accordance with workplace procedures
	2.6 De-isolation and restoration of power generation plant is planned and coordinated, in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures, to meet recommissioning targets
	2.7	Records are maintained during power outages, in accordance with workplace procedures and site requirements
3 Report on permit to work system	**3.1**	Permit to work system is monitored and reviewed, and results are evaluated, in accordance with workplace procedures
	3.2	Results are documented and reports are confirmed with appropriate personnel, in accordance with workplace procedures
	3.3	Permit to work system incidents are identified, in accordance with workplace procedures
	3.4	Permit to work incidents are investigated and assessed, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

UEPOPS404 Coordinate first response team operation

Modification History

Release 2. This is the second release of this unit in the Electricity Supply Industry - Generation Sector Training Package. The following modification has been made:

- UEPOPS210 Conduct first response within a workplace team deleted due to zero enrolment.

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the operations of a first response team. Coordinators will organise workplace emergency response procedures and communicate with external emergency agencies.

A first response team prepares for and responds to emergency incidents that pose an immediate risk to a power generation facility. The operation of a first response team is to support emergency service agencies.

Competency in this unit requires the ability to coordinate a workplace emergency team, cooperate with other emergency services personnel, evaluate an emergency, respond to an emergency and to report the outcomes of an emergency response. Individuals will, in general, work as an operator, with coordination responsibilities, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Coordinate workplace first response team	**1.1** First response team purpose is identified and clarified with appropriate personnel, in accordance with workplace procedures
	1.2 Duties and responsibilities of first response team members are identified, in accordance with workplace procedures
	1.3 Instructions are relayed to first response team members, in accordance with workplace procedures
	1.4 First response team member identification is displayed, in accordance with workplace procedures
2 Cooperate with emergency services personnel	**2.1** Responsibilities of emergency services personnel are clarified to first response team members, in accordance with workplace procedures
	2.2 Role and authority of emergency services is discussed with first response team members, in accordance with workplace procedures
	2.3 Instructions from emergency services personnel are clarified and coordinated, in accordance with workplace procedures
	2.4 Guidance and assistance for emergency services personnel is coordinated, in accordance with workplace procedures
	2.5 Directions and advice are given to emergency service personnel and first response team members, in accordance with workplace procedures, after emergency site inspection
	2.6 An emergency plan to ensure personnel safety and power generating plant integrity is developed, in accordance with legislative requirements, industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

		standards and workplace procedures
	2.7	Relevant documentation is obtained and used, in accordance with workplace procedures
	2.8	Materials, equipment and resources are obtained and coordinated, in accordance with workplace procedures
3 Evaluate emergency	**3.1**	Nature, extent and cause of emergency is identified, in accordance with workplace procedures
	3.2	Potential risks to personnel, equipment, environment and power generation production is identified, in accordance with workplace procedures
	3.3	Notification of emergency is undertaken, in accordance with workplace procedures
	3.4	Emergency evacuation procedures are followed, where appropriate, in accordance with workplace procedures
	3.5	Requirement for special expert assistance is identified, in accordance with workplace procedures
	3.6	Emergency incident is evaluated, in accordance with workplace procedures, to prevent repetition
	3.7	Location of emergency is identified and most effective route is determined, in accordance with workplace procedures
4 Respond to emergency	**4.1**	Vehicles and buildings are secured and protected, in accordance with workplace procedures and emergency plan requirements
	4.2	Potential sources of danger are isolated, and warning signs, signals and barriers are put in place, in accordance with workplace procedures
	4.3	Emergency incident responses are applied, in accordance with emergency plan requirements and workplace procedures
	4.4	Communication is established with key stakeholders and emergency services personnel, in accordance with workplace procedures
	4.5	Use of personal protective equipment during emergency incident is monitored, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	4.6	Technical advice to emergency service personnel is given, in accordance with workplace procedures
5 Report outcomes of emergency response	**5.1**	Fire and emergency equipment is marked or positioned after use, in accordance with workplace procedures, to indicate servicing or replacing
	5.2	Use of emergency equipment is reported, in accordance with workplace procedures
	5.3	Debriefing is attended and responded to, in accordance with workplace procedures
	5.4	First response team outcomes are evaluated, and recommendations are submitted for consideration, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

UEPOPS405 Operate and monitor A.C. electrical systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor the local and remote operation of Alternate Current (A.C.) electrical systems including switchgears, switchboards, distribution systems and transformers.

The main functions of electrical systems in power generating facilities is to distribute electrical power to system components and to provide electrical protection for power sources and for the components.

Competency in this unit requires the ability to plan switching operations work; carry out operation of switchgears and switchboards; test switchgears and equipment operation; analyse A.C. electrical system, switchgear and equipment faults; inspect and monitor A.C. electrical system and switchboards and the completion of all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for switching operations	**1.1** Safety issues related to operating and monitoring Alternating Current (A.C.) electrical systems are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and legislative requirements
	1.2 Work requirements are identified, in accordance with workplace procedures, from appropriate personnel and documentation
	1.3 Documentation to determine A.C. electrical system plant status is assessed and evaluated, in accordance with workplace procedures
	1.4 Equipment inspection, preoperational checks and preparations for A.C. electrical system service are carried out, in accordance with workplace procedures and manufacturers' recommendations
	1.5 Switchboard and electrical equipment operational prerequisites and switching sequences are established, in accordance with workplace procedures and manufacturers' recommendations
2 Carry out operation of switchgear and switchboards	**2.1** Operation of switchgear is carried out, in accordance with workplace procedures and manufacturers' recommendations
	2.2 Isolation, removal and reinstatement of switchgear, switchboards and rectification system is carried out, in accordance with workplace procedures and manufacturers' recommendations
	2.3 Paralleling and balancing requirements are assessed to meet A.C. electrical system stability, in accordance with workplace procedures
	2.4 Rectification system is operated, isolated and reinstated, in accordance with workplace procedures and manufacturers' recommendations

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Test switchgear and equipment operation**	**3.1** Operational tests are performed, in accordance with workplace procedures
		3.2 Switchgear and equipment is observed for correct operational response, in accordance with workplace procedures
		3.3 Corrective action is taken, in accordance with workplace procedures, when switch gear and equipment response does not meet with documentation, A.C. electrical system integrity or personnel safety requirements
		3.4 Switchgear equipment is returned to required operational status upon completion of testing, in accordance with workplace procedures
4	**Analyse A.C. electrical system, switchgear and equipment faults**	**4.1** Causes of abnormal A.C. electrical system and switchgear operating conditions are identified, in accordance with workplace procedures, and by analysing technical and operational information
		4.2 Corrective action is taken, in accordance with workplace procedures
		4.3 A.C. electrical system and switchgear plant integrity and personnel safety are maintained, in accordance with workplace procedures, and in consultation with appropriate personnel and technical and operational documentation
5	**Inspect and monitor A.C. electrical system and switchboards**	**5.1** A.C. electrical system and switchgear to be monitored and inspected is physically identified, in accordance with workplace procedures
		5.2 A.C. electrical system and switchgear is monitored and inspected, in accordance with workplace procedures, for normal operation or to detect deviations
		5.3 Corrective action is taken, in accordance with workplace procedures
		5.4 Appropriate personnel are notified when A.C. electrical system defects and abnormal operating conditions are detected, in accordance with workplace procedures
6	**Complete documentation**	**6.1** A.C. electrical system equipment problems and status are reported, in accordance with workplace procedures
		6.2 Documentation is updated, in accordance with

UEPOPS406 Operate and monitor D.C. electrical systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate and monitor local and remote operation of Direct Current (D.C.) electrical system including switchgears, ring mains, switchboards, rectification and distribution systems.

Electrical systems in power generating facilities distribute electrical power to system components and provide electrical protection for power sources and components.

Competency in this unit requires the ability to plan switching operations work, carry out operation of switch gears, switch boards and rectification systems, test switch gear and rectification equipment operation, analyse switch gear and rectification system equipment faults, inspect and monitor switch gear and switch board systems and the completion of all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

operation		workplace procedures
	3.2	Switchgear and/or rectification system equipment is observed for correct operational response, in accordance with workplace procedures
	3.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, D.C. electrical system integrity or personnel safety requirements
	3.4	Switchgear and/or rectification system equipment is returned to required operational status upon completion of testing, in accordance with workplace procedures
4 Analyse system, switchgear and rectification equipment faults	**4.1**	Causes of abnormal D.C. electrical system and switchgear operating conditions are identified, in accordance with workplace procedures, and by analysing technical and operational information
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	D.C. electrical system, and switchgear plant integrity and personnel safety are maintained, in accordance with workplace procedures, and in consultation with appropriate personnel and technical and operational documentation
5 Inspect and monitor system and switchboards	**5.1**	D.C. electrical system and switchgear to be monitored and inspected is physically identified, in accordance with workplace procedures
	5.2	D.C. electrical system and switchgear is monitored and inspected, in accordance with workplace procedures, for normal operation or to detect deviations
	5.3	Corrective action is taken, in accordance with workplace procedures
	5.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects and abnormal operating conditions are detected
6 Complete documentation	**6.1**	Equipment problems and status are reported, in accordance with workplace procedures
	6.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS406B Operate and monitor d.c. electrical systems.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=1715b9fa-e7bd-441c-bb8d-cf22c9c825a8

Assessment Requirements for UEPOPS406 Operate and monitor D.C. electrical systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing system, switchgear and rectification equipment, D.C. electrical system and protection faults using diagnostic and test techniques
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedure
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- conducting switching, switchgear, switchboard and rectification system operations
- identifying D.C. electrical system plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- monitoring and inspecting equipment and D.C. electrical system operation
- operating switchgear and equipment
- organising resources
- preparing D.C. electrical system plant and/or equipment for operation
- recognising and responding to abnormal D.C. electrical system plant operating conditions
- testing D.C. electrical system, switchgear and rectification equipment operationally using data analysis techniques and tools
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- D.C electrical system plant and equipment, its location and operating parameters

© Commonwealth of Australia, 2025 Powering Skills Organisation

- D.C electrical system plant status
- D.C. switchgear types and characteristics
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedure
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards,
- equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS407 Start and run up gas turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required for the purging, ignition and establishment of combustion and run-up of a gas turbine to operational and synchronous speed.

A gas turbine may be operated as an individual unit on open cycle or as a component of a combined cycle plant consisting of a gas turbine, heat recovery steam generator and steam turbine.

Competency in this unit requires the ability to plan and prepare work, conduct gas turbine start and run up, test gas turbine plant, identify and respond to gas turbine plant operation and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare gas turbine start and run up work	**1.1** Safety issues are identified in accordance with workplace procedures, Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and site requirements
	1.2 Work requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Preoperational checks are carried out on gas turbine plant, in accordance with manufacturers' recommendations and workplace procedures
2 Conduct gas turbine start and run up	**2.1** Preoperational conditions for gas turbine plant are established, in accordance with workplace procedures and site requirements
	2.2 Preoperational conditions of the Heat Recovery Steam Generator (HRSG), associated steam mains and steam turbine are established when gas turbine is a component of a combined unit, in accordance with workplace procedures
	2.3 Starting procedures and correct purge, ignition and run-up sequence are commenced and observed, in accordance with workplace
	2.4 Minimum operation of gas turbine is established and supported, in accordance with workplace procedures and manufacturers' recommendations
	2.5 Monitoring and control of HRSG drum level, feedwater flow, steam and metal temperature rates of rise, steam pressure rate of rise, steam flow and drainage are carried out where gas turbine is a component of a combined cycle unit, in accordance with workplace procedures
	2.6 Gas turbine exhaust temperature and flow to HRSG and gas turbine power output are monitored and adjusted to achieve required steam conditions, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Generating plant is operated within limits of its' design, in accordance with workplace procedures
	2.8	Generating plant is monitored and observed, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.9	Corrective action is taken to rectify gas turbine abnormalities, in accordance with manufacturers' recommendations and workplace procedures
3 Test gas turbine plant operation	**3.1**	Tests are performed, in accordance with workplace procedures
	3.2	Power generation system and gas turbine plant is observed, in accordance with workplace procedures, for correct operational response
	3.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet documentation, plant integrity or personnel safety requirements
	3.4	Gas turbine plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4 Identify, respond and report on gas turbine plant operation and anomalies	**4.1**	Causes of abnormal gas turbine plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	Gas turbine plant integrity and personnel safety is maintained, in accordance with workplace procedures, through consultation with appropriate personnel and technical and operational documentation
	4.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
5 Complete documentation	**5.1**	Gas turbine plant problems, movements, and status reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

UEPOPS408 Shut down a gas turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to shut down a gas turbine unit to a standby state.

Performing shut down procedures for a gas turbine unit will require the implementation of power generation facility procedures and provisions including manufacturers' recommendations and work site specific requirements.

Competency in this unit requires the ability to plan and prepare gas turbine shut down, shut down a gas turbine, test gas turbine plant operation, analyse power generation system faults and the completion of documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

	1.2 Work requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Operational checks are carried out on gas turbine plant in accordance with manufacturers' specifications and workplace procedures
	1.4 Team and individual roles and responsibilities are identified, in accordance with workplace procedures and are recorded in the shutdown plan
2 Conduct gas turbine shut down	**2.1** Gas turbine is unloaded and shut down, in accordance with manufacturers' specifications, workplace procedures, site requirements and shut down plan
	2.2 Gas turbine exhaust gas flow and power output are adjusted when gas turbine is a component of a combined unit, in accordance with workplace procedures, to achieve required steam flow conditions
	2.3 Gas turbine and associated power generation plant is placed in a safe condition, in accordance with manufacturers' recommendations, workplace procedures and shut down plan
	2.4 Gas turbine plant is operated within limits of its' design, in accordance with workplace procedures during gas turbine shut down
	2.5 Gas turbine plant is inspected and monitored, in accordance with workplace procedures, to detect abnormal operating conditions during shut down
	2.6 Corrective actions are taken to rectify gas turbine plant operation abnormalities, in accordance with manufacturers' recommendations and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Inspect and test gas turbine plant operation during shutdown**	**3.1** Tests are performed on gas turbine plant, in accordance with workplace procedures and shut down plan
		3.2 Gas turbine system and plant is observed for correct operational response, in accordance with workplace procedures
		3.3 Corrective action is taken when operation response is not in accordance with shut down work plan, plant integrity or safety requirements
		3.4 Gas turbine plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4	**Analyse system faults during gas turbine shutdown**	**4.1** Causes of abnormal gas turbine plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
		4.2 Corrective action is taken, in accordance with workplace procedures and shut down plan
		4.3 Gas turbine plant integrity and personnel safety is maintained, in accordance with workplace procedures, and through consultation with appropriate personnel and technical and operational documentation
		4.4 Appropriate personnel are notified in accordance with workplace procedures, when defects are detected
5	**Complete documentation**	**5.1** Gas turbine plant problems, movements and status are reported, in accordance with workplace procedures
		5.2 Documentation is updated, in accordance with workplace procedures

UEPOPS409 Start up a boiler unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to establish combustion in a boiler through to a stage at which combustion support energy is no longer necessary.

A boiler is a closed vessel in which water, under pressure, is converted into steam. Combustion is an important key to boiler operations; it occurs when oxygen combines with an element or compound to release heat.

Competency in this unit requires the ability to plan and prepare boiler unit start up, conduct boiler unit boiler unit start up, test and analyse boiler unit system faults and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare boiler unit start up work	**1.1** Safety issues are identified in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and workplace procedures
	1.2 Work requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Preoperational checks are carried out on boiler unit plant, in accordance with manufacturers' recommendations and workplace procedures and site requirements
2 Conduct boiler unit start up	**2.1** Boiler auxiliary systems are started up to support boiler unit start up, in accordance with manufacturers' specifications and workplace procedures
	2.2 Pre-light up conditions for boiler unit are established, in accordance with workplace procedures
	2.3 Combustion is established with fuel consumption kept at minimum levels, in accordance with workplace procedures and manufacturers' recommendations
	2.4 Fuel, air and feed water flows are adjusted, in accordance with workplace procedures, to achieve required steam conditions and demand
	2.5 Boiler unit plant is operated within limits of its' design, in accordance with workplace procedures
	2.6 Boiler unit plant is monitored, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.7 Corrective actions are taken to rectify boiler unit abnormalities, in accordance with manufacturers' recommendations and workplace procedures
3 Test boiler unit plant operation	**3.1** Tests are performed, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.2	Power generation system and boiler unit plant is observed, in accordance with workplace procedures, for correct operational response
	3.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet documentation, plant integrity or personnel safety requirements
	3.4	Boiler unit plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4 Analyse system faults during boiler unit start up	**4.1**	Causes of abnormal boiler unit plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	Boiler unit plant integrity and personnel safety is maintained, in accordance with workplace procedures and through consultation with appropriate personnel and technical and operational documentation
	4.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
5 Complete documentation	**5.1**	Boiler unit plant problems, movements, and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Assessment Requirements for UEPOPS409 Start up a boiler unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- employing temperature and pressure raising techniques
- identifying boiler unit plant status
- implementing legislation, industry standards, codes of practice and regulations
- monitoring and operating boiler unit plant and equipment
- organising resources
- planning and preparing boiler unit plant and equipment for start and run up operations
- recognising and responding to abnormal boiler unit plant operating conditions
- reviewing fuel consumption during boiler unit start up
- starting, running up and operating boiler unit and associated plant and equipment
- testing boiler unit plant operation using diagnostic and data analysis techniques and tools to determine faults
- using recording procedures to complete documentation
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- boiler system components and interaction with other plant and equipment
- boiler unit plant and equipment, its location and operating parameters
- manufacturers' specifications and manuals
- permit to work system

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques of fuel combustion
- temperature and pressure raising requirements
- typical arrangements of power production plant
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS410 Shut down a boiler unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct the shutdown of a boiler unit to a depressurised state.

A shut down of a boiler unit will involve a series of steps to stop production, feed and fuel flows in a safe and controlled manner.

Competency in this unit requires the ability to plan and prepare boiler unit shut down, conduct a shut down, test boiler unit operation during shut down, analyse boiler unit system faults during shut down and completing documentation post shut down. Individuals will, in general, work under supervision in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare boiler unit shut down work	**1.1** Safety issues are identified, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) procedures and workplace procedures
	1.2 Work requirements are identified from relevant personnel and documentation, in accordance with workplace procedures
	1.3 Preoperational checks are carried out on boiler unit plant in accordance with workplace procedures, manufacturers' recommendations and workplace procedures and site requirements
2 Conduct boiler unit shut down	**2.1** Perform shut down of boiler unit, in accordance with manufacturers' specifications and workplace procedures.
	2.2 Cool down and purge boiler unit, in accordance with manufacturers' specifications and workplace procedures
	2.3 Depressurise boiler unit, in accordance with manufacturers' specifications and workplace procedures
	2.4 Corrective actions are taken to rectify boiler unit abnormalities, in accordance with manufacturers' recommendations and workplace procedures
3 Test boiler unit plant operation	**3.1** Tests are performed on boiler unit, in accordance with workplace procedures
	3.2 Power generation system and boiler unit plant is observed for correct operational response, in accordance with workplace procedures
	3.3 Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, boiler unit plant integrity or personnel safety requirements
	3.4 Boiler unit plant is returned to required operational status upon completion of testing, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

4 Analyse and report on system faults during boiler unit shut down	**4.1**	Causes of abnormal boiler unit plant operating conditions are identified by analysing technical and operational information in accordance with workplace procedures
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	Boiler unit plant integrity and personnel safety is maintained, in accordance with workplace procedures, and through consultation with appropriate personnel, and technical and operational documentation
	4.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
5 Complete documentation	**5.1**	Boiler unit plant problems, movements and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UEPOPS410 Shut down a boiler unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- identifying boiler unit plant status
- implementing legislation, industry standards, codes of practice and regulations
- monitoring and operating boiler unit plant and equipment
- organising resources
- planning shut down boiler unit plant operation
- preparing boiler unit plant and equipment for operation
- responding to abnormal boiler unit plant operating conditions
- testing boiler unit plant operation using diagnostic data analysis techniques and tools to determine faults
- using recording procedures to complete documentation
- utilising cooling and depressurising techniques
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- boiler cooling and depressurising techniques
- boiler operational processes
- boiler system components and their interaction
- legislation, industry standards, codes of practice and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- manufacturers' specifications and manuals
- permit to work system
- typical power generation unit plant
- WHS/OHS legislation requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS411 Run up a steam turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct a steam turbine run up to a stable operating condition.

Run up of a steam turbine will involve the operator making a sequence of checks prior to and during start up. This ensures that loading the turbine is completed in a safe and consistent manner.

Competency in this unit requires the ability to plan and prepare steam turbine run up work, conduct steam turbine run up, test steam turbine and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare steam turbine work	**1.1** Safety issues are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and site requirements
	1.2 Work requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Preoperational checks are carried out on steam turbine plant, in accordance with manufacturers' recommendations and workplace procedures
	1.4 Turbine running up and loading schedule are ascertained from relevant documentation, in accordance with workplace procedures and site requirements
2 Take action to commence run up steam turbine	**2.1** Steam turbine and generator auxiliary systems are made available to support steam turbine run up, in accordance with manufacturers' specifications and workplace procedures
	2.2 Steam turbine plant is monitored to detect deviations from normal operating conditions
	2.3 Corrective actions are taken to rectify steam turbine abnormalities, in accordance with manufacturers' specifications and workplace procedures
	2.4 Steam generator is synchronised and connected to electrical system, in accordance with workplace procedures and manufacturers' recommendations
3 Test steam turbine plant operation	**3.1** Tests are performed, in accordance with workplace procedures
	3.2 Power generation system and steam turbine plant are observed for correct operational response, in accordance with workplace procedures
	3.3 Corrective action is taken when response does not meet documentation, steam turbine plant integrity or

© Commonwealth of Australia, 2025 Powering Skills Organisation

		personnel safety requirements
	3.4	Steam turbine plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4 Analyse system faults	**4.1**	Causes of abnormal steam turbine plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	Steam turbine plant integrity and personnel safety is maintained, in accordance with workplace procedures, through consultation with appropriate personnel and technical and operational documentation
	4.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
5 Complete documentation	**5.1**	Steam turbine plant problems, movements and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS411B Run up a steam turbine.

Assessment Requirements for UEPOPS411 Run up a steam turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working procedures
- communicating with personnel
- identifying and responding to abnormal steam turbine plant operating conditions
- monitoring and operating steam turbine plant and equipment
- organise resources
- planning and preparing steam turbine operations work
- recognising steam turbine plant status
- recording procedures to complete documentation
- starting, running up and operating steam turbine and associated plant and equipment
- testing gas turbine plant operation using diagnostic and data analysis techniques and tools to determine faults
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- permit to work system
- steam turbine operating procedures and processes
- system components and their interaction with other plant and equipment including steam turbine operations
- turbine supervision and control systems
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation

© Commonwealth of Australia, 2025 Powering Skills Organisation

including:

- emergency procedures
- risk control measures
- safe working procedures

- workplace policies and procedures
- workplace documentation manufacturers specifications and manuals

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS412 Undertake commissioning and decommissioning

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the commissioning and decommissioning of power generation plant and equipment.

Commissioning is a process in which installed power generating plant is tested to verify it functions according to its design specifications. Power generating plant that is shut down and dismantled is decommissioned. Commissioning and decommissioning of power generating plant does not include removal or return to service under normal or routine maintenance situations.

Competency in this unit requires the ability to plan and prepare for work, decommission plant or equipment, remove plant or equipment, recommission plant or equipment and complete work. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for work	**1.1** Work requirements are identified from work order and are confirmed with appropriate personnel or by site inspection, in accordance with workplace procedures
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are identified, applied and monitored
	1.3 Resources are obtained and inspected for compliance with job specification, in accordance with workplace procedures
	1.4 Plans, drawings and manuals are selected and used, in accordance with workplace procedures
	1.5 Correct size, type and quantity of materials or components are obtained and inspected, in accordance with workplace procedures
	1.6 Work is sequenced and prioritised, in accordance with workplace procedures and site requirements
	1.7 Potential hazards are identified and risk control measures are selected and implemented, in accordance with workplace procedures
	1.8 Work area is prepared, in accordance with workplace procedures
2 Decommission plant or equipment	**2.1** Isolations are confirmed, where appropriate, in accordance with workplace procedures, site requirements and decommissioning plan
	2.2 Equipment or power generating plant is decommissioned, in accordance with workplace procedures and decommissioning plan
	2.3 Equipment or power generating plant is disconnected from energy or material sources, in accordance with workplace procedures and decommissioning plan

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Remove plant or equipment**	**3.1** Isolations are confirmed, where appropriate, in accordance with workplace procedures and site requirements
		3.2 Removal of power generating plant or equipment, or dismantling of major components is carried out, in accordance with workplace procedures and decommissioning plan
		3.3 Unused electrical conductors are isolated, and are terminated, in accordance with workplace procedures and decommissioning plan
		3.4 Other sources of energy or materials are terminated and blanked, in accordance with workplace procedures and decommissioning plan
4	**Commissioning plant or equipment**	**4.1** Isolation of power generating plant is removed, in accordance with workplace procedures and site requirements
		4.2 Preoperational checks are carried out on power generating plant, in accordance with workplace procedures, manufacturers' recommendations and site requirements
		4.3 Sequence for commissioning plant are adhered to, in accordance with workplace procedures
		4.4 Power generating plant is tested for correct operation, in accordance with manufacturers' recommendations and workplace procedures
		4.5 Power generating plant or equipment performance is monitored against manufacturers' specifications, in accordance with workplace procedures, using approved methods and testing equipment
		4.6 Data is collected and referenced against manufacturers' specifications and any variances are recorded, in accordance with workplace procedures
		4.7 Power generating plant or equipment is adjusted to meet manufacturers' specifications, in accordance with workplace procedures, using approved techniques
		4.8 Final inspection is undertaken and performance data is collected, in accordance with workplace procedures, to ensure compliance with manufactures' specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

5 Complete work	**5.1** Work is completed and appropriate personnel are notified, in accordance with workplace procedures
	5.2 Work area is cleared of waste, cleaned, restored and secured, in accordance with worksite procedures
	5.3 Power generating plant, tools and equipment are maintained and is stored appropriately, in accordance with workplace procedures
	5.4 Work completion details are finalised, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UEPOPS412 Undertake commissioning and decommissioning

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing data
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- commissioning plant or equipment
- communicating with personnel
- completing work interpreting manufacturers' specifications and manuals
- decommissioning power generating plant or equipment
- identifying power generating plant and equipment
- planning and preparing for work
- restarting power generating plant or equipment
- using testing and measuring equipment
- utilising isolation procedures
- utilising permit to work system
- working with decommissioning procedures for removing plant or equipment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- data analysis
- decommission and commission of power generating plant and equipment
- isolations processes
- legislation, industry standards, codes of practice and regulations

UEPOPS413 Coordinate operational strategies for power production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required coordinate operational strategies to achieve short and long-term goals of a power generation facility's production plant.

An operational plan describes how a power generation facility will use their resources within specified time frames. Operational strategies are the methods used to reach objectives and performance targets related to the power generation facility's operational plan.

Competency in this unit requires the ability to coordinate the implementation of operational strategies, monitor strategies and report on performance against strategies. Individuals will, in general, work as a coordinator in operational management, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

UEPOPS414 Perform risk analysis of generation plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to identify and analyse risks in the loss of power generation and/or production plant.

Risk analysis identifies dangers posed by potential natural or human caused adverse events. Once risks have been identified, they must be assessed as to their potential impact and the probability of occurrence.

Competency in this unit requires the ability to identify risks; conduct analysis; produce, implement and monitor recommendations and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify risk	**1.1** Power generation plant maintenance and operational procedures are obtained, in accordance with workplace procedures
	1.2 Power generation plant operating and maintenance history is obtained, in accordance with workplace procedures, including incident and failure reports
	1.3 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and environmental standards are researched and applied, in accordance with workplace procedures
	1.4 Power generation plant technical documentation is obtained, in accordance with workplace procedures
	1.5 Risk analysis objectives for power generation plant are defined, in accordance with workplace procedures
2 Conduct analysis	**2.1** Risk analysis is completed using approved methodology, in accordance with workplace procedures
	2.2 Power generation plant incident scenarios are identified and consequences are analysed and prioritised for risk, in accordance with workplace procedures
	2.3 Objectives identified during risk analysis for power generation plant risk scenarios are recorded, in accordance with workplace procedures
3 Produce, implement and monitor recommendations	**3.1** Recommendations for risk preventative actions are produced against each power generation plant risk scenario, as appropriate, in accordance with workplace procedures
	3.2 Implementation of recommendations for risk controls are monitored, in accordance with workplace procedures
4 Complete documentation	**4.1** Risk analysis recommendations are documented, in accordance with workplace procedures
	4.2 Risk analysis report is produced and submitted, in

UEPOPS416 Monitor implementation of quality control for production and maintenance

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to monitor the implementation of production and maintenance quality control procedures at a power generation facility.

Quality control is a process used to ensure variations in quality are kept to a minimum. Quality control in a power generation facility will focus on a set of processes and procedures intended to ensure that personnel, plant and equipment operate smoothly and efficiently.

Competency in this unit requires the ability to plan for quality control, monitor quality control and complete all documentation. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

- monitoring quality control processes and techniques
- planning quality control
- undertaking data analysis
- working with quality control procedures, processes and techniques

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- data analysis
- inspection techniques
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- power generation plant and equipment, its location and operating parameters
- quality control procedures, processes and techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS417 Monitor and implement environmental site plans and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to address the monitoring and implementation of environmental plans and procedures.

Environmental planning is the process of meeting legislative and regulatory obligations, identifying risks, determining risk control strategies and responding quickly to incidents.

Competency in this unit requires the ability to plan for quality control, monitor quality control and complete all documentation. Individuals will, in general, work as an operator or technician, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare environmental plan and procedures	**1.1** Environmental site plans and procedures are identified and examined, in accordance with site and project requirements
	1.2 Environmental risks and impacts are identified for the project, in accordance with workplace procedures
	1.3 Environmental site plans and procedures are selected, in accordance with the specific project and site requirements
2 Implement environmental plan and procedures	**2.1** Emergency procedures are implemented and environmental risks are controlled, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and site requirements
	2.2 Environmental activities are carried out, in accordance with workplace procedures and the requirements of the environmental plan
	2.3 Environmental control procedures are implemented, and maintained and risks are mitigated, in accordance with workplace procedures and site requirements
3 Review environmental project procedures	**3.1** Environmental procedures are assessed, using feedback from stakeholders and relevant data
	3.2 Environmental procedures are reviewed and rewritten, if required, in accordance with workplace procedures
4 Control environmental incidents	**4.1** Environmental incidents are identified and controlled, in accordance with the workplace procedures and environmental plan requirements
	4.2 Environmental incidents are recorded and reported, in accordance with workplace procedures and the environmental plan requirements
5 Monitor and report on application of environmental plan and procedures	**5.1** Application of the environmental plan processes and procedures are monitored and documented, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

5.2 Environmental risks and incidents are reported, in accordance with workplace procedures

5.3 Review of environmental plan is reported on, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS417B Monitor and implement environmental plans and procedures.

Assessment Requirements for UEPOPS417 Monitor and implement environmental site plans and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel and stakeholders
- implementing legislation, industry standards, codes of practice and regulations
- managing environmental incidents including:
  - assessing environmental risks of project including impacts
  - controlling environmental incidents
  - integrating operational activities into review of environmental procedures
  - monitoring project and environmental site
  - using risk control procedures
- monitoring and reporting on application of environmental plans and procedures
- preparing to implement environmental plan and procedures
- reviewing application of environmental plans and procedures
- working with environmental plans and procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- environmental impact assessments
- environmental site plans and procedures
- identification of environmental risks and impact
- legislation, industry standards, codes of practice and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- potential incident environmental auditing
- power generation plant and equipment, its location and operating parameters
- project planning methods and techniques
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS419 Shut down a steam turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct a shut down of a steam turbine to where it is placed at rest.

Shut down of a steam turbine will involve the operator making a sequence of checks prior to and during shutdown. This ensures that the shut down of the turbine is completed in a safe and consistent manner.

Competency in this unit requires the ability to plan and prepare steam turbine shut down, conduct a shut down, test steam turbine plant operation during shut down, analyse system faults during shut down and completing documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare steam turbine shut down work	**1.1** Safety issues are identified, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, industry standards and workplace procedures
	1.2 Work requirements are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 Turbine shut down schedule is identified from relevant documentation, in accordance with workplace procedures and site requirements
	1.4 Pre-shut down checks are carried out on steam turbine plant, in accordance with manufacturers' recommendations and workplace procedures
2 Conduct steam turbine shutdown	**2.1** Steam turbine load is reduced, in accordance with and manufacturers' recommendations and workplace procedures
	2.2 Steam turbine and generator are removed from the steam generation system, in accordance with manufacturers' recommendations and workplace procedures
	2.3 Steam turbine is placed on turning gear, in accordance with manufacturers' recommendations and workplace procedures
	2.4 Steam turbine is cooled down on turning gear, in accordance with manufacturers recommendations and workplace procedures
3 Test steam turbine plant operation during shut down	**3.1** Tests are performed, in accordance with workplace procedures
	3.2 Steam generation system and steam turbine plant is observed, in accordance with workplace procedures, for correct operational response
	3.3 Corrective action is taken, in accordance with workplace procedures, when response does not meet

© Commonwealth of Australia, 2025 Powering Skills Organisation

		documentation, plant integrity or personnel safety requirements
	3.4	Steam turbine plant is returned to operational status upon completion of testing, in accordance with workplace procedures
4 Analyse and report on system faults or status during steam turbine shutdown	**4.1**	Causes of abnormal steam turbine plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	Steam turbine plant integrity and personnel safety is maintained, in accordance with workplace procedures, through consultation with appropriate personnel and technical and operational documentation
	4.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
5 Complete documentation	**5.1**	Steam turbine plant problems, movements and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS419 Shut down a steam turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- identifying steam turbine plant status
- implementing legislation, industry standards, codes of practice and regulations
- monitoring and operating steam turbine plant and equipment
- organising resources
- recognising and responding to abnormal plant operating conditions
- shutting down steam turbine plant and equipment planning steam turbine plant work
- testing plant operationally
- testing steam turbine plant operations using diagnostic and data analysis techniques and tools to determine faults
- using steam turbine cooling techniques and procedures
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- steam turbine plant and equipment, its location and operating parameters

© Commonwealth of Australia, 2025 Powering Skills Organisation

- steam turbine system components and their interaction with other power generation plant and equipment
- turbine operations
- typical arrangements of power production plant
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation including:
  - emergency procedures
  - risk control measures
  - safe working procedures
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS420 Coordinate network/system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required for the coordination of a network and/or system. Networks and/or systems may be interconnected, remote or isolated.

Power generation operators will typically manage varying levels of network and/or system complexity across facilities, as well as the networks and/or systems that exist within an individual facility's plant and equipment.

Competency in this unit requires the ability to plan network and/or system operations, coordinate network and/or system, respond to network and/or system faults or incidents and complete all documentation. Individuals will, in general, work as an operator with coordination responsibilities in network and/or system control in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare network/system operations	**1.1** Information and documentation is identified, assessed and evaluated, in accordance with workplace procedures and network and/or system requirements
	1.2 Network and/or system and associated equipment operational prerequisites are determined, in accordance with workplace procedures
	1.3 Work priorities are determined to suit network and/or system circumstances, in accordance with workplace procedures
	1.4 Network and/or system limitations and performance are identified, in accordance with workplace procedures
2 Coordinate network/ system	**2.1** Network and/or system is operated, in accordance with workplace procedures
	2.2 Network and/or system demand is monitored, in accordance with workplace procedures to ensure the quality of supply and to maintain stability and system integrity
	2.3 Network and/or system load shedding sequence and priorities are monitored, in accordance with workplace procedures
	2.4 Network and/or system corrective actions to rectify deviations are implemented, in accordance with workplace procedures, following analysis of data
	2.5 Resources to meet network and/or system requirements are identified and coordinated, in accordance with workplace procedures
	2.6 Network and/or system operations are carried out, in accordance with workplace procedures and in consultation with team members
3 Respond to network/system faults	**3.1** Causes of abnormal network and/or system operating conditions are identified, in accordance with workplace procedures and technical and operational information

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.2	Operation of protection for network and/or system is identified and assessed, in accordance with workplace procedures, to evaluate the nature and cause of fault conditions
	3.3	Communication is established with key stakeholders, in accordance with workplace procedures to identify the nature and source of network system interference
	3.4	Corrective action is taken, in accordance with workplace procedures
	3.5	Network and/or system integrity and safety are maintained, in accordance with workplace procedures, through consultation with personnel and reference to technical and operational documentation including contingency plans
4 Complete documentation	**4.1**	Network and/or system problems, movements and status is reported, in accordance with workplace procedures
	4.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS420 Coordinate network/system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with external agencies
- communicating with personnel
- completing documentation using recording procedures
- coordinating and controlling network and/or system to maintain power generating plant integrity
- coordinating personnel
- diagnosing continuity of supply for optimum efficiency
- identifying power generating plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting plant drawings, manufacturers' specifications and manuals
- planning and preparing network and/or system operations
- recognising and responding to network system faults and abnormal operating conditions
- selecting appropriate load shedding
- using contingency plans

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- coordination of a network and/or system operation
- legislation, industry standards, codes of practice and regulations
- network and/or system faults and abnormal system operating condition

UEPOPS422 Schedule generation

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the scheduling of generation plant to meet forecast demand.

Scheduling is the process of optimising plant operations in the power generation process. The aim is to enhance overall energy delivery over different planning and time horizons.

Competency in this unit requires the ability to forecast from market data, identify generation unit availability and capability, prepare generation unit schedules and implement generation unit schedules. Individuals will, in general, work under supervision, in a power generation facility as an operator with responsibility for scheduling. Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Forecast from market data	**1.1** Information on all variables which have the potential to affect generation demand is obtained and employed, in accordance with workplace procedures, to enable a forecast
	1.2 Forecast prediction is based on the interpretation of relevant information, in accordance with workplace procedures
	1.3 Forecast outcomes are produced in a time frame that enables electricity system security and operational criteria to be maintained, in accordance with workplace procedures
	1.4 Forecast prediction is continuously assessed, in accordance with workplace procedures, against real time trends and adjustments are made
2 Identify unit availability and capability	**2.1** Information integrity is confirmed, in accordance with workplace procedures, and deficiencies are detected and rectified
	2.2 Information is processed and recorded, in accordance with workplace procedures, in a time frame that enables scheduling to take place
	2.3 Information on all factors which have the potential to affect generation unit status is obtained, in accordance with workplace procedures
	2.4 Communication is maintained with remote and independent power generators, in accordance with workplace procedures
	2.5 Power generation plant maintenance commitments are incorporated into setting priorities for committing generation units scheduling, in accordance with workplace procedures
	2.6 Generation plant testing commitments are incorporated into setting scheduling priorities, in accordance with workplace procedures for committing units
	2.7 Power station generation plant problems are accurately assessed, in accordance with workplace procedures, for impact on generation unit commitments and scheduling

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements
3 Prepare generation unit schedules	**3.1**	Base load generation is scheduled, in accordance with workplace procedures and contractual obligations
	3.2	Electricity system security criteria is applied and met, in accordance with workplace procedures
	3.3	Schedule is produced and applied, in accordance with workplace procedures, to allow for power generation plant movements to occur within required timeframes
4 Implement generation unit schedules	**4.1**	Circumstances resulting in unexpected changes to demand are identified and managed, in accordance with workplace procedures and electricity system requirements
	4.2	Transmission system losses are identified and minimised, in accordance with workplace procedures and electricity system requirements
	4.3	Transmission and generation system status changes are identified and accommodated, in accordance with workplace procedures and electricity system requirements
	4.4	Fuel supply status changes are identified and accommodated, in accordance with workplace procedures and electricity system requirements
	4.5	Generation outputs are monitored, in accordance with workplace procedures and electricity system requirements
	4.6	Power generation plant problems are assessed, in accordance with workplace procedures, and impact on generation unit scheduling and electricity system requirements
	4.7	Electricity system fault levels and transmission plant load levels are identified and not exceeded, in accordance with workplace procedures and electricity system requirements
	4.8	Scheduling of generation units is timed to optimise electricity system efficiency, in accordance with workplace procedures
	4.9	Scheduling information is recorded and communicated to all stakeholders, in accordance with workplace

UEPOPS423 Plan a scheduled outage

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to plan for a scheduled outage of power generating plant.

A schedule is a plan of action detailing a series of tasks to be undertaken at or during a specified time. A forced outage is the shutdown of generation facility, transmission or distribution line when a generating unit is unavailable to produce power due to an unexpected breakdown.

Competency in this unit requires the ability to identify outage requirements, create outage plans, implement outage plans and complete documentation. Individuals will, in general, work as an operator with responsibility for quality control, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify outage requirements	**1.1** Outage requirements are identified from work orders and is clarified with the appropriate personnel or site inspection, in accordance with workplace procedures
	1.2 Safety issues are identified, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) and legislative requirements, industry standards and workplace procedures
	1.3 Date, time and expected duration of outage is assessed and confirmed from relevant information and statistical records in accordance with workplace procedures
	1.4 Schematic diagrams, drawings, plans or maps are consulted to determine area affected by outage, in accordance with workplace procedures
2 Create outage plan	**2.1** Impact of outage is ascertained, in accordance with workplace procedures
	2.2 Key stakeholders and/or equipment affected by outage are identified, in accordance with workplace procedures
	2.3 Status of plant and consumers affected by outage is identified and assessed, in accordance with workplace procedures
	2.4 Key stakeholders are consulted to determine timetable and contingency plan, in accordance with workplace procedures
	2.5 Disruptions to key consumers are minimised, in accordance with workplace procedures, by providing alternative routes of power generation supply
	2.6 Scope of work to be carried out during outage is evaluated against allocated timeframes, in accordance with workplace procedures
	2.7 Work permits required prior to and during outage are obtained, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3 Implement outage plan	**3.1**	Work crews are notified of outage plan through the appropriate channels, in accordance with workplace procedures
	3.2	Notification of outage is communicated to all stakeholders, in accordance with workplace procedures
4 Complete documentation	**4.1**	Records are maintained, in accordance with workplace procedures
	4.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS423B Plan a scheduled outage.

Assessment Requirements for UEPOPS423 Plan a scheduled outage

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- advising and communicating with key stakeholders
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- creating outage plans
- identifying outage requirements
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- investigating implications of outage
- planning outage work
- recognising power generation plant status
- using documenting and recording procedures
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication and liaison techniques
- legislation, industry standards, codes of practices and regulations
- manufacturers' specifications and manuals
- outages and potential impact
- permit to work system

© Commonwealth of Australia, 2025 Powering Skills Organisation

- power generation plant and equipment, its location and operating parameters
- power generation plant status
- scheduling methods and tools
- stakeholders
- types of schedules
- typical arrangements of power generation plant
- WHS/OHS policy and procedures including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS424 Coordinate local H.V. networks

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the control and management of High Voltage (H.V.) substations and/or local networks.

H.V. substations are a node point in power generation infrastructure. They transform voltage from high to low, or the reverse, and enable the reliable transmission of large amounts of power.

Competency in this unit requires the ability to plan and prepare work; operate, monitor and control H.V. substation and local network; analyse and respond to H.V. substation or local network faults or incidents; review incident response and preventative procedures and complete all documentation. Individuals will, in general, work as an operator with responsibility for H.V. network coordination, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Documentation to determine High Voltage (H.V.) substation and/or local network status is assessed and evaluated, in accordance with workplace procedures
	1.2 H.V. substation or local network equipment operational prerequisites are established, in accordance with manufacturers' requirements and workplace procedures
	1.3 Sequence for operating local network section and equipment is determined, in accordance with workplace procedures and site requirements
	1.4 Information to forecast and plan response for efficient operation of H.V substation or local network is utilised, in accordance with workplace procedures
	1.5 Regular consultation with key stakeholders is maintained, in accordance with workplace procedures
	1.6 Implications of operator's actions to H.V substation or local network are identified and assessed, in accordance with workplace procedures
2 Operate, monitor and control H.V. substation and local network	**2.1** Local network is operated and coordinated, in accordance with workplace procedures
	2.2 Local network voltage and current requirements are assessed and evaluated, in accordance with workplace procedures, to maintain stability and system integrity
	2.3 Voltage and/or load profiles are identified and adhered to, in accordance with workplace procedures
	2.4 Corrective actions to rectify H.V. substation or local network abnormalities are implemented following analysis of data, in accordance with manufacturers' requirements and workplace procedures
	2.5 Resources are identified and coordinated to meet H.V. substation or local network system requirements, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Analyse and respond to H.V. substation and local network faults or incidents**	**3.1** Cause of H.V. substation or local network fault conditions are identified, in accordance with workplace procedures, by analysing technical and operational information in consultation with system control personnel
		3.2 Operation of protection systems for H.V. substation or local network is identified and assessed, in accordance with workplace procedures, to evaluate nature and cause of fault conditions
		3.3 Communication is established with key stakeholders, in accordance with workplace procedures, to identify nature or source of H.V. substation or local network system interference
		3.4 Corrective action is taken, in accordance with workplace procedures
		3.5 Local system integrity and personnel safety are maintained, in accordance with workplace procedures, through consultation with appropriate personnel and operational documentation and contingency plans
4	**Review incident response and preventative procedures**	**4.1** Incident or fault responses are assessed and reviewed, in accordance with workplace procedures
		4.2 Alternative responses or contingency plan strategies are identified and assessed, in accordance with workplace procedures
		4.3 Alternative responses or contingency plan strategies are documented and approved, in accordance with workplace procedures
5	**Complete documentation**	**5.1** H.V. substation or local network problems, movements and status are reported, in accordance with workplace procedures
		5.2 Documentation is updated, in accordance with workplace procedures

Foundation Skills

UEPOPS425 Produce maintenance plans for generation production plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the establishment and implementation of maintenance plans for generation production plant. Power generation production plant can include boilers, turbines, hydro equipment and systems, electrical components and systems, control and monitoring systems, ash and dust systems, water treatment and fuel equipment.

A maintenance plan details the actions to maintain and improve the condition of power generating plant. It involves the inspection, servicing, repairing or replacing of the physical components of machines, plant and equipment.

Competency in this unit requires the ability to research and plan for maintenance, develop maintenance plans and implementing and monitoring maintenance plans. Individuals will, in general, work under supervision, in a power generation facility as an operator with responsibility for maintenance planning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Research and plan for maintenance	**1.1** Work requirements are identified and confirmed with appropriate personnel or by site inspection, in accordance with workplace procedures
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are identified, applied and monitored
	1.3 Resources for maintenance planning are obtained, in accordance with workplace procedures
	1.4 Relevant plans, drawings and manuals are selected and used, in accordance with workplace procedures
	1.5 Maintenance is sequenced and prioritised, in accordance with workplace procedures and site requirements
	1.6 Potential hazards are identified and risk control measures are selected and implemented, in accordance with workplace procedures
	1.7 Generation production plant maintenance history including condition monitoring information, recent modifications and existing status are identified and addressed in the maintenance plan, in accordance with workplace procedures
	1.8 Costing of maintenance work is undertaken, and impact on budget is assessed, in accordance with workplace procedures
	1.9 Need for operational testing or generation production plant recommissioning is identified, in accordance with workplace procedures
2 Develop maintenance plan	**2.1** Maintenance schedule is placed into the maintenance plan, in accordance with workplace procedures
	2.2 Generation production plant isolation and access requests are documented, in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	2.3	Availability of resources is confirmed and documented, in accordance with workplace procedures
	2.4	Information relevant to work activities, including risk management and quality control, is attached to maintenance plan, in accordance with workplace procedures
	2.5	Maintenance plan is distributed to personnel, in accordance with workplace procedures
	2.6	Maintenance methods are documented as part of the maintenance plan and are presented for review to appropriate personnel, in accordance with workplace procedures
3 Implement and monitor maintenance plan	**3.1**	Maintenance plan is implemented, in accordance with workplace procedures
	3.2	Feedback on maintenance plan is sought, in accordance with workplace procedures
	3.3	Maintenance plan is modified and approved, in accordance with workplace procedures
	3.4	Amended maintenance plan is distributed to appropriate personnel, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS425 Produce maintenance plans for generation production plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (OHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- analysing information using data analysis techniques and tools
- communicating with personnel
- determining legislation, industry standards, codes of practice and regulations
- developing maintenance plan
- disseminating maintenance plan
- documenting maintenance methods
- identifying risk management and quality control information and procedures
- implementing and monitoring maintenance plan
- producing maintenance plans
- recognising maintenance requirements by applying maintenance planning principles
- researching and planning for maintenance
- using manufacturers' specifications and manuals

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- dissemination of maintenance plans
- generation production plant and equipment, its location and operating parameters
- legislation, industry standards, codes of practice and regulations
- maintenance methods

UEPOPS426 Interpret and analyse multi-operation protection devices

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to interpret and analyse multi-operation High Voltage (H.V.) protection devices.

Power protection schemes aim to keep the power system stable by isolating only faulty plant or equipment, whilst leaving as much of the network as possible in operation. The devices that are used to protect the power system are called protection devices.

Competency in this unit requires the ability to respond to a protection operation, interpret and determine cause of protection operation, restore protection and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS342 Interpret and analyse single operation protection devices

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Respond to multi-operation protection	**1.1** Protection operation is confirmed and multi-operation protection devices are identified for use, in accordance with workplace procedures
	1.2 Apparatus affected is identified, in accordance with workplace procedures
	1.3 Targets, flags and alarms are identified and recorded, in accordance with workplace procedures
	1.4 Stakeholders are advised, in accordance with workplace procedures
2 Interpret and determine cause of multi-operation protection	**2.1** Information to external stakeholders is recorded, in accordance with workplace procedures
	2.2 Information, for internal use, on use of multi-operation protection devices is collated and assessed, in accordance with workplace procedures
	2.3 Sequence of events prior to and following recognition of fault and use of multi-operation protection devices are identified and assessed, in accordance with workplace procedures
	2.4 Multiple-operation protection devices are assessed and evaluated, in accordance with workplace procedures
	2.5 Findings from assessment of multi-operation devices are analysed, in accordance with workplace procedures, to determine most probable cause of fault
3 Restore protection	**3.1** Stakeholders are informed of analysis findings and plan of action, in accordance with workplace procedures
	3.2 Multi-operation protection device indicators are reset, in accordance with workplace procedures
	3.3 Corrective action is taken, in accordance with workplace procedures, in relation to identified fault
4 Complete documentation	**4.1** Records are maintained and all use of multi-operation

© Commonwealth of Australia, 2025 Powering Skills Organisation

protection devices are documented, in accordance with workplace procedures

4.2 Reports are forwarded to authorised personnel, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS426B Interpret and analyse multi-operation protection devices.

UEPOPS428 Develop H.V. switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to develop High Voltage (H.V.) switching programs where multiple sources of supply must be considered and managed.

Switching can be set up to provide power to critical circuits, or to entire electrical subpanels, or to allow loads in large backup generator installations to be smoothly transferred from the utility to synchronised generators and back again.

Competency in this unit requires the ability to interpret requirements, research switching programmes, draft switching programs and validate switching programs. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Interpret requirements	**1.1** Notification of switching program requirement is confirmed and assessed, in accordance with workplace procedures
	1.2 Area of planned outage is identified in consultation with appropriate personnel and use of power generation system diagrams, drawings and maps
	1.3 Work details are interpreted from outage request and draft switching program, in accordance with workplace procedures
2 Research switching programme	**2.1** Implications of switching program on the power generation system are identified and recognised, in accordance with workplace procedures
	2.2 Types and function of switchgear to be operated are identified, in accordance with workplace procedures and their suitability for operation under forecast system conditions during scheduled outage is assessed
	2.3 System loadings, limitations and alternate supply route capabilities are evaluated, in accordance with workplace procedures to ensure system integrity
	2.4 Consultation with appropriate personnel affected by the switching programme is undertaken, in accordance with workplace procedures
	2.5 Location of isolation points are identified, in accordance with workplace procedures, to ensure shortest route when determining sequence of switching steps
	2.6 Safe working clearances are identified and maintained, in accordance with workplace procedures, and legislative requirements
	2.7 High Voltage (H.V.), Low Voltage (L.V.) and control circuitry is examined, in accordance with workplace procedures to ensure no back-feed is possible
3 Draft switching program	**3.1** Switching program draft is documented, in accordance with workplace procedures, stating location, apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

	and its' identification and the operation to be conducted
	3.2 Permit to work procedures are implemented, if required, in accordance with workplace procedures
	3.3 Switching program is planned and implemented, in accordance with workplace procedures
	3.4 Switching program is checked for omissions, in accordance with workplace procedures
	3.5 All documentation supporting the switching program is completed, in accordance with workplace procedures
4 Validate switching program	**4.1** Switching program is forwarded to appropriate personnel for verification, in accordance with workplace procedures
	4.2 Documentation is recorded, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS428B Develop H.V. switching programs.

Assessment Requirements for UEPOPS428 Develop H.V. switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - risk control measures
  - safe working practices
  - site emergency procedures
- communicating with personnel
- documenting and reporting switching programmes
- drafting switching program
- identifying power generation plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting switching program requirements
- researching switching programme using data analysis techniques and tools
- utilising manufactures' specifications and manuals
- validating switching program
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- draft switching programme
- isolations
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- power generation plant and equipment, its location and operating parameters

© Commonwealth of Australia, 2025 Powering Skills Organisation

- power generation plant status
- switch programmes
- switchgear types and characteristics
- typical arrangements of power production plant
- validation of switching programs
- WHS/OHS legislated requirements including:
  - site emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS430 Control permit to work operations

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to perform work in association with a permit system.

Permits to work are a formal system used to control high risk activities in power generation facilities. They specify the control measures to be used. Permits ensure that all hazards and precautions have been considered before any hazardous work begins.

Competency in this unit requires the ability to plan and prepare for permit to work procedures, perform permit duties and complete work. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for permit to work procedures	**1.1** Permit to work requirements are identified from work orders, in accordance with workplace procedures and are confirmed
	1.2 Information and documentation related to controlling permit to work procedures is obtained, in accordance with workplace policies and procedures
	1.3 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, industry standards and workplace procedures are identified and monitored
	1.4 Power generation plant is identified, in accordance with workplace procedures
	1.5 Consultation with key stakeholders to identify state of power generation plant, isolations and maintenance timetable is confirmed, in accordance with workplace procedures
2 Perform permit duties	**2.1** Permit is obtained and relevance to work is confirmed, in accordance with workplace procedures and job requirements
	2.2 Isolations and appropriate barriers or taggings are confirmed, in accordance with workplace procedures and permit requirements
	2.3 Permit requirements are clarified to personnel involved in or affected by the work, in accordance with workplace procedures
	2.4 Personnel involved in work tasks are signed on to permits prior to commencement of work, in accordance with workplace procedures
	2.5 Permit conditions are monitored and controlled throughout work sequence, in accordance with workplace procedures
3 Complete work	**3.1** Power generation plant is inspected and returned to normal operation, in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures

3.2 Staff signed on to permit are signed off, in accordance with workplace procedures

3.3 Work is completed and appropriate personnel are notified, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS430B Control permit to work operations.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=1715b9fa-e7bd-441c-bb8d-cf22c9c825a8

Assessment Requirements for UEPOPS430 Control permit to work operations

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel and key stakeholders
- completing work
- controlling permit to work system including safety procedures
- identifying power generating plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- locating power generating plant and equipment
- performing permit to work duties and procedures
- planning and preparing to use permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- manufacturers' specifications and manuals legislation, industry standards, codes of practice and regulations
- mechanical and electrical equipment isolation techniques
- mechanical and electrical isolation equipment types and characteristics
- permit to work system and its' implementation
- power generating plant and equipment
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures including safety procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS431 Collect and analyse hydrological and meteorological data

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to predict and determine inflows in catchment areas within a hydro powered electricity generation system.

Inflow forecasting for hydro powered electricity generation systems depends on several elements such as weather, snow cover, ground conditions and the run off process in catchment areas. All these elements help give insight into future water availability.

Competency in this unit requires the ability to plan for work, plan and prepare to conduct data collection, undertake data collection, verify and report data collection and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS209 Perform process plant inspection

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for work related issues	**1.1** Safety issues are identified, in accordance with workplace procedures, industry standards, legislative requirements and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations
	1.2 Work, hydrological and meteorological equipment and resource requirements are identified from information and documentation, in accordance with workplace procedures
	1.3 Preoperational check on hydrological and meteorological equipment is carried out, in accordance with workplace procedures
2 Plan and prepare to conduct data collection	**2.1** Appropriate hydrological and meteorological equipment is selected, in accordance with workplace procedures, to conduct data collection
	2.2 Hydrological and meteorological equipment is recalibrated, in accordance with workplace procedures and manufacturers' specifications preparation for survey
	2.3 Potential hydrological and meteorological hazards are assessed and risk control measures are implemented, in accordance with workplace procedures
	2.4 Meteorological charts and data are assessed for use, in accordance with workplace procedures
3 Undertake data collection	**3.1** Measurement site in catchment area is established, in accordance with workplace procedures
	3.2 Hydrological and meteorological instrumentation is set out in the catchment area, in accordance with workplace procedures and manufacturers' specifications
	3.3 Measurements are taken, in accordance with workplace procedures
	3.4 Measurements are record, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.5	Tools and equipment used, are cleaned and stored, in accordance with workplace procedures
4 Verify and report data	**4.1**	Measurements are analysed to verify accuracy of findings, and data is entered into data system, in accordance with workplace procedures
	4.2	Work order requirements are completed, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS431B Collect and analyse hydrological and meteorological data.

Assessment Requirements for UEPOPS431 Collect and analyse hydrological and meteorological data

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing meteorological and hydrographical data using analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- completing documentation
- coordinating the operation of meteorological and hydrographical instrumentation and equipment to undertake
  - conducting and calculating depth measurements
  - determining inflows based on snow melt
  - measuring snow depth and stream flows
- displaying safety procedures in remote locations including survival techniques
- implementing legislation, industry standards, codes of practice and regulations
- planning and preparing to conduct data collection
- recognising abnormal meteorological and hydrographical conditions interpreting manufacturers' specifications and manuals
- undertaking data collection
- verifying and reporting data collection

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- calibration of meteorological and hydrographical instrumentation
- inflow forecasting

© Commonwealth of Australia, 2025 Powering Skills Organisation

- interpretation of hydrological and meteorological data using analysing tools and techniques
- interpreting meteorological charts
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- meteorological and hydrographical equipment, its location and operating parameters
- personal safety and working alone in remote locations
- snow depth gauging
- stream gauging
- survival techniques including hypothermia and snake avoidance
- water quality monitoring
- WHS/OHS legislated requirements including:
  - risk control measures
  - emergency procedures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS432 Start up a heat recovery steam generator unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to start up a Heat Recovery Steam Generator (HRSG) for service.

HRSGs are recovery heat exchangers that retrieve the heat from hot gas streams which are then supplied to steam turbines to generate additional electric power. Placing an HRSG in-service will require the entry of a heating medium and the control of water within the steam and/or water drum. It includes monitoring the flow and quality of feedwater, steam pressure and temperature increases and metal temperatures within HSRG design limits so that the HRSG is supplying a constant flow of steam at the required temperature and pressure.

Competency in this unit requires the ability to plan and prepare start up, operate HRSG plant during start up, test and analyse HRSG system faults and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS333 Operate and monitor HRSG hot gas control system

Competency Field

Operations

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare HRSG start up work	**1.1** Safety issues are identified in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and workplace procedures
	1.2 Work requirements are identified from relevant personnel and documentation, in accordance with workplace procedures
	1.3 Preoperational checks are carried out on plant, in accordance with manufacturers' recommendations and workplace procedures and site requirements
2 Conduct HRSG start up	**2.1** Preoperation conditions of the Heat Recovery Steam Generator (HRSG) and gas turbine are established, in accordance with workplace procedures
	2.2 Minimum operation of gas turbine is established and supported, in accordance with workplace procedures and manufacturers' specifications
	2.3 Monitoring of HRSG drum level, feedwater flow, steam and metal temperature rates of rise, steam pressure rate of rise and control of steam flow and drainage is carried out, in accordance with manufacturers' specifications and workplace procedures
	2.4 Exhaust temperature, flow to HRSG and gas turbine power output are adjusted, in accordance workplace procedures, to achieve required steam conditions and demand
	2.5 HRSG plant is operated within limits of its' design, in accordance with workplace procedures.
	2.6 HRSG plant is monitored, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.7 Corrective action is taken to rectify HRSG abnormalities, in accordance with manufacturers' recommendations and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3 Test HRSG plant operation	**3.1**	Tests are performed, in accordance with workplace procedures
	3.2	HRSG plant is observed, in accordance with workplace procedures, for correct operational response
	3.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet documentation, plant integrity or personnel safety requirements
	3.4	HRSG plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4 Analyse HRSG faults	**4.1**	Causes of abnormal HRSG plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	4.2	Corrective action is taken, in accordance with workplace procedures
	4.3	HRSG plant integrity and personnel safety is maintained, in accordance with workplace procedures, and through consultation with appropriate personnel and technical and operational documentation
	4.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
5 Complete documentation	**5.1**	HRSG plant problems, movements and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Assessment Requirements for UEPOPS432 Start up a heat recovery steam generator unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- identifying HRSG plant status
- monitoring and operating HRSG plant and equipment
- organise resources
- planning and preparing HRSG plant and equipment for start and run up operations
- recognising and responding to abnormal HRSG plant operating conditions
- starting, running up and operating HRSG and associated plant and equipment
- testing HRSG plant operation using diagnostic and data analysis techniques and tools to determine faults
- using recording procedures to complete documentation
- utilising temperature and pressure raising techniques
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- control of heat transfer and rate of temperature rise during HRSG start up
- HRSG plant and equipment, its location and operating parameters
- manufacturers specifications and manuals
- operational testing of HRSG plant
- permit to work system

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques HRSG plant and equipment operation

UEPOPS433 Operate and monitor a heat recovery steam generator unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate an in-service Heat Recover Steam Generator (HRSG). Operation of the HRSG, with or without supplementary firing, will be required through the full range of output, up to and including the maximum continuous rating.

A HRSG is a heat exchanger that retrieves heat from hot gas streams which is then supplied to steam turbines to generate additional electrical power.

Competency in this unit requires the ability to plan work, carry out operation of HRSG system, test HRSG operation, analyse HRSG system faults, inspect and monitor HRSG system and complete all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

UEPOPS434 Shut down a heat recovery steam generator unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to shut down an in-service Heat Recovery Steam Generator (HRSG) unit.

HRSGs are heat exchangers that retrieve heat from hot gas streams which is then supplied to steam turbines to generate additional electric power. Shutting down an HRSG unit, with or without supplementary firing, to a boxed up condition will require the hot and cold gas outlet dampers to be closed and the steam water drum to be pressurised at a normal working level prior to a hot or warm restart, or to be in a depressurised state in preparation for a short or long outage.

Competency in this unit requires the ability to plan and prepare shut down, operate plant during shut down, test and analyse steam turbine system faults and completing documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Assessment Requirements for UEPOPS434 Shut down a heat recovery steam generator unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- identifying HRSG plant status
- organising resources
- planning for HRSG plant shut down
- preparing and operating Heat Recovery Steam Generator (HRSG) plant and equipment
- responding to abnormal HRSG plant operating conditions
- shutting down HRSG plant operations
- testing HRSG plant operation using diagnostic and data analysis techniques and tools to determine faults
- using temperature and pressure reducing techniques and principles
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- control of steam temperature and pressure throughout full range of heat recovery steam generation operation up to and including maximum continuous rating
- depressurisation and cooling
- heat recovery steam generator gas path and water and steam circuits
- HRSG system components and the interaction of these components with other power

© Commonwealth of Australia, 2025 Powering Skills Organisation

generation plant and equipment
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- operation techniques for HRSG plant and equipment
- permit to work system
- typical arrangements of power production plant
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS435 Operate and monitor flue gas (NOx) mitigation systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required for the operation, inspection and monitoring of flue gas (NOx) mitigation systems. Flue gas (NOx) mitigation systems are typically used by coal, gas, oil and biomass fired oil and gas fired gas turbines and combined cycle power generation facilities.

Nitrogen Oxides (NOx) are poisonous gases derived from nitrogen and oxygen combustion under high pressure and temperatures. NOx is composed of nitric oxide (NO), and a smaller percentage of more poisonous nitrogen dioxide (NO2).

Competency in this unit requires the ability to plan work, carry out operation of flue gas (NOx) mitigation system, test flue gas (NOx) mitigation operation, analyse flue gas (NOx) mitigation system faults, inspect and monitor flue gas (NOx) mitigation system and complete all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Safety issues for flue gas (NOx) mitigation are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and legislative requirements
	1.2 Work requirements including the use of Personal Protective Equipment (PPE), permits and risk control measures are identified, in accordance with workplace procedures, from relevant personnel and documentation
	1.3 Inspection, preoperational checks and preparations for flue gas (NOx) mitigation service are carried out, in accordance with workplace procedures and manufacturers' recommendations procedures
	1.4 Flue gas (NOx) mitigation plant operational prerequisites are established, in accordance with workplace procedures and manufacturers' recommendations
	1.5 Sequence for recommissioning of flue gas (NOx) mitigation plant is determined to suit existing circumstances, in accordance with workplace procedures and site requirements
2 Operate flue gas (NOx) mitigation plant	**2.1** Flue gas (NOx) mitigation plant is operated, in accordance with workplace procedures and manufacturers' operating recommendations
	2.2 Flue gas (NOx) mitigation plant is monitored and observed, in accordance with workplace procedures, to detect deviations from normal operating conditions
	2.3 Corrective actions are taken to rectify flue gas (NOx) mitigation abnormalities, in accordance with workplace procedures, industry standards and site requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

3	**Test flue gas (NOx) mitigation plant operation**	**3.1** Operational tests are performed, in accordance with workplace procedures
		3.2 Flue gas (NOx) mitigation plant is observed for correct operational response, in accordance with workplace procedures
		3.3 Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, flue gas (NOx) mitigation plant integrity or personnel safety requirements
		3.4 Flue gas (NOx) mitigation plant is returned to required operational status upon completion of test, in accordance with workplace procedures
4	**Analyse flue gas (NOx) mitigation plant faults**	**4.1** Causes of abnormal flue gas (NOx) mitigation plant operating conditions are identified, in accordance with workplace procedures, and by analysing technical and operational information
		4.2 Corrective action is taken, in accordance with workplace procedures
		4.3 Flue gas (NOx) mitigation plant integrity and personnel safety is maintained, in accordance with workplace procedures, and in consultation with appropriate personnel and technical and operational documentation
5	**Monitor and inspect flue gas (NOx) mitigation plant**	**5.1** Flue gas (NOx) mitigation plant to be monitored and inspected is physically identified, in accordance with workplace procedures
		5.2 Flue gas (NOx) mitigation plant is monitored and inspected, in accordance with workplace procedures, for normal operation or to detect deviations
		5.3 Corrective action is taken, in accordance with workplace procedures
		5.4 Appropriate personnel are notified, in accordance with workplace procedures, when defects are detected
6	**Complete documentation**	**6.1** Flue gas (NOx) mitigation plant problems, movements and status are reported, in accordance with workplace procedures
		6.2 Documentation is updated, in accordance with workplace procedures

Assessment Requirements for UEPOPS435 Operate and monitor flue gas (NOx) mitigation systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing flue gas (NOx) mitigation plant faults using data analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- identifying flue gas (NOx) mitigation plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- monitoring and inspecting flue gas (NOx) mitigation plant
- operating flue gas (NOx) emission control plant and equipment
- organising resources
- preparing flue gas (NOx) mitigation plant and/or equipment
- recognising and responding to abnormal flue gas (NOx) mitigation plant operating conditions
- testing flue gas (NOx) mitigation plant operation using diagnostic and test techniques
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- NOx mitigation system plant and equipment, its location and operating parameters including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - NOx generation during combustion process within fossil fuelled boilers and gas turbines
  - NOx emission control plant and equipment components and the way they interact with plant and/or equipment
- performance tests on NOx mitigation system plant
- permit to work system
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS437 Manage system restart

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage a power generation system restart after the islanding or shut down of the system and/or network.

A restart is the process of restoring an electric power generating facility to operation without relying on an external transmission network. Power generation system restarts allow parts of the power system to be re-energised through black start equipped generation capacity following a black out.

Competency in this unit requires the ability to identify cause for power generating system restart, restore power generating system and document work. Individuals will, in general, work as an operator with responsibility for managing system restarts in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify cause for system/network restart	**1.1** Probable implications of power generation system restart are identified and assessed, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and workplace procedures
	1.2 Secondary threats to power generation system restart are identified and monitored, in accordance with workplace procedures
	1.3 Power generation system configuration or generation capability is evaluated, in accordance with workplace procedures
	1.4 External information is collated and assessed, in accordance with workplace procedures
	1.5 Probable cause of power generation system shutdown is identified from available information and resources, in accordance with workplace procedures
	1.6 Communication with key stakeholders is established, in accordance with workplace procedures
	1.7 Roles and work tasks are identified, in accordance with workplace procedures and in consultation with appropriate personnel
2 Restore system/network generation	**2.1** Power generation system restart response is managed, in accordance with workplace procedures and site requirements
	2.2 Power generation system restart responses are prioritised, in accordance with workplace procedures
	2.3 Contingency management plan including power generation system restart is actioned, in accordance with workplace policies and procedures
	2.4 Additional resources are coordinated and directed, as required, in accordance with workplace procedures
	2.5 Restart plans are monitored, evaluated and adjusted, as

© Commonwealth of Australia, 2025 Powering Skills Organisation

		required, in accordance with workplace procedures
3 Document work	**3.1**	Equipment failure or system restart problems are recorded and processed, in accordance with workplace procedures
	3.2	Feedback from key stakeholders is recorded, in accordance with workplace procedures
	3.3	Reports are generated and distributed to appropriate personnel, in accordance with workplace procedures
	3.4	Alternative restart plans or recommendations are communicated to appropriate personnel, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS437B Manage system restart.

Assessment Requirements for UEPOPS437 Manage system restart

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with key stakeholders
- communicating with personnel and key stakeholders
- determining corrective actions using diagnostic techniques
- documenting completed work using recording procedures
- identifying power generation system restart cause
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- locating power generating plant and equipment
- maintaining power generator unit integrity
- recognising abnormal power generating plant operating conditions
- recognising power generating plant status including interpreting remote indications of status using data analysis techniques and tools
- restarting and operating power generating plant within design parameters
- restoring power generation system and/or network generation
- using contingency and restarting plans

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- abnormal power generating plant operating conditions
- communication with key stakeholders
- contingency and restart plans

UEPOPS439 Plan and organise work

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the planning and organising of work tasks to be undertaken by a workplace team.

Planning and organising work activities requires tasks to be identified, the development of a plan and the organisation of tasks that are assigned to team members.

Competency in this unit requires the ability to plan and prepare work, coordinate and allocate work tasks to the team, the completion of work documentation and the reporting on status of completion. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for work	**1.1** Work requirements, including permits, are identified from work orders and are confirmed with appropriate personnel and site inspection, in accordance with workplace procedures
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, industry standards, legislative requirements, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are identified, applied and monitored
	1.3 Materials, equipment and resources to satisfy team tasks are obtained and inspected for compliance with job specifications, in accordance with workplace procedures
	1.4 Team work is planned, in accordance with workplace procedures, using appropriate plans, drawings, manuals and industry standards
2 Coordinate work	**2.1** Tasks are assigned and monitored to ensure compliance with plans and work requirements, in accordance with workplace procedures
	2.2 Provision for recycling or reuse of materials is undertaken, where possible, in accordance with workplace procedures
	2.3 Work tasks are modified to meet unforeseen circumstances and any changes are communicated promptly, in accordance with workplace procedures
3 Complete work	**3.1** Finalisation of work and restoration of site is monitored, in accordance with workplace procedures
	3.2 Permits are signed off and appropriate personnel are notified of work completion, in accordance with workplace procedures
	3.3 Work records, costing data and reports are prepared and finalised, in accordance with workplace procedures

UEPOPS440 Coordinate team activities

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to direct and coordinate team activities in the workplace to achieve agreed goals.

Team coordination is the process of turning a group of individuals into a cohesive team where they work together interdependently and cooperatively to meet the needs of the workplace.

Competency in this unit requires the ability to prepare for team work, coordinate team work and conduct team meetings. Individuals will, in general, work as a coordinator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for team work	**1.1** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards, codes of practice, environmental obligations and workplace procedures are identified, applied and monitored
	1.2 Team work is planned, in accordance with workplace procedures
	1.3 Hazards or incidents related to performance of team work are identified and investigated and remedial action is planned and implemented, in accordance with workplace procedures and legislative requirements
	1.4 Team communication requirements are identified, in accordance with workplace procedures
	1.5 Communication and information systems are used, in accordance with workplace procedures
2 Coordinate team work	**2.1** Site or team performance goals are identified and clarified with team members, in accordance with workplace procedures
	2.2 Cooperative interaction between team members is fostered, in accordance with workplace procedures
	2.3 Team roles are identified and coordinated, in accordance with workplace procedures
	2.4 Work plans for the team are developed, revised and coordinated, in accordance with workplace procedures
	2.5 Proposals for improvements are encouraged from team members, in accordance with workplace procedures
	2.6 Barriers to achievement of team goals and performance are identified and resolved, or referred to appropriate personnel, in accordance with workplace procedures
3 Conduct team meetings	**3.1** Team meeting objectives are clarified, and research is prepared, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Meeting procedures are conveyed to team members, in accordance with workplace procedures

3.3 Formal presentations are undertaken in team meetings, in accordance with workplace procedures

3.4 Team members are encouraged to participate and are given a hearing in meetings, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for UEPOPS440 Coordinate team activities

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with team
- conducting team meetings
- coordinating team work
- developing work plans
- implementing legislation, industry standards, codes of practice and regulations
- instigating team goals
- maximising and utilising team potential through interpersonal techniques and skills
- monitoring team activities and resolving team member differences
- preparing for team work
- promoting team unity and providing team support

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication techniques and procedures
- coordination of work teams
- dispute resolution procedures
- interpersonal techniques and skills
- legislation, industry standards, codes of practice and regulations
- management of team meetings

© Commonwealth of Australia, 2025 Powering Skills Organisation

- team member competency and skill identification
- techniques for team goal setting
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- work plans
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals

UEPOPS441 Operate and monitor system equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate, monitor and control High Voltage (H.V.) apparatus on the system via SCADA control.

Supervisory Control and Data Acquisition (SCADA) is a control system that uses computers, networked data communications and graphic interfaces. It uses other peripheral devices such as programmable logic controllers and discrete proportional integral derivative controllers to interface with plant, equipment or machinery.

Competency in this unit requires the ability to plan work, operate system equipment, monitor system equipment, analyse system equipment faults and complete all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Safety issues related to operating and monitoring system and/or network High Voltage (H.V.) apparatus through Supervisory Control and Data Acquisition (SCADA) is identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and legislative requirements
	1.2 System and/or network requirements for operating, monitoring and controlling H.V. apparatus through SCADA are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.3 System and/or network and associated H.V. apparatus and SCADA equipment operational prerequisites are identified and established, in accordance with workplace and manufacturers' procedures
	1.4 Sequence for recommissioning of system and/or network H.V. apparatus and equipment through SCADA is identified and determined, in accordance with workplace procedures
2 Operate system/network equipment	**2.1** System and/or network equipment and SCADA programs are operated, in accordance with workplace procedures
	2.2 Load shedding requirements are identified, selected and monitored, in accordance with workplace procedures, during equipment operations to ensure system integrity
	2.3 System and/or network operations are completed in consultation with appropriate personnel
3 Monitor system/network equipment	**3.1** Voltage and current requirements are assessed, evaluated and controlled to maintain system/network equipment integrity and stability, in accordance with workplace procedures
	3.2 System and/or network equipment is monitored for normal operations or to detect deviations, in accordance

		with workplace procedures
	3.3	Corrective actions to rectify system and/or network abnormalities are taken, in accordance with workplace procedures
	3.4	Appropriate personnel are notified when system and/or network equipment defects or abnormal operating conditions are detected, in accordance with workplace procedures
4 Analyse system/network equipment faults	**4.1**	Cause of system equipment operating faults are identified by analysing technical and operational information, in accordance with workplace procedures
	4.2	Operation of protection system is identified and assessed, in accordance with workplace procedures, to evaluate nature and cause of fault conditions
	4.3	Communication is established with key stakeholders, in accordance with workplace procedures, to identify nature and source of equipment system fault or failure
	4.4	Corrective action is taken, in accordance with workplace procedures
	4.5	Network and/or system integrity and personnel safety are maintained, in accordance with workplace procedures, and in consultation with appropriate personnel technical and operational documentation including contingency plans
5 Complete documentation	**5.1**	Equipment problems, movements, and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS441B Operate and monitor system equipment.

Assessment Requirements for UEPOPS441 Operate and monitor system equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing system equipment faults using data analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- monitoring system equipment and identifying status
- operating screen based equipment
- operating, monitoring and controlling High Voltage (H.V.) apparatus through use of Supervisory Control and Data Acquisition (SCADA)
- planning and preparing work
- recognising and responding to abnormal system equipment operating conditions

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications
- operation of Supervisory Control and Data Acquisition (SCADA)
- system equipment including its location, operating parameters and status
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS442 Monitor and coordinate the operation of a combined cycle gas turbine unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to simultaneously operate and monitor combined cycle power generation plant. It involves the safe and effective management of energy production to meet demand using a combined cycle gas turbine unit.

Combined cycle plant typically consists of a gas turbine and associated generator, Heat Recovery Steam Generator (HRSG), steam turbine and associated generator. Combined cycle power plant uses both the gas and steam turbines together to produce more electricity from the same fuel.

Competency in this unit requires the ability to plan for plant operation, operate heat recovery steam generator, operate generator and excitation system, control generation of electrical energy, coordinate unit operations, monitor system/plant, test system/plant operation, analyse system/plant faults and complete all documentation. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS314 Operate and monitor fuel firing plant (gas or oil)

UEPOPS333 Operate and monitor HRSG hot gas control system

UEPOPS336 Operate and monitor gas turbine unit

UEPOPS340 Operate and monitor a steam turbine

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for plant operation	**1.1** Safety issues, including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, are identified, in accordance with workplace procedures and site requirements
	1.2 Work, combined cycle plant and resource requirements are identified from relevant information and documentation, in accordance with workplace procedures
	1.3 Preoperational checks are carried out on combined cycle plant, in accordance with workplace procedures and site requirements
2 Operate heat recovery steam generator	**2.1** Gas turbine exhaust, gas flow and power output are adjusted to achieve required steam flow and conditions, in accordance with workplace procedures and operating requirements
	2.2 Supplementary firing system is placed into and out of service, as required, in accordance with workplace procedures, to maintain steam flow and steam conditions
	2.3 Combined cycle plant is operated within limits of its design, in accordance with workplace procedures and site requirements
	2.4 Combined cycle plant is operated, monitored and observed, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.5 Corrective action is taken to rectify abnormalities in combined cycle plant, in accordance with manufacturers'

© Commonwealth of Australia, 2025 Powering Skills Organisation

		specifications and workplace procedures
3 Operate generator and excitation system	**3.1**	Generator and excitation system is operated, in accordance with workplace procedures and manufacturer's operating recommendations
	3.2	Synchronising requirements are assessed, evaluated and implemented, in accordance with workplace procedures, to ensure generator and excitation system stability
	3.3	Generator and excitation system is monitored and observed, in accordance with workplace procedures, to detect deviations from normal operating conditions
	3.4	Corrective actions are taken to rectify generator and excitation system abnormalities, in accordance with workplace procedures and manufacturers' recommendations
4 Control generation of electrical energy	**4.1**	Generator output is adjusted to meet demand, in accordance with workplace procedures, whilst observing operating requirements
	4.2	Reactive power generation and voltage regulation requirements are assessed, in accordance with workplace procedures, to ensure the generator and excitation system is controlled to achieve desired output
	4.3	Generator stabilities and operating limits are assessed and the generator and excitation system is controlled to maintain those limits, in accordance with workplace procedures and manufacturers' recommendations
	4.4	Generator cooling systems and limits are monitored and assessed, and excitation system is controlled to maintain those limits, in accordance with workplace procedures and manufacturers' recommendation
5 Coordinate generator and excitation system operations	**5.1**	Generator and excitation systems are operated, in accordance with workplace procedures, to meet workplace requirements whilst observing power generating plant limitations
	5.2	Generator and excitation systems are monitored and observed, in accordance with workplace procedures, to detect deviations from normal operating conditions
	5.3	Causes of abnormal generator and excitation system operating conditions are identified by analysing technical and operational data and information, in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with workplace procedures
	5.4	Corrective action is taken to rectify generator and excitation system abnormalities, in accordance with workplace procedures and site requirements
	5.5	Generator and excitation system integrity, personnel safety and continuity of supply are maintained, in accordance with workplace procedures
	5.6.	Consultation with appropriate personnel is undertaken, in accordance with workplace procedures and site requirements
	5.7	Generator and excitation system is operated at optimum efficiency, in accordance with workplace procedures
6 Monitor system/plant	**6.1**	Generator and excitation system and combined cycle plant to be monitored is physically identified, in accordance with workplace procedures
	6.2	Generator and excitation system and combined cycle plant is monitored for normal operation to detect deviations, in accordance with workplace procedures
	6.3	Corrective action is taken, in accordance with workplace procedures
	6.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects and abnormal operating conditions are detected
7 Test system/plant operation	**7.1**	Operational tests are performed, in accordance with workplace procedures
	7.2	Generator and excitation system and combined cycle plant is observed for correct operational response, in accordance with workplace procedures
	7.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet documentation, combined cycle plant and generator and excitation system integrity or personnel safety requirements
	7.4	Generator and excitation system and combined cycle plant is returned to required operational status, in accordance with workplace procedures, upon completion of testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

8	**Analyse system/plant faults**	**8.1** Causes of abnormal generator and excitation system operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
		8.2 Corrective actions to rectify faults are determined, in accordance with workplace procedures
		8.3 Generator and excitation system and combined cycle plant integrity and personnel safety are maintained, in accordance with workplace procedures, and in consultation with appropriate personnel and technical and operational documentation
		8.4 Appropriate personnel are organised, in accordance with workplace procedures for investigation of identified operational abnormalities
9	**Complete documentation**	**9.1** Combined cycle plant problems, movements, and status are reported, in accordance with workplace procedures
		9.2 Documentation is updated, in accordance with workplace procedures

Foundation Skills

Assessment Requirements for UEPOPS442 Monitor and coordinate the operation of a combined cycle gas turbine unit

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing generator and excitation system and/or combined cycle plant for faults using data analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- controlling power generation operations of combined cycle plant and equipment
- coordinating operation of interacting generator and excitation systems
- identifying combined cycle plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- maintaining generator unit integrity
- monitoring generator and excitation system and/or combined cycle plant
- operating heat recovery steam generator
- organising resources
- planning for combined cycle plant operation
- preparing combined cycle plant and/or equipment for operation
- responding to abnormal combined cycle plant operating conditions
- testing generator and excitation system and/or combined cycle plant operation using diagnostic and testing techniques
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes

knowledge of:

- combined cycle plant and equipment, its location and operating parameters
- combined cycle plant status
- combined cycle system components and interactions including generator and system stability
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- potential resources
- steam and gas turbines and generators
- types and characteristics of heat recovery steam generators
- typical arrangements of power production plant
- WHS/OHS legislated requirements including
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS443 Coordinate wind farm operations

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the safe management of energy production at a wind farm.

A wind farm consists of a group of wind turbines in the same location used to produce electricity. Turbines at a wind farm are typically interconnected, with a substation transformer used to send the power to its grid destination.

Competency in this unit requires the ability to plan for plant operation, monitor wind farm operations, control wind farm electrical energy production, test wind farm operation, analyse system or plant faults and the completion of all documentation. Individuals will, in general, work as an operator at a wind farm with responsibilities for coordination activities.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for plant operation	**1.1** Safety issues are identified, in accordance with workplace procedures, to comply with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
	1.2 Work and wind farm plant and resource requirements are identified, in accordance with workplace procedures, from relevant information and documentation
	1.3 Preoperational checks of wind farm plant and equipment are carried out, in accordance with workplace procedures
2 Monitor wind farm operations	**2.1** Wind turbines and equipment are monitored for normal operation, in accordance with workplace procedures
	2.2 Alarms are acknowledged, prioritised and responded to, in accordance with workplace procedures
	2.3 Deviations from wind farm operations are identified and corrective actions are taken, in accordance with workplace procedures
	2.4 Wind farm plant and equipment use is monitored in key areas and trends in problems are identified, in accordance with workplace procedures
3 Control wind farm electrical energy production	**3.1** Wind farm energy output is controlled, in accordance with workplace procedures, to meet operational or load requirements of power generation facility
	3.2 Wind turbines are manually adjusted to meet operation requirements, in accordance with workplace procedures and manufacturers' recommendations
	3.3 Wind turbines are taken out of service and are shut down to meet operational and maintenance requirements, in accordance with workplace procedures and manufacturers' recommendations
	3.4 Wind turbines are run-up and placed into service to meet operational requirements, in accordance with workplace

UEPOPS444 Start and run-up a hydro turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct safe hydro turbine run-ups to a stable operating condition.

Run up of a hydro turbine will involve the operator making a sequence of checks prior to and during start up. This ensures that loading the turbine is completed in a safe and consistent manner.

Competency in this unit requires the ability plan and prepare hydro turbine, start and run-up hydro turbine, test and analyse hydro turbine system faults and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

UEPOPS445 Shut down a hydro turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct a shutdown of a hydro turbine to where it can be placed at rest safely.

Shutdown of a hydro turbine will involve the operator making a sequence of checks prior to and during shutdown. This ensures that the shutdown of the turbine is completed in a safe and consistent manner.

Competency in this unit requires the ability plan and prepare hydro turbine shut down, conduct a shutdown, test hydro turbine plant operation during shut down, analyse hydro turbine system faults during shutdown and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Assessment Requirements for UEPOPS445 Shut down a hydro turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- conducting safe and controlled shut down of hydro turbine plant and equipment
- identifying hydro turbine plant status
- implementing legislation, industry standards, codes of practice and regulations
- preparing hydro turbine plant and equipment for operation
- recognising and responding to abnormal plant operating conditions
- testing hydro turbine plant operationally using diagnostic and analysis techniques and to determine faults
- using recording procedures to complete documentation
- working with the permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- hydro turbine operational processes
- hydro turbine plant and equipment, its location and operating parameters
- hydro turbine plant system components and their interaction
- hydro turbine supervision and control systems
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- on-line condition monitoring equipment and trends

© Commonwealth of Australia, 2025 Powering Skills Organisation

- permit to work system
- power generation plant status
- typical arrangements of hydro power production plant
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation including:
  - emergency procedures
  - risk mitigation control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS446 Operate and monitor hydro unit control and protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to operate, inspect and monitor a hydro unit control and protection system.

Hydro unit controls and protection systems provide operators with the facilities to control and supervise plant and equipment. Hydro unit control and protection systems help to ensure efficiency in critical applications such as turbine control, energy management and equipment protection.

Competency in this unit requires the ability to plan work, carry out operation of hydro unit control and protection system, test hydro unit control and protection system operation, analyse hydro unit control and protection system faults, inspect and monitor hydro unit control and protection system and the completion of all documentation. Individuals will, in general, work under supervision, as an operator in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Safety issues related to operating and monitoring hydro unit control and protection systems are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and legislative requirements
	1.2 Work tasks, hydro unit control and protection system and type of start requirements are identified, in accordance with workplace procedures, from appropriate personnel and documentation
	1.3 Hydro unit control and protection system run-up and loading schedule are ascertained from relevant documentation, in accordance with workplace procedures and site requirements
	1.4 Inspection, preoperational tests and field preparation for hydro unit control and protection system service are carried out, in accordance with workplace procedures and manufacturers' recommendations
	1.5 Hydro unit control and protection system operational prerequisites are established, in accordance with workplace procedures and manufacturers' recommendations
	1.6 Sequence for recommissioning of hydro unit control and protection system is determined, in accordance with workplace procedures
2 Operate hydro control and protection system	**2.1** Hydro unit control and protection system is adjusted, in accordance with workplace procedures, to achieve operating requirements
	2.2 Hydro unit control and protection system is operated within limits of its' design and site requirements, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.3	Hydro unit control and protection system is monitored and observed, in accordance with workplace procedures, to detect deviations from required operating conditions
	2.4	Corrective actions are taken to rectify hydro unit control and protection system abnormalities, in accordance with workplace procedures and manufacturers' recommendations
3 Test hydro unit control and protection system operation	**3.1**	Operational tests are performed, in accordance with workplace procedures
	3.2	Hydro unit control and protection system is observed for correct operational response, in accordance with workplace procedures
4 Analyse hydro unit control and protection system faults	**4.1**	Cause of abnormal hydro unit control and protection system operating conditions are identified, in accordance with workplace procedures, and by analysing technical and operational information
	4.2	Actions to rectify hydro unit control and protection system faults are correctly determined, in accordance with workplace procedures
5 Monitor and inspect hydro unit control and protection system	**5.1**	Hydro unit control and protection system to be monitored and inspected is physically identified, in accordance with workplace procedures
	5.2	Hydro unit control and protection system is monitored and inspected, in accordance with workplace procedures, for normal operation or to detect deviations
6 Complete documentation	**6.1**	Hydro unit control and protection system plant problems, movements, and status are reported in accordance with workplace procedures
	6.2	Documentation is updated, in accordance with workplace procedures

UEPOPS447 Coordinate photovoltaic solar power plant operations

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the coordination of photovoltaic solar power plant operations.

A photovoltaic solar power plant operation typically consists of a large scale Photovoltaic System (P.V.) system designed for the supply of power into the electricity grid. The solar power source is via photovoltaic modules that convert light directly to electricity.

Competency in this unit requires the ability to coordinate plant operations, monitor plant operations, test plant operations, analyse plant faults and report operation against strategy requirements. Individuals will, in general, work as an operator with responsibility for photovoltaic solar power plant coordination, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Coordinate plant operations	**1.1** Photovoltaic solar power plant operational procedures are implemented, in accordance with workplace procedures
	1.2 Resources and supplies are coordinated to meet photovoltaic solar power plant requirements, in accordance with workplace procedures
2 Monitor plant operations	**2.1** Deviations from photovoltaic solar power plant operations are identified and recorded, in accordance with workplace procedures
	2.2 Photovoltaic solar power plant operation and condition is monitored, in accordance with workplace procedures and legislative requirements
	2.3 Requirements that may impact on photovoltaic solar power plant operations are monitored, in accordance with workplace procedures
	2.4 Photovoltaic solar power plant operations are monitored to meet legislative, industry and site requirements, in accordance with workplace procedures
3 Test plant operation	**3.1** Operational tests are performed on photovoltaic solar power plant, in accordance with workplace procedures
	3.2 Photovoltaic solar power plant is observed for correct operational response, in accordance with workplace procedures
	3.3 Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, photovoltaic solar power plant integrity or personnel safety requirements
	3.4 Photovoltaic solar power plant is returned to required operational status upon completion of testing, in accordance with workplace procedures
4 Analyse plant faults	**4.1** Causes of abnormal photovoltaic solar power plant operating conditions are identified, in accordance with workplace procedures, by analysing technical and

		operational information
	4.2	Corrective actions to rectify faults are determined, in accordance with workplace procedures
	4.3	Photovoltaic solar power plant integrity and personnel safety are maintained, in accordance with workplace procedures, and through consultation with personnel and technical and operational documentation
	4.4	Appropriate personnel, including specialists, are arranged for investigation of identified photovoltaic solar power plant operational abnormalities, in accordance with workplace procedures
5 Report operation against strategy requirements	**5.1**	Data is collected and processed for review, in accordance with workplace procedures and operational strategy
	5.2	Photovoltaic solar power plant operation or condition is reported, in accordance with workplace procedures and legislative requirements
	5.3	Abnormal photovoltaic solar power plant operating conditions are reported, in accordance with workplace procedures
	5.4	Changes to operational strategy are coordinated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

UEPOPS450 Coordinate workplace communication

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate workplace communication and meetings.

Workplace communication is the process of exchanging information, both verbal and non-verbal, within a team. Communication fosters working relationships which can improve morale and lead to productivity increases.

Competency in this unit requires the ability to plan and prepare for communication, coordinate team communication, coordinate workplace meetings and represent team views. Individuals will, in general, work as an operator with responsibility for coordinating communications, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for communication	**1.1** Communication requirements are identified, in accordance with workplace procedures, from analysis of team requirements
	1.2 Workplace communication system is planned and established, in accordance with workplace procedures
	1.3 Workplace communications are monitored and modified, as required, in accordance with workplace procedures
2 Coordinate team communications	**2.1** Forums including briefings, meetings and committees, are scheduled and coordinated, as required, in accordance with workplace procedures
	2.2 Information on workplace communication is coordinated and provided to team members, in accordance with workplace procedures
	2.3 Communication deficiencies are identified and team members are made aware of action required and are informed of remedial options available, in accordance with workplace policies and procedures
	2.4 Team members are encouraged to participate in workplace communication forums, in accordance with workplace policies and procedures
3 Coordinate workplace meetings	**3.1** Meetings are planned and organised, including distribution and clarification of agenda, notification of date, venue and attendees, in accordance with workplace procedures
	3.2 Format and rules of meetings are, established and applied, in accordance with workplace procedures
	3.3 Views of personnel are presented in minutes, in accordance with workplace policies and procedures
	3.4 Meeting outcomes and agreed action plans are recorded, and details of next meeting is confirmed, in accordance with workplace procedures
4 Represent team views	**4.1** Team view is determined, in accordance with workplace procedures, including possible options and acceptable alternatives or compromises prior to a presentation

© Commonwealth of Australia, 2025 Powering Skills Organisation

4.2 Team view is presented clearly and concisely, in accordance with workplace procedures

4.3 Decisions and outcomes are conveyed to team members, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

UEPOPS451 Coordinate the use of contingency plans

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the use of contingency plans that are developed to support the integrity of power generation facilities.

A contingency plan is a course of action designed to help a power generation facility respond to a significant event. A contingency plan should include any event that might disrupt power generation facility operations.

Competency in this unit requires the ability to identify contingencies, identify preferred contingency plans and complete all documentation. Individuals will, in general, work as coordinator in risk management, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS370 Facilitate the use of contingency plans

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify potential risks	**1.1** Potential contingencies are identified, in accordance with workplace procedures, legislative requirements and industry standards, from a risk analysis of functions which are critical to the performance of the power generation facility
	1.2 Likelihood and impact of risks are assessed and evaluated for impact, in accordance with workplace procedures and the risk management system
	1.3 Risks are arranged using a risk management matrix in order of priority and/or impact
2 Coordinate preferred contingency plan	**2.1** Processes for each identified risk are developed and coordinated, in accordance with the contingency plan
	2.2 Workplace procedures and risk management strategies are mapped to contingency plan processes
	2.3 Analysis of human, fiscal and resourcing requirements that may impact use of the contingency plan is undertaken
3 Complete documentation	**3.1** Contingency plan problems and status are reported, in accordance with workplace procedures
	3.2 Contingency plan documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

UEPOPS452 Conduct operational checks and carry out corrective action on in-service electrical plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to conduct operational checks and carry out corrective actions on in-service electrical plant.

An operational check is the verification that a group of components or units are working together to accomplish a single objective. An operational check consists of running in-service electrical plant to ensure that all the systems function together.

Competency in this unit requires the ability to plan for plant in-service checks, carry out in-service electrical checks, carry out corrective actions and complete work. Individuals will, in general, work as an operator in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practices

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for plant in-service checks	**1.1** Safety issues and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations are identified, in accordance with workplace procedures
	1.2 Work, electrical in-service plant and resource requirements are identified from relevant personnel, work orders and documentation, in accordance with workplace procedures
	1.3 Electrical in-service plant status and work requirements are confirmed with appropriate personnel or by site inspection, in accordance with workplace procedures
	1.4 Equipment is checked for correct calibration and operation and materials are obtained and inspected for compliance with job specification, in accordance with workplace procedures
	1.5 Potential hazards are identified and risk control measures are selected, in accordance with the workplace procedures
	1.6 Pre-access checks of electrical in-service plant are carried out, in accordance with workplace procedures and site requirements
2 Carry out in-service electrical checks	**2.1** Electrical in-service plant is operated, in accordance with workplace procedures and manufacturers' recommendations
	2.2 Electrical in-service plant checks are conducted and monitored, in accordance with workplace procedures, to detect deviations from normal operation parameters
	2.3 Electrical in-service checks are performed, in accordance with workplace procedures
	2.4 Electrical in-service plant integrity and personnel safety are maintained, in accordance with workplace procedures and in consultation with appropriate personnel and technical and operational documentation

© Commonwealth of Australia, 2025 Powering Skills Organisation

3 Carry out corrective actions	**3.1**	Corrective actions are identified after analysing electrical in-service plant operations, in accordance with manufacturers' recommendations and workplace procedures
	3.2	Isolations are confirmed, where appropriate, in accordance with workplace procedures and site requirements
	3.3	Equipment for use in conducting operational checks is modified using appropriate plans, drawings and manuals, in accordance with workplace procedures
	3.4	Corrective actions are carried out on electrical in-service plant, without damage or loss to other plant, in accordance with workplace procedures
	3.5	Modified electrical in-service plant is set up to meet operational parameters, in accordance with workplace procedures and manufacturers specifications
	3.6	Final electrical in-service plant inspection is performed, in accordance with workplace procedures
4 Complete work	**4.1**	Operational checks and corrective actions are completed, and electrical in-service plant is returned to operational status, in accordance with workplace procedures
	4.2	Appropriate personnel are notified of work completion, in accordance with workplace procedures
	4.3	Electrical in-service plant problems and corrective actions are reported, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS452A Conduct operational checks and carry out corrective action on in-service electrical plant.

Assessment Requirements for UEPOPS452 Conduct operational checks and carry out corrective action on in-service electrical plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety(WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- carrying out in-service electrical checks
- communicating with personnel
- completing work
- determining and completing corrective actions using data analysis techniques and tools
- finalising documentation using recording procedures
- identifying electrical in-service plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting power generation plant drawings, manufacturers' specifications and manuals
- maintaining electrical in-service plant integrity
- performing isolations
- planning for electrical in-service plant checks
- preparing electrical in-service plant or equipment for operational check
- recognising abnormal electrical in-service plant operating conditions
- recognising remote indication of plant status and conditions
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- electrical in-service plant and equipment, its location and operating parameters
- electrical in-service plant drawings
- electrical in-service plant status
- isolations
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- modification techniques
- permit to work system
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS454 Coordinate response to critical incidents

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to respond to incidents of a critical nature that may impact on the operations of power generation plant or its' system, endanger human life or property or have an adverse impact on the environment.

A critical incident refers to an event that may result in a high level of risk, directly or indirectly to the core operations of a power generation facility. The level of risk is determined using the facility's risk management processes as outlined in the Risk Management System.

Competency in this unit requires the ability to identify critical incident and consequences, establish contingency plan, establish communications, coordinate response to a critical incident and the documentation of the incident and response. Individuals will, in general, work as an operator with responsibility for coordinating critical incident responses and/or risk management, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS369 Respond to a critical incident

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify critical incident and consequences	**1.1** Critical incidents and probable implications are identified and evaluated, in accordance with workplace procedures
	1.2 Secondary threats are identified and monitored, in accordance with workplace procedures
	1.3 Data is evaluated, in accordance with workplace procedures to determine probable causes, consequences and potential responses
2 Establish contingency plan	**2.1** Contingency and emergency response plans are identified, in accordance with workplace procedures
	2.2 Additional resources are identified, in accordance with workplace procedures
	2.3 Alternate contingency plan strategies to cater for crisis variations are developed, in consultation with team members and in accordance with workplace procedures
3 Establish communications	**3.1** Communication links with external authorities for coordination of resources are established, in accordance with workplace procedures
	3.2 Communication with key stakeholders is established to disseminate information, in accordance with workplace procedures
	3.3 Team roles, both internal and external, are identified and conveyed to personnel, in accordance with workplace procedures
4 Coordinate response to critical incident	**4.1** Response is coordinated, in accordance with workplace procedures and site requirements, with allowance made for personnel and equipment limitations
	4.2 Events and responses are prioritised with consideration given to the needs of stakeholders, in accordance with workplace procedures
	4.3 Impact of secondary threats are identified and assessed,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with workplace procedures
	4.4	Contingency plan is actioned, in accordance with workplace policies and procedures
	4.5	Additional resources are coordinated and directed, in accordance with workplace procedures
	4.6	Critical incident power generation restoration strategies are monitored, evaluated and adjusted, in accordance with workplace procedures
5 Document incident and response	**5.1**	Critical incident equipment failure or problems are recorded and processed, in accordance with workplace procedures
	5.2	Feedback from stakeholders and personnel debriefing comments are recorded and analysed, in accordance with workplace procedures
	5.3	Critical incident reports and findings are generated and distributed to appropriate personnel, in accordance with workplace procedures
	5.4	Improvements to critical incident procedures are recommended to appropriate personnel, in accordance with workplace procedures
	5.5	Alternative contingency strategies are identified, analysed and recommendations are communicated to appropriate personnel, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS454 Coordinate response to critical incidents

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with external and internal stakeholders
- conducting debriefings and reviewing stakeholder feedback
- coordinating critical incident situations
- coordinating personnel
- determining communications
- documenting critical incident and response using recording procedures
- establishing contingency and emergency response plans
- identifying critical incidents and consequences
- implementing legislation, industry standards, codes of practice and regulations
- organising and coordinating response to critical incidents
- using policies and procedures for critical incidents
- utilising data analysis techniques and tools when assessing critical incident risks and responses
- working with contingency plans

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication during critical incidents
- contingency and emergency response plans
- coordination of critical incident situations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- data analysis techniques and tools
- debriefings and stakeholder feedback methods
- legislation, industry standards, codes of practice and regulations
- role of external authorities
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS456 Perform switching to a switching program

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to perform switching to a switching program.

An electrical switch can alternate a load between two sources either manually or automatically when sensors detect one of the sources has lost or gained power. A switch is installed where the backup generator is located so that the generator can be used to provide temporary electrical power, as required.

Competency in this unit requires the ability to prepare for switching program, carry out switching program, and complete all documentation. Individuals will, in general, work as an operator in, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for switching program	**1.1** Authorisation is confirmed to perform switching operation with coordinating personnel, in accordance with workplace procedures
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards, codes of practice and environmental obligations are identified, applied and monitored
	1.3 Contingency plan is discussed with personnel coordinating switching program, in accordance with workplace procedures
	1.4 Permits and access requirements are identified prior to program commencement, in accordance with workplace procedures
	1.5 Documentation is received and checked prior to starting switching program, in accordance with workplace procedures
2 Carry out switching program	**2.1** Personnel involved in switching program is confirmed and they are directed to switching locations, in accordance with workplace procedures
	2.2 Communication is established and maintained with personnel coordinating switching program, in accordance with workplace procedures
	2.3 Access to electrical power generation plant is obtained, in accordance with workplace procedures
	2.4 Switching program steps are verified before and after each operation, in accordance with workplace procedures
	2.5 Switching steps are documented upon completion of each operation, in accordance with workplace procedures
	2.6 Permits are issued, monitored and recorded, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Switching program is completed and is recorded, in accordance with workplace procedures
3 Complete documentation	**3.1**	Equipment problems, abnormalities and status are reported, in accordance with workplace
	3.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS456A Perform switching to a switching program.

Assessment Requirements for UEPOPS456 Perform switching to a switching program

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- acquiring and analysing system operation information
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations including:
  - emergency procedures
  - risk control measures
  - safe working practices
- carrying out switching program
- communicating with personnel
- completing documentation using recording procedures
- directing and coordinating switching programs
- implementing legislations, industry standards, codes of practice and regulations
- preparing, planning and prioritising work for switching programs
- using permit to work system
- working with switching operations and procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- implementation of switching programs
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- power generation plant and equipment, its location and operating parameters
- switching operations and procedures
- typical arrangements of power generation plant

UEPOPS457 Control electrical energy production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to control the safe operation of energy production to meet demand on an electricity generating unit.

Generating units usually operate independently, with most power generation production facilities consisting of several independent generating units which can be brought online or taken offline as demand fluctuates.

Competency in this unit requires the ability to plan for power generating plant operation, operate generator and excitation system, control generation of electrical energy and the completion of work. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for plant operation	**1.1** Safety issues related to controlling electrical energy production are identified, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards and workplace procedures
	1.2 Work, electrical energy production plant and resourcing are identified, in accordance with workplace procedures, from relevant information and documentation
	1.3 Preoperational check on electrical energy production plant is carried out, in accordance with workplace procedures and site requirements
2 Operate generator and excitation system	**2.1** Generator and excitation system is operated, in accordance with workplace procedures and manufacturers' operating recommendations
	2.2 Synchronising requirements are assessed, evaluated and achieved, in accordance with workplace procedures, to ensure generator and excitation system stability
	2.3 Generator and excitation system is monitored and observed, in accordance with workplace procedures, to detect deviations from normal operating conditions
	2.4 Corrective actions are taken to rectify generator and excitation system abnormalities, in accordance with workplace procedures and manufacturers' recommendations
3 Control generation of electrical energy	**3.1** Generator output is adjusted to meet demand, in accordance with workplace procedures
	3.2 Reactive power generation and voltage regulation requirements are assessed, in accordance with workplace procedures, and the generator and excitation system is controlled to achieve desired output
	3.3 Generator stabilities and operating limits are assessed and the generator and excitation system is controlled to maintain those limits, in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures and manufacturers' recommendations
	3.4	Generator cooling systems and limits are monitored and assessed and the generator and excitation system is controlled to maintain those limits, in accordance with workplace procedures and manufacturers' recommendations
4 Complete documentation	**4.1**	Power generating plant problems, movements and status is reported, in accordance with workplace procedures
	4.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS457 Control electrical energy production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing electrical energy production plant faults using diagnostic and testing techniques
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- completing documentation
- controlling generation of electrical energy production
- directing the operation of interacting systems, electrical energy production plant and equipment
- identifying electrical energy production plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- maintaining generator unit integrity
- monitoring electrical energy production unit operations
- operating generator and excitation system
- organising resources
- planning for electrical energy production plant operation
- reviewing electrical energy production plant operation using data analysis techniques and tools
- undertaking corrective actions

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- analysis of electrical energy production plant faults

© Commonwealth of Australia, 2025 Powering Skills Organisation

- control of electrical energy generation production
- electrical energy production plant and equipment, its location and operating parameters
- electrical energy production plant operation monitoring
- electrical energy production unit operations
- generator and system stability including system components and interactions
- generator excitation and cooling system types and characteristics
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- operation of generator and excitation systems
- typical arrangements of power generating production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS501 Manage Work, Health and Safety policy and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage the identification of hazards and the assessment and control of risks associated with generating plant and equipment.

Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) is concerned with protecting the wellbeing of all workplace stakeholders from exposure to hazards and risks resulting from activities in power generation facilities. It involves the assessment and mitigation of risks that can cause short and long term harm.

Competency in this unit requires the ability to identify hazards, analyse and manage WHS/OHS risks, implement and manage procedures for identifying risks, recommend controls for hazards, identify and manage licensing and certification issues and review and evaluate risk control measures. Individuals will, in general, work as operators with responsibility for WHS/OHS, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify hazards	**1.1** Recognised sources of information, data and advice on power generating plant and equipment hazards are accessed, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations
	1.2 Hazardous situations associated with use of generating plant and equipment are identified, analysed and managed, in accordance with workplace procedures
	1.3 Key stakeholders are identified and consulted, in accordance with workplace procedures
	1.4 WHS/OHS recording and reporting procedures on hazards and risks are reviewed and managed
2 Analyse and manage WHS/OHS risks	**2.1** Risk assessment controls are determined, analysed and managed in consultation with key stakeholders
	2.2 Register of risk control measures including permits, is developed and managed, in accordance with workplace procedures
3 Implement and manage procedures for identifying hazards	**3.1** Hierarchy of control measures are implemented and managed, in accordance with workplace procedures
	3.2 Workplace monitoring processes are continually managed to eliminate or control risks, in accordance with workplace procedures
	3.3 Risks requiring further controls are identified and managed, in accordance with workplace procedures
	3.4 Management of reporting cycle to key stakeholders is undertaken, in accordance with workplace procedures
4 Recommend controls for hazards	**4.1** Permits to work and access procedures are monitored and managed, in liaison with key stakeholders, in accordance with workplace procedures
	4.2 Isolation procedures are implemented and managed, in accordance with workplace procedures, to ensure

© Commonwealth of Australia, 2025 Powering Skills Organisation

		continued safety of all workplace personnel
	4.3	Maintenance procedures are documented and communicated to all personnel to ensure generating plant and equipment are safe, in accordance with workplace procedures
	4.4	Modifications to generating plant or equipment are recorded in return to service documentation.
	4.5	Work practices are monitored and modified, as required, for safe operation of generating plant and equipment, in accordance with workplace procedures
	4.6	Maintenance systems are monitored and evaluated for safe operation of generating plant and equipment
5 Identify and manage licensing and certification issues	**5.1**	WHS/OHS legislative requirements for plant registration, operator licensing or authorisation are identified and communicated to key stakeholders
	5.2	Training to meet WHS/OHS regulatory requirements is identified and communicated to key stakeholders
	5.3	WHS/OHS compliance for operator licensing, registration or authorisation is managed, in accordance with workplace procedures
	5.4	Records of operator competencies in working with generating plant and equipment are managed, in accordance with workplace procedures
6 Review and evaluate risk control measures	**6.1**	Risk control measures are reviewed and evaluated, in accordance with workplace procedures, and risk assessments are conducted
	6.2	Risk control plans are developed in consultation with key stakeholders, and are managed, in accordance with workplace procedures
	6.3	Record system is managed for generating plant, equipment and systems of work, in accordance with workplace procedures
	6.4	WHS/OHS improvements are implemented and managed, in consultation with key stakeholders
	6.5	WHS/OHS management system is evaluated, reviewed and reported on, in accordance with workplace

UEPOPS502 Manage permit to work system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage the development, implementation and review of the permit to work system in a power generation facility.

Permits to work are a formal system used to control high risk activities in power generation facilities, they specify the control measures to be used. They ensure that all hazards and precautions have been considered before any hazardous work begins.

Competency in this unit requires the ability to plan for implementation of permit to work procedures, develop permit to work system and procedures, manage permit to work system and audit permit to work procedures. Individuals will, in general, work as an operator with responsibility for managing the permit to work system in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS403 Coordinate permit to work system

UEPOPS402 Conduct multiple energy source isolation procedures for permit to work

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for implementation of permit to work system	**1.1** Statistical records are consulted on permit to work implementation, in accordance with workplace procedures
	1.2 Requirements for the development of permit to work procedures are identified and confirmed, in accordance with workplace procedures and legislation
	1.3 Key stakeholders or equipment affected by the permit to work system are identified, in accordance with workplace procedures
	1.4 Consultation with key stakeholders to determine contingency plan implementation and timetable of review is carried out, in accordance with workplace policies and procedures
2 Develop permit to work system and procedures	**2.1** Permit to work procedures are planned and developed in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation requirements
	2.2 Resources are obtained and utilised for development of permit to work system, in accordance with workplace procedures
	2.3 Permit to work procedures are documented and approved, in accordance with workplace procedures
3 Implement permit to work system	**3.1** Permit to work system incidents are identified, managed and recorded, in accordance with workplace procedures and legislation requirements
	3.2 Permit to work incidents are investigated and assessed, in accordance with workplace procedures and legislation requirements
	3.3 Results and recommendations of incident investigations are documented and confirmed with appropriate personnel, in accordance with workplace procedures and legislation requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

4 Audit permit to work procedures	**4.1** Permit to work system is audited and results are evaluated and managed, in accordance with workplace procedures
	4.2 Audit results are documented and reports including recommendations are confirmed with appropriate personnel, in accordance with workplace procedures and legislation requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS502B Manage permit to work system.

Assessment Requirements for UEPOPS502 Manage permit to work system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - hazard identification
  - risk control measures
  - safe working practices and procedures
- conducting and managing audits and reviews of incident reports
- consulting with key stakeholders
- developing and managing permit to work system and procedures
- managing legislation, industry standards, codes of practice and regulations
- planning for implementation of permit to work system
- using data analysis techniques and tools to analyse permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- auditing procedures and techniques
- incident investigation using evaluation techniques
- legislation, industry standards, codes of practice and regulations
- permit to work systems
- stakeholder management techniques
- WHS/OHS legislated requirements including:
  - emergency procedures
  - hazard identification
  - risk control measures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- safe working practices and procedures
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS505 Produce maintenance strategies for generation production plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the establishment and implementation of maintenance strategies for power generation production plant. Generation production plant can include boilers, turbines, hydro equipment, electrical systems, control and monitoring systems, ash and dust systems, water treatment plant and fuel equipment.

A maintenance plan details the inspection, servicing, repairing or replacing of physical components of machines, plant and equipment used in power generation facilities through the implementation of a prescribed maintenance schedule. Strategies relate to what must happen to achieve the objectives outlined in the maintenance plan.

Competency in this unit requires the ability to research and plan for maintenance, establish strategies and implement strategies. Individuals will, in general, work under supervision, in a power generation facility as an operator with responsibility for maintenance planning and strategies.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS425 Produce maintenance plans for generation production plant.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Research and plan for strategies	**1.1** Existing maintenance strategies are reviewed, in accordance with workplace procedures and the maintenance plan
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are identified and applied
	1.3 Business plans are reviewed, in accordance with workplace procedures, for impact on the maintenance plan and proposed work
	1.4 Major maintenance activities are identified, in accordance with workplace procedures and the maintenance plan
	1.5 Time frames for implementation and completion of maintenance strategies are established, in accordance with workplace procedures and the maintenance plan
	1.6 Key indicators of maintenance strategy performance are defined, in accordance with workplace procedures and the maintenance plan
	1.7 Budget is developed to identify maintenance costs, in accordance with workplace procedures
	1.8 Legal implications of maintenance work to be undertaken are identified, in accordance with workplace procedures
	1.9 Risk control measures are applied, in accordance with workplace procedures and maintenance plan
2 Establish strategies	**2.1** Resources to implement maintenance strategies are identified and obtained, in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	2.2	Time frames and potential variances for maintenance scheduling are identified, in accordance with workplace procedures and maintenance plan
	2.3	Any interdependence of maintenance activities is identified and documented, in accordance with workplace procedures and maintenance plan
	2.4	Objectives for maintenance strategies are documented, in accordance with workplace procedures and maintenance plan
3 Implement strategies	**3.1**	Maintenance strategies are implemented, in accordance with workplace procedures, to facilitate outcomes
	3.2	Variances in maintenance strategies are identified, in accordance with workplace procedures
	3.3	Strategies are redeveloped or updated, in accordance with workplace procedures to satisfy outcomes
	3.4	Opportunities for maintenance strategy enhancements are identified and documented, in accordance with workplace procedures, for inclusion in future strategy preparation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS505B Produce maintenance strategies for generation production plant.

Assessment Requirements for UEPOPS505 Produce maintenance strategies for generation production plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- establishing and implementing maintenance strategies
- implementing legislation, industry standards, codes of practice and regulations
- produce maintenance strategies
- researching and planning maintenance strategies using data analysis techniques and tools
- undertaking maintenance strategy development
- using manufacturers' specifications and manuals

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- legislation, industry standards, codes of practice and regulations
- maintenance work practices and planning principles
- manufacturers' specifications and manuals
- power generation plant and equipment, its location and operating parameters
- risk management techniques
- strategy development
- techniques for maintenance strategy development
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures

UEPOPS507 Conduct project management

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake project management plans and conduct project work.

Project management is the application of processes, methods, knowledge, skills and experience to achieving explicitly stated objectives. Project management includes initiating, planning, executing, controlling and closing projects in line with budget and time frame constraints.

Competency in this unit requires the ability to plan and prepare, coordinate project plans and complete all documentation. Individuals will, in general, work as an operator with responsibility for project management, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare	**1.1** Project management scope, desired outcomes, budget and timeline dates are identified, in accordance with workplace procedures
	1.2 Resources and stakeholders are identified, availability assessed and tasks allocated, in accordance with workplace procedures and project requirements
	1.3 Preparation of technical specifications is conducted, in accordance with workplace procedures to meet project timeline dates
	1.4 Agreements with service providers and stakeholders are established, in accordance with workplace procedures and project requirements
	1.5 An integrated overview plan is prepared and distributed for review by stakeholders, in accordance with workplace procedures and project requirements
	1.6 Areas for potential overrun and resource complications are identified and are assessed for risks, in accordance with workplace procedures and project requirements
	1.7 Documentation, materials and equipment required for the project are obtained, in accordance with workplace procedures and project requirements
	1.8 Communication processes, including meetings, are organised to meet the needs of project stakeholders and service providers, in accordance with workplace procedures and project requirements
2 Coordinate project plan	**2.1** Project plan including power generation plant isolation and access requirements are coordinated, in accordance with legislative obligations, industry standards and workplace procedures
	2.2 Specialist equipment and personnel are coordinated, in accordance with workplace procedures and project requirements, to achieve desired project outcomes
	2.3 Project progress and costs are reviewed against budget targets and baseline key performance indicators
	2.4 Deviations from project management plan are identified

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and actions are taken, in accordance with workplace procedures and project requirements to adjust project outcomes
	2.5	Deviations from project management plan requirements are reported to relevant stakeholders, in accordance with workplace procedures and project requirements
	2.6	Project is continuously reviewed in relation to workplace safety, quality control, resources, timeframes, costs and equipment, in accordance with workplace procedures
3 Complete documentation	**3.1**	Power generation plant quality assurance documents and outage reports are provided, in accordance with project requirements, legislative obligations and workplace procedures
	3.2	Power generation plant and maintenance records are updated, in accordance with workplace procedures
	3.3	Power generation plant availability is declared on completion of project, in accordance with workplace procedures
	3.4	Project performance and completion is reviewed, in accordance with workplace procedures, against plan, and opportunities for improvement are documented

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for UEPOPS507 Conduct project management

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with stakeholders
- completing documentation including recording procedures
- coordinating project management plan including contributing to project plan
- identifying conflict of power generating plant and project work requirements
- implementing legislation, industry standards, codes of practice and regulations
- managing timelines and resources including human resource requirements including contractual procedures
- monitoring budget expenditure
- planning and preparing project using project management principles
- responding to project plan deviations
- using quality control procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- contractual obligations
- legislation, industry standards, codes of practice and regulations
- power generating plant and equipment, its location and operating parameters
- project management planning principles, techniques and concepts
- project management work coordination
- stakeholder management techniques including liaising with contractors

© Commonwealth of Australia, 2025 Powering Skills Organisation

- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures including:
  - quality control procedures
  - financial and contractual procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

UEPOPS508 Manage commissioning and decommissioning

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage the commissioning and decommissioning of power generation plant and equipment. It includes the reporting of progress and completion of work against key indicators however, it does not cover the removal or return of plant to service under normal routine maintenance situations.

Commissioning refers to the process where equipment and/or plant is installed or completed and is then tested to verify that it functions according to its' design specification. Decommissioning refers to the planned shutdown or removal of equipment and/or plant from usage.

Competency in this unit requires the ability to plan work, commissioning of plant or equipment, decommissioning of plant or equipment, removal or disassembly of plant or equipment, recommissioning of plant or equipment and completing work. Individuals will, in general, work as an operator with responsibility for managing commissioning and decommissioning, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for work	**1.1** Management of commissioning and decommissioning tasks are identified from and are confirmed with personnel by detailed site inspection and with a meeting of stakeholders
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, legislative requirements, industry standards, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are applied and managed throughout the commissioning and decommissioning of plant or equipment
	1.3 Resources to satisfy commissioning and decommissioning management plan are obtained and inspected for compliance
	1.4 Relevant plans, drawings and manuals are used, in accordance with the commissioning and decommissioning management plan
	1.5 Commissioning and decommissioning work is sequenced and prioritised, in accordance with commissioning and decommissioning management plan and site requirements
	1.6 Isolations and sequencing are managed, in accordance with commissioning and decommissioning management plan
	1.7 Potential hazards are identified, and risk control measures are implemented and managed, in accordance with commissioning and decommissioning management plan
	1.8 Work area is determined, in accordance with commissioning and decommissioning management plan,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		manufacturers' requirements and site procedures
	1.9	Roles and responsibilities are assigned and managed, in accordance with commissioning and decommissioning management plan requirements
2 Commission plant or equipment	**2.1**	Isolations are confirmed, in accordance with commissioning and decommissioning management plan and site requirements
	2.2	Equipment is connected to energy or material sources, in accordance with commissioning and commissioning and decommissioning management plan
	2.3	Equipment is commissioned, in accordance with the commissioning and decommissioning management plan and manufactures' specifications
3 Decommission plant or equipment	**3.1**	Isolations are confirmed, in accordance with commissioning and decommissioning management plan and site requirements
	3.2	Equipment is disconnected from energy or material sources, in accordance with commissioning and decommissioning management plan
4 Removal and disassembly of plant or equipment	**4.1**	Isolations are confirmed, in accordance with commissioning and decommissioning management plan and site requirements
	4.2	Removal of plant or equipment, or disassembly of major components is carried out, in accordance with commissioning and decommissioning management plan
	4.3	Unused electrical conductors are isolated and terminated, in accordance with commissioning and decommissioning management plan
	4.4	Other sources of energy or materials, are terminated and blanked, in accordance with commissioning and decommissioning management plan
5 Recommission plant or equipment	**5.1**	Generation plant or equipment is de-isolated, in accordance with commissioning and decommissioning management plan and site requirements
	5.2	Preoperational checks are carried out on plant or equipment, in accordance with commissioning and decommissioning management plan, manufacturers'

		recommendations and site requirements
	5.3	Sequence for recommissioning procedures are managed, in accordance with commissioning and decommissioning management plan
	5.4	Generation plant or equipment is tested for correct operation, in accordance with commissioning and decommissioning management plan, manufacturers' specifications and workplace procedures
	5.5	Generation plant or equipment performance is monitored and tested, in accordance with commissioning and decommissioning management plan
	5.6	Data is collected and referenced against manufacturers' specifications and any variances are recorded, in accordance with commissioning and decommissioning management plan
	5.7	Generation plant or equipment is adjusted to manufactures' specifications using appropriate techniques, in accordance with commissioning and decommissioning management plan
	5.8	Final inspections and performance data is collected, in accordance with commissioning and decommissioning management plan, to ensure compliance with manufacturers' specifications
6 Complete work	**6.1**	Work is completed and appropriate personnel are debriefed, in accordance with commissioning and decommissioning management plan and site requirements
	6.2	Work area is cleared of waste, in accordance with commissioning and decommissioning management plan and site requirements
	6.3	Specialist tools and equipment are maintained and stored, in accordance with commissioning and decommissioning management plan and manufacturers' recommendations.
	6.4	Completion details, including report and recommendations are finalised, in accordance with commissioning and decommissioning management plan and site requirements

Assessment Requirements for UEPOPS508 Manage commissioning and decommissioning

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing data
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - hazard identification
  - risk control measures
- communicating with personnel
- completing work including reports
- identifying generation plant or equipment
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- managing commissioning and decommissioning of generation plant or equipment
- performing decommissions, recommissions and isolations
- planning and preparing for work related to the management of commissioning and decommissioning tasks
- recommissioning generation plant or equipment
- removal and disassembly of generation plant or equipment
- safe working practices
- using testing and measuring equipment
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- commission, decommission and recommission management plans including resourcing and implementation procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- generation plant and equipment, its location and operating parameters including performance limits
- generation plant or equipment commissioning and decommissioning
- isolations
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- permit to work system
- report processes
- test and measurement equipment for analysis of data
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - hazard identification
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

UEPOPS509 Manage quality control procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage quality control procedures.

Quality control is a process through which a workplace seeks to ensure significant variations in quality are kept to a minimum. Quality control in a power generation facility will typically focus on procedures intended to ensure that personnel, plant and equipment operate smoothly and efficiently.

Competency in this unit requires the ability to plan for quality control, manage quality control, manage records and audit quality control procedures. Individuals will, in general, work as an operator with responsibility for quality control, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for quality control	**1.1** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislative requirements, industry standards, codes of practice, manufacturers' specifications, environmental obligations and workplace procedures are applied and managed throughout quality control process
	1.2 Manufacturers' specifications and manuals are interpreted to meet quality control procedures as part of the Quality Management System
	1.3 Plant and equipment testing and inspecting programme is managed to determine conformance with manufacturers' specifications and quality control process and procedures
	1.4 Data is collected to determine cause of variations in quality control processes and procedures
	1.5 Quality control process improvement tools are used to identify and resolve quality control problems, in accordance with Quality Management System (QMS) requirements
	1.6 Quality process improvement techniques are used to manage work groups in the identification and resolution of quality control variances
2 Monitor quality control	**2.1** Monitoring equipment is checked and managed for correct calibration, and environmental conditions are reviewed and confirmed to ensure reliability and accuracy of test results
	2.2 Quality control process improvement measures are implemented and managed, in accordance with Quality Management System requirements and workplace procedures
	2.3 Deviation and fault data is managed, in accordance with workplace procedures and Quality Management System requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Changes in quality performance are actioned, in accordance with quality control procedures
	2.5	Independent inspections, tests and audits are managed, in accordance with quality control procedures
	2.6	Quality improvement system is monitored and managed, in accordance with quality control procedures
3 Manage quality control records	**3.1**	Calibration records of test equipment is managed, in accordance with quality control procedures and Quality Management System requirements
	3.2	Recording of quality control procedure updates are managed, in accordance with Quality Management System requirements
4 **Audit quality control procedures**	**4.1**	Quality Management System (QMS) is audited, and results are evaluated, in accordance with quality control procedures
	4.2	Audit results are documented and report with recommendations is reviewed and confirmed with appropriate personnel, in accordance with quality control procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS509B Manage quality control procedures.

Assessment Requirements for UEPOPS509 Manage quality control procedures

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- auditing quality control procedures
- communicating with personnel
- completing quality control documentation
- identifying quality control procedure variances
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- managing quality control including procedures, processes and techniques
- organising quality control procedure audits, inspections and tests
- performing analysis of Quality Management System (QMS) and quality control procedures
- planning quality control

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- data analysis of quality variances
- legislation, industry standards, codes of practice and regulations
- liaising with contractors
- manufacturers' specifications and manuals
- monitoring equipment, procedures and records
- plant and equipment, its location and operating parameters

© Commonwealth of Australia, 2025 Powering Skills Organisation

- quality control procedures, processes and techniques
- Quality Management System (QMS)
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS510 Monitor power generation plant reliability

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to monitor power generating plant reliability through data assessment.

Data is collected and assessed to accurately evaluate the impact of power generating plant reliability in the operation of power generation facilities.

Competency in this unit requires the ability to collect data, perform calculations, evaluate and analyse information and produce reports and complete work. Individuals will, in general, work under supervision as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Collect data	**1.1** Information and data is collected, in accordance with legislative requirements, industry standards and workplace procedures
	1.2 Generating plant is identified and its' status is established, in accordance with workplace procedures
	1.3 Tools and equipment are identified and acquired, in accordance with workplace procedures
	1.4 Specialist assistance or equipment is obtained, as required, in accordance with workplace procedures
	1.5 Information collected is recorded and ranked, in accordance with legislative requirements, industry standards and workplace procedures
2 Perform calculations	**2.1** Performance calculations are undertaken, in accordance with legislative requirements, industry standards and workplace procedures
	2.2 Calculations are checked for accuracy, in accordance with workplace procedures
3 Analyse information	**3.1** Technical and operational information is analysed, in accordance with workplace procedures, to identify abnormal generating plant operating conditions
	3.2 Causes of abnormal generating plant conditions are identified, in accordance with workplace procedures
	3.3 Generating plant integrity is maintained, in accordance with workplace procedures, and in consultation with relevant personnel and operational documentation
	3.4 Need for specialist assistance is determined, in accordance with workplace procedures
4 Produce report and complete work	**4.1** Information and data is documented, in accordance with workplace procedures
	4.2 Reports are produced, in accordance with legislative requirements, industry standards and workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures

4.3 Actions to rectify generating plant loss of reliability are ranked, and recommendations are made to appropriate personnel, in accordance with workplace procedures

4.4 Implementation of recommendations is monitored, in accordance with workplace procedures, to ensure generating plant reliability

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS510B Monitor power generation plant reliability.

UEPOPS511 Tune process plant and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to complete the investigation, nomination and adjustment of tuning parameters associated with power generation process plant and equipment

Tuning is a method in which one or more parameters of power generation plant and equipment are adjusted up or down to achieve an improved or specified result. Tuning will include testing and reviewing power generation process plant and equipment to identify faults.

Competency in this unit requires the ability to plan and prepare to tune generation process plant and equipment, testing and implementing process plant tuning and completing documentation. Individuals will, in general, work under supervision as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare work	**1.1** Tuning requirements for process plant and equipment are identified from appropriate personnel and documentation, in accordance with workplace procedures
	1.2 Resource and equipment requirements are identified, in accordance with workplace procedures
	1.3 Process plant availability, capability and limitations are identified, in accordance with workplace procedures
	1.4 Testing and monitoring equipment are connected, in accordance with workplace procedures, testing requirements and process plant integrity
	1.5 Initial operating state for process plant is maintained for testing, in accordance with workplace procedures, legislative requirements and industry standards
	1.6 Test procedures are identified and recording documentation or equipment is prepared, in accordance with workplace procedures
	1.7 Testing equipment is calibrated, in accordance with workplace procedures, industry standards and manufacturers' specifications
2 Test plant and implement tuning	**2.1** Field instrumentation and control elements are checked for calibration and correct operation, in accordance with workplace procedures and manufacturers' specifications
	2.2 Testing and tuning is performed, in accordance with workplace procedures and tuning program requirements
	2.3 Variations are reassessed and accommodated to enable test objectives to be met
	2.4 Testing results are analysed with reference to desired outcomes, and new settings for process plant are determined, in accordance with workplace procedures
	2.5 Accuracy of test results is assessed through analysis of

© Commonwealth of Australia, 2025 Powering Skills Organisation

		test data, in accordance with workplace procedures
	2.6	Process plant is retuned to achieve desired outcomes, in accordance with workplace procedures
3 Complete documentation	**3.1**	Records are updated and documentation is retained, in accordance with workplace procedures
	3.2	Changes to equipment operational settings are recommended to appropriate personnel, in accordance with workplace procedures
	3.3	Implementation of recommendations are monitored, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS511B Tune process plant and equipment.

Assessment Requirements for UEPOPS511 Tune process plant and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing test results
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including:
  - emergency procedures
  - risk control measures
  - safety procedures
- communicating with personnel
- completing documentation using recording procedures
- coordinating testing operations using monitoring procedures
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers specifications and manuals
- locating process plant and equipment
- planning and preparing for tuning
- setting up and using testing or tuning equipment
- translating and using tuning parameters and settings
- using data analysis techniques and tools
- utilising testing and tuning techniques for process plant and equipment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- analysis methods and tools
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- power generation process plant and equipment, its location and operating parameters

© Commonwealth of Australia, 2025 Powering Skills Organisation

- tuning and testing techniques and processes
- tuning parameters and settings
- typical arrangements of power production plant
- WHS/OHS legislation including:
  - safety procedures
  - emergency procedures
  - risk control measures
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS512 Manage high voltage network system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage a High Voltage (H.V.) network system that may be interconnected, remote or isolated.

Operators seek to optimise and manage H.V. network systems that are deployed to supply, transfer and store electrical power through efficient and safe operations at power generation facilities. This includes identifying faults, taking corrective actions and using protection programs to ensure network system stability.

Competency in this unit requires the ability to plan network system operations, manage and control network system, analyse and respond to network system faults or incidents, review incident response and preventative procedures and the completion of all documentation. Individuals will, in general, work as an operator with responsibility for managing a H.V. network system, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS420 Coordinate the network system.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare network system operations	**1.1** Information and documentation to determine power generation network system status is assessed and evaluated, in accordance with High Voltage (H.V.) system operating requirements
	1.2 Power generation network system and associated equipment operational prerequisites are established, in accordance with H.V. system operating procedures
	1.3 Sequence for operation of power generation network system sections and equipment is created for a range of potential scenarios, in accordance with H.V. system operating procedures
	1.4 Power generation network system forecast is based on assessment of data and relevant information, in accordance with H.V. system operating procedures
2 Manage and control network system	**2.1** Power generation network system is operated and managed, in accordance with H.V. system operating procedures
	2.2 Power generation network system demand is managed using a contingency plan and strategies to maintain quality of supply, in accordance with legislative requirements and H.V. system operating procedures
	2.3 Power generation network system voltage and current requirements are assessed, evaluated and managed to maintain stability and H.V. system integrity
	2.4 Voltage load profiles are identified and adhered to, in accordance with power generation network system, to minimise transmission losses
	2.5 Power generation network system load shedding sequence and priorities are monitored and managed, to ensure H.V. system integrity
	2.6 Power generation network system data is monitored and managed, for normal operation or to detect deviations

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Corrective actions to rectify abnormalities in power generation network system are implemented, following assessment of data, in accordance with H.V. system operating procedures
	2.8	Resources to meet power generation network system requirements are managed, in accordance with H.V. system operating procedures
3 Analyse and respond to network system faults	**3.1**	Causes of power generation abnormal network system operating conditions are identified by analysing technical and operational information, in accordance with H.V. system operating procedures
	3.2	Operation and management of power generation network system protection program is evaluated to determine nature and cause of faults
	3.3	Communication with key stakeholders is established managed, to assist in identifying nature and source of H.V. system interference
	3.4	Corrective action is taken, in accordance with H.V. system operating procedures
	3.5	Power generation network system integrity and personnel safety are managed, in accordance with H.V. system operating procedures, and in consultation with appropriate personnel and technical and operational documentation including contingency plans
4 Review incident response and preventative procedures	**4.1**	Power generation facility network system incident responses are assessed and reviewed, in accordance with system operating procedures
	4.2	Alternative responses to contingencies are identified and assessed, in accordance with system operating procedures
	4.3	Alternative responses to contingencies are documented and managed, in accordance with system operating procedures
5 Complete documentation	**5.1**	Network system problems, movements and status is reported, in accordance with workplace and system operating procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Assessment Requirements for UEPOPS512 Manage high voltage network system

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing and responding to faults and abnormal H.V. network system operating conditions using diagnostic techniques
- analysing and responding to H.V. network system faults or incidents using data analysis techniques and tools
- ascertaining type of H.V. network system
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures and techniques
  - risk control measures
  - safe working practices and procedures
- communicating with key stakeholders
- completing documentation using recording procedures
- directing and coordinating personnel and stakeholders
- identifying power generating facility's plant status
- implementing legislation, industry standards, codes of practice and regulations
- managing and controlling H.V. network system operations
- planning High Voltage (H.V.) network system operations
- preparing for H.V. network system operations
- reviewing incident response and preventative procedures
- selecting appropriate load shedding
- using permit to work system
- working with contingency plans

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

UEPOPS513 Manage operational crisis to maintain or restore power system integrity

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage a crisis of a magnitude which affects the integrity and effectiveness of the power generation facility's system.

A crisis is defined as a significant threat to power generation operations that can have negative consequences if not handled with care. The risk management system ensures that the power generation facility identifies, assesses and prioritises risks and manages the application of resources to monitor and control the impact of potentially hazardous events.

Competency in this unit requires the ability to identify a crisis, establish a contingency plan, establish communications, manage crisis documents and review the crisis and response. Individuals will, in general, work as an operator with responsibility for risk management, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify crisis	**1.1** Operational crisis and implications are identified and assessed, in accordance with risk management system and workplace procedures
	1.2 Secondary threats from crisis events are identified and monitored, in accordance with Risk Management System and workplace procedures
	1.3 Network system configuration or power generation capability is evaluated, in accordance with risk management system and workplace procedures
	1.4 Data determining network system and power generation status is assessed and evaluated, in accordance with risk management system and workplace procedures
	1.5 External information is collated, assessed and managed, in accordance with risk management system and workplace procedures
	1.6 Probable cause of crisis is identified from available information and resources, in accordance with risk management system and workplace procedures
	1.7 Crisis team is activated and individual roles and responsibilities are identified and managed, in accordance with risk management system and workplace procedures
2 Implement contingency plan	**2.1** Contingency and emergency response plans are implemented, using risk management system documentation and workplace procedures
	2.2 Additional resources are identified, in accordance with risk management system and workplace procedures
	2.3 Alternate strategies to cater for crisis variations are implemented, in consultation with key stakeholders, in accordance with risk management system and workplace procedures
3 Implement	**3.1** Communication links with external authorities are established and implemented, in accordance with risk

© Commonwealth of Australia, 2025 Powering Skills Organisation

communication		management system and workplace procedures, to ensure coordination of resources
	3.2	Communication with key stakeholders is established and implemented to disseminate information, in accordance with risk management system and workplace procedures
	3.3	Customers are assisted, in accordance with risk management system policies and workplace procedures
4 Manage crisis	**4.1**	Crisis response is managed, in accordance with risk management system, workplace procedures and site requirements
	4.2	Crisis events and responses are prioritised according to related risk and the needs of key stakeholders, in accordance with risk management system and workplace procedures
	4.3	Impact of secondary threats are managed, in accordance with risk management system and workplace procedures
	4.4	Contingency and emergency response plans are actioned and managed, in accordance with risk management system policies and workplace procedures
	4.5	Additional resources are managed and directed, in accordance with risk management system and workplace procedures
	4.6	Restoration strategies are monitored, evaluated and adjusted as required, in accordance with risk management system and workplace procedures
	4.7	Power generation systems are stabilised and integrity is maintained, in accordance with risk management system and workplace procedures
5 Document and review crisis and response	**5.1**	Equipment failure or problems are identified and managed, in accordance with risk management system procedures
	5.2	Crisis feedback from key stakeholders is analysed, in accordance with risk management system and workplace procedures
	5.3	Crisis reports and findings are distributed to appropriate personnel, in accordance with risk management system and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

5.4 Improvements to crisis management plans, processes and procedures are recommended to appropriate personnel and key stakeholders, in accordance with risk management system and workplace procedures

5.5 Alternative crisis management strategies are identified and analysed, and recommendations are communicated to appropriate personnel and key stakeholders, in accordance with risk management system and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS513B Manage operational crisis to maintain/restore power system integrity.

Assessment Requirements for UEPOPS513 Manage operational crisis to maintain or restore power system integrity

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures and techniques
  - safe working practices
  - site safety procedures
- communicating with personnel during a crisis event
- controlling crisis emergency situations
- detecting plant status including interpreting remote indication of plant status and condition
- determining corrective actions using data analysis techniques and tools
- documenting and reviewing crisis events and responses
- identifying crisis events
- implementing legislation, industry standards, codes of practice and regulations
- instigating contingency and emergency response plans
- managing crisis including oversight of personnel
- recognising abnormal plant operating conditions using diagnostic techniques
- responding to stakeholder feedback
- utilising communication techniques and methods including recording procedures
- working with and managing the risk management system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication equipment, techniques and procedures
- contingency and emergency response plans
- control techniques and methods for crisis events

© Commonwealth of Australia, 2025 Powering Skills Organisation

- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- power generation plant and equipment, its location and operating parameters
- power generation plant status
- Risk Management Systems
- risk mitigation processes
- role of external authorities and agencies
- stakeholder liaison and feedback
- stakeholder management techniques including liaising with contractors and clients
- types of crises events
- typical arrangements of power production plant
- WHS/OHS legislated requirements including
  - emergency procedures and techniques
  - safe working practices
  - site safety procedures
- workplace documentation workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS514 Control hydro generation pumping

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the control of hydro generation pumping through remote control of hydro generating plant.

Hydro pumping is a system for generating hydroelectric power for peak periods. This is performed by pumping water from a lower to a higher reservoir during low demand periods and then releasing it during peak periods.

Competency in this unit requires the ability to maintain key indicator limits, operate remote hydro plant, maintain policies and procedures and complete work. Individuals will, in general, work as an operator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Maintain key indicator limits	**1.1** Pond levels, power station discharges, plant voltage and current limits, frequency and time errors are maintained, in accordance with workplace procedures and manufacturers' specifications
	1.2 Hydro generation plant is run at peak efficiency, or to the load schedule, avoiding rough running zones, in accordance with workplace procedures
2 Operate remote hydro plant	**2.1** Hydro generation power plant is remotely stopped, started, loaded and unloaded, in accordance with workplace procedures and the operating regimes dictated by the electricity generation schedule
	2.2 Power generating plant is remotely switched in and out of synchronous condenser operation, as required, in accordance with workplace procedures
3 Maintain policies and procedures	**3.1** Communication procedures used to alert public of increased river flows, in accordance with workplace procedures
	3.2 Minimum river flows are maintained, in accordance with workplace procedures and agreed limits
	3.3 Water storage levels are monitored and maintained, in accordance with workplace procedures, legislative requirements and policy guidelines
4 Complete documentation	**4.1** Equipment problems, movements, and status are reported, in accordance with workplace procedures
	4.2 Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS514B Control hydro generation and pumping.

Assessment Requirements for UEPOPS514 Control hydro generation pumping

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating dam and river levels to public
- completing documentation using recording procedures
- determining remote indication of hydro plant status and condition
- identifying hydro power generating plant status
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- maintaining policies and procedures
- operating remote hydro plant within design parameters
- preserving hydro generation pumping key indicator limits
- recognising abnormal hydro plant operating conditions and determining corrective actions

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication required by public and stakeholders about dam or river levels
- hydro power generating plant and equipment, its location and operating parameters
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- typical arrangements of hydro power production plant including:
  - dam types and characteristics

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - hydro generator types and characteristics
  - hydro power generating equipment status
  - hydro turbine types and characteristics including hydro turbine governors
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS515 Coordinate power generation

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the operation and control of multiple power generators sharing load under the control of one operator.

Operators are responsible for starting and stopping power generators. Depending on need this includes synchronising and adjusting voltage output, troubleshooting, fixing problems and responding to emergencies.

Competency in this unit requires the ability to plan for power generating plant operations, operate power generator and excitation system, control generation of electrical energy, coordinate generation control, monitor system and/or power generating plant and the completion of all documentation. Individuals will, in general, work as an operator with responsibility for coordinating power generation, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for plant operation	**1.1** Power generating safety issues are identified, in accordance with workplace procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislation
	1.2 Work, power generation plant and resource requirements are identified, in accordance with workplace procedures, from relevant information and documentation
	1.3 Preoperational checks of power generation plant operations are carried out, in accordance with workplace procedures and site requirements
2 Operate generator and excitation system	**2.1** Generator and excitation system is operated, in accordance with workplace procedures and manufacturers' operating recommendations
	2.2 Synchronising requirements are assessed and evaluated, in accordance with workplace procedures to ensure generator and excitation system stability
	2.3 Generator and excitation system is monitored and observed, in accordance with workplace procedures, to detect deviations from normal operating conditions
	2.4 Corrective actions are taken to rectify generator and excitation system abnormalities, in accordance with manufacturers' recommendations and workplace procedures
3 Control generation of electrical energy	**3.1** Power generator output is adjusted, in accordance with workplace procedures, to meet electricity demand whilst observing operating requirements
	3.2 Reactive power generation and voltage regulation requirements are assessed and the generator and excitation system is controlled to achieve desired output, in accordance with workplace procedures
	3.3 Generator stabilities and operating limits are assessed and the generator and excitation system is controlled to maintain those limits, in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures and manufacturers' recommendations
	3.4	Generator cooling systems and limits are monitored and assessed, and the excitation system is controlled to maintain those limits, in accordance with workplace procedures and manufacturers' recommendations
4 Coordinate generation control	**4.1**	Load sharing between multiple generators is controlled, in accordance with workplace procedures, to maintain optimum efficiency and power generating plant reliability
	4.2	Output of generators is adjusted to meet electricity demand whilst observing operating requirements, in accordance with workplace procedures
	4.3	Generator and excitation system and power generating plant key indicators are monitored and adjusted, in accordance with workplace procedures, to maintain limits and detect deviations from normal operating conditions
	4.4	Corrective actions are taken to rectify generator and excitation system abnormalities, in accordance with manufacturers' recommendations and workplace procedures
	4.5	Generator and excitation system integrity and continuity of supply are maintained, in accordance with workplace procedures
	4.6	Consultation with appropriate personnel is undertaken, in accordance with workplace procedures
	4.7	Generator and excitation system is operated at optimum efficiency, in accordance with workplace procedures
5 Monitor system and plant	**5.1**	Generator and excitation system or power generating plant to be monitored is physically identified, in accordance with workplace procedures
	5.2	Generator and excitation system or power generating plant is monitored, in accordance with workplace procedures, for normal operation or to detect deviations
	5.3	Corrective actions are taken, in accordance with workplace procedures
	5.4	Appropriate personnel are notified, in accordance with workplace procedures, when defects and abnormal

© Commonwealth of Australia, 2025 Powering Skills Organisation

		operating conditions are detected
6 Analyse system and plant faults	**6.1**	Causes of abnormal generator and excitation system operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	6.2	Corrective actions to rectify faults are determined, in accordance with workplace procedures
	6.3	Generator and excitation system or power generating plant integrity is maintained, in accordance with workplace procedures, through consultation with appropriate personnel and reference to technical and operational documentation
	6.4	Appropriate personnel, including specialists, are arranged for investigation of identified operational abnormalities, in accordance with workplace procedures
7 Complete documentation	**7.1**	Power generation plant problems, movements and status are reported, in accordance with workplace procedures
	7.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UEPOPS515 Coordinate power generation

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing generator and excitation system and power generation plant faults using data analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- controlling and coordinating power generation of electrical energy
- coordinating power generation control
- coordinating operation of equipment to maintain power generation plant integrity and continuity of supply including:
  - clarifying power generation plant status
  - determining appropriate corrective actions
  - maintaining power generator unit integrity
  - recognising abnormal plant operating conditions
- interpreting manufacturers' specifications and manuals
- interpreting remote indication of power generation plant status and condition
- monitoring generator and excitation system and power generation plant
- operating generator and excitation system
- planning for one operator isolated power generation plant operations

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- analysis of system faults typical arrangements of power production plant
- coordination of power generation including one operator isolated power generation plant operations
- generator excitation and cooling systems, types and characteristics types
- identification of power generation plant status
- legislation, industry standards, codes of practice and regulations
- manufacturers' specifications and manuals
- operation of generator and excitation system
- power generation plant and equipment, its location and operating parameters
- power generation plant process control systems, system components and interactions
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

UEPOPS520 Evaluate cost estimations and initiate appropriate solutions

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to evaluate estimated costs for planned and forced power generation plant outages (either a single item or whole unit) and to initiate appropriate solutions.

An outage is when power generation plant and/or equipment is not available to perform its intended function. Forced outage is the shutdown of power generation plant, equipment or a power generation facility when a generating unit is unavailable to produce power due to an unexpected breakdown.

Competency in this unit requires the ability to evaluate work details, identify costs, develop solutions and complete documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator with responsibility for maintenance budgets.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Evaluate work details	**1.1** Power generation plant outage work plan and methods are evaluated, in accordance with workplace procedures
	1.2 Time frames for power generation plant outage work is identified, in accordance with workplace procedures
	1.3 Details of materials, equipment, specialist services and contractual provisions are identified, in accordance with workplace procedures
	1.4 Specific disposal requirements are evaluated, in accordance with workplace procedures
2 Identify costs	**2.1** Costs associated with the planned and forced outages are evaluated, in accordance with workplace procedures
	2.2 Previous planned and forced outages are analysed, in accordance with workplace procedures, to determine problems
3 Develop solutions	**3.1** Potential solutions to limit time frame and budget over runs are identified, in accordance with workplace procedures
	3.2 Potential variations in planned and forced outages scope of work are identified, in accordance with workplace procedures, and solutions are developed
4 Complete documentation	**4.1** Evaluation report is produced, in accordance with workplace procedures
	4.2 Possible increases in budget are documented, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

UEPOPS523 Manage critical incidents

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the management of incidents of a critical nature that may impact the operational effectiveness of a power generation facility's plant or system. It may include endangering human life, damaging or destroying property or adversely impacting the environment.

A critical incident refers to an event that may result in a high level of risk, directly or indirectly, to the core operations of a power generation facility. The level of risk is determined using the risk management processes outlined in the power generation facility's Risk Management System.

Competency in this unit requires the ability to identify a crisis, implement contingency and critical incident plans, establish communications, manage critical incident documents and review critical incident response. Individuals will, in general, work as an operator with responsibility for risk management, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify critical incident and consequences	**1.1** Critical incident and probable implications are identified and analysed, in accordance with risk management system and workplace procedures
	1.2 Secondary threats from the critical incident are identified and monitored, in accordance with risk management system and workplace procedures
	1.3 Data related to critical incident is evaluated and managed to determine cause consequences and potential responses, in accordance with risk management system and workplace procedures
	1.4 Critical Incident Management team is activated and individual roles and responsibilities are identified and managed, in accordance with risk management system and workplace procedures
2 Implement contingency and critical incident plan	**2.1** Contingency and critical incident plans are implemented using risk management system documentation and workplace procedures
	2.2 Additional resources are identified, in accordance with risk management system and workplace procedures
	2.3 Alternate strategies to cater for crisis variations are managed in consultation with key stakeholders, in accordance with risk management system and workplace procedures
3 Establish communications	**3.1** Communication links with external authorities are established, in accordance with risk management system and workplace procedures, for coordination of resources
	3.2 Communication with key stakeholders is established to disseminate information, in accordance with risk management system and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

4 Supervise critical incident	**4.1** Critical incident response is managed, in accordance with risk management system, workplace procedures and site requirements
	4.2 Critical incident events and responses are prioritised, related to risk and the needs of stakeholders, in accordance risk management system and workplace procedures
	4.3 Personnel and key stakeholder actions are monitored and managed, in accordance with risk management system and workplace procedures
	4.4 Impact of secondary threats are managed, in accordance risk management system and workplace procedures
	4.5 Contingency and critical incident plans are actioned and managed, in accordance with risk management system policies and workplace procedures
	4.6 Additional resources are directed and managed, in accordance with risk management system and workplace procedures
	4.7 Restoration strategies are monitored, evaluated and adjusted, as required, in accordance risk management system and workplace procedures
5 Document and review critical incident response	**5.1** Equipment failure or problems are managed, in accordance with risk management system and workplace procedures
	5.2 Critical incident feedback from key stakeholders is analysed and managed, in accordance with risk management system and workplace procedures
	5.3 Critical incident report with alternative preventative measures are distributed to appropriate personnel, in accordance with risk management system and workplace procedures
	5.4 Improvements to critical incident management processes and procedures are managed, in accordance with risk management system and workplace procedures
	5.5 Alternative strategies are identified and analysed, and recommendations are communicated to appropriate personnel, in accordance with risk management system and workplace procedures

UEPOPS524 Evaluate scheduling of generation plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to undertake the evaluation of a power generation plant schedule to meet forecast demand.

Scheduling is the process of arranging and optimising the use of generating plant and personnel in a power generation facility. Scheduling can have a major impact on the productivity and costs of a power generation facility.

Competency in this unit requires the ability to analyse load profile, evaluate power generation unit availability and capability, evaluate power generation unit schedule and complete documentation. Individuals will, in general, work as an operator with responsibility for scheduling in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Analyse load profile	**1.1** Information on variables which have the potential to affect power generation demand and load are analysed, in accordance with workplace procedures
	1.2 Power generation forecasts are produced, in accordance with workplace procedures
	1.3 Power generation forecasts are evaluated against real time trends, and adjustments are made, in accordance with workplace procedures
2 Evaluate unit availability and capability	**2.1** Power generation unit status is analysed, in accordance with workplace procedures, to maintain the integrity of scheduling plans
	2.2 Information on power generation unit status is processed and recorded, in accordance with workplace procedures, to enable the identification of problems
	2.3 Relationships are maintained with remote or independent power generators, in accordance with workplace procedures
3 Evaluate generation unit schedules	**3.1** Base load generation schedules are analysed, in accordance with workplace procedures, and in line with contractual obligations
	3.2 Peak load generation schedules are analysed to meet power generation system demand, in accordance with workplace procedures, to maintain adequate spinning reserve capability
	3.3 Schedule is evaluated to confirm power generation units are operating, in accordance with workplace procedures and fuel strategies framework
	3.4 Megawatts and megavar spinning reserve criteria are continuously evaluated, in accordance with workplace procedures
	3.5 Power generation system security criteria are analysed continuously, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	3.6	Quality of supply is analysed continuously, in accordance with workplace procedures and legislative requirements
	3.7	Power generation plant maintenance commitments are analysed, in accordance with workplace procedures, when setting priorities for committing power generation units
	3.8	Schedule is produced with sufficient lead time to allow power generation plant movements to occur, in accordance with workplace procedures
	3.9	Power generation plant problems are assessed for impact on unit commitment and scheduling requirements, in accordance with workplace procedures
	3.10	Power generation plant testing is incorporated into priorities for committing power generation units, in accordance with workplace procedures
4 Complete documentation	**4.1**	Scheduling information is recorded, in accordance with workplace procedures
	4.2	Key stakeholders are informed of scheduling evaluation outcomes, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS524A Evaluate the scheduling of generation.

Assessment Requirements for UEPOPS524 Evaluate scheduling of generation plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing and forecasting load profile
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures and techniques
  - risk control measures
  - safe working practices and procedures
- assessing power generation unit availability and capability
- communicating with stakeholders
- completing documentation using recording procedures
- evaluating power generation unit schedules
- evaluating scheduling of power generating units for optimum efficiency using data analysis techniques and tools
- identifying power generation unit status
- implementing legislation, industry standards, codes of practice and regulations
- preparing and implementing power generation schedules
- scheduling power generation plant to meet demand
- using manufacturers' specifications and manuals
- utilising fuel strategies

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- evaluation techniques and tools
- framework for fuel strategies
- identification of power generation unit status
- legislation, industry standards, codes of practice and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- load profile forecasts
- manufacturers' specifications and manuals
- operation and load characteristics of power generation plant
- power generation plant and equipment, its location and operating parameters
- power generation schedule implementation
- power generation schedules including peak load generation schedules
- stakeholder liaison
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures and techniques
  - risk control measures
  - safe working practices and procedures
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS525 Coordinate and direct switching program

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate and direct resources for a switching program.

An electrical switch can alternate a load between two sources either manually or automatically when sensors detect one of the sources has lost or gained power. A switch is typically installed where the backup generator is located so that the generator can be used to provide temporary electrical power, as required.

Competency in this unit requires the ability to prepare for a switching program, coordinate and direct a switching program, maintain dynamic integrity of power generation system and complete all documentation. Individuals will, in general, work as a switching program coordinator, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

UEPOPS456 Perform switching to a switching program

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for switching program	**1.1** Qualifications and authorisations of personnel performing switching operations are established, in accordance with workplace procedures
	1.2 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations, industry standards, legislative requirements codes of practice and environmental obligations are identified, applied and monitored
	1.3 Contingency plan is evaluated and discussed with key stakeholders, in accordance with workplace procedures, and any amendments made are relayed to all appropriate personnel
	1.4 Permit and access requirements are established prior to switching program commencement, in accordance with workplace procedures
	1.5 Documentation is distributed, in accordance with workplace procedures, to relevant personnel prior to switching program commencement
2 Direct switching program	**2.1** Personnel are advised of switching programme and directed to locations, in accordance with workplace procedures
	2.2 Communication is established with key stakeholders and personnel, in accordance with workplace procedures, and is maintained throughout duration of switching program
	2.3 Network system schematic diagram, or equivalent, is updated, in accordance with workplace procedures, as switching program proceeds
	2.4 Access to power generation plant is controlled, in accordance with workplace policies and procedures
	2.5 Work groups are coordinated and directed throughout switching programme, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Permits issued are monitored and recorded, in accordance with workplace procedures
	2.7	Switching program is controlled, in accordance with workplace procedures, to ensure outage coincides with planned timetable
3 Maintain dynamic integrity of system	**3.1**	Switching program steps are verified before and after each operation, in accordance with workplace procedures
	3.2	Switching program steps are recorded, in accordance with workplace procedures, upon successful completion of each operation
	3.3	Network system conditions or stability is constantly monitored, in accordance with workplace procedures
	3.4	Alternative switching program steps are quickly and accurately developed, in accordance with workplace procedures, if unexpected problems occur
4 Complete documentation	**4.1**	Equipment problems and status are reported, in accordance with workplace procedures
	4.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS525A Coordinate and direct switching program.

Assessment Requirements for UEPOPS525 Coordinate and direct switching program

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation
- coordinating and directing switching programs
- identifying power generation plant status including:
  - monitoring network system integrity and stability
  - analysing system operational information
  - recognising abnormal power generating plant and/or network system operating conditions
  - determining corrective actions
- implementing legislation, industry standards, codes of practice and regulations
- interpreting power generation plant drawings and network system diagrams
- liaising with stakeholders
- maintaining dynamic integrity of power generation system
- preparing for switching program
- using manufacturers' specifications and manuals
- utilising contingency plans
- working with permit to work system

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

UEPOPS526 Coordinate electrical energy production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to coordinate the safe and effective management of energy production to meet demand on an electricity generating unit.

Power utilities match demand and supply through adjusting the production rate of their power generating facilities. This is achieved by taking generating units online and offline or through importing power from other utilities.

Competency in this unit requires the ability to coordinate unit operations, monitor network system and power generating plant, analyse network system and power generating plant faults and complete all documentation. Individuals will, in general, work as an operator with responsibility for coordinating electrical energy production, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Coordinate unit operations	**1.1** Electricity generating unit is operated, in accordance with workplace procedures, industry standards and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations to meet demand requirements whilst observing power generating plant limitations
	1.2 Electricity generating unit is monitored and observed, in accordance with workplace procedures, to detect deviations from normal operating conditions
	1.3 Causes of abnormal operating conditions in electricity generating unit is identified, in accordance with workplace procedures, by analysing technical and operational information
	1.4 Corrective actions are taken to rectify electricity generating unit abnormalities, in accordance with workplace procedures and site requirements
	1.5 Electricity generating unit's integrity personnel safety and continuity of supply are maintained, in accordance with workplace procedures
	1.6. Consultation with appropriate personnel is undertaken, as required, in accordance with workplace procedures
	1.7 Electricity generating unit is operated at optimum efficiency, in accordance with workplace procedures
2 Monitoring unit and plant	**2.1** Electricity generating unit and power generating plant to be monitored is physically identified, in accordance with workplace procedures
	2.2 Electricity generating unit and power generating plant is monitored, in accordance with workplace procedures, for normal operation or to detect deviations
	2.3 Corrective action is taken, in accordance with workplace procedures
	2.4 Appropriate personnel are notified, in accordance with workplace procedures, when defects and abnormal

© Commonwealth of Australia, 2025 Powering Skills Organisation

		operating conditions in electricity generating unit and power generating plant are detected
3 Test unit and plant operation	**3.1**	Operational tests are performed, in accordance with workplace procedures
	3.2	Electricity generating unit and power generating plant is observed, in accordance with workplace procedures, for correct operational response
	3.3	Corrective action is taken, in accordance with workplace procedures, when response does not meet with documentation, electricity generating unit and power generating plant integrity or personnel safety requirements
	3.4	Electricity generating unit and power generating plant is returned to operational status, in accordance with workplace procedures, upon completion of testing
4 Analyse unit and plant faults	**4.1**	Causes of abnormal electricity generating unit operating conditions are identified, in accordance with workplace procedures, by analysing technical and operational information
	4.2	Corrective actions to rectify faults are determined, in accordance with workplace procedures
	4.3	Electricity generating unit and power generating plant integrity and personnel safety are maintained, in accordance with workplace procedures, through consultation with personnel and technical and operational documentation
	4.4	Appropriate personnel, including specialists, are arranged for investigation of identified operational abnormalities, in accordance with workplace procedures
5 Complete documentation	**5.1**	Electricity generating unit and power generation plant problems, movements and status are reported, in accordance with workplace procedures
	5.2	Documentation is updated, in accordance with workplace procedures

Foundation Skills

Assessment Requirements for UEPOPS526 Coordinate electrical energy production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- analysing electricity generating unit and generating power plant faults using data
- analysis techniques and tools
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with personnel
- completing documentation
- coordinating electricity generating unit operations
- coordinating power generation including:
  - controlling electricity generating unit systems energy generation
  - maintaining generator unit integrity
  - monitoring power generating plant and equipment operations
  - preparing power generation plant and equipment for operation
  - recognising power generation plant status
- identifying and responding to abnormal electricity generating unit system and power generating plant operating conditions
- implementing legislation, industry standards, codes of practice and regulations
- interpreting manufacturers' specifications and manuals
- monitoring electricity generating unit and power generating plant
- testing electricity generating unit and power generating plant operations using diagnostic and testing techniques

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes

UEPOPS527 Manage first response team

Modification History

Release 2. This is the second release of this unit in the Electricity Supply Industry - Generation Sector Training Package. The following modification has been made:

- UEPOPS210 Conduct first response within a workplace team deleted due to zero enrolment.

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage the operation of a first response team. It covers the development, implementation and review of the procedures for the operation of a first response team.

A first response team includes trained personnel who prepare for and respond to an emergency incident that poses an immediate risk in a power generation facility such as that caused through natural disaster, fire, hazardous spills or other dangerous events. First response teams must comply with federal, state and local government laws and regulations for the management of emergency incidents.

Competency in this unit requires the ability to plan for operation of first response team, manage operation of first response team and report outcomes of the emergency response. Individuals will, in general, work as an operator with responsibility for risk management, in a power generation facility.

Power generation plant operators are typically trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for operation of first response team	**1.1** Purpose of first response team is identified and clarified, in accordance with emergency response plan and risk management system
	1.2 Roles and responsibilities of external emergency services personnel are clarified and managed, in accordance with emergency response plan and risk management system
	1.3 First response team members are identified and assigned duties and responsibilities, in accordance with emergency response plan and risk management system
	1.4 Directions or advice is provided to emergency service personnel and first response team members after site inspection, in accordance with emergency response plan and Risk Management System
2 Manage operation of first response team	**2.1** Emergency incidents are investigated, assessed and evaluated to minimise hazards and control risks, in accordance with emergency response plan and risk management system
	2.2 Emergency incident investigation results and recommendations are documented and managed, in accordance with emergency response plan and risk management system procedures
	2.3 Guidance is provided to emergency services, in accordance with response plan and risk management system procedures
	2.4 First response team materials, equipment and resources required for to the emergency incidents are obtained and managed, in accordance with emergency response plan and risk management system procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Debriefing is conducted and findings are responded to and managed, in accordance with emergency response plan and risk management system procedures
3 Report outcomes of emergency response	**3.1**	Improvements to first response team emergency procedures are identified and managed with appropriate personnel, in accordance with emergency response plan and risk management system procedures
	3.2	Results of debriefing are reported, in accordance with emergency response plan and risk management system procedures
	3.3	Improvements to incident response procedures are implemented and managed, in accordance with emergency response plan and risk management system procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for UEPOPS527 Manage first response team

Modification History

Release 2. This is the second release of this unit in the Electricity Supply Industry - Generation Sector Training Package. The following modification has been made:

- UEPOPS210 Conduct first response within a workplace team deleted due to zero enrolment.

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- communicating with the personnel and other organisations and/or agencies following an emergency
- employing Risk Management System
- identifying hazards
- identifying potential hazards
- implementing legislation, industry standards, codes of practice and regulations
- managing first response team's emergency plant and/or equipment for operation
- managing team's response to an emergency using emergency procedures and techniques
- planning and managing operation of first response team
- reporting outcomes of emergency response
- utilising emergency response plans

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- communication techniques including stakeholder management
- emergency response plans

© Commonwealth of Australia, 2025 Powering Skills Organisation

- equipment appropriate to emergency tasks including operation and maintenance of
- legislation, industry standards, codes of practice and regulations
- management procedures of first response team in an emergency
- potential hazards
- power generation plant and equipment, its location and operating parameters
- power generation plant status
- Risk Management Systems
- roles and responsibilities of emergency services
- roles of first response team members
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

UEPOPS528 Manage environmental management systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage the environmental management strategy of the power generation facility. It involves the implementation of policies and procedures related to environmental legislation and regulations that impact the power generation industry.

Environmental legislation is a collection of laws and regulations aimed at protecting the environment from harmful actions. Federal, state and local governments jointly administer environmental protection laws in Australia.

Competency in this unit requires the ability to plan, implement, manage and monitor environmental management strategies. Individuals will, in general, work as an operator with responsibility for environmental management systems, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

No prerequisites are required for this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan environmental management strategies	**1.1** Environmental management system plan and strategies are identified and clarified with all stakeholders including external organisations
	1.2 Environmental management system activities and operation is identified and investigated to ensure that hazard minimisation strategies are developed and implemented
	1.3 Environmental management system strategies for identified problems are developed and prioritised for implementation
	1.4 Timelines, schedules and targets are established to ensure environmental management system objectives are managed
	1.5 Financial resources, personnel, physical facilities and equipment are procured and managed to achieve environmental management system performance outcomes
2 Manage environmental management strategies	**2.1** Environmental management system strategies are documented, assessed and evaluated to control risks
	2.2 Results and recommendations relating to environmental management system are documented and confirmed with stakeholders, in accordance with environmental management system plan
	2.3 Environmental management system and strategies are promoted to all stakeholders
3 Monitor environmental management strategies	**3.1** Data is collected and managed to provide accurate measures of performance, in accordance with Environmental management system plan
	3.2 Statistical comparisons between environmental management system objectives and performance are managed and reported, in accordance with environmental management system plan

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.3 Feedback from stakeholders is evaluated and managed to determine changes to environmental management system plan and strategies

3.4 Changes to implemented strategies are recommended and managed, in accordance with environmental management system plan

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS528A Manage environmental management systems.

Assessment Requirements for UEPOPS528 Manage environmental management systems

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- carrying out environmental planning and strategy development
- communicating with stakeholders
- identifying sources of pollution and minimisation procedures
- implementing legislation, industry standards, codes of practice and regulations
- managing resources
- managing risk management control measures
- monitoring and reviewing environmental strategies
- monitoring environmental management strategies and procedures
- producing and managing environmental management strategies
- recognising and managing potential environmental hazards and issues including
- recommending environmental management system strategy change
- researching and producing environmental reports using data analysis techniques and tools

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- environmental management system planning and strategy development
- environmental planning and/or management techniques and tools
- identifying and responding to environmental issues and change
- legislation, industry standards, codes of practice and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- potential impacts of environmental hazards including pollution
- power generation plant and equipment, its location and operating parameters
- resource usage
- risk management planning, techniques and tools
- stakeholder liaison
- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency strategies
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEPOPS529 Manage operational strategies for power production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit involves the skills and knowledge required to manage operational strategies in achieving the short and long term goals of a power generation facility's production plant.

An operational plan of action describes how a power generation facility will employ their resources in producing power. Operational strategies are the methods used to reach objectives and performance targets related to resources, personnel and the work processes outlined in the operational plan.

Competency in this unit requires the ability to identify long and short term strategies, implement and manage strategies and report outcomes of strategies. Individuals will, in general, work as an operator with responsibility for operational strategies, in a power generation facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: Workplace practice

The application of the skills and knowledge described in this unit may require a licence or training permit to practice in the workplace where work is carried out on gas and electrical installations. Additional conditions may apply under state and territory legislative and regulatory licensing requirements.

Pre-requisite Unit

There are no prerequisite units.

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify long and short term strategies	**1.1** Purpose of long and short term strategies are identified and clarified with all stakeholders including external organisations
	1.2 Budgets, operational, maintenance and personnel requirements are identified, in accordance with operational plan and strategies
	1.3 Data and operational information is analysed and evaluated, in accordance with operational plan and strategies
	1.4 Operating strategies are monitored and managed, for compliance with statutory regulations, industry standards and site requirements, in accordance with operational plan and strategies
	1.5 Team and individual roles and responsibilities are identified and managed, in accordance with operational plan and strategies
2 Implement and manage strategies	**2.1** Power generating plant operational procedures are reviewed and managed in consultation with stakeholders, in accordance with operational plan and strategies
	2.2 Power generating plant operations or condition is managed and reported, in accordance with statutory regulations and operational plan and strategies
	2.3 Power generating plant abnormal operating conditions are investigated and reported, in accordance with operational plan and strategies
	2.4 Critical resources and supplies for operational strategies are managed, in accordance with operational plan
	2.5 Human resource requirements are managed, in accordance with operational plan and strategies
	2.6 Debriefings are conducted, in accordance with operational plan procedures
3 Report outcomes of strategies	**3.1** Improvements to operational strategies are identified and managed, in consultation with all stakeholders

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Results of debriefings are reported, in accordance with operational plan procedures

3.3 Improvements to operational strategies are implemented and managed, in accordance with statutory regulations and operational plan

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS529A Manage operational strategies for power production.

Links

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=1715b9fa-e7bd-441c-bb8d-cf22c9c825a8

Assessment Requirements for UEPOPS529 Manage operational strategies for power production

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and includes:

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including:
  - emergency procedures and techniques
  - risk control measures
  - safe working practices
- communicating with personnel and stakeholders
- determining and managing operational strategies
- identifying long and short term operational strategies
- identifying plant status using data analysis techniques and tools
- implementing legislation, industry standards, codes of practice and regulations
- instigating and monitoring operational strategies
- managing generation plant and operating parameters
- managing human resources in power production
- reporting outcomes of power generation production
- utilising stakeholder management techniques

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

- identification of power generation plant status
- legislation, industry standards, codes of practice and regulations
- measurement and analysis systems and procedures including data collection and analysing techniques
- operational strategy practices
- power generation plant and equipment, its location and operating parameters
- stakeholder liaison and management techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

- typical arrangements of power production plant
- WHS/OHS legislated requirements including:
  - emergency procedures
  - risk control measures
  - safe working practices
- workplace documentation
- workplace policies and procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals

UETTDRCJ21A Lay ESI electrical cables

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the laying of cables for electrical purposes and includes the laying of ducts and/or conduit for such cables. It could include direct laying of cables in trenches, on racks, in troughs and /or in conduit or ducts. It also encompasses cable pulling methods, pulling tensions, minimum bending radii, reduction of frictional forces, use of supporting plant (e.g. dynamometers, rigging, winches), working on FRC, PVC, A/C ducted systems and the sealing of cables.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL16A	Working safely near live electrical apparatus

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to lay electrical cables	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received and confirmed, if necessary, by site inspection
	1.2 Relevant requirements and established procedures for the work are discussed with other personnel and identified for all work sites
	1.3 OHS policies and procedures related to requirements and established procedures for the laying of electrical cables are obtained and confirmed for the purposes of the work to be performed and communicated
	1.4 Work is prioritised and sequenced following consultation with others for completion within

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at work site are confirmed current in First Aid and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Traffic management plan is identified and implemented.
2 Carry out the laying of electrical cables	2.1	OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Essential knowledge and associated skills are applied in the safe laying of electrical cables to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4	Electrical cables are laid in accordance with the work schedule and requirements/established procedures.
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.6	Unplanned events in the laying of electrical cables are undertaken within the scope of established procedures.
	2.7	Known solutions to a variety of problems are applied using routine procedures.
	2.8	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the laying of electrical cables	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures.
	3.5	Relevant work permit(s), works completion records, reports, drawings and/or documentation

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and information are actually completed and appropriate personnel notified.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential knowledge and associated skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of laying ESI electrical cables.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TCJ21A Underground cable installation and safety

Evidence shall show an understanding of the installation of underground cable to an extent indicated by the following aspects:

T1 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings

T2 Safety precautions specific to the installation of underground cable encompassing:

- Excavation and trench safety regulations
- Gas detection procedures
- Working in confined spaces
- Personal protective equipment
- Hazards for the use of LPG equipment for jointing of underground cable
- Gas bottle testing procedures
- Permit to work systems and isolation procedures
- Trench excavation and reinstatement procedures
- Rescue victims from confined spaces

Note: Examples include planning, identifying the procedures and establishing responses, developing techniques, involvement of external emergency services and practical demonstration/rehearsals of rescuing a person from confined spaces and emergency procedures for the rescue of an electric shock victim including CPR.

T3 Installation of underground cable procedures encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Types of tools and equipment

T4 Methods of cable handling encompassing:

- Direct laid cables
- Duct laid cables
- Solid laid cables
- Cables supported in cleats or hangers
- Corrosion protection
- Minimum bending radius of cables

T5 Methods of cable sealing encompassing:

- Shorting of cables cores
- Core of unterminated cables
- Methods of protection from corrosion
- Polymeric sheathed cables sealing with mastic lined
- Heat shrink caps buried sealed ends

T6 Methods of installing conduits

T7 Procedures for the safe use of LPG equipment for cable jointing

T8 Traffic management

Note: Examples include purpose of traffic management and a power worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements, demonstration of the procedure used to provide an effective traffic management scheme and the use of a two-way radio

T9 Procedures for purchasing/ordering items, removing/dispatching items, stocktaking, and record keeping

KS02-TCJ21A Underground cable construction

Evidence shall show an understanding of the construction and types of underground cables to an extent indicated by the following aspects:

T1 Safety precautions specific to handling underground cables

T2 Requirements for the use of enterprise manuals, system diagrams/plans and drawings

T3 Types and applications of underground cables

T4 Construction types and structures of underground cables

T5 Characteristics of different types of underground cables

T6 Ratings

© Commonwealth of Australia, 2025 Powering Skills Organisation

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
  - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to**	**Item List**

	be demonstrated	
A	At least one of the following:	HV polymeric HV paper insulated
B	At least one of the following:	LV polymeric LV paper insulated
C	At least one of the following:	Direct lay On racks In conduits
D	At least one cable pulling methods of the following:	Stocking pulling Bond pulling Armour pulling Nose pull attachments
E	At least two cable sealing methods of the following:	Heat shrinkable Pre-stretched materials Tin/lead wiping Pre-moulded components
F	At least one cable cutting methods of the following:	Hydraulic cutters Electric reciprocating Motorised Hand tools
G	At least four of the following:	Drum jacks Winches Spindles Capstans Bollards Cable trailers Rollers Lubricants Ropes Bell mouths

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Draw wires/rods
H	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and

© Commonwealth of Australia, 2025 Powering Skills Organisation

demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UETTDRCJ22A	Install and maintain de-energised low voltage underground paper insulated cables.
UETTDRCJ26A	Install and maintain de-energised low voltage underground polymeric cables.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the laying of cables for electrical purposes and includes the laying of ducts and/or conduit for electrical cables.

The unit includes the laying of cables direct in trenches, on racks, in troughs and /or in conduit or ducts.

It also encompasses cable pulling methods, pulling tensions, minimum bending radii, reduction of frictional forces, use of supporting plant (e.g. dynamometers, rigging, winches, etc), working on FRC, PVC, A/C ducted systems and the cutting and sealing of cables.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

- Authorisation
- Confined space
- Documenting detail work events, record keeping and or storage of information.
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect
- Legislation
- MSDS
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Personnel

REQUIRED SKILLS AND KNOWLEDGE

KS01-TCJ26A LV Polymeric cable jointing

Evidence shall show an understanding of the types of cables, tools and equipment used in the jointing and termination of LV polymeric cable to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements pertaining to the jointing of LV polymeric cables

T2 Types of jointing tools

T3 Techniques in the use of LPG encompassing:

- Safety precautions
- Personal protective equipment
- General maintenance and repair

T4 Techniques in jointing LV XLPE cables encompassing:

- Straight through joint
- Jointing different types of cable
- Service and street light cable joints

T5 Techniques in terminating LV XLPE encompassing:

- Pole top terminations
- Substation terminations
- Distribution pillar/column/cubicle terminations
- Service and street light cable terminations

T6 Techniques in repairing LV XLPE cable encompassing:

- Different types of damage
- Repairs to sheath
- Repairs to cores

T7 Methods of testing cable after jointing

prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
  - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All of the following:	LV polymeric cable
B	Any two of the following:	Tee-off joints Straight through joints Parallel branch joints Parallel joints

© Commonwealth of Australia, 2025 Powering Skills Organisation

C	At least one of the following:	Transformers, LV switchboards Pillars/turrets Lighting columns Ring main units Chamber substations
D	At least two of the following:	Busbar/termination boxes Links/Fuses Disconnect boxes Termination boxes Control gear UG/OH terminations Circuit breakers
E	At least one of the following:	Resin filled boxes, Compound filled boxes Polymeric tape Heat shrink Slip-on' moulds Pre-stretched polymeric
F	At least one of the following:	Compression lugs Welded connections Mechanical connectors Insulation piercing connectors
G	All of the following:	Insulation resistance testers Voltage detectors
H	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate

		solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation and maintenance on de-energised low voltage underground polymeric cables.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with **9.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

other units

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UETTDRCJ22A	Install and maintain de-energised low voltage underground paper insulated cables.
UETTDRCJ27A	Install and maintain de-energised high voltage underground polymeric cables.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation and maintenance of de-energised low voltage underground polymeric cables and covers the jointing, terminating, repair and replacement of cables used in systems and circuits and the issuing/accepting of relevant permits.

Test and recording equipment may include voltage detectors, tong ammeters, cable identification equipment, and insulation resistance testers.

Jointing and terminating materials may include compound and resin filled boxes, polymeric tape materials, polymeric heat shrink materials, "slip-on" moulded components and pre-stretched polymeric materials, compression, welded and mechanical connectors.

Jointing and terminating equipment and locations may include links, fuses, disconnect boxes, ring main units, distribution fuse boxes, pad mount and ground transformers, chamber substations, LV switchboards, pillars/turrets, busbar/termination boxes, street lighting control points and street lighting columns.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation and maintenance of de-energised high voltage underground polymeric cables and covers the jointing, terminating, repair and replacement of cables. It includes the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits, the undertaking of pre-commissioning and/or re-commissioning tests and the updating of system data/maintenance records.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and

License to practice **3)**

Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UETTDRCJ21A	Lay ESI electrical cables
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL16A	Working safely near live electrical apparatus

Literacy and numeracy skills	**4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills	**5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT		PERFORMANCE CRITERIA	
1	Prepare to the installation and maintenance of de-energised HV underground polymeric cables	1.1	Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
		1.2	Relevant requirements and established procedures for the work are communicated to

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for the installation and maintenance of de-energised HV underground polymeric cables are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at work site are confirmed current in First Aid and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements.
2 Carry out the installation and maintenance of de-energised HV underground polymeric cables	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures.
	2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of de-energised HV underground polymeric cables to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.5	De-energised HV underground polymeric cables are installed according the work schedule and requirements/established procedures.
	2.6	Maintenance, including repair and/or replacement of de-energised HV underground polymeric cables is carried out, in accordance with the work schedule and requirements/established procedures.
	2.7	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.8	Unplanned events in the installation and maintenance of de-energised HV underground polymeric cables are undertaken within the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		scope of established procedures.
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the installation and maintenance of de-energised HV underground polymeric cables	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, HV underground polymeric cables are returned to service in accordance with requirements.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential knowledge and associated skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of installing and maintaining de-energised HV underground polymeric cables.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TCJ27A HV Polymeric underground cable jointing

Evidence shall show an understanding of the jointing and termination of HV polymeric cable to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements pertaining to the jointing of HV underground polymeric cables

T2 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, encompassing:

- Characteristics of different types of cables and components
- Purpose of stress control

T3 Applications of various tools and equipment for HV jointing

T4 Procedure for isolating high voltage underground cables encompassing:

- Method for proving safe to work

T5 Earthing procedures

T6 Techniques in jointing HV underground polymeric cable, encompassing:

- Short circuit cores and seal cable
- Straight through
- Trifurcating

T7 Techniques in HV terminations encompassing:

- Pole top termination
- Substation/switchgear termination
- ABC termination
- Telcon termination

T8 Procedures for repairing HV underground cables encompassing:

- Location of faults
- Types of damage
- Techniques to repairs to sheath
- Techniques to repairs to core

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the performance criteria and the range statement of the

EVIDENCE GUIDE

unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects 9.2)

© Commonwealth of Australia, 2025 Powering Skills Organisation

of evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
  - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered

© Commonwealth of Australia, 2025 Powering Skills Organisation

holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range; and
  - Apply sustainable energy principles and practices as specified in the performance criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least two of the following:	Copper Aluminium Aluminium/steel reinforced Steel Pilot
B	At least two of the	EWP

© Commonwealth of Australia, 2025 Powering Skills Organisation

	following:	Ladder Portable platform
C	All of the following:	Insulating mats/sleeves Temporary bridging device Insulating gloves Insulated cable tensioning devices Ladder/pole shrouds Equipotential bonding
D	At least three of the following:	Voltage detector* Clamp-on ammeter Polarity tester Insulation resistance tester Phase sequence indicator Recording meters (*must do)
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual maintenance of overhead energised LV conductors and cables

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrencies for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the maintenance of overhead energised low voltage conductors and cables taking into account the

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

potential hazards, the calculation of physical loads, including an understanding of the effects of traffic loads and de-rating of circuits.

Maintenance may include the removal, repair and replacement of cables, conductors and associated hardware.

Structures include poles, and columns.

Work methods require the use of insulating gloves and specialised live working equipment and tools.

Work may be performed from elevating work platform, ladder, portable pole platform, or the ground.

Testing and recording devices include voltage detectors, tong ammeters, polarity testers, recording meters and phase sequence indicators.

Specialised live working equipment includes insulating mats and sleeves, insulating gloves, temporary bridges/hoppers, insulated cable tensioning devices and ladder/pole shrouds and equipotential bonding.

The following constants and variables included in the element/performance criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the implementation of relevant environmental procedures to specific projects/sites. It includes the identification of possible environmental risks and impacts, the undertaking of work in accordance with sustainable energy and energy conservation principles, the provision of re-cycling materials and the recording and reporting of environmental incidents. It also encompasses the process of reviewing and participating and contributing in environmental procedures according to established enterprise requirements.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work.

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

There are no prerequisite competencies to this unit.

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of

Employability Skills	**5)** competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to implement environmental and sustainable energy procedures	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3 OHS policies and procedures related to requirements and established procedures for the implementation of environmental and sustainable energy procedures are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4 Environmental and sustainable energy procedures are identified, prioritised and combined within relevant projects, following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to environmental and sustainable energy procedures, requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in environmental and sustainable energy procedures and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule, taking into account environmental and sustainable energy procedures and the need to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed on environmental and sustainable energy procedures and respective responsibilities confirmed where applicable in accordance with established procedures.
2 Carry out environmental and sustainable energy procedures	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Use of power tools/equipment, techniques and practices are safely followed under environmental and sustainable energy procedures and, currency according to requirements confirmed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.3	Essential knowledge and associated skills are applied in the safe implementation of environmental and sustainable energy procedures to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4	Relevant environmental procedures are applied to a specific project(s)/site(s).
	2.5	Work is conducted in accordance with the principles of sustainable energy and energy conservation.
	2.6	Provision for the re-cycling or re-use of materials is undertaken where possible.
	2.7	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.8	Unplanned events in the implementation of environmental and sustainable energy procedures are undertaken within the scope of established procedures.
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills on environmental and sustainable energy procedures.
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the environmental and sustainable energy procedures	3.1	Work undertaken is checked against works schedule for conformance with requirements and environmental and sustainable energy procedures and, anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		safe in accordance with environmental and sustainable energy procedures as well as other established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with environmental and sustainable energy procedures as well as other established procedures.
	3.5	Relevant work permit(s) are signed off and, environmental risks/incidents and potential impacts are reported and recorded according to requirements/established procedures.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of applying environmental and sustainable energy procedures.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TEL11A Environmental fundamentals

Evidence shall show an understanding of environmental fundamentals to an extent indicated by the following aspects:

T1 Environmental standards, codes, environmental legislation, supply authority regulations and or enterprise requirements applicable to the control of environment associated with the worksite encompassing:

- Relevant federal legislation
- Relevant state/territory legislation
- Relevant local government by-laws
- Relevant government or quasi government policies and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Relevant community planning and development agreements - land care agreements

T2 Employer and employee responsibilities

T3 Methods of obtaining information on environmental issues and updates

T4 Methods of identifying environmental impacts from work related activities

T5 Meaning of environmental terms encompassing:

- Identification, assessment and control of risks
- Compliance
- Best practice
- Sustainable energy

T6 Procedures in implementing management plans to ensure compliance

KS02-TEL11A Material handling and the environment

Evidence shall show an understanding of material handling and the environment to an extent indicated by the following aspects:

T1 Methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials

T2 Environmental standards, codes, environmental legislation, OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and or enterprise requirements applicable environmental care when handling materials including provision of manufacturers and suppliers information such as material safety data sheets (MSDS)

T3 Types and application of personal protective equipment used for hazards substances and dangerous goods

T4 Techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from such equipment encompassing:

- Vehicle loading crane
- Chainsaw
- Enterprise vehicles
- Explosive power tools

T5 Procedures for handling and control of spillages of herbicides

T6 Methods of disposing and storage of herbicides, pesticides, oils and chemicals

T7 Methods of cleaning mobile plant, equipment and tools

T8 Emergency procedures for spillages of oil to reduce risks to the environment encompassing:

- Methods of cleaning up excessive spillages
- Methods of protection to surrounding environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Procedure for notification of relevant personnel and authorities
- Recording procedures

T9 Recording of data

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures;

© Commonwealth of Australia, 2025 Powering Skills Organisation

and

- Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All of the following:	Environmental risk assessment Legislative requirements Sustainable energy principles and practice
B	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual environmental and sustainable energy procedures.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 "Assessment Guidelines".

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UEENEEE101A Apply Occupational Health Safety regulations, codes and practices in the workplace

UETTDREL12A Operate plant and equipment near live electrical conductors and apparatus

UETTDREL14A Working safe near live electrical apparatus as a non-electrical worker

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to the application of relevant environmental and sustainable energy procedures to specific projects/sites incorporating energy conservation principles and relevant re-cycling procedures.

Specific project(s)/site(s) may include, but is not limited to buildings; plants construction and maintenance sites; workshops; laboratories; catchments; flood plains irrigation sites; wetlands; drainage sites; waste disposal sites; easements.

Environmental risks may include impact of mismanagement of chemicals; impact of mismanagement of biological agents; detrimental impact on limited water resources; spillage; waste disposal; detrimental impact on water catchment areas (urban and non-urban); detrimental impact on rivers, waterways and channels; unsatisfactory trade waste treatment and disposal processes; poor construction processes; planning deficiencies; neglect of sustainable energy principles

Environmental legislation may include relevant federal legislation; relevant State/Territory legislation; relevant local government by-laws; relevant government or quasi government policies and regulations; relevant community planning and development agreements (e.g. land care agreements)

Incidents of environmental impact may include emissions to air; releases to/of water; releases to land; vibration and noise; disposal of waste; contamination of land; impact on communities; destruction of habitat; use of energy sources; waste generation processes and technologies; impact on culturally significant sites; and may involve the implementation of emergency responses

Environmental management documentation may include information on applicable environmental laws or other requirements; complaint records; training records; process information; process operational log books; inspection, maintenance and calibration records; relevant contractor and supplier information; incident reports; information on emergency preparedness and response; records of significant environmental impacts; chain of custody and compliance records; audit results; management reviews

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Assessing risk
- Assessment
- Authorisation
- Diagnostic, testing and restoration

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to operate plant and equipment near energised and exposed electrical conductors/apparatus	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the operation of plant and equipment near energised and exposed electrical conductors/apparatus are communicated to all personnel and identified for all work sites.
	1.3 OHS policies and procedures related to requirements and established procedures for the operation of plant and equipment near energised

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		and exposed electrical conductors/apparatus are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in First Aid, relevant rescue procedures and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
2 Carry out the operation of plant and equipment near energised and exposed electrical conductors/apparatus	2.1 OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3 Essential knowledge and associated skills are applied in the safe operation of plant and equipment near energised and exposed electrical conductors/apparatus to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4 Plant and equipment are safely operated near energised and exposed electrical conductors/apparatus according to requirements and established procedures.
	2.5 Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.6 Unplanned events in the operation of plant and equipment near energised and exposed electrical conductors/apparatus are undertaken within the scope of established procedures.
	2.7 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.8 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the operation of plant and equipment near	3.1 Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with

energised and exposed electrical conductors/apparatus		established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, plant and equipment are checked, returned to service/stored appropriately, in accordance with requirements and established procedures.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of operating plant and equipment near live electrical conductors/apparatus.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TEL12A Chain saw principles

Evidence shall show an understanding of requirements for the use of chain saws including relevant certification and licensing (if required) to an extent indicated by the following aspects:

T1 Safety precautions, requirements and responsibilities

T2 Selection and use of appropriate personal protective equipment

T3 Chain saw operation encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Parts and function of components and ancillary equipment
- Pre-operational checks
- Starting procedures
- Safe use of chain saw under load
- Safe transporting and storage procedures

KS02-TEL12A Elevating work platform operational principles

Evidence shall show an understanding of operation of elevating work platform (EWP) to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements associated with EWP including relevant certification and licensing encompassing:

- Safe working clearances
- Safe operation procedures and the mandatory wearing of harness/attachment requirements
- Safety observers
- Inspection and testing procedures prior to use
- Set-up, operate and shut down procedures for an EWP

T2 Emergency procedures for an EWP encompassing:

- Escape procedures for an EWP
- Rescuing procedures
- Mechanical failure procedures

T3 Types of EWPs insulated/uninsulated

KS03-TEL12A Enterprise vehicles

Evidence shall show an understanding of requirements for the use of enterprise vehicles such as, trucks and four wheel drives to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements associated with safe use of enterprise vehicles including relevant certification and licensing such as encompassing:

- Motor cars
- Light and heavy commercial trucks
- Heavy truck/trailer combination
- Four wheel drive vehicles

T2 Compliance with regulations associated with the securing of loads prior for transportation

KS04-TEL12A Hydraulic and pneumatic portable equipment

Evidence shall show an understanding of operation and maintenance of mobile plant, tools and equipment to an extent indicated by the following aspects:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements associated with portable hydraulic equipment and portable pneumatic equipment, including relevant certification and licensing encompassing:

- Safe working clearances
- Safe operation procedures
- Safety observers

T2 Inspection and testing procedures prior to use

T3 Set-up, operate and shut down procedures

T4 Permit to work systems and isolation procedures

KS05-TEL12A Basic rigging techniques

Evidence shall show an understanding of basic rigging techniques to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements associated with rigging including the operation of cranes, hoists and winches and relevant certification and licensing (if required)

T2 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings

T3 Safe use of rigging equipment, tools and associated equipment encompassing:

- Types, techniques and application
- Site inspection procedures encompassing:
- Identifying hazards, assessing and controlling risks
- Appropriate sequence of loading and unloading

T4 Determining the mass and dimensions of load

T5 Selection and inspection procedures encompassing:

- Rigging equipment, materials and tools
- Note: Examples include natural and synthetic fibre ropes and chains, fittings, winch and capstan
- Ratings of wire ropes and slings
- Removing, repairing and replacing of damage parts

T6 Techniques for assembling and erecting power winches and capstans

T7 Checking the integrity of support structure; visual inspection of load connections

T8 Techniques in moving, lifting, shifting, managing and placing loads encompassing:

- Use of appropriate communication and signalling methods
- Codes of practice/compliance
- Enterprise and Commonwealth, State/Territory legislative requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Erection of safety nets and lines
- Methods of fixing and anchoring loads
- Load stability

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

© Commonwealth of Australia, 2025 Powering Skills Organisation

need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination

© Commonwealth of Australia, 2025 Powering Skills Organisation

legislation, regulations, policies and workplace procedures; and

- Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least four of the following:	Portable generators Chain-saws Concrete cutters Jack hammers Welders Compressor Crimper-cutters Pumps Post hole diggers Drills Friction grip winches Pullers Block and tackle
B	At least one of the following:	Elevating work platform Back hoes Self loading vehicle Borer Bobcat Trench excavators Heavy vehicles
C	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items. Note Refer to Section 2.1 Licence to practice contained in this unit for information relevant to the use of the above equipment.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual operation of plant and equipment near live conductors and or apparatus.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all

© Commonwealth of Australia, 2025 Powering Skills Organisation

necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UETTDREL13A	Comply with sustainability, environmental and incidental response policies and procedures
UEENEEE101A	Apply Occupational Health Safety regulations, codes and practices in the workplace

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the operation of plant and equipment near live electrical conductors and/or apparatus.

Support plant may include elevating work platform, back hoes, earth drilling rigs, trench excavators, heavy vehicles, concrete cutters, compressors, portable generators, welders, crimper-cutters, pumps, chain-saws, jack-hammers, post hole diggers, sand-blasters, drills and self loading vehicle.

Equipment may include hand operated ratchet and friction grip winches, chain pullers and block and tackle.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment

UETTDREL16A Working safely near live electrical apparatus

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers compliance with working safely up to the defined "safe approach distance" near energised electrical apparatus (inc. electrical powerlines) for electrical worker. It includes work functions that may be performed, such as vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus by an electrical worker. Also included is the preparation of risk assessment control measures that encompass job safety assessment. It does not include any work that is or may be performed by other competent operatives within the defined "safe working zone". The defined "safe working zone" is that so defined by relevant State or Territory regulatory agencies/bodies, local government legislation, Industry bi-partite body – Guidelines/Codes of Practices or other related requirements for Safe work and access near live Electrical and Mechanical Apparatus.

Application of the Unit

Application of the Unit **2)**

This competency standards unit shall apply to Transmission, Distribution, Rail Traction, Telecommunications and Vegetation Management Control industry sectors.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

There are no prerequisite competencies to this unit.

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3 Writing 3 Numeracy 3

© Commonwealth of Australia, 2025 Powering Skills Organisation

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to work safely near live electrical apparatus as electrical worker	1.1 Instructions related to the work to be performed safely near live electrical apparatus as electrical worker are received and confirmed.
	1.2 Relevant requirements and established procedures to be followed and, relevant personnel to be communicated with for the work to be performed are identified.
	1.3 OHS policies and procedures to be followed for the work to be performed are received and confirmed.
	1.4 Suggestions to assist in meeting the safety requirements for working near live electrical apparatus as an electrical worker are made to others involved in the work.
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.6	Scope of responsibility and process of relevant work permit(s) issue is identified, received and confirmed according to requirements and established procedures.
	1.7	Relevant responsibility associated with First Aid, Safety Observers and/or other related work safety procedures at the worksite are identified in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident.
	1.8	Processes for identifying and reporting client issues to appropriate personnel in accordance with industry/acceptable /community standards are identified.
	1.9	Site and the work schedule to be prepared are confirmed according to given instructions for a quality outcome and to minimise risk and damage to property, commerce, stock and individuals in accordance and established procedures.
	1.10	Electricity infrastructure assets, related voltages and requirements for working safely near live electrical apparatus as electrical worker are identified.
	1.11	Safe approach distances including any zones thereof that may apply, as defined in industry guidelines, requirements and/or established procedures for the intended work are confirmed.
2 Carry out the work safely near live electrical apparatus as electrical worker.	2.1	OHS principles and practices to reduce the incidents of accidents are identified in accordance with given instructions, requirements and/or established procedures.
	2.2	Working safely and complying with all safety requirements for working near live electrical apparatus as an electrical worker are followed in accordance with given instructions and established routines/procedures.
	2.3	Processes for monitoring and reporting/referring hazards and OHS risks to the immediate

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		authorised personnel for directions according to established procedures are followed.
	2.4	Non-routine events are referred to the immediate authorised personnel for directions according to established procedures.
	2.5	Unexpected events associated with working safely near live electrical apparatus as an electrical worker are responded to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met.
3 Complete the work safely near live electrical apparatus as electrical worker.	3.1	Work schedule and anomalies for completion and checking of the work are reported to authorised personnel in accordance with established procedures.
	3.2	Processes for reporting to authorised personnel accidents and/or incidents are confirmed in accordance with established procedures.
	3.3	Requirements for returning work permit(s) and/or access authorisation permits are confirmed.
	3.4	Appropriate personnel are notified of work completion according to established procedures.
	3.5	Works completion records, report forms/data sheets are completed accurately in accordance with given instructions and established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of working safely near live electrical apparatus as electrical worker.

All knowledge and skills detailed in this unit should be contextualised to current

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

industry practices and technologies.

KS01-TEL16A ESI safe work practices near live electrical apparatus

Evidence shall show an understanding of ESI safe work practices near live electrical apparatus to an extent indicated by the following aspects:

T1 Electrical safety and principles encompassing:

- Hazards encountered in an electrical environment and safety procedures for dealing with them - types of hazards (hazards include electrical shock, fire from an electrical source, chemical hazards and fall hazards.), factors indicating general unsafe work practices and conditions, safety practices in the use of common tools and plant.
- Rescue techniques and first aid treatment of an electric shock victim - methods to rescue an electrical shock victim in contact with live equipment or conductors, accepted first aid treatment for burns, bleeding and shock, procedures for conducting EAR and CPR.
- Procedures for dealing with fires and hazardous chemicals associated with electrical equipment - selection and use of different types of equipment used to fight fires associated with electrical equipment, procedures for dealing with a fire associated with electrical equipment, procedures for dealing with PCBs.
- Basic circuit components and state the function of each - sources of electrical supply, control switches, types and functions of resistive consuming devices, basic circuit components symbols used in electrical diagrams.
- Connection of basic electrical circuits and measurement of circuit parameters - connection of components that make up a single-source single-load circuit, relationship between voltage and current in such circuits, consequences of a short-circuit and an open-circuit.
- Determining the voltage, current and resistance - calculation methods, measurement methods.
- Cable and conductor terminations to Australian/New Zealand standards - types of terminations, cable conductor preparation, prepare conductor for termination, termination method (conductor terminations include soldered and pressure types).

T2 Transmission, distribution and rail systems encompassing:

- Relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
- Characteristics of a transmission, a distribution and a rail system - principal components, typical voltage levels and methods of transmission and distribution including grid type transmission systems, radial, parallel and ring main feeders
- Relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
- Single line drawings and layouts - drawings and layouts of transmission and distribution systems including, radial, parallel and ring main feeders and the HV

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

equipment associated with substations

T3 Fundamentals for working safely near live electrical apparatus encompassing:

- Standards, guidelines/codes of practice, State/Territory/local government legislation, supply authority regulations and or enterprise requirements including relevant certification and licensing, applicable to working safely up to the defined "safe working zone" near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker
- Definitions of terminologies - 'safe working zone' 'risk assessment', 'safe approach distances zones', 'safe working distances'.' work permits', access authorisation permits', 'Technical standards' 'isolation procedures' and compliance requirements'
- OHS policies and procedures for working safely - emergency response and First Aid procedures such as CPR, roles and responsibilities of employers, employees and other parties under OHS legislation, personal protective equipment, identifying hazards, assessing and controlling OHS risks, first aid procedures, duties of a safety observer, working at heights/confined spaces, permit to work systems and isolation procedures, safe application of different types of tools and equipment
- Operation of mobile plant and machinery (e.g. EWP) near live electrical apparatus
- Electricity supply infrastructure assets and voltages
- Techniques and precautions in undertaking different work functions and working safely up to the defined "safe working zone" near energised electrical apparatus (inc. electrical powerlines) for non-electrical worker - work functions that may be performed include, vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker.

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

the “Assessment Guidelines – UET1211”. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All of the following:	Confirmation of the "safe working zone" for Safe work and access near live Electrical Apparatus Identification of the relevant technical standards. Acts, regulations and codes/guidelines Identification of

© Commonwealth of Australia, 2025 Powering Skills Organisation

		established (Enterprise) procedures
B	All of the following:	Confirmation of the principles of electricity, the three phase power system, electric shock and resuscitation, power system Recognition of aerial voltage systems Identification of Low Voltage Aerial Circuits Identification of High Voltage
C	All of the following:	Procedures in the event of an incident Events constituting an incident Procedures for responding to incidents Hazard and risk assessment procedure Conduct Work-site Hazard Assessment Confirmation of essential components of Hazard Assessment Checks Applying Hazard Identification in Electrical Work Confirmation of the Basic Safety Principles for Work on Electrical works Hazard Identification and Risk Assessment Hazard Control Risk Assessment and Management (JSAs)

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Control The Hierarchy of Controls including Evaluation, Worksite Hazard and Risk Assessment Checklist, Pre-job Hazard Assessment Check (HAC) Items, Planned Inspection and Pre-Work Hazard Risk Assessment Form
D	All of the following:	Use of work permits and/or authorisation permits Sustainable energy principles and practices Possible affects of weather conditions on working near electrical apparatus as a electrical worker
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

to safely undertake actual work near live electrical apparatus

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competence in this unit is not recommended to be assessed concurrently with any other unit.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to safe working so defined by relevant State or Territory regulatory agencies/bodies, local government legislation, Industry bi-partite body – Guidelines/Codes of Practices or other related

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for the installation of electrical equipment (network infrastructure)	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3 OHS policies and procedures related to requirements and established procedures for the

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		installation of electrical equipment (network infrastructure) are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in First Aid, Pole Top Rescue and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
2 Carry out installation of electrical equipment (network infrastructure)	2.1 OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3 Essential knowledge and associated skills are applied in the safe installation of electrical equipment (network infrastructure) to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4 Electrical equipment and associated hardware is positioned, secured and terminated/connected in accordance with requirements and established procedures.
	2.5 Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.6 Unplanned events in the installation of electrical equipment (network infrastructure) are undertaken within the scope of established procedures.
	2.7 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.8 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the installation of electrical equipment (network infrastructure)	3.1 Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3 Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5 Relevant work permit(s) are signed off and, electrical equipment (network infrastructure) are returned to service in accordance with requirements.
	3.6 Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of installing electrical equipment (network infrastructure).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS41A Substations, power transformers and reactors

Evidence shall show an understanding of substations and power transformers to an extent indicated by the following aspects:

T1 Relationship between the substations within an overall power system

- Note: Examples include purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment

T2 Characteristics of a power transformer

- Note: Examples include basic construction of distribution transformers,

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

operation under load/no load conditions, types and basic operation of tap changing switches including solid state types, efficiency and cooling

T3 Auxiliary equipment used on transformers encompassing:

- Function and basic operation

T4 Maintenance of a power transformer

- Note: Examples include basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault finding procedures

T5 Characteristics of a reactors encompassing:

- Description and purpose

KS02-TIS41A Switchgear installation

Evidence shall show an understanding of the installation of switchgear and associated equipment to an extent indicated by the following aspects:

T1 Types and function of various switchgear

- Note: Examples include isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, requirements and techniques

T2 Types of equipment

- Note: Examples include transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators

T3 Installation procedures for switchgear and equipment encompassing:

- Standards, codes, legislation, supply authority regulations and or enterprise requirements
- Assembly and erecting procedures
- Earthing requirements and techniques
- Pole mounted locations

T4 Testing and commissioning encompassing:

- Electricity supply industry standards and procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must

© Commonwealth of Australia, 2025 Powering Skills Organisation

EVIDENCE GUIDE

be read in conjunction with the Performance Criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**

© Commonwealth of Australia, 2025 Powering Skills Organisation

A	Any three of the following:	Fuse switches Dropout fuses Sectionalisers Disconnectors Links Fuses Surge arrestors
B	Any one of the following:	Reclosers Motorised switches Gas filled switches Ring main units Line fault indicators Oil filled switches Air break switches
C	Any one of the following:	Transformers Reactors Regulators Capacitors
D	Any three of the following:	Voltage detectors Phasing equipment Clip-on ammeters Insulation resistance testers Recording meters Earth resistance tester
E	At least one occasion:	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation of electrical equipment in a network infrastructure.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation, termination/connection of overhead electrical equipment relevant to the transmission, distribution and rail networks, and includes pre-commissioning.

Electrical equipment and associated hardware may include relevant transmission or distribution linework/network; switchgear (e.g. reclosers, sectionalisers, drop-out fuses, disconnectors, isolators, air break switches, gas filled switches, links, fuses, fuse switches and circuit breakers); transformers (e.g. padmount, pole-mounted and mobile); reactors; fault indicators; regulators; street lighting control points; capacitors; cables; underground/overhead cable terminations; relays (simple); mobile generators and surge arrestors; support brackets and the like.

It does not include the energisation of equipment in a highly complex, interdependent and interconnected electricity supply Network system, where the affects of unintended consequences on the system are high risk and appropriate personnel effect energisation.

Test and recording equipment includes voltage detectors, phasing equipment, tong ammeters, voltmeters, recording meters and insulation resistance testers used for the purposes as intended and according to requirements, and does not include use of such in energising installed equipment in a highly complex, interdependent and interconnected electricity supply Network system, where the affects of unintended consequences on the system are high risk.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the maintenance of electrical equipment and associated hardware, such as fuse switches, drop out switches, sectionalisers, links, surge arrestors, gas filled and or oil filled switches, relevant to the transmission, distribution and rail traction networks and includes the repair and/or replacement of "like for like" electrical equipment and associated hardware as well as the termination and/or connection of this equipment according to requirements and may include sampling of insulating oils. It also encompasses the identification of faults, the pre-commissioning tests involving the equipment/system and the interpretation of these tests against agreed specifications. It excludes the energisation of the equipment maintained in a highly complex, interdependent and interconnected electricity supply Network system, where the affects of unintended consequences on the system are high risk and appropriate personnel effect energisation.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Transmission Overhead

Distribution Overhead

Rail Traction

Distribution Cable Jointing

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEENEEE104A	Solve problems in d.c. Circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. Circuits
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDREL16A	Working safely near live electrical apparatus

Transmission Overhead Pathway Group

Unit Code	Unit Title
UETTDRIS41A	Install network infrastructure electrical equipment
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables
UETTDRTP26A	Install transmission structures and associated hardware
UETTDRTP27A	Maintain transmission structures and associated hardware
UETTDRTP29A	Install and maintain transmission overhead conductors and cables

Distribution Overhead Pathway Group

Unit Code	Unit Title

competency standard unit	Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for the maintenance of electrical equipment (network infrastructure)	1.1	Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures the maintenance of electrical equipment (network infrastructure) are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in First Aid, Pole Top Rescue and other related work procedures according to requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements.
2 Carry out maintenance of electrical equipment (network infrastructure)	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Essential knowledge and associated kills are applied in the safe maintenance of electrical equipment (network infrastructure) to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4	Maintenance, including repair and/or replacement of electrical equipment (network infrastructure) is carried out, in accordance with the work schedule and requirements/established procedures.
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		directions according to established procedures.
	2.6	Unplanned events in the maintenance of electrical equipment (network infrastructure) are undertaken within the scope of established procedures.
	2.7	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.8	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the maintenance of electrical equipment (network infrastructure)	3.1	Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, electrical equipment (network infrastructure) is returned to service in accordance with requirements.
	3.6	Works completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of maintaining electrical equipment (network infrastructure).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS42A Switchgear installation maintenance

Evidence shall show an understanding of the installation of switchgear and associated equipment to an extent indicated by the following aspects:

T1 Types and function of various switchgear

- Note: Examples include isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, requirements and techniques

T2 Types of equipment

- Note: Examples include transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators

T3 Maintenance procedures for switchgear and equipment encompassing:

- Diagnosing and rectifying faults according to electricity supply industry standards and procedures

T4 Testing and commissioning encompassing:

- Electricity supply industry standards and procedures

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit **9.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered

© Commonwealth of Australia, 2025 Powering Skills Organisation

holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	Any three of the following:	Fuse switches Dropout fuses Sectionalisers Disconnectors Links Fuses Surge arrestors

© Commonwealth of Australia, 2025 Powering Skills Organisation

B	Any one of the following:	Reclosers Gas filled switches Ring main units Oil filled switches Air break switches
C	Any one of the following:	Transformers Reactors Regulators Capacitors Relays Line fault indicators
D	Any three of the following:	Voltage detectors Phasing equipment Clip-on ammeters Insulation resistance testers Recording meters Earth resistance testers
E	At least one occasion:	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual maintenance of electrical equipment in the network infrastructure.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the maintenance of overhead electrical equipment relevant to the transmission, distribution and rail

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

networks.

Maintenance may include the removal, repair and replacement of electrical equipment encompassing “like for like” and associated hardware as well as the termination and/or connection of this equipment according to requirements and may include sampling of insulating oils. It also encompasses the identification of faults; the pre-commissioning tests involving the equipment/system and the interpretation of these tests against agreed specifications. It excludes the energisation of the equipment maintained in a highly complex, interdependent and interconnected electricity supply Network system, where the affects of unintended consequences on the system are high risk and appropriate personnel effect energisation.

Electrical equipment and associated hardware may include relevant transmission or distribution linework/network; switchgear (e.g. reclosers, sectionalisers, drop-out fuses, disconnectors, isolators, air break switches, gas filled switches, links, fuses, fuse switches and circuit breakers); transformers (e.g. padmount, pole-mounted and mobile); reactors; fault indicators; regulators; street lighting control points; capacitors; cables; underground/overhead cable terminations; underground cable joints; relays (simple); mobile generators and surge arrestors; support brackets and the like.

Test and recording equipment includes voltage detectors, phasing equipment, tong ammeters, voltmeters, recording meters, insulation resistance testers and may include the, sampling of transformers, switchgear and cable insulating oil and tests for dielectric strength and moisture used for the purposes as intended and according to requirements, and does not include use of such in energising equipment and circuits in a highly complex, interdependent and interconnected electricity supply Network system, where the affects of unintended consequences on the system are high risk.

Equipment may include Pump, filter press, hoses, pipes, soil kits, sample bottles, storage vessels etc.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

UETTDRDP12A	Maintain overhead energised low voltage conductors and cables
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UETTDRIS41A	Install network infrastructure electrical equipment
UETTDRIS42A	Maintain network infrastructure electrical equipment
UETTDRIS52A	Install and maintain poles, structures and associated hardware
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables
UETTDRIS56A	Install and maintain low voltage overhead services

Rail Traction Pathway Group

Unit Code	Unit Title
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52A	Install and maintain poles, structures and associated hardware
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables
UETTDRRT21A	Install traction overhead wiring systems
UETTDRRT22A	Maintain traction overhead wiring systems
UETTDRRT23A	Install rail traction bonds
UETTDRRT27A	Install overhead traction components and equipment
UETTDRRT28A	Maintain overhead traction components and equipment

Distribution Cable Jointing Pathway Group

Unit Code	Unit Title

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UETTDRCJ21A	Lay ESI electrical cables
UETTDRCJ26A	Install and maintain de-energised low voltage underground polymeric cables.
UETTDRCJ27A	Install and maintain de-energised high voltage underground polymeric cables.
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41A	Install network infrastructure electrical equipment
UETTDRIS42A	Maintain network infrastructure electrical equipment
UETTDRIS55A	Install and maintain low voltage underground services

Electrical Pathway Group

Unit Code	Unit Title
UEENEEE137A	Document and apply measures to control OHS risks associated with electrotechnology work
UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG033A	Solve problems in single and three phase electrical apparatus and circuits
UEENEEG063A	Arrange circuits, control and protection for general electrical installations
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits
UEENEEG108A	Trouble-shoot and repair faults in low voltage electrical apparatus and circuits
UEENEEG109A	Develop and connect electrical control circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEENEEK142A	Apply environmentally and sustainable energy procedures in the energy sector
UETTDRIS67A	Solve problems in energy supply network equipment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to undertake HV switching procedures to a given schedule	1.1	Switching and work schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for HV switching are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant authority is obtained to perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in First Aid and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements.
2 Carry out HV switching procedures to a given schedule	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Essential knowledge and associated skills are applied for the safe undertaking of HV switching procedures to a given schedule to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4	Communications with Switching Control Officer are established and maintained throughout the isolation operation according to established procedures.
	2.5	Electrical equipment and associated circuits line/network or work site to be switched including paralleling is isolated and proved de-energised using appropriate devices and earthed where required according to requirements and established procedures.
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.7	Unplanned events occurring during HV switching

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		procedures to a given schedule are responded to and undertaken within the scope of established procedures.
	2.8	Relevant permits are prepared and issued in accordance with established procedures.
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete HV switching procedures to a given schedule	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5	Relevant permit(s) are signed off, safety devices are removed, and the system is re-energised and returned to service in accordance with requirements/established procedures.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel and authority notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of performing high voltage field switching to a given schedule.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS44A High voltage switching

Evidence shall show an understanding of high voltage switching principles to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements applicable to switching of high voltage to a given schedule

T2 Requirements for the use of manuals, system diagrams/plans and drawings encompassing:

- Types, characteristics and capabilities of electrical apparatus
- Use, characteristics and capabilities of specialised tools and testing equipment
- Network interconnectors source of possible backfeed

T3 Role of the HV switching operator

T4 Procedures for obtaining correct HV switching authorisation encompassing:

- Identification of OHS hazards, assessing and controlling risks
- Safety procedures and precautions
- Safe approach distances
- Responsibilities and protocols
- Identifying switching resources
- Procedures for obtaining electrical access permits/authorities
- Requirements for team switching
- Procedures for coordination of operations

T5 Use and operation of equipment associated with HV overhead and substation equipment encompassing:

- Test instruments
- Sticks
- Interrupters
- Arc stranglers

T6 Operation of protection systems and substation equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Note: Examples include fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications

T7 Types and categories of HV switchgear

T8 Application, function and operating capabilities of switchgear

T9 Restrictions pertaining to HV switching equipment

T10 Procedures for the isolation of HV transmission main and working earths

T11 Earthing HV electrical apparatus practices and procedures for access encompassing:

- Purposes of Operational and additional work part - on-site earths
- Factors determining the location and effectiveness of Operational earthing
- Acceptable industry procedures
- Personal protective equipment

T12 High voltage switching techniques

- Pre-switching checks
- Switching operational procedures
- Isolation procedures and proving dead/de-energised
- Earthing procedures
- Pre-switching checks
- Switching operational procedures
- Emergency fault procedures
- Energisation procedures

T13 Application and function of SWER system components

- Circuit arrangement
- Principle of operation
- Hazards and procedures associated with faulty SWER earth systems
- Procedure to isolate, energise and commission SWER substations

T14 Operation of HV overhead switching or indicating devices encompassing:

- Identifying hazards, assessing and controlling risks associated with HV switchgear operation
- Systematic and defensive techniques
- Mobile radio procedures
- Double isolation procedures
- Note: Examples include fuses; disconnect fuses; load switching; live line

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

indicators; capacitors; reclosers; sectionalisers, underslung links, airbreaks; switches, disconnects; live line clamps; phasing sticks; phasing tester

KS02-TIS44A High voltage fault switching principles

Evidence shall show an understanding of high voltage fault switching principles to an extent indicated by the following aspects:

T1 Primary causes, effects and types of HV electrical faults

T2 HV protection devices encompassing:

- Main components
- Types
- Categories
- Applications
- Functions

T3 Basic principle of operation of HV system protection devices

T4 Protection co-ordination and protection ―zoning

T5 HV feeder auto-reclosing suppression encompassing:

- Function
- Application

T6 Circuit condition requirements and switching considerations when paralleling and separating HV feeders

KS03-TIS44A High voltage distribution transformer principles

Evidence shall show an understanding of high voltage distribution transformer principles to an extent indicated by the following aspects:

T1 Operation of HV distribution transformers encompassing:

- Principle governing factors for transformer ratings
- Protection and alarms
- Operating limitations and the relationship between transformer and HV fuse rating
- Purpose and principle operation of HV distribution transformer tap changers
- HV distribution transformer and transformer — cable combination switching practices
- Paralleling requirements
- Isolation and earthing procedures for access
- Common distribution transformer and associated electrical apparatus faults

T2 HV underground switching equipment

- Note: Examples include arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

KS04-TIS44A Feeder automation system

Evidence shall show an understanding of feeder automation system to an extent indicated by the following aspects:

T1 Function of feeder automation system and the main components

T2 Operation procedure for a remote field device from a local control station

T3 Functions of ―System Control and Date Acquisition (SCADA) (or any other relevant Data Acquisition and Control) systems and its main components

T4 SCADA system security interlocks and access restrictions

T5 SCADA system operation when switching apparatus or retrieving data via a remote access device such as; Remote Access Terminal (RAT), Dial Up Voice Annunciate System and Local Control Station

T6 Function of the main components of a local/remote control system

T7 Operation of a field devices using SCADA systems via a Remote Access Terminal (RAT), Dial Up Annunciate System and Local Control Station

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is

© Commonwealth of Australia, 2025 Powering Skills Organisation

recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and

© Commonwealth of Australia, 2025 Powering Skills Organisation

range; and

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	All of the following:	Approvals/clearances Access permits
B	All of the following:	HV operating sticks HV operating earths HV detectors
C	At least one of the following:	HV phasing sticks HV ground mounted equipment isolating handles and earths
D	At least two of the following:	HV links Air break switches Fuses
E	At least three of the following:	Reclosers Ring main units

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Circuit breakers Isolators Earth switches Sectionalisers
F	At least one occasion:	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual performance of HV field switching to a given schedule.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit

© Commonwealth of Australia, 2025 Powering Skills Organisation

applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the carrying out of high voltage switching operations involving the operation of circuit breaking and isolation devices from a given switching schedule.

Switching operations are confined to those performed in field situations, not in system control rooms or substations and may include electrical load transfer.

Switchgear includes reclosers, ring main units, circuit breakers, isolators, earth switches, sectionalisers, HV links, air break switches, live line clamps, and fuses.

Specialist tools may include HV phasing sticks, HV link sticks, HV live-line clamp operating sticks, HV ground transformer isolating handles and associated earths, HV overhead operating earths and HV detectors.

Switching program/schedule including necessary detail, e.g. structure, switch or equipment number; locations; HV feeder; outage times; works plan/order;

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

- Assessment
- Authorisation
- Confined space
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect
- Legislation
- MSDS
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Personnel
- Quality assurance systems
- Requirements
- Testing procedures
- Work clearance systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation and maintenance of poles and/or structures and associated hardware, other than towers, which may consist of wood, steel, concrete or composite type material. It includes the fixing and or securing of hardware associated as well as the repair and or replacement of poles and or structures used in the distribution and or rail traction industry sectors. It encompasses the implementation of a suitable traffic management plan.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL16A	Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for the installation and maintenance of poles and/or structures and associated hardware	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.3 OHS policies and procedures related to requirements and established procedures the installation and maintenance of poles and/or structures and associated hardware are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6 Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.7 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.8 Relevant personnel at worksite are confirmed current in First Aid, Pole Top Rescue and other related work procedures according to requirements.
	1.9 Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.12	Traffic management plan is identified and implemented.
2 Carry out installation and maintenance of poles and/or structures and associated hardware	2.1	OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.3	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.4	Essential knowledge and associated skills are applied in the safe installation of poles and/or structures and their associated hardware to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.5	Poles and/or structures and their associated hardware to be installed are stabilised according to requirements.
	2.6	Installation is carried out, in accordance with the work schedule and requirements/established procedures.
	2.7	Maintenance, including repair and/or replacement of poles and/or structures is carried out, in accordance with the work schedule and requirements/established procedures.
	2.8	Unplanned events in the installation of poles and/or structures and associated hardware are undertaken within the scope of established procedures.
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the installation and maintenance of poles and/or structures and associated hardware.	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, poles and/or structures and their associated hardware are returned to service in accordance with requirements.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of installing and maintaining poles/structures and associated hardware.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS52A Pole and hardware installation and maintenance

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show an understanding of the installation of poles and or structures and hardware to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements applicable to installing poles and associated hardware

T2 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, encompassing:

- Characteristics and applications of different types of poles and associated hardware

T3 Techniques for installing poles and associated hardware encompassing:

- Types of installation equipment/tools
- Excavation methods
- Types of footings/foundations
- Types of attachments
- Earthing systems
- Clearances between conductors
- Safe methods of erecting and stabling poles and or structures and cross arms

T4 Techniques for maintenance of poles and associated hardware encompassing:

- Stabilisation techniques for unstable poles
- Methods of strengthen poles
- Maintenance and replacement of high voltage insulators and cross arms

T5 Traffic management

- Note: Examples include purpose of traffic management and a power worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements, demonstration of the procedure used to provide an effective traffic management scheme and the use of a two-way radio

T6 Procedures for purchasing/ordering items, removing/dispatching items, stocktaking and record keeping

Evidence Guide

E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation of poles and or structures and their associated hardware.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts

RANGE STATEMENT

and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation of poles and or structures which may include basic inspection, removal, repair and replacement of poles and/or structures, including welding, pole staking and rebutting.

Equipment may include:

Pole types and structures may include wood, concrete, steel and composite.

Maintenance may include the basic inspection, removal, repair and replacement of poles including welding, pole staking and rebutting.

Associated hardware includes insulators, crossarms, stays, earth down leads and bond wires, crossarm braces, pole steps, shackle straps and associated bolts and clamps, cantilever assembly, pull off, head span, portal, drop tube

Pole stabilisation techniques include back-fill consolidation, concreting, baulking, reinforcement nailing, approved steel reinforcing and temporary and permanent stay-wires.

Methods of erection may include crane, auger/erector, winch/‘A’ frame, lifting apparatus and helicopter lift.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information

UETTDRIS54A Install and maintain poles, structures and overhead conductors and cables

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation and maintenance of overhead conductors and cables used on poles and structures (excluding towers) which includes the stringing, tensioning and terminating of the conductor/cable, as well as the cleaning of insulators (de-energised), the securing of the conductor to the insulators or supports and the undertaking of the electrical connections. It also covers maintenance work associated with the diagnosing of faults, the conducting of visual inspections, the confirmation of phasing and the completion of other enterprise tests. It also encompasses the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits and the updating of system data/maintenance records according to requirements and established procedures.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL16A	Working safely near live electrical apparatus

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for the installation and maintenance of overhead conductors and cables used on poles and/or structures	1.1	Plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for the installation and maintenance of overhead conductors and cables used on poles and/or structures are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in First Aid, Pole Top Rescue and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			commerce, and individuals in accordance with established procedures.
		1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
		1.12	Traffic management plan is identified and implemented.
2	Carry out installation and maintenance of overhead conductors and cables used on poles and/or structures	2.1	OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
		2.2	Lifting, climbing, working aloft, rescue and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
		2.3	Confirm systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures.
		2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of overhead conductors and cables used on poles and/or structures to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
		2.5	Overhead conductor/cables are strung, tensioned and terminated as per requirements/established procedures.
		2.6	Insulators are cleaned and conductors and anti-vibration devices, spaces/spreaders are secured as per established procedures.
		2.7	Electrical connections are made in accordance with the requirements/established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	2.8	Maintenance, including repair and/or replacement of overhead conductors and cables used on poles and/or structures is carried out, in accordance with the work schedule and requirements/established procedures.
	2.9	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.10	Unplanned events in the installation and maintenance of overhead conductors and cables used on poles and/or structures are undertaken within the scope of established procedures.
	2.11	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.12	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the installation and maintenance of overhead conductors and cables used on poles and/or structures	3.1	Work undertaken is checked against works schedule for confirmation of phasing and conformance with requirements and, anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, overhead conductors and cables used on poles and/or structures are returned to service in accordance with requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.6 Conductors/Cables are tested and commissioned in accordance with enterprise requirements and procedures.
	3.7 Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of installing and maintaining overhead conductors and cables (poles and structures).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS54A Powerline distribution installation

Evidence shall show an understanding of the installation of overhead distribution conductors to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements applicable to installing conductors and associated equipment

T2 Safe work practices encompassing:

- Requirements to enable safe working on conductive poles
- Procedures to attach on site earthing devices to de-energised low voltage and high voltage circuits

T3 Requirements for the use of overhead line construction manuals, system diagrams/plans and drawings, encompassing:

- Material lists
- Conductor size, type and route length

T4 Constructions types and structures for distribution and sub transmission lines

T5 Types, sizes and characterises of overhead conductors

T6 Resources for the stringing and maintenance of conductors, encompassing:

- Types of low and high voltage overhead electrical conductor connections
- Causes and effects of poor electrical connections

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Reasons for and methods used to maintain standard phase sequencing
- Removing, repairing and replacing of damage conductors
- Minimum clearances between overhead conductors and low and high voltage structures

T7 Techniques for conductor installation encompassing:

- Types and application of tools, equipment and hardware
- Methods of stringing, tensioning and termination of low and high voltage conductors

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment; and

- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least two of the following:	Copper Aluminium Steel LV abc Aluminium/steel reinforced HV abc HV iuc Pilot
B	At least two of the following:	EWP Portable platform Ladder
C	At least three of the following:	Tension equipment* Cable drum stands Cable trailers Ropes Rollers Sheaves Stockings Stringing equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Swivels Winches (* must do one)
D	At least two of the following:	Voltage indicators * Phasing sticks Fault indicators Field intensity meter Operating rods (*must do)
E	Any one of the following:	Lay-out (stringing method) Pull through (stringing method) Pilot rope (stringing method)
F	Any one of the following:	Dynamometer Site board Beat (wave sagging) Abney level Theodolite
G	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice

© Commonwealth of Australia, 2025 Powering Skills Organisation

using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation and maintenance of overhead conductors and cables on poles and other structures.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation and maintenance of overhead conductors and cables used on poles and structures.

Installation and maintenance may include the stringing, tensioning, terminating of the conductor/cable and the removal, repair and replacement of cables, conductors and associated hardware and includes the cleaning of insulators. May include pre-energised/energisation checks and tests. Visual inspections, diagnosing maintenance work associated with the fault diagnosis, conducting of visual inspections, confirmation of phasing, and the completion of other enterprise tests is also included. It also encompasses the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits and the updating of system data/maintenance records according to requirements and established procedures.

Structures include poles and columns.

Types of conductor include copper, aluminium, steel, aluminium conductor steel reinforced (ACSR), low voltage aerial bundled cable (LVABC), high voltage aerial bundled cable (HVABC), insulated unscreened cable (IUC), service cable and fibre optic, pilot and control cables.

Overhead systems include their associated earthing systems, e.g. MEN and CMEN LV systems, bridging/bonding and conventional and SWER HV systems.

Plant may include elevating work platform, winches and capstans, specialist tension stringing equipment, cable trailers and cable drum stands.

Testing and recording equipment (LV) includes voltage detectors, tong ammeters, polarity testers, insulation resistance testers, recording meters and phase sequence indicators.

Testing and recording equipment (HV) includes phasing sticks, fault indicators, radio frequency interference detectors and voltage detectors.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for the installation and maintenance of LV underground services and associated equipment	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	1.3 OHS policies and procedures related to requirements and established procedures for the installation and maintenance of LV underground services and associated equipment are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7 Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8 Relevant personnel at worksite are confirmed current in First Aid, Rescue and other related work procedures according to requirements.
	1.9 Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures
	1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12 Road signs, barriers and warning devices are

ELEMENT	PERFORMANCE CRITERIA	
		established procedures.
3 Complete the installation and maintenance of LV underground services and associated equipment	3.1	Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, the LV services and associated equipment are returned to service in accordance with requirements.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of installing and maintaining low voltage services (underground).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS55A Low voltage electrical underground service installation

Evidence shall show an understanding of the installation of low voltage electrical services to an extent indicated by the following aspects:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements

T2 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, encompassing:

- Types of low voltage underground services
- Methods of construction and installation
- Minimum depths for underground services to be buried and proximity to other assets and structures

T3 Installation equipment/tools

- Equipment and tools for underground service installation
- Fittings and hardware for underground service installation

T4 Methods of laying cables including:

- Conduits and sand and slabbing

T5 Characteristics and applications of different types of cables encompassing:

- Cable cross-sectional area of conductors
- Current rating and fuse types and ratings

T6 Techniques for maintenance of service installations encompassing:

- Diagnosis and repair of faults

T7 Jointing and terminating methods encompassing:

- Polymeric heat-shrink materials
- Polymeric tape materials
- Insulated piercing connectors (IPCs)
- Energised and de-energised cables
- Connections to point of entry, fuse boxes, pillars, pits

T8 Testing and commissioning procedures encompassing:

- Pre-energising tests - insulation resistance and continuity test
- Inspection
- Equipment functionality tests
- Polarity, voltage and phase sequence tests
- Neutral and phase identification tests
- Neutral integrity tests
- Meter function test
- Testing check forms

T9 Connection principles:

- Purpose and function of MEN system
- Types of connection faults
- Causes and effects of incorrect and poor electrical connections

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Principles of loop impedance
- Reasons for and methods used to maintain standard phase sequencing
- Purpose and operation of service fusing
- Use of independent earth for testing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence

© Commonwealth of Australia, 2025 Powering Skills Organisation

need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UET12”. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination

© Commonwealth of Australia, 2025 Powering Skills Organisation

legislation, regulations, policies and workplace procedures; and

- Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least two of the following:	Underground pillar/pit connection (single phase) Underground pillar/pit connection (three phase*) Underground to overhead connection (* must do)
B	At least one of the following:	Fuse units Circuit breakers Service links
C	At least four of the following:	Polarity test * Phase rotation test Continuity test Voltage test Insulation resistance test (* must do)
D	At least one of the following:	Aluminium LV cable XLPE cable Copper LV cable
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation and maintenance of underground LV services.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent **9.5)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessment and relationship with other units

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation and maintenance of underground low voltage services as they relate to distribution circuits and associated equipment and includes the identification of faults.

Installation may include, the laying and connection of service cables, connection of the service cable to underground equipment, the fitting and connection of fuses or circuit breakers and the testing and commissioning of the service

Service includes the connection between the customers' point of supply and the underground pillar/pit connection (single phase), underground pillar/pit connection (three phase) and or underground to overhead connection.

Maintenance may include the identification and diagnosis of faults, the removal, replacement or repair of service cables and associated hardware and the temporary installation of services and associated equipment and the testing and commissioning of the service.

Testing procedures may include continuity, polarity, phase rotation, insulation resistance and voltage.

Testing equipment may include, digital/analogue voltage testers, multimeters, phase rotation testers, load testers, insulation resistance and continuity testers.

Associated hardware may include fuse units, circuit breakers, contactors, mains connection boxes.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

- Confined space
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation, maintenance and connection of low voltage overhead service lines and associated equipment (between the connection point and the point of supply - customers' premises). Maintenance includes the repair and replacement of service cables, service fuses and the replacement and repair of service hardware, the identification and rectification of faults. It also covers insulation, voltage, polarity testing and phase rotation.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Transmission Overhead

Distribution Overhead

Rail Traction

Distribution Cable Jointing

Electrotechnology Electrician

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. Circuits
UEENEEE105A	Fix and secure electrotechnology equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. Circuits
UETTDREL16A	Working safely near live electrical apparatus

Transmission Overhead Pathway Group

Unit Code	Unit Title
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables
UETTDRTP26A	Install transmission structures and associated hardware
UETTDRTP27A	Maintain transmission structures and associated hardware
UETTDRTP29A	Install and maintain transmission overhead conductors and cables

Distribution Overhead Pathway Group

Unit Code	Unit Title
UETTDRDP12A	Maintain overhead energised low voltage conductors and cables
UETTDREL11A	Apply sustainable energy and environmental procedures

		sustainable energy procedures in the energy sector
	UETTDRIS67A	Solve problems in energy supply network equipment

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for the installation and maintenance of LV overhead services and associated equipment	1.1	Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for the installation and maintenance of LV overhead services and associated equipment are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in First Aid, Pole Top Rescue and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			commerce, and individuals in accordance with established procedures.
		1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
		1.12	Road signs, barriers and warning devices are positioned in accordance with requirements.
2	Carry out installation and maintenance of LV overhead services and associated equipment	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
		2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
		2.3	Essential knowledge and associated skills are applied in the safe installation and maintenance of LV overhead services and associated equipment to ensure completion to quality standards with a minimum of waste according to requirements.
		2.4	LV overhead services and associated equipment are installed according to the work schedule and requirements/established procedures.
		2.5	Maintenance, including repair and/or replacement of LV overhead services and associated equipment is carried out, in accordance with the work schedule and requirements/established procedures.
		2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
		2.7	Unplanned events during the installation and maintenance of LV services and associated

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		equipment are undertaken within the scope of established procedures.
	2.8	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the installation and maintenance of LV overhead services and associated equipment	3.1	Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, the LV overhead services and associated equipment are returned to service in accordance with requirements.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

Evidence shall show that knowledge has been acquired of installing and maintaining low voltage services (overhead).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS56A Low voltage electrical overhead service installation

Evidence shall show an understanding of the installation of low voltage electrical services to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements

T2 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, encompassing:

- Types of low voltage overhead services
- Methods of construction and installation
- Minimum clearances for overhead services to assets and structures
- Ground clearances for overhead services
- Maximum span lengths and tensions for overhead services
- Customer poles

T3 Installation equipment/tools

- Equipment and tools for overhead service installation
- Fittings and hardware for overhead service installation

T4 Characteristics and applications of different types of cables encompassing:

- Cable cross-sectional area of conductors
- Current rating and fuse types and ratings

T5 Stringing and terminating methods encompassing:

- Energised and de-energised cables
- Connections to point of attachment, fuse boxes and pole top boxes
- Termination at customer pole

T6 Connection of overhead services:

- Types of overhead service connections
- Live low voltage work principles

T7 Techniques for maintenance of overhead service installations encompassing:

- Diagnosis and repair of faults
- Removing, repairing and replacing of damaged overhead services
- Removing and replacing pole type fuses

T8 Testing and commissioning procedures encompassing:

- Inspection

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Equipment functionality tests
- Continuity tests
- Polarity, voltage and phase sequence tests
- Neutral and phase identification tests
- Neutral integrity tests
- Meter function test
- Testing check forms

T9 Connection principles:

- Purpose and function of MEN system
- Types of connection faults
- Causes and effects of incorrect and poor electrical connections
- Principles of loop impedance
- Reasons for and methods used to maintain standard phase sequencing
- Purpose and operation of service fusing
- Use of independent earth for testing

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the range statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1)**
	Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is

© Commonwealth of Australia, 2025 Powering Skills Organisation

recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and

© Commonwealth of Australia, 2025 Powering Skills Organisation

range; and

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least two of the following:	Overhead service line (three phase)* Overhead service line (single phase) Overhead service line (two phase) (* must do)
B	At least one of the following:	Service fuse Circuit breakers (pole) Service link
C	All of the following:	Polarity test * Phase rotation test Continuity test Voltage test (* must do)

© Commonwealth of Australia, 2025 Powering Skills Organisation

D	At least one of the following:	Aluminium LV mains Copper LV mains LV ABC mains
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation and maintenance of overhead LV services.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified essential knowledge and

© Commonwealth of Australia, 2025 Powering Skills Organisation

associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation and maintenance of overhead low voltage services as they relate to distribution circuits and associated equipment and includes the identification of faults.

Installation may include, the erection and connection of service lines, the fitting and connection of pole fuses or circuit breakers and the testing and commissioning of the service.

Maintenance may include the identification and diagnosis of faults, the removal, replacement or repair of service lines and associated hardware and the temporary installation of services and associated equipment and the testing and commissioning of the service.

Testing procedures may include continuity, polarity, phase rotation, insulation resistance and voltage.

Testing equipment may include, digital/analogue voltage testers, multimeters, phase rotation testers, load testers, insulation resistance and continuity testers.

Associated hardware may include pole fuse units, circuit breakers, contactors, mains connection boxes.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This unit covers determining correct operation of energy supply network electrical equipment and providing solutions as they apply to energy supply network electrical equipment.. It encompasses working safely, reading circuit and reticulation diagrams, applying logical problem solving processes from measurements and completing the necessary documentation.

Application of the Unit

Application of the Unit **2)**

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit require a license to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed plus all the competencies in one (1) of the identified Pathway Unit Group(s):

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. Circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. Circuits
UEENEEG006A	Solve problems in single and three phase low voltage machines
UEENEEG106A	Terminate cables, cords and accessories for low voltage circuits

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to solve problems in energy supply network equipment.	1.1 OHS procedures for a given work area are identified, obtained and understood.
	1.2 OHS risk control measures and procedures in preparation for the work are followed.
	1.3 The likely extent of work to be undertaken is envisaged from reports and/or discussions with appropriate person(s).
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
	1.6 Tools, equipment and testing devices needed to take measurements are obtained in accordance with established procedures and checked for correct operation and safety.
2 Solve problems in energy supply network equipment.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
	2.4 Safety hazards resulting from the reports and risk control measures devised and implemented in consultation with appropriate personnel.
	2.5 Problem solving is approached methodically drawing on knowledge of energy network equipment using measured and calculated values

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		of circuit/apparatus parameters.
	2.6	Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
	2.7	Circuits/components are rechecked and their operational status is confirmed.
	2.8	Materials/replacement parts required to solve problems are sourced and obtained in accordance with established procedures.
	2.9	Effectiveness of the repair is tested in accordance with established procedures.
	2.10	Apparatus is reassembled, finally tested and prepared for return to service.
	2.11	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.12	Problem solving activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Completion and report for problem solving in energy supply network equipment	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
	3.3	Maintenance work activities are documented in accordance with established procedures.
		Note. Examples of documentation are component, test results, authorisations, permits, and parts/component dispatch and stores records.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in energy supply network equipment in energy supply network equipment.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TIS67A Electricity supply and reticulation

Evidence shall show an understanding of electricity supply and reticulation systems to an extent indicated by the following aspects:

T1 Generation encompassing:

- primary energy sources
- power stations
- power station output
- acts and legislation relating to generation
- renewable energy sources and techniques

T2 Transmission encompassing:

- system requirements
- principal components of a power system
- voltage levels
- grid systems
- acts/legislation relating to transmission
- future trends

T3 Distribution encompassing:

- high voltage distribution systems
- medium/low voltage distribution systems
- radial feeders
- parallel feeders
- ring main feeders
- acts/legislation relating to distribution

T4 Substations encompassing:

- purpose
- location
- layout

T5 Overhead and underground systems encompassing:

- relative merits
- applications

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- planning
- installation

T6 Power distribution system electrical characteristics encompassing:

- transmission and distribution systems
- inductance, capacitance and resistance

T7 Voltage problems in a power distribution system encompassing:

- low voltage
- unbalanced voltages
- voltage rises

T8 Voltage regulation encompassing:

- autotransformers with OLTC
- transformers with OLTC
- static capacitors
- load control

T9 Control of OLTC encompassing:

- regulation relays
- control circuits
- line drop compensation

T10 Power distribution system faults encompassing:

- type/classification of fault
- typical causes/effects of faults
- three-phase symmetrical fault levels
- fault level limitation

T11 Voltage surges in a power distribution system encompassing:

- lightning surges
- switching surges
- typical surge levels
- surge impedance, typical values
- significance of the system surge impedance.

T12 Metering and metered quantities encompassing:

- purpose
- energy
- maximum demand
- accuracy classes for metering systems

T13 Energy and demand meters encompassing:

- construction

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- operation
- adjustments
- testing

T14 Metering circuits encompassing:

- direct metering
- instrument transformer metering

T15 Electronic metering systems and recording meters encompassing:

- types
- applications
- connections

T16 Load control encompassing:

- purpose
- methods

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UET12'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as

© Commonwealth of Australia, 2025 Powering Skills Organisation

specified in the performance criteria and range statement
    - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
    - Demonstrate an appropriate level of skills enabling employment
    - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
    - Solving problems in energy supply network equipment as described as described in 8) and including:

A Determining the operating parameters of existing energy supply equipment.

B Envisaging the likely extent of work from reports and discussion with appropriate person(s).

C Using methodical problem solving techniques.

D Solving problems efficiently.

E Altering an existing energy supply equipment to comply with specified operating parameters.

F Developing energy supply equipment to comply with a specified function and operating parameters.

G Determining conditions causing an existing energy supply equipment to be unsafe.

H Completing documentation correctly.

I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to solving problems in energy supply network equipment.

Method of assessment

9.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competency

© Commonwealth of Australia, 2025 Powering Skills Organisation

development in this unit may be arranged concurrently with unit:

UEENEEG006A	Solve problems in single and three phase low voltage machines

Range Statement

RANGE STATEMENT

10) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by solving problems in energy supply network equipment in:

At least one of energy supply network systems:

- distribution overhead system;
- distribution underground system;
- transmission overhead system;
- transmission underground system.

and

At least three of the following distribution/transmission equipment:

- voltage regulation equipment
- on load tap changers
- energy metering
- demand meters
- load control
- current transformers
- potential transformers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

UETTDRRT21A Install traction overhead wiring systems

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation of overhead traction wiring systems to ensure proper installation, in particular the correct registration of the contact wire with respect to the current collectors. It includes the undertaking of safe working practices on or about the running line/track and the preparation needed for stringing and profiling including the isolation of systems and circuits for safe working according to work plans. It may also encompass the correct positioning of road signs, barriers and or warning devices, and the procedure of issuing/accepting electrical permits. It also includes the visual and other necessary checks to confirm that equipment and associated hardware have been correctly installed according to design and are in a safe condition to undertake pre-commissioning tests prior to, putting into service, and updating of, installation data such as as-built drawings and relevant quality assurance documentation.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. Circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. Circuits
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDREL16A	Working safely near live electrical apparatus
UETTDRIS52A	Install and maintain poles, structures and associated hardware
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to install overhead traction wiring systems	1.1	Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for the installation of overhead traction wiring systems are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in CPR, First Aid, and other rescue

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		procedures and related work procedures according to requirements.
	1.9	Liaison and communication issues with other authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Rail/Road signs, barriers and warning devices are positioned in accordance with requirements
	1.13	Environmental constraints applicable to work are identified and control measures applied.
2 Carry out the installation of overhead traction wiring systems	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures.
	2.4	Essential knowledge and associated skills are applied in the safe installation of overhead traction wiring systems to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.5	Overhead traction wiring systems, including cables, fittings, traction conductors and associated equipment are installed according to design and work schedule requirements and established procedures.
		2.6	Profiling completed according to established procedures.
		2.7	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
		2.8	Unplanned events in the installation of overhead traction wiring systems are undertaken within the scope of established procedures.
		2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
		2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3	Complete the installation of overhead traction wiring systems	3.1	Work undertaken is checked against design drawings and works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
		3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
		3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
		3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
		3.5	Relevant work permit(s) are signed off and, the overhead traction wiring system is returned to service in accordance with requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.6 Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of installing overhead traction wiring systems has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS02-TRT21A Electrical overhead traction wiring systems

Evidence shall show an understanding of electrical traction systems to an extent indicated by the following aspects:

T1 Electrical wiring system components - earth wires, feeder wire, return conductor, insulators, catenary wire, contact/trolley wire, droppers, tensioning equipment, current collectors, tram support networks, tram fittings, bridge/tunnel fittings

T2 Electrical traction circuits encompassing:

- Types
- Applications

T3 Relationship of the components, apparatus and the conductors to the operation of the traction system

T4 Effective current collection and wire interface

T5 Effective registration in the traction power system

T6 Profiling overhead traction wire methods encompassing:

- Factors that impact on current collectors
- Methods to achieving smooth current collector transitions and interfaces
- T7 Dynamic and static forces encompassing:
- Types that effect traction systems
- Effects on effective registration
- Techniques to minimise the adverse effects

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

KS03-TRT21A Electrical traction principles

Evidence shall show an understanding of electrical traction principles to an extent indicated by the following aspects:

T1 Standards, codes, legislation, supply authority regulations and or enterprise requirements applicable to the electrical traction

T2 Electrical traction voltage and current circuit paths encompassing:

- Transmission distribution voltages
- Traction supply system and voltages
- Return and stay current paths, including electrolysis

T3 Relationship of sectioning, section insulator and overlaps/air gaps in a traction power system

T4 Traction power system components encompassing:

- Function of transformer/rectifiers
- Configuration and purpose of traction overhead wiring systems
- Function of isolators/switches
- Function of the circuit breaker

T5 Reliability and security of traction supply

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment	**9.1)**
	Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for

© Commonwealth of Australia, 2025 Powering Skills Organisation

apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this

© Commonwealth of Australia, 2025 Powering Skills Organisation

shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least four of the following:	Support structure, Span, Section insulator, Neutral section, Midpoint anchor, Support equipment, Tension regulators, Stay/guy wire, Tramway support network
B	At least two of the following:	Catenary, Dropper,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Contact/trolley*, Feeder, Earth conductor, Drape/potential jumper (*must do)
C	At least one of the following:	Elevating work platform, Ladder, Mobile platform
D	At least two of the following:	Tensioning equipment*, Specialised tools, Ropes, Geometry profiling equipment. (*must do)
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation of overhead traction wiring systems.

© Commonwealth of Australia, 2025 Powering Skills Organisation

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Transmission, Distribution and Rail Traction Industry. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UETTDRRT27A	Install overhead traction components and equipment

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Unit shall be demonstrated in relation to the installation of overhead traction wiring systems as it relates to the correct registration of the contact wire with respect

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

to the current collectors

Types of conductor may include HD, CAD, tin bearing and magnesium copper, aluminium, steel, aluminium conductor steel reinforced (ACSR), insulated screened and unscreened cable and pilot and control cables.

Materials and equipment may include porcelain, glass, ceramic, fibre glass and composite insulators, steel, brass, stainless steel, neoprene, copper, cast and galvanized fittings, drums, pulleys, hooks, yoke plate, line grips, tensioning devices, ropes, slings, hydraulic/manual crimping and cutting tools, specialized tools and dynamometers; Conductors and support wires include droppers wire, catenary wire, contact/trolley wire, earth wire, feeder wire, drape/potential jumper wire, stay wire, cross-span, networks and head span wire.

Associated equipment to conductors may include registration arms, midpoint anchors, section insulators, neutral sections, supports, cantilevers, portals, drop verticals, surge diverters and tensioning devices.

Plant may include ladders, elevating work platform, winches and capstans, specialist tensioning stringing equipment, cable trailers and drum stands, rail and road rail mounted overhead wiring vehicles.

Installing tension regulators encompasses fitting, positioning and securing weight chains and pulley systems.

Permits may include access permits, permits to work and or other relevant permits and documents by recognised bodies.

Profiling encompasses sag, tension, encumbrances, offsets, cants and registration which involves horizontal and vertical calibration of the contact wire or trolley wire to a design height and stagger in reference to the running rail.

Current collectors may include pantographs and tram trolley poles.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space
- Diagnostic, testing and restoration
- Documenting detail of work events, record keeping and or storage of information
- Drawings and specifications
- Emergency

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the maintenance and repair of overhead traction wiring systems to ensure their serviceability, in particular the correct registration of the contact wire with respect to the current collectors. It includes the undertaking of safe working practises on or about the running line/track, the preparation needed for stringing and profiling including the isolation of systems and circuits for safe working according to work plans, the diagnosis of faults and the modification and re-adjustment to appropriate standards. It may also encompass the correct positioning of road signs, barriers and or warning devices and the procedure of issuing/accepting electrical permits, the re-commissioning tests as required to ensure the integrity of the traction system prior to returning to service and, the updating of system data and/or maintenance records.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to maintain overhead traction wiring systems	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3 OHS policies and procedures related to requirements and established procedures for the maintenance of overhead traction wiring systems are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5 Hazards are identified; OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at worksite are confirmed current in CPR, First Aid, and other rescue procedures according to requirements.
	1.9	Liaison and communication issues with other authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.12	Rail/road signs, barriers and warning devices are positioned in accordance with requirements.
	1.13	Environmental constraints applicable to work are identified and control measures applied.
2 Carry out maintenance on overhead traction wiring systems	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures.
	2.4	Essential knowledge and associated skills are

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		applied for the safe maintenance of overhead traction wiring systems to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.5	Maintenance, including repair and/or replacement of overhead traction wiring systems, including the modification and re-adjustment of overhead traction conductors is carried out, in accordance with the work schedule and requirements/established procedures.
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.7	Unplanned events in the maintenance on overhead traction wiring systems are undertaken within the scope of established procedures.
	2.8	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
	2.10	Recommissioning checks and tests are undertaken to ensure the integrity of the system prior to returning to service.
3 Complete the maintenance on overhead traction wiring systems	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	checked and returned to storage in accordance with established procedures.
	3.5 Relevant work permit(s) are signed off and, the overhead traction wiring system is returned to service in accordance with requirements.
	3.6 Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of maintaining overhead traction wiring systems has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TRT22A Maintain overhead traction wiring systems

Evidence shall show an understanding of the maintenance of overhead wiring systems indicated by the following aspects:

T1 Electrical wiring system components

- (Note: Examples include catenary wire, contact/trolley wire, droppers, feeder wire, return conductor, insulators, surge arresters, cantilevers, tensioning equipment, tram support network, tram fittings, bridge/tunnel fittings, current collectors)

T2 Electrical traction circuits encompassing:

- Types
- Applications

T3 Relationship of the components, apparatus and conductors to the operation of the traction system

T4 Effective current collection and wire interface

T5 Effective registration in the traction power system

T6 Dynamic and static forces encompassing:

- Types that effect traction systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Effects on effective registration
- Techniques to minimise adverse effects

T7 Safe and effective use of repair and maintenance tools, equipment and machinery

T8 Maintenance of overhead traction wiring systems encompassing:

- Types of equipment and components
- Types and function of tools and equipment
- Maintenance/repair procedures
- Inspection and recording procedures

T9 Diagnose and correct simple faults in specific overhead wiring systems encompassing:

- Types and causes
- Determination of appropriate corrective actions
- Repair and replace procedures for overhead wiring systems

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full

© Commonwealth of Australia, 2025 Powering Skills Organisation

can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

© Commonwealth of Australia, 2025 Powering Skills Organisation

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least four of the following:	Support structure Span Section insulator Neutral section

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Midpoint anchor Support equipment Tension regulators Stay/guy wire Tramway support network
B	At least two of the following:	Catenary Dropper Contact/trolley* Feeder Earth conductor Drape/potential jumper (* must do)
C	At least one of the following:	Elevating work platform Ladder Mobile platform
D	At least two of the following:	Tensioning equipment* Specialised tools Ropes Geometry profiling equipment (* must do)
E	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Context of and specific resources for assessment

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual maintenance of overhead traction wiring systems.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Transmission, Distribution and Rail Traction Industry. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UETTDRRT2 Maintain overhead traction components and

© Commonwealth of Australia, 2025 Powering Skills Organisation

8A	equipment
UETTDRRT29A	Operate rail road traction height access equipment.

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the maintenance of overhead traction wiring systems as it relates to the correct registration of the contact wire with respect to the current collectors

Maintenance may include the removal, repair and replacement of cables, conductors and associated hardware.

Types of conductor may include HD, CAD, tin bearing and magnesium copper, aluminium, steel, aluminium conductor steel reinforced (ACSR), insulated screened and unscreened cable and pilot and control cables.

Materials and equipment may include porcelain, glass, ceramic, fibre glass and composite insulators, steel, brass, stainless steel, neoprene, copper, cast and galvanized fittings, drums, pulleys, hooks, yoke plate, line grips, tensioning devices, ropes, slings, hydraulic/manual crimping and cutting tools, specialized tools and dynamometers.

Conductors and support wires include droppers wire, catenary wire, contact/trolley wire, earth wire, feeder wire, drape/potential jumper wire, stay wire, cross-span, networks and head span wire.

Associated equipment to conductors may include registration arms, midpoint anchors, section insulators, neutral sections, supports, cantilevers, portals, drop verticals, surge diverters and tensioning devices.

Plant may include ladders, elevating work platform, winches and capstans, specialist tensioning stringing equipment, cable trailers and drum stands, rail and road rail mounted overhead wiring vehicles.

Installing tension regulators encompasses fitting, positioning and securing weight chains and pulley systems.

Permits may include access permits, permits to work and or other relevant permits and documents by recognised bodies.

Profiling encompasses sag, tension, encumbrances, offsets, cants and registration which involves horizontal and vertical calibration of the contact wire or trolley wire to a design height and stagger in reference to the running rail.

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

Current collectors may include pantographs and tram trolley poles.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space
- Diagnostic, testing and restoration
- Documenting detail of work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation.
- Environmental management documentation.
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect
- Legislation
- MSDS
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Personnel
- Quality assurance systems
- Requirements
- Testing procedures
- Work clearance systems

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation of the temporary and permanent traction bonds and bonding cables. It includes the undertaking of safe working practices on or about the running line/track. It may also encompass the isolation of systems and circuits for safe working according to work plans and the correct positioning of road signs, barriers and or warning devices and the procedure of issuing/accepting electrical permits and includes the necessary checks to confirm that bonds, bonding cables and associated hardware have been correctly installed according to design and are in a safe condition to test prior to putting into service. It also includes the undertaking of pre-commissioning tests and the updating of installation data and relevant quality assurance documentation.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. Circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

Prerequisite Unit(s) **4)**

UEENEEG101A	Solve problems in electromagnetic devices and related circuits
UEENEEG102A	Solve problems in low voltage a.c. Circuits
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDREL16A	Working safely near live electrical apparatus
UETTDRIS52A	Install and maintain poles, structures and associated hardware
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of installing traction bonds has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TRT23A Traction Bonding

Evidence shall show an understanding of the installation of permanent traction bonds to an extent indicated by the following aspects:

T1 Traction bond and cables encompassing:

- Permanent bonding methods
- Applications for permanent bonding
- Components of permanent bonds
- Interface between traction and signalling circuits

T2 Safe working procedures/practices when carrying out permanent bonding encompassing:

- Personnel protective equipment (PPE)
- Electrical and visual testing on PPE

T3 Installation of temporary traction bonds and cables encompassing:

- Types and purpose of tools and equipment
- Installation and removal methods
- Testing for electrical integrity of bonds and cables

T4 Installation of permanent traction bonds and cables encompassing:

- Types and purposes of tools and equipment
- Installation and removal methods
- Testing for electrical integrity of bond, cables and equipment

Evidence Guide

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation of the temporary and permanent traction bonds and bonding cables according to work plans.

Installation includes but is not limited to fitting, setting up and putting in place structures, conductors, bonding cables, equipment, spark gaps and connecting terminals and conducting tests for operational soundness.

Earthing and bonding systems may be permanent or temporary.

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

Types of conductors may include steel, steel rail, copper, aluminium and steel, bare and sheathed cables, single core, stranded and flexible.

Cables may be surfaced mounted, buried and enclosed.

Permanent jointing and terminating materials include polymeric tape materials, polymeric heat shrink and covering materials, exothermic welds, crimped and bolted connections.

Temporary terminating components include screwed and clipped earth/rail/conductor clamps.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL12A	Operate plant and equipment near live electrical conductors and apparatus
UETTDREL16A	Working safely near live electrical apparatus
UETTDRIS52A	Install and maintain poles, structures and associated hardware
UETTDRIS54A	Install and maintain poles, structures, overhead conductors and cables

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”.

Reading 3 Writing 3 Numeracy 3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare for the installation of overhead traction equipment/components	1.1	Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for the installation of overhead traction equipment/components are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified; OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			order.
		1.8	Relevant personnel at worksite are confirmed current in CPR, First Aid, and other rescue procedures according to requirements.
		1.9	Liaison and communication issues with other authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
		1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures
		1.11	Rail/road signs, barriers and warning devices are positioned in accordance with requirements.
		1.12	Environmental constraints applicable to work are identified and control measures applied.
2	Carry out the installation of overhead traction equipment/components	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
		2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
		2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures.
		2.4	Essential knowledge and associated skills are applied in the safe installation of overhead traction equipment/components to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
		2.5	Electrical components/equipment and associated hardware are positioned, secured and terminated/connected in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		requirements and established procedures.
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.7	Unplanned events during the installation of overhead traction equipment/components are undertaken within the scope of established procedures.
	2.8	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the installation of overhead traction equipment/components	3.1	Work undertaken is checked against design drawings and works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.3	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.4	Relevant work permit(s) are signed off and, overhead traction equipment/components are commissioned in accordance with requirements.
	3.5	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of installing overhead traction equipment and components has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TRT27A Overhead traction equipment and components

Evidence shall show an understanding of the installation of overhead traction equipment and components indicated by the following aspects:

T1 Overhead traction equipment encompassing:

- Types
- Purpose
- (Note: Examples include switches/isolators, fuse switches, links, section insulators, and fuses)

T2 Types of overhead components encompassing:

- Types
- Purpose
- (Note: Examples include cantilever hardware, droppers, bay components, portal hardware, head span hardware, section insulators, neutral sections, registration fittings, steady span, tension regulators and cross spans)

T3 Types of conductors used for overheads wiring such as hard-drawn, CAD, and tin-bearing copper, aluminium, steel, and other alloyed conductors

T4 Types of traction wire support structures that may consist of portals, cantilevers, drop pieces, head spans, cross spans and pull-offs

T5 Ancillary equipment

- Types
- Purpose
- (Note: Examples include surge arresters, booster and auxiliary transformers)

T6 Methods for installing conductors that may consist the use of:

- Preformed fittings
- Compression fittings
- Wedged fittings
- Bolted splices
- Lugs
- Bolted clamps

T7 Methods for installing components such as:

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

- Feeders
- Droppers
- Dissimilar conductors
- Jumpers
- Surge arresters

T8 Use of plant and equipment for installation work, such as:

- Elevating work platforms
- Ladders
- Works trains
- Rail-mounted overhead wiring equipment/vehicles
- Road/rail height access machinery/vehicles
- Voltage detectors
- Micrometer/gauges
- Tension wrenches
- Dynamometers
- Other specialised tools

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
    - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control

© Commonwealth of Australia, 2025 Powering Skills Organisation

measures as specified in the Performance Criteria and range; and

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least two of the following:	Fuse switches Dropout fuses Section insulators Switches/isolators Links Fuses Surge diverters Transformers
B	At least five of the following:	Cantilever hardware Head span Neutral sections Pull offs Registration fittings Steady span

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Tension regulators Cross spans Tramway support network Pendulum
C	At least two of the following:	Preformed fittings Compression fittings Wedge fittings Bolted splices
D	At least three of the following:	Feeders Dissimilar conductors Lugs Bolted clamp Drapes/potential jumper Droppers
E	At least two of the following:	Voltage detectors Micrometer/gauge Tension wrench Dynamometer Specialised tools
F	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

© Commonwealth of Australia, 2025 Powering Skills Organisation

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation of overhead traction equipment and components.

In addition to the resources listed above, in context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Transmission, Distribution and Rail Traction Industry. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with the following units:

UETTDRRT2 Install traction overhead wiring systems 1A

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation, visual inspection and pre-commissioning tests of the overhead traction electrical equipment and components as well as associated hardware including ancillary equipment.

Installation includes but is not limited to fitting, setting up and putting in place conductors, equipment, systems and conducting tests for operational soundness.

Types of traction wire support structures may consist of portals, pull-off, drop-pieces, head spans, cross spans and tramway support networks.

Types of traction components may include droppers, bay components, cantilever hardware, portal hardware, steady spans hardware, steady spans, insulators, pull-off, tension regulators, section insulators, neutral sections, tramway frogs, pendulums, crossing pans and ears/hangers, booster and auxiliary transformers, air break switches, in-span feeders, isolation switches knuckles (insulated and non-insulated), cross arms.

Traction system components may consist of metalwork, wires, hardware, fittings and insulators.

Types of conductor may include HD, CAD and tin bearing copper, aluminium, steel, aluminium conductor steel reinforced, copper cover steel.

Types of wiring arrangements include single wire/tram systems, simple and compound catenary systems.

Plant may include ladders, elevating work platforms, winches, specialist tension string equipment, cable trailers, work trains, rail mounted overhead wiring equipment/vehicles and road rail mounted overhead wiring equipment/vehicles.

Ancillary equipment may include, transformers, switches, and surge diverters.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the maintenance and repair of the overhead traction electrical equipment and components as well as associated hardware including ancillary equipment. It includes the repair or replacement of “like for like” electrical components/equipment and associated hardware and the undertaking of safe working practices on or about the running line/track. It also encompasses the isolation of systems and circuits for safe working according to work plans and the correct positioning of road signs, barriers and or warning devices and the procedure of issuing/accepting electrical permits. It also includes the visual inspection and necessary checks to confirm that equipment; components and associated hardware are in a safe condition to test and/or return to service, the re-commissioning tests of the electrical equipment, components and associated hardware and the updating of system data/maintenance records.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE104A	Solve problems in d.c. Circuits
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules,

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA	
1 Prepare to the maintenance of overhead traction equipment/components	1.1	Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3	OHS policies and procedures related to requirements and established procedures for the maintenance of overhead traction equipment/components are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified; OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
		1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
		1.8	Relevant personnel at worksite are confirmed current in CPR, First Aid, and other rescue procedures according to requirements.
		1.9	Liaison and communication issues with other authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
		1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
		1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
		1.12	Rail/road signs, barriers and warning devices are positioned in accordance with requirements.
		1.13	Environmental constraints applicable to work are identified and control measures are applied.
2	Carry out the maintenance of overhead traction equipment/components	2.1	OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
		2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
		2.3	Systems and circuits are isolated as required,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		proved safe to work on in accordance with the requirements/permits and established procedures.
	2.4	Essential knowledge and associated skills are applied in the safe maintenance of overhead traction equipment/components to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.5	Electrical component/equipment and associated hardware is ascertained as operating within normal operating parameters and in accordance with requirements and established procedures.
	2.6	Maintenance, including repair and/or replacement of overhead traction equipment/components is carried out, in accordance with the work schedule and requirements/established procedures.
	2.7	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.8	Unplanned events during the maintenance of overhead traction equipment/components are undertaken within the scope of established procedures.
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.10	Ongoing checks/visual inspection of work quality are undertaken in accordance with instructions and established procedures.
3 Complete the maintenance of overhead traction equipment/components	3.1	Work undertaken is checked and or tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	3.3	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
	3.4	Relevant work permit(s) are signed off after final inspections and the system is energised, tested and returned to service in accordance with requirements.
	3.5	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge of maintaining overhead traction equipment and components has been acquired.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TRT28A Maintain overhead traction equipment and components

Evidence shall show an understanding of the maintenance of overhead traction equipment and components indicated by the following aspects:

T1 Overhead traction equipment encompassing:

- Types
- Purpose
- (Note: Examples include switches/isolators, fuse switches, links, section insulators, and fuses)

T2 Types of overhead components encompassing:

- Types
- Purpose
- (Note: Examples include cantilever hardware, droppers, bay components, portal hardware, head span hardware, section insulators, neutral sections, registration fittings, steady span, tension regulators and cross spans)

T3 Types of conductors used for overheads wiring such as hard-drawn, CAD, and tin-bearing copper, aluminium, steel, and other alloyed conductors

T4 Types of traction wire support structures that may consist of portals, cantilevers, drop pieces, head spans, cross spans and pull-offs

T5 Ancillary equipment

- Types
- Purpose
- (Note: Examples include surge arresters, booster and auxiliary transformers)

T6 Methods for replacing conductors that may consist the use of:

- Preformed fittings
- Compression fittings
- Wedged fittings
- Bolted splices
- Lugs
- Bolted clamps

T7 Methods for replacing components such as:

- Feeders
- Droppers
- Dissimilar conductors
- Jumpers
- Surge arresters

T8 Use of plant and equipment for maintenance work, such as:

- Elevating work platforms

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the range statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and

Not applicable.

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the erection of non-energised, pyramid, delta, Pi or enterprise specific transmission towers and associated hardware. It includes the erection of components in accordance with construction plans, specifications, work orders and standing enterprise requirements. Erection could also involve cleaning and welding. The updating of system data, records and or completion of relevant documentation in accordance with enterprise requirements also forms part of this competency.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may require a licence/registration to practice in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to

© Commonwealth of Australia, 2025 Powering Skills Organisation

License to practice **3)**

regulations directly related to Occupational Health and Safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

Pre-Requisites

Prerequisite Unit(s) **4)**

Competencies **4.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

Common Unit Group

Unit Code	Unit Title
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace
UEENEEE102A	Fabricate, assemble and dismantle utilities industry components
UEENEEE105A	Fix and secure electrotechnology equipment
UEENEEE107A	Use drawings, diagrams, schedules, standards, codes and specifications
UETTDREL11A	Apply sustainable energy and environmental procedures
UETTDREL16A	Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

Literacy and numeracy skills **4.2)**

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 “Literacy and Numeracy”

Reading	3	Writing	3	Numeracy	3

Employability Skills Information

Employability Skills **5)**

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to erect transmission towers and associated hardware	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
	1.3	OHS policies and procedures related to requirements and established procedures for the erect towers and associated hardware are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5	Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7	Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8	Relevant personnel at work site are confirmed current in First Aid, Tower/Pole Top Rescue and other related work procedures according to requirements.
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures.
	1.12	Traffic management plan is identified and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
		implemented.
2 Carry out the erection of transmission towers and associated hardware	2.1	OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
	2.3	Essential knowledge and associated skills are applied in the safe erection of towers and associated hardware to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements.
	2.4	Towers and associated hardware to be erected are stabilised according to requirements.
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
	2.6	Erection of towers and associated hardware is carried out, in accordance with the work schedule and requirements/established procedures.
	2.7	Unplanned events in the erection of towers and associated hardware are undertaken within the scope of established procedures.
	2.8	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3 Complete the erection of transmission towers and associated hardware	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3 Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures.
	3.5 Relevant work permit(s) are signed off and, towers and associated hardware are returned to service in accordance with requirements.
	3.6 Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of erecting transmission towers and associated hardware.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TTP26A Transmission structures and hardware

Evidence shall show an understanding of transmission structures and hardware to an extent indicated by the following aspects:

T1 Requirements for the use of enterprise construction manuals, system diagrams/plans and drawings

T2 Types of structures

T3 Types and function of associated hardware/equipment and insulators

T4 Types of conductors

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T5 Location of transmissions structures

T6 Other equipment used on transmission structures, e.g. aircraft warning devices

T7 Voltages on transmission structures

T8 Traffic management

- Note: Examples include purpose of traffic management and a power worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements, demonstration of the procedure used to provide an effective traffic management scheme and the use of a two-way radio

T9 Classification and identification of equipment, components and tools

T10 Procedures for purchasing/ordering items, removing/dispatching items, stocktaking, and record keeping

T11 Safe working practices encompassing:

- Requirements to enable safe working on conductive poles
- Safe working practices when working with associated hardware/equipment and insulators
- Precautions of voltages on transmission structures
- Safe working practices when using specialised equipment

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the Range Statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment

© Commonwealth of Australia, 2025 Powering Skills Organisation

is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and;
- Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
- Demonstrate an appropriate level of employability skills; and

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	Any one of the following:	Pyramid Delta pi Enterprise specific type
B	At least two of the following:	Insulators Clamps Bolts Structural components
C	At least one of the following:	Welding Cleaning
D	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual erection of towers and associated equipment.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments.

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Transmission, Distribution and Rail Traction Industry. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent **9.5)**

assessment and relationship with other units

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the erection of non-energised, pyramid, delta, Pi or enterprise specific towers in accordance with construction plans and specifications

Tower types may include pyramid, delta and pi and other enterprise specific types.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect
- Legislation

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA	
3 Complete the maintenance of transmission towers and associated hardware	3.1	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures.
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures.
	3.5	Relevant work permit(s) are signed off and, towers and associated hardware are returned to service in accordance with requirements.
	3.6	Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of maintaining transmission towers and associated hardware.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-TTP27A Routine maintenance on transmission structures

Evidence shall show an understanding of procedures for routine maintenance on transmission structures and hardware to an extent indicated by the following aspects:

T1 Procedures for gaining access permits

T2 Reasons for gaining access

© Commonwealth of Australia, 2025 Powering Skills Organisation

REQUIRED SKILLS AND KNOWLEDGE

T3 Types of maintenance procedures on transmission structures encompassing:

- Procedure to follow for inspection/patrols according to the Transmission Supply Authority

T4 Erecting and removing of transmission equipment and hardware from a tower encompassing:

- Climbing procedures
- Square rigging principles
- Calculation of forces at work within a given square rigging system
- Construction of a square rigging system
- Procedures for changing insulators
- Note: Examples include vertical angle suspension, strain insulator, post insulator (horizontal or vertical) and bridge insulator, calculation of conductor forces

T5 Installation of temporary work platforms encompassing:

- Types and function of installation tools and equipment
- Precautions and work methods to follow
- Procedures for installations of temporary work platforms

T6 Installation of conductor protective hardware encompassing:

- Types and selection of common dampers, tools and equipment
- Control of Aeolian vibration
- Procedures for the installation of dampers onto conductors

T7 Dead line insulator washing encompassing:

- Supply Authority regulations
- Procedure for washing de-energised transmission lines

Unit Descriptor

Unit Descriptor **1) Scope:**

1.1) Descriptor

This Competency Standard Unit covers the installation and maintenance of overhead conductors and cables used on towers which includes the stringing, tensioning and terminating of the conductor/cable while de energised, securing of the conductor to the insulators or supports and the undertaking of the electrical connections. It also covers maintenance work associated with the diagnosing of faults, the conducting of visual inspections, the confirmation of phasing and the completion of other enterprise tests. It also encompasses confirming isolation of systems and circuits, and/accepting/ issuing electrical permits and the updating of system data/maintenance records.

Application of the Unit

Application of the Unit **2)**

This Competency Standard Unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

License to practice **3)**

The skills and knowledge described in this unit may

6) Elements describe the essential outcomes of a competency standard unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare for the installation and maintenance of overhead conductors and cables used on towers	1.1 Works schedule(s), including drawings, plans, requirements, established procedures, and material lists are received/ sourced, analysed and confirmed, if necessary, by site inspection.
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites.
	1.3 OHS policies and procedures related to requirements and established procedures for the installation and maintenance of overhead conductors and cables used on towers are obtained and confirmed for the purposes of the work to be performed and communicated.
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures.
	1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
	1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures.
	1.7 Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and confirmed in working order.
	1.8 Relevant personnel at work site are confirmed current in First Aid, Rescue and other related procedures according to requirements.
	1.9 Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary.
	1.10 Site is prepared according to the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
			and to minimise risk and damage to property, commerce, environment and individuals in accordance with established procedures.
		1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures.
		1.12	Traffic management plan is identified and implemented.
2	Carry out installation and maintenance of overhead conductors and cables used on towers	2.1	OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures.
		2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed.
		2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements /permits and established procedures.
		2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of overhead conductors and cables used on towers to ensure completion in an agreed timeframe to quality standards with a minimum of waste according to requirements.
		2.5	Overhead conductor/cables are strung, tensioned and terminated as per requirements/established procedures.
		2.6	Conductors and anti-vibration devices, spaces/spreaders are secured as per established procedures.
		2.7	Electrical connections are made in accordance with the requirements/established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT		PERFORMANCE CRITERIA	
		2.8	Maintenance, including repair and/or replacement of overhead conductors and cables used on towers is carried out, in accordance with the work schedule and requirements/established procedures.
		2.9	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.
		2.10	Unplanned events in the installation and maintenance of overhead conductors and cables used on towers are undertaken within the scope of established procedures.
		2.11	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills.
		2.12	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures.
3	Complete the installation and maintenance of overhead conductors and cables used on towers	3.1	Work undertaken is checked against works schedule for confirmation of phasing and conformance with requirements and, anomalies reported in accordance with established procedures.
		3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
		3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
		3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures.
		3.5	Relevant work permit(s) are signed off and, overhead conductors and cables used on towers are returned to service in accordance with requirements.

© Commonwealth of Australia, 2025 Powering Skills Organisation

ELEMENT	PERFORMANCE CRITERIA
	3.6 Works completion records, reports, as installed /modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) Essential Knowledge and Associated Skills (EKAS): This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of installing and maintaining overhead conductors and cables (towers).

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS02-TTP29A Powerline transmission installation safety

Evidence shall show an understanding of the safe working practices and procedures for the installation of overhead transmission conductors to an extent indicated by the following aspects:

T1 Limits of approach for personnel, vehicles, mobile plant and elevating work platforms (EWP)

T2 Requirements of persons prior to making bare hand contact with dead low voltage mains and apparatus

T3 Requirements of relevant electrical access permits necessary to allow work to be performed on low and high voltage apparatus

T4 Safe working practices encompassing:

- Requirements to enable safe working on conductive poles
- Procedure to attach an on-site earthing device to de-energised low and high voltage overhead circuit
- Safe working practices when working with associated hardware/equipment and insulators
- Precautions of voltages on transmission structures
- Dangers when working at heights
- Identification of hazards, assessing and controlling risks
- Types, selection, maintenance and uses of personnel protective equipment
- Permit to work systems and isolation procedures
- Safe working practices when using specialised equipment
- Emergency response and rescue including First Aid etc

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the Range Statement of the unit of competency and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all component parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment **9.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and

© Commonwealth of Australia, 2025 Powering Skills Organisation

developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines – UET12". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range; and
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range; and
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment; and
  - Demonstrate an appropriate level of employability skills; and
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures; and
  - Demonstrated performance across a representative range of contexts from the prescribed items below:

Range of tools/equipment/materials/procedures/workplaces/other

© Commonwealth of Australia, 2025 Powering Skills Organisation

variables		
Group No	**The minimum number of items on which skill is to be demonstrated**	**Item List**
A	At least one of the following:	Copper Aluminium Steel Composite Aluminium/steel reinforced Pilot
B	At least two of the following:	Elevated work platform Portable platform Gondola Hook ladder* Elevated work box (*must do)
C	At least five of the following:	Winches* Tension equipment* Stringing equipment Cable trailers Crimping equipment * Pre-formed splices Hardware Cable drum stands Ropes Rollers/ sheaves Comealongs Swivels (*must do)
D	At least two of the following:	Voltage/ de-energised indicating device

© Commonwealth of Australia, 2025 Powering Skills Organisation

		Field intensity meter Operating rods (*must do)
E	At least one of the following:	Dynamometer Site board Abney level Sag chart* Theodolite (*must do)
F	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment **9.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual installation and maintenance of overhead conductors and cables on towers.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency working below ground, in limited spaces, with different structural/construction types and method and in a variety of environments

© Commonwealth of Australia, 2025 Powering Skills Organisation

Method of assessment **9.4)**

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 “Assessment Guidelines”.

Note:

Competent performance with inherent safe working practices is expected in the Transmission, Distribution and Rail Traction Industry. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units **9.5)**

There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the installation and maintenance of overhead conductor and or cables used on transmission towers

Installation and maintenance may include the stringing, tensioning, terminating, removal, repairing and replacement of the conductors/cables. Visual inspections and the diagnosing of faults is also included.

Structures include towers and columns.

Types of conductor include copper, aluminium, steel and composites. Conductor configurations may be single or bundled and include pilot cables.

Overhead conductors include earthing systems

Plant may include elevating work platform, winches and capstans, specialist tension stringing equipment, cable trailers, cable drum stands and equipotential equipment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

RANGE STATEMENT

Testing and recording equipment includes, insulation resistance testers, recording meters and other approved devices and techniques applicable to the voltage. .

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and sustainable energy procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention
- Hazards
- Identifying hazards
- Inspect
- Legislation
- MSDS
- Notification
- OHS practices
- OHS issues
- Permits and/or permits to work
- Personnel
- Quality assurance systems
- Requirements.
- Testing procedures
- Work clearance systems

UEPSS00005 High Risk Licensing - Licence to operate a reciprocating steam engine

Modification History

This Skill Set replaces and is equivalent to UEPSS00001 High Risk Licencing - Licence to operate a reciprocating steam engine.

Description

This Skill Set UEPSS00005 Licence to operate a reciprocating steam engine provides the skills and knowledge required to operate reciprocating steam engines within the Australian UEP Electricity Supply Industry - Generation Sector Training Package environment.

Pathways Information

This Skill Set UEPSS00005 Licence to operate a reciprocating steam engine is part of the UEP Electricity Supply Industry - Generation Sector Training Package.

This Skill Set can be a stand alone licensing outcome, or the unit may be included in a qualification as a core or elective option.

Licensing/Regulatory Information

Personnel seeking certification as a licenced operator of a reciprocating steam engine are to comply with national High Risk Licensing requirements for operators of reciprocating steam engines.

Skill Set Requirements

A total of one unit of competency must be attained.

UEPOPL002	Licence to operate a reciprocating steam engine

Target Group

This is Skill Set UEPSS00005 Licence to operate a reciprocating steam engine is suitable for operators who require occupational licencing by a State or Territory WHS/OHS regulator.

Suggested words for Statement of Attainment

This Skill Set UEPSS00005 Licence to operate a reciprocating steam engine from the UEP

© Commonwealth of Australia, 2025 Powering Skills Organisation

Electricity Supply Industry - Generation Sector Training Package meets the minimum industry requirements for High Risk Licensing of operators of reciprocating steam engines.

UEPSS00006 High Risk Licensing - Licence to operate a steam turbine

Modification History

This Skill Set replaces and is equivalent to UEPSS00002 High Risk Licensing - Licence to operate a steam turbine.

Description

This Skill Set UEPSS00006 Licence to operate a steam turbine provides the skills and knowledge required to perform the duties of an operator of steam turbines within the Australian UEP Electricity Supply Industry - Generation Sector Training Package environment.

Pathways Information

This Skill Set UEPSS00006 Licence to operate a steam turbine is part of the UEP Electricity Supply Industry - Generation Sector Training Package.

This Skill Set can be a stand alone licensing outcome, or the unit may be included in a qualification as a core or elective option.

Licensing/Regulatory Information

Personnel seeking certification as a licenced operator of a steam turbine are to comply with national High Risk Licensing requirements for operators of steam turbines.

Skill Set Requirements

A total of one unit of competency must be attained.

UEPOPL001	Licence to operate a steam turbine

Target Group

This is Skill Set UEPSS00006 Licence to operate a steam turbine is suitable for operators who require occupational licencing by a State or Territory WHS/OHS regulator.

Suggested words for Statement of Attainment

This Skill Set UEPSS00006 Licence to operate a steam turbine from the UEP Electricity Supply Industry - Generation Sector Training Package meets the minimum industry requirements for

UEPSS00007 High Voltage Operation - H.V. switching programs

Modification History

This Skill Set replaces and is equivalent to UEPSS00003 High Voltage Operation - H.V. Switching.

Description

This Skill Set UEPSS00007 High Voltage Operation – H.V. switching programs provides the skills and knowledge required to operate H.V. switching programs within the Australian UEP Electricity Supply Industry - Generation Sector Training Package environment.

It includes undertaking the operation of high voltage circuit breaking devices, and the performance of H.V. switching for a given switching program.

It is essential that anyone undertaking this Skill Set must already hold a UEE33011 Certificate III in Electrical Fitting, or equivalent.

Pathways Information

This Skill Set UEPSS00007 High Voltage Operation – H.V. switching programs is part of the UEP Electricity Supply Industry - Generation Sector Training Package.

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV and Diploma qualifications from the UEP Electricity Supply Industry - Generation Sector Training Package.

Licensing/Regulatory Information

The skills and knowledge described in this Skill Set do not require a licence to practice in the workplace.

Skill Set Requirements

A total of two units of competency must be attained.

UEPOPS349	Operate local H.V. switchgear
UEPOPS456	Perform switching to a switching program

© Commonwealth of Australia, 2025 Powering Skills Organisation

Target Group

This Skill Set UEPSS00007 High Voltage Operation – H.V. switching programs is suitable for operators working in the UEP Electricity Supply Industry - Generation Sector Training Package environment

Suggested words for Statement of Attainment

This Skill Set UEPSS00007 High Voltage Operation – H.V. switching programs from the UEP Electricity Supply Industry - Generation Sector Training Package meets the minimum requirements for the development and coordination of H.V. switching programs.

UEPSS00008 High Voltage Operation - Development and coordination of H.V. switching programs

Modification History

This Skill Set replaces and is equivalent to UEPSS00004 High Voltage Operation - Development and co-ordination of H.V. Switching Programs

Description

This Skill Set UEPSS00008 High Voltage Operation – Development and coordination of H.V. switching programs provides the skills and knowledge required to perform the duties of operating H.V. switching programs within the Australian UEP Electricity Supply Industry - Generation Sector Training Package environment.

It includes developing switching programs where multiple sources of supply must be considered, managed and coordinated including the control and management of H.V. substations and/or local networks.

It is essential that anyone undertaking this Skill Set must already hold a UEP30118 Certificate III in ESI Generation – Systems Operations, or equivalent.

Pathways Information

This Skill Set UEPSS00008 High Voltage Operation – Development and coordination of H.V. switching programs is part of the UEP Electricity Supply Industry - Generation Sector Training Package.

The units of competency in this Skill Set can contribute to the completion of relevant Certificate III, Certificate IV and Diploma qualifications from the UEP Electricity Supply Industry - Generation Sector Training Package.

Licensing/Regulatory Information

The skills and knowledge described in this Skill Set do not require a licence to practice in the workplace.

Skill Set Requirements

A total of two units of competency must be attained.

UEPOPS424	Coordinate local H.V. networks

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEPOPS428 Develop H.V. switching programs

Target Group

This is Skill Set UEPSS00008 High Voltage Operation – Development and coordination of H.V. switching programs is suitable for operators working in the UEP Electricity Supply Industry - Generation Sector Training Package environment.

Suggested words for Statement of Attainment

This Skill Set UEPSS00008 High Voltage Operation – Development and coordination of H.V. switching programs from the UEP Electricity Supply Industry - Generation Sector Training Package meets the minimum requirements for the development and coordination of H.V. switching programs.
